Bahr el Ghazal to the Nile at Fashoda. The right bank of the Nile opposite Fashoda, through several degrees of latitude, was claimed by the Negus Menelek as a part of Ethiopia. The Anglo-Egyptian operations for the reconquest of the Soudan, begun in 1896, were intended to forestall the French and prevent these missions advancing secretly from the French Congo, and also French adventurers acting in conjunction with the Abyssinians from getting a foothold in the Nile valley. In 1895 Sir Edward Grey, Undersecretary of Foreign Affairs in Lord Rosebery's Cabinet, declared in the House of Commons that Great Britain would consider the invasion of the Nile valley by another power as an unfriendly act. M. Hanotaux, the French Foreign Minister, in a diplomatic note, traversed this assumption that the abandoned provinces of Egypt were British by pre-emption. In 1897 Lord Salisbury formally reaffirmed the position taken by Sir Edward Grey. In negotiations with respect to the valley of the Niger and the regions north and east of Lake Chad, Sir Edmund Monson, British ambassador at Paris, told M. Hanotaux that in the event of a road being opened up from Lake Chad to the Nile, Great Britain must not be understood to admit that any other European power had any claim to occupy any part of the valley of the Nile, and the French minister, in his reply, demurred to the British position once more and repeated his reservations as to the Nile, to which the British Government had made no reply.

Capt. Marchand established posts in the Bahr el Ghazal region in 1896 and 1897 among the Dunks, and in 1898 descended to Meshra er Rek, and thence to the left bank of the Nile, making a treaty with the Mek of the Shilluks and raising the French flag over the Government building at Fashoda on July 10, two months previous to Sir Herbert Kitchener's victory over the Khalifa at Omdurman (see EGYPT). A detachment of the retreating dervishes attacked him there, on Aug. 25, with a gunboat, and, being repelled, turned back to get reinforcements, but was broken up by the sirdar as he was ascending the Nile in gunboats to oust any French or Abyssinian forces that might have established themselves on the Nile banks. When the Anglo-Egyptians approached, Capt. Marchand sent a message to the sirdar to inform him that he had occupied, by order of the French Government, the Bahr el Ghazal as far as Meshra er Rek and the confluence of the Bahr el Ghazal with the Bahr el Djebel, as well as the Shilluk country on the left bank of the White Nile as far as Fashoda. At their meeting on Sept. 19 the sirdar informed Capt. Marchand that the presence of the French at Fashoda and in the valley of the Nile was regarded by the British Government as a direct violation of the rights of Egypt and of Great Britain, and asked him if he was prepared to resist the occupation of the Mudirieh. Capt. Marchand replied that he would die at his post before retiring from his position or hauling down his flag without orders from his Government. The Egyptian flag was hoisted on the old fort near by, after Capt. Marchand had said that he could not resist this. Sir Herbert Kitchener then returned north, leaving Jackson Bey as commandant with a battalion of infantry and a gunboat, which was ordered to ascend the Bahr el Ghazal and establish posts in the direction of Meshra er Rek. The Shilluks, who had taken service under Capt. Marchand, went over to the Egyptians, and their Mek repudiated his treaty, saying that he had made it supposing Capt. Marchand to be an officer of the Egyptian Government.

After the dervish rout at Omdurman, M. Delcassé, expecting that the Anglo-Egyptians would find Capt. Marchand on the Nile, deprecated a collision between the forces on the spot and expressed a desire for an amicable settlement of all causes of

difference by means of a frank discussion between the two governments. Capt. Marchand had been instructed to act merely as a herald of civilization and not to assume the decision of questions of right or take any steps likely to produce a local conflict. The Marquis of Salisbury replied that by the military events all the territories which were subject to the Khalifa had passed by right of conquest to the British and Egyptian governments, and that he did not consider this right open to discussion. On Sept. 18 M. Delcassé asked if the British Government considered that Capt. Marchand had no right to be at Fashoda, and when Sir E. Monson reminded him of the warning that any incursion into the upper Nile basin would be considered an unfriendly act, he said that there was no Marchand mission, that M. Liotard had been instructed to secure French interests in the northeast two or three years previous to Sir Edward Grey's declaration, and under his direction Capt. Marchand had gone to occupy the regions recognized as French in the Franco-Congolese convention. If Lord Salisbury's theory of conquest were admitted, Fashoda had been conquered from the Mahdi by the French before the capture of Khartoum by the sirdar. That the Soudan was abandoned by Egypt was admitted by the English when they conquered for themselves Unyoro in the Equatorial Province and sanctioned the occupation of Kassala by the Italians and of Lado by the Belgians. In order to prove that the French position on the upper Nile was not equivalent *de jure* to her own, England would have to show a mandate from the Sultan for the occupation of the Soudan. The British ambassador told M. Delcassé that the situation on the Nile was dangerous and that the British Government would consent to no compromise. The French minister said that if the two governments discussed the matter calmly with a sincere desire to avoid a conflict there could be no doubt that a peaceable and satisfactory solution would be found. After receiving the sirdar's report of the meeting at Fashoda the British Government demanded the instant recall of Capt. Marchand. The French minister, after consulting with his colleagues, said on Sept. 27 that he was ready to continue the discussion in a conciliatory spirit, that he must not be asked for the impossible; the French Government wished to communicate with Major Marchand and receive his report before taking any action. Lord Salisbury said the British Government could not refuse to transmit a dispatch to a French explorer in a difficult position, and laid down as the British view that the region where he was found, whether in times of Egyptian or of dervish dominion, had never been without an owner and that his expedition with an escort of 100 Senegalese troops had no political effect, nor could any political significance be attached to it. M. Delcassé asked if the dervish dominion was placed on the same footing as the Egyptian and if it was vindicated in opposition to French occupation. The British ambassador replied that whatever title the Khalifa possessed had passed to the conqueror, and that an occupation by a secret expedition of a handful of men who would have been destroyed but for the timely arrival of the Egyptian gunboats could give no title. When Sir Edward Monson remarked that in going toward the Nile after the German and Italian recognition of the British sphere of influence, France could not be unaware that she was advancing to a conflict with England, M. Delcassé refused to believe that Lord Salisbury would admit the idea of a conflict over such an incident, and recalled the fact that the French enterprise went back to an epoch when England had done nothing and said nothing indicating an intention to reconquer the Egyptian Soudan, which it had itself obliged

Egypt to abandon in 1884. As the French were the first to reach Fashoda, and had taken it from barbarism, to ask them to evacuate it previous to all discussion would be to formulate an ultimatum, to which France could make only one reply. In a conversation with M. de Courcel, Lord Salisbury said that M. Marchand had established himself surreptitiously in the rear of the Mahdi while the latter was occupied in fighting the Anglo-Egyptian army. The French ambassador could not see how the French could be blamed for taking advantage of the Mahdi's difficulties, still less for co-operating with the English. He spoke of the injustice of France being excluded from the Nile, to which Germany and Belgium were admitted. When Lord Salisbury declined to discuss the substance of the matter in dispute, M. de Courcel said that the evacuation of Fashoda was not an issue, but that this should be preceded by a friendly delimitation, as France was ignorant of the limit of the pretensions of England, either for herself or for Egypt. Lord Salisbury would not reply respecting a delimitation without first consulting his colleagues. M. Deleassé, in a dispatch dated Oct. 8, asked by virtue of what mandate and in what way the title invoked by England could be better than the French, assuming that Egyptian rights over the territories in question had not lapsed, and on Oct. 10 M. de Courcel, while regarding as unusual the claim of Egypt to territories formerly belonging to her in spite of the transformations produced by conquests and evolutions, asked how it was that this claim was not set up against France by an Egyptian minister nor by a representative of the Sultan's sovereignty, but by the Prime Minister of England. Neither treaties concluded with Germany or other third parties nor the unilateral declaration of an English Under secretary of State in the British Parliament sufficed to create for England a right superior to French pretensions. If the English claimed the upper Nile regions as coming in their sphere of influence or in that of Egypt, the French were not less entitled to claim, as belonging to their sphere of influence, territories opening an outlet on the Nile that are the continuation of their possessions in Central Africa. Between these rival pretensions a delimitation had become indispensable. On Oct. 12 M. de Courcel said that if the legitimacy of Egyptian pretensions were acknowledged, it was not proved that the presence of French troops was necessarily a derogation of them or was more incompatible with the authority of the Khedive than the presence of English troops in territories more unquestionably Egyptian. Lord Salisbury replied that a mixed occupation of Egypt would present inconveniences. The ambassador then reminded him that England, when her troops entered the old Equatorial Province of Egypt, raised her own flag, not the Egyptian, adding that the two or three years in which the Bahr el Ghazal province had been under the rule of Egypt afforded a slender basis for an inalienable legitimacy such as had never been set up in respect to territory in Europe. In answer to Salisbury's claim of the right of conquest, he said that the Bahr el Ghazal had been occupied for several years by the French, and that it was not a Mahdist territory when they entered it, for they encountered no dervishes there. Lord Salisbury objected to the French forces on the Bahr el Ghazal as being too feeble for an effective occupation and unable to defend the territory against the claims of Egypt. M. de Courcel replied that they were small bodies of well-trained native troops under French officers, capable of being re-enforced by local levies from friendly tribes, such forces as sufficed to uphold European rule in all parts of Africa

in all normal exigencies, but certainly not sufficient to cope with an army equipped and organized in the European manner. If Lord Salisbury meant that the sirdar's forces could compel Capt. Marchand to withdraw as far as they liked, it would be necessary to quit the ground of diplomacy. Lord Salisbury reasserted the British claim to the whole basin of the Nile, and even this extreme boundary, M. de Courcel said, could not be fixed in the Bahr el Ghazal region without a compromise, for at different seasons the streams run in different directions. Lord Salisbury then asked the French ambassador to make proposals, and the latter claimed for the French territories of the Congo basin the possession of their natural outlet on the Nile, namely, the valley of the Bahr el Ghazal, urging that it was the common interest of both countries not to intercept this natural Central African trade route, the use of which might be guaranteed to trade by special stipulations analogous to those concluded for the Niger territories. The question of Fashoda would disappear if England would agree to a delimitation of the territories between Lake Chad and the Nile, the only task remaining in Africa.

Lord Salisbury would not answer until he had seen his colleagues. The Cabinet council decided to demand the evacuation of Fashoda before entering upon any discussions. The naval preparations of England and the warlike temper of her people convinced the French Government that negotiations had better be postponed until the English were in a calmer mood. When Lord Salisbury demanded, on Nov. 1, the unconditional withdrawal of the French post at Fashoda the new French Cabinet decided to endure the humiliation rather than precipitate a war over such an incident, the position at Fashoda being in any case untenable. Capt. Marchand, who had gone to Cairo, was ordered to return and to withdraw his force through Abyssinian territory to Jiboutil.

Colonies.—The colonies of France are represented in the Senate and Chamber. Algeria has an administration and laws independent of the colonies, and is regarded as an outlying portion of France. The other possessions are governed in accordance with laws passed by the Chambers by officials who are responsible to the Cabinet.

The area and population of the French colonies and protectorates, according to the most recent estimates and returns, are given as follow :

POSSESSIONS.	Square miles.	Population.
Algeria	307,974	4,480,000
Tunis	50,840	1,500,000
Senegal, French Soudan, Dahomey, Guinea, and Gabun	444,550	8,150,000
French Congo	496,920	8,950,000
Sahara	1,684,000	2,500,000
Réunion	970	171,720
Comoro Isles	620	53,000
Mayotte	143	8,700
Nossi Bé	113	7,800
Ste. Marie	64	7,670
Obok and Somal coast	8,640	30,000
Bagirim	65,650	1,000,000
Madagascar	227,750	3,500,000
French India	197	286,910
Cochin China	22,500	2,035,000
Annam	81,000	6,000,000
Tonquin	122,000	12,000,000
Cambodia	46,000	1,500,000
French Gulana	46,850	22,710
Guadeloupe	688	167,100
Martinique	380	187,600
St. Pierre and Miquelon	93	6,250
New Caledonia and dependencies	7,630	51,000
Marquesas Islands	480	4,450
Tahiti and Moorea	455	11,800
Tubual	80	880
Tuamotu and Gambier	390	5,250
Wallis Archipelago	100	5,000
Total	3,617,327	52,642,990

The special trade of France with the colonies in 1896 amounted to 137,300,000 francs of imports and 105,200,000 francs of exports, not including the trade with Algeria and Tunis, which would bring the total up to 358,800,000 francs of imports and 345,600,000 francs of exports. The commerce of the several colonies for the latest years reported was, in francs, as shown in the following table :

COLONIES.	Imports.	Exports.
Senegal.....	13,866,000	17,985,000
French Guinea.....	4,634,000	5,787,000
Ivory Coast.....	4,638,000	4,400,000
Dahomey.....	9,729,000	9,100,000
French Congo.....	3,166,000	2,345,000
Mayotte and Comoro.....	603,000	972,000
Diego Suarez.....	6,700,000	680,000
Nossi Bé.....	2,521,000	2,383,000
Réunion.....	19,671,000	17,086,000
French India.....	3,277,000	20,129,000
Cochin China and Cambodia.....	41,636,000	88,826,000
Annam.....	151,000	2,549,000
Tonquin.....	358,000	13,311,000
St. Pierre and Miquelon.....	7,091,000	9,401,000
Martinique.....	19,726,000	21,431,000
Guadeloupe.....	7,106,000	18,793,000
French Guiana.....	4,387,000	4,734,000
New Caledonia.....	2,411,000	5,749,000
Oceania.....	149,000	3,098,000

The expenditure of France on the colonies in 1898 was 88,030,868, exclusive of Algeria, and the amount received from the colonies, including Cochin China's contribution of 4,510,000 francs, was 9,296,914 francs. The military and naval expenditure for the colonies makes the annual cost to the mother country much greater.

Algeria has at the head of the administration a civil governor-general, who receives instructions from the various ministries. M. Lépine was appointed to this office on Oct. 2, 1897. The population of the civil territory in 1896 was 3,873,278 and of the military districts 556,143; total, 4,429,421, not including about 50,000 nomads of the Algerian Sahara. The population included 318,137 Frenchmen and 446,343 foreigners. The revenue for 1898 was estimated at 52,037,152 francs, of which 11,915,507 francs come from direct taxes, 7,763,800 francs from registration and stamps, 11,999,000 francs from customs, 5,435,120 francs from monopolies, 3,253,100 francs from domains and forests, and 7,972,320 francs from various sources, while 3,698,305 francs are *recettes d'ordre*. The total expenditures are set down as 71,147,857 francs, of which 502,250 francs are for finance, 3,583,920 francs for justice and worship, 23,539,794 francs for the interior, 5,060,583 francs for instruction, 22,041,000 francs for public works, 15,379,510 francs for *régie*, and 1,040,800 francs for repayments. The special troops recruited and trained for the defense of Algeria from the Nineteenth Army Corps, which is composed of 2 foreign legions, 3 regiments of zouaves, 3 regiments of *tirailleurs*, 3 battalions of light infantry, 3 discipline companies, 5 regiments of *chasseurs d'Afrique*, 3 regiments of spahis, 3 companies of remount cavalry, 12 batteries of field artillery, 3 companies of engineers, 9 companies of train, a recruiting section, and the staff, numbering in all 2,917 officers and 53,714 men.

Of the total population 3,482,358 were engaged in agriculture in 1895, including 205,642 Europeans. The yield of hard wheat in 1896 was 5,828,857 quintals; of soft wheat, 1,242,114; of barley, 8,412,263; of wine, 4,350,120 hectolitres; of alfalfa, 385,484 quintals; of cork, 22,073; of tobacco, 5,720,360 kilogrammes. Olives, dates, flax, colza, and ramie are also produced. The mines in 1895 produced 94,200 tons of iron ore and 14,143 tons of zinc and lead ore. The quantity of phosphate taken out was 156,857 tons. The total value of the general imports in 1896 was 275,798,959 francs, of which 217,-

801,956 francs were imports from France and 57,997,003 francs from other countries. Total value of exports 247,409,742 francs, 203,779,613 francs to France and 43,630,129 francs to other countries. The principal special imports were animals for 8,386,891 francs, animal products for 2,352,223 francs, colonial products for 7,759,478 francs, timber for 4,458,250 francs, and textile fabrics for 1,696,233 francs.

The special commerce for 1896 was divided among different countries, as shown in the following table, values being given in francs :

COUNTRIES.	Imports.	Exports.
France.....	217,801,956	196,841,646
Great Britain.....	5,271,121	11,812,023
Brazil.....	9,853,444
Tunis.....	5,262,994	2,779,883
Spain.....	4,870,440	2,905,689
United States.....	4,500,795	956,218
Morocco.....	6,551,988	100,037
Italy.....	2,949,854	2,369,087
Belgium.....	559,479	3,066,144
Russia.....	2,083,565	1,561,009
Germany.....	1,134,844	1,713,316
Austria-Hungary.....	1,932,807	637,099
Other countries.....	7,114,721	6,932,536
Total.....	269,237,968	231,074,677

The number of vessels entered from French and foreign ports in 1896 was 1,654, of 895,618 tons, of which 338, of 101,089 tons, were French; cleared, 1,641, of 878,212 tons. Of coasting vessels, 7,836, of 1,378,950 tons, were entered. The merchant marine belonging to Algeria on Jan. 1, 1897, comprised 644 sailing vessels, of 6,764 tons, and 60 steamers, of 7,202 tons. The length of railroads in operation in 1897 was 2,156 miles. The telegraph lines had a length of 5,025 miles, with 10,671 miles of wire. The number of dispatches in 1895 was 1,574,948, of which 1,473,402 were internal, 50,022 foreign, and 71,524 official.

Tunis was declared a French protectorate by the treaty of Kasr-es-Said, concluded on May 12, 1881. The French Minister Resident superseded the authority of the Bey, and French judges took the place of the consular courts in 1884. The army of occupation, numbering 13,458 officers and men in 1898, is maintained at the cost of the republic. The present Bey, Sidi Ali, born Oct. 5, 1817, succeeded to the throne on Oct. 28, 1882. The Resident General is R. P. Millet. Including the military, there were 26,678 French in 1896. The imports in 1896 were 46,444,548 francs in total value, and the exports 34,507,532 francs. Of the imports 25,563,000 francs were from France, 5,284,000 francs from Italy, 3,832,000 francs from Great Britain, 2,483,000 francs from Malta, and 2,012,000 francs from Russia. The chief exports were wheat for about 9,000,000 francs; olive oil, 4,000,000 francs; barley, 3,000,000 francs; cattle, 2,000,000 francs; wine, 1,500,000 francs; alfalfa, 1,500,000 francs; sponges, 1,200,000 francs. During 1896 there were entered at Tunisian ports 8,389 vessels, of 1,805,814 tons, of which 1,237, of 846,718 tons, were French; 2,215, of 712,700 tons, Italian; and 115, of 113,374 tons, British. The commercial marine numbered 403 vessels. The length of railroads in operation was 883 miles, all belonging to the Government except 17 miles. The telegraph lines had a length of 2,060 miles, with 3,670 miles of wire. The number of internal letters sent through the post office in 1895 was 2,899,692; of foreign letters, 8,099,208.

The French empire in India was reduced after the Napoleonic wars to the port of Pondichery and four other towns with the surrounding districts, covering an aggregate area of 200 square miles, and having a total population on Jan. 1, 1896, of 286,913. The expenditure of France in 1898 was 322,-

629 rupees. The debt amounts to 10,754,300 francs. The chief exports is oil seeds. There were 428 vessels, of 562,000 tons, entered and 432, of 560,868 tons, cleared in 1895. The post office carried 672,698 letters.

French Indo-China comprises Cochin China, Tonquin, Annam, and Cambodia. The imports of Annam in 1896 were 3,860,682 francs in value, and exports 2,398,610 francs. Sugar and cinnamon are the chief articles exported. There are 23,370 troops to preserve order in Annam and Tonquin, of whom 14,500 are natives. Tonquin now includes a tract of 110,000 square miles on the east side of the Mekong that was formerly claimed by Siam, but was conceded to France in 1893. The chief product is rice, which is largely exported to Hong-Kong and China. The total imports for 1896 were valued at 25,204,013 francs, and exports at 7,560,898 francs, not including a transit trade with Yunnan amounting to about 5,000,000 francs of imports and 3,200,000 francs of exports. The railroad from Phulang to Langson, 64 miles, is to be extended to Nacham, on the Chinese frontier. The local revenue and expenditure of Annam and Tonquin in 1897 was 7,962,000 Mexican dollars. France's expenditure in 1898 was 24,450,000 francs.

The budget of Cambodia for 1897 was 2,025,000 Mexican dollars. The population includes, besides the various native races, 250,000 Chinese and Annamese and 40,000 Malays. The exports are rice, cotton and cotton seed, betel, tobacco, pepper, indigo, and cinnamon. The value of the imports in 1896 was \$4,000,000 and of exports \$10,000,000.

Cochin China is an organized French colony. The population, numbering 2,034,453 in 1897, contains, besides Annamese, Chinese, Malays, and Malabar natives. There was a net immigration of 3,637 Asiatics in 1894. The French population is 4,335. The military force consisted in 1897 of 1,217 French troops and 2,400 Annamese soldiers. The rice crop was 8,281,300 piculs in 1896. This is exported to China, Java, and Europe. Other exports are cotton, silk, hides, fish, pepper, and copra. Imports were valued at 55,828,250 francs in 1896, and exports at 91,117,500 francs. There is a railroad from Saigon to Mytho, 51 miles. The telegraphs have a length of 1,905 miles, with 3,077 miles of wire. The number of dispatches in 1896 was 321,536. The local revenue and expenditure in 1897 were \$12,420,000; expenditure of France, 3,150,000 francs.

French Guiana is a penal settlement with a convict population of 4,500. The border territory in which gold has been discovered was disputed with Brazil, and in April, 1897, a convention was signed agreeing to leave it to arbitration. The export of gold in 1896 was 101,938 ounces. The local revenue and expenditure in 1897 was 2,770,000 francs. The expenditure of France in 1898 was 6,161,000 francs, including 4,732,000 francs for the penal establishment.

St. Pierre and Miquelon and adjacent islands off the south coast of Newfoundland are stations for the French cod-fishing fleet. The local budget for 1897 was 463,000 francs; the expenditure of France in 1898 was 302,500 francs.

The penal colony of New Caledonia had imports in 1896 amounting to 9,198,545 francs, and exports to 5,748,552 francs, of which 3,500,000 francs represent nickel and chrome ores. There were 120 vessels, of 132,829 tons, entered and 154, of 175,993 tons, cleared at the port of Noumea. The local budget for 1897 was 2,569,000 francs; the expenditure of France for 1898 was 7,833,000 francs, including 4,716,000 francs for the penal establishment.

The Loyalty and Wallis groups, the Isle of Pines, and some smaller islands are dependencies of New

Caledonia. The French establishments in Oceania comprise the Society Islands, of which the chief ones are Tahiti, Moorea, the Tetea group, and Meitia, the islands of Raiatea, Tubuai-Manu, Huahine, Bora-Bora, and others in the northwest, and the Marquesas, Tuamotu, Gambier, and Tubuai groups and Rapa island, all under one governor. The total imports in 1896 were valued at 2,923,957 francs, and exports at 3,269,888 francs. The leading exports were mother-of-pearl for 1,464,265 francs, copra for 855,590 francs, vanilla for 405,425 francs, and cotton for 205,737 francs. Breadstuffs, provisions, canned goods, and calico are imported from the United States and Europe. The local budget for 1897 was 1,110,000 francs; the expenditure of France in 1898 was 856,000 francs. (See MADAGASCAR, WEST AFRICA, WEST INDIES.)

FREE BAPTIST CHURCH. The following is a summary of the statistics of this body as they are given in the "Free Baptist Yearbook and Register" for 1899: Number of quarterly meetings, 190; of churches, 1,507; of ordained missions, 1,343; of licensed preachers, 240; of members, 87,620; value of church property, \$2,854,651; amount of benevolent contributions—for foreign missions, \$14,275; for home missions, \$7,890; for the Educational Society, \$4,057; for the Woman's Mission Society, \$7,781. Tables, very incomplete in detail, are given of 21 other bodies—associations and quarterly meetings—not connected with the General Conference, which include 367 churches, 333 ministers, and 16,471 members, with church property valued at \$10,890. These bodies are in the States of Alabama, Arkansas, Georgia, Mississippi, Missouri, North Carolina, Tennessee, Virginia, and the Indian Territory. The mission churches in India (included in the above total enumeration) return 6 principal stations, 27 American missionaries, 5 of whom are now in the United States, 233 native helpers, 791 members, with 32 additions by baptism during the year, 3,303 pupils in Sunday schools, 209 Christian Endeavorers, a native Christian community of 1,704 persons, 87 Christian and 67 non-Christian teachers, and 2,981 pupils in all, in the schools, of whom 533 are Christians, 1,286 Hindu, 82 Mohammedan, and 1,034 Santal pupils. The total contributions of the mission churches and Sunday schools were 1,961 rupees, or about \$654.

The Nova Scotia Free Baptist Conference returns 41 churches, 3,836 members, with 91 additions during the year; 39 Sunday schools, with 232 teachers and 2,509 pupils, contributing \$470; and contributions of \$8,200 for local work, \$500 for foreign missions, and \$400 for other purposes. It has one foreign missionary, in India.

The triennial General Conference met at Ocean Park (Old Orchard Beach), Me., Aug. 25. The Rev. Dr. R. D. Lord, of Brooklyn, N. Y., presided. The report of the committee on the ministry, as adopted, declared, in substance, that persons having gifts and qualifications for prayer and personal Christian work ought to be recognized by the local churches without ordination; that married persons not living in married union should not be ordained unless for reasons satisfactory to a council; that the course of studies required by the General Conference, or its equivalent, should be the minimum of requirements for ordination; that ministers should report their work to the State organizations for approval; that ministers coming from other denominations should be as carefully and thoroughly examined as those proposing to enter the ministry from the Freewill Baptist denomination; and that those ordained should be sound in doctrine and of good report. The report on foreign missions expressed regret that a diminution had taken place in the missionary force in India; recommended

that the work be largely done there by native helpers; advised sending additional missionaries; commended the interest manifested by the young people in foreign missions and desired its extension; approved the action of the General Conference Board in making apportionments to churches; recommended the institution of a mission committee for each church, and the use of the card system; urged that quarterly meetings, associations, yearly meetings, and State associations devote some time for presenting the missionary cause; and advised measures to interest the children in missions. The establishment of missions in Africa and in the West Indies was authorized if the Conference Board should decide upon them. The report on church polity recommended consultation with some committee or board in the selection of men for positions as a step toward getting "the right man into the right place"; presented it as the duty of churches and members of churches reverently to respect the accepted methods of service, and to conduct Sunday schools, Young People's Societies, missionary societies, and other societies doing church work, under the auspices of the church, and to enter the records of their transactions upon the records of their respective churches. A report on doctrine set forth that truth does not change, but men's conception of it does; that it is the duty of Free Baptists to welcome new conceptions of truth, but that there is no call for change in the Confession of Faith. A report on home missions recommended that \$10,000 a year be raised for three years for the home-mission work of the denomination, and that the sum be apportioned among the churches *pro rata* upon resident members, and approved a system of institutes for the benefit of the ministers in the Cairo mission. The publication of a quarterly review was approved. Delegates were appointed to the "Anti-Saloon Convention," to be held in Cleveland, Ohio. A resolution was passed in favor of proper respect for the Lord's Day and observance of it.

FREE CHURCHES, EVANGELICAL, FEDERATION OF. The National Council of the Federation of Evangelical Free Churches of England met at Bristol, March 8. Nearly 500 local councils were represented by between 600 and 700 delegates, and the fact is noted that the members, instead of attending on their personal responsibility, as had been largely the case heretofore, were for the most part elected representatives. The Rev. Dr. John Clifford presided, and made the opening address, the subject of which was the solution of the problem of church unity through federation. Unity, he said, was to be found in the one Spirit of Christ, and he believed, with a strong majority of churchmen, that this demonstration of unity in Christ was coming; in fact, "it was here in this National Council of Free Evangelical Churches." The union was not nominal and technical—a mere junction of reluctant persons—but a genuine fellowship as of hearts that could no longer keep apart. Figures were quoted in the address citing representations which had been made in the "Contemporary Review" to the effect that the free evangelical churches of England and Wales provide more seats and have more communicants, Sunday-school teachers, and pupils in Sunday schools than the Established Church, and tables were quoted from the "Free Church Handbook" for 1898 showing that similar proportions prevail among the English-speaking people as a whole, including those of the British Isles, the United States, the colonies, and the missions. In all these countries the Anglicans have, according to the "Church of England Yearbook" for 1897, 3,122,526 and the free evangelical churches (Methodists, Baptists, Presbyterians, and Congregationalists), ac-

cording to official reports and estimates, 16,025,152. Adding to these a number of American religious bodies not exactly corresponding to any in England, statistics of which are given in the tables of the "Independent," New York, the whole number would be brought up to 20,500,000. As between the Established Churches in the British Empire and the English-speaking non-established churches, the numbers are 2,573,925 communicants in Established Churches, and 21,043,534 in non-established churches. The Rev. Dr. Charles A. Berry gave an account of his visit to the United States where he had been seeking by conference and addresses to promote the movement for federation. The federation report showed that 106 councils had been formed during the year, bringing the whole number up to 490. A process of consolidation had been carried on in the formation of district federations, of which 20 were named as already in existence. A series of united missions had been carried on in which half the local councils had taken part. Excellent spiritual results had followed these missions, and they had also been a means of bringing the leaders and workers of the different churches where they had been held into closer and living association. The preparation of parish maps with reference to regular house-to-house visitation had been encouraged by an offer of £5 to each council of more than fifteen churches which should undertake it for its own district. Twenty-six councils had prepared, or were preparing such maps. In the matter of a circulating library, 202 boxes of books had been sent to councils, each box containing about 50 volumes. The subjects of "Town Organization," "County Federation," "Slavery in Africa," "Secondary Education," and the relation of the free churches and the press were discussed. Alarm was expressed at the failure of her Majesty's servants to repress the systems of servitude which had arisen in Pemba and Zanzibar and in South Africa. In a resolution opposing the proposed establishment of a Roman Catholic University in Ireland, the council, "believing that the policy which has prevailed in the United Kingdom for many years of founding new universities on a national rather than on a sectarian basis, and freeing the older universities from denominational control, is a sound policy, favorable to social peace and good will, as well as essential to the highest educational efficiency," declared that it condemned, "as retrograde and dangerous the proposal to institute by authority either of the Crown or of Parliament and sustain by public money a Roman Catholic University in Ireland, as it would similarly condemn the proposal to institute a denominational university in England or Scotland," and instructed its committee vigorously to oppose any measure that might be brought before Parliament for the foundation of such a university.

FRIENDS. The Orthodox American Friends return for 1898 1,272 ministers, 830 churches, and 92,073 members. The other three bodies in America have, by the latest returns, no special enumeration for 1898 being given: The "Hicksites," 115 ministers, 201 churches, and 21,992 members; the "Wilburites," 38 ministers, 53 churches, and 4,329 members; and the Primitive Friends, 11 churches, 9 ministers, and 232 members, making for the whole society in America 1,436 ministers, 1,093 churches, and 118,626 members. These numbers show an increase during the year of 1,152 members in the Orthodox branch, while the number of ministers is 26 less, and that of churches shows no change. The Friends have seven institutions devoted to collegiate instruction, one new one, Friends' University, at Wichita, Kan., having been opened during the year by the Kansas Yearly Meeting. It occupies the building and property of the former Gar-

field University of the Disciples of Christ, which were purchased by James A. Davis, of St. Louis, Mo., and presented to the society. An enumeration of the large gifts that have been made to Friends' institutions in the United States begins with the donation of 45 acres of land and \$15,000 in money by Moses Brown, of Providence, R. I., early in the century, for the foundation of a Friends' school in the New England Yearly Meeting. This was followed by a gift from Mr. Brown's son, in 1827, of \$100,000 to the same institution for Friends' scholarships. Haverford College has received numerous gifts of from \$25,000 to \$30,000 from each donor, and the estate of Jacob P. Jones, who left the bulk of his property to this institution, is expected to add about \$1,000,000 more to its funds. Bryn Mawr College for women was founded by Dr. Joseph W. Taylor, who bought the land and began the construction of a building, when he died, leaving a residuary estate, which is valued at \$850,000, to the college. The last gift mentioned is that of Mr. Davis, of the property at Wichita. The foreign missionary work of American Friends is carried on in six countries outside of the United States, and in Alaska and among the American Indians. New England Friends have completed a building for a girls' training school near Jerusalem. A committee appointed in 1897 is engaged in preparing a uniform discipline for the thirteen Orthodox American yearly meetings that correspond with one another.

A large conference of "Hicksite" Friends was held at Richmond, Ind., at which important questions concerning the principles and work of that branch of the society were considered.

The returns of the whole society for 1898 show that at the close of 1897 the number of Friends registered throughout the world was 113,877, compared with 112,413—a gain of 1,464, or about 1.30 per cent. The chief gain (1,301) is in the United States, where the membership is given as 93,699. The whole number of Friends in Great Britain and its colonies and on the Continent of Europe is 20,178, a net gain for the year of 163. There are 14 yearly meetings of Friends on the American continent, 2 in Great Britain and Ireland, 5 on the Continent of Europe, and 6 in Australasia, with mission stations in every quarter of the globe. The whole number of "recognized ministers of the Gos-

pel" is 1,648. The foreign-mission stations return 1,860 native members, with 104 Bible schools, having an aggregate attendance of 5,102.

The London Yearly Meeting met May 16, beginning with the session of the meeting on Ministry and Oversight. The reports from the provincial meetings embodied many references to the importance of Bible study and of the efforts that have been made in different towns to promote it. The subject has been made more prominent than heretofore in the life of the society by the institution of a "summer school" at Scarborough, which has been largely attended, where addresses and lectures on subjects relating to religion, research, and scholarships have been delivered by eminent men both of the Society of Friends and of other denominations. A committee had been formed at the close of the summer school in August, 1897, for organizing this work by arranging courses of lectures and helping in the formation of local circles. It appeared at the meeting of this committee held during the session of the yearly meeting that seventeen courses of lectures on Bible study had been given in different centers. In the course of the discussion of the epistles from the American yearly meetings the question of correspondence with the branch of American Friends known as "Hicksite" was again raised. The London Meeting has hesitated to recognize these Friends in its correspondence, because the holding of communication with other bodies was supposed to imply a recognition of their orthodoxy, and the Hicksites were regarded as holding Unitarian doctrines. It was maintained, on the other hand, in the discussions at the present meeting that the Hicksites had adhered to the principles of conservative Quakerism, from which several of the bodies to whom epistles were addressed had departed to a greater or less extent. A proposition was made that a simple letter be sent to all who call themselves "Friends" in America stating the position of the London Meeting, but not in a controversial spirit. It was generally thought that the time had not yet come for opening correspondence with the Hicksite body, and the sense of the meeting was recorded as against the proposal. Among matters of missionary work, the attention of the meeting was given to the concerns of the industrial mission which had been established by Friends on the island of Pemba, for the instruction of freed slaves.

G

GAS, NATURAL. It has been known for centuries that gas or inflammable vapors issued from the earth in various localities. If these vapors became ignited, they continued to burn indefinitely, and the fires thus maintained were often regarded by superstitious persons with religious awe. Perhaps the first attempt to utilize the heat produced by these fires was made by the Chinese, who are said to use it for evaporating water from brine in order to procure salt. From the fact that a gas similar in properties and composition to natural gas is produced from decaying leaves, sticks, and other organic matter in the bottom of ponds, it has been held by some that all natural gas is produced from similar materials in a similar manner, and this explanation has been accepted by the majority of scientific men. Since the discovery of the method of producing calcium carbide in quantity and the method of generating acetylene by the action of water upon the carbide some have been inclined to think that natural gas may have been produced in a similar manner, namely, by the action of water on

metallie carbides in the interior of the earth. Those who accept this latter theory hold that the metallie carbides exist in the interior of the earth in vast quantities, and that water, finding its way downward, comes in contact with these carbides and generates natural gas and crude oil, which are prevented from rising to the surface of the earth by superimposed layers of rock. Both these theories have able advocates among scientific observers.

Natural gas has issued from the earth in southeastern Europe and southwestern Asia for centuries; but, as before stated, little if any effort has been made to utilize it or to increase the supply by drilling or other artificial methods. One of the first attempts to utilize it in the United States was made at Fredonia, N. Y., where it was used for illuminating when Lafayette visited this country in 1824. No serious attempt was made to procure natural gas by drilling until some years after the opening of the great petroleum fields of western Pennsylvania in 1859. During the excitement that followed the development of the petroleum deposits many

gas wells were drilled in searching for oil. The value of the gas was not at first realized, and vast quantities were permitted to waste by blowing out into the atmosphere. But gradually it was learned that it possessed high economic value as a heating agent, and, after some difficulty, crude appliances were devised for utilizing it. Natural gas was found in Ohio at Findlay in 1885 and was utilized to a considerable extent within a year after its discovery, owing to the fact that means of handling and controlling it could be obtained readily. Vast quantities were wasted, however, by allowing many of the wells to burn uselessly in the air. It has been estimated from reliable data that millions of dollars' worth of gas were wasted in this manner from the Findlay fields alone, saying nothing of the waste at other points in Ohio.

The Ohio and Indiana fields are practically the same so far as geological formations are concerned, but differ from each other in rock pressure, which fact shows them to be distinct as to rock reservoir. The general surface of the earth in Ohio and Indiana under which the gas is found is nearly level or gently undulating. In most portions of the Western gas fields the rock is covered with soil, though in some instances it comes directly to the surface. In most instances the accompanying engraving will represent fairly well the formations passed through by the drill.

The gas is found in the Trenton limestone. The soil above the Niagara limestone is usually soft loam or clay, though immediately between it and the Niagara limestone there is commonly a layer of sand or gravel. The Niagara formation is a hard grayish or yellowish limestone, which is traversed by numerous horizontal seams containing water. The Hudson river shale, immediately beneath it, is soft and compact in texture and contains no water. The line of demarcation between these strata is not distinct, but the lower portion of the limestone becomes more and more shaly, until it finally merges into the Hudson shale. Beneath the Hudson shale is the Utica or black shale, but the line of demarcation between it and the overlying Hudson is not usually distinct. When Trenton limestone is reached the line of demarcation is perfectly clear and well defined. The Trenton limestone is so much harder than the overlying shale that it is frequently possible to hear the first strokes of the drill after it reaches the Trenton. The hard, ringing blows of the drill on this formation are easily distinguished from the dull thud produced by the strokes in the shale. The upper surface of the Trenton is hard and compact and usually of a dark cinnamon-brown color. About a foot beneath its surface (in good territory) it becomes porous and lighter of color, though it still remains hard. In this porous portion the gas or oil is found. The porous or gas-bearing Trenton usually extends from 10 to 20 feet in depth, but in some instances as much as 60 feet.

When it is desired to drill a gas well, a derrick about 74 feet in height is erected, and to one side of it, at its base, is attached a large windlass, around which is coiled a rope a little more than 2 inches in diameter and from 1,000 to 2,000 feet long. This rope extends to the top of the derrick, where it passes over a pulley and thence downward to the center of the derrick, where it is attached to the drill stem, which is a heavy cylindrical steel bar about 4 inches in diameter and sometimes nearly 30 feet long. To the lower end of the drill stem is screwed the "bit," which is made of tool steel and is widened at its lower end

to the diameter desired for the well. The drill stem is given an up-and-down motion by attaching the rope to one end of a horizontal walking beam, which is set in motion by a steam engine some distance from the derrick. The first portion of the well is usually about 9 inches in diameter, so that it will readily admit an 8-inch pipe, which is introduced as soon as the Niagara limestone is reached. This pipe keeps the well free from sand and gravel and prevents caving. Its lower end enters the Niagara limestone a few inches. A smaller bit is now attached to the drill stem, which drills the well of such size that a 5½-inch pipe will

GEOLOGICAL SECTION SHOWING LOCATION OF THE GAS SUPPLY.

readily enter. As soon as the Hudson shale is reached and the driller feels sure that all water is passed, the 5½ pipe or "casing" is introduced. This pipe shuts all water out of the well, and another bit is attached to the drill stem, which will readily pass through the interior of the casing. The drilling now proceeds until Trenton limestone is reached, the drillings being removed from time to time by means of a "bailer."

Soon after the drill reaches the Trenton rock the gas begins to flow, and if the well proves to be large the flow increases until the roar of the escaping gas through the casing can be heard a long distance. As soon as the well is completed it is ready for the "packer." This is a hollow cylinder of rubber which nearly fits the well and is usually set just above the surface of the Trenton limestone.

Attached to the lower end of the cylinder is an open cage which permits the gas to pass through the interior of the rubber. Immediately above and immediately below the rubber is a cap of metal. Into the upper cap is screwed the pipe (usually two or three inches), which conveys the gas from the bottom to the top of the well. As soon as the pipe below the packer reaches the bottom of the well the weight of the pipe above bears down upon the upper cap, thus squeezing the rubber firmly outward against the wall of the well. This compels the gas to ascend through the central pipe, which is fitted with a valve at its upper extremity by means of which the gas may be controlled.

Wrought-iron or steel pipe is screwed into the valve, through which the gas may be conveyed to the point of consumption. If the gate valve is closed the pressure increases in the well to about 200 pounds in the Indiana field.

If the gas is to be used for city supply, it is piped to the limits of the city, and there the pressure is controlled by valves which work automatically and for domestic use reduce the pressure to a few ounces. Just before entering the stove the gas passes through an appliance called a "mixer," by means of which it is mingled with about ten times its volume of air, after which it burns with a blue flame, giving great heat and no smoke. It requires about 20,000 cubic feet of natural gas to equal a ton of soft coal in heating power, and about 30,000 cubic feet to equal a ton of anthracite coal. If desired, the gas may be used in connection with a thermostat, which will so regulate the supply for a heating stove that the room warmed by it will remain at the same temperature from one month's end to another. The writer has used one of these devices of his own invention for several years with the most gratifying results.

In the gas belt, the gas is also used exclusively for cooking, for which purpose it is admirably adapted. The price of gas per stove varies from \$1.50 to \$3 a month in the gas district, according to the expense of piping. Vast quantities of gas are used for manufacturing operations throughout the gas regions. Perhaps the most common establishment is the glass factory. These plants are quite numerous, as no other fuel is so well adapted to their operation as natural gas, and thus far no substitute can be furnished so cheaply. The gas is also used for firing steam boilers and for running gas engines, which latter give great power for the amount of gas consumed.

The composition of the gas is as follows: Carbon, 70.25; hydrogen, 21.45; sulphuretted hydrogen, 0.17; carbonic acid, 0.02; nitrogen (by difference), 8.11.

The natural gas consumed daily in the Indiana field alone may be roughly estimated at 200,000,000 cubic feet, which is equivalent in heating power to about 10,000 tons of soft coal. This would be equivalent to a consumption of 3,650,000 tons of coal a year.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; and 1,937,253 in 1890. Capital, Atlanta.

Government.—The following were the State officers during the year: Governor, William Y. Atkinson, succeeded, Oct. 29, by Allen D. Candler; Secretary of State, Allen D. Candler, succeeded by Philip Cook; Treasurer, W. J. Speer; Comptroller, William A. Wright; Attorney-General, Joseph M. Terrell; Adjutant General, J. M. Kell; State School

Commissioner, G. R. Glenn; Commissioner of Agriculture, Robert T. Nesbitt, succeeded by O. B. Stevens; Commissioner of Pensions, Richard Johnson; State Librarian, John Milledge; State Geologist, W. S. Yeates—all Democrats; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, H. T. Lewis, A. J. Cobb, W. A. Little, and W. H. Fish—all Democrats.

Finances.—The taxable valuation of the State in 1896 was \$413,307,369, and in 1897 it was \$412,321,369. The valuation of railroads for purposes of taxation was \$42,286,457. The State tax on the roads that are taxed on property was \$220,312.44, and the county taxes \$226,419.85. Four roads that are operated on old charters, which provide for taxes on their income, paid \$3,347.41 to the State, nothing to the counties.

Education.—The school population in 1893 was 604,971. The school money was distributed on this basis in 1897, though several counties reported an enrollment larger than the whole school population in 1893. The amount distributed was \$1,163,359.23. The teachers number more than 8,000. The State Commissioner says: "We have built more and better schoolhouses. We are tearing down the old plank shacks and the uncomfortable log huts, and we are erecting in their places cozy, modern school buildings, furnished with comfortable seats and modern appliances. Another significant movement is the centralizing of the schoolhouses and the changing of residences to a closer proximity to the schoolhouses. In both the town and country the sentiment is growing in favor of the same educational facilities for the country as we have provided for the towns and cities."

The Legislature appropriated \$10,000 to the State School of Technology, for adding a textile department on condition that an equal sum should be raised by subscription. This was done, and the City Council of Atlanta added \$3,000. Other gifts of money and machinery raised the total to more than \$33,000. It is expected that students will be received in February. The textile school will be a model mill.

Prisons.—The number of convicts in the Penitentiary, by the last report at hand, was 2,235, of whom 58 were women and 169 were boys. The number unable to work was 345.

Atlanta has been selected as the site for a new Federal prison.

Railroads.—From a report on railroad building during the first six months of the year, it is learned that the mileage in Georgia was increased by 62. In 1897 the increase was 119 miles. A road is in process of construction through the pine lands of the southwestern counties.

Products.—The report of the cotton consumption in 1897-'98 credits Georgia mills with 258,617 bales, an increase of 31,900. The annual product of the cotton fields is about 1,200,000 bales.

That Georgia is no longer a practically all-cotton State, as it was for some years after the war, is shown by statistics of other crops in recent years.

ALLEN D. CANDLER,
GOVERNOR OF GEORGIA.

Various methods have been used to encourage general farming by proving to landowners the adaptedness of the soil to the cultivation of grains and hay and the facility for cattle raising. The Georgia Southern and Florida Railroad has offered 6 prizes of \$25 each for the best acres of corn, wheat, oats, tobacco, strawberries, and garden truck; and at Albany an annual hay festival, inaugurated two years ago by the Hon. H. M. McIntosh, has for its object the increase of acreage devoted to that crop. Premiums are given by the Albany Board of Trade for the best crop on a five-acre plot, and for the second and third best, for the best ton of native hay exhibited, the best crop of peavine hay, and the best and second best hay floats.

The State at Omaha.—From an account by ex-Gov. Northen, chairman of the commission for making a display of the products of the State at the Trans-Mississippi and International Exposition, the following extracts are taken:

"It is of course known that under our Constitution the State could not appropriate money to make the necessary arrangements for suitable advertisement of our resources at Omaha. The commission therefore made direct appeal to the people and realized, in cash contributions, \$7,700. Of this amount \$3,150 were contracted to be paid for a State building, and \$450 were paid for the ground space for its erection. Georgia was the only Southern State represented by a State building, and the only State of all the States that installed its exhibit in its own building.

"For each of seven separate entries we received seven separate gold medals, as follows: First, State exhibit; second, fruits; third, building stones; fourth, aluminum ore and manufactured products; fifth, ornamental timbers; sixth, cotton seed and its products; seventh, the best small farm, by John A. Mangett, of Marietta. We were awarded two silver medals, as follow: First, mica, graphite, and asbestos; second, grains, grasses, and cotton. We were awarded seven bronze medals, as follow: First, for gold ores; second, for clays; third, for iron and manganese; fourth, for timber specimens; fifth, for cheese; sixth, for Indian corn; seventh, for sugar cane and sirup."

Immigration.—In June 51,000 acres in the southeastern part of the State were bought by the Shaker Society, of Union Village, Ohio, for the location of a colony. Other large sales of lands for colonies have been reported—one of 5,000 acres near Baxley, on which it is designed to plant a colony of farmers from the northwest, and one of 12,000 acres near Jessup for a colony of Dunkards from Ohio, Minnesota, and other States. Both these tracts are in southeastern Georgia. A site for a colony of Mennonites has been selected at Lithia Springs, De Kalb County, about 18 miles from Atlanta.

Damage by Storm.—A storm swept over southwestern Georgia about Oct. 2. There was little damage at Savannah, but the losses in Brunswick were heavy, and the cotton and rice crop suffered severely. Many persons were rescued by boats from second-story windows in Brunswick, and the livery stables were flooded so that it was necessary to quarter some of the horses in the Baptist church. On the wharves there was great destruction of property, naval stores in quantities being swept away.

The loss of life there was remarkably small, the only deaths reported being four negroes, two of them children; but the loss of life on the sea islands was believed to be large.

Mob Violence.—A negro was lynched near Griffin, Aug. 8, and one near Quitman, Aug. 21, both for attempted assaults on white women. Another negro, charged with murder, was put to death by a

mob of people of Fredonia and West Point, Oct. 23, according to an Associated Press dispatch. At Augusta, Nov. 22, a mob made an attack upon the jail to take a negro held for attempted assault. The jailer resisted, and in the fight that followed a volunteer soldier who was at home on furlough was shot and mortally wounded. The attempt at lynching was then abandoned, and the negro was tried, Nov. 5, and sentenced to twenty years in the Penitentiary. At Monticello a negro named Merriwether, who was lynched for murder, made a confession implicating three others, whereupon the mob, after disposing of him, "rushed back to the jail to get the other negroes, who had been arrested on suspicion. Ropes were put around their necks, and they were dragged to the place where Merriwether's bullet-riddled body was hanging. A large number of citizens rushed to the scene. It was only by the most vigorous efforts that this lynching was prevented. One of the negroes was about to be drawn up on a limb when a young white man jumped forward and cut the rope. The mob then gave up, and the three negroes were turned over to the sheriff." On Dec. 6 another negro, suspected of complicity in the murder, was lynched near Monticello.

At Wood's Bridge, Dec. 24, a negro charged with murder and arson was taken from the officers on the way to jail and lynched. In June the grand jury was engaged in the investigation of the alleged demolition of a general merchandise store in Chickamauga by two regiments of soldiers, said to be Pennsylvania and Illinois troops. According to the statement, "the men reached Chickamauga and a few of the hungry soldiers stepped into Berger's store to buy food. While he was waiting on the men their comrades made a rush into the store and began to help themselves. Berger made an effort to stop the robbery, but was helpless against hundreds of reckless soldiers. He had to stand and see the men demolish his store and carry off its contents. The soldiers did not confine their foraging to the eatables, but took the dry goods and wasted what was not wanted. There were other disorders in the neighborhood of Chickamauga and Lytle connected with the attempted enforcement of liquor laws.

The State Boundary.—Georgia and Tennessee have a boundary dispute which involves possession of the city of Chattanooga. The present boundary line places the city in Tennessee, but several expert geographers have recently found information which goes to show that the boundary line is not located properly. The boundary line between the States is the thirty-fifth parallel of north latitude, and this was located by a survey in 1818 at a point one mile south of Tennessee river. Georgia will claim that a correct survey will place the thirty-fifth parallel north of Lookout mountain, and that more than 100,000 citizens of Tennessee will have to become citizens of Georgia.

Peace Jubilee.—Dec. 14 and 15 were set for a jubilee in Atlanta over the return of peace, but the President sent a telegram in November requesting the committee to change the name of the celebration from "peace jubilee" to a demonstration over "our victorious arms," giving as the reason for the change "the uncertain outcome of the Paris conference and the exigencies which may arise." The executive committee of the celebration held a special meeting and decided to call the demonstration "the Atlanta jubilee." The President addressed the Legislature, Dec. 14, and a banquet was given on the evening of Dec. 15. The President also made speeches in other cities. At Macon an address of welcome was given by the commander of the Bibb County Veterans' Association and Bibb County Camp, No. 484, in which he said:

"You, sir, have endeared yourself to the hearts of all Confederate soldiers on account of the noble sentiments expressed by you in regard to our Confederate dead. I assure you that these old, maimed, and infirm veterans who have met here to do you honor to-day appreciate such words of love and kindness, and uttered, too, by the President of this great country and by one who was a member of the Union army in the sixties. I hope and pray, Mr. President, that God in his infinite mercy may so direct the future legislation of this country that the living Confederates will be remembered. This country and the Stars and Stripes belong as much to the Confederate veterans as to the Grand Army of the Republic. The South proved its loyalty to this grand old country when war was declared with Spain, and now, henceforth, and forever she will be found ready to take up arms to defend our country and our flag. Mr. President, on behalf of these brave and maimed Confederate soldiers of Bibb County, Georgia, I present to you this parchment, engrossed in letters of gold, the beautiful sentiment expressed by you in our capital city in regard to our honored dead."

Another Confederate veteran offered the President a badge of a Confederate Veterans' Association, which was accepted and worn by the President during his stay in Macon.

Legislative Session.—This began Oct. 28, and ended in December.

President McKinley made a speech before the joint session on Dec. 14, and the following passage was received with great enthusiasm:

"Every soldier's grave made during our unfortunate civil war is a tribute to American valor. And while, when those graves were made, we differed widely about the future of the Government, those differences were long ago settled by the arbitrament of arms, and the time has now come in the evolution of sentiment and feeling, under the providence of God, when in the spirit of fraternity we should share with you in the care of the graves of the Confederate soldiers."

The following resolutions were unanimously adopted, Dec. 15:

"*Resolved*, By the House, the Senate concurring, that as the chosen representatives of the people of Georgia we desire to express our high appreciation of the chaste, eloquent, and enthusiastic address delivered in the presence of this General Assembly in the hall of the House of Representatives on yesterday by his Excellency, William McKinley, President of the United States.

"*Resolved, further*, That President McKinley by his ready recognition of Southern ability and Southern worth in military appointments made at the outbreak and during the recent Spanish-American War won a warm place in the hearts of all of our people and endeared himself to the country at large.

"*Resolved, further*, That we desire especially to commend and applaud the generous and soldierly suggestion made by his Excellency that the North should share in the care of the graves of the Confederate soldiers.

"*Resolved, further*, That the Secretary of the Senate and the clerk of the House of Representatives be instructed immediately after the adoption of these resolutions to have a copy of the same enrolled and duly attested and that they deliver the same to his Excellency, the President, in person, before he leaves the capital of the State."

Among the important measures before the Legislature were several designed to reduce State expenditures and lower the rate of taxation. It is estimated that those which were adopted will reduce the rate from 6.21 mills to 5.36 mills. The most important act in this direction was the re-

duction of the common-school appropriation from \$1,000,000 to \$800,000.

Measures were proposed also for making taxation more equitable and reaching property that escapes paying its just proportion. A set of questions was prepared and embodied in the general tax bill. They call for exact answers as to the quantity and value of the various kinds of property, and every taxpayer is to be required to answer them under oath. Further, a resolution was passed providing for the appointment of a board of tax commissioners to consider the tax problem in its different phases and to report at the next session of the General Assembly in 1899.

In the House 435 bills and 149 resolutions were introduced, and 157 of them were passed. The number passed of those originating in the Senate was 37.

Political.—A Governor and other State officers were to be elected in October. The candidates of the Democratic party were chosen at the primaries, June 6, and were nominated by the State convention held in Atlanta, June 29. The platform declared the war with Spain to be "just and righteous," and demanded that Spain be driven from the Western Hemisphere. It urged the construction of the Nicaragua Canal, and declared in favor of the free coinage of gold and silver at the ratio of 16 to 1. On State issues it approved the uniform primaries called by the State Executive Committee to ascertain the choice of the people for the nominations to be made by the convention, and instructed the committee to make similar provision for choosing future candidates for State offices, and to declare the official form of a ballot for use at the primaries, containing the names of all candidates to be voted for, and allowing no other to be recognized. It favored the nomination of candidates for the Senate by direct vote of the people. It commended the existing State administration and called for liberality to the public schools; and said further:

"We commend the last General Assembly for the improvement inaugurated in the State Penitentiary system, and we urge upon the prison commissioners to give immediate attention to the establishment of a reformatory for youthful criminals.

"We refer with pride to the fact that the State of Georgia has been more liberal than any other State in the matter of pensions to Confederate veterans, and we believe it is the duty of the General Assembly to make adequate provisions, for the future, for all Confederate veterans and the widows of Confederate veterans who are in dependent or needy circumstances."

The candidates were: For Governor, Allen D. Candler; Secretary of State, Philip Cook; Attorney-General, Joseph M. Terrell; Comptroller General, William A. Wright; Commissioner of Agriculture, O. B. Stevens; Commissioner of Schools, G. R. Glenn; Treasurer, W. J. Speer; Prison Commissioner, J. S. Turner.

The Populists held a convention in March and nominated Thomas E. Watson for Governor. He declined to run and J. R. Hogan was afterward made the candidate. Republicans and Populists fused in many of the districts.

The total vote for Governor, Oct. 5, was 164,089—about 20 per cent. less than that of 1896. The Democrats carried the election by large majorities; Candler's was given as 67,923 (not official). The Democratic vote in the Legislature is overwhelming. All the eleven Congressmen elected are Democrats. A proposition to amend the Constitution so that the judges and solicitors of the Superior Court shall be elected by the people was carried. The city of Atlanta decided in favor of municipal ownership of the electric-light plant.

GERMAN EVANGELICAL CHURCH. The German Evangelical Synod of North America returns for 1898 872 ministers, 1,130 churches, and 199,234 communicants. The figures show a decrease of 6 ministers and an increase of 4,618 communicants, while the number of congregations remain the same as in 1897. The General Conference held its triennial session at Quincy, Ill., Sept. 20 to 29. The Rev. Paul L. Mengel, D. D., of Richmond, Va., was appointed a delegate to represent the Synod at the dedication of the Evangelical Church in Jerusalem, to take place Oct. 31. A question of several years' standing respecting the legal position of the teachers in the parochial schools was settled by granting them a full representation in the General Conference; the revision of the constitution of the Synod was proceeded with; a board of home missions was instituted; the publication of a hymn book and of a Sunday-school paper, both in the English language, was authorized. Measures were taken looking to the celebration of the semi-centennial anniversary, the theological institution of the church, July 4, 1900, and in reference to further provision for the educational institutions, to the reduction of the indebtedness of the Church and to the enlargement of its publishing house.

GERMANY, an empire in central Europe composed of the federated German states. The King of Prussia is German Emperor, and as such has supreme charge of military and political affairs, and power to make war or conclude peace, except that for an offensive war he must have the consent of the federated states and princes. There are two legislative bodies—the Bundesrath, representing the federated states, and the Reichstag, representing the German people. The acts on which they agree become law on receiving the Emperor's assent and being countersigned by the Chancellor of the Empire. The Bundesrath has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 124,500 of population, elected for five years by universal manhood suffrage and by secret ballot.

The German Emperor is Wilhelm II, born Jan. 27, 1859, who succeeded his father, Friedrich III, King of Prussia and German Emperor, on June 15, 1888. The heir apparent is the Emperor's eldest son, Prince Friedrich Wilhelm, born May 8, 1882.

The Chancellor of the Empire is Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894. The following were the secretaries of state in charge of the various departments at the beginning of 1898: Ministry of Foreign Affairs, B. von Bülow; Secretary of the Interior and Representative of the Chancellor, Graf Posadowsky-Wehner; Secretary of the Imperial Marine, Rear-Admiral Tirpitz; Ministry of Justice, Dr. A. Nieberding; Imperial Treasury, Freiherr von Thielmann; Imperial Post Office, Lieut.-Gen. von Podbielski; Imperial Railroads, Dr. Schulz; Imperial Exchequer, Herr von Wolff; Imperial Invalid Fund, Dr. Rösing; President of the Imperial Bank, Dr. Koch; Imperial Debt Commission, Herr von Hoffmann.

Area and Population.—The area and population of the states of the empire according to the completed returns of the census of 1895, compared with the population at the last preceding census period, are given in the table at the head of the next column.

The total population in 1895 was divided into 25,661,250 males and 26,618,651 females. The number of marriages in 1895 was 414,218; of births, 1,941,644; of deaths, 1,215,854; excess of births, 725,790. The number of emigrants in 1896 was 33,824, of whom 29,007 went to the United States, 1,001 to Brazil, 2,152 to other parts of America, 1,346 to Africa, 144 to Asia, and 174 to Australia.

STATES.	Square miles.	POPULATION	
		Dec. 1, 1890.	Dec. 2, 1895.

Total	208,830	49,428,470	52,279,901

There sailed in 1896 from German ports 95,803 emigrants of other countries than Germany. Of the German emigrants who embarked at German, Dutch, and Belgian ports, 17,549 were males and 14,513 females. There were 3,907 families, numbering 12,770 persons. The emigration from Germany to the United States since 1871 has been 2,404,782; the total emigration from 1820 to 1896, about 5,230,000. The emigration to Brazil since 1871 has been 49,440. Of the emigrants of 1896, not counting 1,710 who sailed from French ports, 19,459 were Prussians, 3,418 Bavarians, 2,121 from Württemberg, 1,080 from Baden, 1,303 from Saxony, 1,644 from Hamburg, 558 from Hesse, 645 from Bremen, 345 from Mecklenburg-Schwerin, 340 from Oldenburg, and 268 from Alsace-Lorraine.

Finances.—The customs, stamp, and excise duties, and the profits of the imperial railroads, the post office, and the telegraph service are the chief resources from which are defrayed the common expenditures of the empire; but, as these are insufficient, the deficit is made up by matricular contributions from the states assessed in proportion to their population. The total revenue for the year ending March 31, 1898, was estimated in the budget at 1,295,468,300 marks, of which 653,131,500 marks came from customs and excise duties, 61,873,000 marks from stamps, 41,253,100 marks from posts and telegraphs, 1,546,300 marks from the imperial printing office, 25,405,600 marks from railroads, 3,506,100 marks from the Imperial Bank, 17,378,500 marks from various departments, 28,683,000 marks from interest of the Invalid fund, 411,100 marks from various ordinary sources, 47,459,900 marks from extraordinary sources, and 414,824,700 marks from the federal contributions. The customs receipts amount to 372,480,000 marks; tobacco duty, 11,293,000 marks; sugar duty, 81,000,000 marks; salt duty, 45,669,000 marks; spirit duty, 115,783,000 marks; duty on beer, 26,843,000 marks. Bavaria, Württemberg, Baden, and Alsace-Lorraine, which have their own postal and telegraph services, collect and expend the beer duty separately, furnishing in compensation higher matricular contributions. The stamp duties turned into the imperial treasury are 1,366,000 marks from playing cards, 8,183,000 marks from letters of exchange, 51,521,000 marks from securities, bills, lottery tickets, etc., and 803,000 marks from certificates. The gross receipts of the

posts and telegraphs amount to 314,683,150 marks, and expenses to 273,726,968 marks; the gross receipts of the imperial printing office to 6,317,000 marks, and expenses to 4,770,841 marks; the gross railroad receipts to 70,431,000 marks, and expenses to 45,052,600 marks. There was a surplus of 12,107,690 marks remaining over from 1897.

The total imperial expenditure for 1898 was estimated at 1,307,576,000 marks, of which 1,168,210,500 marks are the ordinary recurring expenditures and 139,365,500 marks non-recurring and extraordinary expenditures. Of the recurring expenditures 653,200 marks are for the Reichstag, 159,200 marks for the Imperial Chancellery, 10,961,600 marks for the Ministry of Foreign Affairs, 36,712,200 marks for the Ministry of the Interior, 486,409,000 marks for the army, 58,925,300 marks for the navy, 1,981,000 marks for the Ministry of Justice, 409,151,300 marks for the imperial treasury, 357,000 marks for the railroad office, 76,191,300 marks for the debt of the empire, 740,500 marks for the audit office, 57,459,400 marks for the Pension fund, and 28,504,500 marks for the Invalid fund. The total expenditure for the army is 539,973,000 marks, and for the navy 116,974,000 marks, including 97,936,355 marks of extraordinary expenses for the army and 58,094,968 marks for the navy. Of the other extraordinary expenditures 8,440,000 marks were for railroads, 8,434,520 marks for foreign affairs, 8,297,828 marks for posts and telegraphs, and 9,298,377 marks for the Invalid fund. Of the federal contributions for 1898 Prussia pays 243,490,000 marks, Bavaria 54,237,000 marks, Saxony 28,931,000 marks, Württemberg 19,047,000 marks, Baden 14,391,000 marks, Alsace-Lorraine 13,692,000 marks, Hesse 7,942,000 marks, and the smaller states and free cities in proportion.

The debt of the empire on March 31, 1896, amounted to 2,245,273,100 marks, of which 450,000,000 marks were borrowed at the rate of 4 per cent. per annum, 790,000,000 marks at 3½ per cent., and 885,355,100 marks of old debts paying 3½ per cent. were refunded at 3 per cent., and new obligations emitted since 1890 at 3 per cent.

The Invalid fund on March 31, 1896, amounted to 447,708,993 marks. The war treasure of 120,000,000 marks is hoarded in gold at Spandau.

The following table gives, in marks, the budgets and debts of the different states for 1898 or, in the case of a few, for 1897:

STATES	Revenue.	Expenditure.	Debt.
Alsace-Lorraine.....	53,503,396	52,619,060	24,115,000
Anhalt.....	22,861,250	22,861,250	773,124
Baden.....	81,506,809	87,520,764	335,172,885
Bavaria.....	345,356,505	345,356,505	1,418,443,185
Bremen.....	18,546,681	26,447,631	142,359,833
Brunswick.....	16,300,500	16,300,500	27,408,738
Hamburg.....	73,352,612	75,967,263	325,495,781
Hesse.....	37,378,000	37,316,000	163,400,000
Lippe.....	1,194,318	1,194,318
Lübeck.....	4,573,427	4,573,427	19,120,620
Mecklenburg-Schwerin	3,952,000	3,952,000	113,531,600
Mecklenburg-Strelitz..	6,000,000
Oldenburg.....	10,369,137	8,949,581	50,690,709
Prussia.....	2,046,031,385	2,046,031,385	6,498,138,631
Reuss-Grütz.....	1,332,418	1,332,418	61,050
Reuss-Schleiz.....	2,396,900	2,379,734	1,040,550
Saxe-Altenburg.....	4,057,798	4,056,189	887,459
Saxe-Coburg-Gotha.....	5,313,743	5,985,558	2,924,858
Saxe-Meiningen.....	7,624,330	6,802,800	9,174,331
Saxe-Weimar.....	9,656,218	9,656,218	4,870,943
Saxony.....	77,601,250	77,604,250	716,963,900
Schaumburg-Lippe.....	1,029,210	1,029,210	360,000
Schwarzburg-Rudolstadt	2,778,050	2,778,050	3,884,000
Schwarzburg-Sondershausen	2,964,753	2,964,755	3,044,145
Waldeck.....	1,410,428	1,410,428	2,037,000
Württemberg.....	74,123,540	74,608,813	473,878,700

Against the debts must be offset the productive state property for which they were mainly incurred,

fully covering the debt of Alsace-Lorraine, Baden, Bavaria, Bremen, Hamburg, Mecklenburg-Schwerin, Mecklenburg-Strelitz, Oldenburg, Saxe-Coburg, Saxe-Meiningen, Saxe-Weimar, and Württemberg, and amounting to 5,535,622 marks in Anhalt, 42,000,000 marks in Brunswick, 154,100,000 marks in Hesse, 5,544,120 marks in Saxe-Altenburg, and 838,403,742 marks in Saxony.

The Army.—By the law of Aug. 3, 1893, which continues in force till the end of the fiscal year 1899, the average peace strength of the imperial army is 479,229 men, exclusive of volunteers of officers and of surgeons, paymasters, and other non-combatants. The number of young men arriving at the age of twenty every year is about 400,000, of whom 10 per cent. are unfit for service by reason of physical or moral defects, or are lost by emigration, or join the army as volunteers. Of those who are available, men enough are drawn by lot to fill up the ranks of the active army, in which they serve two years, except in the cavalry and horse artillery, in which the term of active service is three years. The one-year volunteers, numbering about 8,000, are not counted in the budget strength of the regular army, which for 1898 was as follows: 215 regiments of infantry, numbering 12,048 officers and 363,113 men; 19 battalions of rifles, 410 officers and 12,013 men; 288 depots, 797 officers and 5,478 men; 2,684 surgeons, instructors, etc., making the total infantry 13,255 officers and 383,288 men; 93 regiments of cavalry, 2,375 officers and 65,688 men, exclusive of 823 officers and men on special service; 43 regiments of field artillery, 2,671 officers and 57,997 men, exclusive of 810 officers and men on special service; 17 regiments and 1 battalion of foot artillery, 869 officers and 22,734 men, exclusive of 132 officers and men on special service; 23 battalions of pioneers, 2 balloon detachments, 3 regiments of railroad troops, 1 railroad battalion, and 3 railroad companies, 738 officers and 19,086 men, exclusive of 126 on special service; 21 battalions of train, 310 officers and 7,750 men, exclusive of 69 on special service; special formations containing 506 officers and 3,570 men; and 2,364 non-regimental officers, with 279 men, making the total strength on the peace footing 23,088 officers and 563,352 men, with 97,850 horses. The battalion in the German army has a normal peace strength of 544 men, and in war is raised by calling in a part of the reserves to 1,002 men. There are 494 field batteries, including 47 mounted batteries, each consisting in time of peace of 4 and in war of 6 guns. Every one of the 21 *corps d'armée* can be mobilized independently, as it includes troops of all arms, auxiliary services, and all the stores and equipments necessary for action as a separate army.

The Navy.—The effective navy on Jan. 1, 1898, consisted of 6 first-class, 4 second-class, and 6 third-class battle ships, 19 armored gun vessels and old ironclads suitable for coast defense, 2 first-class and 6 second-class cruisers, 11 lookout ships, and 105 first-class and 9 second-class torpedo craft. Besides these a battle ship of the first class, 2 cruisers, a lookout ship, and 6 destroyers were building.

The *personnel* of the navy at the beginning of 1898 consisted of 1,014 officers and engineers, 5,389 petty officers, 16,778 seamen, and 222 surgeons, paymasters, and gunsmiths, making the total number of men 23,403.

Commerce and Production.—The production of wheat in 1897 was 3,008,385 metric tons; of rye, 7,232,320; of barley, 2,317,334; of oats, 4,968,272; of buckwheat, 95,205; of potatoes, 29,278,132; of sugar beets, 12,616,432; of other beets and turnips, 10,526,403; of hops, 25,325; of wine, 5,050,808 hectolitres. The quantities of minerals produced in 1896 were 85,639,900 tons of coal, 26,797,900 of

lignite, 14,162,300 of iron ore, 729,900 of zinc ore, 154,700 of lead ore, 717,300 of copper ore, 755,800 of rock salt, 1,780,400 of potassic salt, and 286,600 of other products. Of pig iron 5,464,501 tons were produced in 1895; of zinc, 150,286 tons; of lead, 111,058 tons; of copper, 25,777; of silver, 392; of tin, 884; of sulphur and sulphuric acid, 539,989; of gold, 3,547 kilogrammes; of nickel, bismuth, and other products, 30,809 tons; of manufactured iron, 6,193,480 tons. There were 1,537,522 tons of raw sugar and 328,463 tons of molasses produced in 1896 from 11,672,816 tons of beet root. The beer brewed amounted to 37,733,000 hectolitres in the imperial excise district, 16,034,000 in Bavaria, 3,885,000 in Württemberg, 1,914,000 in Baden, and 997,000 in Alsace-Lorraine; total, 60,563,000 hectolitres. The production of alcohol was 3,334,000 hectolitres.

The special imports in 1896 into the imperial customs territory, which contains 52,485,807 inhabitants, and includes Luxemburg and two communes in Austria, but does not include the free ports reserved in Hamburg and Bremen nor certain petty districts in Prussia and Baden, were valued at 4,557,951,000 marks, and the special exports at 3,753,822,000 marks. The imports of live animals were 157,749,000 marks, and exports 23,951,000 marks; imports of animal products, 117,498,000 marks, and exports 26,361,000 marks; imports of articles of consumption, 1,324,266,000 marks, and exports 426,752,000 marks; imports of seeds and plants, 53,237,000 marks, and exports 32,500,000 marks; imports of fuel, 116,854,000 marks, and exports 165,157,000 marks; imports of fats and oils, 245,395,000 marks, and exports 31,656,000 marks; imports of chemicals, drugs, and dyes, 284,225,000 marks, and exports 360,743,000 marks; imports of stone, clay, and glass, 64,014,000 marks, and exports 155,005,000 marks; imports of metals and metal manufactures, 471,500,000 marks, and exports 658,929,000 marks; imports of wood manufactures, 274,173,000 marks, and exports 124,550,000 marks; imports of paper and paper manufactures, 21,776,000 marks, and exports 106,985,000 marks; imports of leather and leather manufactures, 211,353,000 marks, and exports 216,480,000 marks; imports of textile materials and manufactures, 1,040,828,000 marks, and exports 957,422,000 marks; imports of rubber and rubber manufactures, 45,639,000 marks, and exports 31,916,000 marks; imports of machinery and instruments, 69,888,000 marks, and exports 212,656,000 marks; imports of hardware, etc., 18,495,000 marks, and exports 100,854,000 marks; imports of works of literature and art, 41,061,000 marks, and exports 120,727,000 marks; various other exports, 1,178,000 marks. The imports of horses were 73,594,000 marks in value; of hogs, 6,873,000 marks; of wheat, 197,943,000 marks; of rye, 85,491,000 marks; of barley, 108,850,000 marks; of coffee, 189,294,000 marks; of petroleum, 57,481,000 marks; of hides, 114,775,000 marks; of raw cotton, 238,810,000 marks; of wool, 237,125,000 marks; of woollen yarn, 114,084,000 marks; of raw silk, 83,567,000 marks. The exports of sugar were 236,352,000 marks; of coal and coke, 157,882,000 marks; of hops, 19,556,000 marks; of aniline colors, 64,932,000 marks; of wooden wares, 57,517,000 marks; of paper, 67,364,000 marks; of leather goods, 77,268,000 marks; of coarse cottons, 62,869,000 marks; of mixed silk and cotton cloth, 98,327,000 marks; of woollen cloth, 149,904,000 marks; of hosiery, 92,185,000 marks; of haberdashery, 121,499,000 marks. Of the total imports in 1896 the value of 2,336,369,000 marks paid duties, and the value of 2,221,582,000 marks was free of duty. The gold and silver imports in 1896 were 233,552,000 marks, and the exports 227,989,000 marks.

The participation of the different countries in the commerce of the German customs union in 1896 is shown in the following table, giving, in marks, the values of the imports from and of the exports to each country:

COUNTRIES.	Imports.	Exports.
German free ports.....	15,801,000	40,456,000
Great Britain.....	647,773,000	715,946,000
Austria-Hungary.....	578,032,000	477,324,000
Russia.....	634,671,000	364,142,000
Netherlands.....	162,632,000	262,265,000
France.....	233,587,000	201,533,000
Switzerland.....	146,343,000	243,953,000
Belgium.....	175,702,000	168,000,000
Italy.....	137,484,000	85,630,000
Norway and Sweden.....	93,109,000	127,144,000
Denmark.....	58,224,000	97,417,000
Spain.....	35,942,000	39,428,000
Balkan countries.....	114,830,000	72,702,000
Portugal.....	15,226,000	13,412,000
British India.....	171,163,000	49,179,000
Other countries in Asia.....	132,324,000	99,123,000
Africa.....	88,588,000	57,457,000
North America.....	640,142,000	424,766,000
South America.....	369,417,000	182,307,000
Australia.....	104,464,000	30,044,000
All other countries.....	2,498,000	1,574,000
Total.....	4,557,951,000	3,753,822,000

The Prussian Minister of Finance on Jan. 30, 1898, issued an order prohibiting on sanitary grounds the importation of fresh fruits from the United States. The ostensible cause for this interdiction, which was suspected to be a protectionist measure for the benefit of German fruit-growers and a retaliation for the differential duty placed on sugar from bounty-paying countries, was the discovery of the San José scale in a consignment of Californian pears. Negotiations were carried on with foreign governments during 1898 for new commercial treaties. The Anglo-German treaty, which the British Government had denounced in order to secure preferential treatment for British goods from Canada, expired on July 30, 1898. In accordance with a special law enacted on May 11, a *modus vivendi* was proclaimed for one year, according most-favored-nation treatment to imports from the United Kingdom and from British colonies and possessions which do not impose heavier duties on German than on British goods.

Navigation.—The number of vessels entered at German ports during 1895 was 66,688, of 15,183,222 tons, of which 57,436, of 14,225,271 tons, were with cargoes and 9,252, of 957,951 tons, in ballast. The total number cleared was 67,142, of 15,285,527 tons, of which 49,948, of 10,227,895 tons, were with cargoes and 17,194, of 5,057,632 tons, in ballast. There were 41,287 German ships, of 7,340,252 tons, entered with cargoes and 7,121, of 566,789 tons, in ballast, and 16,149 foreign ships, of 6,885,019 tons, entered with cargoes and 2,131, of 391,162 tons, in ballast. Of the total number cleared 38,803, of 6,505,186 tons, were German and 11,145, of 3,722,709 tons, foreign ships carrying cargoes and 10,164, of 1,526,031 tons, German and 7,030, of 3,531,601 tons, foreign ships in ballast. Of the foreign ships entered with cargoes 5,462, of 4,581,352 tons, were British; 4,638, of 748,619 tons, Danish; 3,053, of 599,122 tons, Swedish; 1,312, of 206,593 tons, Dutch; 948, of 391,906 tons, Norwegian, and 510, of 168,152 tons, Russian. Of the number cleared with cargoes 3,017, of 2,017,222 tons, were British; 4,232, of 633,983 tons, Danish; 1,807, of 409,884 tons, Swedish; 1,011, of 182,001 tons, Dutch; 632, of 246,940 tons, Norwegian, and 281, of 93,528 tons, Russian.

The merchant navy of Germany on Jan. 1, 1897, comprised 2,552 sailing vessels, of 597,617 tons, and 1,126 steamers, of 889,960 tons. Of the sailing vessels 509, of 76,703 tons, belonged to Baltic and 2,043, of 520,914 tons, to North Sea ports, and of

the steamers 389, of 142,818 tons, to Baltic and 737, of 747,142 tons, to North Sea ports. The number of sailors was 40,805. Of the sailing vessels 496, and of the steamers 1,119 were constructed entirely of iron or steel. There were 29 sailing vessels and 268 steamers over 2,000 tons, 218 sailing vessels and 185 steamers between 1,000 and 2,000 tons, 114 sailing vessels and 231 steamers between 500 and 1,000 tons, 414 sailing vessels and 309 steamers between 100 and 500 tons, and 1,777 sailing vessels and 133 steamers under 100 tons.

Communications.—There were 28,882 miles of railroads in operation on Jan. 1, 1897, of which 26,065 miles were owned by the imperial and state governments and 183 miles of private lines were operated by the Government, while 2,634 miles remained in the hands of companies. There were, besides, 1,942 miles of private railroads not open to public traffic. The capital expenditure on the state railroads was 11,481,738,000 marks. The total receipts in 1896 were 1,504,375,000 marks. Expenses, 856,722,000 marks. There were 592,333,000 passengers transported during the year, paying 405,973,000 marks, and 248,055,000 tons of freight, paying 984,103,000 marks.

The number of letters that passed through the imperial post office and the separate post offices of Bavaria and Württemberg in 1896 was 1,395,405,590; of postal cards, 509,534,530; of printed inclosures, 668,296,280; of samples, 41,262,690; of newspapers, 1,126,816,947. The amount of money sent was 22,600,006,382 marks. The receipts from the post office and telegraph service were 339,792,074 marks; expenses, 308,134,429 marks. There were 72,220 miles of telegraph lines, with 282,949 miles of wire, in the imperial postal territory; 8,961 miles of lines, with 28,961 miles of wire, in Bavaria; and 3,189 miles of line, with 8,915 miles of wire, in Württemberg; total, 84,370 miles of line and 320,825 miles of wire. The telegrams forwarded numbered 24,540,795 internal, 9,811,642 foreign in the *Reichs-postgebiet*, 2,098,822 internal and 559,873 foreign in Bavaria, and 1,184,220 internal, and 196,872 foreign in Württemberg; total, 27,823,837 internal and 10,568,387 foreign.

Colonies.—The colonial Empire of Germany dates only from 1884. Shores of Africa and islands of the Pacific not yet claimed by European powers began to be occupied and declared German protectorates with the object of obtaining new fields for the growing foreign commerce of Germany and colonies in which German emigrants would remain loyal subjects instead of becoming American citizens. The regions in Africa taken under German protection between 1884 and 1890 have a total area of 920,920 square miles and a native population estimated at 10,200,000. (See CAPE COLONY AND SOUTH AFRICA, EAST AFRICA, and WEST AFRICA.) In the Pacific the part of southeastern New Guinea to which the name of Kaiser Wilhelm Island was given, and the Bismarck Archipelago, previously known as New Britain, were proclaimed German protectorates in 1885, and in the following year the Northern Solomon Islands and the Marshall Islands.

Kaiser Wilhelm Island, including Long Island, Dampier Island, etc., has a total area of about 70,000 square miles, with a population estimated at 110,000. Cotton and tobacco are planted, and horses, cattle, and goats have been introduced. The coconut palms are well taken care of. Areca and sago palms, bamboos, and ebony and other cabinet woods abound in the forests. Besides copra, trepang and mother-of-pearl are bartered by the natives for trade goods. Gold was discovered in 1897 in the Bismarck mountains. The revenue for 1897 was estimated at 93,000 marks, and expenditure at 273,000 marks.

The Bismarck Archipelago comprises the islands once known as New Britain, New Ireland, and the Duke of York Islands, together with New Hanover, Admiralty, Anchorite, Hermit, and other islands. The total area is about 20,000 square miles; population, 188,000. The exports are copra and coconut fiber.

Bougainville, Choiseul, and Isabel are the principal islands in the part of the Solomon Islands belonging to Germany, the area of which is about 9,000 square miles, with 89,000 population. The chief exports are sandalwood and tortoise shell.

The administration as well as the trade of Kaiser Wilhelm Island, the Bismarck Archipelago, and the Solomon Islands, has been given over to the German New Guinea Company, which has three steamers and numerous sailing vessels. There were 164 Europeans, of whom 97 were Germans, residing in the protectorate of Kaiser Wilhelm Island and the Bismarck Archipelago in 1896.

The Marshall Islands are under an Imperial Commissioner. Their aggregate area is 150 square miles, with 13,000 population, including 58 whites, of whom 45 are Germans. They are coral islands on which the coconut palm grows luxuriantly. In 1897 the export of copra was 2,362 tons.

Session of the Reichstag.—The session of the Reichstag was closed on May 6. The discussion of the navy bill took up a large part of the time. After the new Foreign Minister, Herr Von Bülow, announced the occupation of Kianchan, its passage was assured. The bill presented a programme of construction extending over six years, which will so enlarge the navy as to enable it to prevent a blockade by attacking the enemies on the seas, the theory that the coasts can defend themselves having been abandoned. It fixed the maximum and the minimum strength of the navy. The automatic replacement of vessels was provided for at the end of their probable period of efficiency—twenty-five years for battle ships, twenty years for large cruisers, and fifteen years for small ones—it being stipulated that their lives can be prolonged by the decision of the Federal Council or shortened by the decision of the Reichstag. The manner of raising money for the increased expenditure was much discussed. The Government estimated that the ordinary revenue would be sufficient each year. In case it should not, the Clericals and other parties proposed special taxes that would fall only on the rich. The Government in the end carried a clause declaring that the additional sum required should not be defrayed by means of increasing indirect taxation on articles consumed by the masses. The acceptance of this declaration was secured by giving an additional pledge that the burden of any new taxes required should be laid on the strongest shoulders. The bill was passed on March 28, a part of the Clericals, including the Poles and the Guelphs, voting against it, with the Radical Left, the Social Democrats, the South German Democrats, and a few Anti-Semites.

The long-promised bill for the reform of military judicial procedure was passed without much discussion, except on the right of accused persons to have civil counsel, which was denied, and on the question of a separate military supreme court for Bavaria, which was left in abeyance, to be settled by negotiation. It is left to the Emperor to decide in each case whether the procedure be public or whether reasons of state demand a secret trial.

Elections to the Reichstag.—The legislative period of the Reichstag, which was elected on June 15, 1893, expired on June 15, 1898, and the general election took place on June 16. As the once powerful Liberal party was split up into dwindling factions at war with each other, little interest was

taken in the electoral campaign, except by the highly organized Clerical and Social Democratic parties. The Government was sure of having a majority as long as it shaped legislation so as to retain the support of the Center party, which had come to be called the Government. Dr. Lieber, the Clerical leader, said that it was not that, but was the governing party, owing to the ability of its members, the unskillfulness of its opponents, and the determination of the Imperial Government to carry on the affairs of the country by the aid of any political party which from time to time may suit its purpose. The Clericals stood ready to unite with the Conservatives in carrying out positive legislation, in particular to promote the interests of all the productive classes, or on occasion to join with the Left in repelling assaults on the liberties of the people or attempts to overburden the nation with taxes. The campaign was suddenly quickened as the elections approached by a letter of Graf Posadowsky, which was taken to express the views of the Government. This manifesto invited all the parties of civil order to unite wherever possible in combating the Social Democracy. It seemed to countenance agrarianism and higher protection by its reference to aiding the producers by the settlement of difficult questions of international competition, and to promoting the prosperity of the classes whose interests were most endangered—agriculturists and the middle classes.

The National Liberal party was honeycombed with agrarianism. The Agrarian League had also made great gains among both Conservative parties and had numerous Clerical members. The two Radical parties, led by Richter and Rieker respectively, were concerned with nothing but their mutual rivalry. The Social Democrats, whose ideas were making alarming headway among the rural population, set up a candidate in every one of the 397 districts. As the result of the first ballots there were elected 85 Clericals, 38 Conservatives, 34 Social Democrats, 13 Poles, 10 Free Conservatives, 10 National Liberals, 5 Anti-Semites, 3 members of the Bavarian Peasants' League, 1 Moderate Radical, 1 member of the Radical Left, 1 member of the Agrarian League, 1 Dane, and 9 unattached. In the 186 constituencies to be decided by the second ballot, the Conservatives urged all adherents of the Government parties to support the Radical candidates against Social Democrats. The Radical Volkspartei of Herr Richter won 29 seats in the second balloting, which was held on June 24, and the Radical Left obtained 11, while the Socialists, who contested 101, won 24. The strength of the various parties in the new Reichstag was as follows: Center, 108; Social Democrats, 58; Conservatives, 57; National Liberals, 49; Radical People's party, 30; Free Conservatives, 20; Poles, 14; Radical Left, 12; South German Democrats, 11; Anti-Semites, 10; Guelphs, 8; Agrarian League, 4; Dane, 1; Independent, 15. Counting the candidates of the National Liberal, Conservative, and Center parties elected by the aid of the Agrarian League and pledged to support its demands, this organization commanded about 100 votes.

Prussian Legislation.—In the fifth and final session of the Prussian Landtag, which was opened on Jan. 11, 1898, the Government, which showed one of Dr. Miquel's gratifying budgets, allowing a large increase of expenditure in nearly all branches of administration, brought forward a bill for regulating the principles on which the revenue and expenditure of the state are to be administered, a measure which had long been demanded by the Liberal parties. An increase in the number of railroads was promised. Disastrous floods in Silesia suggested a comprehensive scheme for the regula-

tion of all rivers that are liable to inundation. The abolition of bonds for Government officials was proposed. A bill to increase the salaries of clergymen, both Protestant and Catholic, met with considerable opposition. In March, the Kaiser created a difficult situation in the Cabinet by appointing Baron von Btlow, Graf Posadowsky, and Admiral von Tirpitz three Imperial Secretaries, to be Prussian ministers without portfolios.

Angry protests were uttered by the Poles against the bill to double the fund of 100,000,000 marks, granted originally in 1886, for buying out Polish landowners in Posen and West Prussia in order to settle German farmers on the land. The Poles had increased rapidly in numbers, and advanced materially and intellectually as the result of the partition of the great estates, but their improvement had operated to the detriment of the German settlers, who were unable to compete with them in the same economic conditions, and were constantly emigrating to other parts of Germany. Even in the towns they were getting the upper hand among the middle classes. They held themselves aloof from the German population, and were accused of placing the intelligence that resulted from German civilization at the service of the Polish national cause. Under the act of 1886 2,200 German colonists had been settled on 109,000 acres of land by the expenditure of 80,000,000 marks. Prince Hohenlohe said that hopes had arisen of the separation of Posen from Prussia, or of a kind of federative union. The object of the bill was to strengthen the German element in order to counteract this federal tendency. His plan for the Germanization of Poland was obnoxious, not only to the Poles, but to the Clericals, who regarded it as a Protestant propaganda. The Polish leader, Herr von Jazdzewski, said that the Government, by aiding German settlers with state funds and placing the Polish and Catholic population at a disadvantage, only deepened the differences of nationality and religion and caused bitterness of feeling.

The measure for disciplining *Privatdocenten*, or university lecturers, roused a more general and not less bitter resentment and alarm, impairing, as it does, one of the most precious guarantees of the Prussian Constitution, the liberty of science and its teaching. Hence more than half of the professors in Berlin University signed a remonstrance. The occasion of the bill was the ease of Dr. Arons, a wealthy adherent of the Social Democratic party, in which he was an active leader while retaining his post as lecturer in the University of Berlin, refusing to resign it after being warned by the faculty. The lecturers in the university are more free from Government control than professors, not being state officials. Lately there have been complaints about lecture rooms of the universities being turned into nurseries of socialism and anarchism. The bill carried by the Government authorizes the university authorities or the Minister of Education to warn or reprimand a *Privatdocent*. His license may also be taken away after a formal trial before the governing body of the university, from which appeal can be made to the Prussian ministry.

The session and the legislative period came to an end on May 18. Besides the measures passed in this session, the Diet had authorized the conversion of the 4-per-cent. loan, thus strengthening the financial basis of Prussia, and had established chambers of agriculture, securing a better representation for the suffering agricultural interest. The Government bill for restricting the rights of association and of public meeting in Prussia was defeated by Clerical Deputies joining the Liberal Opposition. The ministry refused to introduce an amendment to the laws regulating the union and

association of political societies except upon impossible conditions. The Saxon and Bavarian Diets passed measures withdrawing all restrictions to such union, and permitting women to join political societies, but not minors. Count Posadowsky sent a letter to the various German governments regarding the necessity of limiting the right of coalition so as to prevent picketing and intimidation by Socialist strike committees. This confidential circular was, as usual, intercepted by the Social Democrats and published in their organ, "Vorwärts." The epidemic of prosecutions for lese majesty culminated in the arrest and condemnation of Johannes Trojan, the veteran editor of the Berlin "Kladderatsch," for publishing a cartoon ridiculing the Emperor Wilhelm's assertion, in an address to recruits, that only good Christians make brave soldiers.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes, of \$5,000 each and upward in amount or value, that were made, became operative, or were completed in the United States during 1898. It excludes the ordinary denominational contributions for educational and benevolent purposes, all State and municipal appropriations to public and sectarian institutions, and the grants of Congress for the relief of suffering in Cuba. The known value of the gifts and bequests here enumerated exceeds \$38,000,000. This amount is less than that of 1897, but it comprises a much larger number of items. It would be a pleasure, if it were possible, to record individually the grand outpouring of gifts for the benefit of our soldiers and sailors, in camp, on shipboard, and in hospital. A few examples are included here because they have an exceptionally broad interest. The State of Massachusetts is deserving of special mention for having provided for the national navy a swift and commodious hospital ship, which the women of that State furnished with every necessity and convenience for its humane mission, and which the Government afterward purchased for \$100,000. It is fair to assume that the gifts of the year that were diverted from benevolent and educational institutions found their way to the altar of patriotism.

Abendroth, William P., Port Chester, N. Y., bequest to the local Ladies' Hospital Association, \$5,000.

Akin, Albert J., New York city, gift to Pawling, N. Y., a library building that cost \$50,000, with an endowment of \$10,000.

Alexander, James B., bequests to the public schools, \$3,000, and the Methodist and Baptist churches, each \$2,000, all in Derry, N. H.

Allen, Judge Charles, Supreme Court of Massachusetts, gift to Franklin County Hospital, \$10,000.

Allen, Henry B., Waterloo, Iowa, gift to the city for a public hospital, his homestead, valued at \$15,000.

Alms, Mrs. Frederick, Cincinnati, Ohio, gifts to charitable and educational institutions, an aggregate of \$100,000, the bequests in her husband's unguished will.

Altman, B., New York, gift toward a fund of \$1,000,000 for Hebrew educational purposes in New York, \$20,000.

American Board of Commissioners for Foreign Missions, bequests from friends, \$187,729.

American National Red Cross Relief Committee, gifts to, for relief of sick and wounded soldiers and sailors of the war with Spain, \$305,229, besides garments, cots, comforts, and some luxuries of an approximate value of \$80,000.

American University, at Washington, D. C., gifts from friends through Bishops Hurst and McCabe, \$50,000.

Ames, George L., Salem, Mass., bequests to the local Young Men's Christian Association, an estate valued at \$40,000; Calvary Baptist Church, \$5,000; South Congregational Church, \$3,500.

Anderson, Mrs. A. A., New York, gift to Barnard College, \$25,000.

Armour, George A., Princeton, N. J., gift to Princeton University to found a classical department in the library, \$10,000. He also pledged \$2,700 per annum for three years to support it.

Armour, Herman O., New York, gift to Whitworth College, Sumner, Wash., cash and real estate valued at \$20,000.

Armour, Philip D., Chicago, gift to Armour Institute of Technology, for additional endowment, \$500,000.

Astor, John Jacob, New York city, gift to the United States Government, a thoroughly equipped mountain battery of 6 12-pounder Hotchkiss rapid-fire guns, cost \$75,000. The battery was sent to Manila.

Austin, Edward, Boston, Mass., bequests to Harvard University, \$500,000; Massachusetts Institute of Technology, \$400,000; Radcliffe College, \$30,000; Roanoke College, \$30,000; and Tuskegee Normal and Industrial School, \$30,000—in each case interest to be used to aid needy and meritorious students and teachers; Harvard Bacteriological Laboratory, \$10,000; and for needy aged persons who have seen better days, a trust fund of \$100,000.

Averell, Mrs. Anna B., Chicago, gift to Presbyterian Hospital in that city, \$50,000.

Ayer, Frederick F., New York city, gift to Pennsylvania Hospital in Philadelphia, \$25,000.

Ayer, Josephine Mellin Southwick, Lowell, Mass., bequests to Ayer Home for Women and Children, in Lowell, \$100,000; to Pennsylvania Hospital, in Philadelphia, for a clinical laboratory, \$50,000.

Banigan, Joseph, Providence, R. I., bequests to Rhode Island Catholic Orphan Asylum, Home for Aged of the Little Sisters of the Poor at Pawtucket, St. Joseph's Hospital, Infant Asylum of St. Vincent de Paul, and the St. Maria Society, each \$25,000; Rhode Island Society for the Prevention of Cruelty to Children and Providence Lying-in Hospital, each \$10,000; and for St. Francis's Cemetery, an ultimate sum of \$100,000.

Barlow, George, Brooklyn, N. Y., bequests to local Methodist Episcopal and other charitable institutions, an aggregate of more than \$100,000.

Paton, Mrs. Annie S., New York city, bequests to Princeton University and the Manhattan Eye and Ear Hospital, New York, the reversion of \$100,000 and \$50,000 respectively.

Payne, Oliver H., New York, gift to Cornell University, for a Cornell Medical College in New York city, \$500,000 for the building, and \$1,000,000 for endowment.

Parsons, Daniel Kimball, M. D., Chicago, Ill., gifts to Beloit College, Beloit, Wis., on the raising of \$150,000 by its friends, \$50,000, and to Mount Holyoke College, on similar terms, a like amount.

Perry, John, gift for a new building for the Kansas City Boy Orphans' Home at Westport, \$25,000.

Pfalzer, John, Brooklyn, bequest to St. Leonard's Roman Catholic Church, \$20,000.

Phelan, James D., San Francisco, Cal., gift to the city, a library and recreation building, with books, for the almshouse; cost, \$10,000.

Phillips Andover Academy, Friends of, gifts toward a gymnasium, \$36,000.

Pillsbury, George Alfred, Minneapolis, Minn., bequests to Pillsbury Academy, \$250,000; various Baptist institutions, an aggregate of \$25,000; Northwestern Hospital for Women, \$5,000; and New Hampshire Centennial Home for Aged Women, \$5,000. The will requests that his widow shall bequeath \$20,000 to Pillsbury Academy and \$5,000 to the Hospital Association of Concord, N. H.

Plummer, Jerome, Washington, Pa., bequest, available on the death of his widow, his entire estate of \$75,000, to be used in promoting the temperance cause in Washington County.

Porter, Ann E., Newburyport, Mass., bequests to the public libraries of Newburyport and Springfield, Vt., \$1,500 and \$1,000 respectively; Whitfield Church, the poor of St. Paul's Church, and the Girls' Friendly Society, each \$1,200; and St. Mark's Church, Springfield, \$500.

Princeton University, Alumni of, gifts toward the founding of a chair of Philosophy, \$50,000; **Class of '88**, gifts for a political science library alcove, \$15,000.

Randall Charities Corporation, Monson, Mass., donation to the University of Virginia, \$20,000.

Ransom, Susan, Boston, bequests to the Cambridge Home for Aged People, \$50,000; Home for Aged Women, Boston, \$50,000; Cambridge Hospital, Avon Place Home, and Home for Aged Men, Boston, each \$20,000; and Massachusetts Society for the Prevention of Cruelty to Children, Roxbury Home for Children and Aged Women, and Winchester Home for Aged Women, Charlestown, each \$10,000.

Robertson, Dr. Thomas Seton, New York, bequest to the medical department of the University of Vermont, for microscope prizes, \$5,000.

Rockefeller, John D., New York city, gifts to the University of Chicago, duplicating the gift of Martin A. Ryerson (*q. v.*), \$34,000 in cash, and under agreement with Marshall Field (*q. v.*) \$200,000 for the erection of a gymnasium and equipment of the athletic grounds.

Rogers, Elizabeth, Lowell, Mass., bequest to the Rogers Hall School for Girls, all her property, estimated at \$100,000, excepting a few small personal bequests.

Rogers, Samuel B., South Sudbury, Mass., bequests to the Memorial Congregational Church, \$5,000, and to other Congregational societies, \$2,700.

Roosevelt Hospital, New York city, gift from a friend whose name is withheld, for maintenance of twelve new beds for children, \$50,000.

Ross, Julia Ann, Washington, D. C., bequests to Roman Catholic institutions, the reversion of an estate of \$15,000.

Rouss, Charles Broadway, New York city, gift to the University of Virginia for a physical laboratory building, \$10,000.

Russell, Mrs. Hope Brown, Providence, R. I., gift, for a residence for the Protestant Episcopal bishop of Rhode Island, an attractive estate and endowment of \$50,000.

Ryerson, Martin A., Chicago, gift to the University of Chicago, a tract of land valued at \$34,000. See ROCKEFELLER, JOHN D.

St. Peter's Episcopal Church, Port Chester, N. Y., gift from a friend, twelve windows; cost, \$5,000.

Solomon, William, New York, gift toward a proposed fund of \$1,000,000 for Hebrew educational purposes in New York, \$10,000.

Sansser, William, Hannibal, Mo., (died in 1892), bequest, made available by decision of court, to Westminster College, all his estate of \$200,000.

Schermerhorn, Frederick Augustus, New York city, gift to the United States Government for the auxiliary navy, his steel steam yacht "Free Lance."

Schiff, Jacob H., New York city, gifts to Columbia College for a fellowship in political economy, \$15,000; to the New York Public Library for scientific works, \$10,000; and to the fund of \$1,000,000 for Hebrew educational purposes in New York, \$25,000. He also purchased ground and assumed the cost of erecting a building for the Young Men's Hebrew Association of New York; total cost, \$150,000.

Scott, Chief-Justice John, Bloomington, Ill., bequest to the city for a public hospital, available on the death of his heirs, the principal of his estate, estimated at \$2,000,000.

Sears, J. Montgomery, Boston, gift to the United States Government, for a naval patrol boat, his pleasure steam yacht "Varuna."

Sheppard, Isaac A., Philadelphia, Pa., bequests to religious and charitable institutions, \$16,000, and for medals for graduates of manual-training schools, \$1,500.

Shipman, Daniel B., Chicago, Ill., gift to the Chicago Home for Incurables, \$40,000.

Simmons, Sarah Billings, Monmouth, Ill., bequest to the Monmouth Library Association for a building, real estate valued at \$40,000.

Sloane, Mrs. William D., New York, gift to the Protestant Episcopal Home in Denver, Col., \$40,000.

Smith, Eliza E., Lancaster, Pa., gift to the city for a public library, her city residence, valued at \$25,000. She agreed to endow the library, supply books, and erect an annex for the general library, making an immediate outlay of at least \$75,000.

Smith, George Plumer, Philadelphia, Pa., bequests to the Protestant Orphan Asylum, Allegheny, \$25,000; Historical Society of Pennsylvania, \$25,000; New England Genealogical and Historical Society, Plumer Hall, at Salem, Mass., and three charitable institutions in Philadelphia, each \$10,000; and the Pennsylvania Hospital, Philadelphia, the residue of his estate, which is expected to realize several hundred thousand dollars.

Smith College, Northampton, Mass., anonymous friend of, gift for an academic hall, \$50,000.

Snyder, David L., Springfield, Mass., bequest to the city, \$200,000 in United States Government bonds, the interest to be used in beautifying Snyder Park. The gift of the park by John and David L. Snyder represented a value of \$250,000. Two years ago John bequeathed the city \$100,000 for the care of the park, and David's bequest makes the total given by the Snyder brothers at least \$550,000.

Spiegelberg, Solomon J., New York city, bequests to Hebrew congregations and benevolent institutions in Germany and New York city, a total of \$8,500.

Stanford, Mrs. Leland, San Francisco, gift to Stanford University for a school of history, economics, and social science, her mansion on Nob Hill.

Stearns, Frederick, Detroit, gift to the University of Michigan, a collection of musical instruments numbering nearly 1,000 pieces, which originally cost him \$25,000.

Stern, Louis, New York, gift toward a proposed fund of \$1,000,000 for Hebrew educational purposes in New York, \$25,000.

Stevenson, James, Brookline, Mass., bequest to Harvard University for two medical scholarships, \$10,000.

Stillman, James, New York, gift to Harvard University for an infirmary for sick students, \$50,000. He also agreed to give \$2,500 annually for four years toward supporting it.

Stout, James H., Menomonie, Wis., gift to the city, a manual-training-school building, cost \$125,000, and a public high-school building, cost \$55,000, to replace buildings formerly erected by him and destroyed by fire.

Straus, Isidor, New York, gift toward a proposed fund of \$1,000,000 for Hebrew educational purposes in New York, \$10,000.

Sunday-school Children of the Protestant Episcopal Church, gifts to the Dr. William S. Langford Memorial fund, \$81,761.

Sutro, Adolph, San Francisco, Cal., bequest to Vassar College, \$10,000. He left a very large estate, and by a trust clause in his will the San Miguel and Cliff House ranches are directed to be managed for ten years, and then to be conveyed to trustees, who are required to hold the property until after the death of the Sutro children. The trustees are then to sell the property and apply the funds so realized for such charities, institutions of learning and science, and for premiums to be set apart for distinguished scholarships and scientific discovery and inventions as shall be directed by the executors. It is expressly provided that no priest, preacher, or rabbi is to have aught to do with the charitable bequests.

Thayer, Edward C., Keene, N. H., gift to Brown University, Providence, R. I., for free scholarships, \$6,500.

Thomas, Jacob C., Wheeling, W. Va., bequests to benevolent institutions, \$13,000.

Thomas, Josiah B., Peabody, Mass., bequests to trustees for a public hospital, \$50,000; for other purposes, \$10,000.

Thompson, Alice, Ballston Spa, N. Y., bequest to Christ Episcopal Church of that place, \$10,000.

Thompson, James P., Brooklyn, N. Y., bequests to the New York Skin and Cancer Hospital, \$5,000; Society for promoting the Gospel among Seamen, \$1,000; and Mariners' Family Asylum, \$1,000.

Thornton, Charles C. G., Gloucester, Mass., bequests to church and missionary societies in Maine and Massachusetts, \$4,000; and to Thornton Academy, Saco, Me., for a school of technology, the reversion of \$50,000.

Thrall, Mrs. S. Maretta, Middletown, N. Y. (see GIFTS AND BEQUESTS in "Annual Cyclopædia" for 1897). Judge Hirschberg decided her bequest to the hospital invalid, and approved the bequest for a free library (\$30,000).

Tranger, Lewis, Greensburg, Pa., bequests to Lutheran institutions, \$5,500.

Tukerman, Joseph, Newport, R. I., bequests to two local charitable institutions, each \$7,000.

Tome, Jacob, Port Deposit, Md., bequest to the Jacob Tome Institute, founded by him and endowed with \$2,000,000, the residue of his estate, calculated to yield \$2,000,000.

Tomson, Peter C., Philadelphia, Pa., bequest for the care of the sick and worn-out employees of the firm of which he was a member so long as it continues under its present name, the income of his residuary estate.

University of New York, gifts from friends for medical college, \$100,000.

Vanderbilt, Cornelius, New York, gifts to the New York Botanical Garden, the entire expense of an exploring and botanical expedition to Puerto Rico.

Vandeventer, Cornelia Stryker, Plainfield, N. J., bequests to Hope Chapel, Plainfield, and the Presbyterian Church, Bound Brook, each \$5,000; Muhlenberg Hospital, Plainfield, \$3,000; and the Domestic and Foreign Missionary Societies of the Presbyterian Church, each \$2,000.

Vauwinkle, A. S., Hazleton, Pa., bequests to Princeton University, \$45,000; Brown University, \$45,000; and Lafayette College, \$30,000.

Van Wormer, Asa, Cincinnati, gift to the University of Cincinnati for a library building, \$56,000.

Wallace, William Clay, Newark, N. J., daughters of, joint gift to Princeton University for scholarships, \$5,000.

Warburg, Felix, New York, gift toward a proposed fund of \$1,000,000 for Hebrew educational purposes in New York, \$5,000.

Waring, George E., Jr., New York, friends of the late, gifts to a fund for the benefit of his widow and daughter, \$100,000. The beneficiaries have the income during life, and at their death the principal goes to Columbia University to found the Waring Municipal chair.

Warner, Redwood F., Philadelphia, bequests to the School of Design for Women, \$10,000; Germantown Dispensary and Hospital, \$5,000.

Warren, Henry Clark, Cambridge, bequest to Harvard University, all his real estate in Cambridge and all his securities, \$40,000 from the latter to be applied to specific purposes in the university; estimated value of bequest, nearly \$1,000,000.

Warren, Nathan B., Troy, N. Y., bequests to the Protestant Episcopal Church of the Holy Cross of that city, \$240,000, and to Trinity College, Hartford, Conn., \$10,000.

Watson, Mrs. Eliza V. G., Detroit, bequests to local institutions, \$7,500.

Webb, W. Seward, M. D., New York city, gift for the sick and wounded of the First Vermont Infantry, \$5,000.

Webb, Mrs. Dr. W. Seward, gift to the Protestant Episcopal Diocese of Vermont, a fully equipped parish house at Shelburne Farms.

Webber, Frances E., Boston, bequest to Bates College, \$5,000.

Webster, Joseph, Carroll, Iowa, bequest to Western College, Toledo, Iowa, \$30,000.

Wells, Mrs. Ann P., Boston, bequests to the American Unitarian Association, \$10,000; Massachusetts Homœopathic Hospital for two free beds, \$10,000; Harvard University for a new scholarship, \$10,000; Warren Street Chapel, Home for Aged Colored Women, Women's Educational and Industrial Union, and Home for Aged Couples, each \$5,000; Home for Aged Men, Home for Aged Women, Massachusetts Society, and District Nursing Association, each \$3,000; and the Perkins Institution for the Blind and the Industrial School for Crippled and Deformed Children, each \$2,000.

Wells, David Ames, Norwich, Conn., bequests to the public library of Springfield, Mass., his large private library, and, conditionally, to the Springfield Library, Harvard University, and Williams College, his residuary estate in equal parts.

Wellesley College, Wellesley, Mass., gift from a friend, a large and costly telescope, and a pledge to erect a suitable building for it.

Wendell, Jacob, New York city, bequests to Harvard University, \$5,000; Home for Old Men and Aged Couples and Home for Incurables, both in New York, each \$1,000; and Portsmouth Athenæum, for books, \$500.

Wentworth, Aricoh, Boston, gifts to Dover, N. H., Home for the Aged and to the Children's Home Association, \$5,000.

Wetmore, Mrs. Fanny C., Farrington, Conn., bequests of her husband made available by her death, to the Farrington public library \$22,000 and the American Missionary Association \$7,000.

Whitewright, William, New York city, bequest to the Presbyterian Hospital, \$50,000.

Widener, Peter A. B., Philadelphia, Pa., gift to the public library, a collection of 500 books, containing many choice specimens of *incunabula* that were sought by European libraries, for which he paid \$28,000. See GIFTS AND BEQUESTS in "Annual Cyclopædia" for 1897.

Wildner, Charles T., Wellesley, Mass., bequests, available by the distribution of his residuary estate, to Mount Holyoke College, \$100,000, and Wellesley

College, \$50,000. See GIFTS AND BEQUESTS in "Annual Cyclopædia" for 1897.

Williams, Augusta M., Boston, bequest to Hobart College, Geneva, N. Y., \$6,000.

Williams College, Williamstown, Mass., gift to library fund in memory of Josiah W. Wheeler, of New York, \$5,000.

Winants, Mrs. Amanda E., Bayonne, N. J., gift to the Bayonne Hospital and Dispensary, \$10,000.

Winchester, Henry K., Marlboro, Mass., bequests to Unity Church, Santa Barbara, Cal., \$5,000; to other institutions, \$12,000.

Wood, Henry, Boston, Mass., gift to the town of Barre, a high-school building, supplementing gifts of the public library, a chapel, and a society building.

Wood, Samuel, Northboro, Mass., bequests to local institutions, \$5,000.

Woodward, Mrs. Sarah, Saratoga, Cal., gift to the American University, at Washington, D. C., property in Seattle, Wash., valued at more than \$150,000.

Wright, Charles B., Philadelphia, Pa., bequest to the Anna Wright Seminary, Tacoma, Wash., for maintenance or rebuilding, \$50,000.

Vale University, New Haven, **Students of**, gift to the United States Government for the auxiliary cruiser "Yale," two rapid-fire Maxim guns and a full set of ship's colors, cost \$6,000, for which more than \$10,000 was subscribed; **Young Men's Christian Association of**, gift to the university, a new mission building, cost \$6,000.

GLADSTONE, WILLIAM EWART, an English statesman, author, orator, and scholar, born in Rodney Street, Liverpool, Dec. 29, 1809; died at Hawarden Castle, Flintshire, North Wales, May 19, 1898. Although English by birth, he was both on his father's and on his mother's side of pure Scottish blood his father being Lowland Scotch, his mother of Highland descent. Gladstone himself said, "I am purely and absolutely Scotch in every drop of my veins." The original members of the family were of knightly rank, but the holder of the estate in the early eighteenth century, from the impoverishment of the land and other causes, was driven into trade. The last of the Gladstones was a maltster at Perth. Mr. Gladstone's grandfather was a corn merchant at Leith, and his son, John Gladstone (the father of William Ewart Gladstone), became clerk to a Liverpool merchant, and ultimately became himself a millionaire merchant. He acquired vast estates in Demerara, cultivated by slave labor. Grown rich and influential, John Gladstone (now Sir John), became deeply interested in political life, and for several years held a seat in Parliament, where he was an ardent supporter of Canning. On one occasion, when Ewart Gladstone was only three years old, Canning made an election speech from the window of John Gladstone's house, and the noisy enthusiasm of the crowd greatly impressed the boy. John Gladstone was stern and inflexible, but had a keen perception and acute business instincts. He encouraged his sons to practice the art of debate. Nothing was taken for granted between John Gladstone and his sons; all discussions were in perfect good humor, but proof of everything was required. The future Prime Minister was the third son of John Gladstone. His mother was a daughter of Provost Robertson, of Dingwall, and was notable for her sweetness of disposition. She cultivated with assiduous care the already deep religious impressions that were implanted in the early life of the statesman.

Young Gladstone began his education by a course of private instruction at the vicarage of Seaforth, adjacent to his home. Here one of his fellow-pupils was Stanley, afterward Dean Stanley, and a

warm friendship grew up between the two boys, which continued until the end of Stanley's life. At the age of eleven Gladstone was sent to Eton, the preparatory school for Oxford University. The Eton student life of that time must have given a rude shock to the tender susceptibilities of a youth brought up as Gladstone had been, for the older pupils, reflecting the example of the social spirit of the time, engaged in horse racing, betting, cock-fighting, prize fighting, and drinking, on which a corrupt and profligate court and monarch had falsely stamped the seal of good breeding. Even the tutors were not exempt from the insidious infection, and we learn that the tutor of Gladstone was addicted to excessive drinking and gambling. Eton had also an unenviable reputation for flogging, and one of the masters, Dr. John Keate, proudly boasted that he had "flogged the whole bench of bishops." Of young Gladstone at this period we are told that he was a good-looking, rather delicate youth, not much given to the athletic sports in vogue, and only occasionally participating in cricket, hockey, and sculling. He was not really delicate, but on the contrary was robust, and the natural pallor of his face made all the more conspicuous and impressive the marvelous brilliance of his dark eyes. Gladstone had a fine presence, a lofty forehead, and luxurious black hair. Sir Roderick Murchison said he was "the prettiest boy that ever went to Eton." Gladstone, thanks to his home training, remained unaffected by his surroundings. He was untiring in application to his studies, and acquired considerable classical knowledge. He contracted at Eton some happy and life-long friendships. Arthur Henry Hallam, whose untimely death stirred Tennyson's soul to the production of "In Memoriam," with Selwyn, afterward elected bishop, and Kinglake, author of "The Crimean War," were contemporaries and close friends of his at Eton. He joined the Eton Society and introduced Kinglake to that assembly of aristocratic young Tories. Current politics were forbidden, but political opinion disclosed itself under the thin drapery of historic or academic questions. Gladstone, during the latter part of his six years' stay at Eton, took an active part in the editorship of the "Eton Miscellany," and was one of the most prolific contributors. After leaving Eton, where he attained a high reputation, he studied for some time under a private tutor, and on Oct. 28, 1828, was entered and went into residence at Christ Church, Oxford. Christ Church was, and is, the most exclusive and select of all the Oxford colleges. It used to be the custom for sons of princely and ducal houses at this college to wear a distinctive "tuft" in their college caps, and as the society of these students was greatly sought, the word "tuft-hunter" has passed into the language as indicating a man who toadies to rank or wealth. The choice of Christ Church was an ambitious one, but John Gladstone had confidence in his son's ability, and, though parsimonious, he gave his son a liberal college allowance. The choice was also prophetic, for, not including Mr. Gladstone himself, Christ Church College has turned out six prime ministers—Lord Liverpool, George Canning, Sir Robert Peel, Lord Derby, and Lords Salisbury and Rosebery. The life of Mr. Gladstone at Oxford was very much on the same lines as at Eton—constant study, wide reading, and a keen interest in college matters, its advanced thought and higher life.

During his second term at Oxford he was elected to the Oxford Union Debating Society, and a speech at one of these gatherings made by Gladstone and heard by Lord Lincoln, a college friend, and repeated later by Lord Lincoln to his father, the Duke of Newcastle, convinced the duke that Glad-

stone was a suitable man to represent the town of Newark in Parliament, and help with his oratory to stem the tide of reform. Gladstone, at the sessions of the Union, showed the strongest opposition to political reform, and was instrumental in causing the club to pass votes of censure on Lord Gray for the passage of the reform bill, and on the Duke of Wellington for Catholic emancipation. Justin McCarthy says, speaking of Gladstone at this time: "His mind was a mirror of Oxford opinion, veneration for the past, a romantic sense of reverence for the ancient institutions of the country; yet a mind opened to the inevitable tendencies of the future." Gladstone while at Oxford founded the Oxford Essay Club, which became familiar to its members as the "W. E. G.," so named after the initials of Gladstone's name. The object of this intellectual association was the reading of essays alternately in the rooms of each member, subject to the criticism of

unrest harassed the country. The Tories were filled with extravagant fears, the party of progress aflame with extravagant hopes. Gladstone, in his first electoral address at the general election of 1833, felt it a duty to watch and resist that growing desire for change which threatened to produce, "along with partial good, a melancholy preponderance of mischief." The reform bill of 1832 first introduced the great middle-class cities and towns to the right of representation in Parliament and gave them the right of suffrage. The bill struck sharply at the privileges of the territorial magnates, but was really very limited, and left the vast mass of the working population outside the pale of constitutional representation. The Duke of Wellington declared the reform bill to be "a revolution by course of law." Gladstone was returned for Newark, and on the opening of the reformed Parliament on Jan. 20, 1833, took his seat for the first time in the house,

HAWARDEN CASTLE, MR. GLADSTONE'S RESIDENCE.

the other members. As an example of the trend of Gladstone's mind, he chose for one subject a paper "to explain and define the belief of Socrates in immortality." At Oxford he widely extended his classic knowledge, which was, it has been said, never pedantic, and was not open to the charge of having missed the beauties of the ancient authors by parsing. He now began to take an absorbing interest in Greek life of the Homeric era, on which he was probably unequaled as an accurate authority. He was a strong and firmly convinced believer in the actual personality of the blind poet, and scouted the idea of the *Iliad* being a sagalike or romaunt string of separate pearls. It is said that strongly expressed contrary views by Mr. Disraeli on his first meeting with Gladstone on this, to the latter vital question, initiated the raucous and ill-feeling which characterized the private and political connection of two men, who, both great in their respective spheres, were in temperament and ambitions antipodal. In December, 1831, Gladstone secured the highest collegiate honor conferred by the university, a double-first, or first in each, the classical, mathematical, and theological schools.

While taking a needed rest in Italy he was recalled by an earnest request from the Duke of Newcastle to represent the town of Newark, which was what was then called a "pocket borough," or one whose voters were by strong ties of interest almost bound to vote for the duke's nominee. The first reform bill had become law, and political and social

being then twenty-three years of age. He was strikingly handsome, his face pallid, almost bloodless, his eyes more radiant than in youth, his voice strong, clear, flexible, and sweet, heard without strain in any part of the house. As he appeared under the auspices of the ducal house of Newcastle, with the added prestige of his Oxford achievements and his physical qualifications for oratorical success, his maiden speech was eagerly anticipated. He made no attempt to dazzle the house by his brilliance or impress it with his scholarship; the maiden speech was simple and to the point, and produced a good impression. Great orators as both Sheridan and Disraeli were, their first attempts to address the house were ghastly failures; Disraeli's confused declaration as he broke down and took his seat, "The time will come when you shall hear me," being both historic and prophetic.

The first session of the new Parliament was largely devoted to the question of slavery in the colonies, and Gladstone defended his father, a large slave owner, against an attack made upon him in the house. The question of the Irish state Church and the steps advisable to repress agrarian disturbances in that country were also discussed, and Gladstone first made acquaintance with the "Irish specter" which was to haunt him through his long and arduous parliamentary career. The great Irish orator O'Connell was very friendly and helpful to Gladstone during his early parliamentary career, and doubtless enlisted the sympathy of Gladstone

in the "distressful country" and expanded his ideas of the Irish grievances. These were indeed very real. The land held by English landlords was in nearly every instance in the hands of a resident agent, whose sole interest was to wring from the peasantry the highest possible rental. There was no tie of personal attachment between the "absentee landlord" and the oppressed tenant; the agent was the only medium of communication, and was almost invariably tyrannical, cruel, and unjust. Often a man would take at a low rental a piece of rocky hillside or unproductive bog land, and after he, and possibly his sons, had reduced this to something approaching a remunerative condition after eight or ten years of hard toil, would think they had secured a comfortable homestead; but the alert agent was always on the watch, and wherever the land was so improved he insisted on doubling the rent. Refusal to pay meant eviction, and eviction of the cruellest, harshest, and most inhuman kind. This was a question affecting the peasantry only; but there were other abuses in connection with the Irish Church, and the fact that all public works undertaken in Ireland, and for which private bills had to be passed, had to go through the English Parliament, witnesses and lawyers being put to the cost of appearing at Westminster. These latter disabilities were a source of friction to the better class of the Irish people, and often insured their sympathy with acts of violence committed by the peasantry. Such was the condition of Ireland at the time of the first reform Parliament. Gladstone sat in the house as the representative of a great historic house of pronounced Tory proclivities. The Duke of Newcastle, indeed, had the ideas of a fiefdom, and thought he had the undoubted right to send whom he pleased to Parliament to represent the interests of his own large tenantry. Gladstone had taken but a languid interest in Ireland, but the terrible condition of things roused his sympathy and stirred his heart, and he determined to secure by legal enactment just and equitable treatment for the Irish peasantry. He was gaining parliamentary experience, and he eagerly sought, what other members shirked, the tedious and arduous duty of sitting on committees. These committees met at 11 A.M. and often were continued to 4 P.M., when the regular business of the house began, and as the house often was in session until 3, 4, or 5 A.M., Gladstone's day was indeed a hard one; but the experience he gained and his indefatigable energy impressed Sir Robert Peel, who made him Junior Lord of the Treasury, and shortly afterward advanced him to the office of Under Secretary for the Colonies. In the latter capacity he had no time to show his ability, for, before he could pass his first bill, the Peel ministry was defeated and the Whigs resumed power. During the next six years Gladstone took little part in the bitter party struggles, and during this lull in political activity he wrote "The State in its Relation with the Church," insisting that religion was the great end and aim of all civilized government. This book, published in 1838, was the subject of an exhaustive and elaborate review by Macaulay, who speaks of Gladstone somewhat sarcastically as "a young man of unblemished character and of distinguished parliamentary talents, the rising hope of those unbending Tories, who follow, eluctantly and mutinously, a leader, whose experience and eloquence are indispensable to them, but whose cautious temper and moderate opinions they abhor." Macaulay generally disagrees with Gladstone's ideas, and incidentally says: "He has one gift most dangerous to a speculator, a vast command of a kind of language, grave and majestic, out of vague and uncertain import; of a kind of language which affects us much in the same way in

which the lofty diction of the chorus of 'The Clouds' affected the simple-hearted Athenian." This is very similar to the quaint words of the well-known charge of "being intoxicated with the exuberance of his own verbosity," made by Disraeli.

Close application and study by candlelight had so impaired Gladstone's sight that he found it necessary, in the autumn of 1838, to seek medical advice, and rest being prescribed, decided to winter at Rome. Among the visitors in that city were Lady Glynne, widow of Sir Richard Glynne, of Hawarden Castle, Flintshire, North Wales, and Lady Glynne's daughters. Gladstone already had some knowledge of the family and recollections of a pleasant visit to Lady Glynne's son, a college friend at Oxford, at Hawarden Castle. The intimacy was revived, and he whose star seemed always in the ascendant secured the love of Lady Glynne's eldest daughter, Catherine. They were married on July 25, 1839, at Hawarden, and at the same time and place the younger daughter, Mary, was united to George William, fourth Lord Lytton. Miss Catherine Glynne was heir to the Hawarden estates on the decease of Sir Richard Glynne, and on his death, some time later, Gladstone and his wife decided to occupy the castle, and this became the family home. Of all the happy fortunes that befell Gladstone, none equal that of his marriage. Mrs. Gladstone relieved her husband of all the little petty domestic worries that so often harass great thinkers. The conditions of Gladstone's domestic relations were a great help to him in his life work.

In 1841, on the return of Peel to power, Gladstone was appointed Master of the Mint and Vice-President of the Board of Trade. Gladstone came of a great commercial family, conversant with figures, and cradled in finance, and in the tariff revision introduced by Peel he was chiefly instrumental; the abolition or reduction of duty upon 750 out of 1,200 duty-paying articles drew marked attention to his financial ability. During the session of 1842 Gladstone made over a hundred speeches, chiefly on fiscal legislation, which he controlled. His ability as an impressive and powerful orator and a ready and dexterous debater had been proved, but he had now shown ability of another order, exhibiting the versatility of his genius and indicating eminent fitness for control of the national exchequer. In 1843 he was made President of the Board of Trade. He put up a self-made barrier to his progress by somewhat eccentric action on the subject of the grant to Maynooth College, and resigned his office, but when free from its responsibility supported the measure.

He returned to the ministry as Secretary for the Colonies in 1846. Feeling that he was out of touch with his Newark constituency, he resigned, and for a year had no seat in the house. Meanwhile Peel had been forced, in great measure by the potato famine in Ireland, to repeal the corn laws; but the Tory party had their revenge, as on the same day, very greatly owing to Disraeli's influence, who was now rising to power, they defeated the Government on a coercion bill for Ireland. Gladstone was returned to Parliament by Oxford University in 1847. He had altered his views on the question of admitting Jews to Parliament, greatly to the chagrin of his Conservative constituents. In 1849 he attacked the policy of Lord Palmerston in the Don Pacifico difficulty, when Greece very properly protested against an outrageous claim for damages, which Palmerston proposed to enforce with a high hand. The speech was a plea for consideration of the weaker country, and Gladstone said it was the duty of states, as of individuals, to deal gently with the weak. He was not attracted by a dazzling policy calculated to spread English influence and make foreign nations jealous and Englishmen

elated; he asked that England's policy should be a policy of morality and Christianity. This showed him to be an apostle of principle in politics as in private life. He proved his liberality and true love of freedom in the protest he made against the excited and unchristian spirit that actuated the passing of the "ecclesiastical titles bill." Justin McCarthy says, in allusion to this incident and the accusations of sympathy with Romanism then made against Gladstone: "There is no doubt a Church so venerable, with so picturesque a ritual, a Church in whose bosom so many generations of saints and sages have rested, could not but appeal to all that was poetical and all that was devotional in Gladstone's nature."

In the winter of 1850 Gladstone spent some time in Naples. He had intended taking rest, but, hearing of the terrible sufferings of political prisoners in the dungeons of Naples, he devoted his time to investigation. He found the most horrible cases of cruelty to these unfortunate persons, and wrote to Lord Aberdeen, then Prime Minister of England, bringing a powerful and detailed indictment against the rulers of Naples. These letters were published and caused a great sensation throughout Europe, and may be said to have assisted materially in bringing about the revolution that created a free and united Italy ten years later. The great heart of Gladstone was ever sympathetic with the oppressed and downtrodden. Parliament was dissolved in July, 1852, when he was again elected, by a largely increased majority, for Oxford University. Disraeli's second budget, during Lord Derby's administration, initiated the first great duel between him and his life-long rival, Gladstone delivering a critical dissection of the budget, which was the first of a celebrated series. On a division, the result was apparent in the defeat of the Government by a majority of nineteen, and Lord Derby resigned. The excitement in the country was intense and widespread. The new Government was a coalition of Whigs and Peelites, with Sir William Molesworth representing the Radicals. Lord Aberdeen became Prime Minister, and Mr. Gladstone Chancellor of the Exchequer. This was the first time Gladstone had held that responsible place, and his first budget was awaited with interest. It was introduced April 18, 1853. The introductory speech was of five hours' duration, yet the house was held spellbound. Nor was the country less impressed on consideration of Gladstone's financial proposals for the reduction of taxation. He received letters of congratulation from the Queen and the Prince Consort and unanimous eulogy from his numerous friends. The budget abolished duties on 123 articles and reduced the duties on 133 others, affording a total relief of \$5,000,000. Gladstone took no conspicuous part in the Crimean War, nor was he in any way responsible for its gross mismanagement; but as this caused the fall of the Aberdeen ministry, he went out of office. Lord Palmerston then became Prime Minister, with Gladstone again at the exchequer. This was the first time he had served under a Whig leader, and it was a decided step toward Liberalism. But after three weeks he, with two other members of the Government, resigned office on a matter connected with a proposed inquiry into the conduct of the war by the Government.

Gladstone was now for some time an independent member of the house, but in non-partisan matters was as active as ever. He powerfully opposed the institution of a divorce court, basing his opposition entirely on moral and religious grounds. Divorce applications in England before this act had to be heard in court, and if the charge was proved a special act of Parliament must be obtained to dissolve the marriage. This was so expensive that

divorce was possible to the rich only. Gladstone fought the bill desperately, meeting in committee a lawyer of the Crown, expert in divorce law. Gladstone is reported to have answered him as though he had done nothing but study this question all his life, and without note or indication quoted whole statutes. He failed, however, to defeat the bill.

On account of his Greek sympathies and knowledge, Gladstone was asked to go to the Ionian Isles, whose people were restive under British rule and wanted to be allied to their native country, Greece. Finding Greek, as pronounced, not very adaptable, he used Italian in all the negotiations. His reception was enthusiastic and surprising; his fame had gone before him, and the Ionians refused to consider him as an English Conservative commissioner, but as "Gladstone the Philhellene." The islanders agitated more than ever after he left; but their wish was not granted until 1862, when the brother of the Princess of Wales was made King of Greece, and the Ionian Islands were made over to that country.

In 1859, on Lord Palmerston's return to the premiership, Gladstone, now a decided Liberal, was again made Chancellor of the Exchequer, and for seven years he continuously reduced or abolished internal taxes and simplified customs. The budget of 1860 was memorable for the reduction of the wine duty and the proposed abolition of the paper duty. The Tory party always feared educating the people; and cheap paper meant cheap newspapers, which they did not want. Papers then were few and were sold at sixpence each, and many people bought one, which others paid to read. The House of Lords threw out this paper clause. Gladstone was very wroth, and declared their action unconstitutional. However, in the following year, he incorporated it in one great financial measure instead of a separate bill, and the Lords were compelled to pass it, and the penny newspaper was the immediate result. The Tories, in the opposition to this bill, used extraordinary arguments as to the dangers of anarchy and revolution from cheap literature.

A mistake owing to sheer and inexcusable ignorance, made by Gladstone in a speech at Newcastle-on-Tyne in 1862, when he said "Jefferson Davis has created a nation in a day," caused surprise and indignation, both among his own friends and the Americans of the North. Gladstone, however, made the *amende honorable*, frankly owning the ignorance that caused the remark.

The death of Lord Palmerston placed Lord Russell at the head of the Government. Gladstone resuming his old office and assuming also the leadership of the House of Commons. By his budget of 1865 he struck off £5,400,000 of taxation, reducing the tea duty by 6d. in the pound and lowering the income tax from 6d. to 4d. In 1866 he introduced his first reform bill, which was not very well received, though really moderate. The Conservatives would have none of it. There was a split in the camp of the Liberals, and Robert Lowe, the brilliant leader, formed a party who were nicknamed "Adullamites" from the cave where the disgruntled Jews retired. They caused Gladstone much anxiety by their defection, and his speech winding up the second reading debate was one of his greatest, if not his greatest, oratorical effort. The second reading was carried by a majority of only five; but soon afterward an amendment was successful against the Government, which at once resigned. A popular agitation in favor of reform burst forth all over the country, and Gladstone was the name on every tongue. At the general election of 1868 he was nominated for South and West Lancashire, being defeated at one place and successful

at the other. A great Liberal majority was also returned, and Dec. 3, 1868, Gladstone was summoned to Windsor and commanded to form an administration.

Early in the Parliament of 1869 Gladstone began his work by introducing the Irish Church bill, which, after being hotly debated in both houses of Parliament, received the royal sanction on July 26, 1869. Mr. Caldwell's military reorganization scheme, now introduced, included the abolition of the purchase of commissions in the army, future promotions to be by merit only. Gladstone found that vested interests made any action of this kind like stirring a hornet's nest. The Lords had thrown out the ballot bill, and they now threw out the purchase bill. Gladstone took a step for which he was much abused, some of his followers disapproving the course. He found that purchase in the army depended on royal sanction, and he persuaded the Queen to abolish purchase by royal warrant. Much as this act was deprecated, its effect has been most salutary. In the general election in 1874 Gladstone set himself to maintain his hold on Greenwich and upon the country with great determination, foreseeing important Liberal measures, even the abolition of the income tax; though he was elected for Greenwich, a local Tory distiller headed the poll. His followers were less fortunate, and when Parliament met the Tories had a majority of forty-six. So great was Gladstone's disappointment at this unforeseen result that he announced his intention of quitting the political arena. This step greatly embarrassed the Liberal party, but the Marquis of Hartington stepped into the breach.

Gladstone's retirement was not for long; the introduction by Archbishop Tait of a public-worship-regulation bill, which was receiving Disraeli's support, brought him back to fight it to the bitter end. His action delighted the ritualists, and when the bill became law Gladstone published in the "Contemporary Review" his celebrated article on "Ritual and Ritualism," followed by another in 1875, "Is the Church of England worth preserving?" In that article occurred a passage that was plainly an attack on Catholicism, and all the Catholic world rose in arms against him. He replied in two strong pamphlets, "The Vatican Decrees in their Bearing on Civil Allegiance" and "Vaticanism." Both were powerful, but he hardly decimated his opponents.

In the last eighteen years of his political life, Gladstone entered the strife again with all the energy of his younger days. The result may be summed up in the Midlothian campaign against the Bulgarian atrocities and Disraeli's administration; the second Gladstone Government and its protracted conflict with the Parnell revolution; his third term of office devoted to the home-rule bill; the disruption of the Liberal party and the defeat of that project as well as the land scheme; the carrying of the country for home rule at the general election, and the passing of his home-rule scheme through the House of Commons, to be rejected by the House of Lords. Gladstone was thus debarred from putting the crowning act upon his Irish policy. He had early seen the unmitigated evils and injustice of the coercive legislation in that unhappy isle, and the best part of his life and his mighty intellectual powers were devoted to the noble cause of creating between the two so closely allied countries a spirit of true harmony and mutual confidence. He did much, however, to insure the more friendly and sympathetic relations in which the two countries now stand, by the relief which was afforded by the passage of a bill for the disestablishment and disendowment of the Protestant state Church in Ireland, an act in the interest

of religious equality; but he achieved a greater triumph when he caused to be placed on the statute book, after most bitter opposition, the wise and equitable land acts of 1870 and 1881. The first of these provided for giving the tenantry fairer rents and due compensation for unexhausted improvements on the land in case of eviction. The second act went still further and, besides having for its object the reduction of the too often iniquitous evictions, made provision for rents to be fixed by judicial authority. Mr. Gladstone felt, however, that his work for the Irish cause was at an end, and he decided to retire from the active political life to which he had been so long accustomed, impelled also to this course by a severe affection of the eyes, for which an operation was afterward found necessary.

On March 3, 1894, Mr. Gladstone and his wife visited Windsor Castle, where he placed his resignation in the hands of the Queen. Her Majesty had earlier in her reign some suspicions of Gladstone's policy and for some years was failing in appreciation of his great character and aims. Her opinion, however, had undergone a complete change, and on this visit she pressed on the veteran statesman the acceptance of a peerage, and on his refusal it was suggested that the honor be accorded to his wife; but Gladstone clearly saw that his life would be more indelibly impressed on national history and closer to the country's heart by the name of his boyhood and of the mother and father to whose loving care and religious guidance his proud career was greatly due. He retired while yet vigorous and in full possession of all his wonderful mental activity. The evening of his life was spent in literary work and religious reflection, in those ideal home surroundings which were one of the earthly rewards of the great statesman. After his final retirement he was on only one or two occasions tempted into enthusiasm, once when aroused by the massacre of Christians in Armenia, which evoked a stirring speech from the "Grand Old Man," delivered in Liverpool to a wildly enthusiastic audience, and again when, in the Greco-Cretan trouble, he thought it his duty to address a long, impressive letter to the Duke of Westminster.

To summarize the benefits Gladstone conferred on his country during his four terms of office, it may be stated that, though his spirit inspired each of his administrations, he was personally responsible for securing to the public parliamentary trains at one penny a mile and the conveyance of children at half price; the abolition of the paper tax, which made the penny paper a possibility; and the construction of several budgets which removed large burdens of taxation from ratepayers and consumers. The bills relating to Ireland were, it is needless to say, entirely of his personal initiation. During his premiership the governments under his control also passed an act that introduced national education into England and secured to voters immunity from espionage and coercion by means of the ballot act. Socially, Gladstone was brilliant, and his wide reading made his opinions valuable on nearly all the diverse subjects that stir the soul of man. The caution "Beware of the man of one book" could not be applied to him, for it was his habit to have two or three in use together, as a mental change. Gladstone was a good musician, and possessed a fine baritone voice; he was an enthusiastic equestrian, and was exceedingly fond of the somewhat laborious exercise of tree felling, for which the finely wooded desmesne of Hawarden afforded him ample scope. This habit became known, and led to his being presented with axes by his admirers, of all conceivable designs and material, even up to the precious metals. His metaphoric allusion to the *upas tree*

in referring to Irish rule was taken from the active life of the great statesman. Gladstone's sole aim throughout his career was the adaptation of legislative enactment to the moral and material wants and progress of the people. He pinned his faith to moral principles and the sure progress of truth and right. In his last illness, amid the agonies of that painful disease, cancer, he was supported and enabled to bear with patience and resignation the awful suffering by tender ministry of his wife and family, and his deep faith in Divine Providence. It is worthy of comment that two of the greatest statesmen in contemporary history, Bismarck, the "Iron Chancellor," and Gladstone, the "Grand Old Man," were scarcely known to each other. Gladstone is at rest in the finest memorial of the church he loved, amid the dust of those whom the world has delighted to honor, and, by the grim irony of fate, the great commoner and the coroneted earl who was almost his only enemy in life lie side by side, at rest from the fret and fever of earthly ambition.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by the union of the Kingdom of England, the Principality of Wales, and the Kingdom of Scotland, constituting together the Kingdom of Great Britain and the Kingdom of Ireland, the whole forming the United Kingdom, which holds supreme dominion over the Empire of India and colonies and dependencies of various kinds—self-governing colonies, colonies administered by the Crown, and protectorates under native laws and rulers—constituting, with the United Kingdom, the British Empire. The reigning sovereign is the Queen-Empress Victoria, born May 24, 1819, the daughter of Edward, Duke of Kent, who was the fourth son of George III. The heir apparent is Albert Edward, Prince of Wales, born Nov. 9, 1841, whose only surviving son, George, Duke of York, born June 3, 1865, is next in succession.

The power to legislate for the United Kingdom and, except so far as is delegated to local legislative authorities, for the whole British Empire, is vested in the British Parliament, consisting of the House of Lords and the House of Commons. The members of the House of Lords are princes of the blood royal; spiritual lords, which are the metropolitan bishops of ancient English sees; hereditary peers of England, of Great Britain, or of the United Kingdom; law lords and life peers created by the sovereign on the advice of the ministers; and representatives elected from the Scotch and Irish peerages. There were 580 peers on the roll in 1897. The House of Commons numbers 670 members, of whom 495 represent English and Welsh, 72 Scotch, and 103 Irish constituencies. Every proprietor, householder, or lodger paying a rent of £10 a year possesses the parliamentary franchise. The number of registered electors in the three kingdoms in 1897 was 6,470,074. The committee of ministers called the Cabinet, representing the actual majority in the House of Commons, exercises in fact the executive authority in the United Kingdom and in the empire that is nominally vested in the Crown. The Prime Minister selects his colleagues and dispenses the patronage of the Crown; he initiates to a great extent the policy of the Government and the legislation of Parliament, and when his policy is defeated in Parliament or reversed at the polls he resigns with the rest of the Cabinet and advises the Queen as to the political leader who is most competent to form a new Cabinet. The Cabinet formed on June 25, 1895, by Lord Salisbury, consisted, in the beginning of 1898, of the following members: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, the

Earl of Halsbury; Lord Privy Seal, Viscount Cross; Chancellor of the Duchy of Lancaster, Lord James of Hereford; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, Sir Michael E. Hicks-Beach; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, G. J. Goschen; President of the Local Government Board, Henry Chaplin; President of the Board of Trade, C. T. Ritchie; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne, formerly Edward Gibson; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, W. H. Long.

Area and Population.—The area of England is 50,867; of Wales, 7,442; of Scotland, 29,785; of Ireland, 32,583; of the Isle of Man, 227; of the Channel Isles, 75 square miles; total, United Kingdom, 120,979 square miles. The estimated population of England and Wales and the islands in 1897 was 31,055,355; of Scotland, 4,218,279; of Ireland, 4,550,929; total, United Kingdom, 39,824,563. The population of the metropolis in June, 1897, was 4,463,169 for the registration district, and 1,828,508 for the outer ring; total for greater London, 6,291,677. The population of the principal English municipal boroughs in 1897 was as follows: Liverpool, 633,078; Manchester, 534,299; Birmingham, 505,772; Leeds, 409,472; Sheffield, 351,848; Nottingham, 232,934; Bristol, 232,042; Bradford, 231,260; Kingston-upon-Hull, 225,045; Newcastle, 217,555; Salford, 213,190; Leicester, 203,599; Portsmouth, 182,585; Cardiff, 170,063. In Scotland, Glasgow had 714,919 inhabitants in 1897; Edinburgh, 292,364; Dundee, 163,090. In Ireland, Dublin had 361,891 inhabitants in 1891. The number of marriages in England and Wales in 1896 was 242,445; of births, 917,201; of deaths, 527,929; excess of births, 389,272. The number of marriages in Scotland was 30,256; of births, 129,153; of deaths, 70,634; excess of births, 58,519. The number of marriages in Ireland was 22,856; of births, 107,641; of deaths, 75,700; excess of births, 31,941. The number of persons, natives and foreigners, who emigrated from the United Kingdom to the United States in 1897 was 132,098; to British America, 22,702; to Australasia, 12,491; total, 213,450. The total for 1896 was 241,952, comprising 144,913 males and 97,039 females. English emigrants numbered 94,719 in 1897; Scotch, 16,140; Irish, 35,681; total, 146,540. The net emigration in 1896, after deducting 159,913 immigrants, was 82,039; the net emigration of natives of the British Islands, after deducting 101,742 returned, was 60,183.

Finances.—The estimated revenue for the year ending March 31, 1897, was £100,480,000, and the estimated expenditure was £102,324,921. The actual receipts amounted to £103,949,885, and the actual disbursements to £101,476,669, leaving a surplus of £2,473,216, compared with one of £4,209,472 in 1896 and one of £765,341 in 1895. Including £8,249,000 paid over to local taxation accounts, the total revenue was £112,199,000. The net receipts from customs were £21,266,131, of which tobacco paid £11,018,048, tea £3,799,372, rum £2,111,297, brandy £1,303,617, other spirits £908,278, wine £1,296,181, currants £117,265, coffee £172,333, raisins £214,089, and other articles £330,651. The excise receipts were £27,435,096, of which £16,013,412 came from spirits, £10,901,094 from beer, £272,183 from railways, £240,866 from licenses, and £7,541 from other sources. The yield of the estate duty was £7,150,581; of the temporary estate duty, collected on property of persons dying after Aug. 1, 1894, £107,507; of

the probate duty, collected from similar estates, £63,922; of the legacy duty, £2,546,497; of the succession duty, £823,683; of the corporation duty, £40,189; total, £10,741,379. Stamps brought in £7,311,446; the land tax, £916,445; the house duty, £1,513,434; the income and property tax, £16,901,341. The total yield of taxes was £86,085,272, and the income from other sources £18,003,397, making the total net receipts £104,088,669. Of the non-tax revenue £11,876,656 came from the post office, £2,922,449 from telegraphs, £420,403 from Crown lands, £649,075 from interest on Suez Canal shares, and £2,089,814 from miscellaneous sources.

The expenditure under the three main heads for the year ending March 31, 1897, were £26,643,000 for the consolidated fund, £40,440,000 for the army and navy supply services, and £34,394,000 for civil and miscellaneous services, including the cost of collecting the revenue. The national debt charges amounted to £25,000,000, of which £16,108,037 represented interest on the funded debt, £7,149,743 terminable annuities, £112,534 interest on unfunded debt, £175,692 management of the debt, and £1,453,994 the new sinking fund. Other charges on the consolidated fund were £407,579 for the civil list, £296,261 for annuities and pensions, £78,941 for salaries, £513,650 for courts of justice, and £346,436 for miscellaneous expenses. The expenditure on the army was £18,270,000; on the navy, £22,170,000; for civil services, £20,045,000; for customs and inland revenue, £2,716,000; for the post office, £7,150,000; for the telegraph service, £2,961,000; for packet service, £723,000; for a grant in aid to the Egyptian Government, £798,802; total for the supply services, £74,833,802, making with the disbursements for consolidated fund services a total expenditure of £101,476,663.

In 1897-'98 the total revenue collected was £116,016,000, from which £9,402,000 were paid over to local taxation accounts, leaving the total receipts of the exchequer £106,614,000, which was £3,570,000 in excess of the estimates. Customs yielded £21,798,000; excise, £28,300,000; death duties, £15,328,000, of which £11,100,000 went into the exchequer; stamps, £7,650,000; income tax, £17,250,000. The total expenditure was £102,936,000, leaving a surplus of £3,678,000. The budget estimate of £102,541,000 was increased by £250,000 for recoinage of light gold, £644,000 for civil service and post-office supplementary estimates, and £989,000 for army supplementary estimates, while £1,488,000 of the sum voted for naval construction was not expended owing to the engineers' strike. Including the sum paid to the local taxation accounts and £2,751,000 of capital expenditure on naval and military works, barracks, telephones, sites for public offices, and the Uganda Railroad, the aggregate expenditure was £115,089,000, exceeding that of any previous year. Of the realized surplus of the year £2,550,000 were set aside to establish a fund for public buildings, leaving £1,128,000 to be added to the balances in the exchequer. Including this new fund and £1,848,000 appropriated for naval and £1,723,000 for military works, the accumulated surplus on April 1, 1898, amounted to £10,918,000.

For 1898-'99 the total estimated expenditure is £116,007,000, including £9,178,000 to be paid in relief of local taxation and £365,000 required under the Irish local government bill. The budget expenditure is £106,829,000. The increase over the preceding budget is mainly due to the new programme of naval construction, the reform and increases of the army and better conditions for the soldier, increased work in the post office and expenditure on education, and military expenditures in East and West Africa. The increase in the total estimated annual expenditure in three years has

been £12,764,000. Of this increase £2,380,000 go to the relief of local taxation, £1,520,000 to the post office, the revenue of which has increased £2,000,000 in three years, £1,773,000 to education, and £6,564,000 to imperial defense, the annual expenditure for the army having increased £1,237,000, for the navy £5,077,000, and for colonial forces £250,000. The total expenditure on the defenses of the empire, including the expenditure of India and the colonies, is for the army £37,500,000 per annum, and for the navy £26,000,000. The expenditure of the United Kingdom alone on the navy and naval works for 1899 is estimated at £25,528,000, and this is equal to the combined expenditure of France, Germany, and Russia.

The budget revenue for 1898-'99 was estimated at £108,615,000, leaving an estimated surplus of £1,786,000. An increase was looked for under nearly every head except the estate duties, stamps, and the land tax. The total tax revenue under the existing taxes was estimated at £90,000,000 and non-tax revenue at £18,615,000. In framing the budget the Chancellor of the Exchequer reduced taxation to the extent of £1,505,000. A remission to the small income-tax payers costs the revenue £100,000. Under the previous law the amount of income exempt from taxation, namely, £160, was deducted in taxing incomes under £400, £100 in incomes of from £400 to £500 was exempt, and incomes over £500 paid the full tax of 8d. in the pound. Under the new law an abatement of £150 is allowed on incomes of £400 to £500, £120 on incomes of £500 to £600, and £70 on incomes between £600 and £700. Two changes were made in the death duties. As the law stood, lineals who paid estate duty were freed from the legacy or succession duty, while collaterals were not. This made the death duty on a great estate passing to a distant relative or a stranger as high as 18 per cent. Under the amended law collaterals are granted an allowance of 1 per cent. from the legacy and succession duties when they also pay estate duty. The other change postpones the payment of the duty on the devolution from husband to wife or from wife to husband of property settled on the marriage until the death of the survivor. A change was made in the land tax, exempting from taxation properties under £5 annual value which have been taxed only since the reassessments necessitated by the reduction in 1896 of the maximum limit of the land tax from 4s. to 1s. in the pound. The estimated reduction in revenue caused by these remissions of the death duties and the land tax is £285,000. In indirect taxation spirits obtained by grogging, or soaking emptied liquor casks, were made liable to duty the same as other spirits. A considerable reduction was made in the duty on unmanufactured tobacco, which has been 3s. 2d. a pound for half a century, increasing the prime cost of the unmanufactured article 400 per cent. The duty is reduced 6d. a pound on unmanufactured tobacco and on other classes proportionately, with the exception of cigars. The legal limit of moisture in manufactured tobacco is reduced from 35 per cent. to 30 per cent. The loss to the revenue from the reduction in the tobacco duties is estimated at £1,120,000. Customs revenue in 1898-'99 is estimated at £21,080,000; excise, £28,950,000; estate duties, £10,670,000; land tax, £925,000; house duty, £1,570,000; income tax, £17,700,000; stamps, £7,600,000; total tax revenue, £88,495,000; non-tax revenue, £18,615,000; making the total estimated revenue £107,110,000, leaving a margin of £281,000 over the total estimated expenditure.

The funded and unfunded debts on April 1, 1897, amounted to £640,773,679, or, including other capital liabilities, to £644,909,847, of which £587,698,-

732 represent the funded debt, £44,941,947 the capital value of terminable annuities, £8,133,000 the unfunded debt, and £4,136,168 liabilities under various acts of Parliament. The assets of the Government were Suez Canal shares of the market value of £22,299,000 and £970,905 of other assets, making a total of £23,269,905, besides £9,867,134 of balances in bank. On April 1, 1898, the gross liabilities of the treasury amounted to £638,305,000 and the funded debt to £585,788,000, it having been reduced during the year by £1,911,000. The capital value of terminable annuities was £40,553,000, the unfunded debt was the same as the previous year, and the liabilities for barracks, telephones, and other special objects authorized by Parliament were £3,831,000. The total reduction of debt for the year was £6,605,000. The amount of debt paid off in the course of ten years has been £66,250,000. In the same period the local debts have increased £75,250,000.

The Army.—The strength of the regular army, as provided in the estimates for 1898, was 7,814 officers, 1,054 warrant officers, 16,233 sergeants, 3,788 drummers, trumpeters, etc., and 134,680 rank and file; total, 163,569 men of all ranks. The general staff numbered 340 officers, with 133 noncommissioned officers and men; army accountants, 209; chaplains, 86; medical department, 596; veterinary department, 72; cavalry, 551 officers, 1,281 noncommissioned officers, drummers, etc., and 11,437 men; Royal Artillery, 1,045 officers, 2,255 noncommissioned officers, etc., and 23,823 men; Royal Engineers, 595 officers, 1,283 noncommissioned officers, etc., and 5,967 men; infantry, 2,895 officers, 6,768 noncommissioned officers, etc., and 81,740 men; colonial corps, 208 officers, 463 noncommissioned officers, etc., and 5,882 men; departmental corps, 193 officers, 1,381 noncommissioned officers, etc., and 3,140 men; army service corps, 246 officers, 760 noncommissioned officers, etc., and 2,805 men; gunnery and musketry instructors, military academies and colleges, regimental schools, and other establishments, 188 officers, 559 noncommissioned officers, etc., and 130 men. The number of horses provided for the establishment was 15,238. These figures do not include the British army maintained in India at the expense of the Indian Government. The number of troops maintained in the United Kingdom in 1897 was 100,641, comprising 11,897 cavalry, 16,233 artillery, 5,555 engineers, and 66,966 infantry and special corps. The total effective strength of the British army on Jan. 1, 1897, was returned as 220,869 officers and men, of whom 73,272 were stationed in England, 3,599 in Scotland, 23,770 in Ireland, 4,711 in Egypt, 38,522 in the colonies, and 76,995 in India. The effective strength of the regular forces at home and in the colonies in 1898 was 143,874; of the army reserve, 78,142; of the militia, 120,084; of the yeomanry, 10,184; of the volunteers, 236,065; total, 588,349. Adding 76,995 British soldiers in India, the total fighting strength of the nation was 665,344 trained fighting men. Of 40,165 British troops in the colonies in 1897, 10,638 were stationed at Malta, 5,404 at Gibraltar, 6,447 in Cape Colony and Natal, 1,971 in Bermuda, 3,279 in Jamaica, Barbadoes, and St. Lucia, 1,784 at Halifax, 3,448 at Hong-Kong, 1,655 in the Straits Settlements, 1,769 in Ceylon, 1,219 in Mauritius, 1,657 in West Africa, 136 in Cyprus, and 749 at St. Helena.

In time of war dispositions are made for the formation of two army corps for service outside of the British Islands, having a total strength of 2,310 officers and 70,182 men, with 20,236 horses, 128 field guns, and 28 revolver cannon; a division of cavalry, numbering 327 officers and 6,701 men, with 6,676 horses, 12 field pieces, and 6 revolver cannon; and a

reserve force consisting of 448 officers and 11,394 men, with 3,241 horses, 12 pieces of artillery, and 8 revolver cannon. For the defense of the country garrison and fortress troops can be taken from the militia and volunteers, and three army corps can be formed, besides which there are 22 infantry brigades of volunteers for field service and 4 brigades of cavalry, not counting unallotted units available for garrison service. Great Britain and Ireland are divided into 14 military districts, and these into 102 subdistricts for the infantry, organized in linked battalions, one of which is usually serving abroad, while the other is garrisoned somewhere in the United Kingdom. The militia and volunteer infantry of each subdistrict are under the command of the same colonel as the brigade of infantry of the line. For the artillery there are 12 subdistricts, and for the infantry there are 2, commanded by colonels of artillery and of cavalry.

The total number of all ranks of the regular army on Dec. 31, 1897, was 221,487, showing an increase over the previous year of only 618, although the augmentation authorized was 3,136. In the session of 1897 an increase of 7,879 was sanctioned, but of these little more than one third were obtained. In 1898 the Government asked for an increase of 25,000 men, the drain on the army to garrison the new territories and fight in the small wars going on at the edges of the expanding British Empire having disturbed the equilibrium of the linked battalion system, according to which every battalion serving abroad must be supported by a battalion at home. In recent years some line regiments have both battalions serving abroad, and in the case of many others the home battalion is a mere school for raw recruits, deficient in numbers, stamina, age, and training. To attract recruits the pay of the soldier was raised 3d. a day for the long-service troops and a limited number were to be engaged for three years only. Of the additional troops a part were to be formed into 6 new battalions and each of the home battalions was to be strengthened by the addition of 80 men. Two army corps were supposed to be ready to embark in 1898, and a third corps was being formed, but lacked still the necessary field artillery. The intended increase will bring the regular troops up to 132,453 and the reserves up to 83,000, making, with the yeomanry, military, and volunteers, the total military forces maintained at home over 637,000 men. The first-class reserve on Jan. 1, 1898, numbered 82,005 men; the militia, 105,531; the militia reserve, 29,961.

The Navy.—The British navy at the beginning of 1898 consisted of 30 first-class, 7 second-class, and 21 third-class battle ships, 14 coast-defense vessels, 9 armored cruisers, 9 first-class and 64 smaller cruisers, 19 lookout ships, 34 torpedo gunboats, 79 destroyers, and 55 first-class, 4 second-class, and 20 third-class torpedo boats. There were under construction 8 first-class battle ships, 4 armored cruisers, 5 first-class and 14 smaller protected cruisers, and 13 destroyers. The "Majestic," "Magnificent," "Victorious," and "Prince George" are the latest type of battle ship, having a displacement of 14,900 tons, 14 inches of Harveyized armor over the vital parts, engines of 12,000 horse power, designed to make 18 knots, and an armament of 4 12-inch guns mounted in barbette emplacements, with 12 6-inch and 28 smaller quick-firers. The "Mars," "Illustrions," "Jupiter," "Hannibal," and "Cæsar," of the same class, have been begun, and three others are on the programme of Lord Spencer that was adopted in 1880. The barbettes of the "Majestic" class are strongly armored, and the heavy guns, which are mounted in pairs, can be loaded either by hand or by hydraulic power. The three new ones will have water-tube boilers, and

are designed to make 18½ knots with moderate forced draught and 18 knots with natural draught. Their secondary armament will have superior protection. The "Cæsar," "Illustrious," and "Hannibal" were completed before March 31, 1898. The "Renown," launched in 1895, with a displacement of 12,350 tons, 10 inches of armor, 10,000 horse engines, making 17 knots, and 4 29-ton guns mounted in two barbettes, with 10 6-inch quick firers and 30 smaller ones, has been improved in the "Canopus" class. This vessel, launched in October, 1897, has a displacement of 12,950 tons, 12 inches of side armor, engines of 13,500 horse power, giving a speed of 18½ knots, and an armament almost the same as on the "Majestic" class, consisting of 4 12-inch breechloaders, 12 6-inch, 12 12-pounders, and 14 smaller quick-firing guns. The Spencer programme included 4 others of this type, the "Ocean," "Goliath," "Albion," and "Glory," and another, the "Vengeance," has been added. Three more that have been since authorized are improved "Majestics." All the new battle ships will be armed with 12-inch and 6-inch quick-firing guns. These would have been further advanced if the engineers' strike and lockout had not intervened. Four new armored cruisers are building which will have a displacement of 11,850 tons, with an armament of 2 9-inch breechloaders and 12 6-inch and 14 12-pounder quick-firers. The great deck-protected cruisers "Powerful" and "Terrible," of 14,200 tons, have been completed. They have 25,000 power engines, making 22 knots, and carry 2 9.2-inch breechloaders and 12 6-inch, 18 12-pounder, and 12 3-pounder quick-firing guns. The "Diadem" class has a displacement of 11,000 tons, engines of 16,500 horse power, giving a speed of 20½ knots, and an armament consisting exclusively of quickfirers, 16 6-inch, 14 12-pounder, and 20 smaller ones. The "Diadem" was launched in 1896, the "Andromeda," "Niobe," and "Europa" in the following year, and the "Argonaut," "Spartiate," "Amphitrite," and "Ariadne" are rapidly approaching completion. The next four to be built, the "Cressy" class, will be of greater dimensions, 11,850 tons, and will carry a pair of 9-inch, besides 12 6-inch and 14 12-pounder quick-firing guns. Nine second-class cruisers of the "Talbot" class, 5,600 tons, have recently been completed. These are the "Eclipse," "Minerva," "Talbot," "Diana," "Juno," "Venus," "Dido," "Doris," and "Isis." They make 19½ knots with engines of 9,600 horse power, and carry a quick-firing armament of 5 6-inch, 6 4.7-inch, and numerous smaller guns. Three more, the "Hermes," "Hyacinth," and "Highflyer," are being added, and four others of larger size, the "Furions," "Gladiator," "Vindictive," and "Arrogant," were launched in 1896. These displace 5,750 tons, have engines of 10,000 horse power or over, giving a speed of 19 or 19½ knots, and carry 4 6-inch, 6 4.7-inch, 9 12-pounder, and 8 small quick-firing guns. Eight third-class cruisers of the "Pelorus" type were begun in 1896 and 1897. The newest of the smaller cruisers are of the "Apollo" type, displacing 3,400 tons, or of the type of the "Astræa," of 4,360 tons, with engines of 9,000 horse power, giving a speed of 19½ or 20 knots. Of the 90 destroyers ordered under the naval-defense act, but few remain to be finished. Of the 42 first ordered, with a contract speed of 26 or 27 knots, 37 were completed before the end of the financial year. Contracts were next made for 45 with a speed of 30 knots, and five more were ordered in 1898. Of still newer types three were ordered with a speed of 32 or 33 knots, and one having a steam turbine instead of the reciprocating engine. A flotilla of 8 light-draught gunboats has been built for service on African rivers.

The new ship-building programme for 1899 when first announced comprised 3 battle ships, 4 armored cruisers, and 4 sloops. The naval budget for 1899, amounting to £25,000,000, was the heaviest ever voted in peace or war. Still it was insufficient to bring up the arrears in the authorized programme of construction. The number of officers, seamen, boys, coast guard, and marines voted for 1898 was 100,050, an increase of 6,300 for the year. In July Mr. Goschen announced an addition to the original programme, occasioned by the proposed new construction in Russia, and necessitating, in order to maintain the superiority of the British navy over those of France and Russia combined, the building of 4 more battle ships, 4 cruisers, and 12 destroyers. The two programmes together involve an outlay on shipbuilding of £15,000,000 spread over four years.

Commerce and Production.—The production of wheat in Great Britain in 1897 was 54,913,000 bushels; of barley, 66,804,000; of oats, 116,812,000; the production in 1896 of wheat in Ireland, 1,194,000 bushels; of barley, 7,050,000 bushels; of oats, 48,844,000 bushels; of potatoes, 2,701,000 tons; of turnips, 4,783,000 tons. There were 1,526,424 horses, 6,500,497 cattle, 26,340,446 sheep, and 2,342,302 pigs in Great Britain in 1897, and in Ireland 534,133 horses, 4,463,935 cattle, 4,157,581 sheep, and 1,327,226 pigs. The quantity of fish landed on the coast in 1897 was 688,263 tons, valued at £7,480,060. The imports of fish in 1896 were 113,654 tons, valued at £2,636,076. The exports were valued at £2,009,147, of which £1,328,656 stand for herring alone. The quantity of iron extracted from British ores in 1896 was 4,759,446 tons, valued at £11,375,474; of lead, 303,398 tons, valued at £350,940; of tin, 4,838 tons, valued at £307,678; of zinc, 7,110 tons, valued at £123,240; of silver, 283,826 ounces, valued at £36,365; of copper, 556 tons, valued at £28,180. The value of all the ores raised was £3,814,536, and of all the metals contained in the ores £12,226,912. The total value of non-metallic minerals raised was £65,273,830. The coal output was 195,361,260 tons, valued at £57,190,147. The exports of coal, coke, and patent fuel were 34,262,056 tons, valued at £15,156,313. France, Germany, Italy, Spain, Sweden, Russia, Denmark, Norway, and Brazil took the bulk of the exports. The quantity of iron ore smelted in British furnaces in 1896 was 21,204,284 tons; the quantity of pig iron made, 8,659,681 tons; exports of pig iron, 1,060,165 tons; imports, 106,449 tons. The exports of bar and angle iron were 178,123 tons; of railroad iron, 747,662; of wire, 56,110; of plates for tinning, 48,405; of tin plates, 266,963; of cast and wrought iron, 366,230; of hoops and plates, 365,165; of old iron, 127,424; of steel, 297,439; of steel and iron, 36,712; total iron and steel, 3,550,398 tons. The imports of copper ore and regulus were 178,134 tons; of copper, 65,359; of lead, 167,799; of tin, 38,375; of zinc, 76,635. The quantity of raw cotton imported was 1,754,890,256 pounds and the re-exports were 183,823,808 pounds, leaving 1,571,066,448 pounds for home consumption. The imports of wool were 718,537,253 pounds, and the exports 334,691,803 pounds, leaving 383,845,450 pounds for home consumption. The consumption of flax is about 240,000,000 pounds. The exports of cotton piece goods in 1897 were 4,793,000,000 yards; of cotton yarn, 253,000,000 pounds; of woollen piece goods, 200,000,000 yards; of woollen yarn, 57,000,000 pounds; of linen piece goods, 165,000,000 yards; of linen yarn, 18,000,000 pounds; value of manufactured cotton exported, £64,000,000; of woollen manufactures, £20,800,000; of linen manufactures, £5,700,000. The quantity of tea imported in 1896 was 265,394,000 pounds, of which about 48 per cent. came from India, 36 per cent. from Ceylon, 13 per cent. from China, and 3

per cent. from Java and other countries, whereas in 1878 China furnished nearly 81 per cent., India only 17 per cent., and other countries 2 per cent., the great tea industry of Ceylon not having been established at that time. The total value of imports in 1897 was £451,238,683; of exports of British produce, £234,350,003; of exports of foreign and colonial produce, £59,833,677. The imports of live animals for food were valued at £11,380,332; of articles of food and drink free of duty, £151,550,115; of dutiable articles of food and drink, comprising tea, coffee, cocoa, wine, spirits, dried fruits, etc., £26,791,515; of tobacco, £4,072,435; of metals, £21,265,363; of chemical substances, dyestuffs, and tans, £6,006,210; of oils, £7,641,231; of raw textiles, £70,263,511; of raw materials for other industries and manufactures, £52,085,336; of manufactured articles, £85,038,387; of miscellaneous articles, £14,139,314; imports by parcel post, £1,004,930.

Among the exports of British produce and manufactures the value of live animals was £1,133,115; of articles of food and drink, £12,138,542; of raw materials, £20,140,090; of yarns and textile fabrics, £96,618,472; of metals and metal manufactures, £34,487,808; of machinery and mill work, £16,282,085; of apparel and articles of personal use, £9,878,192; of chemical products and medicinal preparations, £8,674,864; of all other manufactured or partly manufactured articles, £32,939,649; exports by parcel post, £2,057,186.

The imports of wheat, not including flour, were 14,659,600 quarters in 1897. The imports from the United States were 34,603,200, from Russia 15,049,900, from Canada 4,820,500, from Turkey 1,862,640, from Germany 1,333,400, from Roumania 1,224,340, from Chili 1,019,300, from the Argentine Republic 933,100, and from India 572,760 hundredweight. The imports of flour were 18,680,669 hundredweight, of which 14,062,970 hundredweight came from the United States. The total imports of cereals and flour were 177,706,840 hundredweight; of potatoes, 3,922,319; of rice, 5,178,862; of bacon and hams, 6,730,790; of fish, 2,449,730; of refined sugar, 15,832,092; of raw sugar, 13,552,227; of tea for home consumption, 231,399,778 pounds; of butter, 3,217,801 hundredweight; of margarine, 936,543; of cheese, 2,603,608; of beef, 3,185,623; of preserved meat, 669,785; of fresh mutton, 3,193,276; the number of sheep and lambs imported, 611,504; of cattle, 618,336; the quantity of wine for consumption, 15,853,971; and of proof spirits, 8,301,010 gallons. The values of the leading articles of import in 1897 were £53,579,745 for grain and flour, £32,194,732 for raw cotton, £27,368,484 for meat, £24,436,872 for wool, £23,636,361 for timber and wood, £18,402,281 for butter and margarine, £16,912,388 for silk manufactures, £15,950,797 for raw and refined sugar, £11,380,332 for live animals, £10,903,179 for woolen manufactures, £10,443,104 for tea, £9,109,253 for flax, hemp, and jute, £7,648,147 for leather and dressed hides and skins, £7,641,231 for oils, £6,633,438 for fruits and hops, £6,438,513 for wines, £6,006,210 for chemicals, dyestuffs, and medicinal preparations, £5,886,546 for cheese, £5,772,054 for iron manufactures, £5,751,045 for seeds, £4,435,934 for iron ore, £4,356,799 for eggs, £4,072,435 for tobacco, £3,571,443 for coffee, £3,040,758 for copper, £2,752,406 for copper ore, £2,115,364 for currants and raisins, £2,033,300 for lead, £1,628,262 for zinc and manufactures of zinc, £1,623,798 for tin; and £539,509 for pig iron.

The exports of cotton fabrics were valued at £54,061,269, and of cotton yarn at £9,932,447, making a total for cotton manufactures of £63,993,716; the exports of woolen fabrics at £15,982,888, and of woolen yarn at £4,842,137, making the total for woolen manufactures £20,825,025; the exports of

linen fabrics at £4,774,310, and of linen yarn at £976,658, making the total for linen manufactures £5,750,968; the exports of jute fabrics at £2,168,071, and of jute yarn at £529,951, making a total of £2,698,022; the exports of apparel and haberdashery at £6,466,080. The sum total for textile manufactures was £99,723,811. The total value of the iron and steel exports was £24,639,643, of which £2,892,373 represent pig iron, £1,084,373 bar, angle, bolt, and rod iron, £3,858,734 railroad iron of all sorts, £866,593 wire, £3,037,279 tin plates, £3,458,758 hoops, sheets, and plates, £4,885,275 cast and wrought iron of all kinds, £239,185 old iron, and £4,317,073 steel and manufactures of steel and mixed steel and iron. This does not include the exports of hardware and cutlery, valued at £2,107,264, or of machinery, valued at £16,282,085. The principal other exports are copper goods, of the value of £2,530,265; coal, coke, and fuel, of the value of £16,659,294; and chemical products, of the value of £8,674,864.

The quantity of butter imported in 1897 was 3,217,801 hundredweight; of margarine, 936,543 hundredweight; of cheese, 2,603,608 hundredweight; total, 6,757,952 hundredweight, valued at £24,288,827. The imports of dairy products have increased nearly a third in seven years; those of butter a full third; while margarine imports have declined.

The imports of gold in 1897 were £30,808,858, and the exports £30,808,571. The imports of silver £18,032,090, and the exports £18,780,988.

British economists and merchants have long been alarmed at the invasion of markets that were once exclusively British, by the manufactured products of Germany. The total value of British domestic exports in 1897 was still one third greater than the value of the similar exports of Germany. American competition has also cut into the export trade to many countries, and the exports to the United States have greatly declined. While the exports of the United States since 1891 have increased 18 per cent., those of Great Britain have decreased 5 per cent. The loss of £2,600,000 in the year ending Oct. 31, 1898, is attributed chiefly to the new American tariff.

Navigation.—The number of vessels engaged in foreign commerce entered at the ports of the United Kingdom in 1896 was 63,058, of 42,477,000 tons, of which 38,393, of 30,290,000 tons, were British, and 24,665, of 12,188,000 tons, were foreign. The number cleared was 63,239, of 85,462,000 tons, of which 38,830, of 61,472,000 tons, were British, and 24,409, of 23,991,000 tons, were foreign. The tonnage of vessels entered with cargoes was 33,480,000, of which 24,630,000 tons were British and 8,850,000 tons were foreign. The tonnage of vessels cleared with cargoes was 37,703,000, of which 27,726,000 tons were British and 9,977,000 tons were foreign. Of a total foreign tonnage of 23,990,288 tons entered and cleared, Norway had 5,883,467 tons; Germany, 3,823,168; France, 2,397,839; the Netherlands, 2,470,138; Denmark, 2,265,153; Sweden, 2,236,382; Spain, 1,364,003; Belgium, 1,179,646; the United States, 768,597; Russia, 693,455; Italy, 279,237; and Austria-Hungary, 237,818.

The tonnage entered and cleared at the port of London was 15,582,195 tons; at Cardiff, 10,905,144; at Liverpool, 10,883,024; at Newcastle, 4,604,104; at Hull, 4,011,909; at North and South Shields, 3,857,468; at Glasgow, 3,191,707; at Southampton, 2,998,254; at Newport, 2,385,675; at Middlesboro, 2,016,807; at Sunderland, 1,801,208; at Leith, 1,792,682; at Grimsby, 1,556,745; at Swansea, Grangemouth, Kirkcaldy, and Bristol, more than 1,000,000 tons each.

The number of vessels registered as belonging to

the United Kingdom on Jan. 1, 1897, was 20,796, of 9,020,282 tons, divided into 12,274 sailing vessels, of 2,735,976 tons, and 8,522 steamers, of 6,284,306 tons. The number of seamen employed was 242,039, of whom 33,046 were foreigners. The total number of vessels belonging to the British Empire was 35,735, of 10,503,307 tons. The number of vessels built and first registered during 1896 was 931, of 519,970 tons, divided into 389 sailing vessels, of 57,467 tons, and 542 steamers, of 462,503 tons. Of the total number of vessels belonging to the United Kingdom, 7,086 sailing vessels, of 449,192 tons, and 2,752 steamers, of 421,404 tons, were employed in the home trade and the adjacent seas; 220 sailing vessels, of 24,640 tons, and 294 steamers, of 232,297 tons, were employed partly in the home and partly in the foreign trade; and 1,686 sailing vessels, of 2,144,235 tons, and 3,701 steamers, of 5,661,572 tons, were employed exclusively in the foreign trade.

Communications.—The total length of railroads open to traffic in the United Kingdom on Jan. 1, 1897, was 21,277 miles, of which 14,708 miles were in England and Wales, 3,391 miles in Scotland, and 3,178 miles in Ireland. The paid-up share and loan capital amounted to £1,029,475,333. The number of passengers carried during 1896 was 980,339,433, exclusive of holders of season tickets. The receipts from all sources were £90,119,122, of which £39,120,865 came from passengers and £46,175,335 from freight; working expenses, £50,192,424, equal to 56 per cent. of the gross receipts.

The number of letters that passed through the British post office during the year ending March 31, 1897, was 1,893,000,000, of which 1,606,500,000 were delivered in England and Wales, 168,500,000 in Scotland, and 118,000,000 in Ireland, being 48 per head of population for the whole United Kingdom, 52 for England and Wales, 40 for Scotland, and 26 for Ireland. The number of postal cards for the United Kingdom was 336,500,000; of book packets, 697,900,000; of newspapers, 150,600,000; of parcels, 63,700,000; of money orders, 10,921,617, for the total amount of £30,249,087, of which 9,314,022, for £25,918,853, were inland orders; of postal orders, 67,182,998, for the gross amount of £24,826,874. The receipts of the postal service were £12,146,935, and the expenses £8,253,112, leaving a net revenue of £3,893,823. The telegraph receipts from paid messages were £2,967,353, and expenses £3,108,065, leaving a deficit of £140,714.

The total length of telegraph lines on March 31, 1897, was 41,393 miles, with 279,935 miles of wire. The number of messages in 1897 was 79,423,556, of which 66,950,409 were English, 8,094,360 Scotch, and 4,378,787 Irish.

The Session of Parliament.—The fourth session of the fourteenth Parliament of Queen Victoria and the twenty-sixth Parliament of the United Kingdom was opened on Feb. 8, 1898. In the Queen's speech an expenditure beyond precedent was declared to be necessary in order to provide adequately for the defense of the empire in view of the enormous armaments maintained by other nations. The promised measure for the organization of a system of local government in Ireland was described as substantially similar to that established in Great Britain. Proposals were announced having for their object to secure increased strength and efficiency in the army and amending the conditions of military service. The bill for enabling accused persons to be heard as witnesses in their defense was revived, as well as the one to improve the procedure in Scottish private-bill legislation. A measure was announced for facilitating the creation of municipalities in the administrative county of London. A bill to amend the vaccination law was recommended as important. Minor proposals were

to prevent certain recognized abuses in connection with Church patronage, to constitute a teaching university for London, to amend the prison act, to deal in part with the subject of secondary education, to amend the law relating to the mercantile marine fund, to guard against fraud in the management of limited companies, to facilitate the ascertainment of the rights of landlord and tenant on the termination of an agricultural tenancy, and to prevent the adulteration of drugs and food.

The session came to an end on Aug. 12. Out of more than 300 public bills submitted to Parliament only 62 finally received the royal assent, and of these about half were Scotch and Irish bills or were only of local or limited application. Those of general interest comprised new departures in the laws of Church patronage, habitual drunkenness, prison discipline, and compulsory vaccination, besides the criminal-evidence act, a vagrancy act, a locomotive act, two merchant shipping acts, and other amendments of previous statutes not so important.

The Irish local self-government bill was foreshadowed by Mr. Balfour in the previous session, when he withdrew the Irish agriculture and industries bill and the Irish poor-law relief bill. His plan for giving the proposed county and district councils control of the rates and local institutions, and at the same time neutralizing the power of these elective bodies to impose undue burdens on the landowners, was at the time accepted in principle by all Irish members, both Unionists and Nationalists. The bill was carried through without serious opposition from either party, except in regard to some details. The poor-law system is modified by the abolition of all official members. In holdings under £4 rental valuation, where the landlord has paid the whole of the poor rate, he will be liable for half which is deducted from the rent. As he has no control over the boards of guardians, it is provided that his liability must not exceed half the rate assessed in 1897 and that the new county councils must limit the expenditure on roads to the average for the preceding three years plus 25 per cent. Ministers of religion are ineligible to the new bodies. The representatives of the landlords were further appeased by a contribution from the imperial treasury in relief of rates. The act consolidates the poor rate and the county cess into a single tax which is paid by the occupiers. Half the poor rate, which the owner paid previously, and half the county cess, which the tenants bore, are met by a grant out of the imperial exchequer, estimated at £730,000 a year. The financial powers previously vested in grand juries are transferred to county councils, elected on the parliamentary franchise, with the addition of peers and women. Urban and rural-district councils and boards of guardians are elected in the same way. Amendments to the Irish land law were recommended by a commission appointed in 1897, which proposed the abolition of the concurrent jurisdiction of county courts in fixing fair rents and the elevation of the sub-commissioners and court valuers to the rank of permanent officials, to be selected from a list approved by some higher and independent authority and subjected to a test as to their qualifications. The uncertainty and instability of the fair rent and the costly process of fixing it periodically the commissioners would obviate by an automatic method of determining the true value or by converting the landlord's interest into a fixed rent charge. The failure of the potato crop in some of the western districts of Ireland was treated by the Government with such seeming indifference as to draw indignant reproaches from all sections of the Nationalists and intercessions from Irish Unionists. The Irish Secretary, Gerald Balfour, would only agree to supple-

ment the poor-law relief with Government aid not to exceed three fourths of the whole, granted on the condition that the guardians applied the labor test. For the next crop Parliament voted to supply seed and the Government furnished implements for spraying potatoes to the boards of guardians in the famished districts. Mr. Davitt's motion charging that no adequate means had been taken to avert starvation was rejected by 235 votes to 133. On June 7 the celebration by Nationalists of the anniversary of the battle of Antrim produced Orange riots in Belfast more serious than had occurred since 1886, necessitating the occupation by troops of some quarters of the town. As in former disturbances, public houses were looted and the street pavements were torn up to furnish cobblestones, which are the favorite weapons of the Belfast rabble. When Sir William Harcourt declined to support Mr. Redmond's amendment to the address asserting the Irish claim for an independent Parliament and Executive, and when the amendment was defeated by an enormous majority, the separation between the Irish Nationalists and the British Radicals, which began in 1897 on the education question, was made apparent. When Irish representatives brought up the question of financial relations, urging that Ireland was overtaxed, a part of the Liberals sustained the view of the Government, as also on the question of local government. On the question of a Catholic university for Ireland the leader of the house conceded the claim of the Irish party, but put off the matter until local government was out of the way.

The criminal-evidence bill deals with a subject that has been brought before Parliament many times in the past twenty-five years. It had the support of a majority of the judges and legal practitioners. Previous statutes allow a prisoner to be heard in certain cases, dependent often on the form of the indictment. Some feared that the present act by allowing him to be cross-examined on questions of character would place him at the mercy of the prosecuting attorney; hence limits were set to the questions that can be put to him. He can not be questioned about other offenses than the one charged nor as to bad character. The bill contains a clause enabling a wife to give evidence in behalf of her husband or a husband in behalf of his wife. Neither the prisoner nor the wife or husband can be called as a witness except on the prisoner's own application. The power of the person charged to make an unsworn statement not subject to cross-examination remains intact. The person charged or the wife or husband can give testimony at any stage of the proceedings, but if the prisoner is the only witness for the defense he is to be called immediately after the close of the prosecution. The act applies to England and Scotland, but not to Ireland.

The London municipalities bill, which was not proceeded with, was violently opposed by the Progressives, who, when it was first adumbrated by Lord Salisbury, saw in it a design to rob the county council of its chief powers and return practically to the old system of parishes in order to frustrate the policy which the local allies of the Tory party were unable to defeat in the county elections. The special juries act abolishes the numerical limit of 48 fixed for the panel by former legislation, and leaves it to the sheriff to decide what is a sufficient number of persons to be summoned to the assizes as special jurors. The prison act amalgamates the convict prison directors with the prison commissioners, establishes visitors to convict prisons, directs that prisoners for debt or for nonpayment of fines are not to be placed in association with criminal prisoners or obliged to

wear prison dress, and empowers the Home Office to make rules for the treatment of prisoners, which are to be submitted to Parliament, and which must have regard for the sex, age, health, industry, and conduct of prisoners and not prescribe corporal punishment except in special cases.

The inebriates act provides that an habitual drunkard, admitted by himself or found by a jury to be such, on being convicted of an offense committed under the influence of drink, may be committed to a state or certified inebriate reformatory, to be detained there in addition to or in lieu of any other sentence. The Secretary of State has power to establish state reformatories and to certify reformatories established by county or borough councils or others of fit character. Both the treasury and the borough or county councils may contribute toward the expenses of certified reformatories. A person committed to a reformatory is maintained at his own charge provided he has an estate more than sufficient to maintain his family. The existing retreats for habitual drunkards are licensed no longer by the justices, but by the county or borough councils, and a person committed under the habitual-drunkards act may be detained in such a retreat for the maximum period of two years, instead of one year. The libraries act makes it a misdemeanor to be disorderly or abusive or to gamble in a public library or in the library of a provident or friendly society or a trade union.

A new vagrancy act makes a man who lives on the earnings of prostitution liable to be sentenced as a rogue and a vagabond to three months' hard labor, and on a second conviction to be whipped, the whipping clause being preserved just to meet such cases. A bail act enables justices of the peace, although they may decide that a person ought to be indicted and tried at assizes or quarter sessions, to dispense with sureties for his appearance at trial unless it tends to defeat the ends of justice. The importation of fictitious foreign postage stamps and of lottery advertisements is prohibited in the customs and inland revenue act of 1898, which also requires an account of importations of diamonds. One of the shipping acts makes the owner responsible for damages caused by his ship previous to its registration; the other establishes a general lighthouse fund and enacts that light dues are to be levied by periods or by voyages, and not according to the number of lights that a ship passes. The reserve forces and militia act enables first-class reservists of good character, up to the number of 5,000, to agree to serve in the permanent army during the first twelve months of their reserve service, and also permits the militia to volunteer for foreign service.

The companies act of 1867 provided that shares must be paid for in cash unless a contract stating the fact of their allotment for goods or other valuable consideration shall have been filed with the registrar of joint-stock companies. The new act extends relief in cases when the company or person interested satisfies the court that the failure to register a contract was accidental, or where it is found just and equitable to grant relief. A superannuation scheme was enacted for elementary-school teachers, who are only admitted to the benefits of the fund on proving their physical capacity to the education department at the time of receiving their certificates and contribute at the rate of £3 a year for men and £2 for woman teachers. The superannuation allowance begins at the age of sixty-five.

The church benefices act invalidates the transfer of the right of patronage unless it is registered, unless twelve months have elapsed since the admission of the last incumbent, and unless the whole

interest is transferred. This puts an end to sales of next presentations. The sale by auction of a benefice is forbidden, unless at least 100 acres of land go with it. All agreements to exercise the right of patronage in favor of a particular person, or to transfer the right of patronage for payment previous to a vacancy, or for resignation in favor of a particular person, are declared invalid. An incumbent may, however, promise to resign in favor of a relative of the patron. The declaration against simony is made so stringent that persons of good character can no longer indulge in practices that are simoniacal, being to the effect that the clergyman has not received the presentation in consideration of any sum of money, reward, gift, profit, or benefit, directly or indirectly given by him, or by any one for him, to any one, and will not perform any contract made in respect to the presentation without his knowledge. The bishop, who formerly had power to refuse institution only to presentees not in priest's orders, unorthodox, illiterate, or of extremely bad character, can now withhold it on the possibility of a corrupt presentation if a year has not elapsed since the last transfer of the right of patronage, or on account of the inexperience of a presentee who has not been ordained as deacon longer than three years, or on grounds of his unfitness by reason of physical or mental infirmity, serious pecuniary embarrassment, grave misconduct, neglect of duty in an ecclesiastical office, or evil life. The marriage act dispenses with the presence of a registrar at other places of worship than churches of the Church of England, permitting any authorized person certified as such by the trustees of a place of worship to take the declarations required to be made before the registrar hitherto, but if the parties desire the presence of the registrar he is bound to attend. Similar rights have long been enjoyed by the Society of Friends and Jewish congregations, but not by nonconformists in general nor by Roman Catholics. The University of London act appoints Lord Davey, the Bishop of London, Sir William Roberts, Sir Owen Roberts, Prof. Jebb, Dr. Michael Foster, and E. H. Busk commissioners to make statutes and regulations for the proposed university, which will recognize as teachers of its staff duly qualified teachers and lecturers giving instruction of a university type in public educational institutions within a radius of 30 miles, whether such institutions be schools of the university or not. The Inns of Court and the Law Society have power to appoint members of the senate, but do not lose their rights and privileges.

The vaccination act was founded on the recommendations of a royal commission which studied the subject from 1889 to 1896, and finally in its majority report dissented from the policy of compulsory vaccination, which has been the law since 1853. It was found that among the class for which it was established it has declined in favor, and that 25 per cent. of the elected guardians of the poor neglect to enforce it, with the result that there are hundreds of thousands of unvaccinated persons. The new act does not abrogate the compulsory clause, but directs that it shall not be enforced in cases where the child's parents or guardians have a conscientious belief that vaccination would be dangerous to the child, also that no person shall be subjected more than once to the penalties for disobedience of the act. The period within which a child must be vaccinated is extended from three months to six months from its birth, and the public vaccinator is required, if requested, to go to the child's home to vaccinate it, instead of the parent being obliged to take the child to the public place of vaccination, though in cases of serious risk of

smallpox the local government board still has power to establish public stations. In case of nonvaccination within four months from birth the public vaccinator is directed to visit the child's home and offer to vaccinate. The local government board is required to issue for public vaccination only glycerinated calf lymph, unless a still safer and more efficacious kind shall be discovered hereafter. The use of calf instead of child lymph prevents the transmission of human infectious diseases, while the glycerin destroys all known germs except the vaccine germ itself. Mr. Chaplin, who had charge of the bill, resisted the proposal practically to destroy the principle of compulsory vaccination by allowing the conscientious objections of parents to nullify the law. Mr. Balfour, however, took the matter out of his hands, and even receded from the proposal of letting magistrates decide on the good faith of the objector, admitting as sufficient a mere declaration. The House of Lords, only 78 being present, struck out the whole clause by a majority of 2, but the Government mustered enough Conservative peers subservient to the claims of party to carry the clause by a majority of 10 after the Commons reinserted it.

A resolution offered by Mr. Seton-Karr, an advocate of national granaries, was carried on April 6, 1897, on being accepted in behalf of the Government by Mr. Balfour, who at the same time indicated his belief that the maintenance of a strong navy offered the best guarantee for adequate provision of foodstuffs. The resolution only went so far as to declare that the dependence of the United Kingdom on foreign imports for the necessities of life and the consequences that might arise therefrom in the event of war demand the serious attention of the Government. When wheat suddenly rose in price upon the outbreak of hostilities between Spain and the United States, the author of the resolution brought up the subject again, pointing out that five sixths of the grain consumed in the United Kingdom is imported, whereas France produces a sufficient supply for her people; Germany, Austria, and Italy grow three fourths of what their people consume in time of peace, and in war time can manage to support themselves; and Russia and the United States are large grain-exporting countries. The Government still held the opinion that so long as England held the seas her commerce would provide a continuous supply of food for her people. A colonial loans bill to extend the credit of the Imperial Government to the colonies and enable them to refund their debts and make fresh ones on better terms than they can get unaided was strenuously opposed by the Radicals, and by some of the Government party was considered so risky a financial innovation that it was withdrawn. The report of the petroleum committee, recommending the raising of the legal flash point from 73° F. by the Abel test, which is equivalent to 100° by the open test, to 100° by the Abel test, was dictated less by real considerations of public safety than by a desire to aid the depressed Scotch paraffin industry, and help the sale of Russian oil to the exclusion of the better and cheaper American illuminant.

The reduction of postal rates to the colonies to one penny a half ounce as the result of an imperial conference was ordered by the Postmaster-General without having to apply to Parliament. This imperial penny postage was established for Canada, Newfoundland, Cape Colony, Natal, and such of the Crown colonies as may be willing to adopt it, but the Australian colonies, having for revenue purposes raised their own rates to two-pence, were unable to enter into the arrangement. The report of a parliamentary committee which investigated the usury and extortion practiced by

money-lenders, recommended that the courts should have absolute and unfettered discretion to review the transactions of professional money-lenders, to hear such cases in private, and to grant whatever relief they deem equitable. It is also proposed that money-lenders shall be registered, paying a fee of £5 a year. The discussion of foreign, colonial, and Indian questions took up more of the time of Parliament than in any previous session. The Liberals pursued the polemic advantage they derived from attacking the forward policy in India, and attributing the frontier war to the reversal of their decision to evacuate Chitral. On the charge of breach of faith to the Afridis the Government was sustained by 311 votes against 208. Samuel Smith's proposal that the cost of the frontier war should be paid by the British Government was met by the explanation that the Indian Government had declined to accept aid, being capable of dealing with the financial situation and unwilling to admit what might lead to further interference by Parliament. The debt of the Egyptian Government to the British exchequer of £798,802, being the advance made to defray expenses of the Dongola expedition when the Caisse de la Dette refused to allow the reserve fund to be diverted for this purpose, was remitted by a vote of 155 to 81 on the representation that the Egyptian Government would be able to pay for the Khartoum expedition. The Irish Nationalists were as disunited as ever and unable to settle the rival claims of Mr. Dillon, Mr. Healy, and Mr. Redmond to the mantle of Charles Stewart Parnell. In the Liberal party a serious division arose over the questions of Imperial expansion, increased armaments, and an aggressive foreign policy, which became irreconcilable toward the end of the year when Lord Rosebery and Mr. Asquith praised the attitude of the Government in the Fashoda dispute (see FRANCE), and led to the resignation of the leadership in the House of Commons by Sir William Harcourt in December. Dissensions in the Conservative party showed themselves earlier, owing chiefly to dissatisfaction with Lord Salisbury's Chinese policy, and the opposite views enunciated by him and Joseph Chamberlain afforded to the Opposition opportunities for satirical comment. The firm position that the Prime Minister took in regard to the Nile valley went far toward healing the breach.

Colonies and Dependencies.—The estimated area of the British Empire is 11,371,391 square miles, with an aggregate population of 388,883,685. This includes British India, with an area of 1,068,314 square miles and 221,172,952 inhabitants, and the feudatory states of India, with an area of 731,944 square miles and 66,050,479 inhabitants. The area and estimated population of the British colonies are given in the following table:

COLONIES.	Square miles.	Population.
Gibraltar	2	20,658
Malta and Gozo	119	176,231
Aden and Perim	80	41,910
Ceylon	25,365	3,008,466
Hong-Kong	30	201,258
Labuan	30	5,853
Straits Settlements	1,472	558,935
Cape Colony	292,000	1,821,550
Basutoland	10,293	250,000
Mauritius	705	374,940
Natal	32,900	778,000
St. Helena	47	3,890
West African colonies	58,771	1,647,000
Canada	3,315,047	4,833,300
Falkland Island and South Georgia	7,500	1,950
British Guiana	109,000	278,260
British Honduras	7,562	33,800
Newfoundland and Labrador	162,300	208,000
West Indies	12,009	1,511,700
Australasian colonies	3,173,538	4,793,900
Total colonies	7,809,734	20,625,691

The protectorates and spheres of influence in Africa have an area estimated at 2,120,000 square miles, with 35,000,000 population, and in Asia there are protectorates covering 120,400 square miles, with 1,200,000 population, and about 10,000 inhabitants on the protected islands in the Pacific Ocean, making the total area of protectorates 2,240,400 square miles and their population 36,210,000.

Most of the inhabitants of Gibraltar are descendants of the early Genoese settlers. The local revenue in 1896 was 1,581,785 pesetas, and expenditure 1,508,705 pesetas. The military expenditure of the Imperial Government was £261,338. The tonnage of vessels entered was 4,334,582, of which 3,361,273 was British. The Governor is Gen. Sir Robert Bidolph.

The population of Malta is divided into 172,334 Maltese, 2,092 English, and 1,805 others. The revenue for 1896 was £313,680, and expenditure £308,902. The imports were valued at £10,472,139, and exports at £11,886,149. The number of vessels entered was 3,786, of 3,293,200 tons; cleared, 3,767, of 3,291,148 tons. There are 7½ miles of railroad. The Governor is Sir Arthur James Lyon Fremantle.

Cyprus is a Turkish island in the Mediterranean which was transferred to British administration by a convention made with the Porte on June 4, 1878. It has an area of 3,584 square miles and a population of 209,286, consisting of 47,926 Mohammedans and 161,360 Greek Catholics and others. The revenue in 1897 was £188,658, and the expenditure £129,494. An annual tribute of £92,800 is paid to the Porte. The British Government makes an annual grant in aid, amounting in 1897 to £46,000. The imports in 1896 were valued at £240,051; exports, £297,142. The vessels entered and cleared had an aggregate tonnage of 887,997. There are 240 miles of telegraph lines.

Aden, a peninsula on the coast of Arabia, is an important coaling station on the route to India or Australia. The imports in 1897 were 41,030,908 rupees by sea and 3,027,706 rupees by land; the exports, consisting of coffee, gums, hides, and tobacco from Arabia and the neighboring districts of Africa, were 32,603,265 rupees by sea and 2,084,123 rupees by land. The number of vessels entered was 1,256, of 2,416,266 tons. Subordinated to Aden is the opposite Somali coast, also the African island of Sokatra, having an area of 1,382 square miles and 12,000 population, and the Kuria Muria guano islands. The Bahrein Islands, whose inhabitants number about 25,000, largely engaged in the pearl fishery, are in the Persian Gulf. The imports in 1895 were valued at £387,010, and exports at £389,258.

British North Borneo is a protectorate in which tobacco similar to the Sumatra leaf is planted on a large scale, also coffee and pepper, 1,000,000 acres having been taken up by planters. The area is 31,106 square miles, with 175,000 inhabitants. The revenue in 1896 was \$411,699, and the expenditure \$300,559. Imports were valued at \$1,882,188, and exports at \$2,473,753. The tobacco exports were \$1,372,277. The tonnage, nearly all of it British that was entered in 1895 was 54,321; cleared, 53,596 tons. There is a military force of 350 natives under English officers. A protectorate has been extended over the sultanates of Brunei, area 3,000 square miles, and Sarawak, area 50,000 square miles. The Rajah of Sarawak is Sir Charles Johnson Brooke, nephew of the Englishman who founded a state there composed of Malays and the native Dyaks, and other races. The population is about 300,000. The revenue is 1896 was \$508,771, and the expenditure \$565,796. The imports were valued at \$3,701,394, and exports at \$3,557,868. The colony of Labuan was placed in 1889 under the administration of the British North Borneo Company, the

chartered company which has jurisdiction over these territories. The Governor of North Borneo, whose appointment by the Board of Directors in London must be confirmed by the Secretary of State for the Colonies, is Leicester Paul Beaufort.

Ceylon has had since 1833 a representative government. The Governor, who is Sir Joseph West Ridgeway, appointed in 1895, is assisted by a Legislative Council containing 9 official members and 8 representatives of the different classes and races of the island. The population in 1891 consisted of 877,043 Buddhists, 615,932 Hindus, 303,127 Christians, and 211,995 Mohammedans. There were 474 Government schools in 1896, with 44,538 pupils, 1,130 state-aided schools, with 94,400 pupils, and 2,268 unaided schools, with 36,720 pupils. The revenue for 1896 was 21,974,573 rupees; expenditure, 21,237,860 rupees. The public debt, incurred entirely for public works, was £3,519,503 in 1896, not including a debt of 3,290,595 rupees raised in the colony. The sum of 2,449,685 rupees was spent out of the general revenue in extending public works in 1896. There are 297 miles of railroads. For the maintenance of the British garrison the colonial Government pays £81,750 a year.

The value of the imports in 1896 was 87,788,085 rupees, and of the exports 87,841,357 rupees. The chief exports were tea, valued at 53,212,676 rupees; cocoanut products, valued at 11,178,077 rupees; plumbago, valued at 3,069,021 rupees; coffee, valued at 1,721,133 rupees; areca nuts, valued at 1,116,656 rupees; and cinchona, valued at 68,849 rupees. The total tonnage entered and cleared during 1896 was 7,079,678. The Maldives Islands, having a population of 30,000 Mohammedans, are a dependency of Ceylon.

Hong-Kong was a Chinese port until it was annexed by Great Britain in 1841. It is a military and naval station of the first class and the center of British commerce with China and Japan. The Governor is Sir Henry A. Blake, appointed in 1897. The population in 1897 was 245,000. The immigration from China in 1896 was 119,468; emigration, 66,822. The number of births in 1896 was 1,233, and of deaths 5,860. The ordinary revenue for 1896 was \$2,250,179, not including \$359,698 of premiums from land and water account; expenditure, \$2,405,399, not including \$300,130 of extraordinary expenditure for defensive works and the water account. The revenue is derived from land, taxes, licenses, and the opium monopoly. The public debt of £341,800 is exceeded by the assets. The colonial contribution for military in 1896 was \$523,128. The British naval squadron on the China station numbers about 20 vessels.

The Straits Settlements is a Crown colony embracing Singapore, Penang, with Province Wellesley and the Dindings, and Malacca. There is a Legislative Council composed of 10 official and 7 nonofficial members. The Governor since 1893 has been Lieut.-Col. Sir C. B. H. Mitchell, who was appointed in 1896 High Commissioner for the federation of the protected states Perak, Selangor, Negri Sembilan, and Pahang, to which Sir F. A. Swettenham was appointed Resident General. The population of the Straits Settlements includes 213,073 Malays, 227,989 Chinese, and 53,927 British Indian subjects. There were 199,288 Chinese immigrants in 1896, and 20,150 Indian immigrants, including 2,652 indentured laborers, while 12,977 persons returned to India. The revenue for 1896 was \$4,266,064, derived from licenses, land, stamps, the post office, and navigation dues. The expenditure was \$3,957,090, of which \$1,459,269 were for salaries, \$900,190 for military, \$428,984 for public works, \$93,041 for education, \$91,814 for police, \$64,120 for the marine department, and \$13,971 for

transport. The debt amounted in 1897 to \$1,016,122, while the assets were \$3,344,564. The colony has built a new harbor at Singapore and protected it with a row of forts erected at a cost of £100,000. The value of the imports in 1896 was \$201,343,700, and of exports \$173,720,814. The chief imports were rice, cotton goods, opium, fish, coal, tobacco, and provisions. The exports of tin were valued at \$28,926,105; of spices, \$7,744,426; of gambier, \$7,509,285; of gums, \$6,929,181; of copra, \$4,455,936; of rattan, \$4,304,413; of tapioca, \$2,546,470. The number of vessels entered in 1896 was 8,728 of 6,119,475 tons, not counting 16,835 native craft of 596,438 tons. There were 2,913,760 pieces of mail matter received at the post office and 3,014,970 sent out in 1896. The expenditure of the colony for fortifications amounts to \$647,300. The annual imports average £4,000,000, and the exports £2,000,000. The foreign trade with China in opium, sugar, flour, salt, earthenware, oil, amber, cotton goods, sandalwood, ivory, betel, and a large share of the Chinese silk and tea trade is conducted by Hong-Kong firms. The registered shipping consists of 19 sailing vessels, of 5,659 tons, and 32 steamers, of 18,715 tons. There were 4,674 vessels, of 6,164,057 tons, entered in 1896, an increase of 392,759 tons over 1895. This does not include the junks and native vessels, of which an average of 52,000, with a tonnage of 1,300,000, visit Hong-Kong each year. Attached to the Straits Settlements are the Cocos Islands, near Sumatra, which produce cocoanuts in large quantities, and Christmas island, southwest of Java. The area of Perak is about 10,000 square miles, with 214,254 inhabitants. The revenue in 1896 was \$3,960,871, and expenditure \$3,989,376. Selangor, with an area of 3,500 square miles and a population of 81,592, had a revenue of \$3,756,936 and \$3,572,583 of expenditures. Sungei Ujong, with Jelebu, is 1,200 square miles in extent and contains 23,602 inhabitants. The area of the other states composing Negri Sembilan is 1,800 square miles and their population 41,617. The revenue of Negri Sembilan in 1896 was \$555,329; expenditure, \$573,569; debt, \$503,119. Johore, where a British agent has resided since 1887, covers 9,000 square miles, with 200,000 population. The territory of the Sultan of Pahang has an extent of 10,000 square miles, with 57,462 population; the revenue in 1896 was \$160,947, the expenses \$462,619, and there was a debt of \$2,103,739. The revenue of these states is derived chiefly from export duties on tin. There are 175 miles of railroads in the native states, and 28 miles are under construction. The exports of tin from Perak in 1896 were 22,754 tons; from Selangor, 20,391 tons; from Sungei Ujong and Jelebu, 3,440 tons. Gold exists in several of the states. Pepper, gambier, sugar, rice, and coffee are grown on the peninsula.

Aseension, a small volcanic island in the south Atlantic, is a coaling and victualing station for the British navy and a sanitarium for sailors suffering from fever contracted on the west coast of Africa. St. Helena is a port of call for vessels passing around the Cape of Good Hope. The people of the island are gradually leaving it to go to South Africa or the United States.

Mauritius, a former French colony, has a Council of Government consisting of 27 members, of whom 8 are official, 9 nominated, and 10 elected. The present Governor is Sir Charles Bruce. The sugar plantations are worked by the labor of Indian coolies, of whom there were 259,004 in 1897 in a total population of 374,942. The rest of the population includes African natives and Chinese and mixed races with the French creoles. The revenue in 1896 was 8,849,181 rupees; expenditure, 8,544,736 rupees. The debt is £1,337,801. The value of

the imports in 1896 was 22,980,586 rupees, and of the exports 33,544,174 rupees. The exports of raw sugar amounted to 28,165,731 rupees. Other exports are rum, aloe fiber, vanilla, and cocoanut oil. There are 105 miles of railroads, the earnings of which in 1896 were 1,783,399 rupees, and the expenses 1,205,645 rupees. The Chagos Islands, Rodrigues, and the Seychelles are dependencies of Mauritius. Among the groups and islands scattered over the Pacific Ocean that have been annexed or taken under British protection are Cook's Islands, having an area of 142 square miles and 8,400 population, Ducie and Pitcairn islands, the Manihike group, Suvarof Islands, Dudoza island, the Union group, the Bowditch and Phoenix groups, Ellice Islands, the Gilbert Islands, the Solomon Islands, and the isolated islands of Fanning, Malden, Starbuck, Jarvis, Washington, and Palmyra. In June, 1898, the British flag was raised over the Santa Cruz and Duff groups, lying east of the Solomon Islands in 10° of south latitude and 167° of east longitude. The Falkland Islands in the South Atlantic, east of Terra del Fuego, had 1,992 inhabitants in 1896, engaged mostly in sheep raising. The revenue in 1896 was £12,358; expenditure, £13,569. The value of the imports was £69,985, and of the exports £132,194.

The Bermudas, with an area of only 20 square miles, had a population in 1896 of 6,117 whites and 9,835 colored. The number of marriages was 100; of births, 523; of deaths, 375. The Governor is Lieut.-Gen. G. Digby Parker. He is assisted by an Executive Council of 6 members, a Legislative Council of 9 appointed members, and a Legislative Assembly of 36 members chosen by 1,123 registered voters. The revenue in 1896 was £34,256; expenditure, £34,717. There is a debt of £46,600. The value of the imports, consisting largely of food-stuffs from the United States, was £304,970 in 1896, and that of the exports, mainly going to the United States, was £108,613, of which £54,843 represent onions, £12,431 lily bulbs, and £18,817 potatoes. The tonnage entered and cleared in 1896 was 391,475. The registered shipping consisted of 23 sailing vessels, of 5,469 tons, and 2 steamers, of 651 tons.

British Honduras has an Executive Council, consisting of 4 official and 3 non-official members, and a Legislative Council, consisting of 3 official and 5 nonofficial members, to assist the Governor. The Governor at present is Col. Sir David Wilson. The revenue in 1896 was \$302,686, and expenditure \$269,877. The debt was \$168,815. The population in 1896 was estimated at 33,811, consisting of 453 whites and 33,358 colored. The number of marriages in 1896 was 288; of births, 1,435; of deaths, 977; excess of births, 458. The value of the imports in 1896 was \$1,462,637, and of exports \$1,378,601. The staple products are mahogany and logwood. Sugar is also exported, and bananas and cocoanuts to New Orleans, and there is a considerable transit trade in coffee, sarsaparilla, and rubber from Yucatan. There were 576 vessels, of 178,199 tons, entered, and 562, of 170,867 tons, cleared in 1896. The shipping of the colony consists of 214 sailing vessels, of 4,570 tons, and 5 steamers, of 748 tons.

British Guiana has a Court of Policy, consisting of 7 official and 8 elected members, to assist the Governor in general legislation, and to this 6 financial representatives are added to form the Combined Court, which frames the budget and levies the taxes. There are 2,416 qualified electors. The Roman-Dutch law is in force in civil cases, while the English system of criminal law has been adopted. The present Governor is Sir Walter J. Sendall. The area is undetermined on account of the boundary dispute with Venezuela. Within the

Schomburgk line there are 109,000 square miles. The population was estimated in 1897 at 285,315. In 1891 there were 2,533 European-born, 99,615 Africans, 105,465 East Indians, and 3,714 Chinamen. The number of births in 1896 was 9,276; of deaths, 7,513. The Indian immigrants in 1897 numbered 2,380, while 2,059 coolies returned to India. The revenue for 1897 was \$555,774, and expenditure £590,616. Of the revenue, £294,671 were derived from customs, £108,859 from licenses, £49,780 from the duty on rum, and £23,902 from the royalty on gold. In the ten years from the beginning of gold-mining in 1886 there have been taken out the value of £2,796,300. The product in 1896 was 123,759 ounces. The total value of imports in 1897 was £1,341,710; of exports, £1,899,457. The principal exports were sugar for £1,098,398, rum for £136,927, molasses for £20,926, and gold for £466,143. The tonnage entered and cleared during the year was 694,229. The shipping of the colony consisted of 121 sailing vessels, of 5,541 tons, and 15 steamers, of 1,171 tons. There are 39 miles of railroad and 546 miles of telegraphs, all belonging to the Government. (See AUSTRALASIA, CANADA, CAPE COLONY AND SOUTH AFRICA, EAST AFRICA, INDIA, NEWFOUNDLAND, WEST AFRICA, WEST INDIES.)

GREECE, a kingdom in southeastern Europe. The legislative authority is vested in a single chamber called the Boule, consisting of 207 members elected for four years by universal manhood suffrage. The reigning King is Georgios I, born Dec. 24, 1845, the second son of King Christian of Denmark. He was elected King of the Hellenes on March 18, 1863, after the deposition of King Otto, with the approval of France, Great Britain, and Russia, the protecting powers under whose auspices the Hellenic Kingdom had been established in 1830, after the overthrow of Turkish rule.

The Cabinet formed on Oct. 3, 1897, was composed as follows: President of the Council and Minister of Foreign Affairs, M. Zaimis; Minister of the Interior, M. Korpas; Minister of Finance, M. Streit; Minister of Justice, M. Toman; Minister of Education, M. Panagiotopoulos; Minister of War, Gen. Smolenski; Minister of Marine, Capt. Hadji Kyriacos.

Area and Population.—The present area of the kingdom is 25,014 square miles, and the population in 1896 was 2,433,806. There are more than 8,000,000 persons of Hellenic language and descent forming the Greek communities in the Ottoman Empire who are of purer Greek race than the Hellenes of the kingdom, which has been subjugated and settled at various periods by Romans, Goths, Slavs, and Albanians, all of whom became Hellenized in time. The population of Athens in 1896 was 111,486.

Finances.—The revenue was originally estimated for 1897 at 95,435,939 drachmai, of which 33,245,552 drachmai came from customs and excise, 19,792,364 drachmai from direct taxes, 18,676,775 drachmai from stamps and dues, 11,402,906 drachmai from monopolies, 3,731,362 drachmai from state property, 3,355,000 drachmai from arrears of taxes, 1,200,000 drachmai from municipal contributions, 1,023,000 drachmai from repayments; 966,650 drachmai from sales, 750,000 drachmai from international telegraphs, 400,060 drachmai from light-houses, 100,000 drachmai from schools, and 700,000 drachmai from extraordinary sources. The expenditure was estimated at 93,852,565 drachmai, of which 21,690,895 drachmai were for the public debt, 16,345,311 drachmai for the army, 13,930,935 drachmai for the interior, 8,963,478 drachmai for cost of collecting revenue, 7,000,487 drachmai for the navy, 5,742,600 drachmai for pensions, etc., 5,647,543 drachmai for public instruction, 5,364,325 drachmai for justice, 2,224,479 drachmai for foreign affairs, 1,523,972

drachmai for finance, 1,325,000 drachmai for the civil list, 490,320 drachmai for legislation, and 3,503,240 drachmai for other purposes. The war with Turkey necessitated a revision of the budget. The estimate of revenue was increased to 97,000,000 drachmai, and that of expenditure to 160,000,000 drachmai.

The consolidated debt on Jan. 1, 1897, was 155,000,000 drachmai payable in gold, and 31,801,295 drachmai payable in paper; amortizable debt, 470,034,822 drachmai in gold and 34,644,248 drachmai in paper; treasury bonds, 14,194,066 drachmai in gold and 14,000,000 drachmai in paper; and paper money of forced currency, 16,800,000 drachmai of gold notes and 88,200,000 drachmai, including 14,000,000 drachmai of fractional currency, payable in paper. The total was 656,028,888 drachmai of gold, and 168,645,543 drachmai of paper obligations. The annual interest on the external debt had been reduced by the action of the Government to 30 per cent., that on the monopoly loan to 43 per cent., and that on other internal debts to 33 per cent. of the agreed rates, making the annual interest charge 8,477,534 drachmai in gold and 4,520,158 drachmai in paper.

By the treaty of peace signed on Dec. 4, 1897, Greece agreed to pay to Turkey a war indemnity of £ T. 4,000,000. International control over Greek finances was imposed by the mediating powers, which were empowered by act of the Boule to appoint a commission of six members to control the collection of revenues and supervise the redemption of debt. The Government was authorized to raise loans to pay the Turkish indemnity, to cover the deficit of 1897, to pay off or convert into a gold debt the outstanding treasury bonds, and to make payments to the holders of the actual debt in gold; also to raise loans not to exceed 20,000,000 drachmai for the purpose of covering the deficits of 1898 and subsequent years. Besides converting the floating debt into gold obligations, it was intended to redeem every year a certain amount of the paper currency. It was provided that the Debt Commissioners should inspect and control all the financial accounts of the Government, and that in case of a disagreement arbitrators should be called in. The revenues from monopolies, the tobacco tax, stamps, and customs duties, estimated at a total of 39,600,000 drachmai a year, were assigned as security for the gold debt, together with supplementary customs duties yielding 7,200,000 drachmai a year. The total sum required to discharge the war indemnity, cover the deficits, and redeem the floating liabilities was estimated at 123,152,000 drachmai, not counting anticipated deficits of future years, for which 20,000,000 drachmai in gold would be required. The Debt Commission estimated the revenue for 1898 at 85,556,000 drachmai, and calculated on a gradual increase to 95,557,000 drachmai in 1901, and 100,260,000 drachmai in 1903. The ordinary expenses of the Government were estimated at 63,251,000 drachmai in 1898, rising to 64,151,000 drachmai in 1901 and 64,751,000 drachmai in 1903.

The Army and Navy.—All able-bodied Greeks are liable to military service for the nominal term of two years in the active army, after which they are enrolled for seven or eight years in the reserves, and for eight or nine years in the territorial militia. The peace strength of the army was fixed by the law of 1887 at 16,136 infantry, 4,877 cavalry, and 3,003 artillery and engineers; total, 24,076 men. There were 1,880 active officers in 1896. The war strength of the regular army is estimated at 82,000 men, and of the militia at 96,000 men.

The Greek navy consists of the belted cruisers "Hydra," "Spetsai," and "Psara," of 4,885 tons, each armed with 3 10.6-inch and 4 5.9-inch Canet

guns, 7 6-pounder quick firers, and 18 smaller guns, 2 older armor-clads, 4 small cruisers, 12 old gun-boats, and 17 first-class torpedo boats.

Commerce and Production.—Zante currants are the most valuable commercial product of Greece, which supplies the world's requirements. About 7,000,000 bushels of wheat, 3,000,000 bushels of barley, and 5,000,000 bushels of corn and other grains are produced annually. Wine, olives, and silk are other important products. The product of olive-oil soap in 1896 was 8,240 tons. The mineral products include manganese and hematite iron, galena, zinc, and magnesite ores. The total value of the imports in 1896 was 113,162,400 drachmai, comprising wheat and meslin for 29,202,475, textile goods for 22,953,525, coal and raw materials for 14,243,825, timber for 5,386,675, fish for 4,864,025, sugar for 3,786,450, hides and skins for 3,362,775, and other articles for 29,362,650 drachmai. The total value of the exports was 69,989,425 drachmai, comprising currants for 23,208,175, ores for 14,617,675, wine for 5,337,575, fruit for 4,089,200, olive oil for 3,063,250, tobacco for 2,704,100, sponges for 1,622,750, silk and cocoons for 1,173,500, olives for 1,131,550, cognac for 951,700, soap for 437,550, emery for 287,275, leather for 231,800, and other articles for 11,108,325 drachmai.

The values, in drachmai, of the commerce with various countries in 1895 are shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	30,773,918	16,883,009
Russia.....	28,416,086	5,310,294
Turkey and Egypt.....	10,058,345	9,975,117
Austria-Hungary	13,886,716	5,957,206
France.....	6,791,022	7,974,573
Germany	8,440,279	5,086,449
Italy.....	2,448,802	6,840,565
Belgium.....	1,434,568	7,880,674
United States.....	3,707,216	2,349,758
Netherlands.....	467,093	3,107,459
Other countries.....	1,513,050	1,905,048
Total.....	109,610,203	72,183,221

Communications.—There were 591 miles of completed railroads in 1897, and 300 miles under construction. The telegraphs had a length of 5,065 miles, with 6,000 miles of wire. The number of dispatches in 1895 was 1,448,738, of which 941,565 were internal and 507,173 foreign; receipts, 2,107,464 drachmai. The post office transmitted 4,225,000 internal and 4,845,000 foreign letters and postal cards, and 5,165,000 internal and 2,838,000 foreign papers and samples; the receipts were 1,627,399, and expenses 1,605,584 drachmai.

Settlement of the Debt.—The result of the Turkish war left Greece practically at the mercy of the conqueror, with a defeated army, dangerous internal conditions, and finances, before disordered, now bankrupt. By the intervention of the powers peace was made saving Thessaly to Greece, but involving the payment of a large indemnity. The Porte would not agree to evacuate any territory until the first third of the indemnity was paid. Greece could borrow no money except on the condition of an international control. On July 9, 1897, M. Hanotaux proposed a guaranteed loan of £ T. 4,000,000, the amount of the indemnity. On Aug. 23 Lord Salisbury proposed to the French Minister of Foreign Affairs to inquire of the Greek Government as to what revenues would have to be hypothecated and what should be the organization of the control, and two days afterward he suggested that the loan of £ T. 4,000,000 be guaranteed by England, France, Russia, and any other powers that might be willing. An international commission, in which each of the six great powers was represented, was

appointed to inquire into the financial condition of Greece.

The Greek Government resisted the proposed international control, but at last gave way as the only means of securing a treaty of peace and the evacuation of Thessaly. Peace was signed with Turkey on Dec. 4. On Jan. 7, 1898, the financial commissioners made their report in the form of the draft of a proposed law, embodying the provisions for an arrangement with all the national creditors. On Jan. 8 the Greek Chamber met to hear the provisional budget of the Minister of Finance, who made the receipts 87,576,000 drachmai, reckoning a loss of 10,000,000 drachmai owing to the Turkish occupation of Thessaly, and the expenditures 87,251,000 drachmai, of which 21,445,000 drachmai were for expenses of the debt and 65,806,000 drachmai for the administration. No business could be done until the treaty with the powers was arranged, and the Chamber therefore adjourned. The majority refrained from overthrowing the ministers, being determined that they should complete all the humiliating arrangements of the peace. The Cabinet assented to the report of the international commission on Jan. 13. The commissioners reported that the finances of the country could not be expected to revert to a state of equilibrium before 1903, and that in the mean time large sums would have to be provided, not only for the indemnity to Turkey of about £3,700,000 sterling and the sum of £92,000 for compensation for private injuries done by Greek troops, but for the deficit in the budget of 1898, the conversion of the floating debt, and possible future deficits before 1903, when the revenue is expected to amount to £2,495,000 and the expenses of the Government to £1,618,000, leaving £877,000 a year for interest and sinking fund on the existing debt and the new debts to be created. The project of law proposed the institution of a Commission of International Control over the finances of the country, which would have a certain definite revenue arising from some internal revenues and the customs of certain places, sufficient to provide £625,000 a year for the service of the old debts at a greatly reduced interest, and £250,000 a year for the new debt. The amount of the new loan was fixed at £6,800,000, of which £3,800,000 would be used to pay off the war indemnity and private claims and £1,200,000 to meet the deficit of 1898. It was proposed to issue a loan of £5,000,000 at once for these purposes, leaving £1,000,000 to be issued later for the conversion of the floating debt, and £800,000 to be raised in such sums as may be needed to provide for subsequent deficits. Germany, Austria, and Italy having declined to take part in the arrangement, France, Great Britain, and Russia agreed jointly and severally to guarantee loans to the maximum amount of £6,800,000. The immediate loan of £5,000,000 it was proposed to raise by issuing 2½-per-cent. bonds at a fixed price to be determined by the state of the market at the time of issue. Greece will pay 2½ per cent. for five years, and after that 3½ per cent., furnishing a sinking fund for the extinction of the debt at the end of fifty-three years, to be applied in annual drawings for the bonds at par. The loan can be converted after twenty years have elapsed.

In accordance with the preliminary treaty, the Greek Chamber had to vote the law approved by the powers without alteration. The international commission was to consist of six members, one for each mediating power, who would decide questions by a majority of votes, and would furnish an accounting to the Greek Government every six months and publish an annual report. The collection of the assigned revenues was intrusted to a Greek company under the absolute control of the commission. Should the affected revenues prove insufficient in

any year to meet the charges of the debt, the Greek Government would have to make up what is lacking. The old debts were to be unified and converted into a new loan, and the forced currency, amounting to 94,000,000 drachmai, was to be extinguished by annual payments, and no new currency to be issued without the consent of the commission, which should apply the excess of the revenue over the amount required for the service of the foreign debt to the service of the internal debt and the withdrawal of the forced currency. The assigned revenues comprise the monopolies, to be conducted on the existing system, which are valued at 12,300,000 drachmai a year, including emery from Naxos; the tobacco duty, valued at 6,600,000 drachmai; stamps, producing 10,000,000 drachmai; and the Piræus customs, estimated at 10,700,000 drachmai, making a total of 39,600,000 drachmai. In case of a deficiency the customs of Patras, Volo, Corfu, and Laurium are assigned as supplementary revenues. Should customs receipts fall below the estimate in consequence of a modification of the tariff, the Government is bound to concede supplementary revenues. By arrangement with the bondholders the old debts were divided into three categories. The first, embracing the two privileged loans, the monopoly loan, and the funding loan, receive 1.72 per cent., being 43 per cent. of the original interest. The second category contains the 5-per-cent. loans of 1881, 1884, and 1890, on which the interest is reduced to 1.60 per cent. The third category, consisting of the 4-per-cent. *rentes*, receives 1.28 per cent., being 32 per cent. of the full interest, the same as in the second category. An arrangement was made regarding the *plus values*, or excess of revenue over the requirements, by which, after deducting 18 per cent. to obtain net revenue, the remainder will be apportioned in the ratio of 30 per cent. to increase the interest on the old debt, 30 per cent. to increase the amortization, and 40 per cent. to go to the Government. The profit to be derived from the fall in exchange will be distributed in the same way. Since April, 1894, the Government has withheld 70 per cent. of the coupons falling due, and of the arrears it was arranged to pay 5 per cent. in four annual installments.

The powers awaited the answer of the Greek Government before signifying their approval of the scheme of international control or making a definite offer to guarantee the new loan. On Feb. 16 the Russian Government, and shortly afterward the English and the French governments, formally undertook to guarantee the indemnity loan.

The Crown Prince, before the end of January, published his report of the campaign in Thessaly, justifying his plan of campaign and his conduct of the retreat, and blaming the Government for the lack of preparation, the lack of commissariat, transport, camp equipments, and medical service, and the entire absence of reserve troops, and accusing Gen. Makri of disobedience of orders in failing to support the right wing at Deleria, and causing the rout to Turnova and Larissa. Recrimination among those who took part in the war became epidemic. The late minister of Marine, M. Levidis, who was himself accused of a total lack of naval knowledge, brought charges against Commodores Sachtouris and Kriegis of disobedience of orders in not attacking the Turkish coast towns. About 50 officers were brought up before the military commission of inquiry on various charges of incapacity, disobedience, and cowardice. Lient. Kokorris, whose telegram to the minister had led to the removal of Commodore Sachtouris, was, at the latter's instigation, tried for insulting his captain and sentenced to a year's imprisonment. His condemnation occasioned much popular indignation. The reawaken-

ing of memories of the campaign caused a recrudescence of the hostility to the Crown Prince and the dynasty that was shown after the defeat of the army, and this feeling was intensified when the Government accepted foreign financial control. An employee of the mayoralty at Athens named Karditzis, who consorted with antidynastic conspirators at Patras, got a young Macedonian of the name of Kyriakos, who had fought with him in Crete, to join in a plot to murder the King. When King George was driving with Princess Marie on Feb. 26, along the seacoast from Phalerum back to Athens, the two, with Gras rifles, fired from alongside the road at the horses, and then Karditzis fired five times at the King, who stood up to shield his daughter and brandished his stick at the assassins, who hit the horses and the footman and struck the carriage several times, but missed the King. The two conspirators were condemned to death. The members of the secret society were arrested. It had been formed after the retreat from Larissa for the purpose of continuing the war, and assumed later its revolutionary and antidynastic character.

The Chamber met on March 3, and the bill of control was passed through all its stages without much debate, after which the bill for the guaranteed loan of 170,000,000 francs was approved. A measure was passed authorizing the Government to retain a part of the currant crop so as to keep up the export price. When the Opposition, led by M. Delyannis, was about to vote the Ministry out of office, Premier Zaimis on April 4 read a royal decree closing the session.

The delegates of the powers met at Paris on May 2 and announced the issue of the indemnity loan, fixing the price at 100}. The ambassadors notified the Porte that the evacuation of Thessaly must take place within a month from May 6. The Turkish army of occupation, numbering 80,000 men, had suffered during the severe winter as much as the Thessalian peasants, and the Turkish soldiers were not less eager than these to get back to their fields in time to sow their crops. When Russia and England urged the nomination of Prince George as Governor of Crete, Edhem Pasha, commanding in Thessaly, was directed to fortify Domoko and Larissa, and the Ottoman Government intimated an intention of making the occupation permanent if the powers placed a Greek prince over the Cretans, and thus gave their sanction to the annexation scheme. Collisions took place between the Turkish troops and the peasantry in Thessaly, who refused to pay taxes to the Ottoman authorities. Seyfulah Pasha in the course of these operations transgressed the neutral zone. The Greek Government distributed relief among the agricultural population.

At the suggestion of the British Government the powers demanded that the evacuation should begin before the first installment of the indemnity should be paid, and that three zones should be evacuated before the payment of the second and third installments. A European commission supervised the transfer of the country from the Turks to the Greeks. The first zone was completely evacuated within the ten days, and on May 18 was occupied by Greek troops. The Greek Government protested, after the Turco-Greek frontier delimitation commission had concluded its work on May 31, against the cession to Turkey of Malakasi and Gribovo. The embassies in Constantinople upheld the decision of the commission on all points. On account of the action of the Greek Government the Turks delayed the evacuation of the fourth zone, and retained possession of the frontier posts of Gritzovali and Nezeros and also the port of Volo until the question was settled. On June 5 the Turkish

troops departed from Larissa, and the place was occupied by Gen. Vassos, who on June 6 entered Volo after Edhem Pasha had embarked with the last detachment of the army of occupation. The final payment of the war indemnity was made on the following day.

The International Commission of Financial Control was already duly installed at Athens. The ministry, which had accepted office in October, 1897, in the face of a hostile majority, in order to carry out the unavoidable measures imposed by the dictates of the powers, refrained from taking any definite steps during the vacation of the Chamber, although the country was clamoring for reforms in every department of state, and on Nov. 7, before the reassembling of the Boule, the Prime Minister tendered the resignation of the Cabinet to the King, who accepted it, but intrusted again to M. Zaimis the task of selecting a ministry.

GUATEMALA, a republic in Central America. The Congress consists of a National Assembly of 69 members, elected for four years by universal manhood suffrage, and a Council of State of 13 members, of whom part are elected by the Assembly and part are nominated by the President. The President is elected for six years by the direct vote of the people, and is not re-eligible for the next succeeding term. José Maria Reyna Barrios was inaugurated President on March 15, 1892, and by a decree of the National Assembly voted on Aug. 30, 1897, his term was prolonged till March 15, 1902. Members of the Cabinet at the beginning of 1898 were: Secretary of War, Gen. Gregorio Solares; Secretary of Fomento, Feliciano Garcia; Secretary of Foreign Affairs, J. Muñoz; Secretary of Public Instruction, M. Cruz.

Commerce and Production.—The value of the imports in 1896 was \$11,429,200 in gold or \$26,287,544 in currency; value of exports, \$23,085,544 in currency. The United States furnished \$3,172,896 of the imports; Great Britain, \$2,164,490; Germany, \$2,012,269. The exports of coffee were valued at \$22,349,623 in currency, consisting of 638,577 quintals, of which 442,681 went to Germany, 119,625 to the United States, and the rest to France, Great Britain, and South America.

Revolutionary Uprising.—On Feb. 8 President Barrios was murdered by a British subject of German origin named Oscar Solinger, who was pursued and killed. Vice-President Morales, who was in Mexico, was declared President, and Gen. Manoquin attempted to seize the Government in behalf of Morales, but he and his associates were killed, and Dr. Manuel Estrada Cabrera, the head of the party that supported the late dictator, was proclaimed Acting President, and, having the army at his back, maintained his power without dispute, but not without aggravating a large part of the population by measures as arbitrary as those of his predecessor, until on July 28 a revolution was started by Gen. José Leon Castillo, one of the leaders of the insurrection of September, 1897. The presidential elections were to be held in the first week of August, and it was the prevailing belief that Cabrera, if elected President for the term of six years, would proclaim a dictatorship and take severe measures against his rivals and enemies. The first rising was immediately suppressed, having been anticipated by the Government. Gen. Castillo took refuge in the Mexican legation. Prospero Morales, who headed the revolt in 1897, then took the lead and raised speedily an insurgent army in the part of the country which had revolted in the preceding year. Several combats took place between the Government troops under Gen. Barrillas and the insurgents, who intrenched themselves at Olos and held the country between that port and Quesaltenango. In one fight

the Government lost 80 men and the insurgents 120. The forces of Morales were far inferior to the troops which the Government was able to move into the revolted district, and at the first engagement at Olos, on Aug. 10, they were defeated and scattered. Manuel Lierandi and Plutarile Bowen, two of the insurgent generals, were killed. Morales, who fell back with the remnant of his army that stayed by him into the Cuchumatanes mountains, was beaten once more, and afterward was hunted among the

rocks and caves until he was captured, on Aug. 17, in a dying condition, having been betrayed by his followers. Acting-President Cabrera announced that the revolution was over and that complete peace prevailed. The Government increased the duties on all imports about 16 per cent. In the presidential election, which had been deferred till September, Cabrera had no competitor. On Sept. 25 the National Assembly proclaimed him President for the term ending in 1905.

H

HAWAII, a republic occupying the Hawaiian Islands in the Pacific Ocean, proclaimed on July 4, 1894, in succession to the Provisional Government that was formed on Jan. 3, 1893, upon the abdication of Queen Liliuokalani (see colored map in "Annual Cyclopædia" for 1892, page 334). The Constitution adopted for the republic vests the legislative power in a Senate of 15 members, elected for six years by indirect suffrage, and a House of Representatives elected by indirect vote for two years. Every male Hawaiian twenty years of age who can speak, read, and write either English or Hawaiian has the right to vote. The President is elected by the two houses in joint session for the term of six years, and is not re-eligible for the next succeeding term. Sanford B. Dole was elected President for the term ending Dec. 31, 1900. The Cabinet in the beginning of 1898 was composed as follows: Minister of Foreign Affairs and of Education, H. E. Cooper; Minister of the Interior, J. A. King; Minister of Finance, S. M. Damon; Attorney-General, W. O. Smith.

Area and Population.—The total area of the islands is 7,629 square miles. The inhabited islands—Hawaii, Maui, Oahu, Kauai, Lanai, Kahului, Molokai, and Miliau—have an aggregate area of 6,640 square miles, with a population on Sept. 27, 1896, of 109,020, which was composed of 72,517 males and 36,503 females. The city of Honolulu, the capital, has 29,920 inhabitants.

Commerce.—The foreign commerce of Hawaii is larger *per capita* than that of any other country. The total value of the imports in 1897 was \$9,000,000, and of the exports \$16,500,000. This showed an increase of 20 per cent. in imports over the previous year. In exports there was also an increase, owing to increased production of sugar, of which 232,334 tons were exported, all of it to the United States. The share of the United States in the import trade was 77 per cent., while that of Great Britain and British possessions was 12 per cent., Germany coming next, and then China and Japan. The exports, of which sugar forms 96 per cent., go almost entirely to the United States, whose share was 99.62 per cent. of the whole. In the import trade American cotton goods, tools, glassware, furniture, etc., are displacing the English. The sugar industry is prosperous, and cultivation is being extended by sinking wells and distributing water by means of powerful pumps. New and improved methods of production and treatment are employed on most of the plantations. 44 out of the 56 being fully equipped with factories. Coffee-growing is increasing, but is still confined to small plantations. An effort has been made to extend the industry with Government assistance. There were 337,153 pounds of coffee exported in 1897. The cultivation of rice is wholly in the hands of the Chinese. About a quarter of all that is raised is exported to San Francisco. Bananas are also exported, and there is some trade in wool.

Annexation to the United States.—A treaty providing for the annexation of the islands to the United States was signed on June 16, 1897, by plenipotentiaries of the United States and of the republic of Hawaii. A joint resolution to accept the offered cession and incorporate the ceded territory into the Union having been passed by the United States Congress and approved by the President on July 7, 1898, President McKinley directed Rear-Admiral Miller to proceed on the "Philadelphia" to Hawaii to arrange with President Dole for the transfer of the sovereignty of the islands to the United States. This was accomplished on Aug. 12, when President Dole, on the presentation of a certified copy of the joint resolution, formally delivered over to the United States representative the sovereignty and public property of the Hawaiian Islands. In accordance with the terms of the resolution President McKinley directed that the civil, judicial, and military powers of the Hawaiian Government officers should continue to be exercised by them, subject to his power of removal, until Congress should provide a government for the incorporated territory. President Dole and the troops of the Hawaiian Republic took the oath of allegiance to the United States, and thus the administrative and municipal functions of the annexed territory have continued in operation thus far with no interruption.

President McKinley, in pursuance of the terms of the joint resolution, appointed on July 9 the following commissioners to confer and recommend to Congress such legislation concerning the Hawaiian Islands as they should deem necessary or proper: Senator Shelby M. Cullom, of Illinois; Senator John T. Morgan, of Alabama; Representative Robert T. Hitt, of Illinois; and President Sanford B. Dole and Chief-Justice Walter F. Frear, of Hawaii. The existing customs relations of the Hawaiian Islands to the United States and with other countries under the provisions of the joint resolution were to remain unchanged until legislation should otherwise provide. The United States consulate was maintained for appropriate services connected with trade and the revenue, and the Hawaiian consuls in the United States and in foreign countries continued to fulfill their commercial agencies.

Before Congress took action on the treaty the United States Government came to an understanding with Japan regarding the rights of the Japanese in Hawaii, assuring to them equal rights with their fellow-countrymen in the United States in the event of annexation. The claims of Japan against the Hawaiian Government for the illegal exclusion of Japanese immigrants were adjusted by the payment of an indemnity of \$200,000. The Senate Committee on Foreign Relations having in its report accompanying the joint resolution charged Great Britain with having agents conveniently at hand to fasten her power on the islands when a pretext should arise for protecting British lives and prop-

erty, if not actually fomenting a movement for the restoration of the monarchy, Sir Julian Pauncefote, under instructions from his Government, assured the State Department on March 21 that there was no ground whatever for these allegations.

HAYTI, a republic in the West Indies occupying the western third of the island of Hayti. The legislative body is the National Assembly, consisting of a Senate of 39 members and a House of Representatives containing 95 members, the latter elected for three years by the votes of all adult male citizens having a regular means of livelihood, while the Senators are chosen by the lower house from lists submitted by the President and by electoral colleges. The presidential term is seven years. Gen. Tiresias Augustin Simon Sam was elected on April 1, 1896, after the death of President Hippolyte, for the term ending in May, 1902. His Cabinet in the beginning of 1898 was composed as follows: Secretary of Foreign Affairs, Finance, and Commerce, Solon Ménos; Secretary of War and Marine, S. Marius; Secretary of Justice and Worship, A. Dyer; Secretary of Public Instruction, M. Chanzy; Secretary of Public Works, M. Arteaud.

The republic has an area of 11,070 square miles, with a population in 1894 of 1,210,625, of whom 90 per cent. are negroes and the rest mostly mulattoes. The people, who are descended from the slaves of French planters, speak a dialect of French and profess the Catholic religion. There are 400 public schools, on which the Government expends \$1,000,000 a year. The commercial products of Hayti are coffee, cacao, and logwood. Coffee is the staple crop, and though the method of cultivation is of the rudest kind, the Haytian berry obtains a good price in the market. Plows are not used by the natives. Small patches of coffee adjoin their huts, scattered in the midst of a general wilderness, except in some of the fertile valleys, and even there the coffee trees are left in a wild state, or, at the most, the soil is loosened and weeded merely around each plant once or twice a year. Foreign enterprise, by which better methods might be introduced, is regarded with jealousy by the natives, and so long as the article in the Constitution forbidding alien ownership of land is retained no improvement can be looked for. Foreigners have begun to export mahogany, of which there is an almost inexhaustible supply, but native jealousy renders the obtaining of it as well as of logwood somewhat difficult and irregular. The crops of coffee in 1897 and 1898 were partial failures, owing to two successive droughts, and at the same time the market price sank in Europe. This, attended by a crisis in Government finances, caused the premium on gold to rise to 195 in the spring of 1898.

The Government threatened to seize the Clyde steamer "Navahoe" in May for a fine which the owners would not pay, considering it to be a corrupt demand based on a technical error in the ship's manifest. After an investigation the United States minister warned the Haytian Government that it would have to pay damages if it detained any vessel of the Clyde line. President Sam had a conference with President Ulisses Heureaux of Santo Domingo at Jacmel to discuss the boundary dispute, which both were willing to submit to the arbitration of the Pope. Hayti offered to pay an indemnity to secure the desired natural boundary. Navassa island, which was declared American by right of discovery in 1856, was abandoned temporarily during the war with Spain by the company that works the guano deposits. The Haytians have always disputed the American claim, and while the island was left unoccupied a party landed and laid claim to it as Haytian territory.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic in Central America. The legislative power is vested in a Congress of Deputies containing 46 members, 3 from each department and 1 from Bay Island, elected for four years by universal manhood suffrage. The President is elected for four years by popular suffrage. Policarpo Bonilla was elected President for the term beginning Jan. 1, 1895. The Council of Ministers at the beginning of 1898 was composed as follows: Minister of Foreign Affairs and Acting Minister of Justice and Public Instruction, Dr. C. Bonilla; Minister of Public Works, Dr. E. C. Fiallos; Minister of War, Gen. J. M. Reina.

Area and Population.—The republic has an area estimated at 45,250 square miles, with about 400,000 inhabitants. Education is free, secular, and compulsory, and there are a university, 8 male and 3 female colleges, and 683 schools, in which 23,767 pupils are instructed.

Finances.—The revenue for the year ending July 30, 1896, was \$1,901,606, and the expenditure \$2,264,586. Of the receipts \$762,859 came from duties on spirits and tobacco, stamps, and other internal taxes, and \$627,512 from customs duties. A New York syndicate negotiated with the Government for the privilege of building a railroad from the Atlantic to the Pacific in connection with a line of coasting steamers, and offered to assume the debt and give the Government \$500,000 a year for administrative expenses in return for a concession of the customs and other revenues. The Government between 1867 and 1870 contracted four loans amounting to £5,398,570 sterling. No interest has been paid since 1872. There is an internal debt of about \$6,000,000.

Commerce and Production.—The cultivation of bananas, coffee, tobacco, sugar, and corn is extending. The people raise large numbers of cattle. The mineral resources are varied and valuable, including gold, platinum, silver, copper, lead, zinc, iron, antimony, nickel, and coal.

Communications.—The railroad from Puerto Cortez to San Pedro Sula and La Piniento, 57 miles, is being carried through to the Pacific coast, and another has been contracted for to connect Puerto Cortez with Trujillo. The telegraphs have a length of 2,667 miles.

Proposed Central American Union.—Honduras entered with Nicaragua and Salvador into the federative scheme of which the first fruit was the Central American Diet for united action in foreign affairs. A convention met at Managua in September, 1898, for the purpose of formulating a federal constitution for the United States of Central America, under which name the states forming the Greater Republic of Central America were to be joined in a national union, with a common President and Congress. The Constitution was drawn up and signed by the delegates, who appointed a commission consisting of Dr. Salvador Callego, of Salvador, Manuel C. Matus, of Nicaragua, and Miguel Agnelugarte, of Honduras, to meet at Amapala, Honduras, on Nov. 1, and organize the Government of the federation, which they were empowered to administer until the installation of the regular Government on March 15. They were authorized to perfect the scheme of the new federation and to arrange for the election on Dec. 13 of a President, Senators, Representatives, and federal judges to hold office for four years. J. Rosa Pacose, of Salvador, had been selected as the first President of the federal republic. While the federal commission was engaged in its task at Amapala and was generally recognized as having superseded the Presidents of the three republics, who assumed the grade of governors, the opposition to federation grew among the Salvadoreans, who expected that

the chief expense of maintaining the Federal Government would fall upon them. Gen. Thomas Regalado, the most popular of the three candidates for the office of Governor of Salvador, on the eve of the election headed an insurrection with the avowed object of defeating the plans of the federal organizers. The latter called upon President Zelaya, of Nicaragua, to suppress the revolt. He, however, refused to let the Nicaraguan troops be used to up-

hold the union. The commissioners then appealed to President Bonilla, who dispatched an army to Salvador. It crossed the border of that republic and encountered the forces of Regalado, and was defeated and compelled to retire. The success of the rebellion in Salvador put an end to federation. On Nov. 30 the federal commissioners formally declared the union dissolved, the three states resuming respectively absolute sovereignty.

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, Frank Steunenberg; Lieutenant Governor, George F. Moore; Secretary of State, George J. Lewis; Treasurer, George H. Storer; Auditor, James H. Anderson; Attorney-General, R. E. McFarland; Superintendent of Public Instruction, L. N. B. Anderson; Adjutant General, D. W. Figgins; State Engineer, F. J. Mills—all Democrat-Populist fusion; Chief Justice of the Supreme Court, I. N. Sullivan; Associate Justices, J. W. Huston and Ralph P. Quarles; Clerk, Solomon Hasbrouck.

Finances.—During 1897 there was received by the Treasurer \$320,587.12, from the following sources: Poll tax, \$10,766.84; revenue, \$206,448.56; wagon-road taxes, \$14,076.26; university taxes, \$1,765.59; licenses, \$13,881.59; insurance fees, \$3,865; attorneys' fees, \$800; docket fees, \$1,529.85; interest and rental—school lands, \$12,772.01; principal—school-lands, \$3,998.57; interest of university lands, \$941.97; interest of school fund invested, \$6,921.52; principal of school fund invested, \$7,028.04; fees of Secretary of State's office, \$2,491.80; fees of Supreme Court, \$1,036.20; Insane Asylum receipts, \$587.07; national endowment fund, \$23,000; Soldiers' Home endowment fund, \$5,678.05; 5 per cent. of sales of Federal land, \$2,501.46; sixth dividend Columbia National Bank, \$77.18; sale of reports by librarian, \$30; escheated estates, \$251.16; interest on Capitol building fund invested, \$4.99; electors' mileage returned, \$43.40; interest on Bunting warrants, \$155.01; overcharge on bill returned, \$5. Warrants to the amount of \$214,498.89 were redeemed, and there was \$65,429.85 in the treasury at the close of the year. There was due from the counties for 1895 and 1896 taxes the sum of \$42,593.33 on revenue account, \$1,161.13 on university account, and \$2,162.78 on wagon-road account. The expenses of the year were given under general headings; the statement was as follows: Governor, \$3,736.44; Treasurer, \$2,481.55; Auditor, \$3,898.31; Attorney-General, \$3,623.46; Superintendent of Public Instruction, \$6,960.52; Secretary of State, \$5,962.85; Supreme Court, \$13,342.54; district courts, \$34,970.20; Penitentiary, \$34,039.37; Insane Asylum, \$28,992.35; Capitol building, \$4,795.57; land department, \$5,460.66; Adjutant General, \$770.44; Soldiers' Home, \$4,980.07; Legislature, \$72,180.87; State Engineer, \$1,987.80; librarian, \$720; sheep inspector, \$50; Board of Horticulture, \$3,285.90; State University, \$17,621.79; Lewiston Normal School, \$5,179.36; Albion Normal School, \$8,350.26; mine inspector, \$1,713.30; total, \$265,102.61.

The total receipts of the office of Secretary of State for the year were \$2,680.15, from the following sources: Domestic articles of incorporation, \$918.50; foreign articles of incorporation, \$455.80;

appointments of agents for corporations, \$43.50; certified copies of articles and laws, \$130.40; copies of journal entries and searching records, \$228.70; certificates of authentication, \$11; certificates of filing, \$2.75; warrants of arrests, \$15; filing trademarks, \$12; searching records, \$2; blue book, \$1.50; notarial appointments, \$803; commissioners of deeds, \$15; other commissions, \$40. There were 94 domestic articles of incorporation filed, 36 foreign articles, and 14 appointments of agents; 62 notaries public were appointed and 3 commissioners of deeds. The expenses of the office for the year were \$5,962.85.

Valuation.—In 1896 the total assessment of the State, including railroads, telegraph, and telephones, was \$29,951,920.51; in 1897 it was \$30,423,671.95. The valuation was as follows by counties: Ada, \$3,452,533.40; Bannock, \$1,817,588.90; Bear Lake, \$1,069,194.60; Bingham, \$1,485,470.25; Blaine, \$1,121,598.05; Boise, \$388,282; Canyon, \$2,161,596.25; Cassia, \$720,559; Custer, \$460,194; Elmore, \$1,155,507.50; Fremont, \$1,332,119.75; Idaho, \$942,639; Kootenai, \$2,361,478.30; Latah, \$2,795,985.30; Lemhi, \$857,494; Lincoln, \$1,072,366.95; Nez Percés, \$1,707,087.70; Oneida, \$1,546,924.95; Owyhee, \$933,226; Shoshone, \$1,802,803.85; Washington, \$1,209,112.50; total, \$30,423,671.95. The tax apportionments aggregated \$253,000.

Mineral Yield.—The value of the mineral production of the State for 1897 was: Gold, \$2,500,000; silver, \$7,100,000; lead, \$3,500,000; total, \$13,110,000, an increase of \$1,358,155 over the preceding year. The receipts of bullion at the United States assay office in Boise during 1897 amounted to \$1,497,146.28, an increase of \$128,127.73 over 1896. The number of deposits was 4,586. There has been a constant increase in receipts for a number of years, those of 1897 being more than twice as great as in 1893.

Education.—The estimated number of children five to eighteen years of age was 38,810; number of pupils enrolled, 32,560; average daily attendance, 24,256; average duration of school, in days, 104; total number of teachers, male and female, 727; salaries of superintendents and teachers, \$218,728; total expenditure, \$296,357.

The apportionment of school money for 1897 was as follows by counties: Ada, \$1,571.22; Bannock, \$1,701.14; Bear Lake, \$1,697.66; Bingham, \$1,683.16; Blaine, \$816.06; Boise, \$488.36; Canyon, \$1,294.56; Cassia, \$910.60; Custer, \$252.44; Elmore, \$324.22; Fremont, \$2,401.20; Idaho, \$962.80; Kootenai, \$1,252.80; Latah, \$2,876.22; Lemhi, \$477.92; Lincoln, \$322.55; Nez Percés, \$1,583.98; Oneida, \$2,218.50; Owyhee, \$368.30; Shoshone, \$876.96; Washington, \$945.98; total, \$25,026.63.

In the University of Idaho tuition is free to residents, \$15 to nonresidents; living expenses are from \$90 to \$150. The number of bound volumes in the library is 3,500, pamphlets 9,500; value of scientific apparatus and library, \$35,000; value of grounds and buildings, \$125,000; productive

funds, \$6,638; income: from tuition fees, \$340; from productive funds, \$500; from State or municipal appropriations, \$6,000; from United States Government, \$37,000; total income, \$43,840; benefactions, \$100.

Penal.—The report of the warden of the State Penitentiary for 1897 shows that there were 210 inmates; the number discharged during the year was 63; largest number of prisoners at any one time, 150; of those discharged 37 went out on expiration of sentence, 11 by pardon, 3 by commutation, 4 on payment of fines, 4 on order of the United States court, 1 on order of the Supreme Court, 1 escaped, 1 died, and 1 was sent to the insane asylum. The amount expended for the year was \$36,758.16. The net cost of maintenance was \$29,002.53, or an average daily cost *per capita* of 60½ cents.

Insane Asylum.—By the latest report there were 187 patients in the asylum, of whom 67 were women. The amount expended during the year was \$32,731.39.

Railroads.—The total mileage in the State was 1,085.34, or 0.59 per cent. of all in the United States, an increase in a year of 0.60 per cent. This was 1.29 miles for every 100 square miles of territory, and 115.30 miles for 10,000 inhabitants.

Crops.—By the latest report of the Department of Agriculture the hay crop was valued at \$2,365,178, there being 502,161 tons from an acreage of 193,139. The potato crop was valued at \$188,957, being 629,856 bushels from an acreage of 3,888.

Indians.—The area of Indian reservation in the State is 1,364,500 acres, or 2,132 square miles; Indian population, 3,640; births in 1897, 88; deaths, 132.

Irrigation.—A large irrigation scheme has been inaugurated, the capital stock of the company being \$1,000,000. An immense dam is being built on Bear river, in the southwestern part of the State, from which will run a ditch about 100 miles in length, 40 feet wide, and 10 feet deep; this ditch, with its various laterals, will irrigate an area of 500,000 acres, about 300,000 acres of which is now settled upon, the remaining 200,000 being Government land.

Fruit.—A new corporation has undertaken to plant 1,000 acres in fruit trees, the planting each year to embrace 500 acres of prunes, 250 acres of winter pears, and 250 acres of winter apples, this planting to continue for five years. The prunes are to be dried by evaporation. The finest of the fruit will be shipped in the green state, but the company will rely upon the drier for handling the bulk of the crop. Storage facilities will be provided for the apples and pears, enabling the company to hold its crop of those fruits as long as desirable.

Prosperity.—The year was reported as one of substantial progress. In mining there was a marked revival, the gold resources attracting the attention of many capitalists. The "Idaho Statesman" said: "The blessings of large crops and good prices have caused the northern wheat counties to feel a thrill of new life. Those counties have grown the largest crops harvested in any part of the United States, and the prices obtained have enabled the farmers to pay off mortgages and supply themselves with luxuries denied during the years of depression. The fruit industry has expanded and the wool growers and cattle men have all enjoyed a good year. They have secured high prices and have all made money."

Decision.—Sections 6 and 14 of the sheep-inspection law of 1895 were declared unconstitutional in the case of the State *vs.* James Duckworth. In the lower court the defendant was convicted and fined for bringing sheep into the State

without first having them dipped by a deputy inspector. An appeal was taken, and the judgment of the lower court was reversed.

ILLINOIS. A Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The State officers during the year were: Governor, John R. Tanner; Lieutenant

Governor, William A. Northcott; Secretary of State, James A. Rose; Auditor, James S. McCullough; Treasurer, Henry L. Hertz; Superintendent of Public Instruction, Henry L. Inglis; Attorney-General, Edward C. Akin; Adjutant General, J. N. Reece; Superintendent of Insurance, James R. B. Van Cleave; President Board of Agriculture, J. Irving Pearce—all Republicans. Board of

JOHN R. TANNER,
GOVERNOR OF ILLINOIS.

Arbitration, H. R. Calef, J. Keefe, W. S. Forman; Justices of Supreme Court, C. C. Boggs, J. J. Phillips, J. W. Wilken, J. N. Carter, A. M. Craig, J. H. Cartwright, B. D. Magruder—all Republicans.

Finances.—The amount of funds in treasury Oct. 1, 1896, was \$886,346.13; receipts from Oct. 1, 1896, to Sept. 30, 1898: from general revenue funds, \$9,911,738.52; from State school fund, \$2,179,032.30; from local bond funds, \$2,203,913.22; total receipts from all sources, \$15,181,030.17; disbursements for same time, \$13,017,652.52; balance in treasury Oct. 1, 1898, \$2,163,377.65; total bonded debt outstanding Oct. 1, 1898, \$18,500, these bonds having ceased to bear interest, but not having been surrendered; total amount paid into State treasury by Illinois Central Railroad, from March 24, 1855, to April 30, 1898, \$16,980,666.23; securities deposited with State treasurer by life insurance companies, \$303,200; amount received from foreign corporations doing business in the State, \$70,233.15.

Valuation.—The report of State Board of Equalization gave the amount of real and personal property of the State for the purpose of taxation as \$799,695,853, of which \$135,283,662 was personal property; total amount added to the assessment of the State as reported by the Land Committee, \$22,595,866; total equalized value of property assessed by local assessors, \$699,486,640; railroad property assessed, \$76,554,845; capital stock of corporations assessed, \$2,433,425; total equalized value of property in State, \$4,778,474,910; rate of taxation, 56 cents on \$100.

Banks.—For the year ending Dec. 1, 1897, the total receipts from the building and loan associations in the State were \$24,568.55; number of associations, 632; business of associations, \$43,049,061.98. The statement compiled by the auditor of public accounts, Sept. 21, 1898, gave the number of State banks as 139; cash on hand, \$20,181,632.88; total resources, \$159,956,854.13; capital stock, \$17,148,000; surplus fund, \$7,270,699.56; savings deposits subject to notice, \$38,393,454.61; total liabilities, \$159,956,854.13. The cash on hand in the 20

banks of Chicago, Sept. 21, 1898, was \$18,379,653; United States bonds, \$1,444,175.95; total resources, \$124,906,207.39; capital stock, \$11,173,000; surplus fund, \$5,606,500; total liabilities, \$124,906,207.39.

Railroads.—The total railroad mileage in the State, Dec. 30, 1897, was 10,625 of main track and 1,370 of second, third, and fourth tracks, an increase of 213.77 over 1896; new road built, 40.04; operating expenses of all roads in the State, \$50,245,338; other expenditures, \$74,224,390; total earnings and income of railroads in State, \$81,108,123; total income of lines operating through the State, \$121,211,766; capital of roads in State, \$2,725,415,138; taxes paid by railroads of State during the year, \$4,554,050.77; number of miles of steel rails, 10,050.09; of iron rails, 322.77; tons of new rails laid during the year, 67,515.08; number of ties laid, 4,700,915; number of stations in the State, 2,729.

The Illinois Central Railroad paid into the treasury of the State, out of the gross receipts from March 24, 1855, to April 30, 1898, the sum of \$16,980,666.23. The excess of receipts from traffic over operating expenses for the five months ending Nov. 30, 1898, was \$3,597,918, an increase over the corresponding months in 1897 of \$955,224.

Education.—The number of pupils enrolled in the public schools, for the year ending June 30, 1897, was 920,425; average attendance, 705,481; average duration of public schools, 157.9 days; per cent. of daily attendance, 76.5; average number of days for each pupil, 120.8; average number of months of school, 7.5; number of schoolhouses in State, 12,683; number built during the year, 200; number of public-school teachers, 25,541, an increase of 125; number of volumes in district libraries, 329,652; number of volumes bought during the year, 27,568; number of private schools, 864, a decrease of 192; number of pupils in private schools, 138,542, a decrease of 1,427; number of teachers in private schools, 4,615, a decrease of 19.

Insurance.—The report of the insurance superintendent, issued March 15, 1898, showed that the total number of fire and marine insurance companies doing business in the State was 206, a gain of 13 over the last report; assets, \$293,598,016.39, an increase of \$19,676,501.57 over 1896; total liabilities, \$130,261,820.52; cash surplus, \$95,489,172.33, a gain of \$16,767,394.87 over 1896; cash income, \$153,926,093.16; disbursements, \$130,026,665.99; fire risks written, \$1,060,706,623.30; marine and inland risks written, \$170,461,553.48; total risks written, \$1,231,168,176.78, an increase of \$221,730,280.78 over 1896; premiums received, \$13,126,233.24, a gain of \$317,432.92 over 1896; losses paid, \$6,450,465.66; losses incurred, \$7,279,759.07, an increase of \$1,197,497.18 over 1896; average premium rate on each \$100 insured in 1896, \$1.26; in 1897, \$1.07; amount of losses incurred in each \$100 insured, 59 cents in 1897, being 1 cent less than in 1896; risks in congested districts of Chicago, \$149,300,619.81.

The aggregate number of life insurance companies reported was 204; whole number of policies issued in 1897, 29,695, an increase of 7,212 over 1896; amount issued, \$66,036,141.53, being \$11,083,517.60 more than in 1896; premiums, \$10,623,538.18, an increase of \$551,364.56 over 1896; losses paid, \$1,491,276.11, being \$271,252.89 less than in 1896.

The 41 legal-reserve insurance companies admitted assets of \$1,351,661,287.07, an increase of \$105,460,646.30 over 1896; total liabilities, \$1,163,628,263.67; total income, \$304,107,014.16, a gain of \$21,945,906.47; number of policies in force Dec. 31, 1897, 2,199,095; amount thereof, \$5,352,788,310.54.

In the 4 industrial companies the number of policies in force Dec. 31, 1897, was 7,612,134; amount thereof, \$958,449,297; total premiums received, \$1,345,093.22; total losses paid, \$344,493.09.

The 33 fidelity, surety, and casualty companies, for the year ending Dec. 31, 1897, reported their assets as \$96,582,958.73; liabilities, \$80,933,626.31; net surplus, \$15,649,332.42; total income, \$20,692,703.32; total expenditures, \$17,895,526.56; risks in force Dec. 31, 1897, \$3,315,565,290.70; per cent. of losses paid to premiums received, 45.

The 44 life associations showed total assets for 1897 to be \$17,394,108.63; liabilities, \$5,133,644.46; total income, \$20,731,676.40; disbursements, \$19,208,658.60.

In the 17 accident associations the number of certificates in force Dec. 31, 1897, was 67,643; amount, \$257,573,175; written during the year, \$151,789,300.

The 69 fraternal beneficiary societies reported the number of policies in force in 1897, as 1,553,220; total liabilities, \$3,441,208.90; total income, \$29,173,682.53; total disbursements, \$27,609,704.89.

Military.—The Fifth Illinois Regiment was the first volunteer regiment mustered into the service of the United States for the Spanish war. Illinois filled her quota of 7 regiments of infantry and 1 regiment of cavalry.

Charities.—The State Commissioners of Public Charities have rearranged the districts from which patients are committed to the State insane asylums, so that now each county will be entitled to keep in the hospital for the insane of the district to which it belongs one patient for each 183½ votes cast in the election of 1898. In the 4 State hospitals for the insane there were about 5,500 patients, June 30, 1898, maintained at an annual expense to the State of \$800,000.

In the Central Hospital for the Insane the number of patients admitted from July 1, 1896, to June 30, 1898, was 2,699; discharged, 1,035; general expense fund, from July 1, 1896, to June 30, 1897, \$246,557.56; balance July 1, 1897, \$19,037.55; general expense from July 1, 1897, to June 30, 1898, \$186,458.97; balance July 1, 1898, \$10,937.88; cost *per capita*, about \$35.94; received from products of farm and garden for year ending June 30, 1898, \$17,522.83.

In the Eastern Hospital for the Insane the total number of patients admitted from 1896 to 1898 was 3,539; discharged, 1,323; ordinary expense fund for the year ending June 30, 1897, \$382,847.90; deficit existing July 1, 1897, \$8,587.73; ordinary expense fund for the year ending June 30, 1898, \$355,978.53; deficit on July 1, 1898, \$5,775.22; unreported debt inherited from 1897, \$22,839.25; paid on this debt since March 31, 1897, \$1,916.95.

In the Southern Hospital for the Insane the number of patients treated from June 30, 1896, to July 1, 1898, was 1,432; discharged, 308; average net cost *per capita*, \$145.49; ordinary expense fund for the year ending June 30, 1897, \$172,304.99; balance on hand July 1, 1897, \$23,796.24; ordinary expense fund for the year ending June 30, 1898, \$178,764.03; balance July 1, 1898, \$42,296.45.

In the Asylum for Feeble-minded Children the number admitted in the two years from July 1, 1896, to June 30, 1898, was 798; number discharged, 46; died, 34; expenses from July 1, 1896, to June 30, 1897, \$101,822.84; expenses from July 1, 1897, to June 30, 1898, \$123,621.25; net balance July 1, 1898, \$49.45.

Agriculture.—The August report stated that the number of acres of wheat harvested was 1,911,852, of which 82,939 acres were raised in northern, 949,929 in central, and 881,984 in southern Illinois; yield of the State in bushels, 18,383,943; average price, 62 cents; total value of wheat crop, \$11,473,216; acres of winter wheat seeded for 1898, 1,483,000, against 1,897,000 in 1897.

The average yield of oats *per acre* in the northern

part of the State was 35 bushels; in the central, 21; in the southern, 19; total area sowed, 3,747,938 acres; total yield, 108,720,511 bushels; ruling price per bushel Aug. 1, 1898, 19 cents; estimated value of crop, \$21,218,742.

The number of acres of rye reported was 115,822; value, \$657,414; seeded for 1898, 90,661 acres.

The number of acres of barley reported was 20,030; average price per bushel, 31 cents; value of the crop, \$171,040. The number of acres of corn planted was 7,051,500; yield, 239,360,000 bushels; price per bushel Dec. 1, 1898, 21 cents; total estimated value of the crop, \$51,510,000.

The experiment station sent out 800 circulars to the farmers of the State, and received 316 replies, 274 of these answers being used in constructing tables on corn, as follows: Total number of acres represented, 16,603; total number of bushels represented, 896,235; average cost per acre, \$8.72; average cost per bushel, 16.1 cents.

The first corn convention ever held in the United States began Feb. 16, 1898, in Chicago. Twenty-one States were represented. The object of the meeting was to draw attention to the corn crop. It was stated that the value of the corn crop in this last decade had been about equal to the combined value of wheat, oats, barley, buckwheat, and potatoes for the same period. The exports of corn foods to Europe have increased in four years from 41,000,000 to 188,000,000 bushels.

Live Stock.—The twelfth annual report of the Live Stock Commission gives the total weight of passed cattle inspected as 770,635 pounds; net proceeds, \$47,905.62; total weight of condemned cattle, 611,260 pounds; net proceeds, \$7,200.79.

The State Board of Commissioners gave a full account of experiments to show that Southern cattle dipped in extra dynamo oil and sulphur are incapable of conveying Southern fever to Northern native cattle. In 1897 700 dairy cattle were tested with tuberculin, and 11 per cent. were found to be diseased. In 1898 229 were tested, and a little more than 16 per cent. were found to be affected. Of the 8,499 cattle quarantined for inspection, 5,761 were released in the yard and 2,738 were slaughtered after inspection. Of the slaughtered, 2,090 were passed on *post mortem*, and the carcasses were sold for food, while 646 were reduced to fertilizer.

Game.—After Sept. 15 the game law is suspended, and pinnated grouse and prairie chicken may be killed. Between Oct. 1 and Dec. 1 quail, ruffed grouse, pheasant, and partridge may be hunted.

The Illinois Fishermen's Association reported 9,703,298 pounds of fish caught in the Illinois river alone, with a net value of \$279,482.07.

Labor Statistics.—The report of the factory inspectors for 1897 gave the total number of places inspected as 11,705; total number of employees therein, 270,271—men, 208,945, women, 52,067, and children, 9,259; total amount of fines and costs, \$3,572.25; total employees in breweries, 2,079; total employees in brick, stone, and terra cotta, 2,308—per cent. children, 3.4; total employees in candies and confections, 2,307—per cent. children, 10.4; total in cigars and cigarettes, 3,457—per cent. children, 4.5; total in department stores, 17,754—per cent. children, 12.1; total in food products, 22,731—per cent. children, 1.1; total garment makers, 31,965—per cent. children, 5.4; total in metal working, 44,923—per cent. children, 1.4; total in paper boxes, 1,401—per cent. children, 1; total in rubber goods, 2,090—per cent. children, 9.6; total workers in tobacco, 603—per cent. children, 8.2; total in wood-working trades, 20,951—per cent. children, 3.4.

The number of counties producing coal is 50; number of mines and openings, 853; total output of all mines in tons of 2,000 pounds, 20,072,758; ag-

gregate home value of total product, \$14,472,529; total number of employees during the year, 33,788; number at work on surface, 3,540; number at work underground, 30,248; average price paid per ton for mining, \$0.5046; number of violent deaths among miners in the year, 69.

Arbitration.—The State Board of Arbitration, March 1, 1898, gave the principal labor disturbance as the great coal strike, which had for its purpose an increase in the wages of miners, and affected the entire bituminous-coal region of the country. The board stood ready to do everything in its power to bring about a settlement, but the scope of the strike made all local arbitration unavailing; so a union was made of the Illinois board with similar boards from Ohio, Indiana, Pennsylvania, and West Virginia, and an unsuccessful attempt was made to settle the difficulty at a joint conference. When it was found that no immediate settlement was likely to be secured the Illinois board returned home. To correct a serious and general misapprehension, the board defined its functions for public information thus: "The Board of Arbitration should be as nearly as possible impartial. Provision is carefully made that the employer and employee shall be equally represented, and that the third member, as nearly as practicable, shall be neutral. The first aim of this board is to determine all controversies wholly upon their merits."

Pharmacy.—The State Board of Pharmacy reported the receipts for 1897 as \$11,192.50; expenditures, \$10,773.46; balance on hand, \$419.04; number of applicants examined, 643; number of certificates of registered pharmacists issued in 1897, 4,570; number of permits to sell domestic remedies in force in 1897, 1,526; number of prosecutions on which fines were collected, 119; receipts from prosecutions, \$2,842.19; expenditures for same, \$3,203.69; expenses over receipts for the year, \$361.50. The receipts for 1896 were \$11,474.50, and the expenditures were the same.

Canals.—The Canal Commissioners reported the gross expenses for 1896 as \$77,987; tolls, \$32,100; number of days canal was open, 229; number of boats running, 67; number of miles run, 167,280; number of tons transported, 446,762.

Peace Jubilee.—On Oct. 21, 1898, 5,000 persons witnessed the formal inauguration of the peace jubilee in the Auditorium at Chicago. At the jubilee ball \$25,000 was realized for the benefit of soldiers and sailors.

Grand Army of the Republic.—At the close of 1898 Illinois had 570 Grand Army of the Republic posts and 23,999 members; receipts during the year, \$37,195; expenditures, \$14,694; assets, \$11,385; invested in United States bonds, \$16,000.

Disaster.—A break in the levee of the Mississippi river at Shawneetown, April 4, 1898, flooded 4 miles of valley land, destroyed 150 houses in Shawneetown at a loss of \$300,000 worth of property, and drowned 24 persons.

Decisions.—The State Supreme Court on Dec. 22, 1898, decided that the school board employees of Chicago come under the civil service law. The justice said: "It seems clear to us that the Board of Education of the city of Chicago is still connected with, dependent upon, and to some extent a part of the municipal government of the city, and, as such, that its offices and places of employment fall within the operation of the civil service act."

A ruling of the same court declared the union-labor-contract clause in the public works to be illegal.

A ruling of the court regarding the validity of a marriage declared that the law of the State in which the marriage was celebrated must be followed.

The same court declared that alien-born women become naturalized when they marry citizens of the State.

The court decided that the city council has no power to levy a tax on vehicles run upon the street of the city for private use or pleasure, and could not compel them to pay an annual license.

The court upheld the cigarette ordinance of the city of Chicago, which fixes a license upon the sale of cigarettes.

A writ of mandamus was ordered to issue against the Board of Education of school district No. 5, in Aurora, prohibiting a change of school books oftener than once in four years.

Public Documents.—The Secretary of State reported finding six large rooms full of miscellaneous reports piled up without system, 50,000 of which have now been classified, listed, and sent out to libraries and persons interested in such collections.

INDIA, an empire in southern Asia, subject to Great Britain and governed under general acts of the British Parliament by a Governor General in consultation with and under instructions from the Secretary of State for India in the British Cabinet. The Governor General is advised by a Council, the members of which are nominated by the Crown. They are re-enforced by additional members of his own appointment, part of them on the recommendation of the Provincial Councils, to form the Legislative Council, which frames regulations to be submitted to him and drafts laws which he forwards to the Secretary of State to be laid before Parliament. The Secretary of State for India in the Cabinet of Lord Salisbury is Lord George Hamilton. The Governor General, or Viceroy, in the beginning of 1898 was the Earl of Elgin. The ordinary members of the Governor General's Council were Sir James Westland, Sir J. Woodburn, M. D. Chalmers, Major-Gen. Sir E. H. H. Collen, and A. C. Trevor, with Gen. Sir W. S. A. Lockhart, commander in chief of the forces, as extraordinary member.

Area and Population.—The territory under direct British administration in 1891 had an area of 965,005 square miles and 221,172,952 inhabitants, having increased since 1881 from 875,186 square miles and a population of 198,860,606. The area of the feudatory or native states was 1,016,322 square miles and their population 70,208,000, making the total area of India 1,981,327 square miles and the total population 291,380,952. There was an increase in the population enumerated in 1881 of 19,294,509 for British territory and 27,721,339 for the whole of India. Of the population in British territory 112,542,739 were males and 108,630,213 females, and in the native states 34,184,557 were males and 31,865,922 females. The foreign population in 1891 numbered 661,637, of whom 478,656 were born in contiguous countries, 60,519 in remote countries of Asia, and 11,816 in Africa, while 100,551 were British and 10,095 were other Europeans, Americans, and Australians. There were 207,731,727 Hindus, 57,321,164 Mohammedans, 9,280,467 nature worshippers, 7,131,361 Buddhists, 2,284,380 Christians, 1,907,833 Sikhs, 1,416,638 Jains, 89,904 Parsees, 17,194 Jews, and 42,763 of other religions in India in 1891. Of the Christians 1,315,263 were Roman Catholics, 295,016 Anglicans, 40,407 Presbyterians, 296,938 Dissenters, 63,967 other Protestants, and 201,684 Syrians, Armenians, and Greek Catholics. There were 11,554,035 males and 543,495 females who were able to read and write, besides 2,997,558 males and 197,662 females under instruction, while 118,819,408 males and 127,726,768 females were found to be totally illiterate and no returns were made as to 13,356,295 males and 12,028,210 females. The expenditure on public instruction in India has increased from Rx 39,400 in 1858 to Rx 3,526,529 in 1896. Of

this latter sum Rx 1,049,895 came from fees, Rx 940,615 from provincial revenues, Rx 778,296 from subscriptions and endowments, Rx 587,950 from local rates and cesses, and Rx 149,773 from municipal funds. In 1896 there were 3,906,006 males and 397,103 females under instruction in 152,841 primary and secondary schools, and in the universities of Calcutta, Madras, the Punjab, Bombay, and Allahabad there were 6,774 matriculated students.

Finances.—The treasury receipts for the year ending March 31, 1897, according to the revised estimates, were Rx 93,803,800, and the expenditures were Rx 97,019,200, including Rx 1,228,500 of expenditure from provincial balances, deducting which the expenditure charged against revenue was Rx 95,790,700. The land revenue yielded Rx 23,699,200; railroads, Rx 20,159,900; salt, Rx 8,438,200; opium, Rx 6,386,700; excise, Rx 5,613,200; stamps, Rx 4,771,500; customs, Rx 4,516,700; provincial rates, Rx 3,538,000; irrigation, Rx 3,200,700; the post office, telegraphs, and mint, Rx 2,992,000; civil departments, Rx 1,887,000; forests, Rx 1,768,500; assessed taxes, Rx 1,855,500; interest, Rx 1,087,300; miscellaneous receipts, Rx 1,076,900; military departments, Rx 964,800; tribute, Rx 902,500; buildings and roads, Rx 697,700; and registration Rx 447,500. The army took Rx 24,295,600 of the expenditures; railroads, Rx 22,970,100; civil salaries, etc., Rx 15,383,300; cost of collection, Rx 9,028,800; buildings and roads, Rx 6,013,200; miscellaneous civil charges, Rx 5,862,900; interest, Rx 3,456,100; irrigation, Rx 3,251,600; the post office, telegraphs, and mint, Rx 2,728,400; famine relief and insurance, Rx 2,012,900; refunds and compensation, Rx 1,878,800; defense works, Rx 123,500; and railroad construction, Rx 14,000.

For the year ending March 31, 1898, the revenue was estimated at Rx 95,676,800, and the expenditure at Rx 99,330,800, less Rx 1,190,000 of provincial balances, which leaves the net expenditure charged against revenue Rx 98,140,800. The deficits for the two years are chargeable to the famine. The sums expended directly for famine relief were Rx 5,606,900, in addition to which losses in land revenue, salt duty, railroad earnings, etc., were allowed for, amounting to Rx 4,264,000 for 1897 and Rx 1,337,800 for 1898. The capital expenditure on railroads and irrigation works, not charged against revenue, was Rx 4,537,400 for 1897 and Rx 6,588,600 for 1898. The land revenue, which averages about 20 per cent. of the rent in the permanently settled tracts of Bengal, Madras, and the Northwest Provinces, and 50 per cent. of the rent in the rest of India, has increased nearly Rx 900,000 in ten years, and the salt duty Rx 1,764,000, while the opium revenue was Rx 2,533,000 less in 1897 than in 1887. The accounts for 1897 closed Rx 280,000 better than the estimate. The revised estimates for 1897-'98, taking exchange at 15½d., show a deficit of Rx 5,280,000 after meeting Rx 5,390,000 of famine charges and Rx 3,820,000 of war expenditure.

The actual revenue in 1896-'97 was Rx 94,129,741, and the expenditure Rx 96,834,763. For 1897-'98 the revised estimate of revenue was Rx 96,561,500, and of expenditure Rx 101,844,600. The budget estimate of revenue for 1898-'99 was Rx 99,085,400, and of expenditure Rx 98,194,000. The net expenditure in England was £15,468,739 in 1896-'97, £16,099,000 in the estimates for 1897-'98, and £16,286,500 in the budget for 1898-'99. The loss by exchange has fallen from Rx 15,045,000 in 1895, when the rupee was 13.101d., to Rx 13,990,949 in 1896, with the rupee at 13.638d., Rx 12,116,399 in 1897, with the rupee at 14.458d., Rx 10,546,000 in 1898, with the rupee at 15.375d., and Rx 10,401,500 in 1899, taking the rate to be the same.

The budget estimates for 1898-'99, after providing

for the full amount of the famine insurance grant, Rx 1,500,000, and Rx 1,490,000 of war expenditure, besides Rx 200,000 for better pay for British troops, show a surplus of Rx 890,000. The opium revenue is taken at Rx 490,000 less than in 1898, but Rx 800,000 of suspended land revenue are expected to be realized, owing to a bounteous harvest, which also warrants the expectation of favorable railroad earnings. The expenditure on railroad construction was Rx 10,570,000 for 1898, and for 1899 it was estimated at Rx 13,200,000. The amount spent on famine relief in 1897 and 1898 was Rx 7,470,000. Including loss of revenue, the cost of the famine was Rx 14,040,000, besides Rx 1,850,000 of revenue suspended and Rx 1,370,000 lent to cultivators. The charitable fund expended amounted to Rx 1,640,000. The cost of the plague to the revenue was Rx 420,000; of the earthquake, Rx 530,000.

The war on the northwest frontier cost up to the end of the financial year Rx 5,355,000. The total extraordinary expenditure was Rx 24,000,000, but the deficits were only Rx 6,000,000.

The debt of British India on March 31, 1896, was Rx 232,339,028, of which Rx 103,788,928 was the amount of permanent debt in India, Rx 14,646,368 unfunded debt in India, and Rx 113,903,732 permanent debt in England.

The Secretary of State in England has refrained from drawing on the Indian treasury, leaving at the end of 1898 a temporary debt of £6,000,000 sterling, which the Government was compelled to renew. It also proposed to raise a permanent loan of £6,000,000, of which £3,380,000 were required to pay off debt, and in India to raise a rupee loan of Rx 3,000,000. The Council bills required to be drawn in 1899 were estimated at £16,000,000. The amount of the sterling loan was afterward increased to £10,000,000, which Parliament in June authorized the Secretary of State to raise. The Government in August placed the first installment of the Indian loan, which bears 3½ per cent. interest and was taken at 94.78.

The Currency Question.—The policy of the Indian Government was formerly to seek to establish a stable ratio between silver and gold by international agreement. Its earnest efforts in this direction were repeatedly thwarted by the opposition of the English Government. When the Government of India saw that international bimetalism was unattainable except at a period too remote to relieve it from financial embarrassments threatening its solvency, for it could not continue to discharge its annual gold obligations to England without imposing new taxes, and financial experts were convinced that the limit of taxation was already reached in India, it decided in 1893 to close the mints to the free coinage of silver. To remit £16,000,000 a year to England the Government was obliged to raise 320,000,000 rupees, instead of 160,000,000 rupees, as when the par value of silver was 15½ to 1 and the rupee worth two shillings. When the price of silver began to fall the Government had made the salaries and pensions of British officials payable at the old rate of 10 rupees to the pound sterling, so that a great part of the cost of administration as well as the expenses of the debt and other fixed charges were doubled. The cotton manufacturers of Lancashire and the wheat-growers of England brought pressure upon the British Government to check the fall of the rupee, complaining that Indian manufactures and grain, produced on a silver basis and sold for gold, subjected them to a ruinous competition. When the Government closed the mints in June, 1893, it agreed to accept in payment of obligations due to the treasury British sovereigns at the rate of 16*d.* to the rupee. This fixed the maximum rate to which the Government expected to bring up the rupee by creating a scarcity

value. At first the exchange continued to fall, going from between 12*d.* and 13*d.* to 11*d.*, and afterward it rose with many fluctuations. The Government imposed a duty on imported silver bars, and whenever the rate of exchange tended downward the Secretary of State intermitted his drafts on India for current obligations, offering no India Council bills in the London market except at the desired rate. This only postponed the demands and doubled the difficulty of meeting them later. The authorities hoped that the withdrawal of banking capital from India, which had already begun, would be checked, but the movement was aggravated. With every additional farthing that could be got for the rupee the bankers withdrew larger sums, until they had no capital in India except what they borrowed there. The scarcity of money and the stagnation of business, caused by the check to the great export trade that had grown up under the stimulus of the silver basis, caused Government revenues to fall off. The Government had to borrow in England to meet the annual deficits. The situation was complicated by war, famine, and pestilence, making it necessary to increase the sterling debt by £16,000,000, which was £1,000,000 more than the Indian Finance Minister had estimated to be a sufficient sum to put the Indian currency on a gold basis. To arrive at a gold basis was the ultimate object of closing the mints and producing a scarcity rupee, although the measure was described at the time as only tentative. Arthur J. Balfour, the First Lord of the Treasury and leader of the House of Commons, in 1896 promised, as the contribution of Great Britain to an international bimetallic standard, that the Indian mints should be reopened, thereby providing for the "free coinage of silver within the limits of the British Empire and among a population greater than that of France, Germany, and Belgium together." The Indian Government, however, when the United States and France proposed an international agreement on this basis, declared that it was on the eve of establishing a gold basis, and summarily rejected the American proposition, being urged and encouraged by the monometallists of the city of London.

Meanwhile the business and monetary situation in India and the financial position of the Indian Government went on from bad to worse, until in the beginning of 1898 the officials and the banking and commercial community both pronounced the conditions to be intolerable. English merchants in Calcutta and Bombay could not discount their notes at less than 12 or 15 per cent., and in the native bazaars money could not be borrowed on the security of gold bars for less than 24 per cent. per annum. The rupee circulation was estimated by the Indian officials at Rx 120,000,000, a little more than a fourth of the amount of coined rupees in existence, besides which there were Rx 10,000,000 of currency notes in circulation and Rx 14,000,000 in the treasury. The quantity of silver hoarded in ornaments and other forms besides coin could not be estimated, and the quantity of gold was placed by some as high as £300,000,000 sterling.

In January Sir James Westland, the Indian Finance Minister, carried through the Council a bill providing for the issue of currency notes in India against gold deposited in London. The ostensible object of the bill was to allow quick transfers of money from London in order to relieve the monetary stringency, although telegraphic transfers already answered the same purpose. No gold was deposited in the Bank of England under the bill, and hence no notes were issued. The bill served to prepare the mind of the public for Sir James Westland's plan for establishing a gold basis in India. He first proposed to obtain a reserve of gold coin

by borrowing in England, and asked the British Government to introduce an act into Parliament authorizing the Secretary of State to borrow up to the maximum of £20,000,000 for the purpose of establishing a gold standard in India. After the passage of the statute the Secretary of State should at once borrow £5,000,000 and ship it to India. Holding this reserve of sovereigns, the Indian Government would withdraw from circulation and melt down 10 crores of coined rupees the first year and another 10 crores the second year. Before the currency is contracted to this extent it is anticipated that exchange will be steady at 16d. for the rupee, and that gold sovereigns will flow into India to form the medium of international exchanges in Bombay and Calcutta, while the silver rupee will remain as before the only coin used in domestic transactions. Sir James Westland believed that the sale of Rx 6,000,000 worth of silver for two successive years would have no permanent effect on the silver market, but did not explain how he expected to get that sum for 10 crores of rupees, equal to a third of the world's supply, when suddenly thrown upon the market in competition with the product of the mines, except that he thought that the Indian population would absorb that amount of rupees, which was approximately equal to the annual importation of silver bars, as it was formerly the custom to use coin in making articles of silver, until the stoppage of the coinage gave an artificial value to the rupee. In the letter of the Government of India of March 3, setting forth this plan for securing the early establishment of a gold standard and a stable exchange, it was represented that this was a matter of imperial concern, in which India could fairly claim that the whole burden should not be thrust upon her and that the British Government should contribute, not only in material assistance, but by creating the greater confidence which would result from its publicly assuming a share of the liability. Financial experts in England did not believe that the whole twenty millions sterling would suffice for the establishment of a gold standard in India. Some thought that eighty or a hundred millions would not be enough. But the prospect of giving up even five millions created alarm in Lombard Street, and drew protests from some who had been foremost in urging the Indian Government to reject international bimetalism and adopt the English standard. The opposition of English financiers was so pronounced and general that Lord George Hamilton was unwilling to accede to the proposals of Sir James Westland until the subject was inquired into by a commission of experts. This commission had for its chairman Sir Henry H. Fowler, Lord George Hamilton's predecessor in the India Office, who was responsible for the closing of the mints. The other members were Lord Balfour of Burleigh, Sir Francis Mowatt, Sir David Barbour, Sir Charles Crosthwaite, F. C. Le Marchant, Robert Campbell, Sir John Muir, Everard Hambro, W. H. Holland, and Sir Alfred Dent.

The bankers of London, not less than the tea and coffee planters of India and Ceylon, the manufacturers of Bombay, and representatives of every section of Indian native society, distrusted the composition of this committee—containing six Indian officials and ex-officials, but no member of the classes engaged in commerce and production in India—and still more distrusted the object and scope of the inquiry. A memorial of leading London bankers declared that no inquiry would be satisfactory that did not include an examination of the entire monetary policy of the Indian Government initiated in 1893, and a report as to the possibility or advisability of maintaining it. When chambers of commerce and planters' associations objected to

the scheme, which they believed would subject their industries even more than before to the ruinous competition of China and other silver-using countries, they were told that the adoption of a gold standard for India must be taken as the definite and permanent policy of the Government of India. Opponents of the gold standard asserted that the money stringency in India was the direct consequence of tampering with the currency, and that the late famine was no food famine but a money famine and a large proportion of its victims were the victims of the Indian Government. Since the closing of the mints fluctuations in exchange, which that measure was intended to lessen, had been as violent as before, and often more unexpected. While Indian producers of all classes desired to return to the silver basis and free coinage, English manufacturers and merchants, except cotton manufacturers of Manchester and others who were in favor of international bimetalism, were interested in raising or keeping up the sterling equivalent of the rupee and introducing the gold standard in India, and bankers and bullion merchants on the other hand were fearful that the attempt, for which they foresaw only failure, would cause a disastrous gold crisis, and grave disturbance of trade in England. Lord George Hamilton, a bimetalist of long standing, in vouching for the plan of establishing a gold standard in India without a gold currency, considered that to open the mints of India to the free coinage of silver without some international arrangement would be an act of lunacy, and that circumstances did not exist for entering into an international arrangement, because no such arrangement would be effective without the inclusion of France, and France would only accept a ratio of 15½ to 1, which was impracticable when the market rate was 35 to 1.

When the currency commission began to take evidence the theories of establishing a gold coinage on a gold basis without gold currency were unsettled by testimony from India. Facts that came to light regarding the extent of the illicit coining of full-weight rupees both in the native states and in British India, with machines brought from Vienna capable of turning out a lakh every week, presented a new phase of the question. These counterfeits, which the masters of the mints are unable to detect, are believed by Indians to have been the means of saving their trade from strangulation since the mints were closed.

The Army.—The European army in India in 1898 had an established strength of 3,626 officers and 70,673 noncommissioned officers and privates, made up of 11 cavalry and 56 infantry general officers, 33 general officers unemployed, 914 officers in the staff corps, 5 officers and 10 men on the invalid and veteran establishment, 491 officers and 12,916 men of the Royal Artillery, 261 officers and 5,409 men of the cavalry, 347 officers and 158 men of the Royal Engineers, and 1,508 officers and 52,180 men of the infantry. The native army of British India had an established strength of 1,578 European officers, 3,209 native officers, and 135,853 noncommissioned officers and privates, comprising 33 European and 54 native artillery officers and 2,001 men, 358 European and 619 native cavalry officers and 21,955 privates, 65 European and 488 native officers of sappers and miners and 3,142 privates, and 1,122 European and 2,048 native infantry officers and 108,755 privates. Of the total effective force of 214,924 men of all ranks 55,872 were in Bengal, 67,171 in the Punjab, 47,318 in Bombay, and 44,563 in Madras.

The European volunteers in India numbered 29,466 on March 31, 1897. The imperial service troops, maintained by native princes and trained under

British inspecting officers, numbered 18,114 in 1897. The Government keeps 2 small ironclad turret ships for coast defense, besides a dispatch vessel, 2 torpedo gunboats, several transports, 7 first-class torpedo boats, and a submarine mining flotilla of 8 vessels. Modern breechloading guns have been mounted in coast batteries at Bombay, Karachi, and Aden, at the mouth of the Hugli, and at Rangoon. Upward of Rx 4,500,000 has been expended on special defenses. On the northwest frontier great sums have been spent on the Sind and Pishin Railroad, on strategic roads, on fortifications and military establishments at Quetta, including an advanced position covering the place, on defenses for tunnels and bridges, on fortifications for the Indus crossings at Attok and Sukkur, on an intrenched camp at Rawal Pindi, a defensible post at Multan, and an arsenal at Ferozepore, and on a large number of minor defensive works.

Commerce and Production.—The area cultivated in British India in 1896 was 188,921,010 acres out of 742,240,110 acres surveyed. The acreage of the principal crops was as follows: Rice, 69,160,351; wheat, 18,530,832; other grains, 84,227,474; oil seeds, 12,844,062; cotton, 9,600,616; sugar cane, 2,930,593; jute, 2,248,593; indigo, 1,569,869; tobacco, 1,111,973; tea, 406,478; coffee, 134,279. The cultivation of the poppy is permitted only in certain districts of Bengal and the Northwest Provinces and Oudh, and for local consumption in the Punjab. The opium grown in the native states of Rajputana and Central India, besides paying heavy export duties to the native rulers, is taxed by the Indian Government at the rate of Rx 60 or Rx 62½ a chest. In British India cultivators of the poppy are obliged to sell their entire crop at a fixed price to the Government, which prepares it for market in the factories at Patna and Ghazipur, and disposes of it in monthly auction sales in Calcutta, supplying also the excise department with the small quantity needed for Indian consumption and keeping back in good seasons a reserve sufficient to make up the deficiencies in poor years. Of the cultivated area, as given above, 24,901,684 acres are cropped twice a year, making the total area under crops 213,331,744 acres. The area irrigated by canals, tanks, wells, and other means, counting twice over the land that is irrigated for double crops, amounts to 26,737,083 acres. The Government works irrigate 9,999,319 acres, major works 7,955,529, and minor works 2,043,790 acres. The gross revenue realized is Rx 3,039,860. The forests preserved by the state cover 76,400 square miles, having increased from 17,705 acres in 1877. There were 147 cotton mills, with 37,278 looms and 3,844,307 spindles in operation in 1896, giving employment to 146,244 persons, while 78,889 were employed in 29 jute mills. There were also 6 woolen mills, with 530 looms and 18,658 spindles. The breweries produced 6,313,946 gallons of beer in 1896.

The total value of the imports in 1897 was Rx 71,914,697, and of exports Rx 99,880,660. The imports of live animals were valued at Rx 367,458, and exports at Rx 177,967; imports of articles of food and drink at Rx 8,848,889, and exports at Rx 25,338,844; imports of hardware and cutlery at Rx 1,557,742, and exports at Rx 22,914; imports of metals at Rx 5,462,773, and exports at Rx 118,903; imports of machinery at Rx 3,510,190, and exports at Rx 1,027; imports of railroad materials at Rx 2,661,717, and exports at Rx 4,793; imports of chemicals, drugs, and colors at Rx 1,890,124, and exports at Rx 13,907,521; imports of oils at Rx 3,439,150, and exports at Rx 608,789; imports of raw materials at Rx 3,610,521, and exports at Rx 39,305,221; imports of yarns and textile fabrics at Rx 34,042,980, and exports at Rx 14,073,606; im-

ports of apparel at Rx 1,516,423, and exports at Rx 190,790; imports of all other articles at Rx 6,006,730, and exports at Rx 6,130,285. The imports of cotton manufactures were Rx 29,750,175 in value; of silk, raw and manufactured, Rx 2,242,157; of sugar, raw and refined, Rx 3,151,829; of woollen goods, Rx 1,692,535; of coal, Rx 979,022; of provisions, Rx 1,549,816; of salt, Rx 628,544; of spices, Rx 604,674; of glass, Rx 704,186; of drugs, Rx 772,097; of paper, Rx 384,280; of umbrellas, Rx 306,943; of grain and pulse, Rx 543,135; of dyeing and tanning materials, Rx 731,347. The exports of raw cotton were Rx 12,970,089 and of manufactured cotton, Rx 8,496,474 in value; of raw jute, Rx 10,550,577; of manufactured jute, Rx 5,215,930; of rice, Rx 11,947,586; of wheat, Rx 836,395; of seeds, Rx 8,011,680; of opium, Rx 8,022,923; of hides and skins, Rx 7,001,370; of tea, Rx 8,124,548; of indigo, Rx 4,370,757; of other dyes and tans, Rx 638,936; of coffee, Rx 1,585,039; of wool, Rx 1,241,497; of spices, Rx 497,056; of lac, Rx 1,399,862; of sugar, Rx 511,661; of raw silk and cocoons, Rx 511,661; of manufactured silk, Rx 159,841; of oils, Rx 608,789; of timber, Rx 798,686; of woollen manufactures, Rx 203,032; of provisions, Rx 949,743; of saltpeter, Rx 572,164. The extent of the trade with the principal foreign countries is shown in the following table, which gives the merchandise imports and the exports of Indian produce only:

COUNTRIES.	Imports.	Exports.
Great Britain	Rx 50,417,501	Rx 31,646,304
China	2,149,089	13,681,925
Germany	2,307,821	7,535,579
Straits Settlements	1,842,122	5,007,998
France	920,096	6,355,496
United States	1,466,949	4,813,561
Belgium	2,403,703	3,052,888
Egypt	199,723	4,853,561
Japan	547,356	4,075,886
Austria-Hungary	1,487,788	2,496,685
Italy	464,717	3,027,963
Ceylon	682,643	3,109,983
Mauritius	1,807,631	1,125,926
Russia in Asia	1,858,955	47,982
Australia	452,676	1,178,876
Arabia	494,690	783,931
East Africa	239,452	807,014
Persia	685,983	417,117
Netherlands	240,105	597,885
Spain	12,167	188,353
South America	126	1,436,142

As a consequence of plague and famine, imports in the year ending March 31, 1898, fell off Rx 2,520,000 and exports Rx 6,100,000. The total trade amounted to Rx 163,170,000, of which Rx 69,390,000 represent imports and Rx 93,780,000 exports. In the importation of piece goods there was a decline of Rx 3,460,000; in other manufactured articles, Rx 1,260,000; in raw materials, Rx 780,000; in machinery, Rx 780,000. In foodstuffs the imports increased Rx 1,890,000, of which Rx 1,630,000 was the increase in sugar. Metals, mineral oils, railroad materials, chemicals, and cotton yarn also showed large increases. The import of salt, which comes from Great Britain, increased over 100,000 hundred-weight. Sugar is imported in greater quantities from Germany and Austria and in less from Mauritius. The decline in exports was distributed throughout the list. Cotton decreased nearly Rx 4,100,000, and opium, indigo, tea, rice, and every article of food, except wheat, showed large decreases, also jute, cotton yarn, and piece goods, whereas oil seeds and other raw materials increased in the amount exported. In wheat the increase of Rx 500,000 lakhs was but small, following upon a famine year. The production of coal in India has increased so fast that the imports in 1896 had fallen to a fifth of the domestic production, which was 3,750,000 tons, against 2,750,000 tons in 1894. The imports of

treasure in 1898 amounted to Rx 20,530,000, being Rx 7,500,000 more than in the previous year.

Navigation.—The total number of vessels entered at Indian ports during 1897 was 5,006, of 3,883,989 tons, of which 1,989, of 3,086,971 tons, were British; 921, of 138,101 tons, were British Indian; 550, of 581,725 tons, were foreign; and 1,546, of 77,192 tons, were native. The total number cleared was 4,934, of 3,814,596 tons, of which 1,980, of 3,078,271 tons, were British; 926, of 137,856 tons, were British Indian; 484, of 521,341 tons, were foreign; and 1,544, of 77,128 tons, were native. The number arriving by way of the Suez Canal was 643, of 1,554,653 tons; and clearing, 787, of 1,823,784 tons. The number of vessels entered coastwise was 94,806, of 11,046,072 tons; and cleared 89,349, of 11,092,238 tons. The number of vessels built during the year was 81, of 2,975 tons; the number first registered was 86, of 5,112 tons.

Communications.—The total length of railroads in operation on March 31, 1897, was 20,390 miles, of which 10,238 miles were state lines leased to companies, costing Rx 34,721,121; 5,095 miles were state railroads, built at a cost of Rx 165,177,847; 2,588 miles were guaranteed railroads, which cost Rx 50,333,837; 428 miles were lines belonging to assisted companies, which cost Rx 8,749,590 to build; 893 miles were lines of native states worked by companies, 146 miles worked by the Indian Government, and 898 miles worked by the states, the whole having cost Rx 11,584,262; and 59 miles were foreign lines, which cost Rx 1,700,800, making the total capital expenditure, including Rx 497,351 for surveys and Rx 308,410 for coal mines, Rx 273,072,718. The gross receipts of all railroads during 1896 were Rx 25,366,043. The working expenses were Rx 12,197,688, being 48.09 per cent. of the gross earnings. There were 160,817,267 passengers carried, paying Rx 9,202,289, and 32,471,335 tons of freight, paying Rx 15,415,151. The net earnings in 1896 were Rx 13,168,355, which gave an average return of 5.20 per cent. on the invested capital.

The number of letters, post cards, and money orders that passed through the post office in British India during 1896 was 374,223,042; of newspapers, 28,928,622; of packets, 18,196,529; of parcels, 2,577,083. The receipts were Rx 1,712,961; expenditure, Rx 1,643,316.

The Government telegraph lines had a total length of 46,375 miles, with 142,926 miles of wire. The number of private messages forwarded in 1896 was 4,736,734. The receipts were Rx 1,085,940, and expenses Rx 897,853. In 1898 826 miles were opened, to be followed by 1,540 additional miles in 1899 and 2,522 miles in 1900.

The Plague.—In the winter of 1897-'98 the bubonic plague assumed the proportions of an epidemic once more in Bombay. The searching of female quarters, the compulsory removal, not only of plague patients, but of all persons who have come in contact with them, to the sanitary camp, and the loss or destruction of household goods were so resented by the people that cases were concealed as far as possible, and dying people were frequently turned into the streets. Poona was visited with the disease shortly after it appeared in Bombay, and a malignant type broke out here and there in the rural villages throughout western India. The powers of segregation and enforced medical treatment, which the epidemic diseases act conferred upon the authorities all over India, were no longer violently resisted in Bombay as they had been at first. The sanitation of dwellings, however, could not be enforced, and the municipal authorities were sullenly indifferent to the sanitary condition of the streets. Hence the Government obtained power to tear down and rebuild Bombay as far as might be

necessary, and to spend Rx 5,000,000 for this purpose. From the first outbreak of the plague in September, 1896, to the beginning of February, 1898, there were 71,000 deaths from the disease in the Bombay Presidency, one fourth of them in the city of Bombay. Among Europeans there were only 26 deaths. In Bombay city the pestilence reached its lowest point in August, 1897, and then gradually increased until the deaths reached 1,250 a week in the middle of February, 1898, a rate 50 per cent. greater than in the previous year. Dr. Haffkine's inoculation was not put in practice, and in experimental trials it seemed to have no effect in preventing infection, although it did in reducing mortality. The natives were willing to carry out only one of the preventive regulations of the Government, that of forbidding the ingress of strangers into uninfected villages. In many places the villagers were too ignorant or callous to observe even this precaution, which in larger towns it was impossible to apply. The difficulty was met in a measure by establishing inspection stations on the railroads, at which every passenger was examined by medical officers and no train allowed to proceed without a certificate showing that all on board were free from suspicion. Owing to a lack of medical officers, it was impossible to carry out this plan thoroughly. Quarantine barriers were erected in all directions to prevent the exodus from Bombay. The plague committee in Bombay was opposed by the municipal authorities in its action, and the failure of the municipal administration there and in Calcutta to provide for sanitation led to new legislation abrogating in a great measure the right of native self-government and transferring to the Provincial Government powers and duties that had been intrusted to the municipality.

The system of hospital treatment, which the British authorities considered indispensable, was so repugnant to Hindus and Mohammedans alike that, whatever their degree of education, they would prefer to see their women die of the plague rather than have them taken to a public hospital. British private soldiers were employed in searching Hindu houses up to March 5, when the popular indignation rose to such a dangerous pitch that the practice was discontinued after numerous attacks on search parties. Four days after this riots occurred, occasioned by the measures which the plague committee had ordered and the distress resulting from the penning of the people in the city when trade and industry were prostrate. In the previous year the exodus reduced the population to 450,000, but now there were 800,000 people confined in the city. Outside of Bombay city deaths from plague decreased from 2,000 a week in November, 1897, to 750 in February, 1898. A new rule, ordering the examination of corpses when no death certificate was produced, angered both Mohammedans and Hindus. The municipal corporation refused to supply more money to the plague committee. When the Mohammedans and Hindus, no attention having been given to their petitions, closed all their shops and places of business, and all laborers struck work, the authorities began to devise a means of harmonizing their plague measures with native susceptibilities, especially after an armed uprising of the people had resulted on March 9 in the death of four British soldiers and five other Europeans. The attempt of a plague party to remove a Mohammedan woman to a hospital led to the riot, which, after the police had killed a number of the mob, spread to the whole population, Mohammedans and Hindus, who assailed Europeans and attacked their houses and the public hospitals until the military took possession of the streets. After a change of policy was inaugurated, the brothers Natu, who had been de-

ported without trial from Poona in July, 1897, and since kept in close confinement, were released from jail, but still were interned at Belgaum. Mr. Tilak, the native member of the Provincial Council of Bombay, who was sentenced in 1897 for seditious articles in his paper, the "Kesari," published in Poona, was released in September.

Medical opinion was already convinced that the drastic regulations, which could never be enforced in a European city and were tenfold more obnoxious to a people holding Oriental sentiments regarding family life, had no effect in arresting the progress of the plague. This was not a filth disease as was at first supposed, and still less a disease propagated by drains and sewers or water pipes. The infection was believed to be conveyed either directly from the sufferers or by clothing, bedding, and other things brought into contact with them. Certain animals, particularly rats, were found to be subject to the disease, and were active agents in spreading it. The officials did not relax their oppressive and inquisitorial methods, although these had been proved ineffectual, until the tumults in Bombay, Calcutta, and other places compelled them to relax their regulations. The native press which gave warning of the outraged feelings of the people was treated as seditious. The search parties were given up in Bombay, the use of spies and detectives abandoned, and segregation made practically voluntary, as well as inoculation. The idea of stamping out the plague was abandoned. It had proved more virulent on its recurrence than during the first outbreak, and the authorities adopted the view that it must run its course. Even the safeguards demanded by the Venice conference to prevent its introduction into Europe it was decided to adapt to the religious requirements and domestic habits which had proved themselves in India to be stronger than the fear of death. In April the mortality in Bombay city, which in March had continued to exceed 1,200 weekly, suddenly abated. In March the plague was introduced into Calcutta. A panic fell upon the population and 250,000 of them fled. The Government did not attempt to carry out the rigid system of visitation and segregation that had failed in Bombay, but even milder rules provoked resistance. Inoculators for the plague were murderously assailed and ambulances removing suspected cases were mobbed. On May 21 a serious riot broke out in the suburb of Bhowanipur, caused by a doctor who shot three members of a mob that threatened him when he was selecting a site for a hospital. Cases continued to occur in Calcutta through the summer, but in October, the period of its recrudescence in Bombay and the northwest, the plague disappeared. In the Bombay residency and Sind the total number of deaths reported for the two years amounted in August to more than 100,000. This includes no estimate for concealed cases nor 2,000 reported deaths in the Punjab, 1,000 in Hyderabad, and smaller numbers in Baroda, Cutch, and Palanpur. The mortality in Calcutta was only 150. In the second epidemic the disease was more virulent, and it attacked Europeans who were exposed, as readily as natives.

In October the pestilence again began to rage in Bombay and other places in western India. The Provincial Government decided that it would not again lock up the people and arrest the activities of that great commercial and industrial hive. Detention camps and passes were discontinued, their place being taken by a strict medical examination of all persons passing the cordon, with disinfection of their clothing when necessary, and a surveillance over persons entering Bombay from infected localities. The third epidemic was more widespread, extending into Madras and Hyderabad and

over wider districts in Baroda, Mysore, and northern India. In the Bombay Presidency the deaths rose to 4,300 a week in the middle of October.

New Sedition Law.—The proposed amendment to the code of criminal procedure, granting powers to first-class magistrates to try cases of sedition with the sanction of the local or the Imperial Government, was opposed by nearly all classes of the native population; by the Hindus more generally than by the Mohammedans. The sweeping character of the measure was toned down so as to allow comments expressing disapprobation of the action of the Government without exciting or attempting to excite hatred, contempt, or disaffection. The punishment for sedition is transportation or imprisonment, the term of which was reduced from ten years to three. Attempts to promote enmity or hatred between races or classes were made punishable with two years' imprisonment. Statements conducive to public mischief were also penalized. Disaffection was defined as including any words calculated to bring the Government into hatred and contempt and any expressions of disloyalty or of feelings of enmity. The bill was passed by the Legislative Council on March 12. It permits proceedings to be taken against native Indians for words spoken in England or anywhere outside of as well as in India. Magistrates are empowered to demand bonds from editors of newspapers and in default to imprison them without trial.

The Frontier War.—The campaign against the Afridis and Orakzais, which cost £4,000,000 and 2,000 men, ended in the evacuation by the British of Maidan and Tirah in December, 1898, when severe cold weather set in. The tribesmen, armed with Martini-Henry rifles and with Lee-Metfords also, captured or stolen from the British, harassed the troops at every step of the retreat. To convince the hill tribes that for them to carry on war against the British was like flies attacking the lion, as Sir William Lockhart said in his farewell proclamation, a winter campaign in the lower valleys and passes was necessary. Gen. Sir Bindon Blood, who had conducted the operations against the Mohmands, and on the Malakand, took possession of the Tanga pass in the beginning of January, 1898, and advanced into the country of the Bunerwals, who showed little hostility to the invaders and paid their fines, allowing the British troops to withdraw at the approach of bad weather. Meanwhile the Zakka Khels abandoned the Khaibar pass, but returned when it was occupied by the British, and attacked the garrison at every opportunity until the troops retired. The Akka Khels and other Afridi tribes sued for terms and began to pay the money and rifles demanded of them after making their submission at Jamrud on Jan. 17. In the middle of January the forces stationed in Makran, in Baluchistan on the border of Persia, far from the former disturbances, were attacked, and reinforcements were dispatched to punish the tribesmen, in co-operation with the troops of the Khan of Kelat. Sir A. Power Palmer succeeded Sir William Lockhart in the command of the Tirah field force when the latter was appointed commander-in-chief of the Indian army. While negotiations were proceeding at Jamrud the delegations of the tribes suddenly departed, and at the same time the Akka Khels began to raid British territory. Several flying columns entered their country, but found the villages deserted. Four British brigades marched from Ali Masjid, Jamrud, Bara, and Mamani to attack the Afridis in their winter pastures in the Bazar valley and on the Kajurai plain, thus carrying out Sir William Lockhart's threat. On Jan. 29 Gen. Westmacott's brigade was surprised in a gorge at Shin Kainar and lost 5 officers and 60 men. This

reverse, followed by the retreat of the British columns without their reaching the Kajural plain, made necessary a spring campaign. The Afridis had lost about 4,000 killed, and wherever the British troops marched their villages, their crops and household goods, and even their fruit trees were totally destroyed, and yet their spirit was not broken. Sir William Lockhart returned to take charge of operations. An army of 50,000 men was massed on the frontier. Four of the eight Afridi tribes, afraid of a fresh invasion of their country, paid their fines and tale of rifles before the spring. The casualties during the previous operations were 44 British and 6 native officers and 186 British and 320 native soldiers killed, 93 British and 36 native officers and 404 British and 845 native soldiers wounded, and 10 British officers and 250 soldiers and 220 natives of all ranks dead of disease. The casualties among the Afridis were greatly increased by the use of the *dum-dum* bullet, which flattens on striking, shattering bones. This was adopted when it was found that the ordinary small-caliber bullet failed to stop the fierce onsets of the tribesmen. The question was raised whether its use was consonant with international law, and the Government affirmed that it was, though it would be improper in dealing with civilized foes.

The Khaibar pass was reopened on March 27, and on April 1 most of the Zakka Khels paid their fine. The Akka Khels and other recalcitrant tribes surrendered the required number of rifles or gave hostages a few days later, completing the submission of the hillmen. Dissatisfied Zakka Khels sent a deputation to the Ameer of Afghanistan, which was turned back at Jelalabad. They had not yet complied with the Government demands in September, and were waiting to see whether their money allowances for guarding the Khaibar pass were to be renewed. The Khaibar rifles were finally again placed in charge of the pass, the British garrison being restricted to Landi Kotal. The Mullah Saiyid Akbar, who fomented the original rising, lost all his influence, and the chiefs who led the rebellion were fugitives in Afghan territory. After the war many Afridis enlisted in Indian regiments. The Khaibar, Bazar, Bara, and Tirah districts brought under British control by the war have an area of about 1,000 square miles. The tribes inhabiting these valleys were made to surrender 764 breechloading rifles and pay 50,000 rupees in cash. The whole frontier involved in the struggle has a length of about 1,000 miles, with a width of from 50 to 100 miles. There was no attempt at a general disarmament or an occupation of the hill country. The tribes had acquired a knowledge and dread of the power of the English, who had invaded their mountain fastnesses where no foe had trod before. But the English, on the other hand, had learned what a costly enterprise they had undertaken in attempting to subjugate these marksmen who fired down on them from cliffs, not with Afghan muzzle-loaders, as formerly, but with modern long-range rifles. The political officers on the frontier had warned the Government of the difficulties of the undertaking, and the most experienced Indian military men considered it to be worse than useless to establish posts and lock up garrisons in this country as a precaution against a Russian invasion, for no army could cross these mountains, and, besides, the 200,000 fighting men of the tribes would defend their independence against any invader. The Government, however, was committed to the forward policy too far to relinquish the country entirely. Hence it was decided that the defense of the Khaibar pass, the commercial route to Cabul, would be assumed by the imperial forces. George Nathaniel Curzon, who was created Lord Curzon of Kedleston,

was appointed Governor General on Aug. 10. Mr. Curzon was known as an adherent of the forward school, and therefore his appointment to the viceroyalty was received with misgivings in India. The Afridi militia were still employed in guarding the pass under the new arrangement, and they received money allowances as before, but they were organized and commanded by British officers. The banished headmen were allowed to return, and the material position of the tribes was the same as before, or was improved in the case of some of those that had received no subsidies under the old arrangement.

INDIANA, a Western State admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820, 343,031 in 1830, 685,866 in 1840, 988,416 in 1850, 1,350,428 in 1860, 1,680,637 in 1870, 1,978,301 in 1880, and 2,192,404 in 1890. Capital, Indianapolis.

Government.—The following were the State officers during the year: Governor, James A. Mount; Lieutenant Governor, W. S. Haggard; Secretary of State, William D. Owen; Treasurer, F. J. Scholz; Auditor, Americus C. Daily; Attorney-General, W. A. Ketcham; Superintendent of Instruction, David M. Geeting; Statistician, John B. Conner; Geologist, W. S. Blatchley; Adjutant General, Gen. Gore; Labor Commissioners, B. F. Schmid, L. P. McCormick; Fish Commissioner, Z. T. Sweeney; Tax Commissioners, I. N. Walker, T. B. Buskirk; Factory Inspector, D. H. McAbee—all Republicans; Chief Justice of the Supreme Court, Timothy E. Howard; Associate Justices, Leonard J. Hackney, James McCabe, L. J. Monks, and James H. Jordan—the two last named are Republicans, the other three Democrats; Clerk, Alexander Hess, Republican; Justices of the Appellate Court, W. D. Robinson, W. J. Henley, James B. Black, D. W. Comstock, and U. Z. Wiley—all Republicans.

Finances.—The report of the Auditor, completed in November, shows that the public debt has been reduced \$1,200,000, making an annual saving of \$38,300 in interest. The Auditor recommends that the present tax levy of less than 30 cents on \$100 be retained, and that legislation be enacted giving greater powers to assessors in the discovery of personal property. During twenty years land values have increased \$65,503,740, while improvements have increased in value \$10,026,218. Lot values have increased in the aggregate \$57,109,228, while the increase in the value of improvements on them has been \$81,184,175. There was a decrease in personal property values from 1891 to 1897 of \$11,663,421. In 1877 corporate property—such as railroads and telegraph companies—was assessed at \$37,760,460, while in 1897 it was assessed at \$161,238,163, or a percentage of 11.56 of the whole taxable property of the State. The total taxable property in 1897 was \$1,295,965,056, an increase of \$421,043,994 in twenty years. The estimate of State expenses for 1898 is \$1,952,350, and for 1900 \$1,852,000.

The report of the Printing Board for the two years ending Oct. 31 shows that the bills for State printing, stationery, and advertising for the first year amounted to \$53,081.77, while for the second year they aggregated \$42,301.32. The legislative printing for the 1897 session cost \$12,778.08, making a total for the year of \$108,161.17. The printing, stationery, and advertising for the State institutions cost \$15,189.73 for the first year and \$12,907.24 for the second year, making a total of \$28,096.97 for institutional printing. The grand total on all accounts was \$136,258.14.

Education.—During the year there was an average daily attendance in the public schools of 434,836, a gain of 32,089 over 1897. Of this gain 21,447 pupils were brought into school under the provisions

of the compulsory law by truant officers. The superintendent shows that, while the direct benefits of the law have been made apparent in the number brought into school by the truant officers, the indirect results of the law are quite as worthy of mention. In many instances children attended school who have never done so before, because they knew this year there was a law which would compel them to attend. Of the total number who were compelled to attend school by the truant officers 1,339 attended private schools.

The number of schoolhouses in the State in 1897 was 10,053, an increase of 753 over 1898.

The apportionment to schools in January was \$960,033.62, and that in July \$1,064,472.45. In November the superintendent forwarded \$738.50 to Washington as part of the amount collected in the public schools of the State for the Lafayette monument fund. Several of the larger cities had not reported.

Changes have been made in the United States school history used in the State in accordance with suggestions made by a committee of the Grand Army.

The standard of admission to the State Normal School has been raised, so that only those who are graduates of colleges or commissioned high schools or who hold a three years' license to teach in the common schools may attend. This does away with entrance examinations. It is also decided to make a certain amount of work in the gymnasium compulsory. There were 113 graduates at the twenty-seventh annual commencement of the school in June. The summer school will hereafter be free, and the work done in the six weeks during which it is held will be credited on the regular course.

The State University had an attendance this year of 1,049, of whom 124 were graduated.

Rose Polytechnic Institute graduated in June 18 students in electrical engineering, 4 in civil engineering, and 1 in chemistry.

Purdue University, which sent out its first graduate in 1887, the only one of that year, graduated in 1898 a class of 57. It has had 4,425 students, more than 80 per cent. of whom are engaged in industrial pursuits, for which the technical training of the university has fitted them. An unusual number of young women entered the freshman class in September. The experiment station connected with the university has given much attention to experiments with beet sugar, with the result of showing that much of the land in the State is adapted to its cultivation.

The senior class at Wabash College numbered 20, that at De Pauw University more than 60, and that at Earlham College 36. At the twenty-eighth commencement of the Indiana Medical College in April, 79 were graduated.

Charities and Corrections.—The condition of many of the county almshouses is reported to be very bad, especially in the southern part of the State. "The houses usually are old buildings, seldom repaired, and some of them are not fit for human habitation. The State Board of Charities has been bending its efforts for years to have these conditions remedied. The State Board of Health has succeeded in doing a great deal of good by forcing changes in county poorhouses which would bring about better sanitary conditions."

The record for 1898 shows that there are 4,300 insane persons in the State, a ratio of 1 to 675. On Sept. 30, of the 4,300 insane, 3,300 were in the hospitals. During the year 322 were refused admittance to the hospitals on account of lack of room, 424 were placed in the county asylums, and 38 were in county jails.

The report of the School for the Feeble-Minded

at Fort Wayne shows the number of inmates, Nov. 1, to have been 570, about half of whom were girls. There are on file at this time 153 suspended applications for admittance which can not be acted upon because of the crowded condition of the school. Fully 15 per cent. of the inmates are now entirely self-sustaining, while about one half of the others are engaged in useful work. During the year the industry of brick making was established in the school, and over 250,000 bricks were produced. This brick was all used in the institution, the principal improvement being the construction of 280 feet of tunnels for steam piping.

A report of the Board of Charities on the State Prison states that the present appropriation of \$90,000, instead of \$100,000, as before, is not adequate to the needs of the institution. Improvements have been made in the building, especially in the sanitary arrangements.

The first biennial report of the management of the Indiana Reformatory at Jeffersonville shows that there are but 536 cells in the institution, while the daily average population for the year ending Oct. 31, 1898, was 909, an increase over the preceding year of 98. The report speaks favorably of the parole law, and shows that 162 men have been released under its provisions. Men in the reformatory are required to earn their own living. The net cost to the State in 1897 was about \$25,000. The cost *per capita* was \$113.30. A school for the convicts is held twice a week. About 200 of them are unable to read and write.

The annual report of the Reform School for Girls and Women gives the number of girls, Oct. 31, as 206, and of women 43. The expenditures for the year were \$40,499.01, and the net maintenance cost to the State was \$21,572.94. There have been 1,125 girls and 614 women received in the institution since it was established in 1873. The girls are crowded into quarters intended for only 60.

At the Reform School for Boys, at Plainfield, a new building was completed in March at a cost to the State of \$4,000, which was the price of materials. The boys made and laid the bricks and did all the other work, even to the steam fitting.

Militia.—A new State militia is to be organized, for whose equipment \$35,000 was available Jan. 1, 1899.

Labor Interests.—The State has had a Board of Labor Commissioners since June 17, 1897. Their first report covers the period from that date to Nov. 1, 1898. During this time the commission "has investigated and reported on 39 strikes and lockouts. Of this number failure to adjust differences occurred in 7 instances, and in 2 of these the contestants on one side were nonresidents of the State, over whom, consequently, the commission could have no jurisdiction. In 4 instances the commission simply investigated and reported the conditions of settlement made between the parties of their own volition. In 28 contests satisfactory agreements were reached through the mediation of the commission, and in 19 of these settlements the workmen secured either advance in wages or other improved conditions." The number of strikers in the whole 39 cases was 13,815, and the number of days lost 539,264. "The commission was also instrumental in having 2 boycotts declared off, and in 5 instances prevented strikes by timely negotiations."

The report says the most formidable obstacles to settlements have usually come, not from the employer or the employed, but from intermeddling third persons—politicians and labor agitators. It says also: "No propositions involving settlements of labor controversies present as great obstacles as those in which trusts are parties to agreements. In every encounter with labor, the workingmen, how-

ever just their cause, emerge from the conflict the greater sufferers. The opportunities of trusts in regard to wage reductions are exceptional, and their desires are always equal to their opportunities. They are not trammelled by State laws, and they defy Federal authority."

On Nov. 14 another strike ended at Hartford city, where more than 600 window-glass workers had gone out; they resumed work without the advance they had demanded, pending arbitration. In regard to this industry the following details are given: "Indiana is the greatest window-glass producing State in the West and one of the greatest in the United States. In it are 40 window-glass concerns; 20,000 skilled workmen and more than 30,000 laborers are affected by the resumption."

From a compilation of statistics by the State statistician it appears that in 21 industries in regard to which he has made comparison the wages in every one were higher in 1898 than in 1897. The largest advance was shown in the business of iron and steel castings, where the average daily wage was 17 cents higher in 1898.

Complaint is made in behalf of factory employees against the practice of many companies in "employing a firm of physicians to attend the medical needs of their employees, and for such services deducting a stated monthly amount from all employees' wages, the company paying the physicians a salary and retaining all left as a commission."

Banks.—Following is a summary from the Auditor's report:

"The 94 State banks of discount and deposit show resources as follows: Jan. 11, 1898, \$16,715,669.10; April 12, \$16,659,572.55; July 21, \$17,257,156.86, and Oct. 31, \$17,803,861.74. The item of "cash on hand," in the aggregate, shows a much better financial condition throughout the State than ever before in years. Last January it aggregated \$1,703,070.52, while on Oct. 31 it had increased to \$1,830,593.42. There was also a much heavier holding of Government bonds by the banks apparent than at the first of the year. On Jan. 11 the amount aggregated \$119,165, while on Oct. 31 the amount rose to \$316,381.

The statement of the liabilities shows that the amount of "individual deposits on demand" has increased over a million and a half during the time covered in the report. On Jan. 11 there was \$9,372,257.44 in the banks subject to demand of depositors. This had risen Oct. 31 to \$10,986,882.88.

One peculiar feature of the report is that the banks and trust companies of the State have gained over \$3,000,000 in business during the year, while the building associations of the State have lost about the same amount of business.

The assets of trust companies were \$3,647,228.79 in 1897 and \$4,413,273.97 in 1898, while the cash belonging to the company's funds rose from \$150,714.58 to \$225,689.26, and the cash in trust funds from \$224,102.61 to \$281,311.55.

The resources of the savings banks increased from \$4,882,638.11 to \$5,651,879.11, the cash on hand or deposit from \$871,878.35 to \$1,178,184.74, and the United States bonds from \$97,000 to \$122,000. Following is the statistical account of the savings banks for 1898: Open accounts first of the year, \$19,707; deposits made during the year, \$5,225,840.83; withdrawn during the year, \$4,473,068.16; interest earned, \$258,602.33; salaries and expenses, \$38,437.74; amount of dividends, \$168,785.91.

Building and Loan Associations.—There were in November 488 of these in operation. During the year 30 retired and 20 liquidated under the law. Thirteen were consolidated, while 9 new ones were incorporated. The report shows a decrease in volume of business done by the associations during the

year of \$2,735,603.60. The reduction of expenses during the year was \$103,027.98. The holdings of real estate increased \$506,025.08, and the fund for contingent losses increased \$100,503.49. The membership decreased 9,748, and the number of shares was reduced 83,947.

Insurance.—For the year ending June 30, 1898, the people of Indiana paid \$8,179,241.93 to insurance companies belonging in other States or foreign countries. This does not include premiums paid to assessment and fraternal associations doing business in the State. In addition to this, several companies are operating under special charters granted prior to the adoption of the present constitution, which make no reports to the department, and a number of fraternal societies take advantage of the exemption of the law and make no reports; so that \$10,000,000 is believed by the Auditor to be a safe estimate.

Railroads.—The increase of mileage in the State reported for 1897 was but 7 miles.

In February the Supreme Court rendered a decision upholding the constitutionality of the co-employees' liability law of 1893, and affirming a judgment by the Cass Circuit Court to William J. Montgomery for \$300 damages against the Pittsburg, Cincinnati, Chicago and St. Louis Railway Company on account of injuries received by reason of the negligence of an engineer of a freight train on which Montgomery was a brakeman. Besides overruling all the claims of the railroad attorneys as to the law's constitutionality, the opinion also ruled that an employee could not waive his title for damages for injuries by signing an agreement before the injury was incurred. Montgomery had signed such an agreement by the terms of which he became a participant in the benefits of the railroad's relief fund on condition that he released the company from all claims for damages.

By another decision the Supreme Court sustained the three-cent fare law in a case where the Citizen's Street Railway Company of Indianapolis was concerned.

Products.—The crop yield of the year is thus reported by the statistician: Wheat, acres 3,012,332, bushels 51,001,080; corn, acres 3,915,131, bushels 145,501,404; oats, acres 1,162,451, bushels 33,490,424; rye, acres 62,084, bushels 948,056; barley, acres 11,397, bushels 136,234; buckwheat, acres 3,733, bushels 61,206; Irish potatoes, acres 66,205, bushels 4,379,044; sweet potatoes, acres 2,215, bushels 150,062; acres of timothy hay, 1,375,390, tons 1,802,579; acres of clover hay, 1,033,407, tons 1,695,629.

The yields of wheat, corn, potatoes, hay, and buckwheat as given here are considerably larger than those of 1897, when the total value of farm products was more than \$250,000,000. The manufactured products from materials furnished by the farms of the State amounted in value to \$142,621,839.

The report of the State Geologist says the State now ranks second in natural-gas production, fourth in petroleum, and seventh in coal. The report further says:

"The citizens of Indiana are drawing upon their resources with a lavish hand. They not only waste them in their furnaces, their grates, and their stoves by burning them at all hours and in over-abundance, but they also allow 20,000,000 or more cubic feet of gas to escape daily because they are too indolent to plug or cap the wells which have been bored for oil. The natural-gas field of the State originally embraced almost 3,000 square miles. To-day the productive area is less than half that size. The average rock pressure was in the beginning 325 pounds; to-day it is less than 200 pounds."

In March the Supreme Court decided that the law providing penalties for the wasting of natural gas is constitutional and may be enforced.

The Versailles Lynching.—Two grand juries in Ripley County examined witnesses in regard to the lynching of five men at Versailles, Sept. 15, 1897 (see "Annual Cyclopædia" for 1897, page 411), but found no indictments. The Attorney-General then took up the matter, but witnesses would not tell what they knew. Local public sentiment was on the side of the lynchers. One of the accused, Hezekiah Hughes, was among those examined before Justice Craig of Cross Plains. The man was not bound over, and a Methodist minister of the county delivered a sermon in Versailles on "How God delivered Hezekiah Hughes," in which he said: "God showed 'Squire Craig, in answer to prayer, that Hezekiah Hughes was innocent. He showed 'Squire Craig he held the destiny of a human being in his hands. God answered: 'Squire Craig, if you bind him over to court, you bind me over to court. Put him in the Ripley County jail, you put me in the Ripley County jail. What you do unto me or my children, even so you do it unto me.' What did it mean when 'Squire Craig said the evidence was not sufficient to convict him? It meant glad hearts, a happy home, a wife's embraces, children's kisses, and the approbation of almost the population of Ripley County. It meant joy unspeakable to all. I felt like saying, 'All glory to God for the release of Hezekiah Hughes.'"

The Attorney-General made a report to the Governor, in which he said that the only hypothesis left to him by the evidence was that one of the five prisoners named Levi broke jail without being detected, broke into a store and got a certain revolver that figured in the killing, broke back into jail again without being seen, shot himself and then killed two other men whom he hanged, then hanged the two remaining men and himself, and, further: "It is clear that, except as to Levi, nobody was abroad that night. It is clear that everybody, especially in Versailles, Osgood, Napoleon, and Milan, condemns, in the strongest language, the conduct of Levi in thus summarily putting an end to the lives of his companions in crime, imprisonment, and death. Every one in the county, especially the men (other than Levi) suspected of the crime, the lawyers, the officials, and the justices, condemns in unmeasured terms the unlawful taking of life. I know of no crime that they regard as worse than that, unless it be the crimes of which these five men were suspected, and on account of which they were incarcerated. It will doubtless be a great relief to your mind, as it is to mine, to know that the sentiment of Ripley County is a unit, outside of the five men who were hung, and I had no opportunity to discover what their sentiments on that subject were, against the commission of any such crimes as the community outside of Ripley County has heretofore, without any just cause, charged upon the good citizens of the county. In this feeling the Methodist minister in charge at Versailles measurably coincides, but only within limits."

Another lynching was reported as having taken place at Scottsburg, Dec. 24. The victim was in jail awaiting trial for an attempt to kill his wife. The sheriff was overpowered by a mob and forced to give up the keys.

Political.—No Governor was elected this year, but other State offices were filled at the election Nov. 8.

The Democratic State Convention was in session at Indianapolis, June 22. The resolutions declared allegiance to the National Democratic platform of 1896, and favored a vigorous prosecution of the

war and a permanent strengthening of the navy and coast defenses.

The following also was adopted: "We express our undiminished confidence in William Jennings Bryan, our peerless leader in the national campaign of 1896, and we note with much gratification his patriotic course in leading to the defense of his country a regiment of citizen soldiers."

The ticket follows: For Secretary of State, Samuel M. Ralston; Auditor, John W. Minor; Treasurer, Hugh Dougherty; Attorney-General, John G. McNutt; Clerk of the Supreme Court, Henry Warrum; Superintendent of Instruction, W. B. Sinclair; Statistician, James S. Guthrie; Geologist, Edward Barrett; Judges of the Supreme Court, Leonard J. Hackney, James McCabe, and Timothy E. Howard; Judges of the Appellate Court, Edwin Taylor, C. J. Kohlmeier, Edgar A. Brown, W. S. Diven, and Johanna Kopelke. Judge Hackney declined the nomination.

The State Republican Convention was held in Indianapolis, Aug. 3 and 4. The platform declared for the gold standard, approved the national administration in its conduct of the war, approved the revenue law, the issue of bonds, and the annexation of Hawaii, and recommended early construction of the Nicaragua Canal, and restriction of immigration. On State affairs it said:

"We commend the administration of Gov. Mount and the Republican State officials, under which, with a reduction of 25 per centum in the State tax rate within the last eighteen months, \$920,000 of the State debt has been discharged; an army of over 7,000 men has been equipped and placed in the field at an expense of over \$200,000; the laws have been enforced and the name of Indiana honored throughout the land.

"Believing that there is need of reform in county and township government, and that a vast saving of the public money can be made by better methods, we favor early and thorough revision of the laws upon this subject, to the end that the people of Indiana may have the best and most economical management of local affairs.

"We favor, as a supplement to our present election law, the enactment by the next Legislature of such a primary election law as will secure to the people a full and free expression in the selection of their candidates for office."

Following are the nominations: For Secretary of State, Union Banner Hunt; Auditor of State, William H. Hart; Treasurer of State, Leopold Levy; Attorney-General, William L. Taylor; Clerk of the Supreme Court, Robert A. Brown; Superintendent of Public Instruction, F. L. Jones; State Statistician, John B. Conner; State Geologist, Willis S. Blatchley; Judges of the Supreme Court, Second District, Alexander Dowling; Third District, J. V. Hadley; Fifth District, Francis E. Baker.

The Populists, in convention Feb. 22, declared against fusion by a close vote, and condemned government by injunction; favored free silver, woman suffrage, prohibition, and abolition of the issue of money to national banks. The candidates were: For Secretary of State, Dr. H. H. Morrison; Auditor of State, W. H. H. Parks; Treasurer of State, Frank M. Brown; Clerk of the Supreme Court, Robert W. Todd; Superintendent of Public Instruction, Edward Packard.

The Prohibitionists also had a ticket in the field.

The election gave all the State offices to Republicans. For Secretary of State, Hunt, Republican, had 286,641, and Ralston, Democrat, 269,125 votes. The Legislature will have a Republican majority which will elect a United States Senator. The 4 Democratic members of the Fifty-fifth Congress were re-elected; the other 9 are Republicans.

IOWA, a western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; and 1,911,896 in 1890. By the State census of 1895 it was 2,058,060. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Secretary of

LESLIE M. SHAW,
GOVERNOR OF IOWA.

State, George L. Dobson; Treasurer, John Herriott; Auditor, C. G. McCarthy; Attorney-General, Milton Remley; Superintendent of Public Instruction, Richard C. Barrett; Railroad Commissioners, G. W. Perkins, E. A. Dawson, and C. L. Davidson; the last-named of whom died and was succeeded in March by David J. Palmer; Labor Commissioner, W. E. O'Brien; Adjutant General, Melvin H. Byers; Dairy Commissioner, L. S. Gates, who died Oct. 11 and was succeeded by Com. Norton; Board of Control for State Institutions, William Larrabee, L. G. Kinne, and John Cownie; architect for the board, Henry Liebbe; secretary, J. G. Jordan, succeeded by L. A. Wilkinson; Chief Justice of the Supreme Court, H. E. Deemer; Associate Justices, Scott M. Ladd, C. T. Granger, Josiah Given, Charles M. Waterman. All elected officers are Republicans.

Finances.—The Treasurer's statement to the Legislature in February gives the following details: The total revenue in 1897 amounted to \$2,167,993.24. This was \$134,150.61 more than was received in 1896. This year (1898) another $\frac{1}{10}$ mill is being collected, the total State levy being 2.8 mills, so that the State's income for 1898, considered solely from the point of view of the State levy imposed on the taxable property of the counties, will be greater by \$180,000 to \$200,000 than in 1896. This estimate excludes the special levy of $\frac{1}{10}$ mill for the State University. There will be increases in the revenues from other sources. The new revenue law will augment the taxes to be obtained from insurance companies. The increase from this source will be from \$30,000 to \$40,000. The State will also receive revenue from the tax on collateral inheritance. The entire increase in the revenues will be absorbed in the redemption of interest-bearing warrants now unpaid because of lack of funds.

At the close of February the State was in debt, above all cash on hand, \$652,748.88.

The valuation for 1898 showed a decrease of \$9,979,186 from that of 1897, the loss being in valuations of land and personalty. That of railroads increased. The total was \$544,247,782.

The tax levy was fixed at 3.2 mills, besides the $\frac{1}{10}$ mill for the University.

The assessment of telegraph and telephone companies was placed at \$930,338, an increase of about 25 per cent., and the levy $\frac{3}{4}$ per cent.

In September it was announced that the floating debt had been nearly half paid, all the 6-per-cent. warrants having been redeemed. Others were outstanding at an average of about 4 per cent.

Charities and Corrections.—The Legislature at its special session in 1897 appointed a committee to examine the State institutions and report at the regular session this year. The committee reported in January, charging upon the management looseness of methods, unbusinesslike ways, open disregard for many statutes, diversion and intermingling of funds, speculation on State warrants, lack of uniformity in bookkeeping, purchase of supplies and construction of buildings, accumulation of State funds for the sake of interest, and a general lack of economy. Their conclusion was that the institutions were costing the State at least \$150,000 a year more than they would under proper management. Following are the statistics of the institutions as given in the report: The Independence Insane Hospital contained 986 patients and 176 employees besides the officers and medical staff. The pay roll was \$40,000 a year, and \$14 a month was drawn for the support of each inmate. A large proportion of the bills were paid without having been audited by any member of the board of trustees.

The Mt. Pleasant Hospital for the Insane had 884 patients, an increase of 49 for the biennial period. Within four years salaries were increased by \$5,000.

The Clarinda Hospital for the Insane had 658 patients, with capacity for 300 more. Its construction and equipment have cost about \$930,000.

Within two miles of Cherokee \$24,000 has been used in the purchase of 600 acres as a site for a Hospital for the Insane. "Of the entire appropriation of \$460,000, \$75,000 was expended in the construction of the foundation for a building planned to accommodate 600 patients. The balance has been expended in constructing walls, inclosing, and roofing. The appropriations available have been exhausted and certificates have been issued by the building commissioners against the appropriations available for 1898 and 1899."

The inmates in the Soldiers' Home at Marshalltown in July, 1897, were 644; those actually domiciled were 563. "The commissioners have drawn per diem, although it is doubtful if they are entitled to it. None of them have observed the limitation of 5 cents a mile for expenses. The increase in the commissioners' expenses for 1897 was at least \$2,500 over that of 1891. The statute allows \$10 a month for each inmate. Since the home was established this has been drawn upon the number of inmates on the books and not on the number actually in the home. Drugs are purchased exclusively of one house at Marshalltown, the bill last year amounting to \$3,600. A part of the year the whisky bill was \$100 a month. The physician at the home informed us it was the practice to give whisky to many inmates at the physician's office for rations at specified hours during the day. The drug bill has been about ten times that of the Illinois home for last year."

The Glenwood Institution for Feeble-Minded Children has 700 inmates, 350 of whom received no educational or remedial treatment. The salary of the superintendent, \$2,400 per annum, is larger than that paid by other States.

"The compensation for mileage and per diem for the three trustees of the Knoxville Industrial Home for the Blind, for the biennial period ending June 30, 1897, was \$2,107.65, equal to one seventh of the total expenditure for support of the inmates of the institution for the same period, there being 47 inmates, and 7 others given employment. It is the home for the adult blind."

There are 492 children enrolled at the Orphans' Home and Home for Destitute at Davenport, about 300 of whom are soldiers' orphans. "Nearly all

supplies are purchased by competitive bids in large quantities. Coal is bought in Illinois, railway rates preventing it being purchased as cheaply in Iowa. The cost *per capita* is \$9.35 a month. There is no institution more economically conducted in the State."

There were 625 inmates in the Anamosa Penitentiary June 30, 1897. The convicts are constructing buildings and carrying on State improvements.

"There is practically no system of accounting for the materials bought or furnished. There is no method by which the committee was enabled to ascertain whether materials that were bought were actually brought within the prison walls and used in the work of construction. There never have been any specifications or details for the construction of any of the buildings built by the State. The purchase of materials is left to the master mechanic and architect. No one supervises the action of the architect."

The Industrial School for Boys at Eldora, with 500 inmates, and the one for Girls, at Mitchellville, with 160, were under the same board, who have drawn less compensation than any other governing board. There was a lack of thorough bookkeeping, and supplies were furnished as in most of the other institutions.

At the School for the Deaf at Council Bluffs there were 300 pupils. "The school is in a bad financial condition. On June 30, 1896, the outstanding indebtedness was \$10,286.21. June 30, 1897, it was increased \$8,000. The annual wages are about \$10,000 in excess of the annual appropriation by the Legislature of \$21,000."

There were 167 pupils in attendance at the College for the Blind at Vinton. The annual cost *per capita* is \$219. The annual cost at the school for the deaf is \$210. In view of this report, the boards of trustees were abolished, and the institutions were placed under a board of control, as given under "Legislative Session" in this article. The Governor appointed ex-Gov. William Larrabee, ex-Justice L. G. Kinne, and John Cownie as the board, and the institutions passed under their control July 1. Among the changes in the regulations was one requiring that the dietary furnished by the State for officers and employees must be the same as that for inmates. It is intended also to have the employees, so far as is practicable, live outside the institutions and furnish their own board. Reductions have been made in many of the higher salaries; and a rule is made that there shall be no discrimination in point of salary against women in places where similar work is done by men and women. A ratio of employees to inmates has been fixed for each class of institutions.

The Official Register for 1898 gives the total net cost of the State institutions of Iowa as \$24,312,498.48; and the present value of the property owned by the State as \$11,753,136.

Education.—The report of the committee of the Legislature appointed to examine State institutions says, "The liberality of the State in providing for its public charities is not exhibited in the appropriations made for its educational institutions."

"There were 1,331 students enrolled in the State University, at Iowa City, in 1897; in 1887 there were 571. In 1897 there were 101 professors. In 1887 there were 49. The cost *per student* in 1897 was \$105. In 1887 it was \$139. The salary list for the year ending June 30, 1898, is \$102,000. The income for 1897 was \$148,000. About \$300,000 has been expended in the construction of buildings. The secretary keeps no books that are checks upon the treasurer. He makes all loans without approval. The treasurer keeps no books showing the sources of revenue." Charles A. Schaeffer, President of the University, died Sept. 23.

The Agricultural College at Ames graduated a class of 85 in November. The report of the legislative committee gives the attendance as 573. "About \$20,000 worth of creamery product is manufactured annually by the creamery department, at an annual loss of about \$1,100, looking at it from a commercial point of view. Relatives of four members of the board are on the pay roll, a practice not to be commended. The statute providing that no member of the board shall receive compensation for more than thirty days in each year is not complied with."

"The number of students in the Cedar Falls Normal School is 1,312. There are 33 teachers receiving salaries aggregating \$34,000. In 1887 there were 435 students, taught by 9 teachers, who received \$10,050. The school is crowded to its full capacity."

Drake University received \$26,390 this year from ex-Gov. Drake. He has given in all about \$150,000 to the institution. The enrollment for the first three days of the eighteenth year reached almost 300 in the college of letters and science, normal, oratory, business, music, and pharmacy departments. Besides these, 113 are enrolled in the law department and about 95 in the medical department, making a total of 508.

The Legislature of 1896 provided for traveling libraries, which may be sent to any incorporated school or college library desiring them; or a club of 25 taxpayers may receive one on application.

The school children of the State contributed about \$1,500 to the Lafayette monument fund.

Military.—The expenses for Iowa troops in the war amounted to about \$125,000. More than half is for the pay of soldiers. They were all uniformed and paid before they left the State.

The report of the State Sanitary Commission shows the following: Voluntary contributions from 10,305 Iowa citizens through the chain letter, \$1,030.50; Grand Army Post, Women's Relief Corps, Daughters of Rebekah, and individual contributions, \$614.34.

The Adjutant General issued a statement in November giving his plan for reorganizing the National Guard after Jan. 1.

Products.—The general crop statement for 1898 gave the aggregate value as \$187,455,376. The yield of corn was 289,214,850 bushels, and that of oats 139,915,346 bushels.

The Dairy Commissioner's report shows the gross number of pounds of butter shipped to have been 92,299,211, which is 7,243,473 pounds less than in 1897. There were 946 creameries, as against 891 in 1897.

The value of the total mineral production of the State in 1897 was \$7,447,800.42, distributed as follows: Coal, \$5,098,103.84; clay, \$1,591,866; stone, \$587,144.58; gypsum, \$195,000; lead and zinc, \$5,616; iron, \$250.

Insurance.—The fire and casualty insurance companies in Iowa in 1897 wrote a total insurance of \$224,832,965, received \$4,306,756.76 in premiums, and paid \$1,594,301.11 in losses. The percentage of losses to premiums was 37, a decrease of 10 per cent. over the previous year.

The Iowa Mutual Tornado Insurance Association reports more than \$55,000,000 of risks now in force. Two new companies were organized at the capital in November, one for insuring against damage by hailstorms, the other against damage by windstorms.

Banks.—The statement of the Auditor on the condition of the 207 State and the 177 savings banks on Sept. 20 shows an increase in deposits during the three months just preceding of over \$2,170,000, and of more than \$16,000,000 in the preceding fifteen months. The amount was \$61,506,858.

Loan Associations.—The number of these in 1897-'98, as reported to the United States League at its annual session in July, was 87; the membership, 25,000; and the assets, \$6,594,778.

Railroads.—The gross earnings of railroads in Iowa in 1898 were \$45,944,244.90, an increase of 19.4 per cent. over those of 1897; the expenses of operation, \$29,812,088.55, an increase of 18.8 per cent.; the net earnings showed an increase of 21.6 per cent.; the employees, including general officers, increased from 26,690 to 30,009; and the salaries paid from \$15,157,519.49 to \$17,280,215.01.

The assessment of railroads in the State in 1897 was \$44,494,431; and this was increased in 1898 by about \$45,000.

Legislative Session.—The twenty-seventh General Assembly was in session from Jan. 10 to April 1, the Republicans numbering about two thirds on joint ballot. J. H. Funk was chosen Speaker of the House. Gov. Drake's message was received Jan. 11, and Gov. Shaw was inaugurated Jan. 13.

Ninety-seven bills were passed, not including all the appropriation bills, the legalizing acts, the support-fund bills, and the five joint resolutions; 55 were Senate bills and 42 House bills.

The most important act was one providing for a board of control for State institutions. It is to consist of three members appointed by the Governor and confirmed by a two-thirds vote of the Senate. They are to receive salaries of \$3,000 each, to give bonds of \$25,000 each, and to serve six years. They are to have control of all State institutions except the three educational institutions, and the boards of trustees of all institutions coming under their care are abolished. The new board supervises the entire management, fixes salaries of officers and employees, approves all contracts for supplies and for buildings, and appoints a State architect to prepare plans for its approval. A complete set of books must be kept at each institution and a record of each inmate. The superintendents and wardens must meet with the board quarterly at Des Moines. Terms of present superintendents are not disturbed. Employees must not pay political assessments or contribute to election expenses in any way, on pain of dismissal.

A law to regulate primary elections provides that when any political party holds a primary election for nomination of candidates for office, it shall be unlawful for any person not a qualified elector or not at the time a member in good faith of such political party to vote in such primary. Nothing in the law is to apply to the conventions held under the caucus system.

Of laws affecting railroads, one called the Temple amendment provides that railroads and other corporations shall not be exempt from liability for accidents to employees by reason of any contract of insurance, relief, benefit or indemnity entered into prior to the injury or death between the person so injured and such corporation, nor shall the acceptance of any such insurance or benefit by the person injured, or his widow, heirs, or legal representatives after the injury be a bar to any cause for action for damages against such corporation.

The Legislature appropriated \$1,165,038.95, including \$500,000 which was to be placed at the disposal of the Governor as a war fund in case war was declared with Spain, and \$50,000 for an emergency fund for the State institutions. The amount provided for the expenses of the Statehouse and all the departments was \$167,000.

The extraordinary appropriations for State institutions were as follow: Industrial School, Mitchellville, \$2,900; Industrial School, Eldora, \$5,500; Anamosa Penitentiary, \$42,825; Fort Madison Penitentiary, \$14,120; Institution for Feeble Minded,

Glenwood, \$9,000; Hospital for Insane, Clarinda, \$24,865; Hospital for Insane, Independence, \$14,875; Hospital for Insane, Mt. Pleasant, \$10,500; Industrial Home for Blind, Knoxville, \$19,000; Orphans' Home, Davenport, \$5,800; State University, library and repairs, \$11,000; School for Deaf, Council Bluffs, \$9,650; College for Blind, Vinton, \$7,000; State Normal School, Cedar Falls, \$14,000; Hospital for Insane, Cherokee, \$100,000; Agricultural College, Ames, \$5,000; Soldiers' Home, Marshalltown, \$16,000; Benedict Home, Des Moines, \$5,000; total, \$317,035.

Increases in the permanent-support funds were made as follows: State Normal School, Cedar Falls, from \$11,000 to \$28,500; State Normal School, Cedar Falls, contingent, from \$3,000 to \$9,000; Glenwood Institution for the Feeble Minded, from \$10 to \$12; State veterinarian, from \$6,000 to \$10,000 biennially; traveling library, \$2,000 annually; State University, \$10,000 annually.

The following reductions in the support funds were made: Hospitals for Insane, Independence and Mt. Pleasant, from \$14 to \$12 a month; Hospital for Insane, Clarinda, from \$14 to \$13 a month; Industrial School, Mitchellville, from \$11 to \$10 a month; Industrial School, Eldora, from \$10 to \$9 a month; College for Blind, Vinton, from \$40 to \$35 a quarter; School for Deaf, Council Bluffs, from \$21,000 to \$18,000 annually and allowing for only three quarters because of vacation.

The amount appropriated is smaller than in other recent years. The executive board was authorized to make a levy for State purposes sufficient to raise \$1,600,000 in 1898 and \$1,500,000 in 1899.

Other enactments were: Apportioning the State into representative districts, fixing the ratio at \$22,000.

Making transfer of real estate by partition a matter of record in the offices of the county recorder and county auditor, so that it may be listed for taxation to the person to whom it belongs.

Requiring every landowner in the country to cut the weeds on the highway bordering his land.

Giving the State entomologist authority to examine with paid assistants any nursery in the State or any fruit trees or other nursery stock shipped into the State, to ascertain whether or not they are infested with the San José scale. All nursery stock shipped into the State must be accompanied by a certificate from the entomologist of the State from which it comes, showing that the stock has been inspected and found free from the scale.

Authorizing the Agricultural College to purchase 40 acres adjoining the present college farm for experimental purposes.

Making it unlawful to kill grouse or pheasant, wild turkey or quail between Jan. 1 and Nov. 1.

Giving the State fish and game warden authority to search for and seize fish and game taken in violation of law.

Prohibiting adulteration of candy.

Exempting beet-sugar corporations from paying the incorporation fee to the Secretary of State.

Providing for the destruction of thistles.

Requiring all applicants for teachers' certificates to pass an examination in didactics.

Extending the jurisdiction of Iowa courts in counties along the Missouri river to the middle of the channel of that river, wherever it may be.

Allowing cities under special charter to levy a one-mill tax for library purposes, and requiring library trustees to report to the city council.

Reducing interest on State warrants from 6 to 5 per cent.

Providing that a fraternal beneficiary society must have 250 active members before receiving a certificate to do business in the State.

Imposing upon life insurance associations the same penalties as are imposed upon fire insurance companies for giving rebates and making discriminations.

Requiring weeds to be cut in parking along streets in cities and towns, the cost to be charged to the abutting property.

To keep girls in the reform school until twenty-one years of age, if necessary to complete reformation.

Requiring husband and wife to testify in cases where they are accused of fraudulent transfer of property, one to the other, to prevent collection of debts.

Prohibiting manufacture and sale of adulterated linseed oil, unless it is branded adulterated.

Providing that a pharmacist's permit to sell liquor can not be revoked on account of a violation of the law occurring more than two years before the action is begun.

Providing that the cost of transcribing testimony in cases of appeal from the District to the Supreme Court shall be taxed as costs in the case, to be paid by the losing party.

Raising the taxes of express companies from 1 to 2 per cent. upon the gross receipts for business done within the State.

Making valid and legal all the contracts by building and loan associations prior to the passage in 1896 of the new law.

Prohibiting killing, maiming, or trapping any deer, elk, or goat, under penalty of \$25 fine or one month in jail.

A joint resolution which had passed two Legislatures provided for submission to the people at the general election in 1898 of a new plan of representation in the lower House of the Legislature. It was proposed that the ratio of representation should be fixed by dividing the total population of the State according to the last State or Federal census by the number of counties, giving each county one representative, and each county having a population of one and three-fifths times the ratio or more, two representatives; but not more than two. This was defeated at the November election by a vote of 33,872 for, to 76,391 against it. It would have increased the number of representatives from 100 to 115.

Another constitutional amendment was proposed by a resolution which passed this Assembly and must pass the next before it is submitted to the people. It provides for biennial elections.

A joint resolution proposing an amendment to the constitution giving the elective franchise to women was defeated by a vote of 49 to 48.

Judicial Decisions.—In a case involving the constitutionality of the Iowa law rendering void any contract with a railroad limiting the liability in cases of loss, the United States Supreme Court affirmed the opinion of the State court that the law did not interfere with interstate commerce, and the regulation attempted was within the province of the States.

The law taxing collateral inheritances was pronounced unconstitutional in a district court at Council Bluffs in February, on the ground that it was in contravention of the fourteenth amendment to the Constitution of the United States in that it took property without due process of law, and also because the law contained no provision for annuities. The law provides for a 5 per-cent. tax on all bequests other than to direct heirs. An appeal will be taken by the State.

The United States Supreme Court gave a decision in May involving the construction of the law forbidding the sale of liquors in the State and making it a crime to transport them, and dealing with construction of the State law under the Wilson act

of Congress, which it was claimed would render the State law valid. The decision reversed the verdict of the State Supreme Court. T. H. Rhodes was a railroad agent at Brighton, Iowa, and was convicted of participating in the transportation of a package of goods shipped from Dallas, Ill., to Brighton, his part of the transaction being the removal of the package a distance of six feet from the platform to the warehouse. The United States court held that Rhodes's act was a part of the act of shipment from one State to another, and therefore not subject to question. The State could control the sale of liquor in the State, but it could not, the justice said, extend its jurisdiction beyond the State's borders.

Justices Gray, Harlan, and Brown dissented, on the ground that the State law was valid as a police regulation.

In a decision at Sioux City in February it was held that when a voter marks a cross in a square opposite to a blank space on an Australian ballot it does not invalidate his vote, and it can not be construed as a mark of identification.

Political.—The State convention of the Middle-of-the-Road Populists was held at Des Moines, June 2, with 34 delegates. The resolutions declared that fusion with other party organizations had been productive of only confusion, distraction, and destruction to the People's party, and said:

"Therefore, be it resolved, that a high sense of honor demands that all true and earnest members of the People's party in the State of Iowa do henceforth refuse to fuse or swap votes for offices, great or small, either in matters of national, State, or local importance, with any other party.

"We deny that the platform of any other leading political party is in harmony with the principles enunciated in the platform of the People's party adopted at Omaha and St. Louis on the subjects of money, land, transportation, Government ownership of public utilities, monopolies, bonded indebtedness and coin, or gold redemption."

They declared in favor of the initiative and referendum, and approved the war, but opposed the acquisition of conquered territory; opposed bond issues and favored free silver for foreign commerce; urged that money should be issued solely by the Government; favored Government ownership of public utilities.

The nominations were: For Secretary of State, R. M. Daniels; Auditor of State, C. A. Wicks; Treasurer of State, A. M. Hutchinson; Supreme Judge, L. H. Weller; Attorney-General, J. A. Lowenberg; Railroad Commissioner, Joseph Ash; Clerk Supreme Court, Alli Reed.

The Prohibitionists in State convention at Des Moines, June 28 and 29, besides reiterating prohibition principles, said:

"We declare that the so-called regulation by license, mulct or taxation whereby a revenue is derived from this traffic, is contrary to good government, is complicity with the liquor crime, and corrupting the public conscience. Therefore, we demand the repeal of the mulct and the manufacturing laws, and that a prohibitory constitutional amendment should be submitted to a direct vote of the people.

"Experience teaches us that any political party not openly opposing this traffic will court the favor of the liquor interests, and will shape legislation to secure or retain its support. We therefore declare for prohibition with a Prohibition party back of it."

The resolutions also declared in favor of a free ballot and Sabbath observance. The candidates named were: For Secretary of State, Malcolm Smith; Auditor of State, Edgar Brintnall; Treasurer of State, J. C. Reed; Judge of the Supreme

Court, H. F. Johns; Attorney-General, Samuel Holmes; Clerk Supreme Court, Bertha J. Bowers; Reporter Supreme Court, Benjamin Radcliffe; Railroad Commissioner (full term), R. M. Diehl; Railroad Commissioner (to fill vacancy), A. M. Johnson.

The National Democrats put out no ticket; but the chairman and national committeeman for Iowa advised the party to vote and work for the Republican congressional candidates, in the interest of sound money.

The Republican convention met at Dubuque, Sept. 1. The platform declared for the gold standard, reciprocity, and protection, and favored "the upbuilding of the American merchant marine, the speedy construction of the Nicaraguan Canal, the securing of naval and coaling stations, and the protection of American rights in every quarter of the world with an adequate navy"; and said, further:

"That the Republican party under whose policies and administration prosperity has been restored, and a foreign war successfully conducted, has earned the right to be further intrusted with the task of solving the territorial, colonial, and commercial problems that have resulted from the war.

"That it is due to the same cause of humanity and civilization for which the war with Spain was fought, that no people who have in consequence thereof been freed from oppression shall, with the consent or through the indifference of the United States, be returned to such oppression or permitted to lapse into barbarism."

The soldiers and sailors were commended, and the administration of Gov. Shaw was approved; but State matters were not touched upon further. The ticket follows: For Secretary of State, George L. Dobson; Treasurer of State, John Herriott; Auditor of State, Frank F. Merriam; Attorney-General, Milton Remley; Railroad Commissioner (full term), Welcome Mowry; Railroad Commissioner (short term), David J. Palmer; Clerk of the Supreme Court, C. T. Jones; Judge of the Supreme Court, Horace E. Deemer; Reporter of the Supreme Court, Ben I. Salinger.

Conventions were held Sept. 7 by the Democrats, silver Republicans, and one wing of the People's party, at Marshalltown. They united upon a ticket with a platform emphasizing their devotion to the policy of free coinage. It said: "We impeach the Republican party of criminal insincerity in declaring for bimetalism in its national platforms of 1888 and 1892 and for international bimetalism in 1896, and now in its latest State platform unequivocally committing itself to the gold standard. And we denounce as being dangerous to the public welfare its proposal for legislation involving the conversion of the 500,000,000 silver dollars and the \$346,000,000 of greenbacks, first into exclusive gold obligations and next into an interest-bearing bonded debt, and filling the vacuum created by the obliteration of the nearly \$1,000,000,000 of legal-tender money with non-legal-tender bank notes."

Following were the nominations: For Secretary of State, Claude Porter; Auditor, E. H. Gillette. Treasurer, Nils Anderson; Attorney-General, J. M. Parsons; Judge of the Supreme Court, W. A. Spurrer; Clerk of the Supreme Court, E. R. Perkins; Reporter of the Supreme Court, W. A. Ferren; Railroad Commissioners, (full term) Anthony Hanson, (short term) H. E. Wills.

The candidates of the Socialist-Labor party were: For Secretary of State, A. C. Swanholm; Auditor, Claude Brouner; Treasurer, Augustus Westphal; Attorney-General, M. J. Kremer; Judge of the Supreme Court, John Wellendorf; Clerk, Augustus Lelonech; Reporter, Charles Schernickau; Railroad Commissioners, (full term) Peter Lohse, (short term), C. Hostrup.

The Republican candidates were elected by pluralities averaging about 65,000. Following was the vote for Secretary of State: G. L. Dobson, Republican, 236,524; Claude Porter, Democratic, 173,000; Malcolm Smith, Prohibition, 7,559; R. M. Daniels, Peoples', 3,372; A. C. Swanholm, Labor, 1,081; Dobson's plurality, 63,524. All the eleven districts elected Republican representatives in Congress.

The constitutional amendment was defeated, as stated under "Legislative Session" in this article.

ITALY, a kingdom in southern Europe. The throne is hereditary in the line of Savoy by male descent in the order of primogeniture. The reigning King is Umberto I, born March 14, 1844, the eldest son of Vittorio Emanuele II of Sardinia, the first King of United Italy. The heir apparent is Vittorio Emanuele, Prince of Naples, born Nov. 11, 1869. The legislative power is vested in a Parliament consisting of a Senate of 372 members, nominated for services in public employment or eminence in science, literature, or other pursuit tending to the benefit of the nation, and a Chamber of Deputies containing 508 members, 1 to 57,000 of population, elected, according to the electoral law of March 28, 1895, by the ballots of all adult male citizens who can read and write or who pay a minimum amount of direct taxes. The number of registered electors in 1896 was 2,120,909, of whom 1,241,486 voted in the election of March, 1897.

The Council of Ministers constituted on Dec. 14, 1897, was composed as follows: President of the Council and Minister of the Interior, Marchese Antonio Starabba di Rudini; Minister of Foreign Affairs, Marchese Emilio Visconti-Venosta; Minister of the Treasury, Prof. Luigi Luzzatti; Minister of Justice and Ecclesiastical Affairs, Signor Zanardelli; Minister of Finance, Ascanio Branca; Minister of War, Gen. di San Marzano; Minister of Marine, Benedetto Brin; Minister of Commerce, Industry, and Agriculture, Signor Cocco-Ortu; Minister of Public Instruction, Signor Gallo; Minister of Public Works, Signor Pavoncelli; Minister of Posts and Telegraphs, Emilio Sineo.

Area and Population.—The area of the kingdom is 110,623 square miles. The population was computed to be 31,479,217 on Dec. 31, 1897. The number of marriages in 1897 was 229,041; of births, 1,148,980; of deaths, 742,734; excess of births, 406,246. The number of permanent emigrants in 1897 was 165,429, and of temporary emigrants 134,426; total, 299,855. The Italian immigration into the United States was reported to be 59,431; into the Argentine Republic, 44,678; into Uruguay, 3,651. The population of Naples on Dec. 31, 1897, was estimated to be 536,073; of Rome, 487,066; of Milan, 470,558; of Turin, 351,855; of Palermo, 287,972; of Genoa, 228,862; of Florence, 209,540; of Venice, 155,899; of Bologna, 153,206; of Messina, 152,648.

Finances.—The receipts of the treasury for the year ending June 30, 1897, were 1,745,497,676 lire, and the expenditures were 1,745,370,744 lire, leaving a surplus of 126,932 lire. For the year ending June 30, 1898, the ordinary receipts were estimated at 1,661,456,980 lire, and the extraordinary receipts at 35,334,375 lire, making a total of 1,696,791,355 lire. The ordinary expenditures were estimated at 1,573,235,729 lire, and the extraordinary at 113,557,680 lire; total, 1,686,793,409 lire. The revenue from railroads and other state property was set down as 93,869,647 lire; direct taxation, 481,499,000 lire, comprising 286,249,000 lire from income tax, 106,750,000 lire from the land tax, and 88,500,000 lire from the building tax; 216,125,000 lire from taxes on transactions, including 67,900,000 lire from stamps, 58,000,000 lire from registration, 19,800,000 lire from railroad receipts, 11,400,000 lire from com-

mercial companies and banks, 37,500,000 lire from succession duties, 6,300,000 lire from mortmain revenues, 7,300,000 lire from the duty on mortgages, 7,250,000 lire from various concessions, and 675,000 lire from consular fees; from customs, monopolies, and excise, 672,615,000 lire, including 188,250,000 lire from the tobacco monopoly, 74,000,000 lire from salt, 48,000,000 lire from duties on the manufacture of beer, spirits, mineral waters, gunpowder, and sugar, 65,500,000 lire from the lottery, 51,865,000 lire from excise duties, and 245,000,000 lire from customs; from public services, 89,711,600 lire, including 55,000,000 lire from the post office, 14,500,000 lire from telegraphs, 1,400,000 lire from the cadastral survey, 2,500,000 lire from assay stamps, 7,200,000 lire from scholastic fees, 5,408,000 lire from prisons, 1,460,000 lire from fines, and 2,243,600 lire from various services; from repayments, 22,263,184 lire; from various departments, 20,342,500 lire; from rents of domains, 15,510,555 lire; from interest on invested funds, 18,913,388 lire; from communal contributions of Rome and Naples, 27,950,947 lire; miscellaneous receipts, from railroad construction account, 565,465 lire; effective extraordinary receipts, 9,858,046 lire; from sales of domains, 1,907,172 lire; from sales of ecclesiastical lands, 2,810,000 lire; from redemption of lands, 325,500 lire; from sales of property, etc., 9,217,842 lire; from recovery of debts, 4,000,000 lire; miscellaneous extraordinary receipts, 6,646,350 lire. The expenditures were 474,593,831 lire for interest on the consolidated debt; 61,498,696 lire for extinguishable debts; 26,802,676 lire for the annuity for the purchase of the railroads of upper Italy; 118,407,646 lire for interest on floating debt, including 16,594,194 lire on Treasury bonds, 15,557,000 lire due to railroad companies, 82,262,452 lire on railroad guarantees, and 3,994,000 lire on accounts current; 16,050,000 lire for civil list and appanages; 5,720,000 lire for pensions; 2,201,200 lire for the Senate and Chamber of Deputies; 9,654,984 lire for general expenses of the Ministry of the Treasury; 1,001,260 lire for various services; 3,500,000 lire for a reserve for unforeseen expenses; 18,913,387 lire for the service of the amortizable debt 2,695,986 lire for interest, etc.; 37,660,794 lire for extraordinary expenditures of the Ministry of the Treasury; 28,724,917 lire for administration of the Ministry of Finance and the cadastral survey; 149,540,622 lire for the cost of collecting revenues, monopolies, lottery, etc.; 3,470,910 lire for extraordinary expenditures of the Finance Ministry; 12,830,000 lire for the Ministry of Foreign Affairs, 12,797,930 lire for ordinary, and 23,000 lire for extraordinary purposes; 40,200,718 lire for the Ministry of Grace and Justice, 40,175,798 lire for ordinary and 24,920 lire for extraordinary purposes; 45,064,889 lire for the Ministry of Education, 44,625,844 lire for ordinary and 439,045 lire for extraordinary purposes; 66,198,946 lire for the Ministry of the Interior, 64,198,946 lire for ordinary and 2,329,097 lire for extraordinary purposes; 75,142,641 lire for the Ministry of Public Works, 27,978,423 lire for ordinary and 47,164,218 lire for extraordinary purposes; 60,149,045 lire for the Ministry of Posts and Telegraphs, 60,089,029 lire for ordinary and 60,016 lire for extraordinary purposes; 279,344,783 lire for the Ministry of War, 263,306,783 lire for ordinary and 16,038,000 lire for extraordinary purposes; 105,963,646 lire for the Ministry of Marine, 101,843,646 lire for ordinary and 4,120,000 lire for extraordinary purposes; 11,367,523 lire for the Ministry of Agriculture, Commerce, and Industry, 9,139,888 lire for ordinary and 2,227,685 lire for extraordinary purposes. The total expenditure on account of the debt in 1898 was 589,519,598 lire for interest and 3,487,048 lire for amortization.

The Army.—The military forces consist of 96 regiments of infantry, including 2 regiments of grenadiers, each formed of three battalions of 4 companies, the strength of the regiment being 54 officers and 1,374 men, besides a depot of 5 officers and 31 men; 12 regiments of *bersaglieri*, each having a complement of 53 officers and 1,346 men, with a depot; 7 regiments of alpine troops, comprising 22 battalions, containing 75 companies, each regiment having its depot; 24 regiments of cavalry, of 6 squadrons, including 10 regiments of lancers, each regiment containing 36 officers and 1,008 men, besides a depot of 7 officers and 60 men, with 4 additional depots for remounts; 24 regiments of field artillery, the 12 regiments of corps artillery having 2 brigades of 4 batteries, one with 6-centimetre and the other 7-centimetre guns, while the 12 regiments of divisional artillery have both brigades armed with 9-centimetre guns and only 1 company of train, instead of 2 companies, every regiment having its depot; 1 regiment of horse artillery, consisting of 6 batteries of 6 guns, with 4 companies of train and a depot; 11 brigades of fortress artillery and 11 of coast artillery, with 5 companies of artificers and 1 of veterans; 5 regiments of engineers, 2 of which consist each of 12 companies of sappers, with 2 companies of train and a depot, 1 of 8 companies of pontonniers, besides 2 companies for lagoons, with 3 companies of train and a depot, 1 regiment of 12 companies of telegraphists and 2 companies of specialists for carrier pigeons, electric lighting, signal service, balloon service, etc., with 2 companies of train and a depot, and 1 brigade of 6 companies of railroad troops; 11 legions of carbiniers, or gendarmes, comprising 43 divisions, and numbering about 3,900 mounted men and 21,000 foot, with 1 legion in training and a depot; 12 companies of sanitary troops, 12 of commissary, 1 company of invalid, and 12 companies of disciplinary troops. The peace effectives in 1898 were 290 officers of the general staff, 8,017 officers and 143,750 men in the infantry, 960 officers and 23,590 men in the cavalry, 1,739 officers and 34,980 men in the field artillery, 597 officers and 8,969 men in the engineers, 585 officers and 2,593 men in the sanitary corps, 325 officers and 2,036 men in the commissary corps, 1,183 administrative officers, 551 officers and 23,945 men in the carbiniers, 1,388 men in the military schools, and 191 officers in the veterinary service; total, 14,438 officers and 241,151 men, with 49,304 horses and mules. The war strength was 36,425 officers, 241,151 men of the permanent army with the colors, as enumerated above, 501,527 men of the permanent army on leave, 349,204 men in the mobile militia, and 296,386 men in the territorial militia, making a total of 1,424,693 men of all ranks. This does not include the second category, numbering 368,898 men who have only had from two to six months of training, nor does it include 1,506,774 men who are in the third category, who have had practically no instruction.

The Navy.—The Italian navy in 1898 comprised 12 battle ships of the first class, 2 of the second, 6 of the third, 5 of the fourth, 9 of the fifth, 13 of the sixth, and 3 of the seventh; 6 torpedo craft of the first class, 94 of the second, 38 of the third, and 6 of the fourth; 2 auxiliary vessels of the first class, 8 of the second, 11 of the third, and 18 of the fourth; 30 vessels for post service, 24 tugs, 9 dredging vessels, 6 gunboats for the lagoons, 16 torpedo launches, 2 submarine boats, and 8 auxiliary cruisers. There were building 3 first-class battle ships, 2 armored cruisers, and 1 protected cruiser, and 4 torpedo boats had been ordered. The navy was manned by 1,546 officers, 18,174 seamen, marines, firemen, gunners, mechanics, etc., on the fleet and 5,455 on the shore; total, 25,175 officers and men.

Commerce.—The value of the special imports of merchandise in 1897 was 1,192,100,000 lire, and of exports 1,092,700,000 lire. The imports of precious metals were 8,700,000 lire, and the exports 23,100,000 lire.

Navigation.—The merchant marine in 1897 comprised 351 steamers, of 237,727 tons, and 6,003 sailing vessels, of 527,554 tons.

Communications.—There were 9,714 miles of railroad in operation on Jan. 1, 1898. The telegraphs on July 1, 1896, had 27,100 miles of line, with 99,612 miles of wire. There were 7,616,658 internal, 1,937,482 international, 352,731 service, and 126,413 transit messages transmitted in 1896.

Session of the Chamber.—The Chamber reassembled on Jan. 25 and elected Signor Biancheri president in the place of Signor Zanardelli, who had been appointed Minister of Justice. The reduction of the wheat duty was approved by 198 votes to 37. The question of reorganizing the state banks, which were loaded down with real estate, taken under foreclosure at the time of the late financial crisis, and had not metallic reserves sufficient to secure the bank-note circulation, was the next thing to occupy the attention of the Chamber. Minister Luzzati stated that the Bank of Naples was solvent, but must have twenty years to realize on its assets. The relations of Francesco Crispi to the Bologna branch was investigated by a commission, which reported on March 18 that there was no law permitting the impeachment of the ex-Premier, as his acts did not constitute a crime in common law, but that these, nevertheless, were deserving of the censure of the Chamber. He had received 500,000 lire, which he professed to have used for the secret service, that Luigi Favilla, the director of the branch, had embezzled; but there was no evidence that he was a knowing party to the defalcation. He had committed irregularities, not only in obtaining the money from the chartered bank, but in repaying the advances partly with money furnished by a political supporter and partly with police funds appropriated for the suppression of the Sicilian disturbances, and also by interfering repeatedly to prevent the examination of the condition of the Bologna branch bank and the prosecution of his friend Favilla. Signor Costa, the late Minister of Justice, had on his part sought to strain the law, and coerce the tribunals in order to secure Crispi's conviction as a common criminal. The report of the commission was approved by 207 votes to 7, Crispi's own friends to the number of 65 not voting. The ministry proposed to extend a state guarantee to the provincial and communal debts, amounting to 1,000,000,000 lire, so as to enable them to be converted from 5-per-cent. to 3½- or 4-per-cent. loans. The project was opposed as endangering the financial stability of the Government and affording opportunities for parliamentary corruption, but the Finance Minister got a bill passed establishing a separate department of the State Loan and Deposit Bank in order to facilitate the conversion of such loans as have been contracted at unreasonable rates of interest. The Chamber accorded to the Minister of Marine the right to sell the cruisers "Varese" and "Garibaldi," but only the votes of the Republican Deputies saved the Cabinet from a defeat on this question.

Bread Riots.—Owing to the rise in the price of bread, riots, incited by anarchist agitators, occurred during January, 1898, in Ancona and other towns in the Marches. The Government took severe military measures of repression, and proposed at the same time concessions for the relief of distress and a bill for the reform of public safety. The stringent provisions of this bill provoked so much criticism that it was withdrawn. A royal decree was issued on Jan. 24 reducing till April 30 the import duty on

grain from 7½ lire a quintal to 5 lire. The peace footing of the army, instead of being reduced in the winter to 140,000 men, was on account of the unsettled state of the country kept up to 180,000 men. A Radical Socialist mass meeting in favor of the total abolition of the duty on breadstuffs was not only forbidden to be held, but the streets of Rome were patrolled by eight battalions of infantry to prevent any demonstration. The Government promised to start public works and to remit the most onerous of the taxes for the alleviation of the general misery. On Feb. 18 the troops fired on a mob of bread rioters at Strofina in Sicily, killing two peasants.

When the Chamber voted 100,000 lire to aid the poor the King gave 150,000 lire. Toward the end of April, when bread mounted to a famine price, collisions took place between the *carabinieri* and the populace at Bari, Rimini, Parma, Ravenna, and other places, and quiet was only temporarily restored when the price was reduced to 35 centimes a kilogramme by the public authorities. Rioting occurred on May 2 at Faenza, Bari, and Foggia, and in Neapolitan districts and at Ravenna and Leghorn manifestations of discontent. The municipal authorities promised to reduce the price of bread at the public expense, and the Government gave a pledge that railroad rates should be lowered. Three classes of reserves of the *carabinieri* were summoned to the colors. On May 3 the troops fired on the people at Piacenza and Bagnacaballo. After more demonstrations at Palermo, Florence, Leghorn, and other places the Government on May 4 decreed the entire suspension of the duty on wheat. The *octrois* were also abolished. These tardy concessions, granted only to stop dangerous tumults, only emboldened the revolutionary spirits. On May 5 several thousand rioters disputed the possession of the streets in Pavia with the police and troops, many of whom were injured before they fired, killing a son of Signor Mussi, the Radical Vice-President of the Chamber. Barricades were erected and wires stretched across the streets to stop cavalry. At Leghorn also the disturbers could not be driven away by several charges of the military, and at Sesto Fiorentino the soldiers, after being stoned severely, fired a volley, killing four rioters. The disturbances extended throughout the southern and central parts of Italy. The people coupled their demand for bread with the cry for social revolution. The riots assumed, more and more, a political character.

Disturbances at Milan, which began on May 6, became an insurrection. The trouble began with the rescue of a man who was arrested for distributing Socialist leaflets in a great rubber factory. The rescuers were set at liberty through the intercession of Socialist Deputies. Nevertheless, soldiers who were sent to guard the works were stoned, and these, after first firing in the air, discharged a volley into the crowd, killing 2 and wounding 12. On the morning of May 7 the workmen of the factory, 2,000 in number, struck work, were joined by the men of the other factories of the city, and began rioting simultaneously at several points. The street cars were overturned to form, with other material, no fewer than 17 barricades. Telegraph wires were cut and strung across the streets to impede cavalry charges. Breaking into palaces and other large buildings, rioters mounted to the roofs and hurled down tiles and stones upon the soldiers until sharpshooters were posted on higher roofs to pick off the stone-throwers. Soldiers were fired upon from behind window blinds, and they lined up and fired at the windows and into the crowds, killing a great number of persons. At one of the gates the troops had to fight thousands of

peasants armed with scythes and hatchets, who tried to join the workingmen. Cavalry charges and volleys of infantry were used against the latter, but the barricades did not fall until cannon were employed. Some women and children were killed by grapeshot entering windows. The number of persons killed during the two days was 75, the number of wounded treated in the hospitals 70. In Pisa and Genzano were similar uprisings, and tumults occurred in Brescia, Treviso, Verona, and Padua. At Luino and Novara many lives were lost. On May 7 martial law was proclaimed throughout Tuscany. The insurrectionary elements were workingmen and students. A state of siege was proclaimed in Milan. The circulation of news and comments on current events were forbidden. The possession of weapons was prohibited, even to those having licenses. Public meetings of every kind were declared illegal. Whoever infringed the regulations of the Government was liable to be tried by court-martial. When the soldiers first charged the barricades many men and women were killed or maimed. One of the main squares, barricaded at every entrance, was held by the mob for a long time, and it was only by the utmost bravery that the *bersaglieri* finally forced their way in. On the outer boulevards several thousand rioters, after a company of *bersaglieri* had fired a volley and killed a number of them, advanced on the soldiers and with a shower of stones drove them into the river, and then returned to the barricade they were building with overturned wagons.

The workingmen, though lacking effective weapons, displayed remarkable tactical knowledge and a degree of discipline that indicated previous organization and preparation for an uprising. The fighting lasted two days and was of the most sanguinary kind. The women, instead of restraining their husbands, urged them on, and even rushed in front of the soldiers, calling them cowards and assassins. Trains bringing recruits who were called to the colors were stopped by rioters and turned back. Men and women threw themselves in front of railroad trains to prevent them from proceeding. In the evening of May 8 bands of students, arriving from Pavia with revolvers, were repelled by the soldiery as they attempted to enter the city. The students were received in the Capuchin convent in one of the suburbs, where they intrenched themselves and fired upon a detachment of soldiers that was marching by. The soldiers returned with cannon, made a breach in the convent wall, and entered, but the students had fled. All the Capuchin friars were arrested and taken to prison, from which Gen. Bava refused to release them at the request of the prefect. Archbishop Ferrari, who had left the city at the beginning of the disorders and had taken no notice of the events that were passing, in contrast with the conduct of the Archbishop of Cremona, who inveighed against the revolutionaries, both anti-Clerical and Clerical; interceded with Gen. Bava, only to receive a severe rebuke for deserting his post instead of restraining the inflammable element in his flock. Later the friars were given into the custody of the ecclesiastical authorities, who gave a pledge for their good behavior. The Government suspected the Clericals of being as deeply implicated and as active in the revolutionary conspiracy as the Republicans, and the Papal press contained as incendiary matter as the Socialist organs. The Milan insurgents were masters of the city on May 8, and had Gen. Bava's troops entrapped in a ring of barricades commanding every gate of the city. The Government only gained control of the situation when Gen. Leone Pelloux, with half an army corps, marched on Milan from Lodi and cleared out the rebels with round

shot. Workingmen and peasants, even laborers working in France and Switzerland, were then hastening to Milan to take part in the revolution. These disturbances, beginning in the south, had followed the railroad from Brindisi through Bari, Molfetta, Foggia, Chieti, Ascoli-Piceno, Pesaro, Rimini, and Ravenna, to Ferrara, and then by Cremona, Piacenza, and Pavia, to Milan, indicating some connection with the Socialistic organizations of railroad employees. Therefore the Government decided to place the railroads under the control of the military. Want of bread was the cause of the first outbreaks in Sicily and the Neapolitan province, but this was only a pretext in the richest parts of central Italy, in Tuscany, and in Lombardy, where the workmen in every instance struck work in order to engage in the uprising, which spread from town to town, each moved by local pride to equal or outdo its neighbor in revolutionary exploits.

In Milan, Deputies Turati, Bissolati, and Costa were arrested. In Venice and other cities where no disturbances occurred Socialist leaders were arrested as a precautionary measure. In the following week riots broke out afresh in Naples and cannon were used to prevent the building of barricades. The whole province was declared in a state of siege. At Potedera, in Tuscany, a detachment of troops, after repeated warnings, fired into a crowd with deadly effect, killing women and infants as well as men. Newspapers were suppressed all over Italy. On May 13, owing to student demonstrations, the Government closed the universities of Pavia, Naples, Bologna, and Rome. The fermentation still extended to new districts, but the outbreaks were simple manifestations of desperate misery, no longer a prearranged and organized insurrection, for the revolutionary leaders gave up their schemes and exerted themselves to calm the people after the troops gained the upper hand in Milan. A state of siege was declared on May 10 in the provinces of Leghorn, Pisa, Sienna, Massa, and Grosseto. Another class of recruits was called out, and to avert a railroad strike all the reserves of the railroad section of the army were ordered to report to their officers for duty. A general strike of railroad employees, paralyzing the whole system of military transport, was one of the main features in the revolutionary plan, but the railroad men, though imbued to a large extent with Socialist and Republican principles, were not prepared to strike when the outbreaks occurred prematurely. On May 11 Parliament was prorogued so as to give the ministry a free hand in dealing with the situation. Revolutionary clubs, including Clerical as well as Red Republican organizations, were disbanded and the Republican leaders in all parts of the country were placed under arrest. Large numbers of arrested rioters were tried by court-martial and sentenced to imprisonment with hard labor. Editors were condemned to prison for four and six years. Very many of the persons implicated in the uprising fled to Switzerland. Ticino was already swarming with Italian revolutionists, and the Swiss Government expelled the most active and notorious ones under the law that was passed in 1892 in order to preserve public safety.

Ministerial Crisis.—Before the reassembling of Parliament the ministry had to decide on what restrictive measures were called for to check the elements of disorder and prevent a recurrence of revolutionary outbreaks. The leniency which the Government showed in the beginning to the bread rioters was severely censured by the Conservatives, who had lost faith in the Premier since his dissolution of the Chamber in 1897 and his dependence in the new Parliament on Republican and Socialist support. The extraordinary development of Radi-

cal, Republican, Socialist, and anarchist organizations was believed to have been promoted and encouraged by the weakness of the Marquis di Rudini and his colleagues, who preferred to retain office by the favor of the extreme sections and to pay the price of their support in critical emergencies rather than resign. The aim of the revolutionary parties was to establish a federal republic, organized more or less on Socialist or anarchist principles. There was an active and influential element which has been working for years through bishops, priests, and religious orders to stir up and keep alive political discontent, and has secretly co-operated with the Republican and Socialist parties, hoping by the overthrow of the house of Savoy and the formation of the federal republic to pave the way to the re-establishment of the temporal power of the Pope.

The differences between the Conservative Minister of Foreign Affairs and the Radical Ministers of Justice and of Education had led to a crisis before the occurrence of the riots, and this became irremediable when the Cabinet came to discuss, on the one hand, the restriction of the liberty of the press and the right of association and public meeting, and, on the other, the remission of taxes and the drainage of extensive marshes and other public works designed to conciliate the turbulent working classes. Signor Zanardelli, the Radical leader, had agreed to restrictive measures and thereby angered his own group. He insisted, however, that any modifications in the laws of association and the press should be applied with the same rigor against Clericals as against Republicans or Socialists. The Marquis Visconti Venosta, unwilling to countenance a Radical campaign against the Church, insisted on resigning, rendering the resignation of the whole unavoidable. When the Marquis di Rudini on May 28 handed in the resignations of the ministers, King Umberto commissioned him to form a new ministry. The Cabinet was constituted on June 1 as follows: President of the Council, Minister of the Interior *ad interim*, and Minister of Agriculture, Marchese di Rudini; Minister of Foreign Affairs, Marchese Raffaele Capelli; Minister of Justice, Signor Bonaeci; Minister of Finance, Signor Branca; Minister of the Treasury, Signor Luzzatti; Minister of War, Gen. di San Marzano; Minister of Marine, Admiral Canevaro; Minister of Public Instruction, Signor Cremona; Minister of Public Works, Gen. Afan de Rivera; Minister of Posts and Telegraphs, Signor Frola.

The new Cabinet adopted the restriction of municipal suffrage which was a part of the legislative programme of the retiring ministers, who proposed also to postpone for a year the elections for fear that the increasing discontent caused by bad harvests, dear bread, and lack of employment would result in a larger contingent of revolutionaries being elected to the local bodies. To counterbalance the changes in the press law and in the right of association the Government proposed to improve and drain different parts of the country, to abolish *octrois* in the smaller communes, and to restore the lands of peasants which had been seized for nonpayment of taxes. Other items of the ministerial programme were provision for the annual cost of railroad construction by a loan, the diversion of a part of the sinking fund for current expenses, a state monopoly of matches, and an increase in the state allowances to parish priests. Parliament reassembled on June 16. The Marquis di Rudini, not the new ministers who had taken office in his fifth Cabinet, was now deserted by Signor Zanardelli and the Left, and was attacked from all quarters for the confusion, the tergiversation, the alternate weakness and violence of his administration, the policy of expedients and

compromises that he had followed for two years, using up more than a score of ministers and abandoning four or five programmes. Foreseeing a crushing defeat, the Marquis di Rudini on June 19 placed the resignations of the ministers and his own in the hands of the King, "in order not to prejudice a grave question of public order," he explained.

On June 29 the crisis was ended by the advent of a ministry composed of members of the various groups of the Left, which was formed by the former Minister of War under Signor Giolitti, as follows: President of the Council and Minister of the Interior, Gen. Pelloux; Minister of Foreign Affairs, Admiral Canevaro; Minister of Justice, Signor Finocchiaro-Aprile; Minister of the Treasury, Signor Vacchelli; Minister of War, Gen. di San Marzano; Minister of Marine, Admiral Palumbo; Minister of Public Instruction, Prof. Bacelli; Minister of Public Works, Signor Laeava; Minister of Agriculture and Commerce, Signor Fortis; Minister of Posts and Telegraphs, Signor Nunzio Nasi; Minister of Finance, Paolo Carcano. The new ministry presented no definite legislative programme. Gen. Pelloux described its policy as absolute maintenance of order, jealous protection of society and the institutions, and pacification of the public mind; its programme as one of administration, work, tranquillity, and justice. The Chamber sanctioned the prosecution of Deputies Turati, de Andreis, and Morgari, charged with complicity in the Milan uprising; postponed the local elections for a year; conferred upon the Government discretionary power to maintain, abolish, or limit the application of the state of siege and the extraordinary powers given to military commissioners at the time of the disturbances; revived a law regarding enforced residence of political criminals; and sanctioned the militarization of railroad, telegraph, and postal employees, with the object of placing them under martial law and thus preventing strikes. After approving these measures, combined in a bill for the preservation of public order, by a vote of 177 against 37, the Chamber adjourned on July 12, and the session, which had lasted fifteen months, was declared closed. Among its legislative enactments were bills establishing pensions for old and disabled workmen and regulating the liability of employers and Gen. Pelloux's army reform bill. The state of siege was abrogated in most districts before the end of July, but in Milan was continued a few days longer until the military courts, which had already convicted about 700 individuals, finished the trial of the accused Deputies. Of these Turati and de Andreis were convicted and sentenced to solitary confinement for twelve years. The sentences passed by the tribunals at Naples were extremely severe, like those of the Milan courts, which meted out over a thousand years of penal servitude to the condemned rioters. Gen. Pelloux enjoined upon the prefects the duty of hindering absolutely or energetically repressing every act and all propaganda of a subversive character, as well as all incitement to class hatred. In September suspected anarchists were arrested all over the kingdom, especially in the industrial centers of the north. Many who fled to Switzerland were expelled under the Swiss antianarchist law. After the assassination of the Empress of Austria Italians were arrested in Hungary and Austria and in Spain. The Italian Government proposed to hold an international conference to consider measures for the repression of anarchists, defined as a class of men animated by subversive principles, pursuing the avowed aim of sapping the bases on which society, as at present constituted, rests, and of overthrowing it altogether — fanatics, who do not recoil from any crime, how-

ever ferocious or insensate, profess principles which they themselves denominate as anarchistic, and carry on their propaganda by a secret press which extols odious crimes and deeds of violence as the most effective means of waging the war they had declared against society. Favorable replies were received at once from France, Austria, Germany, and Belgium. The Russian and other governments gave their adhesion also, England last, with a suggestion that a concrete basis of discussion be formulated in a circular. This was acceptable to the other governments, and the conference was appointed to meet at Rome on Nov. 25. The new Minister of Marine proposed a programme of naval construction involving the expenditure of 540,000,000 lire in eight years, but as the suspension of the wheat duties left a deficit, the other ministers would only agree to an increase in the credit for construction for 1899 to about 30,000,000 lire.

Signor Vacchelli's budget statement on Nov. 23 showed that the year 1898 had really closed with a deficit of 1,100,000 lire, instead of a surplus of 10,000,000 lire, and that, instead of the anticipated surplus of 37,000,000 lire in 1899, a deficit of 14,000,000 lire was to be looked for, while the cessation of various sources of revenue, with the outlay for railroad construction, would create in the next two years a deficiency of 46,000,000 lire. This he proposed to cover by using the fund destined for the redemption of debts and proceeds of the sales of the property of suppressed religious corporations. The floating debt, which should be reckoned at 560,000,000 lire, and not at 410,000,000 lire, the Government intended to convert into 4½-per-cent. consols. The Minister of the Treasury rejected the proposal of his predecessor to create a sinking fund for the relief of small taxpayers, but intended to abolish *octrois* on bread and flour, amounting to 30,000,000 lire a year, indemnifying the communes by imposing other taxes. The state would be in-

demnified by changes in the taxes on buildings, on business transactions, and on persons exempted from military service. Other reforms were promised for the relief of agriculture and industry from taxation. If the revenue of the state should diminish in consequence of these changes, the wealthier classes would be compelled to contribute more largely to the expenses of the state by means of a progressive income tax.

Colonies.—The Italian possessions on the Red Sea coast, extending from Cape Kasar to the southern limit of Raheita, on the Strait of Bab-el-Mandeb, embracing an area of 88,500 square miles, with a population estimated at 450,000, were organized in 1894 as the colony of Eritrea, having an autonomous civil administration and the management of its own finances. By the treaty of peace signed at Adis Abeba on Oct. 26, 1896, Italy renounced the protectorate claimed over Abyssinia and relinquished all the territory occupied south of the rivers Mareb, Belesa, and Muna. Kassala, a post in the Egyptian Sudan that was occupied by Italian troops, was restored to Egypt in December, 1897. The expenditure of the colony for 1898 was estimated at 19,800,000 lire, of which only 1,900,000 lire could be raised from local resources, leaving for the Italian Government to supply the sum of 17,900,000 lire. The total cost of the colony to the Italian treasury from 1882, when Massowa was first occupied, to the end of 1896 was 303,950,926 lire, of which 123,738,064 lire were spent during the warlike operations of 1895 and 1896. The port of Massowah has 7,775 inhabitants, of whom 600 are Europeans and 480 Asiatics. Trade is mostly carried on by Banians from India. The imports in 1896 were valued at 28,442,551 lire. Meat, hides, butter, pearls, and mother-of-pearl are exported. There were 5,811 vessels, of 248,567 tons, entered, and 5,782, of 251,807 tons, cleared at Massowah in 1896. (See ABYSSINIA and EAST AFRICA.)

J

JAPAN, an island empire in Asia, east of the continent and extending from the Philippine to the Kurile Islands. The long and narrow archipelago includes 4,000 islands, of which about 500 are inhabited. The total area is 169,140 square miles. The extremities of the empire are in north latitude at 21° 48' and 50° 56', and in east longitude at 156° 32' and 119° 20'. For administrative purposes the empire is divided into 47 districts, 705 *gun* or sub-districts. There are 44 *shi* or large cities, and 14,782 cities and villages. The Emperor, Mutsuhito, is the one hundred and twenty-second in the line of Mikados. The heir apparent, Yoshihito, was born Aug. 31, 1877. The imperial throne is succeeded to by imperial male descendants. The Emperor exercises the rights of sovereignty, but shares legislative power with the Imperial Diet, which he has the right of proroguing or dissolving. In the upper house of the Imperial Diet are 316 peers and imperial nominees. In the lower house are 300 members, elected by male voters, who must pay national taxes to the value of \$15 annually. His Privy Council is composed of 20 veteran statesmen, and his Cabinet of the 10 heads of departments. Besides this central administration there are the 4 provincial governments subordinate to the Emperor—the prefecture of the police of Tokio, department of colonization for the island of Yezo, the Fu and Ken (prefectures and districts), and the government of the island of Formosa. The total number of salaried employees in the National Government in 1896 was 57,502, whose

salaries amounted to 14,516,262 silver yen. (A yen is worth 50 cents.) Since Oct. 1, 1897, Japan has used the gold standard.

The total population of the empire, Dec. 31, 1897, was 46,000,000. On Dec. 6, 1898, the Imperial Diet unanimously voted to the Emperor \$20,000,000 out of the Chinese indemnity fund, because "the victory over China in the late war was absolutely due to the power and glory of the Emperor, and the gift is in accordance with the will of the people."

Finances.—The budget for 1897-'98, as officially published and digested in that annual publication by the Imperial Cabinet, shows a total revenue of 238,709,484 yen, of which 121,428,570 yen are under the head of ordinary, and 117,280,914 yen are extraordinary receipts. The chief items of revenue are from the land tax, the manufacture of *sake*, patent rights, inposts and customs, and various state enterprises. Under extraordinary receipts are the Chinese indemnity, 50,509,121 yen, and bonds, 61,329,500 yen. The total expenses were 249,547,286 yen, of which 112,310,798 yen were ordinary and 137,236,488 were extraordinary expenses. In the former the chief items were: Interest on the public debt, 22,828,942 yen; for the War Department, 29,129,378 yen; and for communications, 11,671,749 yen. In the latter 66,994,126 yen for the navy and 31,484,591 yen for the army are noted. Japan's public debt in 1897 was 419,380,217 yen, most of it bearing interest at 5 per cent. In the same year there were 289,322,349 yen of metal money in circu-

lation, of which 70,000,000 yen were in gold and 200,000,000 yen were in silver; while of the 196,129,826 yen of paper money in circulation, 9,045,082 yen were in treasury notes, 13,610,995 yen were in national bank notes, and 173,473,749 yen were in silver certificates. During the past year, which has seen the rise of four cabinets and the fall of three, the great problem has been to find the agreement upon the method of taxation, in order to meet the deficit which the great military and naval expansion since 1895 has called for. The burning point of politics is upon the question of raising the land tax from 2.5 to 5 per cent., which was finally done almost unanimously by the Imperial Diet at its twelfth session Dec. 20, 1898. The expenditures for the army and navy on their increased footing are estimated at 40,000,000 yen, against 16,000,000 before the war with China; and for this, with various other enterprises, the yearly payments of interest alone must amount to 17,000,000 yen, which, with the Formosan expenses, means an increase of nearly 65,000,000 of annual expenditures. To meet these, two new taxes—a registration tax and a trade tax—and two increases of tax upon tobacco and *sake* were necessary. The budget for 1898-'99, compiled by Premier Matsukata, showed a deficit of 23,000,000 yen, but that prepared by Count Momye in March reduced expenditures to the extent of 46,000,000 yen. Germany takes in direct taxes from her subjects 7.50 yen per head, Japan takes but 2.30 yen.

Navy.—On March 1, 1898, the Japanese navy, afloat or building, included 4 first-class and 2 second-class battle ships; 18 cruisers, 4 being in the first, 9 in the second, and 5 in the third class; 10 coast-defense ships of the third class; 17 gunboats, 2 of the first and 15 of the second class; 4 dispatch vessels; 1 torpedo-depot ship; 8 torpedo destroyers and 30 torpedo boats, 6 of the first, 4 of the second, 23 of the third, and 1 of the fourth class, making a total of 92 war ships. There are navy yards at Yokosuka, Kure, and Sasebo, with dry docks and most of the appurtenances of first-class naval stations, while on all the newer ships are the fullest resources known to the modern science applied to naval war. The "Shikishima" and "Asahi," to be completed in October, 1899, are the largest war ships in the world, of 15,037 tons, carrying 50 guns each. On Dec. 31, 1896, Japan had in her active navy and in the naval reserve 353 superior officers, 950 officers, 937 naval cadets, 2,221 noncommissioned officers, and 15,597 sailors and marines, a total of 20,028, besides 1,172 functionaries in the Navy Department.

Army.—On Dec. 31, 1896, Japan had in her military establishment 88 generals, 947 superior officers, 5,613 officers, 5,054 cadets, 25,855 noncommissioned officers, and 250,341 soldiers, a total of 287,858, with 3,413 employees in the Department of War. The Imperial Guard, of 12,781 men, is in Tokio, where also is the First Division, and there are large barracks at Sendai, Nagoya, Osaka, Hiroshima, and Kumamoto. In these places there is a division numbering from 12,000 to 16,000 men. The garrisons in Formosa numbered 13,569. Of the total given above, 119,478 men are serving with the colors, 99,454 are in the reserve, and 68,926 belong to the territorial army. In 1895, of 449,834 young men before the recruiting officers, 394,811 had just attained the age of conscription, and 55,023 were above the age of twenty years. Of the total, 80,208 were put into active service or under military instruction in the reserves. In every thousand inhabitants there are 9.29 conscripts twenty years old; 19.87 out of every hundred conscripts are taken into the army; 5.48 in every hundred capable of military duty plead excuse; and 8.94 in every hundred conscripts are freed from duty.

Religion.—The chief religions are Shinto, Buddhism, and Christianity. In 1895 there were 101,142 Shinto priests, pupils, or preachers, and 134,242 shrines and temples. There were 104,738 Buddhist priests or preachers, with 9,286 pupils, monks, or nuns, and 118,324 shrines and temples, divided among the 10 large sects and numerous smaller ones. Of adherents to the Roman Catholic Church there were 52,796 in September, 1897, and to the Russo-Greek Church 23,856. Of members of Protestant churches there were 40,578. The native Protestants contributed 81,552 yen, and the Greek churchmen 5,658 yen for religious purposes. Of Protestant missionaries there were 652, of Roman Catholics 315, and the Russo-Greek Church 2. Of organized churches there were: Protestant, 384; Russo-Greek, 168; Roman Catholic, 208. Of native churches wholly self-supporting there were: Protestant, 72; Russo-Greek, 1. Of churches partly self-supporting there were: Protestant, 312; Russo-Greek, 167. Of adult converts baptized there were, Protestants 3,062, besides 1,348 children. In the Russo-Greek Church there were 992 adults and children, and in the Roman Catholic church there were 2,031 adult and 3,033 infant baptisms. The number of schools and colleges of all communions was 231, with 12,642 pupils, besides Sunday schools, hospitals, dispensaries, and most of the appliances of Christianity in America and Europe.

Foreign Trade.—The total value of the foreign trade of Japan in 1897 was 382,435,848 yen, against 289,517,234 yen in 1896, an increase of 92,918,614 yen, or over 32 per cent. Against 1888, the corresponding figures were 131,160,744 yen, showing that the foreign trade has trebled in a decade. These figures also show that Japanese merchants are invading the domain formerly monopolized by foreigners; for in 1888 the direct exports by Japanese traders represented only 7,081,324 yen out of a total of 65,704,510 yen, whereas in 1897 they rose to 44,244,286 yen, in a total of 163,135,077 yen. In imports the increase has been 36 per cent., or 79,560,939 yen in 1897, out of a total of 219,300,771, as compared with 8,483,739 yen in a total of 65,455,234 yen in 1888. The Japanese have labored to get rid of the foreign middleman, and they have succeeded; but the foreigner as an agent holds his own. The trade movement shows also that Japan is becoming more and more a manufacturing country, increasing in her imports of machinery and raw material, and decreasing in the quantity of manufactured goods. In 1897 she imported 67,167,342 yen: of raw cotton, 43,630,214 yen; of machinery, 12,291,037 yen; of steel, iron rails, and railway equipments, 10,188,609 yen; and of wool, 1,057,482 yen. Her imports of manufactured stuffs amounted to 28,018,431 yen. These were in the form of cotton yarns, cotton goods, muslin, shirtings, flannel, and woolen cloth. Her own exports of manufactured stuffs amounted to 20,232,247 yen, in which three prominent items were cotton yarn 13,490,196 yen, and *habutai* (light summer silks) 9,530,676 yen, and silk handkerchiefs, 3,390,145. The growth of the *Habutai* industry is almost wholly from the year 1891, when 42,377 pieces, valued at 818,537 yen, were exported, compared with 642,801 pieces in 1897, valued at 9,530,676 yen. In the making of cotton yarns nearly a million spindles are now at work. All the exports show a general increase, that of silk amounting to 27,000,000 yen. The chief items in the net increase of 48,000,000 yen of imports are: In machinery and raw materials, 21,750,000 yen; and in sugar, rice, peas, and beans, 24,500,000 yen, the latter owing to the bad harvest of 1896. In sugar there has been an increase from 7,000,000 in 1888 to over 20,000,000 yen in 1897. In paint the increase from 1,205,313 pounds in 1888 to 3,035,082

yen is noticed. The growth of the tea trade has been very steady, from 8,595,450 caddies to 36,674,548 caddies in 1896; and 206,402 families are engaged in this industry.

Politics and Events.—The "Nara Maru" was wrecked with the loss of sixty lives. Prince Shimadzu of Satsuma died. A new Cabinet was formed by Premier Ito, and general elections were ordered for March 15. The Government issued \$10,807,350 worth of loan bonds bearing interest at 5 per cent. Rev. Guido F. Verbeek, D. D., the most influential of all the foreigners that ever came to Japan, long the adviser of the Government, died in Tokio, March 10, after forty years of life among the Japanese. The Red Cross Society's report shows 455,638 members who subscribed 1,262,171 yen. New treaties with France and Austria were ratified. On April 30 the Emperor issued a proclamation of neutrality in the Spanish-American war. Three war ships had been sent to Manila to watch operations. The promoters of the Formosa Railway scheme secured a loan of \$15,000,000 in England. The Diet was formally opened by the Emperor May 19, but neither the Government nor the Opposition had a majority, and, as the lower house refused to pass the bill for increase of the land tax, it was dissolved (for the fifth time in twelve sessions) on June 10, after passing the new civil code which comes (with the new treaties) into operation July 1, 1899. On June 25 the Cabinet was dissolved. Half-yearly reports show that Kobe, opened in 1869, exceeds Yokohama in total volume of exports and imports. Early in July a new coalition Cabinet, in which were Okuma as Premier and Itagaki as head of the Home Department, with a majority of untried men, yet the first real "party" (instead of a "elan") Cabinet, was formed. Prince Cyril Vladimir, from Russia, arrived July 7, and had audience of the Emperor. The general elections showed a large majority for the Government. A great discussion on prison reform occupied the press for several months. The first "party Cabinet," owing to the unfortunate allusion in a speech by the Minister of Education to Japan's possibly becoming a republic centuries hence, was dissolved, and Marshal Yamagata, with other of "the elders," was called to form another Cabinet. An alliance with the Liberals was made, the latter promising to support the land-tax bill and the former agreeing to the newer principle of a cabinet governed by a party. The Diet was opened Dec. 3. A superb bronze statue of Saigo Takamori (military leader of the revolution of 1868 and also of the great Satsuma insurrection of 1877) was unveiled in Ueno Park in Tokio, Dec. 28. Thus closed the year of greatest commercial and manufacturing expansion known to Japan.

JEW. The Dreyfus case formed the leading subject of discussion during the year, and the shifting scenes that led to the movement for revision were watched with feverish interest. With M. Zola's advocacy and the personal participation of so many Protestant leaders in France, it ceased to be a Jewish question and became inextricably involved with French progress or reaction. The new stages of the movement for a fresh trial indicate the spread of a more favorable sentiment. It is felt that only revision will satisfy both France and the civilized world that justice is maintained. While in the early part of the year slight excesses against the Jews were the order of the day in Paris, in connection with the trial of M. Zola, greater calm prevailed toward the close, and the new year's record is awaited with more hope. The success of Mme. Dreyfus in securing a hearing for her petition for revision is the climax of her efforts for her husband's release. It is significant of the general weakness of anti-Semitism that the wave of agitation due

to the Dreyfus case has spent itself in Europe. The riots in Algiers have been followed by social proscription of the Jews; but the anti-Semitic leader was displaced, and the Government is showing a firmer hand. In Germany the anti-Jewish crusade appears to have lost its virulence—the retirement one by one of its parliamentary or journalistic advocates into the solitude of the convict's cell or the gloom of the bankruptcy court indicates the character of its most notorious followers. Local ordinances in Berlin, however, and occasional diatribes in the press, prove that the agitators are still at work, even if they have failed to influence the great body of the nation, as was proved by the June elections. In Austria-Hungary riots in Galicia were the order of the day, chiefly in the remote villages where the peasantry are still dominated by mediævalism, and where the elections were made a pretext for pillage of Jewish shops and homes. The disorder was quelled by the Government, who were more successful in checking the socialistic excesses in Galician towns than in restoring sanity to Bürgermeister Lueger and his friends in Vienna. The Jews of the empire participated actively in the Emperor's jubilee.

In Russia, the tide of justice and toleration seems to be rising; the young Czar's appeal for disarmament, due largely to a pamphlet on the expenses of war, written by a Jewish banker, is perhaps only the first step in a movement to assume a more modern attitude toward dissenters. The absence of any riots or fresh restrictions, and the fact that slight concessions are made from time to time, with less harsh rulings by the courts, are hopeful signs. The Government, to a certain degree, is hampered by the Russian people, who can not be expected to countenance rapid reforms, while a large majority of the Russian Jews are still indisposed to meet the modern current and adapt their education and habits to the approaching twentieth century. That Turkey should receive the Hon. Oscar S. Straus, of New York, as United States minister, shows that the Sultan is more civilized than some other contemporary rulers.

The second Zionist Congress was held in Basel, and was more largely attended than its predecessor. It resolved, as the goal of its efforts, to secure "a legally assured home" for Jews who suffer from persecution, and to establish a bank to raise funds for buying land and concessions in Palestine. The project of establishing a Jewish state, while not directly asserted at the Basel congress, has been so tenaciously affirmed by Drs. Herzl, Nordau, and other leaders, that the whole scheme has failed to receive any wide support among the great body of Jews in England, France, Germany, Italy, and Austria, Russia and Roumania furnishing the chief contingent. One result of the agitation is to close Palestine, by order of the Sultan, to Jewish immigration, and to check the further growth of existing colonies—about twenty in number—many of which are supported by Baron Edmund de Rothschild. There were signs toward the end of the year that the movement was to be changed to an effort to organize agricultural and industrial colonies in Palestine on the plan of existing settlements, and that concessions might be secured from the Sultan. It is possible that more practical sympathy will be thus secured. During the German Emperor's visit to Jerusalem he received a Jewish deputation, and he is said to have expressed himself favorably toward the Jewish colonies. Meanwhile, numerous Zionist societies have been founded in Russia, Galicia, Roumania, and elsewhere, which are principally composed of the Russian element, with here and there a sprinkling of the native born. In England large meetings of Zionists have been held. It is significant that the

most eminent European rabbis hold aloof from the movement and regard it as unpatriotic, visionary, and mischievous. It has spread, however, with much rapidity. It appears to appeal to large numbers as the one hope in their distress, and if it is conducted with due caution and earnestness may compel recognition, so its adherents imagine. It will disappear like the snows of late winter, its opponents affirm, when civil and religious liberty is assured to the Jew in lands that still suffer from the mediæval spirit.

Continued activity in benevolent and educational work marked the year in the United States. The new Baron de Hirsch Trade School was opened in New York, \$600,000 was subscribed for the new Mount Sinai Hospital in the same city, the tenth anniversary of the Jewish Publication Society was held in Philadelphia, and a union of Jewish congregations was organized in New York—the first attempt in many years to unite synagogues of varying ritualistic tendencies. A gift of £150,000 for a new building was made by Mr. J. H. Schiff to the New York Young Men's Hebrew Association. A fair in Chicago for its United Hebrew Charities realized \$100,000. Mr. Zangwill's visit to America gave rise to lively discussion as to the modern drama and modern Judaism, and spread a number of witty epigrams on both subjects. Baroness de Hirsch gave \$7,500 to the B'nai B'rith Orphan Asylum in Atlanta, Ga. The Zionist movement is being actively pushed by Prof. Richard Gottheil, Rev. S. S. Wise, and a few others; but, except by the Russian emigrants, very little general interest is evinced in the movement. The Spanish war aroused much enthusiasm. It is said that 4,000 Jews enlisted,

and a large number were among the killed and wounded.

Among the books of the year was Mrs. Annie Nathan Meyer's "My Park Book"; Morris Rosenfeld's "Songs from the Ghetto"; Zangwill's "Dreams of the Ghetto"; Rev. Dr. Berkowitz's "Sabbath Sentiment"; the tenth part of Rev. Dr. Jastrow's "Talmudic Dictionary"; a further installment of Mr. Rodkinson's Talmud in English; "Services in Synagogue and Home," by Lewis N. Dembitz; the sixth volume of Graetz's "History of the Jews," containing a memoir of the historian by Dr. Philip Bloch, and a complete index to the entire work by Miss Henrietta Szold.

The Jewish Chautauqua held its second summer assembly at Atlantic City. The Union of American Hebrew Congregations, at its convention in Richmond, expressed its disapproval of the Zionist movement. At the session of the Central Conference of American Rabbis, in Atlantic City, in July, steps were taken in reference to issuing a Jewish cyclopædia. A similar work was announced as in course of preparation by Dr. Singer, assisted by numerous Jewish and Christian scholars.

The Jewish Sabbath-school Union of New York continued its regular schedule of lectures, and similar work to improve Sabbath-school instruction was carried on in Chicago, Baltimore, and Philadelphia. A conference of orthodox Jewish congregations was held in June in New York, favoring Zionism. Rev. Dr. Kravskopf, of Philadelphia, went to Cuba in July as one of the National Relief Commission. The Union Hymnal was published under the auspices of the Conference of American Rabbis, to accompany the Union Prayer Book.

K

KANSAS, a Western State, admitted to the Union, Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; and 1,427,096 in 1890. By the State census of 1895 it was 1,334,688; and from a tabulation made by the Board of Agriculture from reports of township assessors, in March, 1898, it appears to be 1,389,777. Capital, Topeka.

Government.—The following were the State officers during the year: Governor, John W. Leedy; Lieutenant Governor, A. M. Harvey; Secretary of State, W. E. Bush; Treasurer, D. H. Heflebower; Attorney-General, L. C. Boyle; Auditor, W. H. Morris; Superintendent of Education, William M. Stryker; Bank Commissioner, J. W. Breidenthal; Insurance Commissioner, Webb McCall; Adjutant General, Hiram Allen—all Democrat-Populists; Secretary of the Board of Agriculture, F. D. Coburn, Republican; Oil Inspector, E. V. Wharton; Grain Inspector, W. W. Culver; Labor Commissioner, Lee Johnson; Railroad Commissioners, William M. Campbell, W. P. Dillard, and L. D. Lewelling; State Printer, J. K. Hindson; Librarian, James L. King, succeeded in March by Annie L. Diggs; Chief Justice of the Supreme Court, Frank Doster, Populist; Associate Justices, S. H. Allen, Populist, and W. A. Johnston, Republican.

Population.—The returns from assessors and county clerks in 1898 show that the State has 103 cities and towns with 1,000 or more inhabitants, against 100 in 1897; 68 municipalities have together gained 21,227, while 35 have lost a total of 5,414. Kansas City made the largest gain, 4,879, and now has 46,028. The other 7 having more than 10,000 are: Topeka, 32,651; Wichita, 20,745; Leavenworth,

20,657; Atchison, 16,266; Pittsburg, 12,322; Lawrence, 11,391; Fort Scott, 11,305.

Finances.—The eleventh biennial report of the State Treasurer shows the following summary and statements: Balance in treasury, July 1, 1896, \$608,926.72; receipts during fiscal years ending June 30, 1897 and 1898, \$5,188,548.25; total, \$5,797,474.97. Disbursements during fiscal years ending June 30, 1897 and 1898, \$5,385,323.34; balance in treasury June 30, 1898, \$412,151.63.

"On July 1, 1896, the State bonded debt was \$682,000. The State bonded debt at present is \$682,000, of which the State permanent school fund owns \$598,000, and the university permanent fund \$9,000. The \$25,000 held by individuals and corporations will fall due Jan. 1, 1899; the last Legislature provided that they be refunded at 4 per cent., and authorized the School Fund Commissioners to purchase them, provided there was not sufficient money on hand to pay them off out of the revenue fund. The general revenue fund became exhausted in October, 1897, and I was compelled for a short period to stamp \$142,620.90 warrants, 'Not paid for want of funds.' According to law these warrants drew 7 per cent. interest from date they were so stamped; they were carried by the banks at par. The amount of interest paid on them amounted to \$1,557.23. The total amount of delinquent taxes on July 1, 1898, was \$164,831.58."

Valuations.—The tax law of Kansas provides that each parcel of land or lots shall be assessed "at its true value in money," and the State Labor Commissioner has gone through the records of transfers of parcels of property in each of 10 counties in representative sections of the State to find the true money value of lands and lots.

For lands, which means farms, the Commissioner has tabulated 646 transfers of property aggregating over 70,000 acres at an actual selling value of \$1,199,447, or \$17.09 an acre, which may be taken as the average value of farm lands in Kansas under cultivation. These lands, the Labor Commissioner discovers, are assessed at \$333,004, or \$4.73 an acre. It is further shown in this tabulation that on lands of the lowest actual values the assessment is relatively highest, while on lands and lots of the highest valuations the assessment is relatively lowest. Lots are assessed at figures nearer their actual value. The Labor Commissioner reports that on the basis of these figures from 10 representative counties an investment of \$1,000 in farm land would pay an average of \$9.05 in taxes, while an investment of \$1,000 in lots would pay \$18.78. But there are great inequalities in valuations of lots also, properties worth less than \$250 being valued sometimes at three or four times their market value, while those whose actual value is \$5,000 and over are assessed at less than half their value in many instances. There are like differences in the valuations of other property. Some of the anomalies of the county returns are given as follows: "Rawlins County is absolutely devoid of silver plate or jewelry. Stevens County returns, under the head of moneys, but \$20. Seward County has no bonds of any sort, no stocks, no national bank shares, no moneys, no credits, but has a piano for every \$10,000 of its taxable personal property. Cattle compose two thirds of its taxable property. Haskell County has the smallest amount of taxable personal property. It is valued for taxable purposes at \$7,548. There are three gold watches in the county, valued at \$5 each, and five silver watches, valued at \$3 each. There is not a piano or musical instrument in the county. There are 20 pleasure carriages or vehicles, 35 wagons, and 82 farm implements."

In regard to assessment of industries the examples below are given: "In 15 reports from coal-mine operators, both the capital invested and the assessed valuation is given, the amount of capital invested being \$1,908,089 and the amount of assessed valuation is \$251,145, or, in other words, this industry pays taxes on 13.1 per cent. of its capital invested, a basis of assessment 86.9 per cent. less than the requirements of the law.

"In four reports from packing houses, the amount of capital is \$9,667,202, and the amount of assessed valuation is \$581,075, or, in other words, this industry pays taxes on 6 per cent. of its capital invested—a basis of 94 per cent. less than that contemplated by law."

Military.—The Governor was authorized to use his own judgment in organizing the State's quota of troops for the war. He decided not to send the militia as organized, a measure that caused much dissatisfaction. The captains of companies were directed to send all military equipments belonging to the Federal Government to the office of the Adjutant-General for the use of the volunteers, and recruiting offices were opened in the larger cities and towns. The number of volunteers sent was about 4,750. It was stated, Aug. 30, that 17 of these had died, all of disease. All the regiments but one had been in service about four months. About 600 of the volunteers are said to have been school-teachers.

Public Lands.—The Labor Commissioner finds that there are 2,485,319 acres of unoccupied land for sale or subject to homestead in Kansas. Of this 1,044,503 acres are Government land, and 1,221,558 acres are of Pacific Railroad land grants. There are 193,025 acres of school lands, and 26,235 acres of grants to the Atchison, Topeka and Santa Fé still untaken.

Education.—The biennial report of the Superintendent gives the following data: There are 9,100 organized districts in the State. This is 49 fewer than last year. Several of the western districts have been consolidated by act of the Legislature. The number of districts maintaining schools is 8,875. The total number of pupils actually enrolled in the State the past year was 370,240; last year the number was 367,690. The average daily attendance this year has been 256,934; last year it was 254,002. The number of teachers employed this year is 12,513; last year, 11,616. The report shows a slight decrease in the salaries. This year male teachers average \$39.03 a month, against \$39.26 in 1897. The average monthly salary of female teachers the past year was \$32.01; last year it was \$34.29. In 1898 110 school buildings and rooms were built. The total expenditures for school purposes during the year amounted to \$4,542,445; last year the amount was \$4,407,446.

The State Normal School at Emporia graduated in June the largest class in its history.

Four completed the post-graduate course for the degree of bachelor of pedagogy, 24 the Latin course, 8 the English course, 74 the elementary, and 16 the academic course. The Normal School at Salina graduated 17 in August.

The Nickerson Normal College opened in August with an attendance of 74, which had increased to 114 when the building was dedicated Oct. 1.

The State University held its twenty-sixth annual commencement June 8, with 190 graduates in all departments. The number of students by the latest catalogue was 1,062, and of instructors 57. Of the students there were in the school of law 172, in the school of fine arts 162, in the school of pharmacy 61, and in the school of engineering 95. While the enrollment of students has increased 150 per cent. in eight years, the annual appropriations have increased 15 per cent. The boiler room of the university engine house was struck by lightning March 22, and the result was the destruction of the engine house and electrical engineering machine shops. The loss was about \$28,000, and there was no insurance. Mr. G. A. Fowler gave \$18,000 for a new building, and various citizens made up a loan of \$30,000 for its equipment.

Baker University, at Baldwin, the first college founded in Kansas, celebrated its fortieth anniversary May 30.

Garfield University, at Wichita, was sold for \$50,000 in March to J. M. Davis, of St. Louis, who gave it to the Society of Friends, and it was opened in September as the "Friends' University," with about 12 instructors.

At the commencement of Bethany College, at Lindsborg, in May, a thanksgiving service was held, commemorating the paying off of the mortgage on May 7, when the subscription committee paid the Massachusetts Mutual Life Insurance Company \$20,000, and thereby availed themselves of a voluntary reduction of a similar amount by the

WILLIAM E. STANLEY,
GOVERNOR OF KANSAS.

company. There were 10 college graduates, 2 normal, 1 music, and 12 commercial.

A class of 18 took the degree of M. D. at the Kansas Medical College in March.

The State Supreme Court in June granted a peremptory writ of mandamus to compel the city of Topeka to use the series of text-books adopted by the State School Text-book Commission. It was the city's contention that the law did not apply in cities of the first class where there were existing contracts for a number of years.

Charities and Corrections.—A sensation was caused in October by the resignation of the superintendent of the State Asylum for the Insane, at Topeka, Dr. C. H. Wetmore, which was accompanied by serious charges against physicians and others holding important places at the institution; incompetency, neglect of patients and brutality toward them, drunkenness, and immoral conduct were among the accusations. The Governor accepted the resignation without investigation. The Board of Charities elected Dr. L. D. McKinley to succeed Dr. Wetmore.

Similar charges were made against the asylum at Ossawatimie by a former attendant, but nothing appears to have come of them. For current expenses the Topeka Asylum received \$116,790 for the year; the appropriations to the Ossawatimie institution for 1898-99 was \$313,528.

The total cost of maintaining a child at the Soldiers' Orphans' Home is \$118. The average number in attendance is 185. The institution is for homeless, neglected, or abused children, and was called the Soldiers' Orphans' Home because there is a provision giving preference to such children. All but 4 are orphans of soldiers.

The second biennial report of the State Industrial Reformatory shows that there have been 277 inmates in the reformatory since its foundation. Of this number 186 were in prison June 30, 1898.

There was an average of 911 prisoners in the State Penitentiary during the year ending June 30. The average cost of maintenance was 44.8 cents a day. The United States and the Oklahoma prisoners are not included in the number given.

A mutiny broke out among the convicts in the United States Penitentiary at Fort Leavenworth, June 1, and 15 escaped. Two hours later James Musgrove, an Indian Territory desperado, who was the leader, was shot down, struck by 8 bullets.

Railroads.—The assessment of railroads for 1898 amounted to \$60,305,466. In 1897 it was \$59,380,194, and in 1896 it was \$59,279,346. There was \$106,000 worth of track taken up during 1897.

The Government lien on the Union Pacific Railroad in Kansas was sold in February to the reorganization committee for \$6,303,000.

Banks.—The fourth annual report of the Bank Commissioner gives a record of his department for two years. During that time 65 State banks, with an aggregate capital of \$784,600, have been organized. Of this number, 23 were reorganized private banks, 8 reorganized national banks, 4 reorganized State banks, and 30 were new organizations. During the same period, 48 State and 15 private banks, with a capital of \$1,049,150, went into voluntary liquidation, and 13 State and 2 private banks, with a capital of \$409,500, were closed by the department.

The annual statement of receipts and disbursements for 1897 shows that the banks charged off the following items of loss: Bad paper, loans, \$452,716.21; depreciation in value of real estate, \$168,518.12; depreciation in value of furniture and fixtures, \$41,580.94; total, \$662,815.27.

A comparison is made of the condition of the banks at the present time with 1892, the year in which the State is supposed to have been more pros-

perous than at any time since. It shows that in 1892 the resources and liabilities of Kansas banks amounted to \$34,637,146.19; while in 1898 the amount was \$31,010,377.73. The report continues: "While there has been a nominal reduction of capital and surplus of over \$4,500,000, the actual capital is greater to-day than in 1892, for the reason that the present capital is unimpaired and is represented by assets worth par, whereas in 1892 none of the losses resulting from the 'boom period' had been charged off, and the impairment of capital at that time probably amounted to 50 per cent. Individual deposits increased nearly \$4,000,000, while demand and time deposits decreased \$1,660,000. The item of borrowed money, bills payable, and rediscounts has been practically wiped out, having been reduced from \$1,400,000 to less than \$300,000."

The report on the national banks of the State, Dec. 15, 1897, shows the total resources to have been \$35,518,104.62. The individual deposits were \$19,696,553.25.

Insurance.—The report of the Kansas Mutual Life Company for 1897 shows that the increase of new insurance for 1897 over 1896 was \$660,000, the new business the last six months being 83 per cent. more than for the corresponding six months of 1896.

Companies that were refused licenses by the Insurance Commissioner (see "Annual Cyclopædia" for 1897, page 433) continued to do business in the State, and suits were brought against them by the Attorney-General. In January the Supreme Court decided for the State against the Mutual Life of New York, whose license had been revoked; but the Federal court held that the law of 1889, which declared that an insurance superintendent had no right to revoke any company's license unless it was insolvent, was operative, and therefore issued an order restraining the State from interfering with the company in the transaction of its business.

Suits against the Commissioner by the Metropolitan Life, one for a restraining order to prevent him from interfering with their business, and the other for \$60,000 damages, were withdrawn, a compromise having apparently been made. There was also a suit by the Connecticut Fire Insurance Company to enjoin the Commissioner from preventing its agents from operating in the State. In March the Commissioner served notice on 15 life insurance companies that an association formed by them for the purpose of preventing any rebate on premiums was in violation of the antitrust law of the State.

The Commissioner required that the salaries of all officers of companies be made known to the department, a demand which was resisted by some of the companies.

Products.—The quantities and values of the principal farm products in 1898 were given as follow in December, by the secretary of the Board of Agriculture: Wheat, 60,790,661 bushels, \$32,987,042; corn, 126,999,132 bushels, \$30,298,094; oats, 21,702,537 bushels, \$4,268,861; rye, 2,153,050 bushels, \$761,970; barley, 2,771,514 bushels, \$620,872; buckwheat, 7,217 bushels, \$4,330; Irish and sweet potatoes, 6,383,680 bushels, \$2,768,017; eastor beans, 68,679 bushels, \$55,798; flax, 1,598,539 bushels, \$1,278,831; broom corn, 13,411,600 pounds, \$299,638; millet and Hungarian, 735,238 tons, \$2,074,820; sorghum for syrup, 1,550,822 gallons, \$501,754; sorghums for grain and forage, \$7,795,753; tame and prairie hay, 2,096,075 tons, \$6,612,141; wool, dairy, and poultry products, \$10,293,491; animals slaughtered and sold for slaughter, \$49,123,517; horticultural and garden products and wine, \$2,010,690. The live stock was rated as follows: 862,051 horses and mules, \$28,868,798; 605,925 milch cows, \$19,389,600; 1,998,140 other cattle, \$51,951,640; 207,482 sheep, \$570,-

575; 2,766,071 swine, \$12,447,320; total value of live stock, \$113,227,933. From tables showing the values of farm products in the State for the twenty years ending with 1897, it appears that the total amounts to \$2,481,061,751.

The first station established by the Government for the production of sorghum sugar was at Fort Scott. After the bounty on sugar was discontinued the industry declined, and in February the last piece of sugar machinery was sold to be sent to Nebraska. It is said that the total amount spent on the experiment was nearly \$250,000.

The value of coal for 1897 is given as \$3,931,707; for the whole period of production since the mining of it began, \$51,335,808. Zinc closely approaches it with a value for 1897 of \$2,795,683.28. The grand total of zinc mined since its production began is estimated at \$35,000,000. The other minerals rank in point of value of output for 1897 as follow: Lead ore, \$914,963.89; salt, \$417,629.94; clay goods, \$265,320.27; gypsum, \$252,811; limestone, \$173,000; natural gas, \$155,500; lime, \$65,000; hydraulic cement, \$64,000; petroleum, \$54,000; sand, \$45,000; sandstone, \$23,180.

Labor.—From the Labor Commissioner's summary of statistics are taken the averages given below: In 9 occupations, and in 175 instances, the hour is the basis of the wage rate, the average being 20.5 cents an hour, ranging from the minimum average of 13.5 cents for the 12 barbers reporting to the maximum average of 28.9 cents for the 10 railroad blacksmiths reporting. With 807 reporting, comparisons with 1896, the wage rate is reported increased in 211, decreased in 128.

In a separate summary of reports on labor of women, it appears that in 5 occupations and in 71 instances, the week is the basis of the wage rate, the average wage being \$5.01 a week, ranging from the minimum average of \$2.09 for those engaged in domestic service to the maximum average of \$6.88 for those engaged in occupations classified as miscellaneous, in which it is found that in the occupations of milliners, tailoresses, and salt workers the highest wage rate is paid.

Mob Violence.—At Great Bend, June 12, a man who had been brought from Hutchinson for a preliminary examination on a charge of murder was taken from the sheriff and hanged in the public square. His crime was the murder of a girl of fifteen because she refused to marry him.

Destructive Storm.—A tornado almost entirely destroyed Cunningham, a small town 60 miles west of Wichita, May 18. Damage was reported also at Peabody, Newton, Halstead, and Lawrence.

State Laws.—The Governor made a proclamation, June 17, suspending the operation of the metropolitan police law, to take effect July 1, and revoking the appointments of the boards of police commissioners in all cities of the first class in the State.

The United States Supreme Court, March 14, affirmed the constitutionality and validity of the State laws of Kansas prohibiting transportation into the State of cattle affected with Texas fever, and providing for a civil action for damages in case of infraction of the law. These laws were attacked on the ground that they were repugnant to the Constitution of the United States, and also on the ground that domestic cattle were sufficiently protected by Federal laws and by regulations of the Agricultural Department.

In the district court at Garnett, June 21, a decision was rendered upholding the validity of the valued policy law, which provides for full payment of policy where loss on real estate is total. It was also held that section three of the same act, which provides for taxation of attorneys' fees against the

company, is unconstitutional in that it discriminates against a class of litigants.

The Court of Appeals decided in August that the "scrip law," prohibiting the issuing of scrip to miners in payment of wages, is valid. It was attacked on the ground that it interfered with the right of private contract.

The same court decided against the city poll-tax law at Fort Scott.

Political.—Municipal elections were held April 5 in first- and second-class cities. A light vote was polled in Topeka, where the Republicans elected all their candidates, except 2 councilmen, who were defeated by their Democratic opponents; and there was a like result in Wichita. In the following cities the Republican tickets were successful: Yates Center, Eldorado, Girard, Hutchinson, McPherson, Lawrence, Independence, Garnett, Fort Scott, Hia-watha, and Abilene. In Leavenworth the Republicans elected 4 out of 6 councilmen. The women's vote was light in Leavenworth. In the village of Uniontown the women put up a full ticket against the men, and were beaten 3 to 1. At Great Bend and several other towns the issue was license or prohibition, and the advocates of license elected their candidates for peace officers.

State officers were to be chosen in November, and four tickets were in the field: Republican, Fusion (silver), Prohibition, and Socialist-Labor.

The Republican convention was held at Hutchinson, June 8. The resolutions approved the national administration "in peace and in war," demanded the immediate strengthening of the navy, the building of the Nicaragua Canal, and the annexation of Hawaii. They favored a liberal construction of the pension laws and the preference of veterans in civil appointments; called upon the Governor and Secretary of State to afford facilities to the soldiers in the volunteer service for voting in the November election; called attention of the coal-miners to the fact that the Populists had not kept the pledges made in their platform of 1896 that convict-mined coal should not be offered in the open market, and that the last Republican administration had kept similar promises which had been made in the platform on which it was nominated; and said further: "In contrast with faithful performance of promises by the Republican party in the nation, we place the broken pledges of the Populist party in the State. Intrusted with power and given absolute control of every branch of the government, they repudiated the pledges by which they gained success at the polls. Their record of inconsistency is rounded out with incompetency and supplemented by corruption, proved by their own partisans in an investigation they made themselves."

Following were the candidates: For Governor, W. E. Stanley; Lieutenant Governor, Harry E. Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; State Superintendent, Frank Nelson; Associate Justice, William R. Smith; Congressman at Large, W. J. Bailey.

The Populist convention was called for June 15 at Topeka, and at the same time the Democratic convention met at Atchison. A conference committee from each convention was appointed to arrange the division of offices in case of fusion. The Populist platform commended the State administration and the acts of the Legislature, also the course of the Representatives in Congress who opposed the issuing of interest-bearing bonds and the "encroachments of corporate power upon the rights of the people." Other demands and recommendations were: A constitutional convention for the purpose of introducing into the State constitution the principle of initiative and referendum; public

ownership of public utilities; an open public market under control of the State for the purpose of preventing combinations of buyers and commission men from fixing and regulating prices; insurance protection furnished at cost by the State; the enactment of a freight-rate law giving to a court of railway commissioners, to be elected by the people, the power to fix rates and classifications of railways, and the further power to compel the railways to make full reports with reference to their business; a general text-book law; a law making county clerks' offices free public employment agencies; complete revision of mining laws; a law taxing as costs in actions for the recovery of wages a reasonable attorney's fee for the collection of the same, and providing that in case of an employer's assignment or insolvency, wages shall be a prior lien to all attachments and mortgages; a law confining the output of the penitentiary mine to the needs of the State institutions; and immediate suspension of the metropolitan police law—also its repeal by the next Legislature. On national issues the platform demanded free coinage, and the issue of legal tender notes good for all debts in preference to the issue of interest-bearing bonds; "opposed the issuance of all bonds and condemned the Republican party for its action in fastening upon the people a large bonded debt ostensibly for war revenue, but in reality for the perpetuation of the national banking system"; favored increase of pay to the volunteer soldiers, and service pensions for veterans of the civil war; denounced the Republicans in Congress for "voting against an income tax and the one fourth of 1 per cent. on railroad corporations which are being enriched by Government contracts, and also their refusal to tax Wall Street transactions."

The entire list of State officers was renominated. All are Populists except A. M. Harvey, Lieutenant Governor, who is a Democrat.

In the Democratic convention at Atchison a minority report of the resolutions committee demanding a straight Democratic ticket was voted down, and the candidates presented by the Populist convention were approved. The resolutions demanded free coinage, and favored "an amendment to the constitution of the United States if the same be necessary, such as will authorize Congress to levy direct taxes upon incomes, corporations, estates, and all forms of aggregated wealth." They also favored vigorous prosecution of the war, but not territorial aggrandizement or the establishment of a colonial policy; favored the resubmission of the prohibition amendment, and denounced the metropolitan police law; commended the State administration, and especially the stock-yards legislation and its vigorous enforcement, and said also: "We commend the course of Senator W. A. Harris in preventing the loss of millions of dollars to the people through the machinations of the Wall Street operators interested in the purchase of the Union Pacific Railroad; and we commend him and those Kansas congressmen who voted against the issuance of further interest-bearing bonds at this time."

The Democrats who were opposed to fusion with Populists decided to support the Republican ticket rather than make nominations of their own.

The Prohibitionists met in State convention at Emporia, June 8. The platform declared for prohibition and woman suffrage, and approved the action of the National Government in the war with Spain. One of the statements was: "We regard civil government as an ordinance of God, and recognize the Lord Jesus Christ as King of Kansas, and therefore believe that the administration of civil affairs should be in harmony with the law and in his spirit."

The ticket follows: For Governor, William A. Peffer; Lieutenant Governor, R. T. Black; Secretary of State, J. B. Garton; Treasurer, John Bidle; Superintendent of Public Instruction, Mrs. E. N. Buckner; Auditor, H. Hurley; Congressman at Large, M. Williams. For Attorney-General and Associate Justice no nominations were made, the intention being to support the Republican nominees.

The Socialists held a convention at Fort Scott, June 28. The platform demanded better pay for soldiers, the issuing of more paper money, the breaking of the land monopoly, and other reforms. A full State ticket was chosen, headed by Caleb Lipscomb for Governor.

The Republicans were successful at the polls in November. The vote for Governor stood: Stanley, Republican, 149,292; Leedy, Populist, 134,158; Peffer, Prohibition, 4,092; Lipscomb, Socialist Labor, 635.

The State Senate of 1899 will be composed of 26 Populists, 12 Republicans, and 2 Democrats; the House, of 93 Republicans, 19 Fusionists, 10 Populists, 2 Democrats, and 1 Independent.

Legislative Sessions.—A special session of the Legislature was called to meet Dec. 21. The reason was given in the following preamble:

"Whereas, assurances have reached me to the effect that if the Legislature shall be convened suitable legislation for the regulation of railroad charges can be enacted and, deeming such matters of sufficient importance to justify the convening of the Legislature in special session," etc.

The Republican Senators and Representatives signed a protest against the calling of the session, as violating "all the usages and precedents of the State and country, by interposing this Legislature in the last moments of its existence between the people and the Legislature they have just elected, and at the very moment it is about to convene to legislate as it has been commissioned to do." This protest was ruled out of order in the Senate.

The Governor's message gave the following in explanation of his action in calling the Legislature together to enact a law like the one passed at the regular session, which he had vetoed (see "Annual Cyclopædia" for 1897, page 435):

"Although the present executive and a majority of each House of the present Legislature were elected under a pledge to the people to enact a maximum-rate law, when the time arrived for fulfilling that pledge the menace of a judicial decision, by the highest tribunal in the land, which would make legislative regulation of railroad charges practically impossible, caused many to doubt the wisdom of attempting the promised legislation; and such difference of opinion prevailed that the executive felt called upon to withhold his approval from the compromise measure finally passed. There was then pending undetermined in the Supreme Court of the United States a case which involved the question whether, as to railroad legislation, the legislatures of theoretically sovereign States should be reduced to the level of city councils or school district boards, upon the reasonableness, as well as the authority, of whose acts courts may sit in judgment. The decision of that case, announced soon after the adjournment of the Legislature, fully justified the fears and anticipations of those who deemed it futile to pass a maximum-rate bill; for it rendered such an enactment a mere proposal of legislation, not a law, which must be submitted to the Federal court for approval or rejection.

"At the same time the court declined, though urged, to lay down any definite rule by which, in advance of its judgment in each particular case, a Legislature might be able to say whether suggested rates would be held reasonable or not.

"I, therefore, recommend that the Legislature confer upon the Board of Railroad Commissioners full judicial power to try, hear, and determine all questions as to the reasonableness and unreasonableness of every charge made by a railroad company for services rendered wholly within this State in the transportation of property; that they be authorized to try, determine, and enter judgment declaring what are at the time of rendering their decision reasonable charges for the transportation of property between different points over each and all of the railroad lines in this State; and also what are reasonable charges for switching, demurrage, and all other charges imposed by them from the time of the reception of each and every kind and class of freight to its delivery to the consignee; and that they be authorized either at stated times or on the complaint of any person, corporation, or municipality to hear, try, and determine any complaint made against the reasonableness of any charges then being collected for any service, and that they also be given power in like manner to establish full and complete classifications of freight to be used in the determination of all questions affected thereby; that the Legislature declare that the rates and charges so determined by them to be reasonable shall be the rate to be thereafter charged by the railroad companies, and the only rate which they shall be authorized to demand or receive until such time as the board upon a like hearing shall determine that the existing rate is unreasonable, and that another and different rate is the reasonable and proper one for the service."

Other recommendations in the message were the passing of a law to limit the amount of mortgage indebtedness that may be placed upon a railroad, and an appropriation to reimburse all corporations, counties, and individuals that contributed to the fund for making a State exhibit at the Omaha Exposition. The session was not finished at the close of the year.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 44,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; and 1,858,635 in 1890. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, William O. Bradley; Lieutenant Governor, W. J. Worthington; Secretary of State, Charles Finley; Treasurer, G. W. Long; Auditor, Samuel H. Stone; Superintendent of Public Instruction, W. J. Davidson; Attorney-General, W. S. Taylor; Adjutant General, D. R. Collier; Commissioner of Agriculture, Lucas Moore—all Republicans; Librarian, Mrs. E. G. Cromwell, succeeded in June by Miss Pauline Hardin; Mine Inspector, George W. Stone; Election Commissioners, William T. Ellis, W. S. Pryor, Charles B. Poyntz; Prison Commissioners, Henry George and Messrs. Fennell and Richardson; State Inspector, C. W. Lester; Chief Justice of the Court of Appeals, Joseph H. Lewis, Democrat; Associate Justices, James A. Hazelrigg, Thomas H. Paynter, and J. D. White, Democrats, and B. L. D. Guffy, George Du Relle, and A. Rollins Burnam, Republicans; Clerk, Samuel J. Shackelford, Democrat.

Finances.—The following statement, showing the condition of the State treasury May 31, was given out by the Auditor, June 4:

Sinking fund—balance April 30, \$565,751.37; receipts in May, \$6,298.38; total, \$572,049.75; expenditures, \$20,265.53.

School fund—balance deficit April 30, \$10,859.92; receipts in May, \$21,091.33; on hand, \$10,231.41; expenditures, \$554.34.

General expenditure fund—balance deficit April 30, \$427,201.33; receipts in May, \$79,323.03; total, \$347,878.30; expenditures, \$145,187.78; balance in treasury May 31, 1898, \$68,395.21.

Education.—A new building was dedicated at the State College at Lexington, Jan. 21. It is for the department of natural science. A bill was before the Legislature in February to change the name of the institution to Kentucky University, but it was opposed by members of the Christian Church, which has a denominational college at Lexington of that name, and a substitute bill was therefore passed, changing the name to State University.

Prisons.—There were 1,295 convicts at the State Penitentiary at Frankfort, March 17. A new method of discipline was adopted this year. Three kinds of clothing were provided for prisoners—a plaid black-and-white for newcomers, to be worn while they are on probation; then the well-behaved are put into plain gray suits, and the incorrigible into the usual striped garments. The Sinking Fund Commissioners, who had control of the prisons under the old law, put the woman's department in charge of women as guards in February. The prisons passed under control of the new Board of Prison Commissioners, Aug. 1.

Military.—The organized militia force of the State was reported in March as 1,371 men, and the number unorganized but available for military duty as 361,137. The State's quota for the war was 4,000 men.

Railroads.—The State has a total railway mileage of 3,042, with an increase of 31 miles in 1897. One fourth of the counties are without railway facilities.

Insurance.—In September the Franklin County grand jury returned a joint indictment against 74 foreign fire insurance companies doing business in the State. The indictment charged conspiracy to control the price of fire insurance and to prevent competition. It included all companies in the insurance combination known as the Kentucky and Tennessee Board of Insurance Underwriters.

Under a statute which provides that a man is legally dead after he has been missing for seven years, during which time nothing has been heard from him, suit was brought against insurance companies by the heirs of I. W. Tate (who was Treasurer of the State and ran away eleven years ago, leaving a deficit of about \$80,000) to recover the amount of insurance upon his life. The companies defended the case until January, when the attorneys for the Connecticut Mutual Life appeared in court and paid over \$4,100 on the \$5,000 policy which Tate carried in their company, indicating that the companies had agreed to give up the suits.

Banks.—The Comptroller of the Currency gave out in October an abstract of reports of the condition of the 69 national banks in Kentucky, Sept. 20, exclusive of Louisville. It shows that the total resources were \$30,871,740, the loans and discounts amounting to \$16,810,083, and the reserve to \$4,457,651, of which the gold held was \$837,305. The deposits aggregated \$14,794,157 and the average reserve held was 31 per cent. The average reserve Feb. 18 was 36.71 per cent. The Comptroller in June declared a dividend of 5 per cent. in favor of the creditors of the First National Bank of Newport, which failed in 1897.

The banks have been settling accounts for back city taxes under the decision of the Court of Appeals which made them liable for city and county taxes, and gave them back taxes illegally paid to the State.

Products.—The mine-inspector's report, rendered in February, said: "The year was one of unusual disturbances, but the output of coal was greater

than in any year except 1893, and is only 18,488 tons less than in any year. The report yet to come in will materially reduce these figures. The greatest hindrance of the year was the prolonged strike in the Jellico district. It commenced about May 1 and continued with most of the mines until late in the fall. There were numerous other hindrances that seriously retarded operations in different sections and prevented a much larger output. Not estimating the few missing reports, the State's products in 1897 was 3,283,762 tons, 100,284 tons more than in 1896.

The war in the Philippines, and consequent dearth of Manila cordage, will, it is believed, restore prosperity to the hemp industry of Kentucky.

The figures of the collector of internal revenue for the year ending June 30 give the total amount of whisky in bond in the district as 35,220,735.3 gallons.

Centenary Celebration.—The city of Nicholasville and Jessamine County celebrated their hundredth anniversary Sept. 16 with a parade, addresses, a dinner, and a ball. Excursions from Cincinnati, Louisville, Lexington, and other cities brought great numbers of visitors, and the procession which paraded the streets in the forenoon was a mile long.

Water Ways.—Work on Tradewater river is completed, but not permanently, as obstructions formed from drifts need constant removal.

Appropriations remaining Feb. 1 for work on the rivers were: For completing Green river improvements, \$15,272.23; Kentucky river, \$208,387.87; Cumberland, above Nashville, \$124,030; below Nashville, \$23,400.55; Louisville and Portland Canal, \$70,116.41; falls of the Ohio at Louisville, \$269,828.45.

The Lottery Closed.—The Kentucky lottery was closed Jan. 1. Following is an account of the litigation that ended its existence: "During Gov. Blackburn's administration indictments were found against some of the officials and employees, and true bills were drawn up against 140 men connected with the company. When the case came up for trial the attorney for the defense exhibited pardons for every one of the defendants. The company carried the case before the Court of Appeals and gained the decision. Thrice the State tried to take away the company's charter and thrice the Commonwealth was defeated in the courts. In 1891, after the adoption of the new constitution, *quo warranto* proceedings were instituted against the lottery. Judge Toney decided in favor of the company, following a former Appellate Court decision, but the latter tribunal reversed itself and Judge Toney. The company then carried it before the Supreme Court, which recently handed down the final decision, giving the death blow to the Frankfort Lottery."

The Toll-gate Raids.—These continued during the earlier part of the year. In January the State offered of \$200 for the apprehension and conviction of each of the mob that raided the toll gates in Nelson County on the night of the 24th inst. Jan. 28 a mob visited the toll gate, near the Fair Grounds, on the Louisville turnpike, and blew up the toll-house with dynamite. Four guards were in charge of the gate, but at the raiders' orders they left the scene. Three gates were destroyed near Shelbyville, Feb. 4, where, it was said, excessive tolls were collected. There was an encounter near Perryville, in Boyle County, March 20, between raiders and two guards who were on duty at a gate between that town and Harrodsburg, and both guards were shot; one of them, it was believed, would be crippled for life. A dispatch of Aug. 12 said: "The third raid was made last night on the toll gate

about one mile from town on the Eminence and Mulberry turnpike, the raiders using dynamite with telling effect for the second time."

Other Lawlessness.—A lynching and white-cap raids took place early in the year at Mayfield, and a colored man was taken from jail by a mob in Russellville, June 25, and hanged.

Legislative Session.—The Legislature convened for its regular session Jan. 4, and adjourned March 15. J. C. W. Beckham was chosen Speaker of the House.

The Governor's message recommended the repeal of the law requiring separate railway coaches for negroes; the enactment of a law to place the control of the charitable and penal institutions on a nonpartisan basis; amendment of the ballot law to prevent voters from losing their votes through mistakes; the abolition of useless offices; a law to make counties responsible for damage by raiders; the establishment of a higher standard for admission to the bar; and a tax of one half a cent for the better equipment of the State militia.

A resolution calling upon United States Senator Lindsay to resign, on the ground that he no longer represented his party, since he refused to support the Chicago platform, passed the House by a vote of 55 to 35, and the Senate by 25 to 10. Five Democrats in the House and one in the Senate voted against the resolution. Mr. Lindsay made a speech in the United States Senate in regard to this resolution, in which he said:

"The substance of the complaint is that I am opposed to the free and unlimited coinage of silver at the ratio of 16 to 1, and that I opposed the election of the nominees of the late Chicago convention, and by so doing betrayed the trust reposed in me by my constituency. I shall not discuss the presidential campaign of 1896. It is not necessary to do so to meet the charges that I betrayed the trust of my constituents by opposing the election of the Chicago nominees. My constituency is made up of the people of Kentucky, and that people voted against these nominees, and 12 out of 13 of the electoral votes of Kentucky were registered against them."

The most important act of the session, probably, was the election bill introduced by Senator Goebel, for creating a State election commission or board, to be elected by the existing Legislature and to hold office for four years; this board is to appoint annually three commissioners in each county, who in turn shall appoint all the elective and registration officers for their respective counties. If a vacancy occur in the State board when the Legislature is not in session, the other members have power to fill the vacancy. The State board can remove a member of a county board at any time without showing cause. The State board may be all of one party; but the county board is required to select the officers of elections from the two leading parties; the county board has the power to count the votes and issue election certificates. These certificates will be sent to the State board, whose duty it shall be, "when returns are all in, or on the fourth Monday after the election, whether they are in or not, to make out in the office of the Secretary of State, from the returns made, duplicate certificates in writing over their signatures of the election of those having the highest number of votes, one certificate to be retained in the office and the other sent by mail to the person elected." In the event of a tie in an election, the result is to be determined by lot, according to any plan that the State board may select. The bill makes election contests impossible, as there is no going behind the returns of county boards. After a long struggle the bill passed the House by a vote of 57 to 42 and also passed the

Senate. It was vetoed by the Governor, and was passed over the veto. The Legislature elected the board under the provisions of the bill; but the Auditor, under advice of the Attorney-General, refused to recognize it by honoring its bill for office supplies. The law was attacked before the Court of Appeals in November as being unconstitutional, since it made material changes in an existing law without re-enacting and publishing the law as amended; as contrary to the principles of a republican government; as destroying local self-government; as concentrating power so that one man might have full control; and as corrupt and dishonest in purpose. The court decided that the law does not conflict with the State constitution, by a vote of the four Democratic against the three Republican justices.

Another important measure was one providing for the taxation of franchises and intangible property of corporations, not including railroads, by cities of the first and second classes; the value is to be estimated by taking that of the tangible property from the capital stock. Shares of stock held by individual owners are exempt. All taxes against railroads are to be assessed by the State Railroad Commissioners. Many corporations resisted the enforcement of the law taxing their intangible stock, and indictments were found against 120 of the companies so resisting.

An act that was passed over the veto of the Governor provides that any foreign corporation engaged in the business of collecting and furnishing news to periodicals must, as a condition for operating in Kentucky, furnish its news to any or all newspapers in the State without discrimination in charges.

It was provided by another act that the prisons, which have been under control of the Sinking Fund Commissioners, shall be placed in charge of a board of three Prison Commissioners to be chosen by the Legislature, and to receive \$2,000 a year and their traveling expenses. The validity of this law was disputed before the courts.

A bill was passed, but was vetoed, giving the Railroad Commissioners power to fix the freight rates of railroad companies in the State.

A law requiring the Louisville authorities to take the school census annually, instead of once in five years as heretofore, was declared unconstitutional by the Court of Common Pleas.

The law to protect rights of owners of marked bottles and other receptacles for beverages was so amended as to make it apply to those used for medicines, perfumery, and other compounds.

A law regarding testimony provides that a husband acting as agent for his wife, or a wife for her husband, may testify concerning such agency. A person may testify for himself against another who is before the court only by constructive service of the summons; prisoners in the Penitentiary are competent witnesses, and may be testified against; and the provision that permits one party to compel the adverse party to testify as any other witness was repealed.

Cities of the second class may take or buy turnpikes controlled by private companies.

The State University may establish a course in mining engineering; the dean of the school is to act as inspector of mines, and to analyze mineral products that may be sent to him for the purpose.

Other enactments were:

Providing a penalty for dispensing intoxicating beverages in local-option districts.

Repealing the provision relative to the penalty when judgment is confessed for unlawful use of deadly weapons.

Allowing outstanding bonds of school districts to be refunded.

Providing that in cases of contests over election of Governor or Lieutenant Governor, a special board shall be drawn by lot from the Legislature to examine.

Imposing a penalty for manufacturing or selling food or drink, excepting liquors, for men, horses, or cattle, which is adulterated or falsely marked. The director of the agricultural experiment station is to make the analyses and enforce the law.

Providing that at least one woman physician shall be employed in insane hospitals that have women among the patients.

Amending the law regarding the practice of pharmacy and the sale of poisons.

Forbidding employers of miners to coerce them to buy at any store, and regulating monthly payments of wages.

Amending the law in regard to trust companies so as to require a capital stock of \$25,000 instead of \$15,000 in counties of less than 25,000 inhabitants.

Allowing children of slave marriages to inherit their parents' property.

Prohibiting the practice of medicine without a certificate from the State Board of Health.

Laws in Court.—The constitutionality of the law requiring separate coaches on railroad trains for the use of negroes was upheld by a decision of the Court of Appeals in October.

The general laws regulating government of cities according to their respective classes were declared unconstitutional so far as they authorize circuit courts to transfer a town or city from one class to another, that power belonging, according to the constitution, to the Legislature alone.

Political.—Congressional elections were held in November, the result giving 9 of the 11 districts to the Democrats, and the other 2 to the Republicans.

In the Third District J. P. Hobson, Democrat, was elected Justice of the Court of Appeals, over W. W. Jones, Republican.

The total election figures for the State were given as follows: Democratic vote, 125,463; Republican, 116,329; Prohibition, 6,367.

KITCHENER, Sir HORATIO HERBERT, Baron Kitchener of Khartoum and Aspell, born in 1851. His father was the late Lieut.-Col. Henry Horatio Kitchener (Thirteenth Light Dragoons), of Ossington, Leicestershire, and his mother, Anne Frances, daughter of the Rev. Dr. Chevallier, of Aspell Hall, Suffolk. After receiving his education at the Royal Military Academy, Woolwich, he entered the army in 1871 as a lieutenant in the Royal Engineers. Three years later he accompanied Capt. Conder and assisted him in the survey of western Palestine. After a year's work he returned to England, and for three years (1875-'78) was engaged upon the Palestine exploration map. In 1878 he went back to Palestine and carried out the survey of Galilee. Having finished this, he was sent to Cyprus to organize the new land courts, and after a short absence (1879-'80), during which he resided at Erzeroum as vice-consul of Anatolia, he returned to the island and surveyed it. After eight years of civil employment he resumed his military career by volunteering for service in the Egyptian army, now in process of formation by Sir Evelyn Wood, and was appointed one of the two majors of cavalry. His first important piece of work in Egypt was performed at Debbel, where as quartermaster general and deputy assistant adjutant he did his utmost to keep open communications with Gordon at Khartoum for the expedition which vainly tried to rescue him in the autumn of 1884. In the following year he acted as commissioner for the delimitation of Zanzibar, which had just been placed under the British protectorate.

Returning to Egypt in 1886, having now the rank of lieutenant colonel, he was made pasha in the Egyptian army and created C. M. G. For the next three years he was in active military service as governor of the Red Sea littoral and commandant of Suakim, then menaced by the Mahdi's lieutenant, Osman Digna. At the battle of Handoub (Dec. 21, 1888) he was severely wounded, and he greatly distinguished himself both in this action and in that at Gemaizeh soon afterward, where he commanded the Soudanese troops he had done so much to train. Besides receiving the Egyptian order of the Osmanieh, he was appointed an A. D. C. to the Queen. On Aug. 3, 1889, he took part in the action under Grenfell at Toski, and, having been specially mentioned in dispatches, was created C. B. When the operations in the eastern Soudan were concluded he returned to Egypt proper, where for four years he acted as adjutant general and second in command of the Egyptian army, being also inspector general of police. He attained the rank of colonel in the English army in April, 1888, and

SIR HORATIO HERBERT KITCHENER.

received the local rank of brigadier general, when, in 1892, he was appointed to the post of sirdar, or commander of the Egyptian troops. In 1894 he was created K. C. M. G. Two years later he commanded the expedition by which the province of Dongola was recovered for the Khedive of Egypt. On March 21 he left Cairo for Assouan, and during the spring he directed the construction of the railway and telegraph lines to Akasheh. When preparations were completed an advance was made, and at dawn on June 7, 1896, the dervishes were surprised and routed at Ferkeh. After a delay of three months the advance was resumed, and, the dervishes having been defeated in an artillery action on Sept. 19 at Hafir, Dongola was entered. For these services Kitchener was specially promoted major general, was created K. C. B., and received the grand cordon of the Osmanieh. A further period of preparation and organization having passed, he completed his work in 1898 by the defeat of the dervishes near Omdurman (Sept. 2) and the capture of Khartoum.

KOREA, an independent empire in continental Asia, between Russia and China: area, 80,000 square miles. It is separated from Russia by the Tunen river, and from China and Manchuria by the Long White mountains on the north and the Yalu river on the west. The population is estimated at 15,-

000,000, almost wholly agricultural. The peddlers and butchers form large and powerful societies, and all the special industries are organized into guilds. Above the great mass of the people are the *yang ban* (civil and military class), who, for the most part, live in idleness and successfully evade the payment of taxes and tolls. Beneath the middle mass are the seven degraded classes, which, since A. D. 1450, have suffered many disabilities, but are now improving in social status. They are the lower servants or runners of the magistrates, buffoons or traveling singers, butchers, basket makers, sorceresses, dancing girls, and handlers of leather. The Buddhist priests, hitherto (from A. D. 1392) forbidden entrance within cities, are now allowed this privilege, and the former serfs or slaves are practically free.

Government.—The direct royal line came to an end in 1864, but the present King was nominated, and during his minority the country was governed by the late Tai-Wen-Kun for nearly twenty years. Succession to the throne is hereditary, and the edict of the sovereign is law. Not until 1898 was Korea a free country. From the dawn of history she has been claimed as a vassal by China, and for nearly fifteen centuries has been tributary to Japan. By the Japanese treaty of 1876, and the convention between Japan and China at Shimonoseki in 1895, Korea was declared absolutely free. On Oct. 14, 1897, the King of Korea assumed the title of Emperor and changed the name of the country to Dai-Han (in contradistinction to the San-Han, or three ancient kingdoms of the peninsula). He is assisted to govern by a Council of State, consisting of a Chancellor, 5 Councilors, 6 Ministers, and a chief secretary. Nine ministers, those of the Royal Household, Finance, Home Affairs, Foreign Affairs, War, Justice, Agriculture, and Education, with a Premier, assist the Emperor in ruling the 14 provinces, over each of which there is a governor. In each of the 360 districts there is a magistrate. The army consists of about 5,000 men, but there is no navy. Seven ports are open to foreign commerce.

Finance.—The budget for 1898 was laid before his Majesty on Jan. 12. It was printed in a neat pamphlet, in mixed Chinese and Korean script. The total income is estimated at \$4,527,476, and the expenses at \$4,525,580. The income is from four sources: Government tax, \$3,779,316; miscellaneous income, \$40,000; mint seigniorage, \$200,000; surplus from last year, \$508,160. The chief items in the income are land taxes, \$2,227,758; customs returned, \$750,000; taxes in arrears, \$358,000; house registration, \$229,558; ginseng monopoly, \$150,000; gold mines, \$40,000; miscellaneous, \$24,000. The land tax is an assessment on the grain-bearing ability of the land under cultivation, all the farming lands being divided into 13 classes, according to the character of the crop and the fertility of the soil. Formerly the farmers' taxes were paid in kind, and the grain was stored in fire-proof storehouses, and often the Government made popular loans, at small interest, from the surplus money derived from the sale of the grain. The rule is now payment of taxes in coin. The scale of taxes graduated on the unit *kyel*, or heap of grain, is from \$6 for first-class land, which includes the rich rice swamps of the central and southern provinces, down to 40 cents for the rocky and sterile regions of the north. The central and southern provinces fall within the first 3 classes, while the 2 northern provinces are classed from the fifth down to the thirteenth grade. The total revenue from land should be \$4,876,475, but on account of crop failure and other causes the sum is reduced to \$4,455,516. Other causes, which reveal the difficulties of good government, are seen in the fact that the

actual amount expected to be realized from the land taxes is only \$2,227,758. Furthermore, instead of getting, as the Government ought to, \$688,674,208 on the house registration tax of the 13 provinces, only \$229,558 is placed in the budget, and the other two thirds are rejected as fictitious and unreliable assets. The reason why there are arrears of \$3,578,000, of which only one tenth, or \$358,000, are set down as collectible, is on account of the defective land survey, made three hundred years ago, and the ever-present *yang ban*. Hundreds of poor people pay taxes on land long ago washed away or ruined by flood or landslide, while many influential *yang bans* pay little or nothing for the use of their rich land. The miscellaneous taxes are from the sale of licenses to boats, butchers, salt makers, fishermen, seaweed gatherers, and raisers of ginseng.

In the expenditures, \$560,000 are for the Imperial House, \$132,296 for the Foreign Department, \$1,251,745 for the War Office, \$892,197 for the Finance Department, \$1,225,655 for Home Affairs, and the remainder for the other departments. In the extraordinary expenditures we note \$70,000 for sacrificial rites and \$30,000 for improvement of the roads and streets in Seoul. The new money of the Korean mint is steadily displacing the old perforated "cash." The Japanese silver *yen*, formerly in circulation, is giving way to the new coinage of Japan, calculated on a gold basis, and to the new native metal money.

Foreign Trade.—The total shipping for the 5 ports of Korea in 1897 amounted to 2,417 entries, with a tonnage of 601,275 tons; of this the Japanese flag covered 1,785 vessels and 462,904 tons, so that a very large proportion of Korean trade is carried in Japanese bottoms. The year was prosperous, the trade being almost double the highest figure it had reached at any time in the past. We give the figures in dollars for convenience, though the basis is the silver yen. The increase was from \$7,986,840 in 1893 to \$23,511,350. The total net trade in 1896 was \$12,842,509, the increase being due partly to the stimulus given to trade by the war of 1894-'95, the interest in public works, the suppression of smuggling, and the opening of the two new treaty ports. Instead of the imports being far in excess of the exports as before, there was something like a balance in 1897. The trade with the United States is mostly in petroleum, machinery, flour, provisions, household goods, and personal articles, amounting to at least \$400,000 in gold: petroleum, \$232,385; machinery for mines and railways, \$100,000; flour, \$25,000; household supplies, \$25,000. The English import trade amounted to about \$2,000,000 gold, of which three fourths was for cotton goods; Japanese cotton goods, \$500,000; piece goods of the United States, nearly \$25,000. Further possibilities and great promise are seen in the native paper, straw braid, tobacco, and the reha-plant fiber. The market appears to be open for foreign plows and agricultural implements. Wheat has appeared among the exports. The Japanese yarn has almost wholly displaced the British yarn, because it is twisted from left to right, which suits the Korean spindles, English yarn being twisted in the opposite direction, and thus getting loosened and tangled in the process of weaving. The imports of the Japanese yarn at Chemulpo in 1897 doubled in value over the previous year. The new seaports—Mokpo, in the rich province of Chulla, the most fertile in the empire, and Chinampo, on the Ping-Yang inlet, 15 miles from the sea and near a city of 40,000 people—have proved very successful. General foreign settlements, of 225 acres each, have been laid out, and colonies of about 200 Japanese settlers, each with consulate, post office, and other

accompaniments of Japanese civilization, have been formed.

Gold Mines.—The German gold-mining concession from the Government gives the firm the right to select "anywhere in Korea, a few places excepted, a tract 20 miles long by 13 miles broad, and of working all mines for a term of twenty-five years on payment of 25 per cent. royalty on net profits." The export of gold dust rose from \$1,390,412 in 1896 to \$2,034,079 in 1897. An estimate made by an American expert puts down the gold known to be annually obtained in Korea at \$3,000,000, but there is reason to believe that the amount leaving the country clandestinely is at least as large as that declared at the customs. The increase in export of gold dust in 1897 from Chemulpo is accounted for by the fact that a rich mine was discovered at Ho-Yang, where 40,000 people were working. Gold is a duty-free export, though coal and all other minerals are dutiable. An American company, employing about 20 men from the United States, with California machinery, obtained the concession for working twenty-five years an area of 25 square miles in Ping-Yang province, the richest district in Korea. They are able to do what the natives could not do—control the water and carry on shaft mining—and have been very successful.

Railways.—The railway between the capital and the chief seaport, begun under American auspices but sold to Japanese capitalists, is nearly finished, and the long steel bridge across the Han river is under way. This road will have 5 stations, the chief being at Yong-San, Orikel, and Puyon, with 2 flag stations. It runs from the river bank at Chemulpo, near the English consulate, to the little west gate at Seoul. A French syndicate has obtained the concession to build a railroad from Seoul northward, to the Chinese frontier at Wiju on Yalu river, with also the right to open mines. This road is to be 500 miles long, run through the mining region, and connect with the Russian road to be built in Manchuria, while the Japanese are making their preparations to build from Seoul to Fu-san. The American Oriental Construction Company have begun the building of the Seoul Electric Street Railroad, which will be 6 miles in length, operated by the overhead trolley system, with cars half open and half closed to accommodate two classes of passengers. A Korean company has been formed to light the city with the electric light, using the trolley company's power.

Land Survey.—To supply one of the greatest needs of Korea, the King issued a decree on July 8, organizing a bureau of land surveying and clothing it with extraordinary powers. The ministries of Home Affairs and Agriculture, with a staff of assistants, some of whom must speak English and Japanese, are charged with the work. The chief surveyor must be a foreigner with at least 10 assistants in practical work, with 20 students from the English and Japanese schools, the chief surveyor's assistants being either foreigners or natives, and his employment is for five years.

Politics and General Events.—On Jan. 10 mourning for the King ended and black hats were seen on the street. On Jan. 22 an attempt was made to assassinate Kim, the native Russian interpreter. On Jan. 27 Tai-Wen-Kun, the greatest figure in Korean history since 1864, died. On March 8 the British consulate was raised to the grade of a legation. On March 10 began a great anti-Russian demonstration which ended in the total withdrawal of Russian influences from the peninsula. The Russian military commission and drill instructors soon afterward departed, and the Russo-Korean bank was closed. The correspondence of the Russian minister showed that Russia

henceforth considers Korea beyond her sphere of influence. Great improvements in cleansing, enlarging, and paving the streets of Seoul were carried out. On May 29 the new Roman Catholic Cathedral, erected at a cost of \$60,000, was dedicated. It is 202 feet long and from 60 to 90 feet wide. The rice crop this year was unusually large. The new national postage stamps are in four denominations—green, 5 poon or 1 cent; blue, 10 poon or 2 cents; brown, 25 poon or 5 cents; purple, 50 poon or 10 cents, with characters at the top in ancient Chinese, meaning “Cho-sen postage stamp,” the same meaning being expressed in Korean at the bottom. The denomination is also given in English and Korean. The plum blossom, which is the royal flower of the dynasty, is in each corner, while the national emblem, in the center, is the ancient representation of the male and female elements of nature; the four characters at the corner of the center piece represent the four spirits that stand at the corners of the earth and support it on their shoulders. There are 200 Americans in Korea, 30 being on the railway or in the gold mines, 7 in Government employ, 3 in trade, and the rest missionaries or children. The year 1898 is a

notable one for missionary success in all lines of work, in the development of the native and foreign press, and in the advance of education. The budget provided for the organization in 1898 of 20 new Government schools, 1 in Seoul (where there are already several private, missionary, and foreign-language schools), 1 normal and 9 primary schools, 1 school in each of the provincial capitals, and 1 in each of the 6 open ports. On Sept. 10 the imperial birthday was celebrated widely throughout the country, with unusual demonstrations of loyalty, and Founder's Day and the five hundred and sixth anniversary of the dynasty was likewise honored with unusual demonstrations and illumination of the capital. The beginnings of modern parties are seen in the Independent Club and the Imperial Club, which represent respectively the progressive and the conservative tendencies in Korean politics. On Sept. 12 an attempt was made to kill the King and the Crown Prince by poison in coffee. On Aug. 31 George W. Lake, an American merchant, was murdered. Marquis Ito, of Japan, visited the capital late in August. On Oct. 21 the national holiday in celebration of the imperial coronation completed the first year of the Korean Empire.

L

LADRONES, THE, OR MARIANA ISLANDS, a group of small islands in the north Pacific Ocean, belonging to the United States. They lie north of the Carolines, between latitude 13° and 21° north and longitude 144° and 146° east, 1,200 miles east of the Philippines, which were also captured from Spain by the United States in the summer of 1898. This little group consists of seventeen islands, the largest of which, Guam, is nearly equal to the rest put together, and the combined area of all is estimated at a little more than 400 square miles. They are dotted along in line so as to form a nearly perfect arc, Farrallon dos Parajos, the northernmost, and Guam, the southernmost, being 600 miles apart. The islands are really a partly submerged range of mountains of volcanic origin, the highest of whose peaks rises 2,320 feet above the level of the sea. This is the summit of Alamagan, a living volcano. On Pagan and Asuncion islands there are craters whose fires are not yet extinct, and Farrallon dos Parajos has an active volcano 1,300 feet high. Some of the islands are of coralline limestone that has been built up on members of this range which fell short of reaching the surface of the water.

Magellan, in his attempt to voyage around the globe, in 1521, discovered these islands, and he gave them the name of Ladrones, or the robbers, referring to the supposed character of the natives. They were later explored by Byron, Wallis, and Freycinet, and by Anson, who, in 1742, found cyclopean ruins on the island of Tinian.

The Spanish queen sent missionaries to settle in the islands in 1667, and this little group, once the Ladrones, afterward called the Lazarus Islands, were named by them the Marianas, in her honor. At the time of the Spanish occupation of the islands the Chamorros, or aborigines, who were, in speech at least, akin to the Tagals, and whose few remaining members appear to be a mixture of the Papuan and Indonesian races, numbered about 40,000. They were reduced to slavery by the invaders, and so harshly treated that, by the close of the seventeenth century, less than half remained, many having perished, and some escaped to the Caroline Islands. Of the 180 native villages more than two thirds had been destroyed. Epidemics swept the

remaining native population from the island of Guam, and the Spanish authorities ordered an immigration thither from the island of Tinian, but this expedient proved worse than useless, as the immigrants soon died of inanition. The islands had been reduced in 1760 to a population of 1,654, and the Spaniards then re-peopled them with colonists from the Philippines. Mexican settlers also came, and, more recently, Polynesians from the Carolines were imported to work on the plantations. The island of Guam became an important station for Spanish ships plying between Manila in the Philippines and Acapulco in Mexico.

Agana, on Guam, is the chief settlement, containing a majority of the whole population of the islands, besides the political prisoners who have been banished to them. It has a good fortified harbor, and here the Spanish Governor resided, and the Spaniards maintained a small garrison, the islands being under military rule.

The Ladrones are picturesque, mountainous islets, most of them well-wooded. Rota, or Sarpan, containing Mount Tempingan, is rock-bound; Tinian, the next but one, is of gentler outlines, and is especially beautiful; Saypan, its neighbor, has a pearl fishery on its coast, and two extinct volcanoes at its northern end; Agrigan and Pagan also have each an extinct cone. The hills of Guam rise to a height of 1,500 feet; below them lie wooded and grassy plateaus, sandy plains, and a high and rugged margin next the sea. Just south of Guam lies the Rose Bank, which is the northern boundary of a cavity of 2,475 fathoms, being the deepest in that part of the Pacific; but about the islands there are shoals, and these and the many currents make navigation dangerous. The stretch of ocean between the Philippines and these islands has scarcely any reefs or islets at all, and the soundings show places of 1,200 to 1,500 fathoms in depth.

Although situated within the tropics, the Ladrones have a very agreeable climate; the north-east trade winds prevail during what is known as the dry season—from June to September—though there is moisture at all times. There is an abundant rainfall, and full streams everywhere, except where the calcareous soil absorbs the water. In

some places, through the destruction of the forests, freshets have been increased, and droughts made more common, the rainfall having been diminished in this way.

Finest specimens of the cocoanut, the bread fruit, and the banana may be found here. Sugar, rice, corn, wheat, arrowroot, the guava, figs, indigo, cotton, and tobacco are other products. The present growth has for the most part been transplanted here in recent times; new plants were brought by the colonists from the Philippines. The indigenous flora was mainly of Asiatic species, and has almost disappeared. Cattle, horses, and llamas were introduced by the Spaniards soon after

saluted. He sent out to apologize, saying that lack of ammunition prevented him from returning the salute, and learned then for the first time that his country and the United States were at war, and suddenly found his dominions captured by the enemy. The islands were occupied by the United States in July, 1898.

LIBERIA, a republic on the west coast of Africa, founded by emancipated American slaves, with a constitution copied from that of the United States. The Senate has 8, and the House of Representatives 13 members. The President is W. D. Coleman, who, as Vice-President, succeeded to the office on the death of President J. Cheeseman, Nov. 13, 1896.

VILLAGE OF SAYPAN, LADRONE ISLANDS.

they came to the islands, and there are many wild hogs which here grow very large. The keraudren, a large bat, is the only indigenous mammal, and its flesh, though it has a very unsavory odor, is eaten by the natives. There are but few birds or insects, and one species of serpent and a few kinds of lizards are the only representatives of the reptiles. Fish swarm in the lagoons.

Guam contains six sevenths of all the population. The other inhabited islands are Rota, Tinian, Saypan, and Agrigan, the northern ones occupied only by a few fishermen. And in Tinian is a community of lepers.

When Anson visited Tinian he found there well-made houses, and outriggers that could make 20 knots an hour, but rude cabins and canoes have replaced these. The people have deteriorated, and though they have been baptized and taught to read Spanish, their agriculture and weaving are inferior to the former work of the natives, and the art of pottery, once practiced in the islands, has disappeared.

The Spaniards have maintained but one mail a year between Agana and Manila; so it is hardly surprising that the last Governor upon hearing, on May 20, 1898, the firing of guns from an American war vessel, could only conclude that he was being

The area of the republic is about 14,360 square miles, and the population is estimated at 1,068,000, of whom 18,000 are civilized negroes of Afro-American descent and 10,050,000 native tribal negroes.

The revenue, which is derived mainly from customs, for 1894 was \$158,861, and the expenditure \$151,975. A debt of £100,000 was contracted in 1871, but no interest has been paid since 1874. An internal debt has likewise been in default for many years. The chief exports are coffee, palm oil and kernels, rubber, cacao, sugar, arrowroot, ivory, and hides. The export trade in rubber was given to a syndicate, which undertook to take 200 tons a year for three years from 1896.

LIGHTHOUSES, RECENT PROGRESS IN. Development in lighthouses, during the past ten years, has taken the direction of steel construction in preference to stone for the structures, and the use of increased force and distinctness in the lights. Nearly all the recent towers built by the Lighthouse Board in the United States are of steel or iron, and Trinity House (a lighthouse board of Great Britain) has not erected any rock towers since 1887. This is owing partly to the lower price at which structural steel and iron can be obtained, and partly to the increased facility with which the material may be had in the desired shapes and sizes.

The total number of lighthouses and beacon lights maintained by the Lighthouse Establishment in the United States in 1898 was 1,179; but as this figure includes many insignificant lights on the seacoast and harbors, it may be safely assumed that only about 500 are lighthouses proper, and only a comparatively small number of these maintain lights of the first order. The increase in number in the past decade has been about 45 per

A MODERN STEEL TOWER, AT STURGEON BAY CANAL, WIS.,
WITH A LANTERN OF THE THIRD ORDER.

cent. In the United Kingdom the Admiralty list shows a total of about 1,100 lights, a gain of 200 in ten years. Eleven to 12 per cent. of these are sea lights of high power, and 6 to 7 per cent. are lightships. On the rivers of the United States the Lightship Board also maintains 1,739 post lights, which are shifted as required by changes in the channels.

In the United States mineral oil is preferred as an illuminant and is used almost altogether, though there are a few electric lights. In the United Kingdom either gas or petroleum are used for illuminating, according to convenience and local conditions, and in a few cases electric lights are used. While the light may be made to develop exceptional brilliance, it is not as acceptable for lighthouses as for illumination on land, because it is so much affected by atmospheric conditions. During foggy weather, when the strength and penetrating power of a light are most needed, the electric light is most liable to dim; hence its value on the water is much reduced, and although, when first introduced into lighthouse use, it was com-

mended, it is now generally regarded with small favor. In United States usage, six orders of lights are maintained: the first of 5 wicks, having 450 candle power; the second of 3 wicks, having 163 candle power; the third of 2 wicks, having 78 candle power; the fourth of 1 wick, having 32 candle power; the fifth of 1 wick, having 18 candle power; and the sixth of 1 flat wick, having 12.5 candle power. The light given out and the distance from which it can be seen vary so much under different conditions and with different observers that the candle-power statement hardly conveys a correct idea of the power of the lights. There is also a considerable difference in methods of estimating candle power. The experiments of the Lighthouse Board indicate that a white light of 1 candle power is visible at a distance of 1 mile, 2 candle power at 2 miles, 3 candle power at 3 miles, while at 4 and 5 miles the power has to be increased to 23 and 33 candle power respectively to be seen clearly. Of course, the conditions of the atmosphere as to dryness or humidity, dustiness or freedom from dust, are so varied that these figures can be taken only as approximate, giving a fair average in moderately clear weather. With colored lights the candle power requires to be increased enormously, as the colored glass absorbs a very large percentage of the light.

There has been a gradual tendency to increase the size of lanterns for sea lights, and 14 feet diameter has succeeded 12 in several instances. Circular galleries are provided both inside and outside for access and cleaning. The best plate glass, half an inch thick, is used, and there have been improvements in the ventilators. The use of mixed lights—that is, lights of both fixed and rotating sections—has materially decreased, and they are now regarded with disfavor. Colored lights also have been generally abandoned for sea lights, though still maintained in harbors. It was formerly thought to be an advantage to differentiate the colors of lights along a coast, in order that mariners might not mistake one light for some neighboring light; but this advantage has been more than offset by the loss in distance from which a colored light can be distinguished, and it is found possible to differentiate the lights of a coast equally well by giving a different time to the flashes. The flashing light not only proves the best safeguard against mistakes, but it increases materially the distance from which a light is perceptible. The general adoption of flash lights for sea use has been followed by a shortening of the period of the flashing. Whereas intervals of one minute were formerly employed between flashes, the periods are now commonly reduced to twenty, ten, or five seconds, and the tendency is toward an even greater reduction, as it has been demonstrated that the best results are obtained with the shortest appreciable intervals. Lord Kelvin has gone so far as to advocate the use of flashes separated only by fractions of a second.

The flashing of the light is obtained in the case of electric or other lights by regular occultation, as by a rotating annular lens bearing dark shades, and in the case of oil lights it is often obtained by regular raising and lowering of the wicks. In order that a light may be visible to the greatest distance, it is not only necessary to secure a short interval of flash, but it must also have the greatest intensity of beam. In other words, the greatest portion of the light must be turned in the desired direction, and this increased power has been sought by the substitution of annular for cylindrical lenses, and by rotating for fixed sections. Lenses have been given a longer focal distance and larger condensing surfaces. Variations and extensions of

the Fresnel refractors have been made to give a higher coefficient of beam. Charles A. Stevenson's improvements on the Fresnel lens have been introduced in several Scottish lighthouses, and are claimed to give an advantage of about 10 per cent. over the older forms.

There have been no important changes in burners within recent years. A mercury float carriage has been introduced with some of the new rapidly rotating lights erected in localities subject to seismic disturbances, the advantage being that the float is not disturbed by earth tremors.

The last report of the United States Lighthouse Establishment shows that 1,339 light keepers are employed, besides 1,226 assistants and 1,356 laborers. There are 50 light vessels, 439 day or unlighted beacons, and more than 5,000 buoys, of which 66 are electric or gas buoys.

LIQUEFIED AIR. Atmospheric air reduced to liquid form by cold and pressure. Its boiling point is -191°C ., its freezing point -207° and its density 0.933. It is noteworthy as being the first gas to be liquefied in large quantities.

History.—Gases were first liquefied by Michael Faraday, who reduced to liquid form by pressure cyanogen, carbon-dioxide, and others. As he did not succeed with all, he concluded that oxygen, nitrogen, hydrogen, and some other gases were permanent, and this distinction was made for some time. The discovery by Andrews of the "critical point"—that is, the discovery that for every gas there is a temperature above which pressure alone can not liquefy it—made it probable that the "permanence" of these gases was merely apparent, and was due to the fact that their critical points are very low. Efforts were therefore made to attain very low temperatures, and these have been rewarded by the final liquefaction of all gases, and the consequent abolition of the distinction between liquefiable and permanent gases. The failure to liquefy certain gases is now seen to have been due to the fact that their critical temperature is mostly below -100°C . Oxygen was first liquefied by the French physicist Cailletet, who obtained it in the form of mist by compressing it in a freezing mixture and then suddenly liberating it, thus further lowering its temperature. Pictet, another French experimenter, obtained the liquid gas in quantities large enough to be experimented upon by using a series of gases that had successively lower boiling points. By first liquefying sulphurous acid and then accelerating its evaporation with a vacuum pump he reduced its temperature to -65°C . With this he cooled carbonic acid gas, which was then liquefied by pressure and connected with the vacuum pump in its turn, and its temperature was thus lowered so that it is solidified and reached a temperature below the critical point of oxygen. By using a similar series, of which oxygen itself was the final member, Olszewski solidified nitrogen and other gases. The first to obtain, or at any rate to exhibit, liquefied atmospheric air in considerable quantities was Prof. James Dewar, of the Royal Institution in London. Concerning priority in the liquefaction of certain gases and the use of certain apparatus for this purpose, there has been a bitter controversy between him and Prof. Olszewski, regarding the merits of which scientific men are divided. Prof. Dewar, by means of a series of successive operations of the type just described, obtained in 1894 about two quarts of liquefied air, which he said cost him about \$5,000. In 1898 Charles E. Tripler, of New York, made a machine in which, using only the atmosphere itself as a refrigerating substance, he achieved the continuous liquefaction of air, so that it can be drawn off through a faucet in any desired quantity. Similar

devices have since been operated in Europe. Mr. Tripler's machine works on the principle of intensive refrigeration. Every one is familiar with the lowering of temperature produced by the sudden release of a compressed gas. It is this that causes the fog about the mouth of a bottle of beer or soda water when it is opened. The cooling is due to the conversion of heat energy into the mechanical energy of expansion. In Mr. Tripler's machine condensed air is permitted to cool to the temperature of the surrounding atmosphere and then allowed to expand suddenly, thus lowering its temperature further. This cooled air is used to cool other condensed air, by whose expansion the temperature is then lowered still more. By repeating the operation continuously, the air is finally reduced to the liquid state.

Mr. Tripler's apparatus consists of a triple air compressor, a cooler, and a liquefier. The compressor has three pumps in line on one piston shaft, the first giving 60 pounds to the square inch, the second 750, and the third 2,000. After each compression the air is cooled by passing it through jacketed pipes surrounded by city water, and after the third compression it is cleaned. It then passes to the liquefier where, by means of a special valve of Mr. Tripler's invention, whose details are not made public, a portion of it is allowed to expand and passes into the space between two concentric tubes, through the inner of which the remainder of the air is flowing. The latter is thus greatly cooled, and by a repetition of the process it is finally liquefied and may be drawn off from the valve at the bottom of the apparatus. Tripler's original apparatus, based on this principle, was used in 1890, and is only 12 inches long and $1\frac{3}{8}$ in diameter. His present plant will produce 30 to 40 gallons of liquid air in a working day of ten hours, with an expenditure of 40 to 50 horse power. The liquid appears in less than fifteen minutes after the first pump has been started. The properties of liquid air may be classified under three heads—those due to its low temperature; those due to the high pressure developed by its evaporation in a closed space; and those due to the fact that it speedily becomes much richer in oxygen than atmospheric air, since its nitrogen boils away faster than its oxygen.

Temperature.—The usual temperature of liquid air is that of its boiling point at ordinary atmospheric pressure, -191°C . or -320°F . This, of course, can not be raised by applying heat at atmospheric pressure, which only makes the liquid boil away faster. It could theoretically be raised by heating the liquid under pressure, but the pressure developed by its own expanding vapor (ordinary air) is so great that it can not safely be confined. The boiling point can be lowered by lowering the atmospheric pressure by means of a vacuum pump, and thus the liquid can be reduced to a temperature of -210°C . Notwithstanding this low temperature the hand may be dipped into the liquid with impunity, being protected by the formation of a layer of vapor, although severe frostbites result from continued or

careless handling. The most evident result of the low temperature of the liquid is the dense fog that surrounds it and proceeds from it, curling over the sides of the containing vessel and falling to the ground or floor where it gradually dissipates. In draining off the liquid from the compressor this fog accumulates in a cloud or bank on the floor, and its temperature is so low that the feet of the operator may be frozen if he is not careful.

The liquid is normally in a state of ebullition, whose violence varies with the surrounding temperature. On being poured, for instance,

FREEZING RUBBER BALL.

into an ordinary glass tumbler it begins by boiling violently, but soon the glass and surrounding air become cooled nearly to the temperature of the liquefied air, the glass is densely coated with hoarfrost, while the liquid becomes quieter and may be seen to be of a steel-blue tint. A tumblerful of it will boil away in a few minutes; a larger quantity—3 or 4 gallons—in a double-walled can, packed in felt, may last eight or ten hours. It must always be kept and transported in an open receptacle owing to the dangerously high pressure developed when it is confined; hence to keep it for any great length of time or to transport it to a distance is at present an impossibility. Prof. Dewar has invented a form of vessel known as the Dewar bulb, which reduces the loss by evaporation to a minimum, and in this about a gill of liquid air has been kept with great care for about forty hours. The Dewar bulb is a double-walled glass bulb having the air exhausted from the space between its walls and having one wall silvered. The vacuum prevents accession of heat by convection or conduction and the polished metal shuts off radiation.

Vaporization when the liquid is agitated or divided is much hastened. When a cupful of it is tossed into the air it descends in a shower of drops like water, but most of these vanish as by magic before they touch the ground. Objects placed in the liquid are quickly frozen solid. India rubber becomes brittle and can be broken to bits with a hammer; bread, eggs, or meat become similarly brittle, and even paper can be crumbled in the hand as if scorched. Sheet iron or tin plate can be broken with the hand. Whisky and mercury are frozen solid. The latter has the appearance of silver and a piece of it can be used to drive a nail or to sustain a weight. If liquefied air be placed in a teakettle over a fire the vapor is expelled through the spout to a great height, and water poured into the kettle is frozen solid while it is still over the fire. The bottom of the kettle becomes covered with solid carbon-dioxide in the form of "snow" while almost close to the red-hot coals of the fire.

Pressure.—The boiling point of the liquid being so low, the pressure necessary to bring this point up to the ordinary atmospheric temperature—that is, to cause the evolution of vapor to cease—is enormous. If the liquid is confined, therefore, ebullition will continue with the consequent production of gaseous

air, until this enormous pressure is reached. In practice the liquid can not be confined. Enough pressure is developed in a small tube to project a tightly driven cork with violence in a small fraction of a second, and the pressure soon becomes dangerous. The liquid must be kept and transported in open vessels, as noted above.

Oxygenation.—The boiling point of nitrogen being 13° C. below that of oxygen, nitrogen is distilled out in the first boiling, so that the liquid becomes steadily richer in oxygen, whose proportion very soon exceeds 75 per cent. The liquid as ordinarily experimented with is thus practically liquid oxygen, and its vapor is gaseous oxygen. All the familiar combustion experiments with oxygen can be performed in the vessel in which it is boiling. A sponge saturated with the liquid explodes when lighted, paper soaked in it burns vividly, and a steel pen or a watch spring burns when the end is heated red-hot and dipped in it. If a rod of carbon, such as is used in the electric arc light be heated to redness and then plunged into the liquid, very vivid combustion takes place, yet, owing to the low temperature of the liquid air, the other end of the carbon may be held in the hand. In this experiment the carbon at a temperature of about $5,000^{\circ}$ F. and the air at -312° F. are in actual contact, and this whole range of temperature may be included within an ordinary glass tumbler. The richness of the liquid in oxygen makes some of the experiments with it dangerous. Thus the freezing of whisky, alluded to above, produces a very powerful explosive, and the bringing of a lighted match into contact with the frozen alcohol would be disastrous.

The rapid increase in the proportion of oxygen in the liquid is strikingly shown by pouring some of it into water. Liquid nitrogen is lighter than water, having a specific gravity of 0.885, while liquid oxygen is heavier than water, its specific gravity being 1.124. The preponderance of nitrogen in the mixture causes it to float at first, but, as the nitrogen boils away, drops of oxygen begin to sink into the water. As they do so they are partially vaporized, and the gaseous oxygen, tending to rise through

EXPLODING A SPONGE.

the water, communicates a peculiar whirling motion to the drop and drives it up again. This motion may be continuously repeated. The drops, which may be as large as an inch in diameter, have been called "oxygen divers."

The magnetic properties of liquid oxygen may be shown by filling a test-tube with it, allowing for the escape of the vapor by a side tube. The test

tube may be attracted by an electro magnet, as if it were a piece of iron.

Applications.—Liquid air is not yet manufactured commercially, and is not on the market. Mr. Tripler's laboratory in New York is probably at present the only place in the United States where it can be obtained in quantities sufficient to perform the experiments described above. But there seems no reason to doubt that it can be produced in as large amounts as desired, and that it will be for sale in the near future. All sorts of applications have been foreseen for it, but no one of them has yet been put on a practical basis. They depend chiefly on the three properties enumerated above—namely, the low temperature of the liquid, the pressure of its vapor, and its high proportion of oxygen.

The low temperature of the liquid naturally suggests its employment for refrigerating. It has been suggested that it may be distributed in pipes, or that an open vessel containing it may take the place of a huge lump of ice in refrigerators. The impossibility of confining the air and the rapidity of its evaporation seem at present obstacles to the practical realization of these plans. Another plan for utilizing the low temperature of the air depends on the fact that the resistance of metallic conductors to electricity decreases as their temperature falls. It has been stated that at the temperature of the liquid a copper conductor of moderate size could be used to transmit to New York the energy of Niagara. At this temperature pure copper becomes fifteen times and pure iron twenty-three times as good a conductor as under ordinary circumstances. The liquid is also a fine insulator, so that, if an induction coil were immersed in it, the resistance of the coil would become enormously smaller and at the same time its insulation would probably be improved. Very low temperatures have recently been used in a variety of applications, as in the purification of chloroform and similar liquids by freezing, the treatment of alcoholic liquors, and even in the cure of certain diseases; and liquid air may prove a convenient and economical means of obtaining the temperature desired for such purposes.

The great pressure developed by the liquid when confined seems to some to promise a great future for it as a motive fluid. The trouble is that this pressure is so high as to be almost uncontrollable and explosive. If the liquid is kept in a closed tank the tank must be fitted with a safety valve which shall not allow the pressure to rise above a certain degree, and this would involve continual "blowing off," with loss. As the product of the liquid's evaporation under such conditions is ordinary compressed air, which has long been used for motors, there is no doubt that it could be so used in this instance, but whether the liquid air would be the cheapest source of compressed air may be doubted. The "Engineering News" (New York, April 14, 1898) considers it possible that liquid air will have a large use for power storage, since, although its employment would be more expensive than present systems, and would return a smaller proportion of the power originally applied, it has the advantage of compactness. Liquid air occupies only about one fourth the space of air at 2,500 pounds' pressure. In a pound is stored 139,000 foot pounds of energy, the equivalent of $4\frac{1}{2}$ horse power exerted for a minute. The writer estimates that only one tenth to one twentieth this amount of energy to the pound can be stored electrically, and only one fourth by heated water. The estimates made by this writer suppose a high degree of perfection in methods, and represent future possibilities rather than present results. Others regard his figures as too sanguine, and are not inclined to believe that liquid air will

ever be used in the way he suggests. If it is, it will doubtless be so used only where small bulk is of paramount importance, as in motor carriages or in torpedo propulsion.

The richness of liquid air in oxygen may be utilized in two ways: 1. By allowing the nitrogen to boil off and then collecting the gas from the residue, very pure oxygen can be obtained, and it is possible that this method may at some future time be employed commercially. 2. The liquid mixed with a combustible forms a high explosive, and it has been proposed by Prof. Ewing, in a paper before the London Society of Arts (March 2, 1898), to use it practically in this way. He would pour the liquid, containing 40 to 50 per cent. of oxygen, on bits of wood charcoal 0.0001 to 0.0002 cubic inch in size.

These are made into a sort of sponge by mixture with about one third their weight of cotton wool. In fifteen to thirty minutes all explosive power disappears by the evaporation of the liquid air, and it is only by inclosing the material in thick cartridge cases of paper that it is made to last as long as this. The explosive must therefore be mixed at or near the place where it is to be used. Satisfactory trials have been made near Munich, Bavaria, and it is claimed that even the fact that the mixture loses its explosive power so soon has the advantage that there can be no danger from unexploded charges, or from its use by criminals. If used, however, it will probably be found convenient chiefly where a considerable amount of blasting is to be done in one place, as in large quarries. It has also been proposed to employ the liquid air in diving operations, as a diver could easily carry a quart of the liquid, and this would furnish by evaporation 1,000 times its volume of gaseous air.

The effect of liquid air on living organisms does not seem to be as injurious as might be expected from its very low temperature. D'Arsonval (Paris Biological Society, June 9, 1898) says that, in experiments upon the action of liquid air on living tissues and membranes, he finds that actual contact does not take place, and that the liquid can even be swallowed. On drinking the liquid (about one tenth of a gill) mixed with champagne the stomach is at first distended, but is at once relieved by eructation. M. D'Arsonval kept bacilli in liquid air six days, and found that they were then still alive and capable of growth.

LITERATURE, AMERICAN, IN 1898. Only 42 fewer books were published during the year than in 1897, although the outlook for the publishing houses was far from favorable in the beginning of the year; thus 4,886 books are recorded, against 4,928 of last year, though it is to be taken into consideration that but 2,908 of these were by American authors, against 3,318 the work of native genius in 1897. Of books by English and other foreign authors (including new editions) 834 were manufactured in this country, compared with 495 last year, and the importations of books bound or in sheets were respectively 1,144 against 1,115. As a whole, the year showed a lower number of books published than any year since 1894, when 4,484 titles were recorded. The most marked increase shown in any department was, strange to say, in that of poetry. One hundred and eight more new books of poetry were sent out in 1898 than in 1897, and the number of new editions was considerably less. The quality, it may be observed, did not improve with the increase of quantity. More works

BURNING STEEL IN LIQUID OXYGEN.

of political and social science were also issued, more of history and general literature, and, especially, more juvenile books were sent out, while there was a marked increase in books on the fine arts and illustrated books, and a slight increase of fiction. The principal decrease shown was in law, theology, education, general science, biography, and mental and moral science. There were no really notable books in any department. The literature of the year was largely colored by the war with Spain, though few of the books called forth by it possess permanent interest or value.

Biography.—William Spohn Baker gave a minute presentation of "Washington after the Revolution, 1784-1799," supplementing his previous compilation, "The Itinerary of General Washington" during the Revolution, and from Sydney G. Fisher we had a glimpse of "The True Benjamin Franklin"; "Benjamin Franklin, Printer, Statesman, Philosopher, and Practical Statesman, 1706-1790," by Edward Robins, appeared in the "American Men of Energy Series"; Elbridge Streeter Brooks told "The True Story of Benjamin Franklin" for the "Children's Lives of Great Men," and "The Life of Benjamin Franklin, by Himself," edited by John Bigelow, went through a new fourth edition, revised and corrected, with additional notes, in three volumes. Abram English Brown gave us "John Hancock: His Book," a biography based upon the manuscript letters of the great patriot, and from Mellen Chamberlain we had "John Adams, the Statesman of the American Revolution," with other essays and addresses, historical and literary. "The Life of Charles Carroll of Carrollton, 1737-1832," with his correspondence and public papers, filled two volumes for which we are indebted to Kate Mason Rowland, and a second edition, revised and enlarged, appeared of "The Life of John Paterson, Major-General in the Revolutionary Army," by his grandson, Thomas Egleston. Vol. I of "Letters to George Washington and Accompanying Papers," published by the Society of Colonial Dames of America, and edited by Stanislaus M. Hamilton, covered the period from 1752 to 1756. Vol. V was issued of "The Life and Correspondence of Rufus King," edited by his grandson, Charles R. King, M. D. Elbert Hubbard conducted us on "Little Journeys to the Homes of American Statesmen," and Thomas Allen Glenn edited the first of three volumes devoted to "Some Colonial Mansions and those who Lived in them," with genealogies of the various families mentioned. The "Life and Administration of Sir Robert Eden," Governor of the Province of Maryland, 1768-76, was the subject of a monograph by Bernard Christian Steiner, in the "Johns Hopkins University Studies." Much interest attaches to Charles A. Dana's "Recollections of the Civil War; with the Leaders at Washington and in the Field in the Sixties," and to James R. Gilmore (Edmund Kirke) we are indebted for "Personal Recollections of Abraham Lincoln and the Civil War." "Best Lincoln Stories" were tersely told by James E. Gallaher, and Hamlin Garland added to the biographies of Grant "Ulysses S. Grant: His Life and Character." The "Life and Letters of Thomas Kilby Smith, Brevet Major-General U. S. Volunteers, 1820-1887," came from his son, Walter G. Smith. "Reminiscences of the Old Navy," from the journals and private papers of Captain Edward Trenchard and Rear-Admiral Stephen Trenchard, by Edgar Stanton Maclay, in an edition limited to 750 copies, cover a period of eighty years and contain the inside history of the navy during that time. Martin I. J. Griffin wrote "The History of Commodore John Barry," in an edition limited to 200 copies, and from Admiral S. R. Franklin we have "Memories of a Rear-Admiral

who has served for more than Half a Century in the Navy of the United States." James Barnes commemorated "The Hero of Erie (Oliver Hazard Perry)." "Here, There, and Everywhere" was the title of delightful reminiscences of Mrs. Mary E. W. Sherwood, Col. Thomas Wentworth Higginson recalled his "Cheerful Yesterdays," and "Princeton, Old and New," by James W. Alexander, contained recollections of undergraduate life. "Autobiographical Reminiscences" of Henry Ward Beecher were edited by T. J. Ellinwood from sermons and lecture-room talks; "Recollections of a Nonagenarian," by John C. Holbrook, D. D., and "Led on, Step by Step," by Anthony Toomer Porter, D. D., belong to clerical autobiography, and contain the experience of well-known and representative men; while from Henry Clay Trumbull, D. D., we have "War Memories of an Army Chaplain," which made their appearance at a peculiarly fitting time. "Seven Months a Prisoner," by J. V. Hadley, belonged to the same period. In the "American Explorers Series" appeared "Forty Years a Fur Trader on the Upper Missouri," the personal narrative of Charles Larpenteur, 1833-'72, in two volumes, and "The Journal of Jacob Fowler," narrating an adventure from Arkansas through the Indian Territory, Oklahoma, etc., to the sources of the Rio Grande del Norte, 1821-'22, both edited, with notes, by Dr. Elliott Coues, in editions limited to 950 copies. "Anti-Slavery Leaders of North Carolina" were the theme of John Spencer Bassett in the "Johns Hopkins University Studies." "Passages from the Correspondence and Other Papers of Rufus W. Griswold" were edited by his son, W. M. Griswold; "Memoirs and Letters of James Kent, L. L. D., late Chancellor of the State of New York," by his great-grandson and namesake, James Kent; and "Early Letters of George William Curtis to John S. Dwight: Brook Farm and Concord," by George Willis Cooke. A "Life of Samuel Sullivan Cox" was written by his nephew, William Van Zandt, and his friend Milton Harlow Northrup, and "Samuel E. Sewall: A Memoir," was from the pen of Nina Moore Tiffany. "The Life of David Dudley Field," by Dr. Henry M. Field, was a remarkable tribute from one brother to another of a distinguished family. Little need be said to recommend "Charles Carleton Coffin, War Correspondent, Traveler, Author, and Statesman," by Dr. William Elliot Griffis, or "Joseph Jefferson at Home," by Nathan Haskell Dole. M. A. De Wolfe Howe published sketches of "American Bookmen," and Mrs. Hattie Tyng Griswold "Personal Sketches of Recent Authors," while Ida Comstock Below gave a charming portrait of "Eugene Field in his Home." "Horace Mann and the Common School Revival in the United States" was contributed by Burke Aaron Hinsdale to the "Great Educators Series." "Eighty Years and More" (1817-1897) is the title of reminiscences of Mrs. Elizabeth Cady Stanton, which are supplemented by "The Life and Works of Susan B. Anthony," in two volumes, by Ida Husted Harper; "Frances E. Willard" was a memorial volume by Anna A. Gordon, which had an introduction by Lady Henry Somerset, with character studies and memorial tributes from all parts of the world; and "Frances E. Willard: The Story of a Noble Life," came from Florence Witts. "Eminent Missionary Women" were the subject of a small volume by Mrs. Annie Ryder Gracey. "Tennyson: His Home, his Friends, and his Work" were carefully reviewed by Elizabeth Luther Cary. "Jerome Savonarola: A Sketch," was written by Rev. J. L. O'Neil in commemoration of the fourth centenary of the death of the famous preacher, and "Petrarch: The First Modern Scholar and Man of Letters," had a selection of

his correspondence with Boccaccio and other friends, designed to illustrate the beginning of the Renaissance, translated by Prof. James Harvey Robinson and Henry Winchester Rolfe, and accompanied with an historical introduction and notes. "Heroic Personalities" were recalled by Dr. Louis Albert Banks, D. D., while the always interesting and romantic "Buccaneers and Pirates of our Coasts" were a novel theme for the pen of Frank R. Stockton. "De Soto and his Men in the Land of Florida" were followed with spirit and accuracy by Grace King, while Noah Brooks told "The Story of Marco Polo" anew. "Tuen, Slave and Empress," by Kathleen Gray Nelson, traced the remarkable career of the dowager ruler of China, while "The Story of Evangelina Cisneros, told by herself," contained also the story of her rescue written by Karl Decker, and was illustrated by Frederick Remington, T. Fleming, and others. "The Life of Henry Bradley Plant," the founder and president of the Plant system of railroads and steamships, by G. Hutchinson Snyth, outlined a successful business man. "A Memorial of a True Life" was the title of a biography of Hugh McAllister Beaver, by Robert E. Speer, and another earnest worker in the cause of Christianity was chronicled in "The Setting of the Crescent and the Rising of the Cross; or, Kamil Abdul Messiah: A Syrian Convert from Islam to Christianity," by Henry Harris Jessup, D. D. "A Yankee Boy's Success," by Henry Steele Morrison, narrating his experiences as a boy reporter, had an introduction by Chauncey M. Depew, and Will M. Clemens edited "The Depew Story-Book." "Black-Belt Diamonds" was the title of gems from the speeches, addresses, and talks of Booker T. Washington to students of Tuskegee Institute, Alabama, selected and arranged by Victoria Earle Matthews. A compilation by William S. Pelletreau of "Early Wills of Westchester County, New York, 1664-1784," contained also genealogical and historical notes; "Early Germans of New Jersey" had their history, churches, and genealogies revived by T. F. Chambers; while a collection of sketches of "Representative Deaf Persons of the United States of America" was edited by James E. Gallaher.

Criticism and General Literature.—Under this head are to be recorded several volumes of essays, notably "Exotics and Retrospectives," by Lafcadio Hearn; "Essays on Work and Culture," by Hamilton Wright Mabie; "As it Seems to Me: Essays," by Elbert Hubbard; "Music and Poetry: Essays upon some Aspects and Inter-Relations of the Two Arts," by Sidney Lanier, and "Essays in Dramatic Criticism," with impressions of some modern plays, by L. Dupont Syle. "The Principles and Methods of Literary Criticism" were examined by Prof. Lorenzo Sears, and Charles F. Johnson entered into the "Elements of Literary Criticism." Harriet Noble prepared a handbook for the study of "Literary Art" and Henry Spackman Pancoast "An Introduction to American Literature" as a companion volume to his previous "Introduction to English Literature." "Emerson and Other Essays," by John Jay Chapman, display much originality as well as ability, and from William Cranston Lawton we have a careful study of "The New England Poets," and a review of the "Successors of Homer." "The Bibliotaph and Other People," by Leon H. Vincent, proved sympathetic and entertaining; Lilian F. Field wrote "An Introduction to the Study of the Renaissance"; John Scott Clark proposed a laboratory method for "A Study of English Prose Writers"; and Vida Dutton Seader reviewed in graphic fashion "Social Ideals in English Letters." Rev. Greenough White edited papers of the English Club of Sevanee upon "Mat-

thew Arnold and the Spirit of the Age," and William G. Ward set forth "Tennyson's Debt to Environment" in a brief monograph. William H. Fleming told us "How to Study Shakespeare," and Frank M. Bristol advanced a theory concerning "Shakespeare and America." Kuno Francke proffered "Glimpses of Modern German Culture." Caroline Louisa White contributed a new study of the life and writings of "Aelfric" to the "Yale Studies in English," another issue of which was "Dryden's Dramatic Theory," by M. Sherwood. Caroline K. Sherman made a brief critical analysis of "Dante's Vision of God," and Walter Copeland, the author of "Greek and Roman Sculpture," treated exhaustively of "The Women of Homer." "Men and Manners of the Eighteenth Century" were described by Susan Hale for the "Chautauqua Reading Circle Literature"; "Home Life in Colonial Days" was from the practiced pen of Mrs. Alice Morse Earle; while Mrs. John King Van Rensselaer gave a picture of "The Goede Vrouw of Mana-hata at Home and in Society, 1609-1760." John C. Van Dyke wrote with subtle charm of "Nature for Its Own Sake," inaking what he termed first studies in natural appearances; Charles M. Skinner made us in love with "Do Nothing Days"; and from Dr. Charles Conrad Abbott we heard of "Clear Skies and Cloudy." "The Cross in Tradition, History, and Art" was the subject of an exhaustive study by Rev. William Wood Seymour. Mrs. Amelia Edith Barr treated of "Maids, Wives, and Bachelors" in the realm of reality, having so long successfully handled them in romance; Eliot Gregory, posing as "An Idler," dwelt on "Worldly Ways and Byways"; while Hamilton Wright Mabie contributed an introduction to "Our Conversational Circle," by Agnes H. Morton. "The Gentle Art of Pleasing" was suggested by Elizabeth Glover, and "Helps to Right Living" by Katharine H. Newcomb, while Mrs. Constance Cary Harrison (Mrs. Burton Harrison) discoursed of "The Well-bred Girl in Society." "Facts about Book Worms" as to their history in literature and work in libraries were vouchsafed by Rev. J. F. X. O'Connor, and the "First Report of a Book Collector," by William Harris Arnold, contained much specific information. "Myths and Legends beyond our Borders," by Charles M. Skinner, contained the folk tales of Canada and Mexico, while from Minnie Walton Myers we had a summary of "Romance and Realism of the Southern Gulf Coast," and from John Trotwood Moore "Songs and Stories of Tennessee." Collections of "Wit and Wisdom from many Minds" filled two volumes, and among other compilations are to be mentioned "Golden Thoughts from the Great Writers," arranged by Alfred J. Fuller, and "Treasure Bits," by Rose Porter; "Great Words of Great Americans," selected by Paul Leicester Ford, were supplemented by seven representative specimens of "Modern American Oratory"; "Choice Readings for Public and Private Entertainments," edited by Robert McLean Cumnock, went through a new revised and enlarged edition; while "A Century of Indian Epigrams," chiefly from the Sanskrit of Bhartrihari, were translated by Paul Elmer More. Nathan Haskell Dole offered a practical manual of corrections for "The Mistakes We Make" in history, language, and facts. The second annual volume of the "Cumulative Index to a Selected List of Periodicals," edited by the Cleveland (Ohio) Public Library, was issued, as was a second revised edition of the "American Library Association's List of Subject Headings for use in Dictionary Catalogues." Luther S. Livingston compiled "American Book Prices Current for 1898," of which a limited edition was published; "The Bookman Library Yearbook" for 1898 was edited by James Macarthur; "The Annual Literary Index,

1897," was the work of W. I. Fletcher and R. R. Bowker; the "Trade List Annual, 1898," and "Annual American Catalogue, 1897," were issued as usual, and A. Growell drew up a "Book Trade Bibliography in the United States in the Nineteenth Century." In the Thumb-Nail Series selections from Franklin's "Poor Richard's Almanack" were edited by Benjamin F. Smith, and Dickens's "Crick-et on the Hearth" had an introduction by Joseph Jefferson.

Education.—From the authority of Hon. W. T. Harris in matters of education there is no appeal, and his latest work upon the "Psychologic Foundations of Education," an attempt to show the genesis of the higher faculties of the mind, appeared in the "International Educational Series," of which it formed No. 37. Another issue of the same series was "The Study of the Child," a brief treatise on the psychology of the child, with suggestions for teachers, students, and parents, by A. R. Taylor, and from Louise E. Hogan we had "A Study of a Child," illustrated with over 500 original drawings by the child; "The Development of the Child" was also studied by Nathan Oppenheim. "New Methods of Education" were dwelt upon by J. Liberty Tadd, "The Meaning of Education, and Other Essays and Addresses" of Nicholas Murray Butler were collected into a volume, as were essays and addresses of President Charles W. Eliot, of Harvard, upon "Educational Reform." "University Problems in the United States" were discussed by President Daniel Coit Gilman, of Johns Hopkins University, and "The Evolution of the College Student" was briefly traced by President William De Witt Hyde, of Bowdoin. "Ideals and Programmes" in education, by Jean L. Gowdy, may be mentioned with Nora Archibald Smith's speculations as to "The Children of the Future." "The History of the Lowell Institute" was written by Harriette Knight Smith, and "The Story of Oberlin, the Institution, the Community, the Idea, the Movement," was told by Delavan D. Leonard, D. D. Among text-books are to be noted "The Automatic Instructor," a practical system for home study, by G. W. Read; "An Elementary Course in the Integral Calculus," by Daniel Alexander Murray, in the "Cornell Mathematical Series"; a "Course of Study in History and Literature," with suggestions and directions, by Emily J. Rice; "A Three Years' Preparatory Course in French," by Prof. Charles F. Kroeh; "Applied Physiology," for advanced grades, by Frank Overton, M. D.; a "Natural Advanced Geography," by Jacques W. Redway and Russell Hinman; a "Physical Geography," by William Morris Davis and William H. Snyder; "The New Century Speaker," for school and college, by Henry Allyn Frink; and "The Strength of Materials," a text-book for manual-training schools, by Mansfield Merriman.

Fiction.—Seven hundred and twenty-four new novels were published in 1898, and 181 new editions of novels, against 713 new books and 156 new editions in 1897. The number of books by American authors, including new editions, was exactly the same for both years, viz., 358. While many were excellent and had a large sale, not one attained striking prominence.

William Dean Howells told "The Story of a Play," and Henry James, in addition to his novel "In the Cage," published two short stories in one volume, exemplifying the power of "The Two Magics" of good and evil. "Red Rock," a chronicle of reconstruction, by Thomas Nelson Page, was widely read as illustrative of conditions prevalent in the South to-day; "Caleb West, Master Diver," was the hero of Francis Hopkinson Smith's latest story; and "The Adventures of François" were related by Dr. S. Weir Mitchell with much of the charm that char-

acterized "Hugh Wynne," and with painstaking accuracy of description and delineation. Harold Frederic's novel of "Gloria Mundi" was issued in book form, and from his facile pen we had also "The Deserter, and Other Stories," a book of two wars of widely different periods of time. Captain Charles King wrote "Ray's Recruit" and a "Wounded Name"; Arlo Bates, "The Puritans," of modern Boston; Albion W. Tourgée, "The Man who Out-lived Himself"; and Nathan Haskell Dole, "Omar the Tent-Maker," a romance of old Persia. Frank R. Stockton was amusing as ever in "The Girl at Cobhurst" and in describing "The Associate Hermits," while Paul Leicester Ford was responsible for "Tattle Tales of Cupid." John Kendrick Bangs published "Peeps at People" of distinction, taken by a typical female "interviewer" for the newspapers, and made us familiar with "Ghosts I have Met and Some Others." Richard Harding Davis laid the scene of his novel, "The King's Jackal," in Tangier, and "From the Other Side" was the title of stories of transatlantic travel by Henry B. Fuller (Stanton Page). Bret Harte told "Tales of Trail and Town" and "Stories in Light and Shadow," and "Tales of the Home Folks in Peace and War" came from Joel Chandler Harris. Mrs. Margaret W. C. Deland published a series of "Old Chester Tales." "The Loves of the Lady Arabella" were detailed by Molly Elliot Seawell; "The Duket Sperret" and the difficulties it created in a family among the Cumberland mountains of Tennessee was the theme of Sarah Barnwell Elliott; "Penelope's Progress" through Scotland was traced by Kate Douglas Wiggin (Mrs. Riggs); "A Revolutionary Love Story" and "The High Steeple of St. Chrysostom's" were the titles of two stories bound in one volume, by Mrs. Ellen Olney Kirk (Henry Hayes); while from Alice French (Octave Thanet) we had "The Heart of Toil" and "A Slave to Duty, and Other Women," both books of short stories, the first dealing, as its name indicates, with the relations between labor and capital. The names of well-known women are to be found on the title-pages of many of the novels of the year. Mrs. Sarah Pratt McLean Greene wrote amusingly of "The Moral Imbeciles"; Eliza Orne White's hero was distinguished as "A Lover of Truth"; "At the Sign of the Silver Crescent" was the latest from Mrs. Helen Choate Prince; Ellen Glasgow, the avowed author of "The Descendant," the anonymous novel of 1897 which aroused favorable comment, followed it with "Phases of an Inferior Planet"; Julia Magruder published two novels, "Struan" and "A Realized Ideal," while three represent the last work of Maria Louise Pool, entitled respectively "The Red Bridge Neighborhood," "A Golden Sorrow," and "Friendship and Folly." "Rosin the Beau" was a sequel to "Melody" and "Marie," by Mrs. Laura Elizabeth Richards, from whom we had also a sketch of "Love and Rocks." Mrs. Constance Cary Harrison (Mrs. Burton Harrison) traced the evolution of "Good Americans"; "A Great Love" was the theme of Mrs. Clara Louise Root Burnham, who published also "Latimer: A Story of Casco Bay," and "A Romance of Summer Seas" was the title of an old-fashioned love story by Varina Anne Jefferson Davis. Mrs. Harriet Prescott Spofford told "Priseilla's Love Story"; "Madam of the Ives" had her affairs finally adjusted by Elizabeth Phipps Train. "New York" was the suggestive title of a novel by Edgar Fawcett, and Julian Ralph was responsible for the flutterings of "An Angel in a Web." Volume I of a new library edition of the works of Edward Everett Hale contained "The Man without a Country, and Other Stories" of that well-known author, and among books more or less historical in char-

acter are to be mentioned "For Love of Country," a story of land and sea in the days of the Revolution, by Cyrus Townsend Brady; "A Yankee Volunteer," of the same period, by M. Inlay Taylor; "An Island Heroine," the story of a daughter of the Revolution, by Mary Breck Sleight; "The Continental Dragoon," a love story of Philipse Manor House in 1778, by Robert Neilson Stephens; "The Count's Snuff Box," a romance of Washington and Buzzard's Bay in the War of 1812, by George R. R. Rivers, and "A Herald of the West," during the same period, by Joseph A. Altscheler, the author of "A Soldier of Manhattan" and "The Sun of Saratoga," who published also a sequel to "The Rainbow of Gold," entitled "The Hidden Mine." "A Puritan Wooing," a tale of the great awakening in New England, was strongly told by Frank S. Child, and "Ye Lyttle Salem Maide," by Pauline Bradford Mackie, was of course a story of witchcraft. "Prisoners of Hope" was the title of a tale of colonial Virginia by Mary Johnston, and "The Gospel Writ in Steel," a story of the American civil war, by Arthur Paterson. "General Nelson's Scout" fought in the same conflict, according to Byron A. Dunn, and "In the Navy; or, Father against Son," was a story of naval adventures in 1861-'65, by Warren Lee Goss. "In the Depths of the First Degree" was a romance of the battle of Bull Run, by James Doran, and "Alicia," a tale of the American navy, by Alexis. Clinton Scollard returned to the days of Gian Galeazzo Visconti, the Great Viper, for his romance of "A Man at Arms"; and William H. Johnson brought to light and edited a sixteenth century chronicle entitled "The King's Henchman." "Rembrandt" was the hero of Walter Cranston Larned; "The Love of the Princess Alice," by Frank Kimball Scribner, carried us back to the Thirty Years' War, and the same author assisted Charles S. Bentley in the composition of "The Fifth of November." "Cartagena; or, The Lost Brigade" was a story of heroism in the British war with Spain, 1740-'42, by Charles W. Hall. Herman T. Koerner illustrated his own story of the Uplands of Baden in the seventeenth century, which was entitled "Beleaguered," and Italian life forty years ago was described in "The Twin Sisters of Martigny," by Joel Foote Bingham, D. D. The Chilian war of 1818 formed the background for Areher Philip Crouch's novel, "Señorita Montemar." "I am the King," by Mrs. Sheppard Stevens, was a tale of the Crusaders, and "In King's Houses" another of the reign of Queen Anne, by Mrs. J. C. R. Dorr, while "Her Majesty the King" was the title of a romance of the harem done into American from the Arabic by James Jeffrey Roache. In cheerful contrast was "David Harum," distinctively a story of American life, by Edward Noyes Westcott, strong and wholesome, original and tender; and from Madeleine Lucette Ryley we had another pen portrait of "An American Citizen." Other stories of a decidedly local flavor were "Penelope; or, Among the Quakers," by Richard H. Thomas, M. D.; "A Cape Cod Week," by Annie Eliot Trumbull, who wrote also "Rod's Salvation"; "Dwellers in Gotham," by Annan Dale; "The Gray House of the Quarries," on the Hudson river, by Mary Harriott Norris; "Jefferson Wildrider," by Elizabeth Glover; "Pearce Amerson's Will," by the gentle and genial Richard Malcolm Johnston; "Stories of the Cherokee Hills" and "Stories of Indiana," by Maurice Thompson; "The Spirit of Sweetwater," by Hamlin Garland; "The Blue Ridge Mystery," by Caroline Martin; "The Waters of Caney Fork," a romance of Tennessee, by Opie P. Read (Arkansas Traveler), who wrote also "A Yankee from the West"; "Cis Martin; or, Furriners in the Tennessee Mountains," by Louise R.

Baker; "Cinch, and Other Stories," by Miss Will Allen Dromgoole; "Under the Ban," a South Carolina romance, by Teresa H. Strickland; "Fortune's Tangled Skein" and "On the Winning Side," by Mrs. Jeannette R. H. Walworth; "Florida Alexander: A Kentucky Girl," by Eleanor Talbot Kinkead; "Juleps and Clover," by M. Vaughan Wilde; "At You-All's House," a Missouri nature story, by James Newton Baskett; "An Idyl of the Wabash, and Other Stories," by Anna Nicholas; "The M. M. C.," a story of the great Rockies, by Charlotte M. Vaile; "Told in the Rockies," by A. Maynard Barbour; "The Black Curtain," by Mrs. Flora Haines Loughead; "Way Out Yonder," the romance of a new city on Puget Sound, by William Lightfoot Visscher; "Moran of 'The Lady Letty,'" a story of adventure off the California coast, by Frank Norris, and four other stories of which California is the scene, viz.: "An Elusive Lover," by Virna Woods; "Within White Walls," by Allan Emory; "In Social Quicksands," by Mrs. Laban E. Smith; and "As a Man Lives," by Mary C. Ferris. "A Sister to Evangeline," by Charles George Douglas Roberts, purported to be the story of Yvonne Lamourie, and how she went into exile with the villagers of Grand Pré, and another Acadian romance was "Rose à Charlotte," by Marshall Saunders, the author of "Beautiful Joe." "The Señora's Granddaughters," by Mrs. Janie Pritchard Duggan, was a tale of modern Mexico; Mrs. Schuyler Crowninshield published "Where the Trade Wind Blows: West Indian Tales," and "Latitude 19," a romance of the same region, and George Cunyngnam Cunningham, "Tales from the Land of Mafiana." "Forest Lily," by James Donald Dunlop, D. D., had its scene laid in northern Ontario. "A Bride of Japan" was by W. Carlton Dawe, and "Madame Butterfly," a collection of Japanese stories, we owe to John Luther Long. Louis Becke and Walter Jeffrey were the joint authors of "The Mutineer," a romance of Pitcairn Island, and "Hassan, a Fellah," was a romance of Palestine, by Henry Gillman. "In Gold We Trust," by A. H. Frankel, pictured Ghetto life in America, as "Out of Mulberry Street," by Jacob A. Riis, did tenement life in New York city. Books which found readers were "The Marbeau Cousins," by Harry Stillwell Edwards; "Regret of Spring: A Love Episode," by Pitts Harrison Burt; "Unspotted from the World," by Mary Stewart; "As Having Nothing," by Hester Caldwell Oakley; "Miriam," by Gustav Kobbé; "The Judge," by Mrs. E. W. Peattie; "The Dull Miss Archinard," by Anne Douglas Sedgwick; "Annie Wynkoop, Artist," by Adelaide L. Rouse; "Phoebe Tilson," by Mrs. Frank Pope Humphrey; "The Celebrity: An Episode," by Winston Churchill; "Miss Theodora," by Helen Leah Reed, a story of the West End of Boston; "Fortuna: A Story of Wall Street," by James Blanchard Clews; "One of the Pilgrims," a bank story, by Anna Fuller; "Four Months After Date," a business romance, by Randall Irving Tyler; the "Tale of an Amateur Adventuress," by Elizabeth Kingsbury; "Warren Hyde," by Helen Riemensnyder; "Two Summer Girls and I," by Theodore Burt Sayre; "Her Ladyship's Elephant," by David Dwight Wells; "A Member of Congress," by William Wentworth; "An Experimental Wooing," by Tom Hall; and "A Country Tragedy," by F. Cameron Hall. W. G. Zeigler maintained "It was Marlowe." The woman question is dealt with in "The Gospel of Freedom," by Robert Herrick; "The Heterodox Marriage of a New Woman," by Mary Ives Todd; and "A Champion in the Seventies," by Edith A. Barnett. Divorce was the theme of "Bound by the Law," by Kate Tyson Marr, and "Let No Man Put Asunder," by Josephine Marié, presumably held the

same ground. "The Letter and the Spirit," by Cora Maynard, revealed the hollowness of society and discussed its evils. Charles Peale Didier, the author of "Twixt Cupid and Cræsus" and "R. S. V. P.," asked the leading question, "Would Any Man?" Thomas Cooper De Leon published "An Innocent Cheat" and "A Novelette Trilogy"; "The Embassy Ball," by Virginia Rosalie Coxé, was distinctively a novel of society life; and "The Title-Mongers," by William Farquhar Payson, was sufficiently suggestive of the plot. "She Who Will Not When She May," by Eleanor G. Walton, conveyed a useful lesson; "Waiting for the Signal," by Henry O. Morris, outlines a socialistic ideal of government, and the righting of the wrongs of labor; "The Money Captain," by Will Payne, was concerned chiefly with questions of finance in their bearing upon the administration of municipalities. "The Lost Word" was a Christmas legend of long ago, told by Henry Van Dyke, Jr., and "The Day Breaketh," by Fanny Alricks Shugert, belonged to the early days of Christianity; "Javan Ben Seïr," by Walter Kennedy, was a story of olden Israel, as was also "Lost Prince Almon," by Louis Pendleton. "The Son of Perdition," by Dr. William A. Hammond, found a new motive for the sin of Judas Iscariot, and from Sarah M. Burnham we had "The Roman's Story of the Time of Claudius I." Other novels having a more or less religious tone were "Victor Serenus," a story of the Pauline era, by Henry Wood; "Enoch, the Philistine," by Le Roy Hooker; "Pro Christo," the story of a royal Huguenot, by Mrs. Hattie Arnold Clark; "Toward the Glory Gate," a story of soul growth, by Julia McNair Wright; "Petronilla, the Sister," by Mrs. Emma H. Thayer; and "Hernani the Jew," a story of Russian oppression, by A. N. Homer. "Lucy Broad's Choice," by Mrs. A. M. Pickford, and "Philip Barton's Secret," by Mrs. May Anderson Hawkins, may be classed together, as may "Lone Point: A Summer Outing," by Grace Livingstone Hill; "Naomi," by Chara Broughton Conant; "The Story of Marthy," by S. O. H. Dickson; and "Miss Erin," by Mrs. M. E. S. Blundell. Temperance was the theme of "Beoni the Sphinx," by Ira L. Jones; "The Secret of the Cañon," by Rev. Adam Stump, was one of the "John Rung Prize Series," and told a true story in narrative form. Books of adventure include "Crooked Trails," written and illustrated by Frederic Remington; "Frontier Stories," by Cy Warman; "The General Manager's Story," by Herbert E. Hamblen (F. Benton Williams); "Under the Rattlesnake Flag," by F. A. Costello; "Four for a Fortune," by Albert Lee; and "Exiled for Lèse Majesté," by James Travis Whittaker, M. D. "In the Sargasso Sea," by Thomas A. Janvier, introduced us into the realm of the marvelous, to which belong "The War of the Worlds," by Henry G. Wells; "Armageddon," a tale of love, war, and invention in the future, by Stanley Waterloo; "The Lost Province: How Vansittart came Back to France," by Louis Tracy, intended as a sequel to "An American Emperor"; "The Recovered Continent," purporting to be a tale of the Chinese invasion yet to be, by Oto Mundo; "The Sack of Monte Carlo," by Walter Frith; "The Lost City," by Joseph E. Badger, Jr.; "The White Princess of the Hidden City," by David Lawson Johnstone; "The Awakening of Noahville," by Franklin H. North; "The Prince of Graves," by Alfred C. Fleckenstein; and "The Abduction of Princess Chriemhild," by Leroy F. Griffin, assisted by two friends. Mrs. Gertrude Franklin Atherton (Frank Lin) published no less than three works of fiction, "The Californians," "American Wives and English Husbands," and "The Valiant Runaways," the last a book for boys;

"Billy Hamilton" was the only venture of Archibald Claverling Gunter; while "Lost Man's Lane" was the title of a second episode in the life of Amelia Butterworth, by Mrs. Anna Katharine Green Rohlf. Richard Henry Savage wrote "In the Shadow of the Pyramids" during the last days of Ismail Khedive, and "In the Swin," a story of currents and undercurrents in gayest New York; Max Pemberton, "The Phantom Army" and "Kronstadt," the latter a story of Russian life; Clinton Ross (R.), "A Trooper of the Empress" and "Bobbie McDuff"; Linn Boyd Porter (Albert Ross) provided "A New Sensation"; and "Merivale," by James Robertshaw, presented phases of Southern life with sensational incidents. Another detective story was "A Prince of the Blood," by Julius A. Lewis; "Genma" was the story of a model, by Alexander McArthur; Lucy France Pierce told the mining story of "The White Devil of Verde"; Clayton Lemars betrayed "The Confessions of an American Citizen"; and Louis Lombardo described "The Vicious Virtuoso." "Cross Trails" was a Spanish-American novel, by Victor Waite. Other thrilling stories were "God's Pay Day," by Edgar Clifton Bross, and "Little Ethel; or A Sprig of Sumac," by Philip H. Smith, while novels of a psychologic turn were "As the Hart Panteth," by Hallie Erminie Rives; "Mr. De Lacy's Double," by Francis Eugene Storke; "The Mind Reader," by L. M. Phillips, M. D.; and "Word for Word and Letter for Letter," by Anthony J. Drexel Biddle. "My Invisible Partner," by Thomas S. Denison, dealt largely with the supernatural, and "Doomsday," by Crabtree Hemenway, was a weird romance, while "Houses of Glass," by Wallace Lloyd, M. D., purported to be a philosophical one. In conclusion may be mentioned "A Pedigree in Pawn," by Arthur H. Veysey; "With Gyves of Gold," by Henry Athey and A. Herbert Bowers; "Two Odd Girls; or, Douglas Rock's Secret," by John A. Peters; "Flames and Ashes," by Alice de Carret; "Rondo," by Cyril Norman; "Maylou," by Frances Raymond; and Robert W. Chambers's two books, "Ashes of Empire" and "The Haunts of Men." "Via Lucis," while its author, Cassandra Vivaria, was a young Italian girl, was written in English and published first in America.

Volumes of short stories published during the year bore the names of some of our best writers on their title-pages. "The Open Boat, and Other Tales of Adventure," were by Stephen Crane; "Silence, and Other Stories," by Mary E. Wilkins; "Moriah's Mourning, and Other Half-hour Sketches," by Ruth McEnery Stuart; "The Woodley Lane Ghost, and Other Stories," by Mrs. Madeleine Vinton Dahlgren; "Comedies and Errors," by Henry Harland; "The Queerest Man Alive, and Other Stories," by Rev. George Hughes Hepworth; and "Southern Stories," by George Cary Eggleston. "Folks from Dixie" were described by the negro poet Paul Lawrence Dunbar; W. D. Howells supplied a prefatory sketch to "The Blind Man's World, and Other Stories," of Edward Bellamy; "Dumb Foxglove, and Other Stories," were by Annie Trumbull Slosson; "A Maid of the Frontier" was the title of nine short stories by Henry Spofford Canfield, and "The Sea of Love," of ten, by Walter Phelps Dodge. "The Man who Worked for Collister," by Mary Tracy Earle, and "The Instinct of Stepfatherhood," by Lillian Bell, were the titles of collections of short stories, and from Agnes Blake Poor we had "Boston Neighbours in Town and Out"; from Charles Belmont Davis, "The Borderland of Society"; "The Prodigal's Daughter, and Other Tales," came from Lelia Hardin Bugg; "The Hundred, and Other Stories," from Gertrude Hall; and "Some Marked Passages,

and Other Stories," from Jeanne G. Pennington. "Told in the Twilight" was the title of stories told and illustrated by Blanche McManus; "Tales of the City Room," by Elizabeth G. Jordan, relate to newspaper life; and Mabel Clare Ervin detailed adventures "As Told by the Type-writer Girl." "The Paper Boat" was a collection of yachting stories, by Paliurus; W. W. Jacobs, the author of "Many Cargoes," gave us "More Cargoes"; and "Spun Yarn" was the title of sea stories by Morgan A. Robertson. "Rodman the Boat-steerer, and Other Stories," were by Louis Becke, and "Fantastic Fables" by Ambrose Bierce. "The Imported Bridegroom, and Other Stories of the New York Ghetto," came from Abraham Cahan; James Gardner Sanderson contributed "Cornell Stories," and David Gray "Gallops." "Tales from McClures: War," contained true stories of camp and battlefield, by Gen. Nelson A. Miles, Musgrove Davis (Charles O. Shepard), T. J. Mackey, and others. "The Eerie Book" was edited by Margaret Armour, and contained tales of the supernatural from various writers of distinction.

Fine Arts.—"The Column and the Arch" was the title of essays on architectural history by William Pitt Preble Longfellow. M. S. Emery told us "How to Enjoy Pictures," a special chapter on pictures in the schoolroom being contributed by Stella Skinner. A book of elementary instruction in "Water-Color Painting" was illustrated by the author, Grace Barton Allen, and "In Nature's Image" was the title of chapters on pictorial photography by W. I. Lincoln Adams, and Julius Klinger offered 100 "Sketches for Lithographers and Designers," in modern style. Henry E. Krehbiel was an authority upon "Music and Manners in the Classical Period," and Hannah Smith told of "Music: How it came to be what it is." William James Henderson asked "What is Good Music?" offering suggestions to persons desiring to cultivate a taste in musical art. "Book-Plates—Old and New" were the theme of J. A. Gade. "The Training of a Craftsman," by Frederic Miller, was illustrated by many workers in the art crafts. Among illustrated volumes may be mentioned "Venice of To-day," described and pictured by F. Hopkinson Smith; "Lest we Forget," army and navy pictures of the late war with Spain; "Cartoons of our War with Spain," by Charles Nelan; "The Life of Our Lord in Art," by Estelle M. Hurl; "Angels in Art," by Clara Erskine Clement Waters; "Love in Art," by Mary Knight Potter; Hamilton Wright Mabie's "In the Forest of Arden," illustrated by Will H. Low; a superb volume of "Sketches and Cartoons," by Charles Dana Gibson, containing 84 of his best; "Drawings" of Charles H. Johnson, A. de Smith Thulstrup, W. Grauville, and others, in four volumes; "Ten Drawings in Chinatown," by Ernest C. Peixotto, with certain observations by Robert Howe Fletcher; and an *édition de luxe* of "A God-Child of Washington: A Picture of the Past," by Katharine Schuyler Baxter. "The Homeric Palace" was the subject of a study by Norman Morrison Isham; Henry C. Lahee commemorated "Famous Singers of To-day and Yesterday"; and "Miss America," by Alexander Black, contained pen and camera sketches of the American girl. Among illustrations of familiar books by standard authors is to be noted "The Pilgrim's Progress," in large folio edition, with 120 original designs by three brothers, George Wooliseroft Rhead, Frederick Rhead, and Louis Rhead. The Pawnee edition of Irving's "Adventures of Captain Bonneville" appeared in two volumes, and a holiday edition of Lew Wallace's "Fair God" was issued. "Life's Book of Animals" was composed of draw-

ings by E. W. Kemble, T. S. Sullivant, Henry Mayer, and others, and from E. W. Kemble we had three characteristic volumes, "The Billy Goat and Other Comicalities," "Comical Coons," and "A Coon Alphabet." Charles Henry Hart published a work entitled "Browere's Life Masks of Great Americans."

General Science.—"The Sphere of Science," by Frank Sargent Hoffman, made a study of the nature and method of scientific investigation, and Henry White Warren published popular studies "Among the Forces" of Nature. "Matter, Energy, Force, and Work" was a plain presentation of fundamental physical concepts and of the vortex-atom and other theories, by Silas Whitcomb Holman, and Arthur E. Chapman compiled "Every-Day Science" for the "Epworth League Reading Course." A second revised edition was issued of Edmond Kelly's work upon "Evolution and Effort," and Prof. David Starr Jordan published "Footnotes to Evolution," a series of popular essays on the evolution of life, with supplemental essays by Edwin Grant Conklin, Frank Mace McFarland, and James Perrin Smith. Prof. Nathaniel Southworth Shaler traced "Outlines of the Earth's History" in a popular study in physiography; a new revised edition was issued of Prof. Joseph Le Conte's "Compend of Geology"; and Prof. Israel Cook Russell contributed "Rivers of North America," a reading lesson for students of geography and geology, to the "Science Series," another issue of which was "Earth Sculpture," by J. Geikie. "Cave Regions of the Ozarks and Black Hills" were described by Luella Agnes Owen, and polar papers, under the title of "The Great Polar Current," were published by Henry Mellen Prentiss. "Penikese: A Reminiscence by one of its Pupils," was given to the public by Frank H. Lattin. Vol. I of "Annals" of Lowell Observatory appeared during the year; David P. Todd published "A New Astronomy for Beginners." "The Earth and the Sky" was intended as a primer of astronomy for young readers, by Edward S. Holden, somewhat in line with which was "Astronomy: The Sun and His Family," by Mrs. Julia MacNair Wright. "The Story of Life in the Seas" was written for "Appleton's Library of Useful Stories," by Sidney J. Hickson. "The Living Organism" was an introduction to the problems of biology, by Alfred Earl. "Four-Footed Americans," by Mabel Osgood Wright, was edited by Frank M. Chapman and illustrated by Ernest Seton Thompson, who published a series of biographies of "Wild Animals I have known," beautifully illustrated with 200 drawings, not exactly designed as a text-book of natural history, but utilizing information which has come to him as naturalist to the Canadian Government of Manitoba, and investing it with an almost human interest. "The Animal World: Its Romances and Realities," was compiled and edited by Frank Vincent as a reading book of zoölogy, and "Familiar Life in Field and Forest," by Ferdinand Schuyler Matthews, was devoted to the animals, birds, frogs and salamanders. Clara Dillingham Pierson was at home "Among the Forest People"; Wesley Mills investigated the "Nature and Development of Animal Intelligence"; and Edward Payson Evans treated of "Evolutional Ethics and Animal Psychology." "Mollusks of the Atlantic Coast of the United States, South to Cape Hatteras," were treated by Austin C. Aggar, and from the same authority we had also "Birds of the United States East of the Rocky Mountains," a manual for the identification of species in hand or in the bush. Dan Giraud Elliot published a superb volume upon "The Wild Fowl of the United States and British Possessions; or, The Swan, Geese, Ducks, and Morgansers of

North America"; William E. D. Scott illustrated from original photographs his "Bird Studies," which gave an account of the land birds of Eastern North America; "Birds of Village and Field" was a bird book for beginners, by Florence A. Merriam; Neltje Blanchan (Mrs. Nellie Blanchan (De Graff) Doubleday) in "Birds that Hunt and are Hunted" gave life histories of 170 birds of prey, game birds, and waterfowl, which had an introduction by Coquina (G. O. Shields). P. M. Silloway published "Sketches of some Common Birds"; H. E. Parkhurst told "How to Name the Birds"; Leander S. Keyser added "News from the Birds" to the "Natural History Series" of "Appletons' Home Reading Books"; "Cruoe's Island" was a bird-hunter's story, told by F. A. Ober, for the same; and "Bird World" was a bird book for children, by J. H. Stickney and Ralph Hoffman. The first of eight sections to contain "Moths and Butterflies of the United States East of the Rocky Mountains," by Sherman F. Denton, was issued, and from W. J. Holland, D.D., we had "The Butterfly Book," a popular guide to the butterflies of North America, with 48 plates in color photography, and many text illustrations. George W. and Elizabeth G. Peckham investigated "The Instincts and Habits of Solitary Wasps." Vol. XI of the 12 which will contain "The Silva of North America," by Charles Sprague Sargent, was issued; Liberty Hyde Bailey published "Lessons With Plants" and also a "Sketch of the Evolution of our Native Fruits." A collection of essays on "Living Plants and their Properties," by Joseph C. Arthur and Daniel Trembley MacDougal, made a volume full of interest, and from Charles Reid Barnes we had "Plant Life considered with Special Reference to Form and Function." "First Lessons with Plants" were an abridgment from Liberty Hyde Bailey's "Lessons with Plants"; George Francis Atkinson wrote an "Elementary Botany"; Mrs. Julia MacNair Wright, "Botany: The Story of Plant Life"; Clarence Moores Weed, "Seed Travellers," studies of the methods of dispersal of various common seeds; Volney Rattan, "Exercises in Botany for the Pacific States" and a "West Coast Botany"; and Mary Elizabeth Parsons, "The Wild Flowers of California," intended to complement Mrs. Dana's instructions "How to Know the Wild Flowers." Thomas Taylor, M. D., published a "Student's Handbook of Mushrooms of America," showing those edible and poisonous. "The Discharge of Electricity through Gases" was the theme of lectures delivered by Joseph J. Thomson on the occasion of the sesqui-centennial of Princeton University. "The Telephone," by William J. Hopkins, traced outlines of the development of transmitters and receivers; "Magnets and Electric Currents" was an elementary treatise for the use of electrical artisans and science teachers, by John Ambrose Fleming; and James Edwin Houston was the author of "A Pocket Dictionary of Electrical Words, Terms, and Phrases." A "Text-book of Physical Chemistry" was written by Prof. Clarence L. Speyers for self-instruction as well as class-room use; a new edition of "A Manual of Inorganic Chemistry," by Thomas E. Thorpe, in two volumes, was practically a new work, the original being wholly recast and for the most part rewritten. Ernest A. Congdon offered "A Brief Course in Qualitative Analysis"; E. T. Ladd, "A Manual of Quantitative Chemical Analysis"; and "Outlines of Industrial Chemistry" was a text-book for students, by Frank Hull Thorp. "The Story of Photography" was told briefly for "Appletons' Library of Useful Stories," by Alfred T. Story. An "Introduction to the Study of North American Archeology" was an instructive and exhaustive work by Cyrus Thomas; "Creation Myths

of Primitive America," in relation to the religious history and mental development of mankind, were examined by Jeremiah Curtin; and "Traditions of the Thompson River Indians of British Columbia" were collected by James Teit and published as Vol. VI of the "Memoirs of the American Folk-Lore Society," with an introduction and notes by Frank Boas. "Folk-Stories of the Northern Border" were collected by Frank D. Rogers, and "The Magic of the Horseshoe," with other folklore notes, came from the pen of Dr. Robert Means Lawrence. "Bird-Gods of Ancient Europe," by Charles de Kay, late consul-general of Berlin, contained much curious and unusual information, and was illustrated by George Wharton Edwards. "The Smithsonian Institution, 1846-1896," edited by Prof. George Brown Goode, covered the history of its first half century of existence, and here may be mentioned a second edition of "A Catalogue of Scientific and Technical Periodicals, 1665-1895," by Henry Carrington Bolton, published by the Smithsonian.

To intellectual science belong "Outlines of Descriptive Psychology," a text-book of mental science for colleges and normal schools, by Prof. George Trumbull Ladd; "Essentials of Psychology," by Colin S. Buell; "The Psychology of Suggestion," a research into the subconscious nature of man and society, by Boris Sidis, which had an introduction by William James; "A Primer of Psychology," by Edward Bradford Titchener; "Truth and Error; or, The Science of Intellection," by Major John W. Powell; and "The Story of the Mind," told by James Mark Baldwin for "Appletons' Library of Useful Stories." "The Problems of Philosophy" were rehearsed by John Grier Hibben in an introduction to the study of philosophy; "Theories of the Will in the History of Philosophy" were gone over by Archibald Alexander; Alexander Sutherland traced "The Origin and Growth of the Moral Instinct"; "Studies of Good and Evil" was the title of a series of essays upon problems of philosophy and of life by Josiah Royce; and from D. P. Hatch we had two volumes, "Some Philosophy of the Hermetics" and "Some More Philosophy of the Hermetics." "The Metaphysics of Balzac, as Found in 'The Magic Skin,' 'Louis Lambert,' and 'Seraphita,'" were discussed by Ursula N. Gestefeld.

History.—Although, as a nation, we were engaged in making history during the year 1898, we yet found time to produce many historical books of value. "A Constitutional History of the American People, 1776-1850," by Francis Newton Thorpe, in two volumes, traced the evolution of our Government during the period named, and from Albert Bushnell Hart we had the second volume of "American History told by Contemporaries," covering the "Building of the Republic, 1689-1783." "Select Documents illustrative of the History of the United States, 1776-1861," were edited with notes by William Macdonald, and "The First Republic in America" was an account of the origin of this nation written from the records then (1624) concealed by the council, rather than from the histories then licensed by the crown, for which we were indebted to Alexander Brown. The latest phases of the controversy over "The Voyages of the Cabots" were published in book form by the author, Samuel E. Dawson, from the "Transactions of the Royal Society of Canada for 1897"; Henry Harris contributed a "Diplomatic History of America, 1452-1494"; William Elliot Griffis wrote of "The Pilgrims in their Three Homes—England, Holland, America," for the "Riverside Library for Young People," and also added to "The Romance of American Colonization: How the Foundation Stones of our History were Laid"; "Heroes of the Middle West:

The French," were the theme of a booklet by Mrs. Mary Hartwell Catherwood, intended for young people; and "The Colonies," by Helen Ainslie Smith, was edited by S. T. Dutton. In the "Harvard Historical Studies" "The Provincial Governor in the English Colonies of North America" was the theme of Everts Boutell Greene. Two handsome volumes contain "The Story of the Revolution," by Henry Cabot Lodge, the illustrations of which were nearly 200 in number; William S. Stryker made studies of "The Battles of Trenton and Princeton"; and Mary Shelley Peehlin compiled the "Anniversary Book of the American Revolution." "A French Volunteer of the War of Independence," the Chevalier de Pontgibaud, gave a striking view of the men and times, as translated and edited by Robert Douglas. Edward Channing wrote "A Student's History of the United States"; Wilbur F. Gordy, "A History of the United States, for Schools"; Edward S. Ellis "A History of our Country"; and a new revised and enlarged edition was issued of "The Story of America," by Hezekiah Butterworth, reviewing, in particular, the attitude of the United States toward the liberation of Cuba. James Morton Callahan considered "The Neutrality of the American Lakes and Anglo-American Relations" in the "Johns Hopkins University Studies." An illustrated edition of John Fiske's history of "The Beginnings of New England" was issued, and to early days belonged a "History of Brulé's Discoveries and Explorations, 1610, 1626," by Consul Willshire Butterfield, a narrative of the discovery by Stephen Brulé of Lakes Huron, Ontario, and Superior, and of his explorations (the first made by civilized man) of Pennsylvania and western New York, etc., accompanied with a biographical notice. "A Quaker Experiment in Government," by Isaac Sharpless, traced the connection of this religious sect with the government of Pennsylvania from 1682 to 1756; Charles Orr edited with notes and an introduction the "History of the Pequot War"; a reprint of the contemporary accounts by Mason, Vincent, Gardener, and Underhill, from the "Collections of the Massachusetts Historical Society"; and Vols. X to XXXII inclusive were issued of "The Jesuit Relations and Allied Documents," edited by Reuben Gold Thwaites. "Red Patriots," by Charles H. Coe, contained the story of the Seminoles, and "Indians and Pioneers," by Blanche E. Hazard, was intended as a historical reader for the young. "Leading Events of Wisconsin History," by Henry E. Legler, contained the story of the State; Royall Bascom Smithy wrote a "History of Virginia" for schools; a new edition was published of "Florida: Its History and its Romance," by George R. Fairbanks; and "West Florida and its Relations to the Historical Cartography of the United States," was briefly considered by Henry E. Chambers in the "Johns Hopkins University Studies," another issue of which was "The Transition of North Carolina from Colony to Commonwealth," by Enoch Walter Sikes. "The Secession and Reconstruction of Tennessee" was the subject of a dissertation submitted by James Walter Fertig in candidacy for the degree of doctor of philosophy of the University of Chicago; Albert Bushnell Hart contributed an introduction to "The Underground Railroad from Slavery to Freedom," by Wilbur H. Sievert; "The Liberty and Free Soil Parties in the Northwest" were the theme of the Toppan prize essay of 1896, by Theodore Clarke Smith, published in the "Harvard Historical Studies"; and from William Archibald Dunning we had a collection of "Essays on the Civil War and Reconstruction, and Related Topics." Part II of "The Origin and Growth of the English Constitution," as traced by Hannis Taylor, covered "The Aftergrowth of the Constitution," and brought us down

to the legislation of the last few years. Two volumes were devoted by Charles McLean Andrews to the "Historical Development of Modern Europe from the Congress of Vienna to the Present Time," and from Ferdinand Schwill we had a "History of Modern Europe" with maps and genealogical tables. "Twenty Centuries of English History" were condensed by James R. Joy for the "Chautauqua Reading Circle Literature." "The Rise of the Dutch Republic: The Student's Motley," was the title of a condensation by William Elliot Griffis of the work of that historian, accompanied with an introduction and notes, and with a sketch of the Dutch people from 1584 to 1897. "Contemporary American Opinion of the French Revolution" was the subject of an essay by Charles Downer Hazen. "The Awakening of a Nation: Mexico of To-day," was the significant title of Charles Fletcher Lummis's book upon the recent development of that republic. "Hawaii's Story, by Hawaii's Queen," Liliuokalani, was an autobiographical narrative of her relations to the people of those summer islands, while "Hawaii and a Revolution," by Mary H. Kront, contained the personal experiences of a correspondent in the Sandwich archipelago during the crisis of 1893 and subsequently. "The Spaniard in History" was a terrible and truthful indictment, by Rev. James C. Fernald, of the nation with which we were engaged in conflict during the year. Moses Bernard chronicled "The Establishment of Spanish Rule in America," and "South America" was a popular illustrated history of the struggle for liberty in the Andean republics and Cuba, by Hezekiah Butterworth. "Four Centuries of Spanish Rule in Cuba: or, Why we went to War with Spain," by Italo Emilio Canini, brings us to the numerous histories of the recent conflict. These include "The War with Spain," by Charles Morris, who wrote also of "The Nation's Navy: Our Ships and their Achievements"; "A Short History of the War with Spain," by Marriion Wilcox; a "History of our War with Spain," by Henry B. Russell; a "History of the Spanish-American War," by Henry Watterson; "The Conflict with Spain," written with remarkable vividness of description by Henry F. Keenan (Dunois), the author of "Trajan," "The Money-makers," etc.; "The Santiago Campaign," by Major-Gen. Joseph Wheeler; "Marching with Gomez," by Grover Flint, a war correspondent's field note-book kept during four months with the Cuban army, which had an historical introduction by John Fiske; "Letters of a War Correspondent," by Charles A. Page, edited, with notes, by James R. Gilmore; Richard Harding Davis's review of "The Cuban and Porto Rican Campaigns"; "Cannon and Camera," sea and land battles of the Spanish-American war in Cuba, camp life, and the return of the soldiers, described and illustrated by John C. Hemment; "The Boys of '98," by James Otis Kaler; "In the Saddle with Gomez," by Capt. Mario Carrillo; "The Fall of Santiago," by Thomas J. Vivian; "The Gatlings at Santiago," by Lieut. John H. Parker; "Our Navy in the War with Spain," by John R. Spears, author of "The History of our Navy"; "With Dewey at Manila," edited by Thomas J. Vivian, from the notes and correspondence of an officer on board the flagship "Olympia"; and "A Gunner Aboard the 'Yankee,'" edited by H. H. Lewis, from the diary of Number Five of the afterport gun, which had an introduction by Admiral W. T. Sampson. "The Story of the Philippines" was written by Murat Halstead, who published also "Our Country in Time of War, and Relations with all Nations." "The Spanish Revolution, 1868-1875," by Edward Henry Strobel, follows an interesting period of Spain's modern history. Vol. LX of "Historical Tales: The Romance of Reality," by

Charles Morris, was given to the Spanish, while Vol. VII was devoted to Russia and Vol. VIII to Japan and China. "The Story of Canada" was written for the "Story of the Empire Series," by Howard Angus Kennedy. The history of "The Great Salt Lake Trail," by Col. Henry Inman, in collaboration with Col. William F. Cody (Buffalo Bill), intended as a companion volume to "The Old Santa Fé Trail," attained almost to the dignity of history while it formed most entertaining reading; it was illustrated by F. Cowan Clarke and Thomson Willing. "A History of the Twelfth Regiment New Hampshire Volunteers in the War of the Rebellion" was written by A. W. Bartlett; a "History of the Sixteenth Regiment New Hampshire Volunteers," by Luther Tracy Townsend, and a "History of the Seventeenth Regiment New Hampshire Volunteer Infantry, 1862-1863," by Charles N. Kent; while "The Story of a Cavalry Regiment, 'Scott's Goo,'" by Thomas Smith, contained the record of the Eleventh New York Cavalry, from the St. Lawrence river to the Gulf of Mexico, 1861-65. A new edition was issued of Katharine Prescott Wormeley's showing of "The Cruel Side of War with the Army of the Potomac," the title being changed from "The Other Side of War," while "Fighting for Humanity; or, Camp and Quarter-deck," by Gen. Oliver Otis Howard, told of relief work done in conjunction with the Salvation Army in the Southern camps and in Cuba during the war with Spain. "The Earliest Colonial Laws of Rhode Island" filled three volumes, and were reprinted in limited editions by Sidney S. Rider, who accompanied them with historical introductions. A. H. Clark compiled "A Complete Roster of Col. David Waterbury, Jr.'s Regiment of Connecticut Volunteers," the first regiment of infantry responding to a call for volunteers for the defense of New York city against the British in the American Revolution. "Pictures of the City of Washington in the Past," by Samuel C. Busey, M.D., gave a political and social history of that city; "How the Dutch came to Manhattan" was penned and pictured by Blanche McManus in the series of "Colonial Monographs"; Vol. II of "Historic New York" contained the second series of the "Half Moon Papers," edited by Mrs. Maud Wilder Goodwin, Alice Carrington Royce, Ruth Putnam, and Eva Palmer Brownell; John Sawyer wrote the "History of Cherry Valley, from 1740-1898"; Spencer Trask commemorated the small park at the extreme end of Broadway known as "Bowling Green"; "Historic Towns of New England," in the series of "American Historic Towns," had an introduction by George Perry Morris, and was edited by Lyman P. Powell; an expensive "History of Barrington, R. I.," was issued in a limited edition by Thomas W. Bicknell; "Historic Boston and its Neighborhood" was an historical pilgrimage personally conducted by Edward Everett Hale, arranged for seven days; "Silas Wood's Sketch of the Town of Huntington, Long Island," from its first settlement to the end of the American Revolution, was edited with genealogical and historical notes by William S. Pelletreau; and Churchill Gibson Chamberlayne transcribed and published "The Vestry Book and Register of Bristol Parish, Virginia, 1720-1789." A "History of the World," from the earliest historical time to the year 1898, was written by Edgar Sanderson for Appleton's Concise Library. A new library edition of the "Works" of Francis Parkman, in twelve volumes, was issued during the year, and the series of "American Colonial Tracts" was carried on.

Jurisprudence.—Fewer books are to be recorded in this department of literature than for some years past. "The Science of Law and Law Making," by L. Floyd Clarke, was intended as an introduction

to law, giving a general view of its forms and substance and a discussion of the question of codification. Edwin H. Woodruff wrote a brief "Introduction to the Study of Law." "A Treatise on the Constitution and Jurisdiction of the United States Courts on Pleading, Practice, and Procedure therein, and on the Powers and Duties of United States Commissioners," was the joint work of A. H. Garland, Robert Ralston, and John H. Ingham; and Carl Evans Boyd edited "Cases on American Constitutional Law." Samuel H. Foster was the author of "Foster's First Book of Practice at Common Law, in Equity and Under the Codes"; John J. McKelvey added to the "Hornbook Series" a "Handbook of the Law of Evidence"; H. C. Underhill published "A Treatise on the Law of Criminal Evidence"; Vols. I-IV of the "Law of Real Property," edited by Tilghman E. Ballard and E. Emerson, were issued; D. H. McFalls dwelt upon "Real Estate Proceedings with Precedents"; Leonard A. Jones contributed "A Treatise on the Law of Easements," in continuation of his "Treatise on the Law of Real Property"; and Edward B. Thomas expounded "The Law of Estates created by Will." "Selected Cases on the Law of Partnership," including limited partnerships, were published by Francis M. Burdick; "A Treatise on the Law of the Contract of Pledge," as governed by both the common law and the civil law, was written by Henry Denis; "A Selection of Cases on the Law of Contracts," by William A. Keener, filled two volumes; and "Elements of the Law of Negotiable Contracts" were set forth by Elias Finley Johnson. "The Principles of the Law of Corporations" were laid down by Charles B. Elliott, and "Cases on Public Corporations" were selected by Howard S. Abbott. "A Treatise on the Law of Monopolies and Industrial Trusts," as administered in England and the United States of America, was the work of Charles Fisk Beach, Sr. Rufus Waples treated of "The Law of Debtor and Creditor relative to the Situs of Debt," and "A Uniform System of Bankruptcy under the United States Law approved July 1, 1898," was arranged by T. W. Tallmage and D. W. Wood. Willis E. Myers prepared a "Syllabus of the Hon. Henry D. Harland's Lectures on the Law of Domestic Relations." Joseph H. Beale, Jr., drew up "A Selection of Cases on the Law of Carriers"; "The Law of Petroleum and Natural Gas" was set forth by George Bryan; and "The Law relating to Building and Loan Associations" by William W. Thornton and Frank H. Blackledge. "A Trustees' Handbook" was the work of Augustus Peabody Loring. Vol. I of the "Medical Jurisprudence of Insanity; or, Forensic Psychiatry," by S. V. Clevenger, contained an exhaustive presentation of the judicial decisions upon the subject by F. H. Bowlby. Vols. X, XI, and XII appeared of the "Encyclopædia of Pleading and Practice under the Codes and Practice Acts, at Common Law, in Equity, and in Criminal Cases," edited by William M. McKinney, were issued, bringing the work down to "Judicial Notice to Legal Conclusions"; Vols. IV, V, and VI of the "Encyclopædia of Forms and Precedents for Pleading and Practice," edited by William Mack and Howard P. Nash, under the supervision of James Cockcroft, reached "Compounding to Dividends"; Vols. VI, VII, VIII, and IX of the second edition of the "American and English Encyclopædia of Law" were sent out, as were Vols. II, III, IV, and V of the Century Edition of "The American Digest," a complete digest of all reported American cases from the earliest times to 1896, bringing the work down to "Assumpsit, Action of Bailiffs," and the "American Digest Annuals" for 1897 and 1898, containing all current decisions of all the American courts to Aug. 31, 1898; Vol. IV of the first series

of "American and English Decisions in Equity," annotated by Ardenus Stewart; Vols. IV and V of the "The General Digest, American and English," annotated; Vol. VII of the new series of "American and English Corporation Cases," edited by Thomas J. Michie; Vols. VII, VIII and X of the new series of "American and English Railroad Cases"; Vol. VII of "American Negligence Cases," edited by T. F. Hamilton, and Vols. II and III of "American Negligence Reports," edited by John M. Gardner; Vol. X of "American Criminal Reports," with notes and references by John Gibbons, and a full and accurate index digest covering Vols. I to X inclusive; Vol. II of a "Supplement to Notes on the Revised Statutes of the United States, and the subsequent Legislation of Congress," covering July 1, 1889, to Jan. 1, 1898, by John M. Gould and George F. Tucker; Vols. CLXVIII and CLXX of "United States Supreme Court Reports," edited by J. C. Bancroft Davis, and Book XLII of S. K. Williams's complete edition of the same, covering from the beginning of Vol. CLXVII to the end of Vol. CLXX. Vols. LXXXIII to LXXXVII inclusive appeared of the "United States Federal Reporter," permanent edition; Vols. LVII to LXII of "American State Reports," selected, reported, and annotated by A. C. Freeman, had a brief digest of Vols. LV to LX by J. M. Ross; and there yet remain for mention, in addition to the "Reports" and "Reporters" of the several States, Vols. XXVI, XXVII, XXVIII, and XXIX of United States Circuit Courts of Appeals "Reports," and several volumes of "Reports" of the United States Courts of Appeals. "The War Revenue Law of 1898" was annotated by Edward L. Heydecker and F. McMahon; and a "Ready Reference Book on the War Revenue Law" was compiled and edited by F. M. Holahan and W. B. Hopkins. George B. Davis was the author of an exhaustive "Treatise on Military Law and the Constitution, Jurisdiction, and Procedure of Courts-Martial of the United States"; Vol. VI of the "American Corporation Legal Manual," containing patent, trade-mark, and copyright laws of the United States, was edited by Charles L. Borgmeyer; and the "Miners' Manual," for the United States, Alaska, and the Klondike, by Horace F. Clark, Charles C. Heltman, and Charles F. Consaul, contained all necessary legal information. "The Commerce Clause of the Federal Constitution" was the subject of special study by E. Parmelee Prentice and John G. Egan. Vol. I of "A Digest of Decisions and Encyclopædia of Pennsylvania Law, 1754-1898," by George Wharton Pepper and William Draper Lewis, covered "Abandonment to Associations," and Vol. II, "Assumpsit to Constable."

Juvenile.—Books for young people continue to be written in increasing numbers and upon every variety of subject. "A Boy I Knew and Four Dogs" is the engaging record of Laurence Hutton's boyhood; "The Book of the Ocean," by Ernest Ingersoll, contained much scientific information for young people as well as many tales of battle and heroism; while from Clinton Ross (R.) we had the exploits of "Heroes of our War with Spain" told for a boy. "Under Dewey at Manila," by Edward Stratemeyer, contained the war fortunes of a cast-away, and "A Young Volunteer in Cuba," in the "Old Glory Series," was also from his pen; Felix Leopold Oswald narrated "Adventures in Cuba" of another youth; while yet another Cuban war story was "The First Cruiser Out," by William Osborn Stoddard. The same author published also "Success Against Odds," telling how a boy made his way, and "With the Black Prince," "From School to Battlefield" was a story of the civil war by Capt. Charles King. Edward Stratemeyer was also heard from again in "The Minute Boys of Lexington"; "A

Hero of Ticonderoga" was chronicled by Rowland E. Robinson; Elbridge Streeter Brooks contributed "A Son of the Revolution" to the "Sons of the Republic Series"; Everett T. Tomlinson published Part II of "Stories of the American Revolution" in the "Library of Historic Events," and "Two Young Patriots; or, Boys of the Frontier," a story of Burgoyne's invasion, as well as "The Boys of Old Monmouth," "The Boys with Old Hickory," in the "War of 1812 Series," and "Ward Hill at Weston," a story of American school life, followed by "Ward Hill, Senior." "One Thousand Men for a Christmas Present," by Mary B. Sheldon, recalled the crossing of the Delaware by Washington. "The Young Puritans in King Philip's War," by Mary Prudence Wells Smith, belonged to the "Young Puritans Series." "Tecumseh of the Shawanoes," by H. R. Gordon, was intended as a companion book to "Pontiac, Chief of the Ottawas"; L. K. Parks fought the War of 1812 over again "With British and Braves"; "A Soldier of the Legion," by Charles Ledyard Norton, was a story of the great Northwest; and "Two Boys in Wyoming" and "Cowmen and Rustlers," by Edward S. Ellis belonged to the "Northwest Series." Hezekiah Butterworth was heard from in three books: "The Pilot of the Mayflower," a tale of the children of the Pilgrim republic, "Lost in Nicaragua; or, Among Coffee Farms and Banana Lands in the Countries of the Great Canal," and "In the Land of the Condor," a story of Tarapaca. Herbert Elliott Hamblen (F. Benton Williams) told "The Story of a Yankee Boy," full of adventures ashore and afloat, and also detailed "Tom Benton's Luck." William Drysdale published "The Young Supercargo," a story of the merchant marine, in the "Brain and Brawn Series"; Harry Castlemon (Charles Austin Fosdick) told of "A Sailor in Spite of Himself"; and "Navy Blue" was a story of cadet life in the United States Naval Military Academy at Annapolis, by Willis Boyd Allen. "Rex Wayland's Fortune" was made by H. A. Stanley; "In Pirate Waters" was a tale of the American navy, by Kirk Munroe, who wrote also "The Copper Princess," a story of Lake Superior mines. In "The Treasure Divers" Charles F. Holder described a boy's adventures in the depth of the sea. Horatio Alger, Jr., wrote "The Young Bank Messenger" for the "Good Fortune Library," and W. Gordon Parker illustrated his own account of "Six Young Hunters." "Klondike Nuggets and how Two Boys secured them," by Edward S. Ellis, and "The Boy Mineral Collectors," by J. G. Kelly, may be mentioned together; "Aleck Hornby," by Charles Stell, was a sea story; John Habberton was delightful as ever, interesting young people with the marvels to be seen "With the Dream-Maker"; John T. Trowbridge described "Philip's Experiments," outlining physical science at home, and also told of "Two Biddicut Boys and their Adventures with a Wonderful Trick Dog." James Otis Kaler was more prolific than ever, sending out "The Capture of the 'Laughing Mary,'" "With Washington at Monmouth," and "With Warren at Bunker Hill" in the "Continental Series"; "When Israel Putnam served the King" in the "Stories of American History Series"; "Corporal 'Lige's Recruit," "A Cruise with Paul Jones," "Morgan, the Jersey Spy," "Sarah Dillard's Ride," a story of the Carolinas in 1780, "A Tory Plot" and "A Traitor's Escape," all in the "Young Patriot Series"; "The Cruise of the 'Comet,'" in the "Privateers of 1812 Series"; "The Princess and Joe Potter," in the "Jenny Wren Series"; "The 'Charming Sally,' Privateer Schooner of New York: A Tale of 1765"; "Joel Harford" and "An Amateur Fireman"; while Miss Will Allen Dromgoole made almost as good a showing with

"A Boy's Battle," "Hero Chums," and "Rare Old Chums" in the "Young of Heart Series," "Three Little Crackers from Down in Dixie," and "A Moonshiner's Son." Sarah E. Morrison concluded her history of the Chilhowee boys with "Chilhowee Boys in Harness"; "Boys in Clover," by Sarah J. Clarke (Penn Shirley), told how the little Dukes found a sister; Mrs. I. T. Thurston contributed "A Frontier Hero" and "A Bachelor Maid and her Brother"; Julia Magruder wrote "Labor of Love," a story for boys; Mrs. Julia McNair Wright, "A Boy of To-day"; A. G. Plympton, "Gerald and Geraldine, and Other Stories"; "His Little Royal Highness" was by Mrs. Charles W. Ide (Ruth Ogden); "Whiz" was a story of the mines, by Amelia Weed Holbrook; Thomas Nelson Page wrote for young people the charming story of "Two Prisoners"; Anna Stevens Reed described "Mount Holyoke Days in War Time"; a fifth edition was issued of "Under King Constantine," by Katrina Trask (Mrs. Spencer Trask); Mrs. Harriet A. Cheever narrated "The Strange Adventures of Billy Trill" and told of "Little Mr. Van Vere of China"; while Mrs. Isabella M. Alden (Pansy) also published two books, "Renben's Hindrances" and "As in a Mirror." "The Rancho on the Oxhide" was an exciting story of boys' and girls' life on the frontier, by Henry Inman; "Bilberry Boys and Girls" were the theme of Sophie Swett, and "The Lakerim Athletic Club" and its diversions, that of Rupert Hughes. "The Master of the Strong Hearts" was a story of Custer's last rally, by Elbridge Streeter Brooks. Sophie May (Rebecca Sophia Clarke) published "Pauline Wyman" and "Santa Claus on Snowshoes, and Other Stories"; Mrs. Evelyn Raymond, the author of "The Little Lady of the Horse," "Among the Lindens"; "A Proud Little Baxter" was by Frances Bent Dillingham; "Three Freshmen: Ruth, Fran, and Nathalie," by Jessie Anderson Chase; "Marjory and her Neighbors," by Louise E. Catlin; "A Lovable Crank" and "A Little Turning Aside," by Barbara Yechton (Lydia Farrington Krausé); "Dorothy Deane" was a children's story by Mrs. Ellen Olney Kirk (Henry Hayes), and Amanda Minnie Douglas was the author of "A Little Girl in Old Boston," as Agnes Sage Carr was of "A Little Colonial Dame," a story of old Manhattan Island. "Teddy, Her Book," was a story of sweet sixteen by Anna Chapin Ray, and "An Odd Little Lass" was the heroine of Jessie E. Wright. "Everyday Honor" was by Fannie E. Newberry; "Dorothy Day," by Julie M. Lippmann; Mrs. Laura E. Richards continued the story of "Margaret Montfort," who belonged to "The Three Margarets" of last year; and Mrs. Kate Tannatt Woods told the story of "A Little New England Maid." Mrs. Harriet Mulford Lothrop published "A Little Maid of Concord Town"; Ellen Douglas Deland, "Katrina"; "Twixt You and Me" was a collection of boarding-school stories by Mrs. Grace Le Baron Upham; "Hester Stanley's Friends," by Mrs. Harriet Elizabeth Prescott Spofford, belonged to the same interesting period of existence, as did "Sherburne Girls," whom Amanda Minnie Douglas has made familiar in former volumes. "An Independent Daughter," "Thy Friend Dorothy," and Kittyboy's Christmas" were from the pen of Amy Ella Blanchard; "Sir Jefferson Nobody" was the self-styled hero of Effie W. Merriam; Mary F. Leonard told "The Story of the Big Front Door," and Albert Paine Bigelow that of "The Hollow Tree." It is impossible to do more than enumerate "The Gap in the Fence," by Harriet Louise Jerome; "The Story of Johnikin," by Beth Day; "Laura's Holidays," by Mrs. Henrietta R. Eliot; "Pickie and Pepper," by Ella Loraine Dorsey; "Concerning Teddy," by Mrs. Murray

Hickson; "The Story of Little Jane and Me," by M. E.; and "Johnnie," by E. O. Laughlin, illustrated from photographs taken from life. "Stories True and Fancies New" was the title of rhymes and chimes by Mary W. Morrison (Jenny Wallis); "The Counterpane Fairy" was both written and illustrated by Katharine Pyle; "Old Sultan's Thanksgiving, and Other Stories," were by Lily Foster Wesselhoeft; "The Story of a Pumpkin Pie" was told in verses by William E. Barton and in pictures by A. M. Willard. "The Rock-a-by Land, and Other Tales," by Thomas H. Arnold, belong with "The Pleasant Land of Play," stories by Sarah J. Brigham. "The Littlest Ones" was the joint production of Maud Humphrey and Elizabeth S. Tucker, and from it two volumes of selections were made, entitled "Little Rosebuds and Baby Folk." "Wonder Tales from Wagner" were told for young people by Anna Alice Chapin, and "Stories from Dante" by Norley Chester, and "The Story of Rob Roy" was condensed from the novel of Sir Walter Scott, by Edith D. Harris for "Appletons' Series of Home Reading Books."

Medicine and Surgery.—Vols. XII to XV inclusive of "Twentieth Century Practice," an international encyclopaedia of modern medical science, by leading authorities of Europe and America, edited by Thomas L. Stedman, M. D., were issued during the year; James C. Wilson, M. D., edited "An American Text-book of Applied Therapeutics," for the use of practitioners and students; George M. Gould, M. D., edited "The American Yearbook of Surgery for 1898," and Frank Pierce Foster, M. D., a "Reference Book of Practical Therapeutics," by various authors, in two volumes. "A Text-book of Materia Medica, Therapeutics, and Pharmacology," was prepared by George F. Bntler, M. D., and "A Text-book of Pathology," by Alfred Stengel, M. D. "The Origin of Disease," especially of diseases resulting from intrinsic as opposed to extrinsic causes, was considered by Arthur V. Meigs, M. D., and contained chapters on diagnosis, prognosis, and treatment by Herman and Erwin F. Faber. Robert Hutchison and Harry Rainy made a study of "Clinical Methods"; "The Practitioner's Manual," by Charles Warrenne Allen, M. D., was a condensed system of medical diagnosis and treatment; and John E. Groff wrote a "Handbook of Materia Medica for Trained Nurses." Vol. V was issued of "A System of Medicine by many Writers," edited by Thomas Clifford Albbutt, M. D., and the "Manual of Pathology," by W. M. L. Coplin, M. D., was in reality a second edition of his "Lectures on Pathology," rewritten and enlarged. "A Text-book of Histology," descriptive and practical, for the use of students, was the work of Arthur Clarkson; E. K. Dunham, M. D., wrote on "Histology, Normal and Morbid"; a third edition of Manrice N. Miller, M. D.'s "Students' Histology" was revised by Herbert U. Williams, M. D., and "An Epitome of Human Histology," for the use of students in connection with lectures and laboratory work, was written by Arthur W. Weyssse. "Cataphoresis; or, Electric Medicament Diffusion as applied in Medicine, Surgery, and Dentistry," was the theme of William James Morton; S. H. Monell, M. D., wrote on "Treatment of Disease by Electric Current"; "A Laboratory Manual of Electro-Therapeutics" was drawn up by William J. Herdman, M. D., and Frank W. Nagler; Parts I to IV of Vol. I, and Part I of Vol. II were issued of "Archives of the Roentgen Ray," formerly "Archives of Clinical Skiagraphy," edited by W. S. Hedley, M. D., and Sydney Rowland; David Walsh, M. D., described "Roentgen Rays in Medical Work," and Frederic Strange Kolle, M. D., "The X Rays: Their Production and Application." Simon Baruch, M. D., explained

"The Principles and Practice of Hydropathy"; "Osteopathy, Complete," came from Elmer D. Barber, and a second edition, revised and enlarged, appeared of "Essentials of Homœopathic Therapeutics," by W. A. Dewey, M. D. Louis Stephen Pilcher discussed "The Treatment of Wounds." Vol. II appeared of a "System of Diseases of the Eye," by American and European authors, for which we were indebted to William F. Norris, M. D., and Charles A. Oliver, M. D.; A. Maitland Ramsay, M. D., prepared an "Atlas of External Diseases of the Eye," and a second revised and enlarged edition was made of "Diseases of the Eye," by G. E. de Schweinitz, M. D. W. J. Walsham wrote upon "Nasal Obstruction"; "Diseases of the Stomach" were the theme of John C. Hemmeter, M. D., and again of William W. Van Valzah, M. D., and J. Douglas Nisbet, M. D.; T. N. Kelynaack made a specialty of "Renal Growths," and Herman Mynter, M. D., of "Appendicitis and its Surgical Treatment," with a report of 75 operated cases. Three lectures of Charles B. Kelsey, M. D., upon "The Office Treatment of Hæmorrhoids, Fistula, etc., without Operation," were collected into a small volume. "Diabetes Mellitus and its Treatment" was considered by R. T. Williamson, M. D.; William H. Howell, M. D., edited "An American Text-book of Physiology"; and "Practical Exercises in Comparative Physiology and Urine Analysis" were given by Pierre A. Fish. "Practical Urinalysis and Urinary Diagnosis," by C. W. Purdy, went through a fourth revised edition. James Kingston Fowler, M. D., and Rickman J. Godlee gave particular attention to "The Diseases of the Lungs," and "Tropical Diseases," by Patrick Manson, was intended as a manual of the diseases of warm climates. "The Surgical Complications and Sequels of Typhoid Fever" formed the subject of a volume by William W. Keen, M. D. "Meditations on Gout," both practical and literary, with a consideration of its cure through the use of wine, by George H. Ellwanger, had a frontispiece and decoration by George Wharton Edwards, and was intended for both the student of medicine and the general reader. "Lectures on the Theory and Practice of Vaccination" were delivered by Robert Cory, M. D. "Operative Gynecology," by Howard A. Kelly, M. D., was complete in two volumes, and a third edition, revised, rewritten, and enlarged, was made of "Conservative Gynecology and Electro-Therapeutics," by G. Betton Massey, M. D.; E. C. Buck, M. D., was the author of "A Treatise on the Principles and Practice of Gynecology"; John Clarence Webster, M. D., drew up a text-book of "Diseases of Women"; and Barton Cooke Hirst, M. D., "A Text-book of Obstetrics." "Veterinary Obstetrics" were prepared for students and practitioners by W. H. Dalrymple. L. Bolton Bangs, M. D., and William A. Hardaway, M. D., were joint editors of the "American Text-book of Genito-Urinary and Skin Diseases (including Syphilis)," and "A Manual of Venereal Diseases" was by James R. Hayden, M. D. James Foster Scott, M. D., wrote upon "The Sexual Instinct: Its Use and Dangers as affecting Heredity and Morals." "Cutaneous Medicine" was the title of a systematic treatise on the diseases of the skin by Louis A. Duhring, M. D., and George Henry Fox, M. D., made a specialty of "Skin Diseases of Children"; a second revised edition was also made of "An American Text-book of the Diseases of Children," by Louis Starr, M. D. "About Children" was the substance of six lectures given to the nurses in the training school of the Cleveland General Hospital in February, 1896, by Samuel W. Kelley, M. D. "A Treatise on Aphasia and Other Speech Defects" emanated from H. Charlton Bastian, M. D., and Joseph Collins, M. D., in "The Genesis and Dissolu-

tion of the Faculty of Speech" made a clinical and psychological study of the same disease. "The Cure of Writers' Cramp, and the Arm Troubles of Telegraphers and Ball Players," was briefly suggested by S. H. Monell, M. D., and W. C. Hollopeter, M. D., reviewed "Hay Fever and its Successful Treatment." "The Nervous System and its Diseases" were examined by Charles K. Mills, M. D., and a new edition was issued of "The Diseases of the Nervous System," by Louis Hirt. Original studies upon "The Normal and Pathological Circulation in the Central Nervous System (Myel-Encephalon)," by William Browning, M. D., were given to the world, and Pearce Bailey, M. D., discussed "Accident and Injury: Their Relations to Diseases of the Nervous System." A "Clinical Manual of Mental Diseases" was prepared by A. Campbell Clark, M. D.; "A Compendium of Insanity," by John B. Chapin, M. D.; and "A Primer of Psychology and Mental Diseases," by C. B. Burr, M. D., went through a second, thoroughly revised, edition. "A Text-book of Dental Pathology and Therapeutics, including Pharmacology," was by H. H. Burchard, M. D. Theodore Potter, M. D., published "Essays on Bacteriology and its Relation to the Process of Medicine"; Edgar M. Crookshank, "A Text-book of Bacteriology," including the etiology and prevention of infective diseases, and an account of yeasts and molds, hematozoa and psorospores. "Notes on Micro-Organisms Pathogenic to Man" were made by B. H. S. Leumann, and "Laboratory Directions for Beginners in Bacteriology" were given by Veranus A. Moore, M. D. "Outlines of Anatomy," by Edmund W. Holmes, M. D., was intended as a guide to the methodical study of the human body in the dissecting room, and "Mammalian Anatomy," by Horace Jayne, M. D., was a preparation for human and comparative anatomy. Winfield S. Hall was the author of "A Laboratory Guide in Physiology." "Practical Points in Nursing," for nurses in private practice, were given by Emily A. M. Stoney, and "How to become a Trained Nurse" was edited by Jane Hodson, giving information in detail together with a complete list of the various training schools for nurses in the United States and Canada. "Diet in Illness and Convalescence" was prescribed by Alice Worthington Winthrop. "A Manual of Hygiene and Sanitation" came from Seneca Egbert, M. D., and "Outlines of Rural Hygiene" were briefly given by Harvey B. Bashore, M. D. "The Psychology of Health and Happiness" was investigated by La Forest Potter, M. D., and some practical suggestions for the improvement of the "Health of Body and Mind" were offered by T. W. Topham, M. D. Vol. I of the "Home Health Club," by David H. Reeder, M. D., inaugurated the series of seven, and contained the preparatory course. Vols. IV and V of "Medico-Legal Studies," by Clark Bell, were sent out, and "A Laboratory Manual of Physiological and Clinical Chemistry and Toxicology" was the work of Arthur E. Austin, M. D., and Isador H. Coriat. The "New Warren's Household Physician," a new edition, enlarged and revised, of "Warren's Household Physician," had the allopathic department, by Ira Warren, M. D., revised by William Thorndike, M. D., and the homœopathic department, by A. E. Small, M. D., revised by John Heber Smith. "Elements of Latin" for students of medicine and pharmacy were set down by George D. Crothers, M. D., and Hiram H. Bice. Vol. III of the second series of the "Index-Catalogue of the Library of the Surgeon-General's Office, United States Army," giving authors and subjects, covered C-Czygan. To surgery proper belonged "A Manual of Surgery," by William Rose and Albert Carless, a "Manual of Operative Surgery," by H. J. Waring; a second revised edition of "An American Text-

book of Surgery," edited by William W. Keen, M. D., and J. W. White, M. D.; a second edition of "A Manual of Modern Surgery, General and Operative," by John Chalmers Da Costa, M. D.; Vol. II of "A Text-book of General Surgery," by Hermann Tillmans, covering "Regional Surgery"; "Orthopædic Surgery," by James E. Moore, M. D.; and "Brief Essays in Orthopædic Surgery," by Newton M. Shaffer, M. D.

Poetry.—"In Palestine, and Other Poems," by Richard Watson Gilder, and "From Sunset Ridge," by Mrs. Julia Ward Howe, contained alike poems old and new, and from poets of the later generation we had numerous volumes of verse, some excellent and many that were ordinary. "New York Nocturnes, and Other Poems," came from Charles G. D. Roberts; "Comes One with a Song" was by Frank L. Stanton, the Georgia laureate; "Weh Down Souf, and Other Poems," by Daniel Webster Davis; "Shapes and Shadows," by Madison Julius Cawein; "The Birth of Galahad," by Richard Hovey; and "By the Aurelian Wall, and Other Elegies," by Bliss Carman. "Songs of War and Peace" were sung by Sam Walter Foss, the author of "Back Country Poems" and "Dreams in Homespun"; "Soldier Songs and Love Songs," by A. H. Laidlaw; and "Songs of Good Fighting," by Eugene R. White. "Ballads and Poems" came from John H. Yates, "The Ocean of Dreams, and Other Poems," from Carolyn Howard Philip; "The Seven Voices," from J. Hooker Hammersley; "The Song of Stradella," from Anna Gannon; "Driftwood," sketches in poetry and prose, from Minnie Wallace Ketcham; "Labor and the Angel," from Duncan Campbell Scott; "Prince Ragnal, and Other Holiday Verses," from Eleanor Cecilia Donnelly; and "Poems," from Philip Henry Savage. "The Wayfarers" was the title of poems by Josephine Preston Peabody; "From Me to You" of poems by Lilian Gertrude Shuman; "Before the Dawn" was a book of poems, songs, and sonnets, by Joseph Leiser; "Voices of the Morning" were heard by J. A. Edgerton; "December Musings, and Other Poems," of Charles Sanford Olmstead, were collected into a volume; "The Shrine of Love, and Other Poems," were from the pen of Lucien V. Rule, and "Tents on the Plains" from that of Shannon Birch; "Songs of Flying Hours" were sung by Edward Willard Watson, M. D., and "Songs of Destiny and Others," by Julia P. Dabney. "Elecampane, and Other Poems," were by T. J. Moore; "The Slopes of Helicon, and Other Poems," by Lloyd Milfin; "The Carnival of Venice, and Other Poems," by Florence Danforth Newcomb; "When the Birds Go North Again," by Mrs. Ella Higginson; "At the Foot of the Mountain" was a collection of short poems by Emily R. Logue; "Songs of Two Peoples," by James Riley, were divided between the American and Irish nationalities; "Songs from the Southwest Country" came from Freeman E. Miller, and "Some Verses" from Helen Hay. "The Dream Beautiful, and Other Poems," by Charles Hamilton Musgrove; "The Chords of Life," by Charles H. Crandall; "Immortelles and Asphodels," by Laura G. Collins; "Impressions," by Lilla Cabot Perry, and volumes of "Poems" respectively from Mrs. Florence Earle Coates and Philip Becker Goetz deserve mention; and "Ben King's Verse" was edited by Nixon Waterman and had an introduction by John McGovern and a biography by Opie Read of the author, Benjamin F. King, Jr., known as the Michigan bard. Most of them were humorous and in dialect. "Phil-o-rum's" and Madeline Vercheres" were two French-Canadian dialect poems by William H. Drummond, M. D. "The Bashful Earthquake, and Other Fables and Verses," contained many pictures by the author, Oliver Herford; "Where Beauty is,

and Other Poems," by Henry Johnson, consisted of twelve sonnets and short poems, and from Tom Hall we had society verses entitled "When Cupid Calls" and "When Love Laughs," the last a new collection of society verse. "The Gotham of Yassar" was a satire in verse by N. J. Clodfelter, and "Three Women" were the theme of Mrs. Ella Wheeler Wilcox. "La Santa Yerba," a volume of verse in praise of tobacco, by William L. Shoemaker, was preluded by a few choice mottoes from lovers of the Indian weed from the time of Sir Walter Raleigh to the present day. Nature poems entitled "The Shadows of the Trees, and Other Poems," were by Robert Burns Wilson. "On Christmas Day," by Ellen M. H. Gates, and "Christmas in California," by Rowland Sill, were illustrated single poems, as was "Monticello: A Picture of the Past," by Arthur C. Butts. "Down Durley Lane, and Other Ballads," by Virginia Woodward Cloud, were illustrated by Reginald B. Birch. "Fables for the Frivolous" were offered, with apologies to La Fontaine, by Guy Wetmore Carryl. One of the most striking books published during the year was a collection of "Songs from the Ghetto," by Morris Rosenfeld, a Russian Jew, who voices the misery of the sweat shops of New York city. His three groups of songs, "Songs of Labor, National Songs, and Miscellaneous," were translated and had a glossary and introduction by Leo Weiner. Volumes of selections of verse include "A Treasury of American Verse," edited by Walter Learned; "Cornell Verse," compiled by H. Adelbert Lyon; and "The Doctor's Window," poems by the doctor, for the doctor, and about the doctor, edited by Ina Russell Warren, which had an introduction by William Pepper, M. D. George C. Perine made selections from the "Poets and Verse-Writers of Maryland"; "Ships and Sailors," a collection of songs of the sea as sung by the men who sail it, was edited and compiled by James Barnes and illustrated in color and black and white by Rufus F. Zogbaum; "Songs of Sea and Sail" were also collected by Frederic Fleming Day; "Immortal Songs of Camp and Field" were sent out by Rev. Louis Albert Banks, D. D., with the story of their inspiration and striking anecdotes connected with their history. S. A. Witherbee compiled and edited "Spanish-American War Songs," a collection of poems written during the recent war with Spain, and "Mother-Song and Child-Song" were put together by Charlotte Brewster Jordan from the writings of many poets. "Aarbert" was the title of a drama without the stage or scenery, wrought out through song in many meters, mostly lyrical, by William Marshall; "Capriccios," a collection of dramatic sketches, came from Louis James Block, and "The Reformer of Geneva," an historical drama, from Charles Woodruff Shields. A revised edition of the "Complete Poetical Works" of Joaquin Miller was published during the year, and "Selections from the Prose and Poetry of Walt Whitman" were edited with an introduction by Oscar Lovell Triggs. James Mudge, D. D., made choice of "The Best of Browning," and Rose Porter gave us "Tennyson's Men and Women," arranged for every day in the year.

Political, Social, and Moral Science.—Foremost among the works falling under this head must be mentioned "The Science of Political Economy," by Henry George, which represents the labor of the last six years of his life upon a subject which he had at least the honor of making popular and widely discussed, if he did not succeed in fathoming all of its problems. A memorial edition of his "Writings" was also inaugurated during the year. "The Philosophy of Government" was investigated by George W. Walthew; Simeon E. Baldwin made a study of "Modern Political Institutions," and John Jay

Chapman of "Causes and Consequences" in politics, society, education, democracy, and government, while "Unforeseen Tendencies of Democracy" were the theme of Edwin Lawrence Godkin. "A History of the Presidency," by Edward Stanwood, while based upon his "History of Presidential Elections," published in 1884, contains much new matter and many modifications of the original. Lauros G. McConachie, in "Congressional Committees," made a study of the origins and development of our national and local legislative methods for the "Library of Economics and Politics." "The Federalist" was edited as a commentary on the Constitution of the United States, by Paul Leicester Ford, with notes, illustrative documents, and a copious index, and "Washington vs. Jefferson: The Case tried by Battle in 1861-'65," by Moses M. Granger, traced the conflict between the two theories of our Government. "The True History of the Missouri Compromise and its Repeal" was written by Mrs. Archibald Dixon, and belongs to political rather than general history. "The Growth of Democracy in the United States; or, The Evolution of Popular Co-operation in Government and its Results," was traced by Frederic A. Cleveland; "The Rights and Duties of American Citizenship" were examined by Westel Woodbury Willoughby; Henry Gaullier made a study of "The Paternal State in France and Germany"; and Bernard Moses delivered four lectures on "Democracy and Social Growth in America." "America's Foreign Policy" was the subject of essays and addresses by Theodore Salisbury Woolsey, and "Mexico and the United States," a study of subjects affecting their political, commercial, and social relations made with a view to their promotion, was from the pen of the late ambassador from that sister republic, Matias Romero, than whom no one was better prepared to give the information contained in the work. "Social Elements, Institutions, Character, Progress," were the theme of Charles Richmond Henderson; "Outlines of Sociology" were supplied by Lester F. Ward, and from John Henry Wilbur Stuckenberg we had an "Introduction to the Study of Sociology." "The Social Crisis, the Duty of Government," came from Dempster Ostrander, the author of "Social Growth," and John Franklin Crowell in "The Logical Process of Social Development" laid a theoretical foundation for educational policy from the standpoint of sociology. George Edgar Vincent considered "The Social Mind and Education," and Edward Payson Payson made "Suggestions toward an Applied Science of Sociology." Part I of "The Individual and his Relation to Society as reflected in British Ethics," by James H. Tufts and Helen B. Thompson, in the "University of Chicago Contributions to Philosophy," dealt briefly with "The Individual in Relation to Law and Institutions." "Popular Progress," by Thomas Donohue, D. D., examined the cause of agricultural and industrial depression and the remedy, while Laurence Gronlund, in "The New Economy," found a peaceful solution of the social problem. "How to Right a Wrong, the Ways and the Means," according to Moses Samuelson, was by a single graduated tax on surplus wealth; Alfred R. Justice proposed "An Equitable Exchange System"; and "Tendencies in American Economic Thought" were the theme of Sidney Sherwood in the "Johns Hopkins University Studies." "The Workers: An Experiment in Reality; the West," by Prof. Walter A. Wyckoff, supplements his previous volume on the East; "Labor Co-partnership," by Henry Demarest Lloyd, was the title of notes of a visit to co-operative workshops, factories, and farms in Great Britain and Ireland; "Industrial Experiments in the British Colonies of North America" were described by Eleanor Louisa

Lord in the "Johns Hopkins University Studies"; James W. Crook gave a history of the development of "German Wage Theories," and Prof. John Davidson showed "The Bargain Theory of Wages," a critical development from the historic theories. "Workmen's Insurance," by William Franklin Willoughby, appeared in the "Library of Economics and Politics." In the "Columbia University Studies" we had "Sympathetic Strikes and Sympathetic Lockouts," by Frederick S. Hall, and "The Centralization of Administration in New York State," by John Archibald Fairlie; "Economic Studies" included "The Housing of the Working People in Yonkers," by Ernest Ludlow Bogart; "Economic Aspects of Railroad Receiverships," by H. H. Swain; "Government by Injunction," by William H. Dunbar; "The Ohio Tax Inquisitor Law," by T. N. Carver; and "The American Federation of Labor," by Morton A. Aldrich. "Density and Distribution of Population in the United States at the Eleventh Census," by Walter F. Willcox, was published for the American Economical Association, the "Handbook" of which for 1898 was issued, and from George Sanders we had "A Reality; or, Law and Order vs. Anarchy and Socialism," a reply to Edward Bellamy's "Looking Backward" and "Equality." "The City Wilderness: A Settlement Study," by residents and associates of the South End House, Boston, was edited by Robert A. Woods. "Thirty Years of American Finance" was a short financial history of the Government and people of the United States since the civil war, by Alexander Dana Noyes; Henry B. Russell explained the purposes, character, and results of "International Monetary Conferences"; William Brough discussed "Open Mints and Free Banking"; "Money and Bimetallism" was the theme of Henry A. Miller, and from John M. Gould and Edward H. Savary we had "The War Revenue Law of 1898 Explained," while "Financial Management of a War," by Henry C. Adams, was reprinted from "Public Debts." The "Finances of New York City" were treated at length by Edward Dana Durand, and Perry Belmont asserted the "Republican Responsibility for Present Currency Perils." "The Philoplist; or, City Lover," came from Charles F. Goss, the author of "The Optimist"; Josiah Strong, D. D., made suggestions for "The Twentieth Century City"; the "Municipal History and Present Organization of the City of Chicago" was the subject of a thesis submitted for the degree of doctor of philosophy in the department of political science of the University of Wisconsin by Samuel Edwin Sparling; Part I of "Charters of the City of Chicago," by Edmund J. James, covered "The Early Charters, 1833-'37," and a second edition was issued of "Special Assessments," a study in municipal finance, by Victor Rosewater in the "Columbia University Studies." "Rules of Parliamentary Procedure" were laid down by John L. Branch, and "Advanced Rules for Large Assemblies" was intended as a supplement by Mrs. Harriette Shattuck to her "Woman's Manual of Parliamentary Law." "The History of the Woman's Club Movement in America" was by Mrs. Jane Cunningham Croly; Charlotte Perkins Stetson in "Women and Economics" presented a study of the economic relation between men and women as a factor in social evolution, likely to meet the approval of the most "advanced" of what Helen Watterson Moody terms "The Unquiet Sex." "The Negro in America, and the Ideal American Republic," were the subject of eight essays by Thomas J. Morgan, D. D., and "Civilization the Primal Need of the Race" was the theme of the inaugural address of Alexander Crummel, D. D., before the American Negro Academy, of which he was president, bound, in

pamphlet form, with his first annual address upon "The Attitude of the American Mind toward the Negro Intellect." Publications of the American Academy of Political and Social Science included "The Place of the Political and Social Sciences in Modern Education," by Edmund J. James; "The Study and Teaching of Sociology" and "The Unit of Investigation or of Consideration in Sociology," by Samuel McCune Lindsay; "Sociology applied to Politics," by F. Siegel; "The Relation of the Colonial Fee System to Political Liberty," by Thomas K. Urdahl; "Sociology and Philanthropy," by F. H. Wines; "Proposed Reforms of the Monetary System," by Joseph French Johnson; "The Relation of Postal Savings Banks to Commercial Banks," by James H. Hamilton; "The Economic Relation of Life Insurance to Society and State," by L. G. Fouse; "The Economic Effects of Ship Canals," by John Archibald Fairlie; "The Development of the Census," by Roland P. Falkner; "Political and Municipal Legislation in 1897," by Edward Dana Durand; "Municipality and the Gas Supply as illustrated by the Experience of Philadelphia," by L. S. Rowe; "Oscillations in Politics," by Abbott Lawrence Lowell; "The Legal Status of California, 1846-49," by Rockwell D. Hunt; "The History of Fiat Money and Currency Inflation in New England from 1620 to 1789," by F. F. McLeod; "The War as a Suggestion of Manifest Destiny," by H. H. Powers, and "Intervention and the Recognition of Cuban Independence," by Amos S. Hershey; "Australian Problems in History," by Helen Page Bates; a "Study of the Negro Problems," by W. E. Burghardt Du Bois; and "Causes Affecting Railway Rates and Fares," by W. E. Weyl.

Sports and Pastimes.—"Trail and Camp Fire: The Book of the Boone and Crockett Club," edited by George Grinnell Bird and Theodore Roosevelt, proved a mine of interest to the sportsman, and "The Golfer's Alphabet," by W. G. Van T. Sutphen, illustrated by A. B. Frost, is not to be lightly passed over. "A Handbook of Wrestling," by Hugh F. Leonard, was edited by Frederic A. Fernald, and Hartwig Nissen published "Rational Home Gymnastics," "The Grand Tactics of Chess," by Franklin K. Young, was followed by his exposition of "The Major Tactics of Chess," the two forming with his "Minor Tactics of Chess" a complete exposition of the laws and principles of chess strategics. Robert F. Foster explained briefly "Foster's Common Sense Leads and How to Read them," and a second series of "Dick's Games of Patience; or, Solitaire with Cards," contained 70 games. Martha Russell Orne traced the origin of "Hallowe'en," and told how to celebrate it with appropriate games and ceremonies.

Theology.—"An Outline of Christian Theology," was offered by William Newton Clarke, D. D., and "God, Nature and Attributes," by Randolph Sinks Foster, D. D., in the series of "Studies in Theology" supplemented his former work on "Theism." "Biblical Apocalypics" was a study of the most notable revelations of God and of Christ in the canonical Scriptures, by Milton Spencer Terry, D. D., while "Corner Stones of Faith; or, The Origin and Characteristics of the Christian Denominations in the United States," were discussed by Charles H. Small, D. D. "In Christ Jesus; or, The Sphere of the Believer's Life," was the theme of Arthur Tappan Pierson, D. D.; "The Manifestations of the Risen Jesus: Their Methods and Their Meanings," were the subject of the Charlotte Wood Sloeum lectures for 1897 by Bishop William Crosswell Doane; Borden P. Bowne met difficulties connected with "The Christian Revelation"; and Rev. Samuel F. Hotchkiss wrote upon "The Living Sav-

iour." O. C. Auringer and J. Oliver Smith were the joint authors of "The Christ: A Poetical Study of His Life from Advent to Ascension"; "Was Christ Born at Bethlehem?" was a study on the credibility of St. Luke, by W. M. Ramsay, who holds to the affirmative, and "Christ and the Critics," by Gérôme, adduced evidence in favor of the authorship of the Pentateuch by Moses. Rev. William James considered two supposed objections to the doctrine of "Human Immortality," and "The Mystery of Life," by Harry E. Richards, M. D., was a study of revelation in the light of science. "Spiritual Life," by L. L. Nash, D. D., had an introduction by Bishop O. P. Fitzgerald; "Christian Truth and Life" were the subject of sermons by Milton Valentine, D. D.; Walton W. Battershall, D. D., suggested "Interpretations of Life and Religion"; "The Kingdom of God and Problems of To-day" was the title of lectures delivered before the biblical department of Vanderbilt University by Alexander Sutherland, D. D.; David H. Greer, D. D., published "Visions: Sunday Morning Sermons at St. Bartholomew's"; David James Burrell, D. D., "The Wondrous Cross, and Other Sermons"; John Oates, "The Sorrow of God, and Other Sermons"; Francis Greenwood Peabody, "Afternoons in the College Chapel," short addresses to young men on personal religion; Rev. C. Armand Miller, "The Way of the Cross," a series of meditations on the history of the Passion of our Lord; Rev. Rudolph von Smetana, "Spiritual Exercises for a Ten Days' Retreat"; and Rev. P. Woods, a "Guide to True Religion," a manual for followers of the Church of Rome. "At the Evening Hour" was the title of simple talks on spiritual subjects by Ethelbert D. Warfield. William Henry Green, D. D., wrote a "General Introduction to the Old Testament: The Canon"; "The History of the English Bible Studied by the Library Method," by S. G. Ayres and Rev. Charles F. Sitterly, had an introduction by Henry M. MacCracken; Vol. I of "The Psalms and their Story," by William E. Barton, D. D., was devoted to a study of the Psalms as related to Old Testament history "From the Exodus," while the second volume covered "From the Exile to the Advent." "The Messages of the Earlier Prophets" were arranged in the order of time, analyzed, and freely rendered in paraphrase by Frank Knight Sanders and Charles Foster Kent, and "Life Lessons from the Book of Proverbs" were gleaned by Bishop William Stevens Perry. "The Gospel according to Saint Mark" was accompanied with an explanatory and critical commentary by Rev. A. J. Maas; "Matthews Gospel" was added by John Worcester to the series of "Spiritual Interpretations of the Scriptures"; A. H. Ames, M. D., D. D., wrote an interpretation of "The Revelation of St. John the Divine"; while "Outlines of New Testament History" were offered by Rev. F. E. Gigot. Dr. Lyman Abbott contributed a volume upon "The Life and Letters of Paul the Apostle," and "A People's Commentary: Romans and 1 and 2 Corinthians," came from George Whitfield Clark, D. D. A "Child's Story of the Bible," by Mrs. Mary A. Lathbury, had an introduction by Bishop John H. Vincent, and "Stories from the Old Testament" were told for children by Harriet S. B. Beale. Walter F. Adeney delivered two lectures upon "The Construction of the Bible" at the Matlock Chautauqua in 1897. "Bible Difficulties and their Alleviative Interpretations" came from Robert Stuart MacArthur; Rev. Martin S. Brennan set forth "The Science of the Bible"; and "Ideas from Nature," by William Elder, was an attempt to prove the world the work of an intelligent Creator. "Sacred Scenes and Mysteries" were gone over by Rev. J. F. X. O'Connor; "Voices

of Hope, and Other Messages from the Hills," was a series of essays on the problem of life, optimism, and the Christ, by Horatio W. Dresser; Rev. Samuel Zane Batten wrote for the "Green Fund Books" on "The New Citizenship," or Christian character in its biblical ideals, sources, and relations; "The Message of Christ to Manhood" was the title of the William Belden Noble lectures for 1898, by Alexander Viets Griswold Allen, D. D., Francis G. Peabody, D. D., Theodore Thornton Munger, D. D., and others; "The Higher Manhood; or, Character through Inspiration," was explained by Rev. Duane C. Johnson; Charles Franklin Thwing, D. D., outlined "The Best Life" in an address printed in the "What is Worth While Series"; and Charles Wood, D. D., dwelt upon "Friends and Foes of Youth." Alexander McKenzie, D. D., treated of the Christian life in "A Door Opened"; Louis Albert Banks, D. D., made "The Christian Gentleman" the subject of a series of addresses to young men, in addition to publishing a series of revival sermons upon "Paul and his Friends"; and "Addresses to Women engaged in Church Work," by Bishop Henry Codman Potter, were collected into a volume. George R. Crooks, D. D., wrote "The Story of the Christian Church"; Prof. R. M. Wenley traced "The Preparation for Christianity in the Ancient World"; Lawrence T. Cole discussed "The Basis of Early Christian Theism" in the "Columbia University Contributions to Philosophy, Psychology and Education"; and Lucius Waterman, D. D., added "The Post-Apostolic Age" to the "Ten Epochs of Church History." "Christian Philosophy" was the title of a treatise on the human soul by Rev. John T. Driscoll; Washington Gladden, D. D., added a volume upon "The Christian Pastor and the Working Church" to the "International Theological Library"; and "The Making and the Unmaking of the Preacher" was the theme of lectures on the Lyman Beecher foundation by William Jewett Tucker. "Catholic Faith and Practice: A Manual of Theology," came from Alfred Garnett Mortimer, D. D.; Charles C. Tiffany, D. D., delivered the Bohnen lectures upon "The Prayer Book and the Christian Life," while "A Concordance to the 'Book of Common Prayer' according to the Use of the Protestant Episcopal Church in the United States of America" was prepared by Rev. J. Courtney Jones; "The Making of Methodism" was reviewed by John James Tigert, D. D.; "Makers of Methodism" were commemorated by W. H. Withrow for the "Epworth League Reading Course," for which George H. Dryer, D. D., wrote also "The Founding of a New World," and "One Thousand Questions and Answers concerning the Methodist Episcopal Church," by Henry Wheeler, D. D., had an introduction by Henry A. Buttz, D. D.; Rev. W. H. H. Marsh claimed the Baptist to be "The New Testament Church," and "A History of the Baptists in the Middle States" was written by Henry C. Vedder. Benjamin B. Warfield delivered an address upon "The Significance of the Westminster Standards as a Creed" on the occasion of the celebration of the two hundred and fiftieth anniversary of their completion, and addresses on "Pioneer Presbyterianism in Tennessee," delivered at the Tennessee Exposition on Presbyterianism Day, Oct. 28, 1897, were collected and published. "The New Puritanism," a series of papers by Dr. Lyman Abbott, Amory H. Bradford, Charles A. Berry, D. D., and others during the semi-centennial celebration of Plymouth Church, Brooklyn, N. Y., 1847-'97, had an introduction by Rossiter W. Raymond; while suggestions for "A National Church" were contained in the Bedell lectures for 1897 by William Reed Huntington. "Renascent Christianity" was a forecast of the twentieth cen-

tury in the light of the higher criticisms of the Bible study of comparative religion and of the universal religious unity, Anno Christi 1898-2000, by an anonymous clergyman, the author of "Ancient Sacred Scriptures of the World"; and "The Divine Drama the Manifestation of God in the Universe" was an attempt by Granville Ross Pike to adjust the new lines of religious thought to the old landmarks. Rev. Morgan Dix edited "A History of the Parish of Trinity Church in the City of New York," compiled by order of the corporation, Part I of which covered "To the Close of the Rectorship of Dr. Inglis, A. D. 1783." "Apostolic and Modern Missions," as treated by Rev. Chalmers Martin, belonged to the "Students' Lectures on Missions" of Princeton Theological Seminary. "Christianity and the Social State" were discussed by G. Claude Lorimer; William Riley Halstead found "Christ in the Industries"; and "The Gate called Beautiful: An Institute of Christian Sociology," by Edward A. Warriner, was a practical application of the principles and teachings of the Christian religion along sociological lines. "Jewish Religious Life after the Exile" was described by Thomas Kelly Cheyne in the series of "American Lectures on the History of Religions"; "Jewish Services in Synagogue and Home" were drawn up by Louis N. Dembitz; and "Kiddush; or, Sabbath Sentiment in the Home," by Henry Berkowitz, D. D., was illustrated by Katherine M. Cohen. "The Jewish Year" was a collection of devotional poems for Sabbaths and holidays throughout the year, made by Alice Lucas. Minot Judson Savage, D. D., defined and amplified what he termed "Our Unitarian Gospel," and "Temple Talks," by Rev. Myron W. Reed, were found to be wholly unsectarian. "Current Questions for Thinking Men" were discussed by Robert Stuart MacArthur from a Baptist standpoint. Woods Hutchinson, M. D., expounded "The Gospel according to Darwin"; Morris Jastrow, Jr., added "The Religion of Babylonia and Assyria" to the series of "Handbooks on the History of Religions"; W. Marsham Adams published "The Book of the Master; or, The Egyptian Doctrine of the Light Born of the Virgin Mother"; "Yoga; or, Transformation," by William Joseph Flagg, was a comparative statement of the various religious dogmas concerning the soul and its destiny, and of Akkadian, Hindu, Taoist, Egyptian, Hebrew, Greek, Christian, Mohammedan, Japanese, and other magic, the result of a quarter of a century's research; and from Herman I. Stern we had "The Gods of our Fathers: A Study of Saxon Mythology." A. H. Barrington attempted to prove the "Anti-Christian Cults" devoid of supernatural powers and contrary to the Christian religion, and J. H. Bates discussed "Christian Science and its Problems." J. B. Hogan, D. D., issued a series of "Clerical Studies" for young priests; T. Harwood Pattison wrote on "The Making of the Sermon" for the classroom and the study; and John D. Davis, D. D., prepared "A Dictionary of the Bible." The two volumes of "The Biblical Museum," by James Comper Gray, a collection of notes explanatory, homiletic, and illustrative, forming a complete commentary on the Holy Scriptures, covered respectively "Gospels and Acts" and "Epistles and the Revelation." "Illustrative Notes, 1899," by Jesse Lyman Hurlbut and Robert Remington Doherty, on the International Sunday-School Lessons for the year were issued, as usual. Louis Albert Banks, D. D., devoted a handsome volume to "Immortal Hymns and their Story," and "Surreum Corda" was a book of praise by E. H. Johnson and E. E. Ayres, intended as the new Baptist hymnal; "From Day to Day" and "Cloud Riffs" were compilations by Theodora

Walton Woolsey and George Dalentine Reichel respectively.

Unclassified.—Books not falling strictly under any of the departments of this article, yet deserving of mention, include "The Army and Navy of the United States, 1776-1898," in 25 parts, of which 1-5 were issued during the year; "Military Europe," a narrative of personal observation and personal experience, by Gen. Nelson A. Miles, U. S. A.; the "Text-book of Seamanship," giving the equipping and handling of vessels under sail or steam, for the use of the United States Naval Academy, by Stephen Bleecker Luce, revised by W. S. Benson, and illustrated by S. Seabury; "Points in Minor Tactics," compiled and arranged in an elementary manner for the infantry arm of the National Guard of the United States, by Charles Albert Smylie; and "Ballistic Tables for Direct, Curved, and High-Angled Fire," by James M. Ingalls. "Notes on Military Hygiene for Officers of the Line," by Alfred Alexander Woodhull, went through a new revised and enlarged edition. "Coffee and India-rubber Culture in Mexico," by Matias Romero, was preceded by geographical and statistical notes on Mexico; "Commercial Cuba," a book for business men, by W. J. Clarke, had an introduction by E. Sherman Gould; "Food Products of the World" were reviewed by Mary E. Green, M. D., and the second book of "Great American Industries," by W. F. Rochelau, covered "Products of the Soil." C. P. Brooks treated exhaustively of "Cotton" in its uses, varieties, fibres, structure, cultivation, and preparation for the market, and as an article of commerce, as well as the manufacture of cotton-seed oil and meal and fertilizers, with special reference to cotton growing, ginning, and oil pressing in the United States; "The Cotton Industry: An Essay in American Economic History," by M. B. Hammond, published for the American Economic Association, had Part I devoted to "The Cotton Culture and the Cotton Trade," and Vol. III appeared of "Cotton Spinning," by William Scott Taggart. "Loom and Spindle; or, Life among the Early Mill Girls," by Harriet H. Robinson, had a sketch of "The Lowell Offering" and some of its contributors, and an introduction by Hon. Carroll D. Wright. "Glass Blowing and Working" was a useful little manual by Thomas Bolas, and Walter J. Sykes, M. D., set forth "The Principles and Practice of Brewing." George Edwin Waring, Jr., published a work on "Street Cleaning and the Disposal of a City's Wastes," William Paul Gerhard another on "Sanitary Engineering," and A. Prescott Polwell yet another on "Sewerage," while T. E. Coleman wrote on "Stable Sanitation and Construction." "The Purification of Public Water Supplies" was discussed by John W. Hill, and the "Report on the Investigations into the Purification of the Ohio River Water at Louisville, Ky.," was made by George W. Fuller. "The Story of the Railroad" was written by Cy Warman for "Appletons' Story of the West Series"; Albert B. Herriek wrote on "Modern Switchboards"; "Kilburn's Standard Handbook for Railroad Men," by A. Kilburn, was complete, practical, and instructive; J. W. C. Haldane treated of "Railway Engineering, Mechanical and Rhetorical"; "The Calculus," for engineers and physicists, came from Robert H. Smith, and "A Pocket-Book for Mechanical Engineers" from David Allan Low. D. B. Dixon edited the "Machinists' and Engineers' Pocket Manual"; "A Short Course in Inorganic Qualitative Analysis" for engineering students was prepared by J. S. C. Wells, and "A Handbook of Engineering Laboratory Practice," by Richard Addison Smart. Edward Sherman Gould was responsible for "The Arithmetic of the Steam Engine." Part II of William M.

Gillespie's "Treatise on Surveying," edited by Cady Staley, covered "Higher Surveying." "The Motor-man's Guide" was a practical treatise on street-railway motors, by J. W. Gayetty, and John P. Brooks supplied a "Handbook of Street Railroad Location"; A. W. and Z. W. Daw were authorities upon "The Blasting of Rocks in Mines, Quarries, Tunnels, etc."; Henry O'Connor was the author of "The Gas Engineer's Pocket-Book"; and William E. Gibbs wrote on "Lighting by Acetylene Generators, Burners, and Electric Furnaces." Charles D. Jameson was heard from on "Portland Cement, its Manufacture and Use." "Specifications in Detail" were offered by Frank W. Macey; "A Treatise on Roofs and Bridges," by Edward Albert Bowser, and practical examples from actual work in "The Cofferdam Process for Piers," by Charles Evan Fowler, while "Modern American Dwellings," with constructive details, was anonymous. Oliver Coleman planned "Successful Houses," and William H. Birkmire discussed "The Planning and Construction of High Office Buildings." "Appletons' Cyclopædia of Technical Drawing," embracing the principles of construction as applied to practical design, was edited by William E. Worthen. "A Course in Mechanical Drawing" was offered by John S. Reid, and "Elements of Perspective," by Christine Gordon Sullivan. Herbert S. Wilson was the author of "The Practical Tool-maker and Designer." In the "Garden-Craft Series" we had "The Pruning Book" and suggestions as to "Garden-making," by Liberty Hyde Bailey; Levi R. Taft supplemented his previous work on "Greenhouse Construction" with "Greenhouse Management"; Frederic W. Caird contributed to the "Rural Science Series" a horticultural monograph on "Bush Fruits," and Charles Eliot presented a forestry report on the "Vegetation and Scenery in the Metropolitan Reservations of Boston." Charles F. Wingate asked "What shall our Boys do for a living?" and Henry Hardwicke explained "The Art of getting Rich." "The Twentieth Century Cook-Book" was written by Mrs. C. F. Moritz and Adele Kahn; "Home Economics" was a guide to household management by Maria Parloa. "Catering for Two," by Alice L. James, promised comfort and economy for small households; Mrs. Sarah I. Rorer told everything about "Good Cooking"; and Fannie Merritt Farmer proposed "Chafing-Dish Possibilities." "Etiquette for Americans" purported to be by a woman of fashion. "The Art of Taxidermy" was set forth by John Rowley; "The Practical compounding of Oils, Tallow, and Grease for Lubrication, etc.," by an expert oil-refiner who prefers to remain unknown; and George H. Hurst explained the manufacture of "Soaps." "A Primer of Heraldry for Americans" came from Edward S. Holden, and a "Masonic Guide" from M. L. Young. Mrs. W. Chance prepared "A Book of Cats." "Spirit Slate Writing and Kindred Phenomena" were considered by William E. Robinson, and "New Thought Essays" were by Charles Brodie Patterson. Books more or less humorous in character were "Mr. Dooley in Peace and in War," by Martin Dooley (Peter Dunne Finley); "The Little Lady, Some Other People, and Myself," by Tom Hall; the third series of "Life's Comedy"; and "Cartoons of the War of 1898 with Spain, from Leading Foreign and American Papers." Four handsome octavo volumes contained the "History of the Columbian Exposition," by Dr. Rossiter Johnson. This work is unique among histories of expositions. Heretofore it has been customary simply to print verbatim the reports of each department; but in this instance such reports were used only as material, which has been worked up into a readable narrative, with the addition of picturesque and

critical chapters written by several experts. The whole is illustrated with more than a thousand fine pictures. In conclusion we had "Appletons' Annual Cyclopædia for 1897," being the twenty-second volume of its issue.

Voyages and Travels.—"The Philippine Islands and their People" were prominent in the minds of the American people during the year, and a record of personal observation and experience among them by Prof. Dean C. Worcester, accompanied with a short summary of the more important facts in the history of the archipelago, possessed unusual interest. "Yesterdays in the Philippines," by Joseph Earl Stevens, contained also much information, and yet another volume was "Manila and the Philippines," by Margherita Arlina Hamm. "Cuba and Porto Rico," with the other islands of the West Indies, had their topography, climate, flora, products, industries, cities, people, and political conditions thoroughly gone over by Prof. Robert T. Hill, and C. H. Rector, in "The Story of Beautiful Porto Rico," gave a graphic description of the garden spot of the world, illustrated by pen and camera. "Cuba at a Glance" came from Emma B. Kaufman and Annie O'Hagan. A new edition was also issued of "Cuba in War Time," by Richard Harding Davis. "One Way Round the World" was illustrated from photographs, by Delight Sweetser; "Fellow-Travelers," according to Francis E. Clark, D. D., were personally conducted in three continents during a journey of nearly 40,000 miles undertaken in the interest of the Christian Endeavor movement. "Ave Roma Immortalis" was the superb tribute paid by F. Marion Crawford to that "city of the soul." It filled two volumes, beautifully illustrated. George B. Taylor gave an account of "Italy and the Italians," having spent a quarter of a century of missionary life among them; "The Isles and Shrines of Greece" were visited in a sympathetic spirit by Rev. Samuel J. Barrows; Mrs. Susan Arnold Wallace (Mrs. Lew Wallace) sailed delightfully "Along the Bosphorus"; and "A Cruise under the Crescent, from Suez to San Marco," was made by Charles Warren Stoddard. "Roundabout Rambles in Northern Europe" were described by Charles F. King, and "Haleyon Days in Norway, France, and the Dolomites," by William Bement Lent. "Glimpses of England: Social, Political, Literary," were published by Rev. Moses Coit Tyler; Archer M. Huntington gave us the benefit of a "Note-Book in Northern Spain"; Mrs. Miriam Coles Harris, the author of that delightful old novel "Rutledge," made us intimately acquainted with "A Corner of Spain"; and "Witch Winnie in Spain" closed the wanderings of that young lady which have been vouchsafed us by Mrs. Elizabeth Williams Champney. "Where Ghosts Walk" was the somewhat eerie title to descriptions of the haunts of familiar characters in history and literature by Mrs. Mary Virginia Hawes Terhune (Marion Harland), and from William L. Terhune we had "My Friend the Captain; or, Two Yankees in Europe," a descriptive story of a tour of Europe. "Vacation Days in Hawaii and Japan" were described by Charles M. Taylor. "Eastern Journeys," by Charles Anderson Dana, contained some notes of travel in Russia, in the Caucasus, and to Jerusalem. John D. Ford in "An American Cruiser in the East" made travels and studies in the far East, the Aleutian Islands, Bering Sea, eastern Siberia, Japan, Korea, China, Formosa, Hong-Kong, and the Philippine Islands; "By Way of Cape Horn," the record of four months in a Yankee clipper, by Paul Eve Stephenson, was illustrated by the author, and Rev. George Hughes Hepworth went "Through Armenia on Horseback" to discover the true cause of the Armenian massacres. The life of "Persian

Women" was described by Rev. Isaac Malek Yonan. "Corona and Coronet," by Mrs. Mabel Loomis Todd, was the title of the narrative of the Amherst eclipse expedition to Japan in Mr. James's schooner-*vaucht*, "Coronet" to observe the sun's total obstruction, Aug. 9, 1896; "Korean Sketches" were published by Rev. James S. Gale; and Charles M. Taylor spent "Vacation Days in Hawaii and Japan." Walter Scott Perry visited "Egypt the Land of the Temple Builders," and Henry M. Stanley in "Through South Africa" gave an account of his recent visit to Rhodesia, the Transvaal, Cape Colony, and Natal, reprinted from the journal "South Africa," while "Africa, its Partition and its Future," which he wrote in collaboration with several other writers, had an introduction by Harry Thurston Peck. Two volumes are filled with Robert E. Peary's narrative of life and work, "Northward over the Great Ice," along the shores and upon the interior ice cap of northern Greenland during the years 1886-91 and 1891-97. "Across the Sub-Arctics of Canada," by J. W. Tyrrell, described a journey of 3,200 miles by canoe and snowshoes through the barren lands, undertaken for the Canadian Government in 1894, and "Canadian Folk-Life and Folk-Lore" were the theme of William Parker Greenough (G. de Montauban). "Alaska" had its history, climate, and natural resources set forth by its former Governor, A. P. Swineford; "The Rainbow's End: Alaska," was by Alice Palmer Henderson; and a new edition was also issued of "Appletons' Guide-Book to Alaska and the Northern Coast," by Elizabeth R. Seidmore, with a chapter on the Klondike. "A Mile of Gold," by William M. Stanley, told of strange adventures on the Yukon, which the author visited to his profit, and gave good advice to prospectors, while Eleanor Ceellia Donnelly accompanied "A Klondike Picnic" with genuine letters from the Alaskan gold fields. "Historic Pilgrimages in New England" were described by Edwin Munroe Bacon, and "Historic Homes of the Southwest Mountains, Virginia," by E. C. Mead. "Mr. Eagle's U. S. A. as seen in a Buggy Ride of 1,000 Miles from Illinois to Boston" was by John Livingstone Wright and Mrs. Abbie Seates Ames. "Afloat on the Ohio," by Reuben Gold Thwaites, outlined a historical pilgrimage of 1,000 miles in a skiff from Redstone to Cairo, and "Across the Everglades," a canoe journey of exploration, was illustrated by the author, Hugh L. Willoughby, from photographs by himself. "A World of Green Hills," by Bradford Torrey, contained observations of Nature and human nature in the Blue Ridge, and Edith M. Nicoll printed "Observations of a Ranchwoman in New Mexico." "Picturesque Mexico," by Marie Robinson Wright, was written from data collected under the special patronage of the Mexican Government, and from Matias Romero we had "Geographical and Statistical Notes on Mexico," the third of his important books upon his country published during the year. "Sealth the City by the Inland Sea," by Elizabeth H. Calvert, made us thoroughly acquainted with Seattle, Wash., and Agnes Repplier's presentation in prose of "Philadelphia" was illustrated by Ernest C. Peixotto. Frank G. Carpenter conducted "Travels through North America with the Children" and "Travels through Asia" in the same company, and also wrote on "North America" for "Carpenter's Geographical Reader." New editions were sent out of Appletons' "General Guide to the United States," "Canadian Guide-Book," "Handbook of Summer Resorts" and "Dictionary of New York." The "Century Atlas of the World" was edited by Benjamin E. Smith.

The following are the figures of book production

during the year, as compared with those of 1897, from the columns of the "Publishers' Weekly":

CLASSIFICATION.	1897.		1898.	
	New books.	New editions.	New books.	New editions.
Fiction	713	156	724	181
Law	474	35	417	39
Theology and religion	447	45	406	40
Education and language	395	36	364	13
Juvenile	319	50	356	17
Literary history and miscellany	261	154	313	19
Poetry	180	67	288	15
History	189	49	244	38
Political and social sciences	175	21	243	14
Biography, memoirs	193	12	172	23
Medical science, hygiene	129	24	143	45
Physical and mathematical science	166	22	143	31
Description, travel	149	20	134	33
Fine arts and illustrated books	108	31	144	19
Useful arts	96	14	106	6

Domestic and rural	52	5	40	3
Sports and amusements	38	5	32	10
Humor and satire	17	5	18	2
Totals	4,171	757	4,332	554
		4,171		4,332
		4,928		4,886

LITERATURE, BRITISH, IN 1898. The excitement incident to wars and rumors of wars told more effectually upon the production of books in Great Britain than in our own country. The record of 1897 showed a total of 7,926 new books and new editions published in England, while that of 1898 was 7,516, a decline of 410. And yet this number exceeded the total production of the United States by 2,630. Of the 7,516 sent from the press, 6,008 were new books, whereas 1897 showed 6,244, while the figures for new editions stood 1,508 in 1898 against 1,682 in 1897. As compared with 1896, however, there is an increase of nearly 1,000 volumes. Nearly all the decrease in new books is found to be in the case of novels and stories for the young. Of these, 1,960 were published in 1897, and but 1,758 in 1898. There was also a great decrease in the department of *belles-lettres*, essays, etc., and there were fewer books of political economy, art, science, and travel. More law books were issued, and more new educational works. Poetry fresh from the pen appeared in nearly the same number of volumes as last year, while the issue of new editions was considerably less. The large increase in the number of miscellaneous works was accounted for by the increased number of pamphlets. The dignity and solidity of English literature have of late years been marred by a trivial and prurient fiction, but this year there was a marked promise of a return to a simpler and purer standard, and the sex novel tends to become a thing of the past.

Biography.—Several delightful books of autobiography and reminiscences were published during the year. Among them are to be noted "Auld Lang Syne," by Prof. F. Max Müller; "My Life in Two Hemispheres," by Sir Charles Gavan Duffy; "Collections and Recollections," by G. W. E. Russell, who announced himself modestly on the title page merely as "one who has kept a diary": Part II of "Memorials, Personal and Political, 1865-1895," in two volumes, by Roundell Palmer, Earl of Selborne, whose "Letters to His Son on Religion" were also collected; two more volumes of "Notes from a Diary," by Sir Mountstuart Grant Duff, covering the years 1873-1881; "Many Memories of Many People," by Mrs. M. C. M. Simpson, the daughter of Nassau Senior, who, from a child, knew most of the people worth knowing in the early part of the century and writes of them charm-

ingly; "Social Hours with Celebrities," by the late Mrs. W. Pitt Byrnie, the author of "Gossip of the Century," edited by her sister, Mrs. R. H. Busk, in two volumes; "The Journals of Walter White," Assistant Secretary to the Royal Society, full of conversations at Carlyle's, Tennyson's, and elsewhere, which had a preface by his brother, William White; "Reminiscences," by Miss M. Betham-Edwards, and "Phases of My Life," by Dean Francis Pigou, full of the raciest anecdotes. Sir Herbert Maxwell published a memoir of "The Honorable Sir Charles Murray," the accomplished diplomatist, scholar, traveler, courtier, and sportsman; "Memoirs of the Life and Correspondence of Henry Reeve," by John Knox Laughton, in two volumes, brought us in contact with many noted men, besides the genial subject, the editor of "Greville's Memoirs," and molder of public opinion through the press; the "Autobiography and Letters of Dean Merivale" were edited by Judith Anne Merivale, and "Memoirs of John A. Heraud," which we owe to Edith Heraud, his daughter, recalls the correspondent of Wordsworth and Southey, and yet another literary biography was that of "James Hain Friswell," by his daughter, Mrs. Ambrose Myall. "Personal Forces of the Period" were agreeably reviewed by T. H. S. Esecott, and "Newman Hall: An Autobiography," details the experiences of the great dissenting minister. The death of Mr. Gladstone brought forth many sketches and memoirs: "The Story of Gladstone's Life," by Justin McCarthy was revised and enlarged, carrying the narrative to the close of the illustrious career; "Mr. Gladstone: A Monograph," came from Sir Edward W. Hamilton, well qualified for the task he undertook by an intimacy of nearly forty years; "Gladstone, the Man," a non-political biography, by D. Williamson; "William Ewart Gladstone: His Characteristics as Man and Statesman," by James Bryce, and "Talks with Mr. Gladstone," by Hon. Lionel A. Tollemache. A "Life of William Ewart Gladstone," edited by Sir Wemyss Reid, was issued in twelve monthly parts. One of the striking books of the year was "The Life of Charles Stewart Parnell," in two volumes, by R. Barry O'Brien, giving an admirable picture of the man and entering deeply into the political situations with which his name is identified. "Pitt: Some Chapters of His Life and Times," by the Hon. Edward Gibson, Lord Ashbourne, threw light on the private character of the great statesman, and supplemented admirably the more solid biographies. To political biography belong also "The Autobiography and Political Correspondence of Augustus Henry, Third Duke of Grafton," edited by Sir William R. Anson from hitherto unpublished documents in the possession of the family, and "The Life of Francis Place," by Graham Wallas, and "The Life and Letters of Henry Cecil Raikes, late Her Majesty's Postmaster General," for which we are indebted to Henry St. John. "Sir Henry Lawrence, the Pacifist," by Lieut.-Gen. J. J. McLeod Innes, appeared in the "Rulers of India Series," and from Capt. L. J. Trotter we had "The Life of John Nicholson, Soldier and Administrator," based on private and hitherto unpublished documents, which threw new light on the stormy days of the mutiny, again revived in "General Sir Richard Meade and the Feudatory States of Central and Southern India," by Thomas Henry Thornton, and "The Recollections of a Highland Subaltern," by W. Gordon-Alexander. Sir Richard Temple contributed an introduction to the highly interesting and picturesque "Memoirs of Alexander Gardner, Colonel of Artillery in the Service of Maharaja Ranjit Singh," edited by Major Hugh Pearse. "A Memoir of Major-General Sir Henry Creswicke Rawlinson," by

his brother, Canon George Rawlinson, told at length the story of his famous climb up the rock of Behistun and the consequent revelation of a new science. Two volumes of absorbing interest were devoted by Lieut.-Col. G. F. R. Henderson to "Stonewall Jackson and the American Civil War," and Sir Charles Alexander Gordon published "The Recollections of Thirty-nine Years in the Army" of his country. "A Prisoner of France" contained the reminiscences of the late Capt. Charles Boothby; "A Middy's Recollections, 1853-1860," came from Rear-Admiral the Hon. Victor Montagu; "The Life of Vice-Admiral Lord Lyons," by Capt. S. Eardley-Wilmot, R. N., gave an account of naval operations in the Black Sea and the Sea of Azov, 1854-'56; Vice-Admiral P. H. Colomb was the author of "Memoirs of Admiral the Right Hon. Sir Astley Cooper Key," and "Admiral Duncan" was commemorated by his great-grandson, Earl Camperdown. "Nelson and His Times" was the theme of Lord Charles Beresford and Mr. H. W. Wilson. To contemporary biography belongs "Paul Kruger and His Times," by Francis Reginald Statham, and "Leo Tolstoy: The Grand Mujik," a study in personal evolution, by G. H. Perris. "H. R. H. The Prince of Wales" appeared anonymously and gave a complete account of his career, including his birth, education, travels, marriage, and home life, and philanthropic, social, and political work. "Letters of Princess Elizabeth of England," an aunt of Queen Victoria, written for the most part to Miss Louisa Swinburne, were edited by that lady's great-nephew, Philip C. Yorke. "The Two Duchesses, Georgiana, Duchess of Devonshire, and Elizabeth, Duchess of Devonshire," was edited by Vere Foster; "Memoirs of Lady Russell and Lady Herbert, 1623-1723," were compiled from original family documents by Lady Stepney; Lady Strachey edited "Memoirs of a Highland Lady," the autobiography of Elizabeth Grant, of Rothiemurehus, 1797-1830, and Lady Newdigate-Newdegate, in "The Cheverels of Cheverel Manor," presented us with the originals of "Mr. Gilfil's Love Story" as told by George Eliot. Oscar Browning contributed lives respectively of "Peter the Great" and "Charles XII of Sweden"; "Charles the Great" was the subject of a monograph by Thomas Hodgkin; "The Great Lord Burghley" purported to be a study in Elizabethan statecraft by Martin A. S. Hume, and "Charles I" was the theme of the last work of Sir John Skelton. "Henry of Guise and Other Portraits" came from H. C. Macdowall. From Archibald Forbes came "The Life of Napoleon the Third," "Michel de Montaigne," by M. E. Lowndes, was a biographical study. Vol. III of "Annals of a Publishing House: William Blackwood and His Sons," was by Mrs. Gerard Porter, and was devoted to her father, John Blackwood. Henry F. Mackenzie Bell was the author of a biographical and critical study of "Christina Rossetti," and E. V. Lucas gave us "Charles Lamb and the Lloyds." George Gissing made a critical study of "Charles Dickens" for the "Victorian Era Series," another issue of which was "John Bright," by C. A. Vince. From Mrs. Anne Ritchie (his daughter) we had the nearest approach we will ever have to a biography of Thackeray in the shape of biographical introductions to the edition of his "Works" in thirteen volumes, inaugurated during the year, nine of which were sent from the press. The correspondence of "Robert Burns and Mrs. Dunlop," now published in full for the first time, with elucidations by William Wallace, filled two volumes of great literary interest, and "The Life of George Thomson, the Friend of Burns," was written by J. Cuthbert Hadden. William Hale White made "An Examination of the Charge of

Apostasy Against Wordsworth"; two volumes contained the "Letters and Journals" of Lord Byron, edited by Rowland E. Prothero in the new edition of his "Works"; while from D. Guido Biagi we had the story of "The Sunset of Shelley" told in all its sadness. Sidney Lee was the author of "A Life of William Shakespeare," in which he exploited a new theory with regard to the "Sonnets." David Wilson, in "Mr. Froude and Thomas Carlyle," contended that great injustice had been done to the latter by the biography, which he nevertheless considers Froude's greatest work. "The Books of William Morris Described," by H. Buxton Forman, contained biography in addition to bibliography. "W. G. Wills, Dramatist and Painter," came from Freeman Wills, and "Social Pictorial Satire," by George Du Maurier, contained reminiscences and appreciations of English illustrators of the past generation, and was, moreover, in part autobiographical. "Robert Louis Stevenson" was the theme of Margaret Moyes Black in the "Famous Scots Series," and Miss E. Blantyre Simpson gave us "Robert Louis Stevenson's Edinburgh Days." In the standard series there appeared fewer volumes than usual. Among them we had "John and Sebastian Cabot: The Discovery of North America," by C. Raymond Beazley; "Edward Gibbon Wakefield: The Colonization of South Australia and New Zealand," by Richard Garnett, and "Sir Thomas Maitland: The Mastery of the Mediterranean," by Walter Frewen Lord, all in the "Builders of Greater Britain Series"; "Sir James Young Simpson and Chloroform (1811-1870)," by Gordon H. Laing; "Sir Benjamin Collins Brodie," by Timothy Holmes, and "William Stokes, His Life and Work, 1804-1878," by his son, William Stokes, in the "Masters of Medicine Series"; "Saladin and the Fall of the Kingdom of Jerusalem," the sole contribution to the "Heroes of the Nations Series," which was from the pen of Stanley Lane Poole, and "Mirabeau," the only addition to the "Foreign Statesmen Series," by Paul Ferdinand Willert. In the "Series of Famous Scots," "James Thomson" was by William Bayne; "Robert Fergusson," by A. B. Grosart; "Mungo Park," by T. Banks MacLachlan; "William Dunbar," by Oliphant Smeaton; "Thomas Reid," by Alexander Campbell Fraser; "Sir William Wallace," by A. F. Murison, and "David Hume," by Henry Calderwood. "Pasteur," by Percy Faraday Frankland and Mrs. Percy Faraday Frankland, appeared in the "Century Science Series," and from Dr. J. Rutherford we had a history of "William Moon, LL. D., and His Work for the Blind." Two volumes contained "The Life and Letters of Sir George Savile, Bart., First Marquis of Halifax," with a new edition of his works, by Miss H. C. Foxcroft; "Brief Lives, Chiefly of Contemporaries," set down by John Aubrey, between the years 1669-1696, were edited from the author's MSS. by Andrew Clark, and from Claud Nugent we had a "Memoir of Robert, Earl of Nugent." W. A. S. Hewins edited with an introduction and notes "The Whiteford Papers," being the correspondence and other manuscripts of Col. Charles Whiteford and Caleb Whiteford, from 1739 to 1810, and Lady Gregory performed a similar service for "Mr. Gregory's Letter Box, 1813-1830." "The Autobiography of Arthur Young" was edited by Miss M. Betham-Edwards, with selections from his correspondence. W. P. Jervis paid a centenary tribute to his father, "Thomas Best Jervis"; "A Memoir of Baron Bramwell" came from Charles Fairfield, and Augustine Birrell prepared a biographical sketch of "Sir Frank Lockwood." "My Inner Life," by John Beattie Crozier, claimed to be a chapter in personal evolution and an autobiography; "Old World Memories" came from Edward

L. Temple, and "Reminiscences of Irish Life and Character" were published by Michael Macdonagh. John Atkinson Hobson studied "John Ruskin as a Social Reformer," and Edwin Hodder made a similar study of "The Seventh Earl of Shaftesbury." Henry B. Irving attempted a justification of the "Life of Judge Jeffreys." In the "Great Educators Series" we had "Rousseau and Education According to Nature," by Thomas Davidson. From George R. Parkin we had two instructive volumes devoted to the life, diary, and letters of "Edward Thring, Headmaster of Uppingham School," and "The Life of Henry Morley" was written by his son-in-law, Henry Shaen Solly. "The Life and Letters of Lewis Carroll (Rev. C. L. Dodgson)" came from his nephew, S. D. Collingwood. To religious biography belongs "The Life of Henry Drummond," by George Adam Smith, and "The Ideal Life," a volume of addresses by Drummond, hitherto unpublished, also contained memorial sketches by Ian MacLaren and William Robertson Nicoll. Vol. I of "The Autobiography of Charles H. Spurgeon," compiled from his diary, letters, and records, by his wife and his private secretary, covered the period from 1834 to 1854; "The Life Work of Edward White Benson, D. D.," the late Archbishop of Canterbury, was reviewed in unpretentious fashion by J. A. Carr; Canon Rawsley contributed a "Memoir of Henry Whitehead, 1825-1896"; "Joseph Arch: The Story of His Life Told by Himself," was edited with a preface by the Countess of Warwick; "Bishop Walsham How" was the subject of a memoir by his son, F. D. How; another son, A. W. W. Dale, wrote "The Life of R. W. Dale, of Birmingham," and "Henry Robert Reynolds, D. D.: His Life and Letters," was edited by his sisters. A new series of "Heroes of the Reformation" was inaugurated with "Martin Luther," by Dr. H. Eyster Jacobs, the succeeding volume being given to "Philip Melancthon, the Protestant Preceptor of Germany" by James W. Richard. "St. Thomas of Canterbury: His Death and Miracles" were the theme of Edwin A. Abbott, and "The Life of Saint Hugh of Lincoln" was written by Herbert Thurston, S. J. Four "Historic Nuns" were commemorated by Bessie R. Belloc. "Kings of the Hunting Field" was the title of memoirs and anecdotes of distinguished masters of the hounds and other celebrities of the chase, by Thormanby; "Reminiscences of the Course, the Camp, the Chase" came from "a gentleman rider," Col. R. F. Meysey-Thompson, and "Reminiscences of Frank Gillard and the Belvoir Hounds," edited by Cuthbert Bradley, were fully illustrated. A series of biographies of "The Royal Household" during the sixty years of the Queen's reign was the work of W. A. Lindsay. Vols. LIV, LV, LVI, and LVII, of the "Dictionary of National Biography," edited by Sidney Lee, reached "Tom-Tytler."

Essays.—In England there is complaint that this form of writing, admittedly one of the most delightful in literature, seems to be going out of fashion. Not many important volumes are to be recorded in 1898, but under this head are included many books of general literature. Two volumes of "Studies of a Biographer" were contributed by Leslie Stephen, in reality a collection of essays; "Affirmations," by Henry Havelock Ellis, was a series of essays on Nietzsche, Casanova, Zola, and others; "Angels' Wings" was the title of others on art and its relation to life, by Edward Carpenter; "Essays at Eventide" came from Thomas Newbigging; "Studies in Little-known Subjects," from C. E. Plumptre; "Essays, Mock Essays, and Character Sketches" were reprinted from the "Journal of Education," with original contributions by the Hon. Lionel A. Tollemache and others; and "Reviews and Essays

in English Literature" were from the pen of Rev. Duncan C. Tovey. Henry Austin Dobson was represented by "Miscellanies," W. Basil Worsfold expounded "The Principles of Criticism," "A Short History of English Literature" was written by George Saintsbury, and Stopford A. Brooke considered "English Literature from the Beginning to the Norman Conquest." Richard Garnett added "A History of Italian Literature" to the "Short Histories of the Literatures of the World Series," another issue of which was "A History of Spanish Literature," by James Fitzmaurice-Kelly, and David Hannay discussed "The Later Renaissance" in "Periods of European Literature." J. Scott Clark wrote on "The Study of English Prose," "A Literary History of India," by Robert W. Frazer, inaugurated the new "Library of Literary History," and was an eminently scholarly and valuable work. "The First Philosophers of Greece" were translated by Arthur Fairbanks, along with important passages bearing upon them from the works of Plato, Aristotle, and others. Another work of scholarship, both vast and complete, was the translation by J. G. Frazer, of "Pausanias's Description of Greece," with a commentary which filled four of the six volumes which contained the work. The existence of an edition so highly lauded as this has been rendered possible, it may be added, by the excavations of the last ten years. The recently discovered odes of "Bacchylides" were rendered accessible to "lovers of poetry not readers of Greek," by E. Poste. "The Attic Theater," by A. E. Haigh, gave a description of the stage and theaters of the Athenians and of the dramatic performances at Athens, and from the same author we had "The Tragic Drama of the Greeks," accompanied with illustrations. Catherine Mary Phillimore, the author of "Studies in Italian Literature," gave us a study of "Dante at Ravenna"; Edmund G. Gardner wrote of "Dante's Ten Heavens"; Rosemary Cotes, in "Dante's Garden," enumerated the flowers mentioned by Dante; and from Paget Toynbee we had "A Dictionary of Proper Names and Notable Matters in the Works of Dante." New criticism of Shakespeare appeared in George Wyndham's edition of the "Poems" of the great dramatist, and Edwin Reed prepared the "Brief for Plaintiff" in the case of "Bacon *versus* Shakespeare," while Israel Gollancz devoted a volume to "Hamlet in Iceland." "The King's Quhair and the New Criticism" was reviewed by Robert Sangster Rait. "Types of Scenery and their Influence on Literature" was the subject of the Romanes Lecture by Sir Archibald Geikie, in which exact scientific knowledge was united with adequate literary taste. J. Baly published Vol. I of "Enn-Aryan Roots," with their English derivatives and the corresponding words in the cognate languages compared and systematically arranged; Lieut.-Col. C. R. Conder wrote on "The Hittites and their Language," largely a study in philology; and Robert Brown made a study of "Semitic Influence in Hellenic Mythology." "The Jew, the Gypsy, and Isl Islan" was the title of three essays by the late Capt. Sir Richard F. Burton, edited by W. H. Wilkins, and "Gypsy Folk-Tales" were collected by Francis Hindes Groome in support of a theory of gypsies. "Tom Tit Tot," by Edward Clodd, traced the story of Rumpelstiltskin through its English variants. J. Starkie Gardner described "Armor in England from the Earliest Times to the Seventeenth Century"; Charles Oman published Vol. II of "A History of the Art of War," covering "The Middle Ages"; "Law and Politics in the Middle Ages" were the theme of Edward Jenks, and "The Universities of Europe in the Middle Ages" that of Hastings Rashdall. "Old English Social Life as Told by the Parish

Register" came from T. F. Thiselton Dyer, the author of "Church Lore Gleanings"; "Records of Old Times: Historical, Social, Political, Sporting, and Agricultural," from J. K. Fowler (Fowler); "Life in an Old English Town," by Mary Dornes Harris, appeared in the "Social England Series," and Vol. II was issued of "A Calendar of the Inner Temple Records," edited by F. A. Inderwiak, covering the period between 1603 and 1660. "Curiosities of a Scots Charta Chest," edited by the Hon. Mrs. Atholl Forbes, and "The Grange of St. Giles," by Mrs. J. Stewart Smith, dealt with two Edinburgh mansions; "Scottish Life and Humor" were discussed by William Sinclair, and Capt. E. C. Ellice wrote on "Place-Names in Glengarry and Glenquoich." Ernest Law wrote "A Short History of Hampton Court," condensed from his monumental and valuable "History of Hampton Court Palace," and Edward Robins told of "The Palmy Days of Nance Oldfield." "Elizabeth and her German Garden," by Benjamin Kidd, contained charming studies of Nature, while "By Roadside and River" was the title of gleanings from Nature's fields by H. Mead-Briggs. James E. Whiting rambled "Where Wild Birds Sing," and J. Arthur Gibbs told alluringly of "A Cotswold Village." Henry B. Wheatley wrote on "Prices of Books" for "The Library Series," and "Pages and Pictures from Forgotten Children's Books" came from A. W. Tuer. "Un-addressed Letters," edited by Frank Athelstane Swettenham, contained "generous self-revelation of uncommon candor in a form sufficiently unfamiliar to preserve the charm of novelty," and from Jerome K. Jerome we had "The Second Thoughts of an Idle Fellow." "Leaders in Literature," by P. Wilson, was a collection of short studies of great authors in the nineteenth century.

Fiction.—Several novels of 1898 possessed unusual merit. "Helbeck of Bannisdale," by Mrs. Humphrey Ward, and "Evelyn Innes," by George Moore, dealt with the deeper questions of life, and in the literary world an event of great importance was the appearance of "Aylwin," the romance which Theodore Watts-Dunton had so long withheld. Its freshness, its pure romance, entitled it to a high and permanent place in literature, aside from the portraiture it was held to contain of that circle of the author's friends which comprised all that was most interesting in the literary and artistic worlds. To the world of pure romance belonged also "The Forest Lovers," by Maurice Hewlett, one of the marked successes of the year, and "The Sundering Flood," the last tale of William Morris. Two other novels that created much comment were "Concerning Isabel Carnaby," by Ellen Thornycroft Fowler, and "The Open Question," by Elizabeth Robins (C. E. Raimond). One of the books which had the widest sale was "The Day's Work," a collection of twelve short stories of Rudyard Kipling, and "Dreamers of the Ghetto," by Israel Zangwill, was pronounced by critics a notable book in its portrayal of the characteristics of the Jew. Historical novels were numerous, as usual. "The Admiral: A Romance of Nelson in the Year of the Nile," came from Douglas Sladen; "The Castle Inn" and "Shrewsbury" from Stanley J. Weyman; "Across the Salt Sea," a romance of the War of Succession, from John Bloundell Burton, who published also "The Scourge of God," a romance of religious persecution under Louis XIV of France; "The Pride of Jennico," by Agnes and Egerton Castle, appeared early in the year, and was one of the favorite books; "The Battle of the Strong" was a romance of two kingdoms, by Gilbert Parker, and from S. R. Crockett we had "The Red Axe" and "The Standard Bearer." "John Splendid," by Neil Munro, told the tale of a poor gentleman and the little wars of Lorn, pre-

senting a strong picture of the Marquis of Argyll; "John Gilbert, Yeoman," was a romance of the Commonwealth, by R. G. Soans, and "In the Shadow of the Three," by Blanche Loftus Tottenham, carried us to Venice in the latter part of the eighteenth century. "The Vintage" was a romance of the Greek War of Independence, by Edward F. Benson, who published also "The Money Market," more in line with his previous work in its cynicism concerning woman; while "The Broom of the War God," by Henry Noel Brailsford, was a story of the recent war between the Greeks and Turkey. Sir Walter Besant published "The Changeling," and Anthony Hope (Anthony Hope Hawkins) "Simon Dale," a story of the days of Charles II and Nell Gwynn, in which Louis le Grand also figures, and "Rupert of Hentzau," a sequel to "The Prisoner of Zenda," to which, however, it was much inferior. Henry Seton Merriman (Hugh S. Scott), who scored such a success last year with "In Kedar's Tents," touched upon the corruptions of English political life in "Roden's Corner," his only novel published during the year; "Doctor Thorne," by H. Rider Haggard, had vaccination for its theme; George Gissing was represented by "The Town Traveler," and Richard Le Gallienne by "The Romance of Zion Chapel," pessimistic in tone, and Benjamin Swift (W. R. Paterson) by "The Destroyer," which in his opinion was the passion of love. "Her Memory" was tenderly and touchingly commemorated by Maarten Maartens (J. M. W. van der Poorten Schwartz), and "Wild Eelin" was the last of William Black's novels, full as ever of the wild beauty of Scottish scenery. "A Voyage of Consolation," by Mrs. Sara Jeannette Cotes (Mrs. Everard Cotes), claimed to be in the nature of a sequel to the experiences of "An American Girl in London," and "Poor Human Nature" was a musical novel by Elizabeth Godfrey. From Maxwell Gray (Mrs. M. J. Tutti) we had "The House of Hidden Treasure" and "Ribstone Pippins," the latter a love-story of Devon; W. Pett Ridge published "Mord Em'ly" and "By Order of the Magistrate"; David Christie Murray, "This Little World"; Frank Frankfort Moore, "The Millionaires" and "The Fatal Gift," presumably of beauty, possessed by the famous Gunning sisters whom the author chose for the heroines; W. E. Norris wrote but one novel, "The Widower"; A. Conan Doyle but one, "The Tragedy of the 'Korosko'"; and W. Clark Russell also was represented but by one sea story, "The Romance of a Midshipman." "A Forgotten Sin" and "The Impediment" were by Dorothea Gerard (Madame Longard de Longgarde); "A Passionate Pilgrim," by Percy White; "Sunset," by Beatrice Whitby; and "The Lust of Hate," by Gny Boothby, while from Ernest Hornung we had "Young Blood" and "Some Persons Unknown," the last a collection of short stories of London literary life and the Australian bush. "The Looms of Time" came from Mrs. Hugh Fraser; "The Incidental Bishop" from Grant Allen; "Dicky Monteith" from T. Gallon; "Materfamilias" from Mrs. Ada Cambridge Cross; "Poor Max" from Mrs. Kathleen Mannington Caffyn (Iota); "The Crook of the Bough" from Mrs. Henry Norman (Ménie Muriel Dowie); "A Valuable Life" and "Margaret Wynne" from Adeline Sergeant; "Torn Sails," a tale of a Welsh village, from Allen Raine, the author of "Mifanwy"; "The Lake of Wine" from Bernard Capes; "The Lady of Castell March" from Owen Rhosecomyl; "A Fiery Ordeal" from Mrs. Jessie Fraser Couvreur (Tasma), and "The Potentate" from Frances Forbes Robertson. "John of Strathbourne" was by R. D. Chetwode; "Miss Balmaine's Past" and "Peggy of the Bartons," by Mrs. Bertha M. Croker; "Wheat in the Ear," by Alien, "Fighting for the King," by W.

G. Tarbets, "The Journalist," by C. F. Keary, "The Confessions of Stephen Whapshare," by Emma Brooke, and "The World's Rough Hand," by H. Phelps Whitmarsh. "Tekla" was a romance of love and war, by Robert Barr; Rosa Nouchette Carey told the story of "Mollie's Prince," and Robert S. Hitchens that of "The Londoners"; literary London was the theme of "Scribes and Pharisees," by William Le Queux; "His Grace o' the Gunne" and "The Minister's Conversion" came from I. Hooper, and "Nanno," a pathetic Irish story, from Rosa Mulholland. "The Nigger of the Nareissus" was a tale of the sea, by Joseph Conrad, who told also "Tales of Unrest"; J. Marshall Mather, the author of "At the Sign of the Wooden Shoon," gave us "By Roaring Loom," a masterly description of life among the Lancashire working classes; "The Scourge Stick," according to Mrs. Campbell Praed, kept her heroine in the right path, while "The Cost of her Pride," in another case, was calculated by Mrs. Alexander (Mrs. Annie French Hector). "Sunlight and Limelight" were contrasted by Francis Gribble, and a survival of the sex novel was George Paston's "A Writer of Books." "In High Places" and "Rough Justice" were the ventures of Miss M. E. Braddon in the world of fiction during the year; Fergus Hume was thrilling as ever in his narration of the adventures of the leader of "The Rainbow Feather," while John Strange Winter (Mrs. H. E. V. Stannard) elected to chronicle "The Peacemakers." M. E. Francis (Mrs. M. E. Sweetman Blundell) described "The Duenna of a Genius," and "The Gunrunner," by Bertram Mitford, was a story of South Africa and the Zulu war. "A Statesman's Chance" was shown by Joseph F. Charles, and William Somerset Maugham described "The Making of a Saint." "The Romantic History of Robin Hood" was retold by Barry Pain. Among volumes of short stories may be mentioned "To be Read at Dusk, and Other Stories, Sketches, and Essays," by Charles Dickens, nearly fifty in all, discovered by F. G. Kitton, which had hitherto escaped the notice of bibliographers, and now first collected; "Afterwards, and Other Stories," by Ian Maelaren; "The Keeper of the Waters," by Morley Roberts; "From the East to the West," by Jane Barlow; "Weeping Ferry, and Other Stories," by Margaret L. Woods; "Traits and Confidences," by Emily Lawless; "The Mess Deck," stories of the Royal Navy; "The Golfieide, and Other Tales of the Fair Greh," by W. G. Van Tassel Sutphen; "King of Circumstance," by Edwin Pugh; and "Life is Life, and Other Tales and Episodes," by Miss Gwendoline Keats (Zack). The story of "Owd Bob, the Grey Dog of Kenmuir," by Alfred Ollivant, was a particularly pretty juvenile book. "To Arms," by Andrew Balfour, was also suited to young readers, and "Off to the Klondyke; or, A Cowboy's Rush to the Gold Fields," by William Gordon Stables, M. D., was illustrated by Charles Whymper. "The Stevenson Reader" was edited by Lloyd Osbourne. A new edition of "The Works of Henry Fielding" was begun, and the Thornton edition of the "Novels of the Sisters Brontë" was put through the press, as well as a ten-volume edition of "The Novels of Jane Austen."

Fine Arts.—Several works of remarkable excellence are to be noted in 1898. "Modern Architecture," a book for architects and the public, by H. Heathcote Statham, criticised the leading modern buildings of Europe and the United States, and from the same author we had a review of "Architecture Among the Poets." "Gainsborough and His Place in English Art" came to us from Walter Armstrong and was superbly illustrated; "Memorials of an Eighteenth-Century Painter (James Northcote)," by Stephen Gwynn, and "George

Morland, and the Evolution from Him of Some Later Painters," by J. T. Nettlehip, were special studies, and from Algernon Graves came a magnificent volume devoted to "Sir Joshua Reynolds." Another was "Drawings and Studies in Pencil, Chalk, and Other Materials," by the late Lord Leighton, which had a preface by S. P. Cockerell, and contained 40 facsimiles, mostly of the same size as the original drawings. "The Pictures of Armitage, R. A.," were considered anonymously; and A. Rischgitz published "Drawings of Constable." The first of three parts of "Van Dyck's Pictures at Windsor Castle," historically and critically described by Ernest Law, was issued, and from the same author we had "The Royal Gallery of Hampton Court Illustrated" with 100 plates. "A Florentine Picture Chronicle" was the title of a series of 99 drawings by Maso Finiguerra, reproduced from the originals in the British Museum, with a critical and descriptive text by Sidney Colvin, and "In the National Gallery," by Cosmo Monkhouse, covered the Italian schools from the thirteenth to the sixteenth century, with illustrations, while Claude Phillips contributed "Titian: A Study of His Life and Work," and A. Letchford "A Series of Seventy Illustrations to Capt. Sir R. F. Burton's Arabian Nights," with a portrait of the explorer. "Painters and their Works," a dictionary of great artists, by R. N. James, filled three volumes. H. Nisbet was an authority "On Painting in Water Colors"; "Japanese Illustrations," by E. F. Strange, gave a history of wood cutting and color printing in Japan, and "Etching, Engraving, and the Other Methods of Printing Pictures" were treated by Hans W. Singer and William Strang. "The Bases of Design," by Walter Crane, contained 200 illustrations, and Waller J. Pearce was the author of an exhaustive treatise on "Painting and Decorating." "King René's Honeymoon Cabinet," by John P. Seddon, reproduced the designs of the pre-Raphaelite painters for the decoration of this cabinet which contained the architect's plans, and upon which a theory regarding the unity and fellowship of the several arts was worked out. "A History of the Society of Dilettanti," compiled by L. Cust, was beautifully illustrated; a history and description of "The Bayeux Tapestry" was written by Frank Rede Fowke for the "Ex-Libris Series"; and "Windows: A Book about Stained and Painted Glass," by Lewis Forman Day, contained 50 full-page plates and more than 200 illustrations in the text, all of old examples. A series of "French Wood Carvings from the National Museums" were selected for illustration and accompanied with descriptive text by Eleanor Rowe, and "Old Furniture, English and Foreign," was drawn and described by Alfred Ernest Chaneellor. "London Impressions" consisted of etchings and pictures in photogravure by William Hyde and essays by Alice Meynell, and "London Types," drawn by William Nicholson, were accompanied with quatorzains by W. E. Henley. "The Nature Poems of George Meredith" were collected into a beautiful volume and illustrated with 20 full-page pictures by William Hyde; and Aubrey Beardsley was represented by "Six Drawings Illustrating Theophile Gautier's romance 'Mademoiselle de Maupin,'" and by "A Second Book of Fifty Drawings." "Pictures of the Classic Greek Landscape and Architecture," by John Fulleylove, R. L., were accompanied with text by Henry W. Nevinson. John H. Huddilston wrote on "Greek Tragedy in the Light of Vase Paintings," and Dr. Murray on "Greek Bronzes." "Examples of Greek and Pompeian Decorative Work" were measured and drawn by James Cromar Watt. Sir Richard Temple gave us "A Bird's-Eye View of Picturesque India," beautifully illustrated. "Our English Min-

isters," described by Dean Farrar, Dean Purey-Cust, and others, filled two volumes, illustrated by Henry Raiton and others; and "The Church Bells of Buckinghamshire, their Inscriptions, Founders, Uses, and Traditions," were described and illustrated in a large volume by A. H. Cocks. "The Arms of the Royal and Parliamentary Burghs of Scotland" we owe to John, Marquess of Bute, J. R. N. Macphail, and H. W. Lonsdale. "A Catalogue of Arabic Coins in the Khedivial Library, Cairo," came from Stanley Lane-Poole, and "Terra-Cotta Sarcophagi, Greek and Etruscan, in the British Museum," by A. S. Murray, was published by order of the trustees of that institution. "Rex Regum," by Sir Wyke Bayliss, was a painter's study of the likenesses of Christ from the time of the Apostles to the present day, with 50 illustrations. "The Art Annual for 1898," being the Christmas number of the "Art Journal," consisted of the life and work of Lady Butler, by Wilfrid Meynell, with 3 full-page plates, and 60 other illustrations; Sir William Blake Richmond delivered a lecture to the students of the Royal Academy upon "Leighton, Millais, and William Morris"; M. H. Spielmann wrote on "Millais and His Work," and "J. F. Millet and Rustic Art" was the theme of Henry Naegely (Henry Gaelyn), the author of "The Mummer and Other Poems." In the "Portfolio Series" R. H. M. Stevenson gave his attention to "Rubens," "Chinese Porcelain," by W. G. Gulland, had notes by T. J. Larkin, and contained 485 illustrations, while "The Ceramics of Swansea and Nantgarw" contained a history of the factories by W. Turner, also illustrated. "The Fringe of an Art," by Vernon Blackburn, contained appreciation applied to music, and "Voice and Violin" was the title of sketches, anecdotes, and reminiscences, by Dr. T. L. Phipson, the author of "Famous Violinists and Fine Violins." H. Tupper considered "The Growth and Influence of Music in Relation to Civilization." Vol. II of "Modern Opera Houses and Theatres," by Edwin O. Sachs, proved no less interesting and instructive than the former volume. "The Theatrical World of 1897" was reviewed by William Archer, and John Hollingshead published "Gaiety Chronicles." "Amateur Clubs and Actors," by various authors, was edited by W. G. Elliot.

History.—"The Building of the British Empire," written by Alfred T. Story for the "Stories of the Nations Series," in two volumes, contained the story of England from Elizabeth to Victoria. "The Foundations of England," according to Sir J. H. Ramsay, were laid B. C. 55-A. D. 1154, and from the same author we had "Lancaster and York: A Century of English History," covering the period 1399-1485. Vol. IV of J. Hamilton Wylie's great work "The History of England under Henry the Fourth" was issued, covering 1411-1413; "England and the Hundred Years' War, 1327-1485," by C. W. C. Oman, was the concluding volume of the "Oxford Manuals of English History"; General the Hon. G. Wrottesley gave us "Crécy and Calais" from the public records, and from James Gairdner we had a review of "The Life and Reign of Richard the Third." "The Early Days of the Nineteenth Century in England, 1800-1820," by William Connor Sydney, filled two volumes; from A. J. Evans and C. S. Fearenside we had "England under the Later Hanoverians, 1760-1837," and H. DeB. Gibbins gave a concise history of "The English People in the Nineteenth Century." "Cromwell's Scotch Campaigns, 1650-'51" appealed to students of military history. W. J. Hardy edited a second volume of "Domestic State Papers of the Reign of William and Mary." "The Battle of Sheriffmuir" was related from original sources, and "Historical Notes or Essays on the '15

and '45" came from D. Murray Rose. "Historical Papers relating to the Jacobite Period, 1699-1750," in two volumes, were edited by Col. James Allardyce, and from Andrew Lang we had "The Companions of Pickle," carrying on the narrative begun in "Pickle the Spy." Julian S. Corbett published a history of "Drake and the Tudor Navy" in two volumes, and also edited the story of two of Drake's campaigns under the title of "The Spanish War, 1585-1587," published by the Navy Records Society. Vol. II of "The Royal Navy," by William Laird Clowes, carried on that valuable work, and Part II of "Britain's Naval Power," a short history of the growth of the British navy, by Hamilton Williams, covered "From Trafalgar to the Present Times." "The British Merchant Service," by R. J. Cornwall-Jones, gave a history of the British mercantile marine from the earliest times to the present day, and from Gomer Williams we had a "History of the Liverpool Privateers and Letters of Marque," with an account of the Liverpool slave-trade. "The War in the Peninsula" was fought over again by Alexander Innes Shand; Major A. Griffiths wrote in an interesting manner of "Wellington and Waterloo," and William O'Connor Morris fought over again "The Great Campaigns of Nelson." The same author also wrote the history of "Ireland, 1798-1898" with striking impartiality, reviewing the miseries of a century, and contending firmly for a government of the unhappy country according to its own ideas. W. H. Fitchett (Vedette) followed his "Deeds that Won the Empire" with "Fights for the Flag"; Lieut.-Col. Ross-of-Bladensburg condensed from his regimental "History of the Coldstream Guards" the story of "The Coldstream Guards in the Crimea," and Col. Edward Vibart wrote "The Sepoy Mutiny as seen by a Subaltern from Delhi to Lucknow." "Two Native Narratives of the Mutiny in Delhi" were translated from the originals by the late C. T. Metcalfe, and "Daily Life during the Mutiny" was described by J. W. Sherer. Modern history received numerous additions. The best selling book published in England during the year was "With Kitchener to Khartoum," by G. W. Stevens, the author of "With the Conquering Turk," who went himself through the campaign which he chronicled so vividly, participating in the battles of the Atbara and Omdurman, and entering with the army the city where Gordon fell. "Sirdar and Khalifa; or, The Reconquest of the Soudan, 1898," by Bennet Burleigh, went over the same ground, and was accompanied with portraits, illustrations, maps, and a plan of battle. E. N. Burleigh in "The Downfall of the Dervishes" also gave a sketch of the campaign, and "The Egyptian Soudan, Its Loss and Recovery," came from Henry S. L. Alford and William Dennistoun Sword. "The Campaign in Tirah, 1897-98," as outlined by Col. H. D. Hutchinson, was supplemented by "Lockhart's advance through Tirah," by Capt. L. J. Shadwell; "Sketches on Service During the Indian Frontier Campaigns of 1897," were published by Major E. A. P. Hobday; Lionel James in "The Indian Frontier War" gave an account of the Mohmand and Tirah expeditions of 1897, and "The Story of the Malakand Field Force," by Lieut. Winston L. Spencer Churchill, was an episode of frontier war. Capt. G. J. Younghusband also gave us "Indian Frontier Warfare." Sir George S. Robertson told admirably "Chitral: The Story of a Minor Siege." "Egypt in the Nineteenth Century; or, Mehemet Ali and His Successors, until the British Occupation in 1882," by D. A. Cameron, was authoritative, the author having enjoyed peculiar advantages for the task he undertook, and Seymour Vandeleur was heard from on "Campaigning on

the Upper Nile and Niger." "Africa in the Nineteenth Century" was an excellent summary of events in the Dark Continent, by Edgar Sanderson, and "Rhodesia and its Government" came from H. C. Thomson, the author of "The Chitral Campaign" and "The Outgoing Turk." Rev. Colin Rae published "Malaboch; or, Notes from My Diary on the Boer Campaigns of 1894 against the Chief Malaboch of Blaauwberg, District Zoutpansburg, S. A. R.," with a synopsis of the Johannesburg crisis of 1896, having been chaplain at the time to the Malaboch forces; Brevet Lieut.-Col. E. A. H. Alderson went "With the Mounted Infantry and the Mashonaland Field Force, 1896," and J. Chalmers described "Fighting the Matabele." Vol. I of "Imperial Africa," by Major A. F. Mockler-Ferryman, was given to "British West Africa," and Demetrius C. Boulger told the story of "The Congo State." "British Rule and Modern Politics," an historical study by Hon. A. S. G. Canning, the author of "The Divided Irish" and "History in Fact and Fiction," may as well be mentioned here as anywhere. From H. E. Egerton we had "A History of British Colonial Policy," and Rev. W. P. Greswell traced the "Growth and Administration of the British Colonies, 1837-1897." An "Essay on Western Civilization in its Economic Aspects (Ancient Times)," by William Cunningham, D. D., appeared in the "Cambridge Historical Series," and was an able and interesting attempt to throw light on the most obscure side of ancient history; Prof. Samuel Dill wrote on "Roman Society in the Last Century of the Western Empire," and W. H. Bullock Hall found traces of "The Romans on the Riviera and the Rhone." "The Invasion of Egypt in A. D. 1249 by Louis IX of France," and "A History of the Contemporary Sultans of Egypt" came from Rev. E. J. Davis; "The Franks from Their Origin as a Confederacy to the Establishment of the Kingdom of France and the German Empire" was contributed by Lewis Sergeant to the "Story of the Nations Series," in which it was followed by "Modern France, 1789-1895," by André Lebou. The two volumes devoted by J. E. C. Bodley to "France," in reality a work of political philosophy, covered respectively "The Revolution and Modern France" and "The Parliamentary System." "The Union of Italy, 1815-1895," by W. J. Stillman (Concordia), the author of "The Cretan Insurrection of 1866" and "Herzegovina and the Late Uprising," belonged to the "Cambridge Historical Series," edited generally by Prof. G. W. Prothero, another issue of which was "Spain, Its Greatness and Decay, 1479-1788," by Major M. Hunne, which had an introduction by E. Armstrong. "Russia's Sea Power, Past and Present; or, The Rise of the Russian Navy," was by Col. Sir George Sydenham Clarke, the author of "Fortifications," and "All the World's Fighting Ships" were passed in review by Frederick T. Jane. "The Romance of the House of Savoy" was related by Alethea Wiel in two charming volumes, and "Scenes in the Thirty Days' War between Greece and Turkey," described by Henry W. Nevins, were illustrated with photographs. "The Romance of Regiment," by J. R. Hutchinson, told the story of the giant grenadiers of Potsdam, 1713-1740. "Monumental Remains of the Dutch East India Company in the Presidency of Madras" were described in a volume of "Reports of the Archaeological Survey of India," by Alexander Rea, superintendent of the survey. From Justin Huntly McCarthy came "A Short History of the United States." "French and English," by Evelyn Everett Green, was a story of the struggle in America, and a "History of the Dominion of Canada," by W. Parr Greswell, was published under the

auspices of the Royal Colonial Institution. Mrs. Frederick Boas was the author of an "English History for Children." "Life in an Old English Town: A History of Coventry," by M. Dormer Harris, belonged to the "Social England Series," edited by Kenelm D. Cotes; "Brentford; Literary and Historical Sketches," came from Frederick Turner, and "Chronicles and Stories of old Bingley" from Harry Speight. "The Beginnings of English Christianity" were traced by Prof. W. E. Collins for the "Churchman's Library"; "The Decian Persecution" was the theme of the "Hulsean Prize Essay" for 1896, by John A. F. Gregg; "England and the Reformation, A. D. 1485-1603," by G. W. Powers, belonged to the "Oxford Manuals of English History"; Henry Gee wrote on "The Elizabethan Clergy and the Settlement of Religion, 1558-1564." Canon Overton contributed "The Church in England" to the "National Churches Series," and "The Anglican Revival" to the "Victorian Era Series"; "The History of the Walloon and Huguenot Church at Canterbury" was written by Francis W. Cross, and "The Celtic Church in Ireland" came from Dr. Heron of Belfast. "The Empire and the Papaey, 918-1273," was from the pen of Prof. Lont. "The Bishop of Lindisfarne, Hexham, Chesterle Street, and Durham, A. D. 635-1020," was an introduction to the ecclesiastical history of Northumbria, by Rev. George Miles, and "The English Black Monks of St. Benedict," by Rev. Ethelred L. Taunton, gave a sketch of their history from the coming of St. Augustine to the present day, in two volumes. "A History of Rugby School" was written for the series of "English Public Schools," by W. H. D. Rouse; "Annals of Eton College" came from Wasey Sterry, and "Harrow School," edited by Edmund W. Howson and George Townsend Warner, had an introduction by Earl Spencer. "Cambridge and Its Colleges," by A. H. Thompson, was a companion volume to "Oxford and Its Colleges," by J. Wells, and was illustrated, like that volume, by Edmund H. New.

Poetry.—Of the 290 new books of poetry published in 1898 it is impossible to say much. Vol. I of "The Poetical Works of Robert Bridges" really introduced that poet of the few to the English public, containing as it did many poems never before publicly printed. The quality of his verse, however, showed him more likely to gain and retain the affection of the minority than the applause of the multitude. "Poems" of Stephen Phillips contained his "Christ in Hades," "Marpessa," and several new poems which have never been previously printed; from John Davidson came "The Last Ballad, and Other Poems," as well as a play in four acts entitled "Godfrida," while Maurice Hewlett, who last year sent forth "Songs and Meditations," was represented by "Pan and the Young Shepherd," a pastoral in two acts, which received the highest praise for "creative power, the vital principle, clean sight, and an imagination both gay and robust." The poet-laureate published but one volume, "Lamia's Winter Quarters," not all of which is poetry even in form, the verse being scattered incidentally amid the record of a family party's sojourn in a Tuscan villa. "The Collected Poems of William Watson" was the misleading title of a selection made by the poet from his printed work in verse. "Odes in Contribution to the Song of French History," by George Meredith, while "possessing splendid beauty in the intervals of lucidity," was about as exasperatingly intricate as that author has ever contrived to render his productions in prose or poetry. Ernest Rhys gave us "Welsh Ballads, and Other Poems," full of Welsh scholarship. "Minuseula" was the title of lyrics of nature, art, and love, by F. W. Bourdillon, and "The Wind in the Trees" was a

book of country verse by Katharine Tynan. "Ram-poli: Growth from a Long-planted Root," consisted of translations (mainly in verse), new and old, chiefly from the German, along with an original poem, "A Year's Diary of an Old Soul," one of the finest pieces of spiritual writing from the author's pen. Laurence Housman published "Spikenard: A Book of Devotional Love Poems," Laurence Binyon, "Porphyry, and Other Poems," Charles Camp Tarelli, "Persephone, and Other Poems," and William Norman Guthrie "A Booklet of Verse." Miss E. Nesbit sent out "Songs of Love and Empire," M. C. Tyn-dall, "Lays and Legends of England," A. Conan Doyle was heard from in "Songs of Action," and Rennell Rodd in "Ballads of the Fleet," while G. Stewart Bowles was responsible for "A Gun-Room Ditty Box," "London Voluntaries" and other poems of W. E. Henley were collected under the title of "A Book of Verses"; "Yggdrasil, and Other Poems" came from John Campbell; "Shadows and Fireflies" from Louis Barsac; "Imaginations in Verse" from G. T. Bridges; "Pictures of Travel, and Other Poems" from Mackenzie Bell; "A Little English Portfolio" from Ada Iddings-gate; "Mallow and Asphodel" from R. C. Trevelyan; "Nightshade and Poppies" from Dugald Moore; "Willow-Vale, and Other Poems" from Henry Rose, and "Poems" from Ernest Hartley Coleridge. "The Shadow of Love" passed over Margaret Armour; Newman Howard followed "Footsteps of Proserpine"; Alfred Gurney dreamt of "Love's Fruition," and Richard Yate Sturges gave us "Song and Thought," the proportion of the latter, however, being very small. "Pan" was the title of a collection of lyrical poems by Rose Haig Thomas; "The Starless Crown, and Other Poems" had only the initials J. L. H. on its title-page; Temple Newell chronicled "Episodes of Joy"; John Rickards Mozley saw "A Vision of England," which he published with other poems; H. M. Burnside entitled his effusions "Driftwood"; F. B. Money Coult's chronicled "The Revelation of St. Love the Divine." "Nocturnes" were composed by Rev. W. Moore; B. J. M. Donne put "Colloquy and Song" into print; Russell Veitch discoursed of "Willow Leaves"; Addison M'Leod found poetry in "A Window in Lincoln's Inn"; "Terra Tenebrarum, Love's Jest-Book and Other Verses," of William Knox Johnson saw the light, as did "The Child of the Bond-woman, and Other Verses," of Jean Carlyle Graham; "Ian and Edric" was a poem of our own day, by Don Antonio Miranda; William Akerman gave a dramatic version of the old legend of "Rip Van Winkle," and Thomas Fergusson contributed "Walter Graeme, and Other Poems." "Comeos, and Other Poems" were by Florence G. Attenborough (Chrystabel), and "Lays of Iona," by S. J. Stone, while "Life of Life" was by Arthur L. Salmon. A new edition of W. S. Gilbert's "Bab Ballads" was sent out; "Selected Poems from the Works of the Hon. Roden Noel" were accompanied with a biographical and critical essay by Percy Addleshaw; "Poems," by Innes Randolph, were compiled by his son, Harold Randolph, from the original manuscript; and "The Poetry of Wilfrid Blunt" was selected and arranged by W. E. Henley and George Wyndham. A new, revised, and enlarged edition of "The Works of Lord Byron," with illustrations, was opened with his "Poetry," edited by Ernest Hartley Coleridge; Thomas Hutchinson edited "Lyrical Ballads by William Wordsworth and Samuel Taylor Coleridge, 1798," with certain poems of the same year, adding an introduction and notes; and Richard Garnett edited "Original Poetry by Victor and Cazire" (Percy Bysshe Shelley and Elizabeth Shelley). Wilfred Whitten compiled "London in Song," and "Lyra Nicotiana" were edited by W. G. Hutchinson

in the "Canterbury Poets Series." Canon Ainger edited the "Poems of Thomas Hood" in two volumes. "Versions From Hafiz" was an essay in Persian metre by Walter Leaf, and translations of the "Rubaiyat of Omar Khayyam" were made by E. Heron-Allen and John Payne, respectively. William M. Rossetti wrote an introduction to an edition of "The Blessed Damozel," by Dante Gabriel Rossetti. Two volumes contained the "Plays, Pleasant and Unpleasant," by George Bernard Shaw, and "The Ambassador" was the title of a comedy in four acts by Mrs. Mary Craigie (John Oliver Hobbes). "The World at Auction" was anything but a creditable production by Michael Field, and "Godefroi and Yolande" was the title of a mediæval drama in one act, by Lawrence Irving.

Physical, Moral, and Intellectual Science.—"The Wonderful Century" which is nearing its close had its successes and failures reviewed by Alfred Russel Wallace. "The Scientific Memoirs of Thomas Huxley" were edited by Professors Michael Foster and E. Ray Lankester; "Recent Advances in Astronomy" were reviewed by A. H. Fison in the "Victorian Era Series," and "The Tides and Kindred Phenomena in the Solar System" were the subject of lectures delivered in 1897 at the Lowell Institute, Boston, Mass., U. S. A., by George Howard Darwin, the son of Charles Darwin. A volume on "Seismology" came from Prof. John Milne, in the "International Science Series." A new "Science Series," edited by F. McKeen Cattell and F. E. Beddard, was opened with "The Study of Man," by Dr. Alfred Cort Haddon, which was followed by "The Groundwork of Science: A Study of Epistemology," by St. George Mivart. Grant Allen turned "Flashlights on Nature." "Organic Evolution Cross-examined; or, Some Suggestions on the Great Secret of Biology," by the Duke of Argyll, was accompanied with illustrations. "A Sketch of the Natural History (Vertebrates) of the British Islands," by F. G. Afalo, the author of "A Sketch of the Natural History of Australia," contained numerous illustrations, and A. S. Woodward prepared "Outlines of Vertebrate Paleontology for Students of Zoölogy," Vol. I of the "Student's Text-Book of Zoölogy," by Adam Sedgwick, covered "Protozoa to Chatognatha"; "Wild Traits in Tame Animals," by Louis Robinson, consisted of familiar studies in evolution, and from Sir William H. Flower we had "Essays on Museums and Other Subjects Connected with Natural History." "Deer of All Lands" were exhaustively treated by Richard Lydekker in a handsomely illustrated volume. A "Monograph of the Turdidæ, or Family of Thrushes," by the late Henry Seebohm, the author of "Siberia in Europe," "A History of British Birds," etc., was completed after the author's death and edited by Dr. E. Bowdler Sharpe, who published himself Parts I, II, and III of "Teracolus: A Monograph of the Genus." Charles Dixon in "Lost and Vanishing Birds" gave a record of some remarkable species and made a plea for some threatened forms, which contained ten plates by C. Whymper, and "Birds in London" were the theme of W. H. Hudson. "The Flora of British India," by Sir J. D. Hooker, was completed by the issue of Vol. VII, and Part III of Vol. VII of "The Flora of Tropical Africa" was issued, the work begun by D. Oliver being continued by various botanists, edited by W. T. Thiselton Dyer. The "Flora Capensis," begun by W. H. Harvey and O. W. Sonder, and also continued by various botanists, edited by Mr. Dyer, reached Part I of Vol. VII, and Alfred Fryer published Parts I-III of "The Potamogetons (Pond Weeds) of the British Isles." Vol. III also appeared of "An Illustrated Flora of the Northern United States, Canada, and the Brit-

ish Possessions." S. A. Moor edited "Practical Plant Physiology," by Prof. W. Detmer, and from W. Robinson we had "The Wild Garden; or, The Naturalization and Natural Grouping of Hardy Exotic Plants," with a chapter on the garden of British wild flowers, illustrated by Alfred Parsons. Part LI was issued of "The Lepidoptera of the British Islands," by Charles G. Barrett, and Part XXXI of "Lepidoptera Indica," by F. Moore. "Ethnological Studies Among the North-West-Central Queensland Aborigines" were pursued by Walter E. Roth. "The Five Windows of the Soul," by Edward Hamilton Aitken, gave a popular account of the human senses; Alfred F. Schofield, M. D., discoursed of "The Unconscious Mind"; Henry Rutgers Marshall contributed an essay on "Instinct and Reason," and "Psychology for Teachers," by C. Lloyd Morgan, had an introduction by Henry W. Jameson. "The Metaphysics of Experience" were explored by Shadworth Hodgson, and Prof. Carveth Read supplied "Logic Deductive and Inductive." "The Number Concept" had its origin and development examined by Levi Leonard Conant. The first volume of "A Treatise on Universal Algebra," with applications, by Alfred North Whitehead, was sent out. Henry E. Roseoe and Arthur Harden published "A New View of the Origin of Dalton's Atomic Theory," a contribution to chemical history, which contained also letters and documents concerning the life and labors of John Dalton; "Three Lectures on the Anatomy of Movement," delivered at the Royal College of Surgeons of England, by Francis Warner, M. D., constituted a treatise on the action of nerve centres and modes of growth, and from L. Forbes Winslow, M. D., the celebrated specialist in lunacy cases, we had an exhaustive work upon "Mad Humanity." Book III of the second volume of "Principles of Political Economy," by Joseph Shield Nicholson, carried on that valuable work, and from William Hurrell Mallock came "Aristocracy and Evolution," a study of the rights, the origin, and the social functions of the wealthier classes. "What is Socialism?" was asked by Scotsburn; "Industrial Democracy," by Sidney and Beatrice Webb, was in reality a cyclopædia of trades-union information, and from the same authors we had "Problems of Modern Industry." "The Rise of Democracy" was contributed by J. Holland Rose to the "Victorian Era Series"; "Australian Democracy" was the theme of Henry de R. Walker, and "A History of English Democratic Ideas in the Seventeenth Century," by G. P. Gooch, appeared in the series of "Cambridge Historical Essays," as did "Outlines of English Industrial History," by W. Cunningham and E. A. McArthur. "Workhouses and Pauperism," by Louisa Twining, and "University and Social Settlements," by W. Reason, appeared in the "Social Questions Series"; and "Provident Societies and Industrial Welfare" was added by E. W. Brabrook to the "Victorian Era Series." "The Cry of the Children" was an exposure made by Frank Hird of certain British industries in which children are iniquitously employed. In the "Criminology Series" "Political Crime," by Louis Proal, had an introduction by Franklin H. Giddings. "Mysteries of Police and Crime" came from no less an authority than Major Arthur Griffiths, one of Her Majesty's Inspectors of Prisons, and Rev. J. W. Horsley, the author of "Jottings from Jail," was again heard from on "Prisons and Prisoners." "English National Education" engaged the attention of H. Holman; "The Educational Systems of Great Britain and Ireland" were discussed by Graham Balfour; J. C. Tarver published essays on secondary education entitled "Debatable Claims." D'Arcy W. Thompson in "Day Dreams of a School-

master" propounded educational theories, and Francis Warner, M. D., wrote on "The Study of Children and their School Training." "University Addresses" of Principal John Caird were edited by his brother, the present Master of Balliol. "Progress in Woman's Education" was edited by the Countess of Warwick. "The Principles of Landed Estate Management" were laid down by H. Herbert Smith, the agent of Lord Lansdowne, and accompanied with plans and illustrations.

Political books and pamphlets were numerous. From Sir Charles W. Dilke came a volume on "The British Empire," a reprint of articles contributed to various newspapers in 1898, and he also made suggestions on "Army Reform." "The Free-Trade Movement and Its Results" was one of the issues of the "Victorian Era Series," by G. Armitage-Smith, and "The House of Lords Question" was edited by Andrew Reid; "The Saving of Ireland," by Sir George Baden-Powell, presented the conditions and remedies, industrial, financial, and political, of that miserable land. "The Gladstone Colony," by James Francis Hogan, contained an unwritten chapter of Australian history. Prof. W. Cunningham wrote on "Alien Immigrants to England and their Influence on Social Life." W. F. Reddaway was heard from on "The Monroe Doctrine" and Benjamin Kidd on "The Control of the Tropics." "Bimetallism" was a summary and examination of the arguments for and against a bimetallic system of currency, by Major Leonard Darwin; "Studies in Currency, 1898," were published by Lord Farrer, and L. C. Probyn discussed "Indian Coinage and Currency." "The Statesman's Yearbook for 1898" was issued, as usual, by J. Scott Keltie.

Religious books of the year included "The Incarnate Saviour," a life of Jesus Christ by Rev. William Robertson Nicoll; "The Christ of History and Experience," the theme of the Kerr Lectures delivered at Edinburgh by Rev. D. W. Forrest; "Divine Immanence in Nature," by Rev. J. R. Illingworth; "Spiritual Apprehension," by Rev. J. Llewellyn Davies; "What the Bible Teaches," by Rev. Renben A. Torrey; "Lessons from the Cross," a series of sermons delivered by the Bishop of London during Holy Week; and "The Gospel of Joy," another collection of sermons, by Rev. A. Stopford Brooke. Vol. II. of "The Book of the Twelve Prophets commonly Called the Minor," by Dr. George Adam Smith, completed the "Expositor's Bible." "Colossian Studies," by Dr. Handley Carr Glyn Moule, followed his "Philippian Studies" of last year, and from Canon Gore we had a practical exposition of "St. Paul's Epistle to the Ephesians." He also edited "Essays in Aid of the Reform of the Church." "The People and the Priest," by Rev. R. E. Welsh, protested strongly against the Romanizing movement in the Church of England, while the High Church view was presented in "Ministerial Priesthood," by Canon R. C. Moberly. "The Ritschlian Theology and the Evangelical Faith" came from James Orr, D. D. Rev. Leighton Pullan wrote "The History of Early Christianity" for the "Popular Biblical Library," another issue of which was "The Women of the Old Testament," by Dr. Robert Forman Horton. "The Early History of the Hebrews" was considered by Prof. Archibald H. Sayce; "The Poetry and Religion of the Psalms" were the theme of the Croall Lectures for 1893-'94, by Dr. James Robertson; "Lectures and Essays on Natural Theology and Ethics," by William Wallace, were edited with a biographical introduction by Edward Caird; "University Sermons," preached before the University of Glasgow, 1873-1898, by the late Principal John Caird, were collected into a volume; "Light and Leaven" was the

title of historical and social sermons, by Hensley Henson, who also delivered some Lenten addresses upon "Discipline and Law"; Dr. Joseph Parker published "Christian Profiles in a Pagan Mirror," and L. B. Hartman, D. D., treated of "Divine Penology." "The Clerical Life" was a series of letters to ministers, written by Dr. J. M. Watson (Ian MacLaren), Dr. Marcus Dods, and others; and from Dr. Watson alone we had "Companions of the sorrowful Way," nine chapters of reflection upon the last days of Jesus Christ on earth. He also contributed an introduction to four volumes of "Sermons" of Rev. Frederick W. Robertson, which had a preface by C. B. Robertson. "The Lord's Prayer," by the late Edward Meyrick Goulburn, was given to the public; Dr. Orello Cone wrote on "Paul the Man, the Missionary, and the Teacher"; Dr. George Holley Gilbert prepared "The Student's Life of Jesus," and Rev. J. Brough dwelt upon "The Early Life of Our Lord." "The Spring of the Day," by Dr. Hugh Macmillan, was a companion volume to his "Clock of Nature," published in 1897, and from Dean Frederic W. Farrar we had a volume of "Allegories" and a history of "The Herods." The Lord Bishop of Winchester contributed a preface to "Selections from the Works of Bishop Thorold." "Footsteps in Human Progress, Secular and Religious," were followed by James Samuelson, and "What is Life?" was asked by Frederick Hovenden. Andrew Lang discussed "The Making of Religion," combating vigorously the animistic theories of Herbert Spencer and Prof. Tylor; Col. R. Elias wrote briefly on "The Tendency of Religion," and Mrs. Humphry Ward delivered an address upon her idea of "New Forms of Christian Education." W. M. Flinders Petrie treated of "Religion and Conscience in Ancient Egypt," and the story of missionary work in modern India was told by Irene H. Barnes in "Behind the Pardah." A "History of the Society for Promoting Christian Knowledge, 1698-1898," was written by W. O. B. Allen and Edmund McClure, and Rev. Duncan Campbell devoted a volume to "Hymns and Hymn-making." "Hymns That Have Helped Me" contained a collection of nearly two hundred made by W. T. Stead from the judgment of a number of distinguished persons in all walks of life, and accompanied with prefaces, appendices, and notes. "Satan's Invisible World Displayed," by Mr. Stead, was a sensational picture of the corrupt condition of municipal affairs in New York city, as disclosed by the investigations of the past few years, and formed a companion volume to his study of Chicago. "Ancient English Holy Week Ceremonial" was revived in an interesting volume by Henry John Feasey, and "The Mysteries, Pagan and Christian," were considered by Archdeacon Chetcham. "A Vindication of the Bull 'Apostolicae Curæ'" was made by the Cardinal, Archbishop, and Bishops of the Province of Westminster, which was replied to by the Archbishops of Canterbury and York.

Books of a miscellaneous character, which may as well be included here as anywhere, were: "Wireless Telegraphy," by Richard Kerr, and from Charles Bright came "Submarine Telegraphs," giving their history, construction, and working. "A History of the Great Northern Railway, 1845-1895," was written by C. H. Grinling; a fifth edition of "Ironclads in Action," by H. W. Wilson, had a new chapter on the American Navy; questions and answers in "The Theory and Practice of Military Topography" were set down by Major J. H. Bowhill, and "Early Fortifications in Scotland" were the theme of the Rhind Lectures on Archaeology, by David Christison, M. D. They were held to comprise mounts, camps, and forts, and were illustrated and

accompanied with maps. A "History of London Street Improvements, 1855-1897," was written by Percy J. Edwards, and in the "Victorian Era Series" appeared "London in the Reign of Queen Victoria, 1837-1897." "The Evolution of the English House," as traced by S. O. Addy in the "Social England Series," contained 42 illustrations. Prof. F. W. Maitland contributed a volume on "Canon Law in England" and also delivered the second course of the Ford Lectures at Oxford upon "Township and Borough." "With Nature and Camera," by Richard Kearton, contained the adventures and observations of a field naturalist and an animal photographer; "Wild Animals in Captivity," by A. D. Bartlett, late superintendent of the Zoological Gardens in Regent Park, contained an account of the habits, food, management, and treatment of the animals, with reminiscences and anecdotes, put together and edited by his son, Edward Bartlett, and from Mrs. Dew Smith, the author of "Confidences of an Amateur Gardener," came a delightful book on domestic animals entitled "Tom Tug and Others." Two volumes contained "The Encyclopedia of Sport," edited by the Earl of Suffolk and Berkshire, Hedley Peck, and F. G. Aflalo, and "An Almanac of Twelve Sports for 1899," by William Nicholson, contained accompanying rhymes by Rudyard Kipling. "Salmon and Sea Trout," by the Right Hon. Sir Herbert Maxwell, M. P., in the "Angler's Library," told how to propagate, preserve, and catch them in British waters, and was illustrated by Mrs. Graham-Moir, E. T. Bennett, the author, and others; "The Trout" was added to the "Fur, Feather, and Fin Series," by the Marquess of Granby. "Punting," by P. W. Squire, belonged to the Badmington Library; Horace G. Hutchinson proclaimed himself "The Golfing Pilgrim"; "Willow and Leather," by E. V. Lucas, celebrated the praises of cricket, in prose and poetry; and "With Bat and Ball" was another contribution to the literature of the noble game, by George Giffen. A history of "Gambling in England," by John Ashton, was supplemented by "The Gambling World," a collection of anecdotic memories and stories of personal experience in the temples of hazard and speculation, by Rouge et Noir. In conclusion we have "The Encyclopedia of Practical Cookery," in two volumes, edited by T. F. Garrett, and illustrated with colored plates and engravings.

Voyages and Travels.—The decrease in the quantity of books of travel written during the year was more than compensated by the quality of those sent out, which was pronounced remarkable by competent critics. Arthur H. Neumann described "Elephant Hunting in East Equatorial Africa": Lionel Deele spent "Three Years in Savage Africa," which he described in a volume to which Henry M. Stanley contributed an introduction; "Rambles in Lion Land" came from the pen of Capt. Francis B. Pearce, and Rev. Dennis Kemp recorded the experiences of "Nine Years at the Gold Coast." "Travels in the Coast Lands of British East Africa and the Islands of Zanzibar and Pemba," by W. W. A. Fitzgerald, were accompanied with maps and illustrations, and R. Anstin Freeman described "Travels and Life in Ashanti and Jaman." Lieut.-Col. J. R. Trotter explored "The Niger Sources and the Borders of the New Sierra Leone Protectorate"; "Exploration and Hunting in Central Africa" were combined by Capt. A. St. H. Gibbons, and Capt. Guy Burrows wrote from experience of "The Land of the Pigmies." Count Gleichen went "With the British Mission to Menelik, 1897," giving a picturesque account of Abyssinia. "The Soul of a People," by H. Fielding, was an account of the life and belief of the Burmese, while two volumes were devoted by H. Warrington Smyth to "Five Years in

Siam," spent by him as Director of Mines in that country. "Sunny Memories of an Indian Winter," by Mrs. Sara H. Dunn, contrasted strongly with "A Tour Through the Famine Districts of India," made by F. H. S. Merewether. "Sport in the Highlands of Kashmir" was described by Henry Zouch Darrah with much effectiveness; "Camping and Tramping in Malaya" came from Ambrose B. Rathborne, and "Pioneering in Formosa" from W. A. Pickering. "China in Transformation," according to Archibald Ross Colquhoun, was pronounced "China in Decay" by Alexis Krausse: John Thomson went "Through China with a Camera," and Arthur May Knapp gave two volumes to "Feudal and Modern Japan." "Goldfields and Chrysanthemums," by Catherine Bond, was a record of travel in Australia and Japan; Albert T. Calvert wrote "My Fourth Tour in Western Australia," and Michael Davitt, M. P., described "Life and Progress in Australasia." "Islands of the Southern Seas," by Michael Myers Shoemaker, and "Brown Men and Women: The South Sea Islands in 1895 and 1896," by Edward Reeves, were both illustrated, while from Hugh Clifford, the author of "In Court and Kampong," we had "Studies in Brown Humanity," in Malay, otherwise described as scrawls and smudges in sepia, white, and yellow. "The Indiscretions of Lady Asenath," by Basil Thomson, was in reality an exposition of native life in the South Sea islands, declared the most satisfying and the most suggestive book yet done on the Melanesians. "Tropics and Snows," by Capt. R. G. Burton, gave a record of sport and travel in various lands, and Mrs. Rowan was "A Flower Hunter in Queensland." G. W. Steeves wrote ably of "Egypt in 1898"; "The City of the Caliphs," by Eustace A. Reynolds-Ball, was a popular study of Cairo and its environments, and the Nile and its antiquities; and "From Sphinx to Oracle, Through the Libyan Desert to the Oasis of Jupiter Ammon," came from Arthur Silva White. "Twenty Years in the Near East," by A. H. Beaman, was a valuable contribution to students of the Eastern question; "Notes from a Diary in Asiatic Turkey," by Lord Warkworth, M. P., contained 21 full-page photogravures and other illustrations from photographs by the author; "The Hill of the Graces," visited by H. S. Cowper, was situated in central Tripoli, and contained the megalithic ruins known as "senams"; Ella C. Sykes rode "Through Persia on a Side Saddle," while, "In the Forbidden Land," in two volumes, contained the account of A. H. Savage Landor's journey into Tibet, his capture by the Tibetan lamas and soldiers, his imprisonment, torture, and ultimate release. M. S. Wellby also went "Through Unknown Tibet" with less disastrous adventures. "Through Asia," by Sven Hedin, in two volumes, with maps, 2 plates printed in color, and about 280 illustrations by the author, taken from photographs, was one of the most important books of travel of the year. "Excavations at Jerusalem, 1894-'97," by F. J. Bliss, Ph.D., was published under the auspices of the Palestine Exploration Fund, and from W. M. Flinders Petrie came "Syria and Egypt, from the Tell-el-Amarna Letters." In this connection may be mentioned also "The Ramesseum and the Tomb of Pthah-hotep," by J. E. Quibell and Messrs. Paget and Pirie, published under the auspices of the Egyptian Research Account. "Old Tracks and New Landmarks" was the title of wayside sketches in Crete, Macedonia, Mitylene, etc., by Mrs. Mary A. Walker; H. Spender and H. L. Smith crossed "The High Pyrenees": sporting adventures in Austria were described in "On Plain and Peak," by Randolph L. Hodgson; Elizabeth Robins Pennell went "Over the Alps on a Bicycle," the journey being illustrated by Joseph Pennell, and William

Scott accompanied his work upon "Rock Villages in the Riviera," with 60 illustrations from drawings of his own. Rev. Alexander Robertson, D. D., author of "Through the Dolomites," gave his attention to "The Bible of St. Mark: The Altar and Throne of Venice," writing not only a history of St. Mark's Church in that city, but a description and interpretation of its biblical sculptures and mosaics. "The Land of Contrasts" was a Briton's view of his American kin, vouchsafed by James Fullerton Muirhead, and from Richard Davey came a sketch of "Cuba, Past and Present." Frances Macnab, the author of "On Veldt and Farm," wrote on "British Columbia for Settlers," describing its mines, trade, and agriculture; E. Jerome Dyer wrote on "The Routes and Mineral Resources of Northwestern Canada," and Harry De Windt went "Through the Gold Fields of Alaska to Behring Straits." J. H. E. Secretan also took a journey down the Yukon from its source to its mouth, the incidents of which are detailed in "To Klondyke and Back." C. J. Cutcliffe Hyne passed "Through Arctic Lapland": "With Ski and Sledge over Arctic Glaciers," by Sir W. Martin Conway, an appendix to "The First Crossing of Spitzbergen," which he published last year, was illustrated from photographs; "A Northern Highway of the Tsar" was traveled by Anby Trevor Battye, and "Side Lights on Siberia," by James Young Simpson, gave some account of the great Siberian railroad and of the prisons and exile system. "The Cruise of the 'Cachalot' Round the World after Sperm Whales," by Frank T. Bullen, contained much unusual information. "South American Sketches" came from Robert Cranford; "Twenty-five Years in British Guiana," by Henry Kirke, was supplemented by "British Guiana," from the pen of Rev. L. Crookall, and "Spark's Guide Book and History" of the same colony; while, returning to the mother country, we have to record "Highways and Byways in North Wales," by A. G. Bradley, illustrated by Joseph Pennell and Hugh Thompson, and Sir Walter Besant's "South London," a companion volume to his "London" and "Westminster," which contained etchings by F. S. Walker and 118 illustrations.

The following are the figures of book production in England during the year, as compared with those of 1897, from the columns of the London Publishers' Circular:

DIVISIONS.	1897.		1898.	
	New books.	New editions.	New books.	New editions.
Theology, sermons, biblical, etc.	594	109	535	153
Educational, classical, and philological.	692	236	732	189
Novels, tales, and juvenile works.	1,960	717	1,758	644
Law, jurisprudence, etc.	93	47	117	46
Political and social economy, trade, etc.	531	110	437	97
Arts, sciences, and illustrated works.	288	30	263	32
Voyages, travels, geographical research.	173	48	133	30
History, biography, etc.	604	141	613	125
Poetry and the drama.	298	129	290	81
Yearbooks and serials in vols.	422	...	347	...
Medicine, surgery, etc.	152	59	160	36
Belles-lettres, essays, monographs, etc.	227	48	182	36
Miscellaneous, including pamphlets, not sermons.	210	8	436	30
Totals	6,244	1,672	6,008	1,506
		6,244		6,008
		7,926		7,516

Three books of the year were "crowned" by the Academy with a gift of 50 guineas each. They

were, "The Forest Lovers," by Maurice Hewlett, "The Life of Shakespeare," by Sidney Lee, and "Tales of Unrest," by Joseph Courad.

LITERATURE, CONTINENTAL, IN 1898.

The following annotated lists include, as always, works of momentary as well as permanent interest, the aim being to make the literary record broad in purpose though limited in space.

Belgium.—Interesting contributions to national history are "Étude sur la Propriété foncière dans les Villes du Moyen Age en Flandre," by Guillaume des Marcz; "Les Tributaires ou Serfs d'Église en Belgique au Moyen Age," by L. Vanderkindere; dissertations by H. van Houtte and V. Desprez on the history of Flanders in the Middle Ages; a collection of "Bans de Police de la Ville de Mons" in the fourteenth and fifteenth centuries, by L. Devillers; Dom Ursmer Berlière's "Mélanges d'Histoire Bénédictine"; a book by Aug. Thys on the persecution of the Belgian clergy by the Directory; F. van Caenegem's "La Guerre des Paysans (1798-'99)"; a work on the population of the large Belgian towns in the nineteenth century by Maurice Heins; revelations concerning André Vésale and his family by the late A. Wauters; and E. Gosart's curious studies on Charles V. Pierre Vander Beke's "Carte de Flandre de 1538" (extant in one copy) has been republished, with notes, by F. van Ortruy. "Le Voyage de François Vinphant en France et en Italie (1609-'10)," by Félix Hachez, makes accessible the notes of an early traveler. Le Comte Goblet d'Alviella has a learned and important treatise on "Ce que l'Inde doit à la Grèce," while Léon Leclercq offers a good "Histoire contemporaine" (1789-1897). The section "Travels" includes Jules Leclercq's interesting "Un Séjour dans l'Île de Java"; D. Siffert's book on South Africa; A. Poskin's "Afrique Équatoriale" and Marie Godelieve's charming "Six Ans au Congo," both on the Belgian Congo; and the books by F. Wodon and A. Berthet on Mexico and G. Kaiser and J. Bernard de Fauconval on Canada. Noteworthy bibliographical works are L. Gilliodts Van Severen's "L'Œuvre de Jean Brito, Prototypographe Brugeois" (Brito once again credited with the invention of printing); a work on Belgian printers abroad, by Paul Bergmans; a history of two centuries of periodicals and pamphlets at Louvain, by A. Berrewaerts; O. Colson's history of "L'Almanach de Matthieu Laensbergh et l'Almanach des Bergers"; and Victor Chauvin's "Bibliographie Arabe" (Part II). Sociological works of value are Émile Waxweiler's "La Participation des Ouvriers aux Bénéfices"; "Le Travail de Nuit des Ouvrières de l'Industrie dans les Pays étrangers," by Maurice Ansiaux; A. Carlier's "La Belgique dentellière"; "Le Socialisme en Belgique," by J. Destrée and E. Vander Velde; P. Verhaegen's "Socialistes anglais"; Henri de Kerchove d'Exaerde's "De l'Enseignement obligatoire en Allemagne"; and Louis Frank's "La Femme Avocat" (an "eloquent and well-documented piece of pleading"). Godefroid Kurth's "La Frontière linguistique en Belgique et dans le Nord de la France" is an important work on "the fluctuations of French and Flemish." Fine arts are treated in D. Joseph's "Histoire de la Peinture de la Renaissance italienne"; Lucien Solvay's monograph on the landscape painter Théodore Verstraete; Maurice Kuffe-rath's study of Wagner's "Meistersinger"; Georges Eekhoud's "Peter Benoit, sa Vie et ses Œuvres"; J. G. Fréron's "La Vie et l'Art en Autriche-Hongrie" ("some curious views upon the musical movement"); In literary criticism there are Léon Mallinger's "Médée" ("interesting study of comparative literature"); Father H. Nimal's book on mediæval authors; Ch. Sroléa's "Essays in Philosophy and

Literature"; E. Cattier's "Le Naturalisme littéraire": a work by Deschamps, Godenne, Legrand, and Thiery on De Monge, Mgr. Cartuyvels, Van Tricht, Kurth, and other Belgian Roman Catholic *littérateurs*; and a volume by François Carez on Verlaine, France, and other contemporary authors. Noteworthy prose fiction includes Arnold Goffin's "Hélène"; Eugène de Molder's "Sous la Robe" ("impressions of the Palais de Justice"); Franz Mahutte's "Le Caprice des Heures"; J. Chot's "Legendes et Nouvelles de l'Entre-Sambre et Meuse"; and Paul Leclercq's "L'Étoile rouge." Poetry of note is found in "La Cithare," by Valère Gille; Iwan Gilkin's "La Nuit"; and Charles van Lerberghe's "Entrevisions."

Flemish works on national history include popular books on the "Guerre des Paysans," by Osw. Robijns, Pattijn, and Opdebeeck; A. Vermast's "Generaal Vander Meersch"; a biography of Mgr. Seghers (head of the Roman Catholic missions of Alaska), by Maurice de Baets; Paul Fredericq's "Geschiedenis der Inquisitie in de Nederlanden" (Vol. II); and "Toponymische Studie over de oude en nieuwere Plaatsnamen der Gemeente Bilsen," a capital study by J. Cuvelier and C. Huysmans. Paul de Witte, a tailor, offers an original and impartial "Geschiedenis van Vooruit" (the socialist club of Ghent). F. Vanden Weghe studies the transformations in the teaching of Flemish in Belgium since 1830; Emiel Vliebergh explains the laws on the official use of the national languages in Switzerland. (The Flemish language has been recognized as an official one, and laws are now passed in both French and Flemish, and so printed.) K. Deflou and E. Gailliard have printed a third report on their search for mediæval Flemish manuscripts in England. H. Claeys delivered two discourses commending the poet Ledeganck and the philologist David, "two of the founders of the school of Flemish literature after the Belgian revolution of 1830." Beside "prose volumes of a clerical tendency" by Mlle. E. Belpaire, Em. de Graye, and A. Stevens, four works of true originality are noted: Emmanuel de Bom's "Wrakken"; Maurits Sabbe's "Aan't Minnewater" (clever sketch of life in Bruges); Virginie Loveling's "Madeleine" ("fine study of a very complex female temper"); and "Schoppenboer" (a record of the crime and shame of brutalized Flemish peasants, by Cyriel Buyse, the "Flemish Zola." Poetry of note includes Pol de Mont's archaic "Van Jezus"; l'Abbé Guido Gezelle's "Rijmsnoer om en om het Jaar" (in the west Flemish dialect); Theo. Coopman's "Kinderlust" (poetry for children); Jan Bouchery's "Gedichten en Gezangen" (unequal in merit); a new volume by Miss Hilda Ram; and the *débuts* of R. de Cneudt, Van Hanswijck, Reinaard, Anemona, and Van Haute. Among the mass of dramatic productions are three of decided originality: "Koning Hagen," by Hui-bert Melis; "De Bruid van Quinten Metsys," by Hendrik de Marez; and Alfred Hegenscheidt's "Starkadd." J. W. Muller and L. Scharpé issue the unpublished plays of Cornelius Everaert, a dramatist of the sixteenth century of Bruges.

A curious phenomenon is the movement of the German-speaking element (about 50,000). The "Deutsche Verein," founded 1892 (President, G. Kurth), established free German libraries, supported two German papers, and published an interesting volume on "Das deutsche Belgien." Works by individual authors are H. Bischoff's "Ludwig Tieck als Dramaturg" and the valuable "Die Kritik in der englischen Literatur des XVII. und XVIII. Jahrhunderts," by Paul Hamelius (Leipsic).

Bohemia.—New historical works are Lacina's "General Chronicle," and Kosina's "History of the World." I. J. Vráz has written an interesting ac-

count of his travels. K. B. Mühl furnishes the text for a fine book on architect Dienzenhofer's villa "America." V. Flajšhans is the author of a work on Bohemian literature. Bibliography, not especially cultivated here, is represented by J. Truhlář's able catalogue of a rich collection of manuscripts in the University Library of Prague, and the "Bibliographic Catalogue for 1895," a record of contemporary literature.

A. Ročazka, in "Monatsschrift für neue Literatur und Kunst", October, 1897, tells us that "Bohemian literature, the older as well as the younger, can not show a novel of lasting worth. We find praiseworthy attempts at social and psychological works of a larger style, but this work of art still awaits its creator," and the "drama is at a low ebb." The list of fiction is long: A. Jirásek's historical novel "U nás" (glowing style); J. Zeyer's "In the Dawn of the Gods" and "The House of the Drowning Star"; three stories of the life of the middle class, by Rais; Ig. Hermann's "Father Kondelík and his Son-in-law Vejvara" (on Prague's humbler citizens); collections of short stories such as "On the Thread of Humor," by Herites, and Sova's "Prose"; Slejhar's "Zátiší" (vigor; "sympathy for the oppressed"); "A Poisoned Rose," by the late V. Kosmák, a collected edition of whose writings has been announced; and Laichter's "After the Truth" (attempts to describe life of Bohemian students). Noteworthy poetry is found in J. Vrchlický's lengthy "Bar-Kochba," "Bunch of Lyrics," and "Portraits of Poets"; and S. Cech's powerful narrative poem "Roháč na Sioně," published in his monthly, "Květy. L. Quis has collected and edited the scattered poems of Havlíček, "the first and best of Bohemian journalists." "Dramatic literature," says a Bohemian writer, "appears . . . to have received a new impulse, in consequence, perhaps, of the lively interest awakened by the attempts to establish a second Bohemian theater in Prague." In this field we have Hilbert's play "For God" (representing struggle between belief and unbelief; prohibited by the authorities); Zeyer's fairy play "Raduz a Mahulena" (beautiful language, deep feeling); Vrchlický's comedy "King and Fowler"; Kvapil's fairy play "Princess Dandelion"; Mašek's faithful picture of the life of "Students"; and Stech's "Fireland" (satire upon small-town life). Two operas are added: Fibich's "Sárka," libretto by Agnes Schulz, and Kovářovic's "Psohlavci," libretto by Šipek (powerful plot).

Denmark.—Some new historical works are N. P. Jensen's "Den første slesvigske Krig, 1848-'50"; H. C. A. Lund's "Studentenforeningens Historie, 1820-'70. Dansk Studentertliv i det 19. Aarhundrede" (Vols. I and II); and E. A. Svedstrup's "Fra Kong Georgs Land under Krigen 1897." Johannes Jørgensen, a convert to Romanism, in "Helve-desfjender" (supporting the doctrine of hell), eloquently defends the Church. O. Hansen traces "Filosofien i Danmark i det 18. og 19. Aarhundrede," and C. Koch writes of "Søren Kierkegaard." Literary criticism is supplied in a volume on "Henrik Ibsen" (published on the occasion of Ibsen's seventieth birthday) by Georg Brandes, who also presents a work on "Poland" (observations and thoughts on conditions and moods of the land and the people; somewhat eulogistic); J. Paludan's "Émile Zola og Naturalismen"; and T. Bierfreund's "Shakespeare og hans Kunst." F. R. Fris offers a "Bidrag til dansk Kunsthistorie." Kristoffer Nyrop's "Kysset og dets Historie" is "a beautiful and most learned piece of pleasantry."

We are told that the literary movement which began some twenty-five years ago with the lectures of Brandes is ebbing fast. This movement, called realism by some, Brandesianism by others, and nat-

uralism by Brandes himself, developed better literary methods, a closer study of Nature, and a wider range of themes. "Finally, it waged a warfare against authority which . . . has long ago passed all reasonable boundaries." And this has brought on a reaction. The year's fiction includes "Lykken Blændværk," a miserable story of marital immorality, by Edvard Brandes (conveys an impression of hopelessness, like much of the naturalistic literature); Jacob Hansen's "En kritisk Tid" (the hero a weak-willed philosopher; the author a "prophet of unmitigated worship of Nature, especially sexual nature"); "Kristian Vesterbro" (a portrait of the Copenhagen tramp), by Karl Larsen, whose "Modet og den blanke Klinge" is a vivid picture of Spain, drawn with acute observation and solid judgment; Holger Drachman's melodrama "Brav Karl" (variously described as "delightful" and "unsuccessful"); Gustav Wied's curious "H. C. Andersen. Stemninger og Eventyr" (stories in Andersen's manner; unlike the author's previous work); Carl Ewald's humorous and imaginative "James Singleton's store Udenlands Rejse"; and K. Gjellerup's "Ved Grændsen." Poetry has been published by Niels Möller, Stuckenborg, Valdemar Rörda, Recke, and Georg Brandes (who has issued his early poems). Dramatic literature is represented by Einar Christiansen's politico-social drama "Cosmos" (much praised; forceful, at times obscene; chief characters are puppets); and K. Gjellerup's "Gift og Modgift. Komædie i fem Akter og paa Vers."

In the "Nordisk Tidsskrift" for 1897 Vilhjalur Jónsson had an interesting contribution on "Newer Icelandic Literature." Hannes Hafstein (lyrical writer) and Gestur Pálsson (novelist) being among the writers referred to. K. Gislason's "Forelæsninger og videnskabelige Afhandlinger" was published at Reykjavik in 1897.

"Kajaknen," stories collected and translated into Danish by Signe Rink (first samples of Greenlandish literature which have come to us), is interesting, giving clear pictures of the people. First printing establishment opened 1861, producing the journal "Atu agadliutit," from which the present collection is taken, and which still exists.

France.—Titles in national history are ever numerous. They include: "Tableau de la France en 1614. La France et la Royauté avant Richelieu," by G. Hanotaux; R. Monlaur's "La Duchesse de Montmorency 1600-'66"; "Le grand Condé, son Fils le Duc d'Enghien, son Petit Fils le Duc de Bourbon (1630-1684)" by Henri Chérot (a study in the education of princes); "L'Alsace au XVII^e Siècle," by Reuss; Comte A. de la Borderie's "Histoire de Bretagne" (Vols. I and II); F. A. Aulard's "Études et Leçons sur la Révolution française. 2^de Série"; Edme Champion's "La France d'après les Cahiers de 1789" (1897); Charavay's biography of Lafayette (historically, excellent; as literature, indifferent); Frantz Funck-Brentano's interesting and admirably written "Legendes et Archives de la Bastille" (upsetting the popular idea of the prison); André Lebon's "Cent Ans d'Histoire intérieure, 1789-1895"; "Campagnes de Crimée, Italie, Afrique, Chine, Syrie. Lettres adressées au Maréchal de Castellane"; G. Bapst's "Le Maréchal Canrobert. Souvenirs d'un Siècle" (Vol. I); and I. V. Labord's "Léon Gambetta. Biographie psychologique." New Napoleonic literature includes the useful "La Jeunesse de Napoléon: Brienne" and "La Jeunesse de Napoléon: La Révolution," by A. Chuquet (indefatigable and exact, but rather overwhelmed by his documents); "Davout, Maréchal d'Empire, Duc d'Auerstaedt, Prince d'Eckmühl: 1770-1825," by Count Vigier (his grandson); L. Masson's minute description of "L'Existence

d'une Impératrice" (Josephine); and Ernst la Jeunesse's queer "Imitatio Napoleonis" (not quite comprehensible; a Nietzsche-like "Uebermensch" following the great emperor). The Dreyfus affair has called forth a swarm of books and pamphlets, including much anti-Semitic matter, by P. Marin, A. Réville, R. Viau, B. Lazare, É. Zola ("Humanité—Vérité—Justice"), Y. Guyot ("Revision du Procès Dreyfus"), J. Grand-Carteret ("L'Affaire Dreyfus et l'Image," 1897), J. DeFrance, J. Bahar, and others. Miscellaneous historical works are O. G. de Heidenstam's "Une Sœur du grand Frédéric, Louise Éléonore, Reine de Suède" (said to be in part a plagiarism); Waliszewski's "Marysienka" (wife of Sobieski); the Comte d'Haussonville's "La Duchesse de Bourgogne et l'Alliance Savoyarde sous Louis XIV"; Alfred Baragon's somewhat heavy "La Maison de Savoie et la Triple Alliance au XVII^e Siècle"; the Duc de Broglie's fine "L'Alliance autrichienne" (at opening of the Seven Years' War), a model in clearness and ease of style; André Lefèvre's "L'Histoire: Entretiens sur l'Évolution historique" (inaccurate, careless); Douchy's "La Guerre turco-grecque de 1897"; and C. Benoist's "L'Espagne, Cuba, et les États-Unis" (anticipating the annexation of Cuba). The science of history forms the theme of Renouvier's "Philosophie analytique de l'Histoire" and the instructive "Introduction aux Études historiques," by Ch. V. Langlois and Ch. Seignobos. In the section "Travel and Description" are noted the observant Th. Bentzon's "Choses et Gens d'Amérique" (clever and agreeable, mainly on social topics); Pierre Loti's "Figures et Choses qui passaient" (descriptive of the Basque country); and A. Bertrand's "Au Pays des Ba-Rotsi, Haut-Zambèze. Voyage d'Exploration en Afrique." A. Fouillée studies the "Psychologie du Peuple français"; Gaston Routier is severely critical in "Grandeur et Décadence des Français"; R. Gonnard explains "La Dépopulation de la France"; Louis Legrand exhaustively traces "L'Idée de la Patrie"; Edouard Demolins, in "A quoi tient la Supériorité des Anglo-Saxons," urges that the children of France be made more self-dependent, and in "Les Français d'Aujourd'hui: Les Types sociaux du Midi et du Centre," he describes unsatisfactory conditions. J. Novicow predicts "L'Avenir de la Race blanche. Critique du Pessimisme contemporain." Delarüe de Beaumarchais expounds "La Doctrine de Monroe." Further sociological works are Albert Métin's noteworthy "Le Socialisme en Angleterre"; Ch. Andler's "Les Origines du Socialisme d'État en Allemagne"; E. Levasseur's "L'Ouvrier américain"; Macé's "Place à la Femme, surtout dans l'Enseignement secondaire"; and C. Wagner's "Au-près du Foyer" (a sensible book on home life). New works on religious subjects are Auguste Sabatier's "Esquisse d'une Philosophie de la Religion d'après la Psychologie et l'Histoire" (conclusions not very clear); Victor Charbonnel's curious "Le Congrès des Religions"; the positivist Pierre Lafitte's "Le Catholicisme"; G. Goyau's "L'Allemagne religieuse"; G. Fonsegrive's "Catholicisme et Démocratie"; and Maigren's "Le P. Hecker est-il un Saint." "John Stuart Mill: Correspondance inédite avec Gustave d'Eichthal (1828-1842-1864-1871)" is edited by Eugène d'Eichthal. In literary criticism, again a voluminous section, we have Joseph Texte's "Études de Littérature européenne" (serious, careful; few original views); Émile Faguet's "Drame ancien, Drame moderne"; Mme. A. Barine's "Névrosés" (a study of literary pathology in the cases of Gérard de Nerval, Poe, etc.); "La Poesie italienne contemporaine," by Jean Dornis; F. Brunetière's important, comprehensive "Manuel de l'Histoire de la Littérature française"; René Doumic's new series of "Études sur l'His-

toire de la Littérature française"; the Vicomte de Broc's pleasant, though not original, "Propos littéraires"; Georges Meunier's "Le Bilan littéraire du XIX^e Siècle" (interesting; not strikingly original); Louis Bertrand's "La Fin du Classicisme et le Retour à l'Antique dans la seconde Moitié du XVIII^e Siècle et les premières Années du XIX^e, en France" (thorough); "L'Élégie en France avant le Romantisme. De Parny à Lamartine, 1778-1828," by Henri Potez; L. Maigrion's capital "Le Roman historique à l'Époque romantique. Essai sur l'Influence de Walter Scott"; Antoine Benoist's "Essais de Critique dramatique" (treating of Sand, Musset, Feuillet, Augier, and Dumas *filis*); Henri Michel's "Le Quarantième Fauteuil" (articles from the "Temps" on "receptions" of new academicians); Stéfane Pol's "Trois grandes Figures" (i. e., George Sand, Flaubert, and Michelet); and the following works on individual authors: P. Bonnefon's "Montaigne et ses Amis" (2 vols.); the late Charles Livet's "Lexique comparé de la Langue de Molière" (third and last volume); G. Lanson's valuable study "Cornéille"; G. Larroumet's interesting "Racine" (modern, analytic criticism) and A. Filon's "Mérinée," both in series "Les grands Écrivains français"; Maurice Souriau's study of "Pascal" (in series "Classiques populaires"); Joseph Vianey's "Mathurin Regnier"; Paul Stapfer's "Bossuet—Adolphe Monod"; the Duc de Broglie's "Voltaire avant et pendant la Guerre de Sept Ans" (a study of his relations with Louis XV and Frederick the Great); Eugène Bouvy's interesting "Voltaire et l'Italie" (relations with Italian authors); "Geoffroy et la Critique dramatique sous le Consulat et l'Empire," by Des Granges; Ernest Zyromski's "Les Sources de la Poésie lyrique de Lamartine"; "Lettres inédites de Lamennais à Montalembert" and "Un Lamennais inconnu" (letters to Benoit d'Azy); "Montalembert," by the Vicomte de Meaux (noteworthy, though not final); Maurice Souriau's "La Préface de Cromwell" (of Hugo); Mme. Darmesteter's remarkable "La Vie de Ernest Renan"; the interesting "Correspondance de Renan avec M. Berthelot, 1847-92"; Léon Daudet's touching homage to his father, "Alphonse Daudet"; "Vraie intime," by Charles Donos (brutally frank); Paterne Berrichon's "Vie de Jean-Arthur Rimbaud" (known from his connection with Verlaine); E. Rod's "Essai sur Goethe" (shows thorough knowledge of subject); "Henri Heine," by J. Legras; Henri Lichtenberger's "Richard Wagner, Poète et Penseur" and "La Philosophie de Nietzsche"; and Ernest Seillière's "Ferdinand Lassalle." Vicomte E. M. de Vogüé's essays "Histoire et Poésie" show nobility of thought and elegant style. François Coppée's "La bonne Souffrance" consists of articles published during his long and bravely borne illness.

Specially noteworthy novels of the year are Zola's "Paris" ("more interesting . . . and significant than 'Rome' or 'Lourdes,'" says Brunetière; Zola "has learned nothing and forgotten nothing. Paris is not so much the subject as the 'dechristianization' of the Abbé Pierre Froment"); the late Alphonse Daudet's "Soutien de Famille" (a warning against the decadence of French character; will rank among his best); Anatole France's original "Le Mannequin d'Osier" (a "philosophical novel" with a minimum of plot, a "most lively and ironical impression of the life of to-day"); Paul Bourget's "Complications sentimentales" (three stories; extraordinary powers of analysis); André Theuriot's "Boisfleury" and "Le Réfugé"; "Jacqueline Vanesse," a "romantic novel," by Victor Cherbuliez; Edouard Rod's masterpiece "Le Ménage du Pasteur Naudé" (a story of French Protestant life); "Le Désastre," by Paul and Victor Margueritte, a tragic picture of the Franco-German War; "Les Déracinés," by Maurice

Barres (first of a series offering a psychological study of France since 1870; surcharged with details, but a serious work by a reflective spirit); Marcel Prevost's "Trois Nouvelles" (three stories; his best); "La Femme et le Pantin. Roman espagnol," by Pierre Louys, a stylist of extraordinary virtuosity (style delicate, even "chaste"; not exactly for "the young person"). Further prose fiction: Rémy Saint-Maurice's "Temple d'Amour"; "Golo," by Pol Neveux; Jean Thorel's "Devant le Bonheur"; "Le Secret du blessé," by P. Sales; J. H. Rosny's "Un autre Monde" and "Les Retours du Cœur" (charming, sentimental); P. Muël's "La Roche-qui-tue" and "Marc et Lucienne"; E. Daudet's "La Mongautier. Roman des Temps révolutionnaires"; Michel Corday's "Confessions d'un Enfant du Siècle"; Maindron's "Saint Cendre"; "Cœurs en Détresse," delicate impressions by Gabriel Mourey; "Le Roi de Paris" and "Vieilles Rancunes," by G. Ohnet, "the E. P. Roe of France"; Marcelle Tinayre's "La Raçon" (delicately feminine); Charles le Goffic's "Morgane" ("written for young girls") and "La Payse"; André Lichtenberger's "Mon petit Trott" (a fine, searching study of the child soul); Gyp's usual batch, including "Journal d'un Grinchu" (on the Dreyfus affair, etc.); and new books by R. Maizeroy, Richard O'Monroy, M. Montégut, and E. Delpit. New poetry by the young men includes the Vte. de Guerne's "Les Siècles morts" and "Bois sacré"; Henri de Regnier's "Jeux rustiques et divins"; Samain's "Au Jardin de l'Infante" ("insinuating and winning charm"); Francis Vielé-Griffin's "La Clarté de Vie" (does some violence to prosody); Henri Ronger's "Poèmes fabuleux" (rather rhetorical); Georges Druilhet's "Le Temps des Lilas" (pleasant, not very original); Jean Richepin's "Les Caresses"; and Mareel Rouff's "Les Hautaines" (shows faults as well as talent). A number of notable plays have been produced: François de Curel's "Repas du Lion" (deals with the labor problem in an "intrepid, ingenious, if slightly incoherent manner"; eloquent passages, but not well carried out); Octave Mirbeau's "Les mauvais Bergers" (also a "labor-and-capital" play, not free from sensationalism; generous feeling, but want of moderation); Jules Lemaître's "L'Aînée" (scene laid in French Protestant circles; firm, supple, and delicate style); E. Rostand's triumphantly successful "Cyrano de Bergerac" (romantic drama, generally and enthusiastically praised for its beautiful language and exquisite sentiments; some critics not so eulogistic, one speaking of "banal but graceful rhymes"; exceedingly skillful construction conceded by all); Dubout's "Frédégonde" (pseudo-classic tragedy); Richepin's "Martyre" ("melodrama of the false romantic sort") and "Le Filibustier" (comedy); and Hurancourt's "Don Juan de Manara" (brilliant verse, weak characterization) and Georges de Porto-Riche's "Le Passé" (bold, penetrating, and unpleasant observation), both ardently sensual. Further dramatic productions are Sardou's "Panlô" (a dramatized anecdote of the Revolution, "an historic vaudeville"; ingenious, superficial); "Medea," by Catulle Mendès, written for Sarah Bernhardt; "Le trois Filles de M. Dupont," comedy by Brieux (not entirely coherent; shows progress); "Mariage bourgeois" ("simple and poignant drama"; "rare intensity of emotion"); "Jalousie, Médor, Petites Folles" ("the action is only vaudeville, the characters are comedy, and the dialogue is 'infiniment spirituel'"), and "Rosine" (successful) by Alfred Capus; Leclercq and Bisson's "Jalousie"; Abel Hermant's "Transatlantiques" (deals with life of American millionaires on the Continent; delicate wit and fancy; strong dash of farce); Henri Lavedan's comedies "Catherine" (sentimental) and "Le nouveau Jeu";

Pierre Veber's "Julien n'est pas ingrat" (a diverting *sainete*); "L'Afranchie," comedy by Maurice Donnay (naturalness of dialogue); Pierre Wolf's "Le Boulet" (sharp observation, spirited dialogue); "Lysiane," by Romain Coolus (produced by Sarah Bernhardt; "vital energy, mediocre"); Ambroise Janvier's rather farcical comedy "Mon Enfant"; Louis Bouilhet's "Mélœnis" (curious, lifelike picture of Roman customs); D. Valabrègue's one-act comedy "Le quatorzième Convive"; and "L'Enfant du Mari," comedy by Mme. Jane Meyerheim and Serge Rello (produced at the Théâtre Féministe, established for women playwrights).

New Provençal publications are "La Terreur" (rich color, swift action) by Félix Gras and Alphonse Tavan's play "Li Mase" (remarkable local sneezes). Some critics have noted a growing influence of the Province as a subject of and a force in French literature, and ask: "Is French literature becoming decentralized? Is Paris losing its commanding pre-eminence?"

Germany.—Noteworthy contributions to national history are Hermann Grimm's "Neue Beiträge zur Culturgeschichte"; F. Zarncke's "Aufsätze und Reden zur Kultur- und Zeitgeschichte" ("Kleine Schriften," Bd. II); Elard Hugo Meyer's "Deutsche Volkskunde" (dealing particularly with the life of the peasantry); Friedrich von Kussler's "Der Ausgang der ersten russischen Herrschaft in den gegenwärtigen Ostseeprovinzen im XIII. Jahrhundert"; E. K. Daenell's noteworthy "Geschichte der deutschen Hanse in der zweiten Hälfte des 14. Jahrhunderts"; "Aus des Grossen Kurfürsten letzten Jahren. Zur Geschichte seines Hauses und Hofes, seiner Regierung und Politik," by Hans Prutz; the late Max Lossen's excellent and thorough "Der Kölnische Krieg," Vol. II (Vol. I, 1883); Gust. Heur. Schneider's "Die Burschenschaft Germania zu Jena. Eine Festschrift"; Js. Emmer's "Kaiser Franz Joseph I. 50 Jahre österreichischer Geschichte, Jubiläums-Ausgabe," Vol. I, 1848-'59; Ernst Victor Zenker's "Die Wiener Revolution 1848 in ihren sozialen Voraussetzungen und Beziehungen"; Hs. Blum's "Die deutsche Revolution, 1818-'49"; Stephan Born's "Erinnerungen eines Achtundvierzigers"; Prinz Kraft zu Hohenlohe-Ingelfingen's "Aus meinem Leben," Vol. I, 1848-'56 (important); Theodor Fontane's charmingly personal "Von zwanzig bis dreissig. Autobiographisches"; K. Jansen's "Schleswig-Holstein's Befreiungskampf" ("a belated protest against the incorporation of the duchies into the Prussian monarchy"), completed by K. Sanwer; "Feldzugsbriefe des Generals der Kavallerie Graf Wartensleben-Carow, in deutsch-französischen Kriegen vom 1870"; and G. W. Buexenstein's "Unser Kaiser. Zehn Jahre der Regierung Wilhelms II. 1888-'98." New Bismarck literature includes the prince's own long-expected memoirs, "Gedanken und Erinnerungen" (introduction and notes by Horst Kohl); Moritz Busch's "Bismarck und sein Werk. Beiträge zur inneren Geschichte der letzten Jahre bis 1896" (of no great historical importance: met with a storm of adverse criticism; admitted by many to be a faithful, frank portrayal of Bismarck; some new truths, diminishing halo of William I); H. v. Poschinger's "Fürst Bismarck und der Bundesrat" (Vol. IV, 1878-'81); Js. Penzler's "Fürst Bismarck nach seiner Entlassung," 6 vols. (1897-'98); etc. In our 1895 report a list of works, mostly serial publications, on local history was given; this is here supplemented by the following titles, entered without comment: "Badische Bibliothek. Systematische Zusammenstellung selbständiger Druckschriften über die Markgrafschaften, das Kurfürstenthum

und Grossherzogthum Baden"; "Baltische Studien. Neue Folge. Herausgegeben von der Gesellschaft für pommer'sche Geschichte und Alterthumskunde"; K. Köstler's "Handbuch zur Gebiets- und Ortskunde des Königreichs Bayern, mit Unterstützung des königl. bayerischen Ministeriums des Innern herausgegeben"; G. Ratzinger's "Forschungen zur bayrischen Geschichte" (1898); W. Altmann's "Ausgewählte Urkunden zur brandenburgisch-preussischen Verfassungs- und Verwaltungsgeschichte" (1897); "Braunschweigische Bibliographie. Verzeichniss der auf die Landeskunde des Herzogthums Braunschweig bezüglichen Litteratur. Bearb. und hrsg. vom Verein für Naturwissenschaft zu Braunschweig"; W. v. Bippen's "Geschichte der Stadt Bremen"; Paul van Niesse's "Geschichte der Stadt Dramburg. Festschrift zur Jubelfeier ihres sechshundert-jährigen Bestehens"; "Quellschriften der elssässischen Kirchengeschichte"; "Beiträge zur Landes- und Volkskunde von Elsass-Lothringen"; Jos. Probst's "Geschichte der Stadt und Festung Gernersheim" (1898); H. W. E. Hübbe's "Beiträge zur Geschichte der Stadt Hamburg und ihrer Umgegend"; W. v. Hassell's "Geschichte des Königreichs Hannover" (1897); "Urkundenbuch der Stadt Hildesheim. Im Auftrage des Magistrats zu Hildesheim herausgegeben von Reh. Doebner"; H. Brandis's "Diarium. Hildesheimische Geschichten aus den Jahren 1471-1528. Herausgegeben von L. Haenselmann" (1896); "Geschichte der Grafschaft Hohenzollern im 15. und 16. Jahrhundert (1401-1605)," by P. Mauns (1897); "Die Konstanzer Rathlisten des Mittelalters. Hgb. von der badischen historischen Kommission, bearb. von Konrad Beyerle" (1898); Gst. Wustmann's "Aus Leipzig's Vergangenheit. Gesammelte Aufsätze. Neue Folge"; "Urkunden-Buch der Stadt Lübeck. Herausgegeben von dem Vereine für lübeckische Geschichte und Alterthumskunde"; F. Schlie's "Die Kunst- und Geschichts-Denkmäler des Grossherzogthums Mecklenburg-Schwerin." I. Bd. (1896); "Osnabrücker Urkundenbuch, im Auftrage des histor. Vereins zu Osnabrück bearb. u. hrsg. von F. Philippi," Vol. II (1896); "Osnabrücker Geschichtsquellen, hrsg. vom historischen Verein zu Osnabrück"; Hm. Dannenberg's "Münzgeschichte Pommerns im Mittelalter. Nachtrag" (1897); "Urkundenbuch der Stadt Rottweil." I. Bd., bearb. von Heinrich Günter"; "Geschichtsquellen der Provinz Sachsen und angrenzender Gebiete. Herausgegeben von der historischen Commission der Provinz Sachsen"; "Codex diplomaticus Silesiae. Herausgegeben vom Vereine für Geschichte und Alterthum Schlesiens. XVIII. Bd." "Schleswig-Holstein-Lauenburgische Regesten und Urkunden. Im Auftrage der Gesellschaft für Schleswig-Holstein-Lauenburgische Geschichte bearbeitet und herausgegeben von R. Hasse." III. Bd. (1891-'40); Fr. L. Baumann's "Forschungen zur schwäbischen Geschichte" (1898); "Urkundenbuch der Stadt Strassburg," Vol. V (1895-'96); Gst. Willgeroth's "Geschichte der Stadt Wismar" (1897); "Württembergische Geschichtsquellen, im Auftrage der württembergischen Commission für Landesgeschichte hrsg. von Dietrich Schäfer," Vol. III (1896); W. Heyd's "Bibliographie der württembergischen Geschichte," II. Bd. (1896); A. Ambrassat's "Die Provinz Ostpreussen. Bilder aus der Geographie, Geschichte und Sage unserer Heimatprovinz" (1896); "Urkunden zur Geschichte der Deutschen in Siebenbürgen. Herausgegeben vom Ausschuss des Vereins für siebenbürgische Landeskunde"—all forming material for history. To these are added the Austrian works. "Quellen und Forschungen zur Geschichte, Litteratur und Sprache Oesterreichs und seiner Kronländer. Durch die Leo-Gesellschaft herausgegeben von J. Hirn und

J. E. Wackernell." V. Bd. (1897); "Geschichte der Stadt Wien. Hrsg. vom Alterthumsvereine zu Wien. Redigiert von H. Zimmermann"; "Beiträge zur deutsch-böhmischen Volkskunde. Hrsg. v. d. Gesellsch. zur Förderung deutscher Wissenschaft, Kunst u. Literatur in Böhmen"; "Monumenta historica ducatus Carinthiae. Geschichtliche Denkmäler des Herzogthums Kärnten." II. Bd. (1898). Interest in family history is shown in such works as Alex. Budberg-Gemauert-Ponion's "Beiträge zu einer Geschichte des Geschlechtes der Freiherren von Bönninghausen genannt Budberg" (1898); "Geschichtsquellen des burg- und schlossgesessenen Geschlechts v. Bocke. Im Auftrage des Familien-Vorstandes herausgegeben von G. Sello"; "Lehrbuch der gesamten wissenschaftlichen Genealogie," by O. Lorenz (1898); Alex. Dietz's "Frankfurter Bürgerbuch. Geschichtliche Mittheilungen über 600 bekannte Frankfurter Familien aus der Zeit vor 1806" (1897). Further historical works are Friedrich Ludwig's "Untersuchungen über die Reise- und Marschgeschwindigkeit im XII. und XIII. Jahrhundert" (of "culture-historic" interest); Ludo Moritz Hartmann's "Geschichte Italiens im Mittelalter"; C. A. Fetzner's "Aus dem thessalischen Feldzuge der Türkei, Frühjahr, 1897"; and Admiral M. Plüddemann's "Der Krieg um Cuba." Miscellaneous biographical works are "Emin Pascha: Darstellung seines Lebens und Wirkens," by his cousin, Georg Schweitzer; the "Briefwechsel mit seinen Freunden" of the "Weinsberg poet and visionary" Justinus Kerner, "who corresponded with half the great men of his time"; and "Briefwechsel zwischen Erzherzog Johann Baptist von Oesterreich und Anton Graf von Prokesch-Osten." In geography and travel we have Friedrich Ratzel's "Politische Geographie"; Julius Scherff's frank "Nord Amerika: Reisebilder, sozialpolitische und wirtschaftliche Studien aus den Vereinigten Staaten"; Wilhelm Geiger's scholarly "Ceylon: Tagebuchblätter und Reise-Erinnerungen"; Paul Rohrbach's "In Turan und Armenien" (of exceptional merit); E. Kunhardt's "Wanderjahre eines jungen Hamburger Kaufmannes. Eine Reise um die Erde in 777 Tagen"; and "Die Bulgaren. Ethnographische Studien," by Adolf Strauss. Franz Hümmerich furnishes the first German work on "Vasco da Gama und die Entdeckung des Seewegs nach Ostindien" (critical use of documents; no cartographic study). The interesting question of colonies is dealt with in Alfred Zimmermann's "Die Europäischen Kolonien" (perspicuous, impartial); Karl Dunker's "Kolonien und Kolonisation" (considers efforts of the Germanic race as most effective); and Esser's "An der Westküste Afrikas." R. Schumacher's "Kiautschau und die ostasiatische Frage. Erlebnisse aus China und der japanischen Gefechtsfront"; and "Ostasiatische Fragen" and "Kiaoutschu," by M. von Brandt (authoritative), meet the present interest in eastern Asia. In sociology, education, and economics there are Paul Heyse's pamphlet "Martha's Briefe an Maria: Ein Beitrag zur Frauenbewegung" (mild but earnest tone and charming style); the useful "Wie erziehen wir unsern Sohn Benjamin" by Adolf Matthias; "Politik: Vorlesungen gehalten an der Universität zu Berlin von Heinrich von Treitschke, herausgegeben von Max Cornicelius" (made up with the aid of the notes left by Treitschke); Siegfried Rietchel's "Markt und Stadt in ihrem rechtlichen Verhältniss. Ein Beitrag zur Geschichte der deutschen Stadtverfassung"; Karl Helfferich's important "Die Reform des deutschen Geldwesens nach der Gründung des Reiches"; and E. Hirschberg's "Die soziale Lage der arbeitenden Klassen in Berlin" (temperate in judgment and suggestion). Among philosophical works there are a treatise by Ferdi-

nand Tönnies (showing the waning of Nietzsche worship): John Henry Mackay's "Max Stirner: sein Leben und sein Werk," a glorification of the apostle of egoism; "Max Stirners kleinere Schriften: Hgb. von J. H. Mackay"; and Friedrich Jodl's "Psychologie" (empirical, concise, comprehensive). Literary history and criticism are supplied in the Jesuit Alexander Baumgärtner's "Geschichte der Weltliteratur" (one-sided, but comprehensive and attractively presented) and a life of Goethe (from author's standpoint); Ernst Elster's suggestive "Prinzipien der Literaturwissenschaft"; "Zur neueren Literaturgeschichte" ("Schriften zur Kritik und Literaturgeschichte") by Michael Bernays; Arthur Eloesser's instructive "Das bürgerliche Drama. Seine Geschichte im 18. und 19. Jahrhundert"; Friedrich Spielhagen's "Neue Beiträge zur Theorie und Technik der Epik und Dramatik"; "Renaissance. Neue Studien zur Kritik der Moderne" (on art and literature), by Hermann Bahr, himself quite modern; "Schwäbische Literaturgeschichte," by Rudolf Krauss; G. Waniek's monumental "Gottsched und die deutsche Literatur seiner Zeit"; Schnbart's interesting "Goethe's Königsleutnant" (shown to have been Count Théa de Thorenc); "Auf Goethes Spuren in Italien," by Julius R. Haarhaus; "J. G. Seume: Geschichte seines Lebens und seiner Schriften," by O. Planer and C. Reissmann (fine literary monument); Paul Schlenker's "Gerhart Hauptmann, sein Lebensgang und seine Dichtung" (sympathetic, just, reserved); "Gerhart Hauptmann," by Adolf Bartels (oracular, presumptuous), and U. C. Woerner's "Gerhart Hauptmann" (unpretentious, thoughtful); Jacob Minor's "Ferdinand von Saar: eine Studie" (a model of sensitive and appreciative analysis); Eduard Heyck's "Geschichte der Allgemeinen Zeitung, 1798-1898" (issued in honor of its centenary; "interesting contribution to the literary and social development of the German people"); August Döring's interesting "Hamlet. Ein neuer Versuch zur ästhetischen Erklärung der Tragödie"; Hans Lach-Zehle's "Die Darstellung krankhafter Geisteszustände in Shakespeares Dramen" (from the psychiatrist's standpoint); Erich Meyer's "Die Entwicklung der französischen Litteratur seit 1830" (suggestive; an advance on what is usually offered on this subject); Harold Höfding's "Rousseau und seine Philosophie" (clear, concise, most satisfactory commentary); and Marie Herzfeld's "Die skandinavische Literatur und ihre Tendenzen, nebst anderen Essays." In the literature of art we have W. Nagel's very good "Geschichte der Musik in England" (1894-'97); new Brahms literature—J. V. Widmann's affectionate and appreciative character picture "Erinnerungen an Johannes Brahms," A. Dietrich's "Erinnerungen an Johannes Brahms in Briefen, besonders aus seiner Jugendzeit," "Johannes Brahms," by H. Deiters, H. Reimann's "Johannes Brahms" (hardly introspective), "Johannes Brahms. Erläuterung seiner bedeutendsten Werke, von C. Beyer, R. Heuberger und anderen" (not entirely satisfactory)—Wendelin Weissheimer's "Erlebnisse mit Richard Wagner, Franz Liszt und vielen anderen Zeitgenossen"; Hans von Bülow's letters; Theodor Billroth's "Wer ist musikalisch?" (correspondence); "Eduard von Steinle's Briefwechsel mit seinen Freunden" ("the correspondence of a German preraphaelite," of the "Nazarene" school, a "precious witness of the nobility of his intentions"); and F. F. Leitschul's "Das Wesen der modernen Landschaftsmalerei" (incoherent, wants arrangement, says one; commendable, another). Prose fiction has its usual list of well-known names, and some unfamiliar ones: Ernst von Wildenbruch's "Tiefe Wasser: 5 Erzählungen" ("Waidfrun" the finest); Fd. v. Saar's

"Novellen aus Oesterreich" (essentially Austrian): the refined writer Adalbert Meinhardt's "Unterwegs," "Das Leben ist golden," and "Heinz Kirchner"; A. Wilbrandt's "Die glückliche Frau" (adds nothing to author's reputation); the oft-fantastic Wilh. Jensen's "Das Bild im Wasser" and "Ein Heilmittel. Novelle"; "Die Frau des Weisen," by Arthur Schnitzler (a moralist, not erotic, we are told); E. Wichert's "Monte Carlo und andere Geschichten"; Georg Freiherr von Ompteda's "Maria da Caza," "Der Zeremonienmeister" (faithful picture of affairs in Saxony, seasoned by fine humor), and "Weibliche Menschen: Novellen"; "Schwiegertöchter" and "Nachgelassene Novellen" (rather superficial), by Alexander Baron von Roberts; Adolf Stern's "Ausgewählte Novellen" (selected "with strictest self-criticism" from his published work); Adolf Pichler's "Gesammelte Erzählungen" (subjective, memoirlike stories of Tyrolean life); H. Hausjakob's sympathetic "Waldeute"; "Der Grabenhäuser," an "agrarian novel," by Wilhelm von Polenz; "Von zarter Hand," "Unter Zigeunern" and "Quitt," by J. R. zur Megede (much praised and read); "Der Ehe Ring. Novellen," by Ernst Clausen (Claus Zehren), who observes well and tells a good story; "Die Intriganten: ein brandenburgisch-preussischer Roman" and "Der gemordete Wald: ein Bauernroman aus der Mark," by Fd. v. Zobeltitz; "Antje Bergholm" and "Die Generalsgöhre" (interesting picture of military circles), by H. von Zobeltitz; "Fanar und Mayfair," by Rudolf Lindau, who again indulges his love for the exotic; Peter Rosegger's personal "Mein Welterleben, oder wie es dem Waldbauernbuben bei den Stadt-leuten erging"; Jakob Wassermann's "Die Juden von Zirndorf" (fantastically personifying the modern Jewish question by characteristic figures); Arthur Zapp's "Drei Mädchen: eine internationale Liebesgeschichte"; "Jugendgenossen. Roman," by Karl Manno (pseudonym of C. v. Lemeke), a novelist of the old school; the late Kr. Telmann's "Gottbegnadet" and "Das Ende vom Lied" (one of his best); Hs. Hoffmann's "Allerlei Gelehrte"; "Die Dithmarscher. Historischer Roman," by Adolf Bartels, the literary critic; Guido List's historic and patriotic novel "Carnuntum"; "Der Arme Conrad" (deals with Peasants' War of 1525) and "Der weisse Tod. Roman aus der Gletscherwelt," by Rudolf Stratz; Greg. Samarow's "Transvaal. Roman aus dem südafrikanischen Leben der Gegenwart" and "Eine goldene Feder"; "Sirenenliebe," by H. A. Krüger, a newcomer; "Von zwei Geschwistern," two posthumous novelettes by Otto Sachs (very promising talent, died in 1897 at the age of twenty-eight); Benno Rüttenauer's "Zwei Rassen"; Karl Bleibtreu's "Freie Liebe" (disappointing); Gustav Wolff's short stories "Die Beichte des Mönchs" (intimate soul description); Heinz Tovoto's "Abschied. Novellen" (mostly "worn-out"); and new works by women: Ilse Frapan's new volume of old-fashioned stories of Hamburg life and "In der Stille"; the Swiss writer Goswine von Berlepsch's "Mann und Weib" (stories of Vienna); "Fräulein Doctor" (enters into the peculiar atmosphere of Zürich) and "Erzählungen" (includes 3 stories, of which "Der Mondreigen von Schlaraffis" was also published separately), by Ricarda Huch (a German living in Switzerland); Wilhelmine von Hillern's "'S Reis am Wege" (comprehension of the Bavarian peasant soul; command of psychological detail); Marie von Bunsen's admirable "Ein alltägliches Paar" (dealing, like her previous works, with Berlin's upper classes); Ossip Schubin's "Wenn's nur schon Winter wär!"; Clara Viebig's "Rheinlandstöchter" and "Kinder der Eifel. Novellen" ("a unusual power of indirect characterization"); "Aus dem Sonnenflimmern. Novellen und Erzählungen," by Wanda von Bartels

(noteworthy); A. v. Gersdorff's "Auf gefährvollen Pfaden," "Verkäuferlicher Wert" and "Des Vaters Schuld"; N. v. Eschstruth's "Mondscheinprinzessen" and "Der Majoratsherr"; D. v. Spättingen's "Arbeitskraft"; Maria Janitschek's "Ins Leben verirrt," and "Ueberm Thal: Novelle" (hyper-psychological); "In blauer Ferne: neue Novellen," by Emil Roland (pseudonym of Frau Emmi Lewald); and Maria Louise von Suttner's first work, "Wie es Licht geworden!" (a vehicle for the author's ideas on social questions). New lyric verse includes "Neue Gedichte und Jugendlieder," by Paul Heyse, "the most brilliant representative of the classic style founded by Goethe"; Wilhelm Jensen's "Vom Morgen zum Abend: ausgewählte Gedichte" (peculiarly individual); Gustav Falke's "Neue Fahrt. Gedichte" (pure art, harmonic forms, no false note); "Stimmen und Bilder. Neue Gedichte," by Ferdinand Avenarius (placed among the best German lyrics; entirely free from modern decadence); "Tempi passati. Dichtungen," by Jenny von Reuss (erotic poems of powerful passion and carefully treated form); and "Gedichte von Johanna Ambrosius, ausgewählt von Karl Weiss-Schrattenthal," Part II. In dramatic literature the mass of productions is of medium quality and serves for amusement. Jolly farces, such as "Im weissen Rössl" and "Auf der Sonnenseite," by Blumenthal and Kadelburg; Blumenthal and Max Bernstein's farce "Matthias Göttinger"; the character picture "Mutter Thiele," by A. L'Arronge; "Die Logenbrüder," by Karl Laufs and Kurt Kraatz; "Die gute Partie," by F. v. Schönthan and Victor Leon; Josef Jarno's comedy "Momentaufnahme"; Moser's "Blaues Blut"; Carlot Reuling's farce "Anno dazumal"; Kempner-Hochstädt's "Die Nothlüge"; "Onkel Bönkost" (sentimental melodrama) by Georg Sabinus (Reike); the comedy "Das neue Weib," by Rudolf Stratz (whose "Jörg Truggenhofen" is very mediocre), hardly bear energetic dissection, and have, at best, an ephemeral success. Plays of more or less note are Gerhart Hauptmann's remarkable "Fuhrmann Henschel" (a sociological study of unhappy marriage; in Silesian dialect); J. J. David's "Neigung" ("minute character drawing"); Arthur Schnitzler's successful "Das Verhältniss"; the comedy "Wunderquelle" and the sensationallly successful "Das Erbe" (inspired by the relations between Bismarck and William II), by Felix Philippi, who commands a remarkable technique, and, as one critic says, "deceives the public . . . as to his poetical impotence and the absolute weakness of his plays"; Ludwig Fulda's "Herrostrat" (his "most thoughtful and best work"); Max Halbe's "Der Eroberer" (a complete failure); "Gertrud" (romantic; highly interesting as literature), drama by Johannes Schlaf, the "prophet of naturalism"; Paul Heyse's "Fornarina: Trauerspiel" (interesting, but conventional in technique) and "Vanina Vanini" (tragic love drama, polished and elegant; melodramatic, but skillfully constructed); Philipp Langmann's "Bartel Turaser" ("labor" drama; well rounded, characters sharply defined) and "Die vier Gewinner" (*Volksstück*; life-like); the Viennese Zionist Theodor Herzl's "Das neue Ghetto" (the "moral Ghetto," from which the hero unsuccessfully strives to escape; excellent picture of Jewish life); Max Bernstein's "Mädchen- trauma" (charming verses, romantic and graceful); Felix Dörmann's surprisingly good comedy "Ledige Leute"; "Die blonde Katharine" (*Märchenspiel*), by Richard Voss; "Königskinder" (a sweetly sentimental fairy fantasy), by Frau Rosa Bernstein (Ernst Rosmer), set to music by Humperdinck; C. G. Reuling's "Der Stärkere"; Max Dreyer's "In Behandlung" and "Grossmama" (farce; natural; well-deserved success); Georg Ruseler's realistic

play "Gudrun"; Georg von Ompteda's "Eheliche Liebe" (respectable, not strong); "Das Recht des Herzens," two-act play by Ernst Possart, the actor (effective, at times theatrical); works by young men, such as Hugo von Hofmannsthal's one-act "Madonna Dianora" (a "dramatized ballad," pulsating with suppressed fire), "Tote Zeit," by Ernst Hardt (not yet mature), and Otto von der Pfordten's "Mohammed"; the *Volksstück* "S. Katherl" and the comedy "Die Bürgermeisterwahl" (neither remarkably original), by Burkhard (who showed a fine appreciation of the modern movement when director of the Hofburg Theater, in Vienna); "Das grobe Heimd" (comedy), by E. Karlweiss (Viennese, good-natured humor); Felix von Stenglin's arrangement of Goethe's "Die Aufregten"; historic dramas, such as Josef Lauff's "Burggraf von Zollern" (inspired by Wilhelm II) and "Alarich, König der Westgothen," by Verdy du Vernois, both coolly received; the Tyrolean Karl Domanig's noteworthy dramatization of the Tyrolean struggle and Hofer's life, a "trilogy" composed of two dramas "Speckbacher" and "Der Kronenwirth von Hall," and a tragedy, "Der Sandwirth," and having also a prelude, "Die Braut des Vaterlands," and an epilogue, "Hofer's Denkmal." ("Der Kronenwirth" was acted by peasants, as the well-meaning but imperfect production of Carl Wolf has been every year, near Meran.)

Greece.—The war with Turkey has occasioned some "hasty and inferior records of its history." Historical works of note are primarily the "History of the Empire of Nicæa and the Despotism of Epirus (1204-1261)," by Anton Miliarakis (comprising material discovered since the publication of Finlay's work); "History of Trebizond from the Earliest Times to our own Day," by Tryphon Evangelides (cursorily); the first connected "History of Nauplia from the Oldest Times to the Present Day," by Michael Lambrynidis (praiseworthy attempt, but author ill-equipped); annals of "Dimitsana, the Famous School of Arcadia," by Jakis Kandiloros; and "Foreign Rule and Kingship in Greece, 1821-27," by George Philaretos (views on influence of foreign intrigues on Kings Otto and George). The new edition of "History of the Church from its Founding to our Day," by A. D. Kyriakos (originally published in 1881), is practically a new work. T. Athanasiu, a Roumanian priest, offers a thorough account of "The Greek Schools in Roumania" from 1644 to 1821. C. Papamarku's polemical, brilliant "The Reading Books of the School Children of Greece" effectively criticises the commission which rejected his schoolbooks and discusses the basis of the latter. A. Vlachos has issued a rather inadequate dictionary of Neo-Greek ("Λεξικὸν ἑλληνογαλλικόν"). Philological and other studies are offered in the excellent "Illustrations of Byzantine Proverbs," by Nicolaos Politis; "Philologica," by D. Angelides; a monograph on Plato's "Laws," by Miltiades Pantazis; "Music among the Ancient Greeks and the Delphic Hymn to Apollo," by T. Polykrates; "Sea Tactics of the Ancients, after the MS. of the Ambrosiana," by K. Rados; and a catalogue of 104 codices preserved in the Hagia monastery in Andros, by S. P. Lambros. The indefatigable Papadopoulos-Kerameus has issued Vols. III and IV of "Ἀνάλεκτα ἱεροσολυμιτικῆς σταχυολογίας" (St. Petersburg) and Vol. III of "Catalogue of the Jerusalem Library," published by the Russian Palestine Syllagos, prominent among the literary societies which are actively publishing manuscript matter found in the monasteries of the Levant.

New prose fiction includes "The Dream of Jan-niris," by J. Pyscharis, who affects the popular dialect "with peculiar results"; stories by K. Passa-

jannis ("akin to folklore") and by Mme. E. Zographu (charming). In poetry we have "Grave," by K. Palamas (a moving, somewhat mysterious tribute to his little son); and "Songs of the Desert," by Petros Vassilikos (i. e., K. Hatzopoulos, a promising young poet). C. Anninos has written a comedy, "The Victory of Leonidas," and A. Provelgios a tragedy, "Rhigas," dealing with the martyrdom of the "prophet of Greek freedom," 1798.

Holland (Flemish authors under "Belgium").—The history of the Dutch Republic during 1776-'86, a "period of disgrace," is dealt with in H. T. Colenbrander's very important "De Patriottentijd. Hoofdzakelijk naar buitenlandsche Besecheiden," based on extensive research, but lacking the information contained in the still unpublished official papers of Sir Joseph Yorke (British minister at the Hague). H. J. Betz enlarges on the same period in "Dames en Heeren uit de vorige Eeuw." S. A. Naber's life of Allard Pierson is full. Jan Ten Brink, in "Brechtje Spieghels," relates an interesting episode in Hooft's life. Albert Verwey's "Toen de Gids werd Oppericht" throws new light on the family history of the Gids. Taco II. de Beer's "Woordenschat" is a useful work on national and foreign phrases. E. I. Jorissen's "Transvaalsche Herinneringen, 1876-'96," is a graphic and important bit of Boer social history. Sociological studies are numerous. Noteworthy are H. P. G. Quack's sympathetic "De Socialisten" (fourth and last volume); Helene Mercier's "Sociale Schetsen"; C. J. Wynaendts Francken's "Sociale Ethiek" (a "popular, full survey of the theory of naturalists and evolutionists"); and "Verzamelde Opstellen" (essays by the principal Dutch socialists), by F. Van der Goes. Mrs. Goekoop's highly successful "Hilda von Suylenburg" (fiction) champions the free development of woman with delightful partiality. Psychology is rendered intelligible in Frederik van Eeden's "Foundations of Intelligence." J. M. Acket's monograph on "De Imitatione Christi" rather belittles Thomas à Kempis. M. Emants's descriptive "Van Heinde en Verre" is slightly monotonous. Maurits shows an artistic impressibility and an open mind in "Van Rome naar Jeruzalem." The late C. Busken Huet's "De Bruce's Josefine" is cynical but entertaining. J. Ph. Vogel has issued a painstaking, annotated Dutch version of "The Little Toy Cart" from the Sanskrit and Prakrit.

Among novels and stories there are "De Roman Van Bernard Bandt" ("romantic realism"; conspicuous failure), by H. Robbers; the late F. Roosdorp's "Kinderen" (sharp observation); Henri Borel's "Jongetje" (prettily written) and "Kwan Yin" (original view of Chinese philosophy and art); "Benjamin's Vertellingen" (rhymed; popular) by W. L. Penning, Jr.; Herman Heyerman's "Interieurs" (light sketches; good); Anna de Savornin Lohman's "Het eene Noodige" (some beautiful passages, but "altogether too wild"); "Barthold Meryan" (confused, socialistic), by Cornelia Huygens; and "Her Memory" (New York), by Maarten Maartens. "Psyche," a parable, by Louis Couperus (in "De Gids"), is an example of poetical prose. In poetry are noted "Een Koning," by Ary Prins (a "monumental piece of imaginative impressionism"); "Verzen," by P. C. Boutens (grand mastery of language, sure touch); Herman Gorter's "De School der Poezie" (second edition of "Verzen," with new poems), with a startling preface advocating poetic treatment of social subjects; and H. J. Boeken's retelling of "Floris and Blanchefleur." New plays are J. de Koo's amusing comedy "De Candidatnur van Bommel" and "Een Kriesis" (fine characterization), by M. Emants (author of "Op Zee" and "Vijftig"). P. H. van Moerkerken has published old farces in "Het Nederlandsch Kluchtspel."

A Dutch writer notes the country's recent advance in literature and art, and informs us that thrifty Holland reads Dutch books and even buys them!

Hungary.—The jubilee of the Revolution of 1848 occasioned G. Gracza's "History of the Struggle for Independence" (5 vols.); Jókai-Bródy's "1848" (a "picture book"); and Boross-Laurencic's "Album of the Struggle for Freedom." G. Láncezy's "Magyardom under the Arpáds" offers a new view of a vexed question. Noteworthy biographies are A. Zichy's work on Count Stephen Széchenyi, "the greatest of Magyars"; Dezső Malonyay's excellent "Life and Work of Michael Munkácsy"; T. Szana's biography of Károlyi Markó, landscape painter; and J. Szinnyi's valuable "Mor Jókai." Books of travel are Count Jenő Zichy's interesting "Travels in the Caucasus" (in search of the origin of the Magyars); the valuable "Bosnia and Herzegovina," by Adolf Strausz; and Gyula Pekár's attractive "South and North." The "Pallas Great Lexicon" (noticed in 1893) has been concluded with Vol. XVI. There is an unusual number of important works in sociology and economics: "The Condition of Agricultural Laborers in Hungary" (valuable; comprehensive research), prize essay by S. Milhofer; "The Result of the Reform of our Criminal Procedure" (an "essay in agricultural politics"), by the gifted Rustem Vámbéry; "Social Questions," by Gyula Dietrich (new writer; talented); Akos Navratil's valuable prize essay on "Adam Smith's System and its Philosophical Basis"; and Eugen Gaal's "The Social System of Thomas Carlyle." Bernát Alexander writes of "Art" in a graceful and interesting way. Béla Lázár is the author of a profound study on "The Fortunatus Legend in Literature."

In fiction, the short story and the sketch stand prominent; in this *genre* we have Sándor Bródy's "The Fairy Ilona" (two stories, rich in color, national in character); Andor Kozma's "Humorous Stories"; István Petelei's "Clouds" (11 tales; individuality strongly marked); István Tömörkény's "Under the Poplars" (masterly descriptions of life on the *puszta*); István Bárony's "The Merry World" (excellent characterization and description); Jenő Heltai's "Seven Meager Years" (humorous pictures from the life of the Hungarian Bohemian); and Béla Lázár's "Moods." Novels to be noted are Gyula Werner's important "The Dawn is sure to come" (life in Transylvania) and "The Immigrants," by Mme. Szikra (pseudonym), lashing the lower gentry, known as "immigrants" among the aristocracy. New poetry includes Andor Kozma's successful, biting "Satires"; Pál Koroda's "Lyre" (beautiful form); and Lajos Palágyi's "Biblical Memories." The national drama, we are told, is in a state of decay; French art reigns supreme, and is awkwardly copied. At the same time, "gratifying progress" is reported for Hungarian literature, on the whole.

Italy.—Interesting works bearing on national history are "Storia di Roma," by Ettore Pais (Part II of his "Storia d'Italia" (thorough; oversubtle in criticism); E. Arbib's "Cinquant' Anni di Storia parlamentare"; B. Croce's "Silvio Spaventa. Dal 1848 al 1861. Lettere, Scritti e Documenti"; Alessandro d'Ancona's worthy biography of "Federico Confalonieri," the "celebrated martyr of the thought of Italian independence"; the successful "Autobiografia di un Veterano (1859-'93). Ricordi storici ed aneddotici del Generale Enrico Della Rocca"; O. Barattieri's "Memorie d'Africa (1892-'96)"; and G. Carducci's interesting monograph on "Alberto Mario: Scrittore e Giornalista, 1848-'61." Sociological topics, which always claim a fair share of attention here, are discussed in P. Chinassi's "Il

Doverc sociale della Classe dominante"; Mario Morasso's "Domini e Idee del Domani—L'Egoarchia" (preaching individualism); Ggl. Ferrero's "Il Militarismo"; and G. Mondaini's "La Questione dei Negri nella Storia e nella Società nord-americana." "Scelta di Prediche e Scritti di Frà Girolamo Savonarola, con nuovi Documenti intorno alla sua Vita," by P. Villari and E. Casanova (a worthy commentary and supplement to Villari's life of Savonarola), forms a fit commemoration of the fourth centenary of Savonarola's martyrdom. Adolfo Padovan's "Le Creature Sovrane" is a "sort of natural history of the man of genius" ("inadequate"). G. Negri's "Segni dei Tempi, Profili e Bozzetti letterari" and Aldo Maggioni's "Edipo" belong to miscellany. The section "Literary history and criticism" is voluminous. We note Luigi Rasi's "I Comici italiani" (complete history of Italian dramatic art and artists); Luca Beltrami's short biography of "Alessandro Manzoni"; Ilario Rinaldi's "Della Vita e delle Opere di Silvio Pellico. Da Lettere e Documenti inediti" (the documents more interesting than the editorial work); and Egidio Gorra's "Lingua e Letteratura spagnuola delle Origini." In Dante literature we have Alfredo Niccifero's "Criminali e Degenerati dell' Inferno Dantesco" (an "attempt to discover anticipations of modern criminological theories in Dante's 'Divina Commedia'"); I. del Lungo's "Dal Secolo e dal Poema di Dante"; "La Divina Commedia di Dante Alighieri, illustrata nei Luoghi e nelle Persone," by Corrado Ricci ("the collection of these pictures of persons and places . . . is largely original and photographic"); G. Cavaretta's "Virgilio e Dante. Confronti critica tra l'Eneide e la Divina Commedia"; G. Longo Manganaro's "Bruto e Catone nella Divina Commedia"; and "Scritti" (Vol. I: Studi Danteschi. Vol. II: La Beatrice svelata. Vol. III: Scritti rari), by F. Perez. The Leopardi centenary was celebrated with great enthusiasm. New books dealing with the poet are E. Celani's "Leopardi a Roma"; De Roberti's "Giacomo Leopardi" and Giosué Carducci's "Degli Spiriti e delle Forme nella Poesia di Giacomo Leopardi," two valuable works; Gi. Negri's "Divagazioni Leopardiane" (Vol. IV); L. Perroni Grande's "Giacomo Leopardi a Messina"; N. Vaccaluzzo's "Vittorio Alfieri e il Sentimento patriottico di Giacomo Leopardi"; E. Boghen-Conigliani's "La Donna nella Vita e nelle Opere di Giacomo Leopardi"; and A. Faggi's "Lenau e Leopardi. Studio psicologico-estetico."

Among new novels are noted F. De Roberti's "Spasimo" (shows versatility and power, but not up to his standard) and "Amori" and "Gli Amori," psychological studies; Girolamo Rovetta's "L'Idolo" (excellent characterization); Gabriele d'Annunzio's "Il Fuoco"; Enrico Rieta's "Il Gusto d'amare: Romanzo"; Maddalena Cravenna Brigola's "Le Vittorie di Clotilde: Romanzo sociale"; Mario Pratesi's "Le Perfidie del Caso" (a psychological study of great power); and Luigi Capuana's "La Sfinge" (naturalism; "flabby unwholesomeness"). The list of poetry includes Antonio Fogazzaro's "Poesie scelte"; G. d'Annunzio's "I Sogni delle Stagioni. Sogno d'un Tramonto d'Autunno. Poema tragico" (a sensuous picture, presented with masterly magic of style); "Versi postumi" of Domenico Stromei, the "Italian Hans Sachs"; "Vita" by Luisa Anzoletti (hitherto known chiefly as a profound writer of philosophical and religious books); Angiolo Orvieto's graceful "Poesie" of love and melancholy; Anita Zappa's "Intime Sinfonie"; Chiggiato Giovanni's "Rime dolenti"; Gustavo Pittaluga's "Il Canzoniere"; Giuseppe Lipparini's "Lo Specchio delle Rose"; Francesco Matteucci's "Atomi e Raggi, 1892-95"; D. Gnoli's "Vecchie e nuove Odi

tiberine"; and Flora d'Adria's "Versi." Finally, a number of new plays are noted: Gabriele d'Annunzio's "La Ville Morte" (produced by Sarah Bernhardt; unpleasant subject; high poetic qualities; beauties and defects remove it far from the sympathies of the general public); A. Paternò Castello's "La Fine di Livia" (comedy); Dani Gino's "Teresina" (drama); Francesco Pastouchi's "Oltre l'Umana Gioia: Favola in terza Rima"; Celestino Calleri's "I due Caporali reduci dall'Africa"; Dante Biechi's "Sulla Rotonda" (comedy); Ersilio Bice's "Ena" (comedy); and Francesco dall'Ongaro's "Il Fornaretto: Dramma storico."

Norway.—A. Ræder's "Keiser Hadrian" is called the best historical book of the year. Other works in the field are H. T. Aschehoug's excellent one on Norwegian communal affairs; some exhaustive monographs on Trondhjem, published at its nine hundredth anniversary; and C. Hallendorff's "Bidrag till det stora nordiska Kriget's Förhistoria." In "Discovery and travel" we have two accounts of the Nansen expedition by members of the same: "Selv-Anden på 86° 14'" (much new material), by Lieut. Hjalmar Johansen, Nansen's sole companion after leaving the "Fram," and a work by the electrician Bernhard Dordahl; Knut Dahl's "Dyr og Vildmand" (account of author's explorations in South Africa and Australia); and J. Raabe's "trustworthy sketches from Germany, Austria, and Italy." Ethnography is supplied in U. Sverdrup's "Extracts from the History of Iroquois Indians." There are two interesting and scholarly works in philology—Amund B. Larsen's "Oversigt over de norske Bygdemaal" and "Dansk-norsken's Lyd-Historie," by Alf Torp and Hjalmar Falk. Church history is furnished in A. C. Bang's "Den norske Kirkes Geistlighed i Reformationsaarhundredet (1536-1600)"; and theological controversy in O. C. Breda's Unitarian manifesto "Ny Grund" and Axel Andersen's "attack on the recognized theory" of "Nadveren." "Reminiscences from the Life of L. Wolff" (a talented actress) and Dietrichson's "Fra svunden Tid" are noteworthy memoirs. Norwegian literature in various phases is dealt with in Carl Nærup's useful "Skildringer og Stemninger fra den yngre Litteratur"; Arne Løchen's scholarly, exhaustive account of the poet J. S. Welhaven; F. Jónsson's "Den oldnorske og oldislandske Litteraturs Historie" (3 vols., 1893-97); and J. B. Halvorsen's "Norsk Forfatter-Lexikon" (in course of publication). Axel Arstall's essay "Between the Lines" is "well-planned, but ill-written."

In prose fiction there is nothing of high importance, but a number of works deserve mention: Peter Egge's historical novel "Jomfru Nelly Maartens"; T. P. Krag's lyrical "Ulf Ran" and "Tusmørke"; T. Madsen's sad "Under Kundskabens Træ"; H. S. Sæther's contemplative "Oves Breve"; J. Tvedt's "Hamskifte" (good sketch of peasant life); Ivar Sæter's short story "Ideelle Krav" (psychological); K. Viller's detective story "Karl Monk's Oplevelser"; and P. Rosenkrantz Johnsen's "Dobbelt-Konsulen" (society novel). Johan Bojer's "Paa Kirkevei" (fairy tales) and the charming stories for small boys by Hans Aanrud and Bernt Lie were highly appreciated. Poetry to be mentioned is contained in Vilhelm Krag's volume of pretty poems, and J. H. Bull's very popular patriotic songs. M. J. Monrad's "Efterladte Digte" have appeared. In dramatic literature there are noted, as of distinct merit and individuality, Jonas Lie's masterly fairy play "Lindelin" (his first dramatic success); K. Hamsun's "Aftenrøde" (marked, like the two first parts of the trilogy, by "biting censure on feminine love-making"); Peter Egge's touching little play "Godfather's Gift" (a "Dickens-like portrayal of

back-street life"; great success); and "Johanne," a three-act play with which Björn Björnson (son of Björnsterne) made his *début* (interesting; not very original)—all four very successful; and Sigbjörn Obstfelder's "Drops of Red" and Hans Kinck's restless drama "Between the Processions" (a "cutting attack on the new woman in her professed dislike to the male sex"), both somewhat puzzling in their eccentric and entire variation from traditional dramatic effects, but showing true artistic instinct as well as blind ardor.

Poland.—Various phases of Polish history are illustrated in Sulima's "History of the Year 1863" (the Polish insurrection); "Memoirs of the Years 1822-1883," by Z. Felinski, former Archbishop of Warsaw; K. Potkowski's "Cracow before the Pils" (a "cutting attack on the new woman in her professed dislike to the male sex"); F. Koneczny's "History of Silesia"; A. Karbowski's "History of Education and School Life in Poland"; and K. Pulaski's "Historical Sketches and Researches." Much literary history has seen the light, notably: H. Biegeleisen's "Illustrated History of Polish Literature" (Vol. I); P. Chmielewski's "Our dramatic Literature" (especially of the nineteenth century); M. Zdziechowski's "Byron and his Age" (deals with his influence on the Slavonic world); I. Matuszewski's "Our Men and the Foreigners" ("literary and æsthetic studies"); J. Kallenbach's psychological and æsthetic study of the works of "Adam Mickiewicz" (whose centenary was celebrated with great enthusiasm, occasioning the publication of numerous books, music, and pictures); and biographies of "Jan Koehanowski," a poet of the sixteenth century, by P. Pleniewicz (sympathetic; thorough), and of H. Kajsiewicz and H. Sieniewicz, by S. Tarnowski. J. Kotarbinski portrays "Unhealthy Love" in literature and life "with artistic moderation and great knowledge of the subject."

The list of novels and short stories includes "The Way to Luck" (rather sketchy), by T. T. Jez (called the Nestor of Polish novelists); K. P. Tetmajer's "The Angel of Death" (historical novel; light, humorous); A. Krechowicki's "Rust"; M. Jasienczyk's "In Wielgie" (realism; artistic power); "A False Partridge," by the late Klemens Junosza; K. Laskowski's "Kulturträger"; A. Gruszecki's "Rugiwojsey" (satirical); M. Pawlikowski's "Baczma" (philosophical; fatalism; keen observation); A. Dygasinski's "Village Dramas," "The Broken Life," and "Life's Misery" (effective pictures of the lower classes); Fr. Rawita's "Zdomu niewoli"; a group of works by women—Mme. E. Orzeszko's "The Sparks"; three collections of stories by M. Konopnicka ("deep psychological truth; highly artistic method"); Deotyma's "Lady of the Window" ("on unusual lines, yet a success"); Mme. G. Zapolska's "The Leader of the Dance"; "The Jewel," by Mme. M. Rodziewicz (exaggerated idealism)—and two successful *débuts*, that of W. Sieroszewski (Sirkó), with five tales of Siberian life, and that of J. Weyssenhoff, with his satirical "The Life and Thoughts of Sigismund Podfilipski." In poetry, Vol. III of K. Przerwa-Tetmajer's "Poems" holds first rank. The dramatic successes of the year were "Malka Schwarzenkopf" (a drama of Jewish life) and "He," by Mme. G. Zapolska. Other plays to be noted are K. Gliński's tragedy "Almansor" (has fine episodes, but "lacks psychological motive"); K. Zalewski's drama "The Chains" (delicate problem of the repentant Magdalene not successfully solved); "The Deceit," by M. Szukiewicz; and M. Dzieduszycki's "The Mammoths." The "Dramas and Comedies" of Adam Belcikowski (five volumes) show poetical inspiration and powerful character drawing. An American critic notes the fact that "a renaissance of letters and of the national spirit has been in progress for the last quarter of a century in the

dislocated members of the quondam Polish kingdom, which gives fair promise soon to rival, if not to surpass, its golden age in the sixteenth century."

Portugal.—The quadricentenary of the discovery of the water way to India occasioned the important "Religiões da Lusitania na Parte que principalmente se refere a Portugal" (1897), by J. Leite de Vasconcellos, and "Chronica dos Reis de Bisnaga. Manuscripto inedito do Seculo XVI" (1897) and "Textos em Aljama portuguesa. Documentos para a Historia do Dominio português em Safim, extrahidos dos Originaes da Torre do Tombo" (1897), both interesting, edited by the Orientalist David Lopes. Other new books are Rocha Peixoto's "A Terra portugueza (Chronicas scientificas)" (1897); articles published in the periodical "Primeiro do Janeiro"; Martinho Brederode's "O Pó da Estrada" (1898); and "P. de Andrade Caminha. Poesias ineditas, publicadas por J. Priebsch" (Halle, 1898)—Caminha was one of the classic lyrists of the sixteenth century in Portugal. "O Instituto. Revista scientifica y literaria" is published monthly at Coimbra.

Russia.—Historical works to be noted are Venetinov's "The Russians in Holland: The Great Embassy, 1697-'8," compiled from Russian and Dutch sources; V. Aleksandrenko's "Russian Diplomatic Agents in London in the Eighteenth Century"; E. Karnovich's "Russian Officials in Past and Present Times" ("incomplete but interesting"); and A. Volinski's essays on the Italian Renaissance, published in the "Northern Messenger." H. Hulevich's timely "War and National Economy" is not entirely trustworthy, yet deserves the attention of every lover of peace. S. Vengerof has issued Vol. V of the important "Critico-Biographical Dictionary of Russian Writers and Scholars" and Vol. I of "Russian Poetry" (a sort of anthology, with important biographical and critical notes). Leo Tolstoi's "What is Art?" takes a utilitarian standpoint; "the purpose of Christian art is to realize the brotherly union of man." Criticism varies from the statement that it is one of his "most searching and enlightened works of criticism" to its characterization as "at times infantile, showing his weakness as a thinker."

In *belles-lettres*, too, not much is worthy of attention: A. Chekhov's "Tales" (including "Among Peasants," delineating village life, and "My Life," depicting provincial life, showing the author's usual skill, observation, and realism); "The Mirrors" (stories and poems), by Zenaida Gippius, who affects elegance and symbolism, and has not altogether redeemed the promise of her "New People," and "Shadows" (stories and poetry), by Th. Sologub, who shows similar delicate qualities; Vol. II of Mme. Myrrha Likhvitskaya's poems (conspicuously melodious verse, devoted almost exclusively to the subjects love and death); and the story "Malva" (published in the "Northern Messenger"), by M. Gorski, a new writer, sprung from the people. A third edition of H. Zlatovratski's works and a second edition of "Poems of the Years 1878-'87" (full of a peculiarly Russian, melancholy tenderness), by the able though little known S. Andreevski, have been issued. The last-named volume includes translations of poems by E. A. Poe, who has many admirers here. In fact, the recent translation of Ibsen and retranslation of Byron, Shelley, Tennyson, and Burns serve to show that foreign poets, especially English, German, and Scandinavian, are popular in Russia. Some critics build high hopes on the influence which the study of such models may have on Russian literature. For it continues to be impressed on us that literature in this country is in a condition of decay and stagnation; the little talent that does exist is not vigorous enough to bring life into this

barrenness. Besides, literary development, we are told, is hampered by criticism, which is guided by principles really foreign to its field, judging writers by their relation to social questions instead of by æsthetic laws.

Spain.—The inferiority of Spanish historians is due not to lack of research, says a Spanish writer, but to "poverty in the development of their subject, and limitation in their points of view," producing bare narrative and unimportant erudite detail. "The Spanish historical school appears indifferent to ideas, and in most cases is quite unaffected by any national feeling of a reasoned character as distinguished from superficial and vulgar chauvinism." Noteworthy historical publications are Julian Ribera's "Los Orígenes del Justicia de Aragón" (an obscure and debated point; author finds the "origins" in Mohammedan institutions); Danvila's valuable and useful "Historia crítica y documentada de las Comunidades de Castilla"; "Relaciones geográficas de Indias (four volumes, 1881, '85, '97), edited by S. Jiménez de la Espada (important; reports by navigators and officials in America during the period of discovery); Bethencourt's "Historia general y heráldica de la Monarquía Española"; Uha-gon's excellent "Órdenes militares"; G. Fournier's "Ensayo de Geografía histórica de España," Vol. II, incomplete; "Lusitania Celtibérica," by Arenas López (endeavors to prove existence of this district); Murguía's biography of "D. Diego Gelmirez"; Villalba's "Ruiz de Padrón y su Tiempo," and "Aventuras y Desventuras de un Soldado viejo," by Gen. Nogues, both illustrating political history in this century; Rafael Altamira y Crevea's "De Historia y Arte" (critical studies; "solid erudition"); and Guichot's "Historia del Ayuntamiento de Sevilla" (diligent investigation). Font's "Determinació de les Comarques naturals é historíques de Catalunya" (in "Joch florals" for 1897) expresses the local feeling in Catalonia—"the one current of sentiment sufficiently remarkable to be noted"—as do also Carreras y Candi's "Hegemonia de Barcelona en Cataluña durante el Siglo XV"; and A. Bori y Fontestà's "Historia de Catalunya." The Basques, too, are giving increased attention to the history of their country; their "Biblioteca Bascongada" includes "Los Isunzas de Vitoria," by Apraiz, Arturo Campión's "Euskariana. 2ª Serie: Fantasia y Realidad," Olascoaga's "El Arbol de Guernica," "Fueros, Privilegios, Franquezas y Libertades del Señorío de Vizcaya," Mario Arozena's "La Derrota de Horacio Nelson (25 de Julio de 1797)" recalls the literary movement in the Canaries. Interesting in the light of recent events are José Muller y Tejeiro's "Combates y Capitulación de Santiago de Cuba"; R. Cappa's "Estudios críticos acerca de la Dominación española en América" (Vol. XXVI); Jesuit Francisco Foradada's "La Soberanía de España en Filipinas"; and M. Sastrón's "La Insurrección en Filipinas." Archaeological works worth noting: El Monasterio de San Pablo de Valladolid" by Paz, and Tarín's "La Real Cartuja de Miraflores" and "La Cartuja de Porta Caeli." Dilettanteism produces many useless publications in this field. Ecclesiastical history: Font's "Episcopologio Ampurità"; Garay's interesting "El Comunismo de las Misiones de la Compañía de Jesús en el Paraguay"; and Lorenzo Moret y Remisa's "Del Cristianismo en España como Elemento de la Nacionalidad," a tribute to Catholicism. A. M. Fabié's "Ensayo histórico de la Legislación española en sus Estados de Ultramar" fills "a conspicuous gap." The Conde de Cedillo and Sanchez Ocaña write on "Contribuciones de León y Castilla en la Edad Media" (not exhaustive). Sociology attracts few; only Sales y Ferré's "Tratado de Sociología" is noted. Calabuig writes of "La Casa enseñanza" of Valencia.

Giner de los Ríos and Calderon present an important "Filosofía del Derecho." Pedro Dorado studies "El Reformatorio de Elmira." Ganivet's "La Conquista del Reino de Maya por el último Conquistador español Pío Cid," and "Idearium español" are "a species of philosophy of the history of Spain and an ideal programme of our political future," expressing "the feeling prevailing among our thoughtful young men." Sanz y Escartín's "Federico Nietzsche y el Anarquismo intelectual" is not profound, but good. Art literature: Barón de Alcala's "Diccionario de Artistas Valencianos"; Leguina's curious "Maestros Espaderos"; and F. Pedrell's "Diccionario biográfico y bibliográfico de Músicos y Escritores de Música españoles, portugueses é hispano-americanos. . . ." Literary criticism: Fernandez Guerra's introduction (edited by Menéndez y Pelayo) to the "Obras completas de Don Francisco de Quevedo y Villegas," issued by the Society of Bibliófilos Andaluces; monographs by Cotarelo on Yriarte, Lomba on P. Arolas (sound judgment; great erudition), and Catalina y García on Fr. José de Siguenza; M. Aramburo y Machado's "Personalidad literaria de Doña Gertrudis Gómez de Avellaneda"; and O'Callaghan's "Códices de la Catedral de Tortosa." Linguistic studies are "Gramática del Poema del Cid," by Araujo Gómez; "Apuntes gramaticales sobre el Romance gallego de la Crónica Troyana," by Rodríguez; Mugica's "Maraña del Diccionario de la Academia"; and Ximenez de Embun's "La Lengua española en el Siglo de Oro de su Literatura." Gener's "Amigos y Maestros" and "Ixart," by Sardá and Musté, are "critical works."

While there is an increase in historical works, the total number of books published is less, especially in *belles-lettres*. The most notable novel is "El Abuelo" (a "modern King Lear," a "semi-dramatic novel"), by B. Pérez Galdós, who has begun a third series of "Episodios nacionales" with "Zumalacárregui" (interesting; one of his best). Other prose fiction includes Juan Valera's "Á vueta Pluma" and "De varios Colores" (stories and sketches: not very important); Emilia Pardo Bazán's "El Tesoro de Gastón," "El Saludo de las Brujas," and "Cuentos de Amor"; Arturo Campión's "Blancos y Negros (Guerra en la Paz)" ("sober and vigorous realism"); Juan Ochoa "Un Alma de Dios" (graceful); Pascual Queral's didactic "La Ley del Embudo, a political satire against *caciquismo* (bossism); "El Hagar de la Viñuela," by Arturo Reyes (picture of Andalusian customs). "In general, there is observed in the new novelists . . . a better unfolding of the descriptive faculties than of the art of composition." Poetical works listed are Eusebio Blasco's "Corazonadas"; Herrero's "Poetas del Amor" (translations from Kalidasa and Heine); Vaamonde's "Dialogos"; Gil's "La Caja de Música"; "Pasaxeirras. Colección de Poesías gallegas," by Jesús Rodríguez López, (well written; knowledge of native land); and "Poesía" ("Biblioteca Bascongada") by Juan Arzadun, (noteworthy, despite defects). There is little new dramatic literature: Guimera's "Tierra baja"; the late Feliu y Codina's "Lo Nuvi"; Echegaray's "La Duda" (failure); and a translation and arrangement of "Antony and Cleopatra," produced by Selles. A writer in "España moderna" deplors the decadence which "touches the limits of inanité." Only that which is considered useful is read, and the preponderating "industrial literature" includes schoolbooks, devotional literature, and one-act farces! Examples of these one-act *zarzuelas* (written in the language of the *chulos*, with its vulgar jokes and *double-entendres*) are "La Revoltosa," by Fernández Shaw and López Silva; F. Shaw's "Los Hijos del Batallón"; "La

Guardia Amarilla," by Lucio y Arniches; and Romea's "El Señor Joaquín." Attention is called to the "purely literary regionalism," the cultivation of the regional dialects or languages and literatures, of which this and former reports have given some inkling. Some books by Catalonians are noted (their poets "are no doubt superior to those of the rest of Spain," says an enthusiast): Morera's "Poesías"; "Alades," by Guanyabens; Verdaguer's "Santa Eulalia"; "Oracions" ("hymns in prose"); "Impresiones de Arte," and "L'Alegria que passa: Quadro líric en un Acte," by Santiago Rusiñol; "Prosa," by Enrique de Fuentes (a "newly arrived"; naturalism); "Natura: Poesías," by J. Massó y Torrents (a true artist); "Narciso Oller's "El Escanyaña-Pobres: Versión castellana de R. Altamira"; "Eseritos de José Solé y Miquel"; Adrian Gual's drama "Silenci" (promise rather than achievement); and "Lo Nuvi," drama by Feliú y Codina (important). The "modern" Catalonians, who are giving most life to the literature of Barcelona, have their review—"Catalonia: Revista literaria" (interesting and fine).

Sweden.—As shown in 1897, the twenty-fifth anniversary of King Oscar Fredrik II (whose "Vers og Prosa, 1872-'97" has appeared) naturally occasioned the publication of new works on his reign; F. U. Wrangel's "Redogörelse för Konung Oscar II.'s 25 årige Regeringsjubileum" being added this year. There has been a remarkable revival of national feeling in all departments of literature. Important historical works have seen the light: H. Hildebrand's scholarly, comprehensive description of mediæval Sweden; the correspondence between Järta and Wirsén in 1814, edited by O. Alin (remarkable; throws much light on the union between Sweden and Norway); and a new, revised edition of Carl Gustaf Malmström's exhaustive and erudite "Sveriges politiska Historia från Konung Karl XII.'s Död till Statsomvälfningen, 1772." Other works noted are "Historiska Studier. Festskrift tillägnad C. G. Malmström, den 2. November 1897"; S. Jacobsen's "Den Nordiske Krigs Krønike utgivet af M. Weibull"; A. E. Norden-skiöld's "Periplus. Utkast till Sjökartens och Sjöböckernas äldsta Historia"; and W. Coucheron Aamot's "Kriget mellan Japan och Kinä jämte kortfattad Skildring af Östra Asiens Historia." H. Berg offers "Skizzer från en Studieresa i Tyskland, Belgien och Danmark." E. Wrangel's "Sveriges litterära Förbindelser med Holland särdeles under 1600-talet." H. A. Ring's "Teaterns Historia från äldsta till nyaste Tid," and N. Erdmann's "Molière" are new productions in literary criticism.

The national movement referred to seems to have incited a revival of the historical romance, as witness Elof Tegner's "Svenska Bilder från Sexton Hundratalet" (masterly pictures of domestic life of Swedish magnates); Oscar Leverin's "Gustaf III.'s Dagar" (elegant, charming sketches; combination of learning and fancy); H. Molander's "En Lyckoriddare" (introducing Lars Wivallius, a Swedish poet and adventurer of the seventeenth century); and Verner von Heidenstam's "Karolinerna" ("a masterpiece"; picturesque; portrait of Charles XII historically untrue). Further titles in the list of prose fiction are Gustaf af Geijerstam's "Det yttersta Skäret" (fresh picture of life of Swedish fisher-folk); Per Hallström's "Vären. En Roman från 1890—Talet" and a new collection of stories; Selma Lagerlöf's "Antekrists Mirakler" (a *chef-d'œuvre*, "absolutely Sicilian in tone and expression"); Hilma Angerod-Strandberg's "Den nya Världen" (gloomy picture of sufferings of emigrants to America), and "På Prärien"; and A. Strindberg's "Inferno" and "Legend" ("diaries of a sick soul," marking the last stage of a long-forescen decadence). Note-

worthy poetry is found in C. D. af Wirsén's "Under Furur och Cypresser" (a triumph of idealistic principles); "Dikter. Femte Samlingen," by Carl Snoilsky, who shows "a transparent lucidity of form and a true Swedish virility"; and "Nytt och Gammalt" ("passionate, melodious defiance against sour hypocrisy") and "Flicker och Stänker" (erotics), by Gustaf Fröding, a "philosophizing vagabond prattler" and "Sweden's most popular poet."

Switzerland.—Purely literary works, as usual, are entered under Germany and France. To the historical works noted in 1893 and 1895 are added: "Bibliographie der schweizerischen Landeskunde. Hrsg. von der Centralkommission für schweizerische Landeskunde"; "Katalog der Handschriften zur Schweizergeschichte der Stadtbibliothek Bern" (1896); "Urkundenbuch der Stadt und Landschaft Zürich. Bearb. von J. Escher und P. Schweizer" (Vol. IV, 1896); "Urkundenbuch der Stadt Basel" (Vol. III, 1897); "Basler Chroniken. Hrsg. von der historischen und antiquarischen Gesellschaft in Basel" (Vol. V, 1895); "Collectanea Friburgensia. Commentationes academice universitatis Friburgensis Helvetiorum"; D. Schilling's "Die Berner Chronik 1468-84. Im Auftrage des historischen Vereins des Kantons Bern hrsg. von G. Tobler" (Vol. I, 1898); Ant. Karl Fischer's "Die Hunnen im schweizerischen Erfschthale und ihre Nachkommen bis auf die heutige Zeit" (1896; unsuccessful attempt to prove that the worthy Erfschthaler are true descendants of the Huns and Magyars); and G. Wunderli's "Huldrych Zwingli und die Reformation in Zürich" (1897).

LITERATURE, LATIN-AMERICAN, IN

1898. This record is again, of necessity, fragmentary, and can simply give a hint of the literary activity of our Spanish- and Portuguese-speaking American brethren. Besides local periodicals, the Spanish "Revista critica de Historia y Literatura españolas, portuguesas é hispano-americanas," gives interesting and useful information in this field.

Argentine Republic.—Eudoro y Gabriel Carrasco's "Anales de la Ciudad del Rosario de Santa Fé, con Datos generales sobre Historia Argentina 1527-1865"; Lucio V. Mansilla's "Rozas: Ensayo histórico-psicológico" (Paris, 1898; interesting account of the dictator); Juan Silvano Godoy's "Mi Misión al Rio de Janeiro"; Francisco P. Moreno's "Reconocimiento de la Región andina de la República Argentina"; Paul Groussac's "Del Plata al Niágara" (intelligent impressions of North and South American affairs; "Señor Groussac—not a frequent matter in the Spanish-American republics—writes a limpid style, without the Gallicisms which so deface the works of others"); "Los Querandies. Breve Contribución al Estudio de la Etnografía argentina," by Félix E. Oates; Samuel A. Lafone Quevedo's "Lenguas argentinas. Idioma abipón"; S. Gesell's "Die Anpassung des Geldes und seiner Verwaltung an die Bedürfnisse des modernen Verkehrs"; "Joyas poéticas americanas, Colección de Poesías escogidas, originales de Autores nacidos en América, Selección hecha por Carlos Romagosa" (interesting but poorly arranged; trilingual, covering North America, Brazil, and Spanish America).

Brazil.—The "Revista do Archivo Publico Mineiro" constitutes a valuable repository for the history of Minas Geraes. José Verissimo, a Brazilian critic, writing of José Pedro Xavier da Veiga's "Ephemerides Mineiras (1664-1897)," says: "The existence in our scanty historical literature of so many collections of ephemerides seems to prove our predilection for this process of studying and writing history. He mentions also Teixeira de Mello's "Ephemerides nacionaes," Barão do Rio Branco's "Ephemerides brazileiras," and Garcez

Palha's "Ephemerides navaes," and points out the valuelessness and dryness of history studied by dates alone. Scientific research is exemplified in "Palma Mattogrossenses novæ vel minus cognitæ," by J. Barbosa Rodrigues; the "Revista" of the Academia Careense; the "Boletín" (interesting and useful) of the Comissão geographica e geologica de S. Paulo; and the "Revista do Museu Paulista." Alfredo de Carvalho has published "A Imprensa pernambucana (1706-1898)." A well-made "Catalogo alphabetico" of the "Bibliotheca do Senado Federal da Republica dos Estados Unidos do Brazil" has been issued. José Fialho Dutra's "Apontamentos sobre Composição portugueza" (grammar and rhetoric; an accurate and intelligent study). "Theatro Brasileiro Martins Penna (comedias) com um Estudo critico sobre o Theatro no Rio de Janeiro o sobre o Autor por Mello Moraes Filho e Sylvio Romero" is a new edition of Penna's comedies, Filho's notice of the Brazilian drama is inadequate.

Chili.—J. J. Medina offers a "Bibliografía española de las Islas Filipinas (1523-1810)" and Vol. XVI of "Colección de Documentos inéditos para la Historia de Chile." Much interesting material is published in the "Anales de la Universidad."

Guatemala.—Ramon A. Salazar's "Historia del Desenvolvimiento intelectual de Guatemala" (good style, erudition, sound criticism; among the best produced in this country).

Mexico.—F. Ramos y Duarte's "Critica del Lenguaje usado por Escritores, Publicistas y Oradores del País"; "Biblioteca de Autores Mexicanos"—Vol. XI ("Obras del Lic. D. J. López Portillo y Rojas," Vol. I) and Vol. XII ("Obras de D. J. García Icazbalceta," Vol. VI).

Peru.—J. Capelo's "La Via central del Perú" and R. P. F. Gabriel Sala's "La Montaña central del Perú. Apuntes de Viaje."

Uruguay.—D. Granada's "Reseña histórico-descriptivo de antiguas y modernas Supersticiones del Río de la Plata."

Venezuela.—Julio Calcaño's "El Castellano en Venezuela. Estudio critico" and Alberto Membrillo's "Hondurismos. Vocabulario de los Provincialismos de Honduras" (second edition, 1897) are interesting contributions to the literature of provincialisms.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; and 1,118,587 in 1890. Capitol, Baton Rouge.

Government.—The following were the State officers in 1898: Governor, Murphy J. Foster; Lieutenant-Governor, Robert H. Snyder; Secretary of State, John T. Michel; Treasurer, Alexander V. Fournet; Auditor, W. W. Heard; Attorney-General, M. J. Cunningham; Superintendent of Education, Joseph V. Calhoun; Adjutant General, Allen Jumel; Commissioner of Agriculture and Immigration, Jordan G. Lee; Commissioner of Insurance, J. J. McCann; Railroad Commission (organized in December), C. L. DeFuentes, R. N. Sims, and W. L. Foster, with C. J. O'Shaughnessy as secretary; Bank Examiner, Fred. G. Freret (appointed in December); Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Lynn B. Watkins, Joseph A. Breaux, and Henry C. Miller; Clerk, T. McC. Hyman. All are Democrats.

Finances.—From reports of the Auditor and the Treasurer, rendered to the Legislature in May, it is learned that assessments steadily increased from 1880 to 1897. In 1890 the total assessments for the State amounted to \$234,350,791.60; in 1897 they

amounted to \$259,798,212.75. The report shows an increase of more than \$7,000,000 in the assessment of 1897 over that of 1896. This increase in the valuation of property is confined almost entirely to the country.

Among the unusual drafts made upon the treasury were: For the constitutional convention, \$80,000; for drought sufferers, \$88,600; for closing the crevasse in the Pontchartrain levee district, \$3,475.

The estimated amount available for appropriations, out of the general fund of 1898 from the 1-mill tax, licenses, the penitentiary lease, and other sources, was \$768,000.

The Legislature of 1896 appropriated \$329,060.83 for the first six months of 1898, leaving for the remaining part of the year \$438,939.17.

Within the biennial period the Board of Liquidation retired \$206,700 4-per-cent. bonds at a cost of \$199,825.73. The total amount of indebtedness retired by the State since 1892 is as follows: Four-per-cent. bonds, \$918,700, costing \$890,557.30; warrants, \$315,555.26, at a cost of \$189,333.13; coupons 1 to 11, \$343,589.28, costing \$158,566.45; baby bonds, \$363,210, costing \$150,450.71, making a total retired indebtedness of \$1,941,054.54, at a cost of \$1,388,907.59.

Of the direct tax fund of \$314,500.84 returned to the State, the sum remaining after all claims were settled was \$73,749.64, of which \$73,600 was given to the drought sufferers.

Education.—Since the establishment of the State Normal College at Natchitoches in 1885, the number of its students has increased from 59 to 441, and of this number 317 are in the normal department proper. It has graduated 235 students, most of whom are now teachers in the schools of the State. The graduating class of 1896 numbered 31, and that of 1898 had 55 members. The monthly cost to the State for each student is \$4.60. The buildings have been improved through an appropriation by the Legislature of 1896.

The State University at Baton Rouge has had a successful session; the enrollment for the spring term was 249, and at the previous session 230, notwithstanding the fact that the sub-freshmen course has been eliminated.

The Audubon Sugar School has been transferred to the college. Both colonels and many of the commissioned officers of the two volunteer regiments recently mustered into the service of the United States from Louisiana are representatives of this institution.

The State Industrial College at Ruston was organized in 1896, and began with 202 students; the number has risen to 300. Its curriculum includes the industrial arts and sciences.

The Southern University, the State institution for colored students, has had an attendance rising during the two years from 368 to 443. The State has paid a little less than half the cost of its maintenance, the National Government the remainder.

The enrollment in the public schools for 1897 showed an increase over that for 1896 of 11,324; and the total increase from 1890 was 65,022. The number of schools in 1897 was 3,053, and the number of teachers 3,854.

Charities and Corrections.—The enrollment at the Institute for the Deaf and Dumb at the last report in May, was 106, with an average of 93.

The Institute for the Blind had 55 pupils. A new building has been erected for the boys at a cost of \$11,000. Music is taught, besides various industries; the manufacture of brooms is mentioned as the most profitable.

The number of inmates of the Confederate Soldiers' Home has increased 50 per cent.; there are now 138. The constitution recognizes the Home as

a State institution, and provides that it shall be maintained by the State by an annual appropriation, which is to be based upon the number of inmates sheltered in the Home on the first day of April of the year in which the appropriation is made, of \$130 per capita, to be used for maintenance and clothing.

At the Lepers' Home, established in 1892 on a leased tract of 200 acres known as Indian Camp Plantation, in Iberville Parish, 21 males and 14 females have been cared for; of these, 1 escaped and 10 have died.

The Insane Asylum at Jackson provides for 1,400 inmates. Improvements have been made in the heating and cooking facilities. An ice plant with capacity of two tons daily, and two cold-storage rooms have been erected. An additional story has been built on both the male and female colored departments, and a new building, 152 feet long by 34 feet in width, has been completed at a cost of \$38,500.

Since the buildings of the Charity Hospital at New Orleans were erected in 1832 there have been 507,197 admissions, 424,521 discharges, and 79,240 deaths. There were during the year 8,149 bed patients, with a daily average of 680, and the attendance in the outdoor clinics was 20,895 patients. There were 1,050 deaths in the year, or a death rate of 12 per cent. This does not include those at the isolation hospital, where 216 patients were treated. New buildings and equipments have been added from time to time. Ground was broken in the spring for a children's hospital, for which Mrs. Richard Milliken gave \$75,000.

The Charity Hospital at Shreveport is shown by the report to have had an average monthly increase of patients of 63, and a total of 6,631 patients received in the hospital, with 213 deaths for the two years past.

A very modern four-room brick aseptic-operation building has been erected and furnished with the most improved equipments.

There were more than 1,100 convicts in the penitentiary at the time of report. Of these an average slightly above 50 are kept within the walls. The average number carried upon the books of the prison is from 1,050 to 1,150. The system of reduced time service for good behavior has worked well, 301 prisoners having been released in the two years under its provisions.

Militia.—The total number enlisted in the National Guard increased from 1,170 in 1891 to 3,048 in 1897. The number given in April, 1898, was 2,607, exclusive of the naval militia. The quota called for in April by the Government was 1,940. The Adjutant General, in his report, says: "The annual appropriation made by the last general assembly of \$15,000 for military purposes and \$6,000 for militia in the field has met very satisfactorily the wants of the State National Guard under the present strength."

Naval Dry Dock.—Steps have been taken toward the construction of a dry dock at Algiers, in front of the naval reservation on the Mississippi. By act of Congress the limit of the cost of the entire work is \$850,000.

Public Works.—Reports of the Board of Control and superintendent of the new basin canal and shell-road show that the canal has been dredged, the shell-road rebuilt, new buildings have been erected, and old ones improved.

The work on the levees amounted to 15,541,188 cubic yards in 1896-'98, and the cost was \$2,115,341.90, of which the districts paid \$1,001,785.75, the State \$297,396.77, and the United States \$816,159.88. From 1892 to 1898 \$8,909,199.53 has been expended upon them.

State Lands.—Under a legislative act of 1896, disabled Confederate veterans or their widows were to receive, under certain conditions, each a quarter section of State land; 230 patents covering 34,761 acres have been issued.

Agriculture and Immigration.—These departments are under one commissioner appointed by the Governor. According to his report, 10,000 immigrants came into the State in 1896-'98, and 250,000 acres of land were sold at a cost of more than \$1,000,000. Farmers' institutes are held under the charge of the department. The reports give details regarding truck gardening and its development. Embracing territory about New Orleans, Shreveport, Alexandria, Monroe, Lake Charles, Hammond, Wilson, and other territory adjacent to the Illinois Central Railroad, the Yazoo and Mississippi Valley Railroad, the Houston, Central Arkansas and Northern, and the Kansas City, Pittsburg and Gulf Railroads, about 5,000 additional acres have been put into truck this year. In 1897, from Ponchatoula, Hammond, Independence, and Amite City there was shipped \$380,000 worth of truck, while for 1898, up to May, \$475,000 worth of products were shipped, showing an increase for 1898 of \$95,000. The report also shows an increased acreage devoted to grain, hay, and forage crops, and to pasturage; a more universal practice of raising adequate supplies of meat and feedstuffs, a marked disposition to raise a better class of farm animals, and a more general use of improved agricultural implements.

The cotton, sugar, and rice crops were all unusually large. The cotton crop is given as 740,000 bales. The number of bales handled at the wharves of New Orleans was 2,815,599. Of wheat, 16,908,207 bushels were moved, and of corn, 23,109,296 bushels.

Relief for Sufferers from Drought.—The sufferers from the drought that prevailed in 13 parishes for more than six months, beginning at the middle of April, 1896, have been relieved by the State and contributions from railroads and other corporations and private subscription, without aid from other States. The commercial fund distributed amounted to \$216,331.47, and the State fund to \$96,618.92.

Quarantine Regulations.—It is alleged that the State has suffered from severe and unnecessary quarantine regulations. The Governor of Texas has issued proclamations for two successive years closing the railroads entering that State from Louisiana and Mississippi. The quarantine was raised Nov. 1.

A new State Board of Health was appointed in January, with Dr. Edmond Souchon as president.

Mob Violence.—A negro who had confessed to an assault on a woman, whom he had left for dead, was burned to death at Doyline, about 18 miles from Shreveport, in June.

Another lynching took place Dec. 6, when two negroes, accused of the murder of Larry Vanee, in Bossier, were tried and condemned by a committee of citizens and were hanged immediately. One had confessed the crime and implicated the other, who maintained his innocence to the last.

The New Constitution.—The constitutional convention met Feb. 8 and framed a new Constitution, which was adopted May 12, and went into effect without being submitted to a vote of the people. The Governor said in his message that the necessity for adjustment of the suffrage, the demand for additional and more generous provision for public education, and the importance of the reorganization of the judiciary system were mainly responsible for the calling of the convention, and the more important changes were in these departments.

The qualifications for suffrage as provided are:

Ability to read and write in English or in the elector's native language; or the ownership of property assessed at \$300 or more. But no citizen who was a voter on Jan. 1, 1867, or at any date prior thereto under the Constitution or statutes of any State of the United States wherein he then resided, nor his son, nor his grandson, nor any naturalized citizen naturalized prior to Jan. 1, 1898, who has been a resident of the State for five years, can be deprived of his right to vote by reason of his failure to possess the educational or property qualification prescribed. The privilege of registration by those taking advantage of this provision expired Sept. 1, 1898. It is also required that the voter shall have paid his poll tax for two years prior to the election.

By the provisions of the Constitution of 1879, actual residence in the State for only one year, six months in the parish, and thirty days in the ward or precinct, prior to election, was required. Under the new Constitution these terms are extended to two years in the State, one year in the parish, and six months in the precinct. Under the former Constitution any unnaturalized foreigner, male, and twenty-one years of age, after a year's residence in the State could vote on a mere declaration that he intended to become a citizen of the United States. Under the new Constitution no man of foreign birth is admitted to suffrage until he has become a naturalized citizen of the United States. Separate registration lists are to be kept for whites and blacks.

Woman taxpayers may vote without registration on questions submitted to taxpayers as such. None but registered voters may vote in any primary or convention. The Legislature shall make laws for registration and to secure fairness in primaries and conventions, and for secret official ballots. Parochial (county) elections must be held on the same day as general elections, except in New Orleans. Of the suffrage provisions the Governor said: "The white supremacy for which we have so long struggled at the cost of so much precious blood and treasure is now crystallized into the Constitution as a fundamental part and parcel of that organic instrument, and that, too, by no subterfuge or evasions. With this great principle thus firmly imbedded in the Constitution and honestly enforced, there need be no longer any fear as to the honesty and purity of our future elections."

The old Constitution fixed the appropriations for public schools. The present one gives them 14 mills out of the general levy of 6 mills, which can be increased by the General Assembly, but not diminished. The interest on the school fund, the seminary fund, and the Agricultural and Mechanical College fund, in all between \$60,000 and \$70,000 annually, instead of being paid, as formerly, out of the general school fund, is to be paid out of the interest tax fund, thus increasing by so much the amount available for the common schools. There is also provided, under certain limitations, a tax not exceeding 3 per cent. upon all inheritances, legacies, and donations above \$10,000 in amount or value, the proceeds of which shall be likewise devoted to the public school fund. The poll tax is appropriated to the same fund. There are to be separate schools for whites and blacks; the law permitting women to hold school offices is repealed. In New Orleans pupils whose parents are unable to furnish them with text-books are to be supplied with them from the public fund. The limit of taxation is 6 mills; but "for giving additional support to public schools and for the purpose of erecting and constructing public schoolhouses, any parish, municipal corporation, ward, or school district may levy a special tax in excess of this, whenever the rate of such increase and the number of years it is to be

levied, and the purpose or purposes for which the tax is intended shall have been submitted to a vote of the local property taxpayers, and a majority of the same in numbers, and in value, voting at such election, shall have voted therefor."

The provisions for taxation include the creation of a State Board of Appraisers to assess property employed in railway, telegraph, telephone, sleeping car, and express business. Railroads completed prior to 1904 are exempt from taxation for ten years from date of completion. Property employed in mining is exempt for ten years from Jan. 1, 1900. The Legislature may levy a tax on inheritances, not to exceed 3 per cent. on direct or 10 per cent. on collateral inheritances; but no such tax shall apply to property which prior to the time of inheritance has "borne its just proportion of taxes." Parishes, municipalities, etc., may, on vote of taxpayers, levy special taxes not to exceed 5 mills, and incur debt to the amount of one tenth of their valuation.

The Legislature is to create boards of health for the State and for each parish and municipality. The local boards have practically absolute power in regard to sanitation and quarantine in their own provinces. The new provisions call for reorganization of the entire system of health regulations.

Radical changes were made in the organization of the courts, their powers and jurisdiction, and mode of procedure. The trial of misdemeanors without a jury; the trial for offenses where the punishment may be hard labor by a jury of 5; in felonies where the punishment is necessarily hard labor, by the concurrence of 9 jurors; requirement of the concurrence of 12 jurors where the punishment may be death,—are among the new provisions. Grand juries are to be composed of 12 members instead of 16 as heretofore, and to serve for six months instead of a single term, and any 9 of them may find a true bill. These provisions are to hold until 1904; after that the Legislature is at liberty to provide a different system. The Supreme Court selects judges of the Court of Appeals from district-judges. The jurisdiction of the Supreme Court has been extended, as also that of the Court of Appeals for the district of New Orleans. The criminal code is to be thoroughly revised.

For improvement of roads, convicts may be worked on them in parishes where the authorities use the power given to them to levy taxes for maintenance of roads; and the Legislature may authorize employment of convicts on public works, and on farms or in workshops controlled by the State; but they are not to be leased after the expiration of the present contracts.

A railroad commission of 3 members is to be established, and a State Board of Charities; and the office of Examiner of State Banks is created.

The law relating to homestead exemptions was amended. The Legislature must pass laws to suppress dealings in options or futures on farm products and articles of necessity. Combinations to control the prices of such articles for speculation are declared unlawful.

The cost of the convention to the State was given as \$145,000. Ernest B. Kruttschnitt was President, and Robert S. Landry Secretary.

Legislative Session.—The Legislature was in session from the middle of May to the middle of July. There were 28 Democrats, 7 Republicans, and 1 Populist in the Senate, and 60 Democrats, 24 Republicans, and 14 Populists in the House.

A large number of the measures passed were for carrying out the provisions of the new Constitution.

A school for education of white children in the arts and sciences is to be established and called the Southwestern Industrial Institute.

The General Assembly passed an act to authorize

the Governor to appoint a commission to draft a new code of criminal procedure. There are 3 commissioners, who are to serve for a compensation of \$2,500 each, exclusive of incidental expenses. The Governor appointed James C. Moise, J. M. Thompson, and J. D. Wilkinson.

State lands are to be sold at 12½ cents an acre to actual settlers—160 acres to each—but proof of settlement and cultivation must be given within twelve months.

Banks are required to keep a reserve equal to one fourth, instead of one third, of their cash liabilities; the other three fourths to be in lawful money of the United States instead of specie and specie funds as formerly, or bills of exchange or discounted paper maturing in six months instead of ninety days as heretofore. Stocks subscribed to by bank companies are to be paid in lawful money of the United States.

Corporations to increase or decrease their capital stock must have a two-thirds instead of a majority vote.

A general law was passed for levying license taxes on corporations, firms, and individuals pursuing any trade, business, or profession, except those of clerk, teacher, clergyman, and laborer, and those in mechanical, agricultural, and mining pursuits, and manufacturers other than those of liquor, tobacco, and cotton-seed oil. Municipalities and parishes may levy additional license taxes, but these must not exceed those levied by the State. License taxes are to be levied on the gross receipts of telegraph, telephone, and electric corporations, those for the sale of meats and mineral oils, and banking companies, except those lending money secured only by mortgage or real estate.

A general law was made for reorganizing the State militia. Contributing members are to be exempt from military and jury duty. Independent organizations may not be formed without the consent of the Governor.

Municipalities were classified—villages, 250 to 1,000 inhabitants; 1,000 to 5,000, towns; over 5,000, cities—and general laws made for their government. Villages are to have 3 aldermen, towns 5, cities 5 to 9. The mayor, aldermen, and marshal are to be elected, and other officers appointed by the mayor and aldermen.

It was provided that three witnesses, instead of seven, as heretofore, shall be required for the mystic or secret testament.

Provision was made for a biologic station on the coast for investigation of questions of importance to the fisheries. The laws to prevent destruction of fish by seines, dynamite, etc., were amended, and also the general law for protection of game and birds.

A law was made relating to boards of health to conform to the requirements of the new Constitution. The State board has power over quarantine against contagious diseases, collection of vital statistics, and the enforcement of law against adulteration of foods.

An annual financial statement is to be made to the Secretary of State by every life insurance company. Policies of assessment or co-operative companies, not fraternal or benevolent, must have "Assessment Plan" printed across the face. Where fire companies choose to replace destroyed property under the three-fourths clause the insured shall not be required to contribute any part of the cost. General regulations for insurance were made in a law providing for incorporation and admission of companies under supervision of the Secretary of State.

A board of pension commissioners was created to carry out the provisions of the new Constitution in regard to pensioning Confederate veterans and

their widows. Pensions are not to exceed \$8 a month. Fees of attorneys prosecuting applications are not to exceed \$5.

Among other enactments were these:

Making it unlawful to gamble or permit gambling with slot machines for money; and for minors to gamble for prizes in stock in trade.

Amending the law concerning the gambling game of craps.

Making it a misdemeanor to take the skin of a dead animal belonging to another.

Creating a privilege upon a crop to secure payment for water for irrigating.

Providing for registration and protection of trade-marks.

Requiring teachers to pass examination in didactics.

Providing a penalty for maiming while fighting.

Imposing the death penalty for setting fire to or blowing up at night any building commonly occupied by human beings.

Fixing imprisonment for one to five years as punishment for bigamy.

Prohibiting the use of oil, paraffin, or the like in preparing rice for the market.

Political.—An election was held Jan. 11 to take the popular vote on the question of holding a constitutional convention, and at the same time to choose delegates to serve in case it should be decided in the affirmative. The vote for the convention was 36,178; against it, 7,578. Of the 134 members chosen, one was a Populist and one an Independent Democrat. All others, regular Democrats.

A State election was held Nov. 8 for the choice of three railroad commissioners as required by the constitution and act of the Legislature. Members of Congress were chosen in all the districts; and a judge of the Court of Appeals for the circuit of New Orleans, and two judges of the inferior courts of that city, were also chosen. The Democratic candidates were elected to all these offices. The railroad commissioners elected were C. L. De Fuentes, R. N. Sims, Jr., and W. L. Foster.

LUTHERANS. Two hundred and sixty years have passed since the first Lutheran congregation was organized in this country. It consisted of a pastor and fifty members. The place was Christina (Wilmington), Del., and the people were a colony of Swedes and Finns who arrived in 1638. The Lutheran Church has now attained a membership of 1,500,000. Following is a general summary of the statistics of the Church in this country in 1898: Sixty synods, 6,482 ministers, 10,513 congregations, and 1,535,552 communicant members; 3,500 parochial schools, with 3,710 teachers and 212,228 pupils (not all synods reporting); 4,919 Sunday schools, with 54,998 officers and teachers, and 487,694 pupils (not all reporting); and benevolent contributions amounting to \$1,118,143.62. This amount includes only those contributions which passed through the hands of synodical treasurers. The actual amount contributed is much larger. The theological seminaries number 25, with property valued at \$1,282,000; endowment amounting to \$663,185, having 103,950 volumes in their libraries, employing 86 professors and having 1,092 students. The colleges number 46, having property valued at \$2,616,380, endowment amounting to \$865,273, with 165,520 volumes in libraries, 302 professors, and 7,125 students, of whom 1,282 have the ministry in view (16 colleges not reporting the latter item). The academies number 36, having property valued at \$542,500, endowment amounting to \$85,000, with 20,384 volumes in libraries, 166 instructors, and 3,861 pupils, of whom, in 16 institutions, 274 have the ministry in view. The ladies' seminaries number 11, having

property valued at \$425,000, endowment amounting only to \$5,000, with 10,500 volumes in libraries, 137 instructors, and 1,039 pupils. The educational institutions number 118, having property valued at \$4,865,880, endowment amounting to \$1,609,458, with 300,354 volumes in their libraries, employing 691 professors, having 13,117 students, of whom 2,648 (48 institutions not counted) are in course of preparation for the ministry. Of the 118 educational institutions, only 50 have any endowment; the rest are supported by the gifts of individuals and congregations. The orphanages number 44, with property valued at \$978,849, endowment amounting to \$912,145, and having 2,100 inmates; the homes for the aged number 18, with property valued at \$206,000, endowment amounting to \$13,384, and 564 inmates; the deaconess institutions number 8, with property valued at \$647,500, endowment amounting only to \$200, but dependent on private charity, and having 271 inmates; 17 hospitals, with property valued at \$1,098,000, endowment amounting to \$30,554, and caring for 8,163 patients; and 11 immigrant and seamen's missions, with property valued at \$226,000, endowment \$6,510, and caring for 13,192 inmates. The total number of this class of institutions is 101, having property valued at \$3,156,349, endowment amounting to \$962,793, with 26,468 inmates. The total number of institutions under Church control is 219, with property valued at \$8,122,229, and endowment amounting to \$2,572,251, representing an investment of capital amounting to \$10,694,480. Only one of these institutions has been in existence more than fifty years; most of the others have been established within the past twenty-five years, and of the 219 institutions 150 are supported by the gifts of the people without the help of any invested endowment. The number of periodicals is 152, of which 64 are in English, 49 in German, 14 in Norwegian, 8 Danish, 7 Swedish, 3 Icelandic, 2 Finnish, 2 Slavonian, and 1 each in French, Lettish, and Estonian. In 1892 the benevolent contributions of the Church amounted to \$829,560.75; in 1896 the million-dollar mark was reached; and in 1898 the amount was \$1,118,143.62. This embraces only the contributions that passed through official channels, and fails to account for the sums that were contributed for missions at home and abroad and for the maintenance of various institutions.

Of the four general bodies only the Synodical Conference and the United Synod of the South held conventions. These two bodies, differing widely in many respects, embrace a communicant membership of more than 550,000.

Synodical Conference.—This body, composed chiefly of German pastors and congregations, held its seventeenth convention in Cincinnati, Ohio, Aug. 10–15, 1898. Representatives were present from the three district synods in organic connection with the general body, to wit: the synod of Missouri, Ohio, and other States; the general synod of Wisconsin, Minnesota, and Michigan; and the English synod of Missouri. These represented 1,879 ministers, 2,451 congregations, and 519,524 communicant members; 1,891 parochial schools, 1,782 teachers, and 102,642 pupils; and the combined contributions for missions, education, and other benevolent objects amounted to \$243,775.31. In connection with this body, or under synodical control, there are 4 theological seminaries, 11 colleges, 6 academies, 12 orphanages, 5 homes for the aged and other needy persons, and 3 hospitals. The Norwegian Synod, which for years has sustained an official relation to this general body, sent a letter of fraternal greeting to the convention. After divine service, the convention was formally organized for transaction of business, the Rev. John Bading, of

Milwaukee, Wis., presiding. Eight sessions were held, the morning sessions being devoted to discussion of the thesis on "Uniformity of practice in the Church," to wit: "As far as the church life of a congregation and its members also takes the form of a life in fellowship with other congregations and their membership, the congregation and its pastor must take into account this living in fellowship, firstly, by conscientiousness in practice as far as it is determined by the Word of God." The remainder of the time of the convention was devoted to the transaction of business. In this connection the report of the committee on negro missions claimed the first attention. An exhaustive report of the work of the committee was presented and considered, together with the report of the treasurer, which showed a total of expenditures amounting to \$30,401.14. The amount of \$30,000 was appropriated for this work for the next two years. New missions are to be established, and the work among the older missions prosecuted with vigor. The district synod of Michigan was admitted to membership in the conference. The next convention will be held in Bay City, Mich., in August, 1900.

United Synod, South.—This body, composed of the eight Lutheran synods in the South, held its sixth convention at Newberry, S. C., May 11–16, 1898. The synodical sermon was delivered by the president, the Rev. Robert C. Holland, D. D., of Charleston, S. C. Representatives were present from the eight synods, organically connected with the general body: those of North Carolina, Tennessee, South Carolina, Virginia, Southwestern Virginia, Mississippi, Georgia, and Holston synod of Tennessee. These synods have a membership of 207 ministers, 427 congregations, and 38,642 communicants, maintain 357 Sunday schools, with 3,095 officers and teachers and 25,805 pupils, and contributed for missions and other benevolent purposes \$20,904.27. The following were elected as the officers of the convention: The Rev. James B. Greiner, of Rural Retreat, Va., President; the Rev. Henry S. Wingard, D. D., of Springfield, Ga., Vice-President; the Rev. Melancthon G. G. Scherer, of Charlotte, N. C., Secretary; and C. H. Duls, Esq., Treasurer. The report of the Board of Missions and Church Extension claimed the first attention of the convention. Since the organization of the general body, in 1886, 20 missions have been organized or aided by the board. In these missions are more than 1,300 communicant members, about 1,100 Sunday-school pupils, and church property valued at \$75,000. There are 9 missionaries in the employment of the board, with 2 under appointment, and 4 more are needed to carry on the work. The board asked for an appropriation of \$8,000 for home missions annually. The board also supports a mission in Japan, with the city of Saga as the center of operations. This work is comparatively new, and is in need of additional workers and increased support. Nevertheless, the missionaries have made a commendable beginning in direct missionary work, in establishing schools, in securing native helpers, and in the publication of helpful literature in Japanese. Luther's Small Catechism and the Common Service of the Lutheran Church have been published. The latter is a book of 430 pages, and contains the various forms of service and the ministerial acts, as contained in the book published for the use of congregations in America. Both books were greatly needed in the development of the mission and have rendered valuable service. The field of operations embraces the island of Kyushu and the city of Saga and its vicinity. The latest statistics are as follows: Two ordained missionaries, part of the time, 3 unor-

dained native helpers, 6 stations, 74 communicant members, 4 Sunday schools with 150 pupils, and 3 candidates for the ministry. The board ask for \$4,500 annually for the maintenance of this work.

The board of directors of the Theological Seminary reported concerning its operations. The Theological Seminary, formerly at Newberry, has been located at Mount Pleasant, S. C., where a valuable property has been secured for it. The former president of the institution having resigned, the Rev. John A. Morehead, of Richmond, Va., was elected to that office. During the last scholastic year at Newberry, the institution had only nine students.

In the matter of practical co-operation among Lutherans, and of the General Conference of Lutherans, arrangements were made for co-operation with the General Council and the General Synod, and a representative of the body was appointed as a member of the Committee of Arrangements. As this is a matter of general interest to the Church at large, it is included in the report of the Committee on Co-operation with other general bodies. The following action, which has been approved by both the General Council and General Synod, was taken by the joint committee:

"1. That we recommend to the bodies which we represent, for their adoption, the following rule: That where any general body has congregations, whatever be the language, the establishment of a congregation of another general body within the territory be not undertaken, unless the Board of Missions of the body occupying the territory and the officers of the synod on the field be first consulted.

"2. That a Committee of Arbitration, representing the bodies that enter into the compact, be constituted, to whom shall be referred all cases where agreement has not been otherwise obtained."

The following action was also taken:

"1. It is the sense of this committee that the Committee of Arbitration should consist of not more than three members from each of the general bodies; and that in this Committee of Arbitration each general body should have but one vote, and that its decision on any subject referred to it should be published as soon as adopted.

"2. This committee hereby requests the general bodies to appoint their representatives on the Committee of Arbitration at their next conventions.

"3. That this committee regards the adoption of common orders of ministerial acts and a common hymn book, in addition to the Common Service, as very desirable."

Regarding the matter of a common book of worship, the General Council has taken the following action:

"Resolved that the Church Book Committee be appointed, to confer and co-operate with committees from other Lutheran bodies in the preparation of a common book of worship, including, besides the common order of service, orders for ministerial acts, and a book of hymns in the English language."

The General Synod approved the action of the joint committee with respect to the common book of worship, and gave forth the following declaration, looking to the compilation of a common hymn book:

"Resolved, That this synod will do what it can to further the object, consistent with the fact of the issuance of a new hymn book of its own.

"Resolved, That the General Synod will look with favor upon any movement toward the preparation of common orders for ministerial acts by and for the bodies of this compact.

"In view of the favorable action taken by the General Synod and General Council in their ap-

proval of the action of the Committee of Co-operation, and their evident desire for continued co-operation; therefore resolved:

"1. That this body indorses the action of the joint Committee of Co-operation, and reaffirms its earnest plea for the adoption, at as early a date as possible, of one common book of worship, including ministerial acts and hymnal.

"2. That the Common Service Committee be appointed as the Committee on Co-operation, and also as the Committee of Arbitration; and that said committee be authorized to confer with similar committees of the other general bodies in the furtherance of the objects contemplated in the appointment of said committees.

"3. That we approve the recommendation of the joint committee for the holding of a general conference or diet; and that Rev. H. F. Scheele be appointed to represent this body, to co-operate with Dr. H. E. Jacobs and Dr. S. W. Owen in arranging for such diet."

On the territory of this general body are maintained 1 theological seminary, 5 colleges, 4 academies, 4 colleges for women, and 1 orphanage.

The next convention of this body will be held at Winston, N. C., in May, 1900.

The General Council and the General Synod held no conventions during the year, but their biennial conventions will be held in 1899. Several of the larger independent synods held important conventions, notably the Joint Synod of Ohio, the German Iowa Synod, and the United Norwegian Church. The congregations and institutions, both educational and benevolent, of these bodies cover a large part of the United States, especially the States in the middle west and northwest; and they are doing a most important work among the Germans and Norwegians of this country. In their rapidly growing educational institutions they are training the youth of these nationalities in the language of the country, and are thus affording them privileges which will make of them useful citizens and intelligent workers both in the State and in the Church.

Sesquicentennial of the Ministerium of Pennsylvania.—The sesquicentennial of the Evangelical Lutheran Ministerium of Pennsylvania and adjacent States was an occasion of more than ordinary importance in the long and interesting history of the body, and was celebrated with special services in Philadelphia, June 2-4, 1898. The Ministerium was organized in that city one hundred and fifty years ago. In 1893 the president of the Ministerium, in his official report, directed attention to this interesting event in the history of the mother synod of the Lutheran Church in this country. In accordance with his suggestion, action was taken which resulted in making arrangements for the observance of that event. The officers of the Ministerium and the faculty of the Theological Seminary were appointed a committee to present a plan by which the suggestion of the president could be carried into effect. In the following year this committee recommended the publication of a volume containing the minutes of the Ministerium for the first century of its history, together with such historical matter as is now in the archives of the body. The result of this action is the publication of an excellent jubilee memorial volume of 600 pages, bearing the title "Documentary History of the Evangelical Lutheran Ministerium of Pennsylvania" (Philadelphia, 1898). Other literature called forth by the event may be mentioned, as follows: "Our Jubilee," a quarterly, presenting the history of the Ministerium and its institutions; the "Jubilee Bulletin" of the Danville Conference, a monthly, presenting congregational histories; the jubilee

number of the "Lutheran Church Review," with articles bearing on the history, position and activity of the Ministerium; the "History of the Wilkes-barre Conference," an illustrated volume of 250 pages, presenting historical sketches of its congregations; and the "Danville Conference Memorial Volume," of 372 pages, presenting a history of the conference, histories of its congregations, sketches of the lives of its pastors and pioneer missionaries, and a report of the sesquicentennial celebration with the addresses delivered on that occasion.

The sesquicentennial celebration, with its interesting services, brought together thousands of Lutherans, and the addresses brought out facts of great historical interest and importance, recalling the feeble beginnings of the Church in this country, the heroic and self-denying labors of the early pioneers, the providential guidance of the Church in the past and the important results accomplished in the line of missionary work, the establishment of congregations, and the founding of institutions of learning and mercy.

When, on Nov. 25, 1742, Henry Melehior Muhlenberg arrived in Philadelphia as a missionary among the scattered German Lutherans in Pennsylvania and the adjoining provinces, he found the people in an unorganized condition. Organized congregations existed in New York, consisting of emigrants from Holland and Germany, and along the Delaware, consisting of Swedish settlers. Though numerous settlements of Germans had been effected in the newly opened province of Penn in the beginning of the eighteenth century, there were only a few Lutheran congregations, between which there was no bond of union except a common name and faith which had been brought from the fatherland. The arrival of Muhlenberg was the direct result of the missionary activity of Lutherans in Germany and England; and it was the beginning of a new era in the history of the Church in this country, the first members of which had arrived not later than 1623. The Ministerium of Pennsylvania was organized in Philadelphia, Aug. 26, 1748. There were present and took part in the organization five German and one Swedish ministers—Henry Melehior Muhlenberg, Peter Brunnholtz, John Fr. Handseuh, John Christian Hartwig, provost John Sandin, of the Swedish Church, and John Nicolaus Kurtz, ordained at this meeting, and lay delegates from the widely separated congregations of these pastors, representing a communicant membership of several thousand, scattered over the provinces of Pennsylvania, New York, and New Jersey. The Ministerium is the oldest synodical organization of the Lutheran Church in America, and therefore the "mother" synod of numerous similar organizations in Pennsylvania and other States, and has always occupied a prominent position in the Church. Up to the time of organization of the synod the pastors had provided for the interests of the congregations which appealed to them for assistance, by consulting with one another and with the congregations. For some time previously they had felt the necessity of a closer bond of union among themselves and their congregations, in order to carry on successfully the arduous work intrusted to them. They realized that the individual congregations must be made to feel that they were organic parts of the Church, and that through their lay representatives they had a voice in the management of affairs. This union of pastors and congregations was felt to be a necessity, for the purpose of maintaining order and exercising discipline; for providing

for the common necessities of the scattered people; as well as preserving the Church against dangerous influences from without and disturbing forces from within. They inquired carefully into the condition of the congregations, adopted measures for the government of the same, and provided an order of service based on the consensus of the best liturgies of the Lutheran Church of the sixteenth century.

The history of the Ministerium for nearly half a century afterward is the history of the Lutheran Church in North America. The work of the synod for many years was missionary work in Pennsylvania, New York, New Jersey, Maryland, and Virginia. From year to year, too, its work extended throughout these States and beyond, reaching Nova Scotia in the north and Georgia in the south. Twenty-five synods have directly or indirectly grown out of the original organization and are now occupying the territory formerly embraced in the territorial bounds of the mother synod. The Ministerium of Pennsylvania took a leading part in the organization of the General Synod in 1821 and the establishment of the educational institutions at Gettysburg. When, for doctrinal reasons, it withdrew from that body in 1866, it again took a leading part in the organization of the General Council, in 1867, on a thoroughly Lutheran basis. It has established and maintains the Theological Seminary at Mount Airy, Philadelphia, with property valued at \$150,000 and endowment amounting to nearly \$200,000, and Muhlenberg College, at Allentown, Pa., with property valued at \$100,000 and endowment of \$154,000. It controls two orphanages and the mother house of deaconesses in Philadelphia. The Ministerium was the prime mover in the establishment of the mission in India, in 1841, and is still the largest contributor to the support of that work. Early in the present century it began missionary work in the West, which has resulted in the establishment of large and flourishing congregations, institutions, and synods in Ohio, Michigan, Wisconsin, Minnesota, and other Western States, and in Maryland, Virginia, the Carolinas, and other States in the South.

General Conference of Lutherans.—This convention was held in Philadelphia, Dec. 27–29, 1898, and was called by authority of the three general bodies—General Synod, General Council, and United Synod of the South—embracing more than half the membership of the Church in this country. The convention was called for the purpose of comparing views, with the aim of ultimate union among the bodies represented, and the subjects discussed was intended to bring out the unanimity of sentiment among the representatives. The convention was attended by 163 clergymen and a large number of laymen. The meetings were held in St. John's Church, on Race Street, the oldest English Lutheran church in the United States, in St. Matthew's Church, on North Broad Street, and in the chapel of the Mary J. Drexel Home of Deaconesses. The sessions were presided over by the three members of the joint committee—the Rev. Drs. Henry E. Jacobs, of Mount Airy, Philadelphia; Samuel W. Owen, of Hagerstown, Md.; and H. Frank Scheele, of Staunton, Va. The secretaries were the Rev. Drs. William S. Freas, of Baltimore, Md., and S. E. Oehsenford, of Selinsgrove, Pa. The treasurer was William H. Staake, Esq., of Philadelphia. The 23 papers read were of an exceptionally high order and clearly set forth many of the fundamental principles of the Church, concerning which there appeared to be no disagreement.

M

MADAGASCAR, an island colony of France, near the southeast coast of Africa, formerly a kingdom, recognized by Queen Ranavalona III as a French protectorate on Oct. 1, 1895, as the result of a war, and declared a French colony on Aug. 6, 1896. The Queen was deposed on Feb. 27, 1897. The French tariff was applied in August, 1897, in spite of the protest of the British Government, which claimed, under international law and by virtue of a pledge of the French Government, that the protectorate did not alter the engagements of the Madagascan Government and the assurance that no change in the status was contemplated; that the rights and immunities enjoyed by British subjects remained intact. Consular jurisdiction was relinquished by Great Britain in return for a like concession given by France in respect to Zanzibar. As regards commercial privileges, the French Minister of Foreign Affairs held that these were abrogated by the act of annexation. In 1898, after subduing a rebellion of the western Sakalavas, Gen.

belonging to many different tribes in various stages of civilization, number from 3,500,000 to 5,000,000. The area of the island is 228,500 square miles. The French Government contributed 15,710,000 francs to the cost of government in 1898, and by a recently organized system of revenue and taxation 10,000,000 francs were collected in the island. A loan of 30,000,000 francs was raised at 3 per cent. in 1897 for the purposes of converting the 6-per-cent. debt of 15,000,000 francs and making internal improvements. The rebellion of the tribes, which began in 1896, was instigated by British subjects, Indian and Arab traders, who exchanged guns and ammunition for slaves and gold dust, and who, to save their trade, appealed for British interference. In the south and parts of the west, where the influence of the Banian traders was powerful, the state of the country was still unsettled in the beginning of 1898. Between Fort Dauphin and the capital bands of robbers defied the Government and prevented the exploitation of the caoutchouc forests. After the

ANTANANARIVO, MADAGASCAR, FROM THE WEST.

Gallieni, the Governor General, set thousands of natives to work building roads from Antananarivo, the capital, toward the coasts, east and west. Through a pass discovered in the Mandraka ridge a good road will connect the central province of Imerina with the port of Tamatave, the harbor of which is being improved. The telegraph system has been extended, and surveys have been made for railroads, the most important being a line from Tamatave to the capital. The capital is connected with Tamatave and with Majunga by telegraphs, and the latter port with the submarine line to Europe by a cable to Mozambique. A beginning has been made with French colonization. The natives,

repulse of 400 Sakalavas at Ambiky with a loss of 53, many of the western rebels submitted. The whole island was pacified before the close of the year. Algerian troops serving in Madagascar were sent home.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,269 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,915 in 1870; 648,936 in 1880; 661,086 in 1890. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Llewellyn

Powers; Secretary of State, Byron Boyd; Treasurer, F. M. Simpson; Attorney-General, Wm. T. Haines; Adjutant General, John T. Richards; Superintendent of Public Schools, W. W. Stetson; Insurance Commissioner, S. W. Carr; Bank Examiner, F. E. Timberlake; Superintendent of Public Buildings, E. C. Stevens; Liquor Commissioner, James W. Wakefield; Commissioner of Labor, Samuel W. Matthews; Inspectors of Prisons, Whitman Sawyer, A. W. Gilman, Augustus Bailey; Secretary of Board of Agriculture, B. W. McKeen; State Librarian, Leonard B. Carver; Railroad Commissioners, J. B. Peaks, Frederick Danforth, Benjamin F. Chadbourne; Commissioner of Sea and Shore Fisheries, O. B. Whitten; Commissioners of Inland Fisheries and Game, Leroy T. Carleton, Henry O. Stanley, Charles E. Oak; Cattle Commissioners, George H. Bailey, F. O. Beal, John M. Deering; State Assessors, William C. Marshall, Otis Hayford, George Pottle; Chief Justice of Supreme Judicial Court, John A. Peters; Associate Justices, Albert R. Savage, Sewell C. Strout, Lucilius A. Emery, Enoch Foster, Thomas A. Haskell, William P. Whitehouse, Andrew P. Wiswell; Clerk, W. S. Choat; State Reporter, Charles Hamlin; State Detective, Dennis Tracy—all Republicans.

Finances.—During the past two years \$247,074 have been paid in principal and interest on the bonded indebtedness of the State, leaving \$2,205,000 still due. The receipts from all sources in 1898 were \$1,854,304.66; cash in treasury, Jan. 1, 1898, \$150,352.22; amount of warrants drawn and paid, \$1,851,931.15; cash balance, Dec. 31, 1898, \$154,723.73; excess of expenditures over receipts in the past two years, \$198,776.85; rate of taxation for 1898, 2½ mills; total liabilities of the State, Dec. 31, 1898, \$4,100,826.67. All taxes against cities, towns, and organized plantations have been paid in full.

Banks.—The number of banking institutions in the State was reported to be 182; entire banking capital, \$116,284,620.04, an increase of \$1,673,796.84 over 1897. The number of banks under the supervision of the Bank Examiner was 100—51 savings banks, 17 trust and banking companies, and 32 loan and building associations—an increase of 1 in the number of trust and banking companies and a decrease of 1 in the number of loan and building associations during the year; total assets, \$76,375,538.69; number of depositors, 192,625; amount paid in interest and dividends, \$2,535,863.66; amount that would accrue to each person in the State by an equal distribution of these assets, \$115.53, against \$110.81 in 1897.

The number of national banks doing business in the State was 182; assets, \$39,909,081.35; amount on deposit in the 51 savings banks, Oct. 29, 1898, \$60,852,557.34, an increase of \$1,254,208.66 from Nov. 6, 1897, to Oct. 29, 1898; number of depositors, 169,714, an increase of 1,835; average amount to each depositor, \$358.56 as against \$355.01 in 1897; average amount for each person in the State, \$92.05; average rate of dividends, 3.53; total amount deposited during the year, including dividends, \$12,081,579.42; aggregate of reserve and undivided profits, \$3,282,079.98; amount of State tax on savings banks for 1898, \$394,016.12.

The 17 trust and banking companies on Oct. 29, 1898, had a capital stock of \$1,586,400; surplus, \$324,000; total liabilities, \$9,182,997.50; number of depositors, 14,755, an increase of 1,750 during the year; amount of deposits, \$6,201,118.28; amount of interest paid during the year on all deposits, \$125,042.13; on savings deposits alone, \$101,680.70; amount of dividends paid stockholders, \$91,752, an increase of \$6,000 over 1897; average rate of dividends paid stockholders, 5.78. The total liabilities

of the 32 loan and building associations were reported as \$3,009,998.77; number of shareholders, 8,156; number of shares outstanding, 44,758½, a decrease of 711 since 1897; dividends paid, \$173,744.81, a decrease of \$39,650.93, owing to the fact that one association in 1897 charged off all dividends previously paid, in readjusting its accounts, and declared a new dividend upon all its outstanding shares; average rate of dividends paid shareholders, 6.5 per cent.

Valuation.—The valuation of the cities, towns, and plantations for 1898, as returned by the assessors, was as follows: Real estate, \$221,355,754; personal estate, \$63,144,504; total valuation, including wild lands, \$329,516,244, an increase of \$1,015,250 over 1896; amount of money at interest in the several counties for 1898, \$9,758,662; stock in trade, \$16,500,158; bank stock, \$7,914,261; trust companies' stock, \$728,085; stock of other companies, \$638,151; shipping, \$2,372,999; logs and lumber, \$1,429,849; wood and bark, \$271,322; railroad property, \$2,753,918; street railways, \$331,550; value of bicycles, \$324,420; carriages, \$1,249,055; musical instruments, \$1,847,313; furniture, \$1,152,782; taxes assessed upon telegraph, telephone, and express companies, \$13,649; taxes assessed semi-annually upon loan and building associations, \$336.05; total amount on savings banks, \$394,016.12; on railroads, \$179,952.83; total number of polls in the State paying State tax for 1898, 190,219; receipts from stampage sold by the land agent for the year, \$11,838. About \$500,000 of the gain in the valuation of real and personal property for the year was on account of property heretofore exempted from taxation.

Insurance.—The number of companies' licenses issued in 1898 was 164; value of them, \$3,285; number of agents' licenses, 3,796; value, \$7,592; number of brokers' licenses, 116; value, \$1,160; number of companies examined, 5; number of life policies in force on Dec. 31, 1897, 56,114; amount of insurance in force, \$52,853,970.12; increase in number of policies issued during the year, 4,372; in amount of insurance written, \$1,829,638.75; increase in the number of policies in force, 5,669; increase in the amount of insurance in force, \$4,313,689.12; in the amount of premiums received, \$154,439.03. There were 245 fire and marine insurance companies, fraternal beneficiary organizations, etc., doing business in the State on Dec. 31, 1897; 156 companies' licenses were issued; value of licenses, \$3,165; number of agents' licenses issued, 3,632; value, \$7,592; number of brokers' licenses, 141; value, \$1,365; number of companies examined, 6.

Railroads.—On June 30, 1898, there were 1,748.95 miles of steam railroads in operation; on Nov. 30, 1898, 1,872.80; total mileage, 1,723.80 of broad gauge and 148.92 of narrow gauge; gross transportation earnings, \$8,231,018.63, against \$8,237,971.15 in 1897; number of tons of freight carried, 5,646,376, against 5,445,524 in 1897; total passenger-train mileage in the State, 3,270,128; total freight-train mileage, 3,049,226; gross assets, \$102,336,272.56, a

LLEWELLYN POWERS,
GOVERNOR OF MAINE.

decrease of \$4,603,722.53 from assets of 1897; gross liabilities, \$98,670,580.35, a decrease of \$5,176,539.71 since 1897; number of men employed, 5,852; wages of men, \$2,811,287.47; gross earnings of the narrow gauge for the year, \$166,414.46; expenses of operating, \$126,586.93; income from 4 roads, \$43,249.57; deficit of 3 roads, \$5,422.34; 1 three-foot gauge not in operation; number of miles of street railways in operation Nov. 30, 1897, 161; number of miles built during 1898, 52.23; total mileage of street railways, 213.23; number of men employed, 725, an increase of 125 in 1898; wages received, \$325,000; number of passengers carried, 14,651,165, against 13,961,980 in 1897; gross earnings for the year, \$819,956.06, against \$770,614.19 in 1897. Nearly 8,000 persons in the State were supported by the operation of the railroads in Maine, receiving \$3,200,000 in wages.

Industries.—In 1898 there were 16 cotton mills in the State with 869,437 spindles and 51 woolen mills with 347 sets of cards. Of the 10 cotton mills that reported, the capital invested was given as \$12,558,500; cost of material, \$3,905,748; value of product, \$7,445,394; number of weeks in operation, 47.2; average number of hands employed, 9,583; total wages paid, \$2,596,131; increase of capital during the year, \$470,000; decrease of cost of material, \$402,971; decrease in total wages paid, \$107,770; decrease in value of product, \$346,032; decrease in average weekly wages of men, 14 cents; of women, 18 cents; increase in average weekly wages of children, 1 cent; decrease in number of men employed, 38; increase in women employed, 275; increase of children, 37. The report from 22 woolen mills showed an increase in capital invested of \$341,995; increase in cost of material, \$327,925; increase in total wages paid, \$147,996; increase in value of product, \$823,512; decrease in average weekly wages of men, 43 cents; decrease in average weekly wages of women, 23 cents; increase in average weekly wages of children, 13 cents; increase in number of men employed, 184; in women employed, 53; decrease in number of children, 4; increase in average number of employees, 233.

The number of buildings erected in 1898 was 72, against 95 in 1897; total cost, \$675,100; number of persons employed, 2,024. The number of foundries and machine shops was 170; number of plants for manufacture of general furniture, 6; of chairs as a specialty, 5; of spring beds, 4; of cabinetwork, 30; of upholsterers, 40; number of workmen in furniture-making, 700; capital invested in the manufacture of furniture, \$500,000; daily wages of men, \$1.75; of women, \$1.25. There were 15 boot and shoe shops; capital invested, \$853,500; cost of material, \$2,195,612; value of product, \$3,515,939; total hands employed, 1,881; total wages paid, \$819,774. The percentage of raw material in textile fabrics has varied little since 1880, while in boots and shoes it fell from 66.6 per cent. in 1880 to 56.1 in 1890, and increased to 62.5 in 1897. The percentage of wages in textiles showed a steady increase from 1880 to the present year, while in boots and shoes it increased from 22.9 per cent. in 1880 to 29.8 per cent. in 1890, and declined to 23.3 in 1897. The percentage of margin in textiles declined constantly from 1880 to 1897, while in boots and shoes it increased from 10.5 in 1880 to 14.2 in 1898. The number of two-hundred spools turned out each year is estimated at 750,000,000; spool bars exported, 13,500,000 feet, at an average price of \$18.50 per 1,000 feet; total amount of spool bars manufactured, 35,000,000 feet; value of spools made during the year, \$1,000,000.

Wood Novelty.—The wood novelty business in Maine is prosperous. Of the 21 plants, all but one are busy. The product is mostly sold out of the

State, and Maine people are employed in the factories.

Brickmaking.—The season was unusually severe upon the brickmakers of Maine; net price of brick, \$5 a 1,000; number of men employed in the 53 yards that reported, 507; output, 54,500,000 bricks.

Shipping.—The amount of shipping in the State was \$2,372,999. There were 29 vessels built in Bath, aggregating 23,689 tons.

Summer Resorts.—The number of guests reported by 97 hotels and boarding houses was 108,736; from outside of the State, 48,942; amount received from guests outside of the State, as given by 70 houses, \$386,096; paid for help by 73 houses, \$76,552, an average of \$1,049 per house.

State Institutions.—The Maine State College received from the State for instruction the sum of \$22,000; for investigation in agriculture and the sciences, \$15,000; endowment fund, \$231,000.

The whole number of boys committed to the Reform School since its opening is 2,216; average number in 1898, 136; number committed during the year, 45; number of boys in the institution Nov. 30, 1898, 142; appropriation for 1898, \$50,500. The receipts from the farm were \$7,497.21.

The number of patients that have been under the care of the Insane Hospital since its opening is about 9,000; number discharged as recovered, 3,000; number discharged as improved, about 3,000; number admitted during 1898, 234; number under treatment during the year, 947; number remaining Nov. 30, 1898, 733; number of patients maintained entirely by the State, 87; entirely by their own means, 53; aided in part by the State, 598. A convenient carpenter's shop has been built during the year, also an engine and boiler house. The disbursements from the Coburn fund for amusements was \$1,265. The balance on hand in the Library fund, Nov. 30, 1898, was \$3,230.05.

The assets for the State Prison on Nov. 30, 1897, were \$88,068.72; liabilities, \$6,442.16; total assets for 1898, \$81,626.62; number of prisoners, 218; of insane, 12; number sentenced during the year, 90.

Education.—The whole number of persons in the State between the ages of four and twenty-one was reported to be 210,341; whole number of different pupils registered during the year, 132,139; number of schoolhouses, 4,162; built during the year, 99, at a cost of \$171,694; number of male teachers in summer term, 405; in winter, 921; female teachers in summer, 4,226; in winter, 3,719; average wages of male teachers per month, excluding board, \$40.64; female teachers per week, \$6.47; whole amount of school money raised by towns, \$744,667; total school resources, \$1,389,044; expended for common schools, \$1,277,628; paid by towns for school superintendence, \$56,270.

There were 56 free public libraries in January, 1898, with 205,400 volumes; number of different libraries reported, 262; total number of volumes, 677,700. Fifteen libraries have an endowment fund of \$10,000 or more each.

Live Stock.—The State assessors reported the number and value of live stock as follow: Horses, 132,592, value \$6,108,956; three-year-old colts, 3,466, value \$131,403; two-year-olds, 3,500, value \$98,681; one-year-old, 2,469, value \$50,505; cows, 137,444, value \$896,550; oxen, 8,898, value \$398,992; three-year-old cattle, 26,642, value \$508,164; two-year-olds, 40,621, value \$545,273; yearlings, 42,254, value \$3,071,513; sheep, 238,519, value \$584,066; swine, 37,551, value \$202,901; total value, \$11,832,904, as against \$11,319,817 for 1897. From 1879 to 1899 the number of horses increased 14,796, and colts increased 9,665; from 1889 to 1893 horses increased 18,710 and colts 3,397; from 1893 to 1896 horses in-

creased 4,000 a year, and from 1896 to 1898 only 129 a year, while colts have decreased 20,281 in the last five years.

Poultry.—By an act of Legislature of 1897-'98 the local assessors are called upon to account for every kind of poultry in their town or city, and to make returns to the State assessors. Such reports showed the total number of hens to be 1,557,252; value of poultry and eggs, \$1,871,781.17; number of turkeys, 5,268, value \$15,362.20; ducks, 9,018, value \$23,258.10; geese, 3,445, value \$7,472.33.

Fisheries and Game.—The hatching troughs have been well filled with spawn, and the number of fish reared and liberated has been encouraging. The number of prosecutions for the violation of the fish and game laws was 115; aggregate of fines imposed, \$3,904; fines paid, \$2,634; number of days of jail sentences for violation of the moose law, 1,050; number of days served, 420; receipts and fees from registration of guides, \$1,316; from the State, \$25,000; from taxidermists' licenses, \$30; total receipts, \$26,931.78; expenses, the same.

In mackerel fishing 239 men and 300 boats were employed; number of pounds of fish sold fresh, 814,130, value \$47,125; number of barrels salted, 665, value \$9,450; canned, 6,591. The total capital invested in sea-shad fishing was \$2,363,374; the number caught in 1898, 1,152, value \$23,720. In the herring fisheries 1,470 men were employed, and the amount received from the herring sold was \$730,058. Sardine packing gave employment to 5,839 persons in the State; wages received for labor, \$811,775; value of the 178,694 cases put up, \$2,727,781; of the oil, \$4,635; of the fertilizer produced, \$6,820. The number of men employed in lobster fishing was 3,103; number of lobsters handled, 8,178,332; number of seed lobsters furnished to the United States hatchery in 1897, 21,365; eggs resulting, 25,207,000; fry hatched, 22,875,000; number planted in Maine, about 21,875,000. In the menhaden industry 869 men were engaged and 83 steamers, at an expense of \$105,000 paid employees; number of tons of pomace procured as fertilizer, 9,120 tons. In digging clams and scallops 550 men were employed; product of the canneries, 40,933 cases; in the shell, 1,109,936 bushels. The catch of smelts for 1898 was 1,156,684 pounds; persons engaged in the work, 1,095. In ground fishing, 819 boats and 1,291 men were employed; fish taken, 32,952,619 pounds, value \$565,271.

New Game Laws.—The Maine Sportsman's Association reported that the calf moose is one "not less than a year old and having two prongs or tines to its horns." The open season on caribou was made to begin on Oct. 5 and to close on Dec. 1. The open season on deer will be from Oct. 1 to Dec. 15, except as to the clause added as follows: "Permitting the taking of deer, for food purposes only, during September, and to be consumed by the party taking it in the locality where taken, when accompanied by a registered guide, under such rules and regulations as the commissioners shall establish from time to time, on payment of a fee of \$6 by a non-resident and \$4 by a resident."

In order to transport lawfully killed game without being accompanied by the owner, a tag provided by the commissioner must be purchased at a fee of \$5 for a moose, \$3 for a caribou, and \$2 for a deer, and this tag must be attached to the game.

The sale of ruffed grouse and woodcock was declared absolutely prohibited, and only 10 of any one kind of game may be taken by any one person in any one day. The open season on fish was declared to begin in the spring as soon as the lakes and ponds are free from ice, instead of May 1, as hitherto. All ice fishing for trout and salmon in the counties of Somerset and Kennebec was declared prohibited.

The close time on white perch is from April 1 to July 1. The law requiring the registration of guides was strengthened, and three classes were named for registration, viz.: first, second, and beginner's class.

Guides.—The Legislature of 1897-'98 enacted a law requiring a record to be kept by the commissioners of the name, age, and residence of all persons engaged as guides in inland fisheries or game hunting, and also the number of days employed as guides, and the number of persons guided, residents and non-residents. Since the law was enacted the number of guides registered is 1,766; number registered in 1898, 1,443, three of whom were women; residents guided, 5,820, against 3,384 in 1897; non-residents guided, 7,366; number of days the guides were employed, 63,501, against 51,918 in 1897; greatest number of days any one guide was employed, 182; total number of moose killed, 260; caribou, 160; deer, 11,000; bears, 160; total pounds of fish caught, 70 tons; total receipts from commissions, \$29,024.

Indians.—The number of the Penobscot tribe reported was 393; of the Passamaquoddy, 475; number of children in school, 109; money expended for the Passamaquoddy tribe during the year, \$8,971; amount of appropriation unexpended, \$32.

Pulp and Paper Mills.—The first pulp mill was built in Maine in 1870. In 1880 there were 7 of these mills, with a capital of \$440,000, and 12 paper mills, with a capital of \$2,000,000. In 1895 the pulp and paper-making industry was estimated at \$12,000,000, and the daily output was 1,162 tons. In the three years since, the increase has been even more marked.

Liquor Traffic.—The number of places in the State where special tax receipts were held was estimated at 1,025, but 113 dropped out of business during the year; total public revenue from the liquor traffic, \$128,823.56; total amount of fines and liquor confiscated and sold, \$92,964.26; net profits of the agencies, \$9,466.10.

Political.—The Populist convention met in Bangor, June 2, and nominated Robert Gerry as candidate for Governor. The resolutions declared for the platform of 1896 on the silver and bonded-debt question. Other planks demanded that all railroad, telegraph, and telephone systems be owned and operated by the Government; that all undesirable foreign immigration be absolutely prohibited; that all trusts and combinations for the purpose of speculating in the necessities of life be prohibited, and their promoters be treated as outlaws; that all land held for speculative purposes be taxed to the full extent of its rental value; for the initiative and referendum; and that all persons, firms, and corporations in the State of Maine employing the labor of unnaturalized foreigners be compelled to pay into the city or town treasury where such persons, firms, or corporations are located, 50 cents a day for each foreigner thus employed.

The Republican convention assembled at Augusta, June 28, and renominated Llewellyn Powers for Governor. The platform invited the voters of Maine, "without distinction of party," to join in maintaining the following principles: "Firm support of President McKinley and his administration in the conduct of the war with Spain and a recognition of the President's wisdom in the management of the Cuban question; cordial appreciation of the valor of the army and navy as shown by the brave deeds of the sailors and soldiers in the war; and the sacred duty of the State to protect and care for their wives and children while they carry liberty to the oppressed and defend the nation's honor; a currency for business and labor, the soldier and the pensioner, that is as good as gold the world over; all necessary legislation in the interests of labor, of

temperance, of education, and economy in the State administration.

The Democratic convention met in Bangor, June 30, and declared unqualified approval of the principles of the Chicago platform. The resolutions declared opposition to the prohibitory law, and recommended that the constitutional amendment relating thereto be repealed, and the question be resubmitted to the electors of the State. The platform demanded a reduction of tariff rates upon all railroads of Maine, as necessary for the business interests of the State; that all mileage books be good to the bearer, and that the limit of baggage be increased. They resolved that, "while we deprecate the horrors of war, it is now the duty of all to give their aid and support in order to bring to a successful termination the present conflict." Their candidate for Governor was Samuel L. Lord, of Saco.

On the same day the Prohibitionists met in Waterville and nominated for the office of Governor the Rev. Ammi S. Ladd.

On July 21 the gold Democrats convened in Portland and made Erastus Lermond their nominee for Governor.

At the election Llewellyn Powers, Republican, was elected Governor. The returns, as reported to the Legislature, were as follow: Powers, Republican, 54,098; Lord, Democrat, 28,485; Ladd, Prohibitionist, 2,326; Gerry, Populist, 641; Lermond, Gold Democrat, 315; scattering, 47.

All the representatives in Congress are Republican, and on joint ballot the State Legislature will have 157 Republicans and 25 Democrats. The vote on the constitutional amendment, providing that vacancies in the Senate shall be filled by an immediate election in the unrepresented district, stood, yeas, 15,080; nays, 1,856.

MANITOBA, a western province of Canada; area, about 80,000 square miles. Capital, Winnipeg.

Statistics.—The following table, compiled from the municipal statistical statement for 1897, gives the figures regarding the province in every direction of its development: Population, 108,957; number of resident farmers, 28,372; total number of acres in rural municipalities, 13,051,375; acres under cultivation, 2,371,441; acres wooded, 840,385; number of horses, 92,762; number of cattle, 214,468; number of sheep, 32,986; number of pigs, 70,885; assessment, real and personal, \$42,827,442; total taxes imposed in 1897 for all purposes, \$674,288.61; average yield of wheat in 1897, 14.14 bushels per acre; average yield of oats, 22.7 bushels per acre; average yield of barley, 20.77 bushels per acre; average yield of potatoes, 149 bushels per acre; average yield of roots, 199 bushels per acre; total yield of wheat, 18,261,950 bushels; total yield of oats, 10,629,513 bushels; total yield of barley, 3,183,602 bushels; total yield of flax, 247,836 bushels; total yield of rye, 48,344 bushels; total yield of peas, 33,380 bushels; total grain crop, 32,404,625 bushels; total yield of potatoes, 2,033,298 bushels; total yield of roots, 1,220,070 bushels; total cattle exported, 31,500; total hogs exported, 12,500; total hogs received by Winnipeg packers and butchers, 25,000; poultry disposed of by farmers—turkeys 47,540, geese and ducks, 20,000, chickens 184,055; value of dairy products, \$450,213.43; estimated expenditure on farm buildings, etc., \$935,310; number of rural school districts, 811; amount of Government grant per school, \$130.

Politics and Government.—The Greenway Government, which had been in power since 1888, had to face during the year the aggressive hostility of a new and popular leader of the Conservative Opposition, in the person of the Hon. Hugh J. Macdonald, son of the late Sir John A. Macdonald. The Legislature met for its third session on March 10, and

was opened by the Hon. J. C. Patterson, Lieutenant Governor, with the Hon. F. M. Young as Speaker. A good deal of legislation was enacted, including the following bills:

To amend the overholding tenants' act.

To amend the Manitoba evidence acts.

To amend the special survey act. Under the survey act provision is made, in agreement with the Dominion Government, to resurvey and fix the surveys of towns and villages in the province. The cost of these surveys is borne by the Federal Government.

To amend the mutual fire insurance act.

To amend the devolution of estates act. This amendment gives the administrators power to mortgage real estate in certain specified cases.

To amend the real property act. This amendment is to reduce the cost of Torrens titles obtained through tax sales.

To amend the liquor license act. The changes provide that during prohibited hours screens and blinds are to be removed from barroom windows. Provincial constables are also given power to search premises and generally to supervise the sale of liquor.

To amend the public schools act.

To amend the agricultural societies act.

To amend the executions act. Certain property was exempted under this act, but in case of a fire the insurance money might be garnished. This amendment exempts the insurance money.

To amend an act respecting life insurance.

To incorporate the Winnipeg and St. Andrews Railway. This act gives the promoters power to build a steam or electric railway from Winnipeg to St. Andrew's Rapids, on Red river; also to operate steamers and barges on Red river and Lake Winnipeg.

To incorporate the Mennonite Educational Institute at Gretna.

For better protection of dependent and neglected children. This provides that whenever a child is habitually neglected by parents or guardians, or is dependent upon the community, upon the application to a judge or police magistrate, he may order the child to be taken absolutely from its parents or guardians and given to a children's aid society. The society is thenceforth the guardian of the child with full powers, and may place the child in a foster home, or may take it away from such home and place it in another. Provision is made for the establishment of a central society, with an officer in Winnipeg, and for the formation of branch societies throughout the province.

Reducing the wolf bounty from \$2 to \$1. The bounty is paid by the municipalities.

To provide for better observance of the Lord's Day. This act, which occasioned more discussion than almost any other of the session, was considerably modified in the House. It prohibits all labor except work of necessity or charity. It prohibits all such amusements as are carried on in a building or inclosure where an admission fee is charged or where any gain is made by the players.

Respecting the Winnipeg and Fort Alexander Railway. This allows a company to build a railway from some near point on the Canadian Pacific Railroad to the navigable waters of Winnipeg river. The distance is about 40 miles.

To provide for the good sanitary condition of bakeshops.

To amend the charity aid act. The Government pays 37½ cents a day toward the keep of a patient in hospitals in the province. Lately a large number of patients from Ontario, Dakota, and Minnesota have been crowding the hospitals. This amendment only permits payment of the 37½ cents for patients domiciled in the province.

To amend the Legislative Assembly act. The sessional indemnity is reduced from \$600 to \$500 a year.

To amend the municipal-hall insurance act. The qualification of voters under this act was fixed at \$300 worth of real property, instead of \$400 as formerly.

To amend an act respecting compensation to families of persons killed by accident. Under the original law if the administrator of a man killed by accident refused to enter an action for damages, there was no power for any one else to take up the case and prosecute. The amendment provides that in such an event the persons who would be benefited by the compensation may prosecute.

To incorporate the Central Canada Fire Insurance Company.

To amend the foreign corporations act.

Respecting aid to railways. This act provides for the building of 140 miles extension to the Dauphin Railway from Sifton station northward to Saskatchewan river, also the building of 80 miles from Winnipeg southeastward to a point near Whitemouth lake, as a part of a railway system to connect with Lake Superior. The aid in each case is the guaranteeing of principal and interest of the bonds of the company for thirty years at 4 per cent. to the extent of \$8,000 a mile.

To amend the noxious weeds act.

To amend the joint-stock companies' act.

Respecting aid to the Northern Pacific and Manitoba Railway. By this act the railway is granted the usual bonus always given to colonization roads of \$1,750 a mile to build an extension from Belmont to Hartney, 50 miles. Besides this, \$20,000 is given to assist in crossing a deep ravine at Lang's Valley.

To amend the public schools act. This empowers school sections in disorganized municipalities to sell lands for taxes just as if they were municipalities.

Respecting liens of mechanics, wage-earners and others. This generally consolidates and simplifies the act, and makes it easier for workmen to establish and enforce their lien.

To amend the game-protection act. The open season for prairie chickens is shortened so as to begin on Oct. 1, instead of Sept. 15, and close on Nov. 15, instead of Dec. 1. No person is permitted to shoot more than 20 prairie chickens in any one day, or more than 100 in the season. No one is permitted to have any prairie chickens in his possession fifteen days after the season closes. The close season for muskrats is to be from May 1 to Dec. 1, instead of from May 15 to Nov. 1. The killing of beavers is totally prohibited. Persons wishing to domesticate game birds or animals must secure a permit from the Minister of Agriculture. When the two years close season for deer expires on Oct. 1, 1898, the law of 1896 prevails, which provides that not more than two deer can be shot in a season by one person.

To amend the county courts act. In debts against traders the amounts received under execution must now be divided *pro rata* among the creditors, following much the same system that prevails in the Queen's Bench.

To amend the medical act.

The Legislature adjourned on May 4, 1898. The following paragraph from the speech of the Lieutenant Governor was the most important:

"I join with you in the feelings of gratification which every one of you must enjoy upon seeing the satisfactory results of the efforts of both my Government and that of the Dominion to promote immigration. The large influx of the most desirable class of settlers so far this year, and the pros-

pects for the remainder of the season, can not but have a great effect upon the business and trade of the province generally, and with a continuation of the good crops of recent years and a maintenance of the prices which the farmers have realized for the products of their farms during the past year, must place the province of Manitoba in the very front rank of desirable countries for incoming settlers."

The provincial Treasurer delivered his budget speech on April 5. The ordinary expenditure for the year was stated to be \$774,353, compared with \$761,635 in 1896. The receipts were \$683,705, or \$124,730 less than had been estimated. The estimated revenue for 1898 was \$900,035, and the estimated expenditure \$1,009,588.

Progress.—Perhaps nothing shows the development that is going on in Manitoba and the territories more directly than the sales of farm lands. All reports from the large land companies show a steady and rapid increase in land sales. The sales made by the Canadian Pacific Railway land department during 1897 were more than double those of the previous year. The largest sales were made during the last three months of the year, but the Canadian Pacific Railway land sales to the end of August this year aggregate more than were made for the whole of last year. The number of acres sold monthly by the Canadian Pacific Railway land department for the past three years was as follows. The total given for 1898 is to the end of August only:

MONTHS.	1896.	1897.	1898.
January.....	4,561	9,443	25,044
February.....	4,067	8,163	20,650
March.....	8,120	8,727	23,421
April.....	8,222	10,785	43,145
May.....	6,100	15,802	43,148
June.....	4,634	18,964	49,303
July.....	6,070	17,083	29,512
August.....	3,606	9,460	19,449
September.....	2,452	16,066	
October.....	8,038	25,273	
November.....	15,147	38,773	
December.....	16,457	20,938	
	87,878	199,481	270,572

Crops.—In 1895 the area under wheat, oats, barley, flax, potatoes, and roots was 1,887,796; in 1896, 1,614,221; in 1897, 1,958,025; and in 1898, 2,210,942. The official estimate of beef cattle in the province in June, 1898, was 7,901, and of milch cows 74,773. There were 35 cheese factories in operation. The crop was splendid, and the farmers came through the year with much financial benefit.

Railways.—For many years a standing grievance of the farmers of Manitoba against the Canadian Pacific Railway was the fact that they had to ship their grain through its elevators or else pay the elevator its regular charges whether the grain went via the elevator or not. In July the railway finally gave way and granted the privilege of loading grain directly into the cars from vehicles or platforms. In 1897 Mr. Greenway had conceived a project to connect Winnipeg with Duluth, Minn., by rail, and thus give the people competition with the Canadian Pacific Railway. The objection to this was in the introduction of American lines to Canadian business and the consequent transfer of Winnipeg traffic to the United States. Much opposition was raised, especially in eastern Canada, where large sums had been paid to build the Canadian Pacific Railway and to obtain the Manitoba market. Eventually the Manitoba Government found that it would be impossible to secure control of the rates on the proposed line and it was abandoned. In 1898 the Government took up and approved the Ontario and Rainy River road, giving connection with Ontario over Canadian territory.

Education.—The school population in 1897 was 51,178; the number of pupils registered was 39,841; the number of teachers was 1,197, of whom 601 were male and 596 female; the number of organized school districts was 1,018; the average teacher's salaries in towns and cities was \$533, and in rural districts \$484. The total receipts of the education department was \$825,774, and expenditures \$805,417. The school assets of the province were \$1,754,875, and the liabilities \$1,018,568.

Winnipeg.—The city of Winnipeg, which is the center of provincial life and activity, showed pronounced evidence of progress during the year. More than \$1,300,000 was spent in new buildings, and these in detail illustrate the activity of business. Messrs. Gordon and Ironsides did not erect their expensive *abattoir* in anticipation of a cattle trade to be brought into existence in the future; the reality was already there.

The *abattoir* was opened on Sept. 1, with great ceremony. It was built at a cost of \$100,000, with a daily capacity of 400 cattle, 500 pigs, and 500 sheep.

The elevators, factories, wholesale warehouses, and fine retail and office blocks that have been built are further proof of progress. So with the new schoolhouses, for which the ratpayers are expending large sums.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and 1,042,390 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Lloyd Lowndes;

Secretary of State, Richard

Dallam; Comptroller, P. L.

Goldsborough; Treas-

urer, T. J. Shryock;

Adjutant General,

A. L. Wilmer; At-

torney-General, H.

M. Claybaugh;

Superintendent

of Education, E.

B. Prettyman—

all Republicans

except Pretty-

man, Democrat;

Chief Judge of

the Court of Ap-

peals, James Mc-

Sherry; Associate

Judges, David Fow-

ler, A. Hunter Boyd,

Henry Page, Charles

B. Roberts, John P.

Briscoe, W. Shepard

Bryan, and James A.

Pearce; Clerk, Allan Rutherford—all Democrats except Rutherford, Republican.

Finances.—According to the report of the Comptroller to the General Assembly in 1898 for the fiscal year ending Sept. 30, 1895, the balance in the treasury was \$704,568.19; for the fiscal year ending in 1896 the total receipts were \$3,156,875.64; total available cash for 1896, \$3,861,443.83; total disbursements, \$2,945,401.07; leaving balance in the treasury on Sept. 30, 1896, of \$916,042.76; receipts into the treasury for fiscal year ending Sept. 30, 1897, \$2,772,055.40; total available cash for the fiscal year of 1897, \$3,688,098.16; total disbursements for same year, \$2,980,959.58; leaving balance in treasury on Sept. 30, 1897, of \$707,138.58.

The receipts for the free-school fund were \$66,259.14, which, added to the balance on hand Sept. 30, 1896, of \$2,000, made \$68,259.14, a loss of \$3,796.22 as compared with 1896.

The total receipts for the sinking fund were \$627,404.18, all of which was invested in Maryland 3.65s, the par value of which was \$613,475. There was sold during the year from stocks and bonds belonging to the sinking funds \$74,000 of Frederick City 4-per-cent. bonds and \$161,000 of Baltimore City stocks, aggregating the par value of \$235,000, which, deducted from the par value of stocks purchased, left \$378,475 as the net par amount invested for the year, this sum exceeding that of 1896 by \$70,775. The sinking fund for the defense redemption loan aggregated \$3,494,245.05, as against \$3,204,770.05 for the year previous, being in excess of the loan by \$494,245.05. The loan matures Jan. 1, 1899.

The receipts for the oyster fund were \$66,783.90, which, added to the balance on hand in 1896, made the total receipts for the fiscal year \$67,270.73, an amount largely in excess of the ordinary receipts for the year previous, the increase being attributable almost solely to receipts from dredging licenses. The disbursements were \$66,761.97, leaving a balance of \$568.76.

Little change was made in the productive assets of the State, which aggregated \$3,430,584.14, against \$3,605,249.99 in 1896. The unproductive stock amounted to \$8,129,626.99.

The State debt at the close of the fiscal year of 1897 aggregated \$9,284,986.24. Deducting the productive assets of the State, as well as stocks and bonds to the credit of the sinking funds at their par value of \$6,335,908.11, left as the net debt of the State on Sept. 30, 1897, \$2,949,078.13, as against \$3,338,553.13 for the previous year, or a net reduction of \$389,475 for the year.

The assessed value of property for State purposes under the new assessment was \$607,965,272, an increase of \$67,503,525 over that of 1896. The increased basis in 1897 produced a corresponding increase in the amount of levy, the same being \$1,079,138.27, or an excess over the previous year of \$119,818.74. This increase was beneficial only for the purposes designated in the State levy, namely, schools, free books, and loans, and could not affect the revenues for ordinary expenses. One of the provisions in the new assessment law is the levying of a tax of $\frac{1}{4}$ of 1 per cent. on the income of mortgages, three fourths of such tax going to the counties in which the mortgages are to be recorded, and the remaining fourth going to the State. The provisions of this law increasing the franchise tax upon the gross receipts of all railroad companies whose roads are worked by steam, as well as upon other companies, have largely increased the revenue from this source, the sum of \$171,140.05 having been received during the year.

The receipts from the public-school tax were \$678,447.44; disbursements, \$496,224.69. The receipts for free school books for the year aggregated \$115,552.14; the disbursements, \$150,000, being the amount appropriated by law, regardless of what sum may be received from the levy of 2 cents, set apart for this purpose. The failure of the Legislature to provide a sufficient tax rate to meet this appropriation had produced in two years the deficit of \$120,818.08.

The revenue from the clerks of courts amounted to \$937,572.96; deducting from this amount the sums due Baltimore city from the sale of high liquor licenses, being three fourths thereof, together with the sums due the oyster fund, aggregating \$477,023.84, left the sum of \$460,549.12 applicable for the ordinary expenses of the State government.

LLOYD LOWNDES,
GOVERNOR OF MARYLAND.

The receipts from registers of wills amounted to \$120,184.33. The amounts paid in from collectors of State taxes aggregated \$1,019,631.76. Receipts from tax on the shares of capital stock of the various incorporated institutions in the State amounted to \$81,332.50. The gross receipts from tobacco warehouses amounted to \$78,541.66; disbursements, \$72,283.78. Receipts from licenses and taxes upon premiums paid by insurance companies and from the fire marshal amounted to \$139,069.82; from franchise tax on the deposits of savings banks and institutions, \$29,059.93.

Banks.—Among the total resources, \$19,530,414.19, of the 47 national banks in the State reported at the beginning of the year were: Loans and discounts, \$10,863,203.71; United States bonds to secure circulation, \$2,106,750; premium on United States bonds, \$148,994.18; stocks, securities, etc., \$2,261,889; real estate and mortgages owned, \$94,403.35; due from approved reserve agents, \$2,044,829.97; gold coin, \$384,568.98; total specie, \$713,960.53. Among the liabilities were: Capital stock paid in, \$3,746,700; surplus fund, \$1,667,675; undivided profits, less expenses and taxes paid, \$409,521.99; national bank notes issued, \$1,882,570; amount outstanding, \$1,818,370; due to other national banks, \$331,803.73; due to State banks and bankers, \$116,928.99; individual deposits, \$11,287,180.14.

Education.—The annual report of the State Board of Education gives the following statistics: Number of schools in Baltimore city, 188; in the counties, 2,266; total, 2,454, being an increase in 1897 of 65. Number of different pupils, city—90,996; counties, 138,951; total, 229,947, being an increase of 10,585. Number of teachers—city, 1,798; counties, 3,038; total, 4,836, being an increase of 220. Receipts from all sources—city, \$1,280,266.01; counties, \$1,298,380.49; total, \$2,578,646.50, being an increase of \$238,029.89. Amount paid for teachers' salaries—city, \$1,011,449.60; counties, \$861,722.01; total, \$1,873,171.61, being an increase of \$82,430.79. Total expenses for public-school purposes—city, \$1,404,543.56; counties, \$1,298,380.49; total, \$2,702,924.05, being an increase of \$52,658.46.

The counties throughout the State are said to be taking action toward an execution of the powers vested in them by the Legislature for the establishment of local libraries. Each of these libraries will, in a sense, be a branch of the State library. The financial plan upon which they are to be established is comparatively inexpensive. Before public money can be expended in the enterprise it is made necessary to submit the question to a vote in order that the people of the town may give expression to their preference, and the same right is extended to the county at large.

At a convention of the State Sunday-school Union Maryland was claimed as the "banner State" of Sunday-school unions. There were reported 250,000 pupils, 25,000 teachers, and 2,600 schools.

Fisheries.—In 1896-'97 the Fish Commissioners propagated at the hatcheries and distributed to different parts of the State more than 136,000,000 fish, including shad, perch, trout, bass, and carp. The area occupied by oyster beds in Chesapeake Bay was estimated at about 200 square miles. While 1897 was noted for an immense catch of oysters, there was a serious depression in prices. The report of the Commissioners of Fisheries says: "The diamond-back terrapins for which Maryland has long been famous are now in great danger of becoming extinct. The price for them has become so extravagant that none except the wealthy can indulge in the luxury of eating them, and yet the numbers are so few that they are not the source of any considerable revenue to the people of the State."

Penitentiary.—At the close of 1897 there were 855 prisoners in the Penitentiary; during the year 412 were admitted and 325 discharged. The prisoners were profitably employed under the various contractors, the percentage of non-productive inmates being only 8½. The prisoners earned for themselves by overwork \$23,722.83. The net earnings of the institution amounted to \$27,871.84, a gain of \$10,147.49 over the previous year. The cost *per capita* for the support of the prisoners for the year was \$97.38½, the smallest in the history of the prison. For the erection of new buildings \$405,709.66 was expended, and \$143,695.33 for the purchase of ground.

Exports and Imports.—It is officially stated that the year 1897 "was the greatest ever known in the history of the export trade of Baltimore." During the year there were exported 15,178,649 bushels of wheat, 42,692,087 bushels of corn, 3,418,669 bushels of rye, 5,244,164 bushels of oats, and 2,287,130 barrels of flour. In addition to the great increase in the breadstuff trade there were notable gains in the trade in lard, provisions, glucose, copper, lumber, and tobacco. The imports for the year amounted to \$11,107,467. Receipts at the customhouse were \$228,711. During the year 1,023 vessels sailed for foreign ports, carrying 1,656,928 tons of cargo; for coastwise ports, 2,138 vessels, with 2,143,104 tons of cargo.

Coal and Tobacco.—The total output of coal of the various mines was 3,931,929 tons. The crop of tobacco was 34,873 hogsheads, the medium and better grades selling at 13 and 14 cents per pound.

Industries.—There were 32,556 farmers in the State, tilling an area of 9,382 square miles. Outside the city of Baltimore there were 5,016 manufacturing establishments, including 737 flour mills, 239 fruit-packing houses, 389 sawmills, 89 oyster-packing establishments, 146 carriage and wagon factories, and 201 dairies. In Baltimore alone there were 990 factories, employing about 100,000 hands, whose aggregate wages per annum were \$42,000,000; capital invested, \$120,000,000; value of output per annum, \$175,000,000. Baltimore's shoe business was estimated at about \$20,000,000; the millinery trade approximated \$3,000,000; hats and straw goods, \$2,000,000; canned articles, \$7,000,000 in Baltimore and \$3,000,000 outside. Over 160 incorporations for business enterprises were recorded during the year in the city, 133 of which were for mercantile, manufacturing, and various trade purposes, the aggregate capital invested being \$5,490,000. The remaining 27 corporations, with a capital of \$44,111,100, were building and savings associations, etc.

Water Ways.—But little work was done in the improvement of the rivers and harbors of the State. In November the Board of Public Works decided to sell all the interest of the State in the Chesapeake and Ohio Canal, which had cost the State about \$25,000,000. It is said that this action was taken for the purpose of enabling the Baltimore and Ohio reorganization managers to obtain a title to the property and to use it in connection with their system. The canal extends from Georgetown, D. C., along the banks of the Potomac to the Cumberland, and is the oldest of the great interior artificial water ways planned in this country in the early part of the century. It was for more than half a century the main public work of Maryland and was built almost entirely by the State.

Game.—The effort to introduce foreign quail into the State has proved a failure. Many birds were imported from the Scilly Islands and from China and liberated in the State, but all have disappeared. The failure of the foreign quail propagation was followed by success in the introduction of American birds. Thousands of partridges from

North Carolina have been loosed in the State during recent years, and reports to the Game and Fish Protective Association indicate the success of the experiment.

San José Scale.—The State entomologist reports that since the first discovery of this pest in Maryland in 1894 the scale "has become established in 18 of the 23 counties of the State, representing 58 localities and involving 95 premises." In the infested orchards, containing 157,165 trees, 58,620 trees were affected, and 50,343 of the latter had been killed in the past four years, leaving 8,277 infested among 106,822 bearing trees. In addition, 21,577 nursery trees had been destroyed.

Boundary.—The disappearance of the monuments marking the boundary line between Maryland and Virginia through Pocomoke Sound and river, and the consequent uncertainty as to the true location of the boundary, has for several years been a source of friction between the citizens of the two States and an embarrassment to the fisheries. In 1897 the Governor appointed a commissioner on the part of the State, to act with a similar commissioner of Virginia in having this boundary line remarked, and the work was duly completed, the cost to be borne equally by the two States.

Lynching.—In his message to the General Assembly the Governor said: "There have been three cases of lynching in Maryland during my administration as Governor. In all these cases the persons accused or suspected of crime were taken from the custody of the proper officers of the law. In the first no indictment had been found; in the second there was an indictment and the case ordered to be removed for trial to another county; and the third, notwithstanding the fact that the prisoner had been speedily tried, convicted, and sentenced, he was taken, in open day, against the entreaties of the judge who had just condemned and sentenced him, and killed by an infuriated mob, in defiance of all decency and law, at the very door of the courthouse. The latter was the only one out of the three where the prisoner was charged with that crime the commission of which has been held by some to be a justification for such violence. . . . Lynchings constitute murder, pure and simple, and no legislation could more clearly define the crime or prescribe the punishment. And yet it seems impossible to secure even a presentment against those who thus set the law at defiance. If a law could be passed placing upon the county in which a lynching occurs some heavy pecuniary penalty, it might help to create public sentiment against this crime which would bear fruit in the choosing of officers who would use intelligent and courageous efforts to protect their prisoners and discover and prosecute these offenders against law and order."

Legislation.—Among the bills passed by the General Assembly were the following:

To appropriate \$50,000 for two years to Johns Hopkins University.

For the education of women to teach in the public schools by providing free scholarships in Western Maryland College, and appropriating \$65,000 per annum additional for that institution.

Providing for a uniform law for promissory notes and other negotiable paper.

Requiring foreign corporations doing business in the State to file their charters here.

To authorize the Mayor and city council of Baltimore to issue bonds for \$5,000,000.

To protect the wife from the debts of her husband.

To limit the hours of labor employees of Baltimore, except firemen and policemen, to eight.

To provide for teaching the principles of civil government in the public schools.

Providing for fourteen free scholarships at Washington College.

Appropriating \$12,000 for the Antietam Battlefield Commission to locate positions of Maryland troops on the field and to erect a monument.

Political.—The total vote cast at the State election in November but slightly exceeded 200,000, against 250,000 cast at the presidential election in 1896. While the Republicans lost the city of Baltimore by 569 votes, they carried the State outside of the city by 5,898 votes.

MASSACHUSETTS. a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; and 2,238,943 in 1890. By the State census of 1895 it was 2,500,183. Capital, Boston.

Government.—The following were the State officers in 1898: Governor, Roger Wolcott; Lieutenant Governor, William M. Crane; Secretary of State, William M. Olin; Treasurer, Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hosea M. Knowlton; Secretary of the Board of Education, Frank A. Hill; Adjutant General, Samuel Dalton; Secretary of the Board of Agriculture, W. R. Sessions; Insurance Commissioner, Frederick L. Cutting; Chairman of the Railroad Commission, John E. Sanford—all Republicans; Bank Commissioner, Warren E. Locke; Chairman of the Board of Lunacy and Charity, Leontine Lincoln; Greylock Reservation Commissioners, T. W. Rockwell, John Bascom, and Alfred B. Mole; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, Oliver W. Holmes, Marcus P. Knowlton, James M. Morton, John Lathrop, James M. Barker, John W. Hammond; Clerk, Henry A. Clapp; Judges of the Court of Registration created by the land transfer act of 1898, Leonard A. Jones, Charles T. Davis; Recorder, Clarence C. Smith.

Finances.—According to the Treasurer's report for 1898, the cash on hand Jan. 1, 1898, was \$10,206,772.61; cash on hand Dec. 31, 1898, was \$10,695,670.93. There was received during the year from the collateral legacy and succession tax \$563,672.34 and \$8,422.98 for interest on overdue taxes.

Loans were issued in 1898 to the amount of \$8,227,500, bearing interest at the rates of 3 and $3\frac{1}{4}$ per cent.

The Treasurer discusses at length the expenses consequent upon the war with Spain. The number of men on the rolls Dec. 31, 1898, entitled to State pay, etc., was more than 11,400. The total amount paid the soldiers or their dependents up to Jan. 18, 1899, was \$334,943.30.

The Governor's message says the net debt has increased more than threefold in four years.

Education.—Smith College received an anonymous gift of \$50,000; Mount Holyoke, \$100,000 from Charles F. Wilder, and \$50,000 from D. K. Pearson, which was conditioned on the raising of an endowment fund of \$150,000, which is now complete. Harvard College received \$500,000 by the will of Edward Austin, who also left the Massachusetts Institute of Technology \$400,000 and Radcliffe College \$30,000.

The Massachusetts Institute of Technology receives a national distinction in the transfer to it from Annapolis of the new course in naval architecture recently established at the latter place. This is an attempt to give as sound technical training to certain cadets, after they have been graduated at Annapolis, as that which has been given in foreign countries, particularly in England.

A radical change has been made in the regulations governing the students of the law school, Boston University. The change is in the entrance requirements, which affect also the students that entered under the old *régime*, who will be compelled to pass an extra examination in the entrance requirements, or present satisfactory certificates from recognized schools, stating that the student is proficient in the studies specified in the change before they can receive the LL. B. degree.

The principal changes in the requirements that have been made are in English, Latin, and mathematics.

Kingston has a new public library bearing the name of the giver, Frederic C. Adams. It was dedicated Aug. 4.

Charities and Corrections.—The State Board of Insanity, provided for by the Legislature this year, was formed in September, the Governor having appointed as members Dr. George F. Jelly, for five years; Dr. Herbert B. Howard, for four years; Dr. Charles R. Codman, for three years; Edward S. Bradford, for two years; and Francis B. Gardner, for one year.

The Woman's Relief Corps of the State dedicated a new dormitory at the Soldiers' Home, Nov. 9, and at the same time gave to the Home a marble bust of Gen. Horace Binney Sargent.

The report of the Prison Commissioners for 1897 shows that the cost of support was \$143,639, and the cost *per capita* was \$174.53, while in 1896 it was \$181.61. The net profits derived from industries of convicts were reduced by \$23,197.25. There has been a constant increase in the population of the prison during the year. At the date of the last report there were 796 prisoners. One hundred and ninety-seven have been committed by the courts, and one has been returned by the revocation of his pardon. One hundred and twenty-eight have been discharged by expiration of sentence, as shortened by deductions for good conduct; 14 have been removed to the lunatic hospital; 9 have been released on parole by the commissioners; 6 have died; 4 have been pardoned; 4 have been removed to the State farm, and 3 have been transferred to the Massachusetts Reformatory—leaving at the present time 826 inmates.

The Attorney-General, in his report, says: "The number of capital cases requiring the attention of this office, or of the District Attorneys, though greater than in the two years next preceding, is less than the average of recent years. The assertion has often been made that the crime of murder is increasing in this Commonwealth. I believe that statistics show this to be untrue. The number of indictments for murder in proportion to the population of the Commonwealth has decreased, rather than increased." The largest number of indictments for murder since 1875 was 27, in 1881; the smallest, 8, in 1896. There were 14 in 1897.

Military.—The number of men in the National Guard at the beginning of the year was about 8,500. The following, on the part of the State in the war with Spain, is from the Boston "Journal": "On land and sea, it is a matter of official record that Massachusetts has given more men to this war than any other equal population in the Union. We have had 3 of our 5 volunteer regiments actually in the field—a proportion which no other State can equal. We have sent thousands of men into the regular service. Afloat we have gloriously maintained our traditions. The nation has received our entire naval brigade of 500 officers and men, and another battalion has been recruited and held in reserve. Fifteen hundred Massachusetts seamen have enlisted in the regular navy at the Charlestown Navy Yard and 450 more at Gloucester. There is

not a ship in the service on which Bay State men are not to be found. Their numbers and quality are suggested by the circumstance that five of Hobson's seven comrades on the 'Merrimac' joined the service from within our borders. Two legislative appropriations have placed a war fund of \$1,500,000 at the disposal of the Governor. Out of this fund a local defense of the State's coast line was quickly extemporized, and the Massachusetts troops have been sent into the service with a complete equipment for health and comfort which evoked the admiration of the War Department."

From an address by the Governor in October are taken the following additional data: "Under the first and second call Massachusetts furnished 6,988 men, and in the signal corps and regulars about 1,500 more, making a total of 8,500. In the naval brigade about 600, and in the navy and marine corps about 2,000, bringing the total in the army and navy up to 11,000 men. Out of that sum of \$500,000 placed in my hands for expenditure at my discretion, the sum of \$307,000 has already been paid out, chiefly for arms, equipment, pay allowance, subsistence, and clothing. The Legislature of Massachusetts, with wise generosity, provided that for all soldiers of Massachusetts, whether enlisting in the volunteer service of the United States or in the regular service, whether on land or afloat, the Commonwealth would supplement the payment made by the United States Government by a monthly payment of \$7. Under this generous policy over \$210,000 has already been paid from the treasury of the Commonwealth. Not only that, but it provided that upon the death of a soldier this monthly payment of \$7 should be continued after his decease. The Commonwealth has also made provisions for hospital treatment for all soldiers of the Commonwealth in whatever hospitals they may have been received, and in cases where the condition of the family is such as to make it necessary, it aids also in the final solemn rites of burial. Two hundred and fifty thousand dollars has been placed in the treasury of the Volunteer Aid Association without personal solicitation. The Legislature gave me authority to spend \$50,000 in the purchase of a ship that should be equipped as a hospital and relief ship to follow our brave soldiers to Cuba or to Porto Rico, and to carry to them aid and relief and comfort and supplies, and to bring back those broken down by wounds or sickness. That vessel has performed a most beneficent work." Massachusetts lost 298 men in the service, only 9 of whom, it is stated, were killed in battle.

Cattle.—The number of cattle paid for as tuberculous during 1897 was 5,275, and the amount paid for them was \$179,867.52. More than \$5,500 was paid for 160 animals in which no lesions of tuberculosis were found. Quarantine killing and burial expenses and arbitration brought the average amount paid for condemned cattle up to \$34.12 per head.

Insurance.—The commissioner's report has the following on assessment companies: "Following the passage of the general assessment law of 1877, 62 assessment companies were almost immediately organized. Every one of them has now departed, some going in infancy, some in childhood, while only two lived to be of much consequence, and both of these are now having their bankrupt estates administered upon by order of the court. Their beneficiaries will receive perhaps 25 per cent. of their claims, while their old or feeble members, whom no company would now insure, are left desolate, all their fond hopes, that when life for them should cease something would be left to their dependents, being dashed to earth. Many of these people feel that they have been deceived—nay, robbed without

conscience. Some blame the companies' managers, while others, who look beyond the instruments to the system, hold the Commonwealth of Massachusetts responsible, because it set its seal of approval upon laws which authorized, under the name of life insurance, the easy organization of companies with such elements of weakness and uncertainty."

Banks.—According to the annual report of the State Board of Savings Banks, the amount of money deposited in such institutions in 1897 was \$83,814,012, an increase over the preceding year of \$3,897,482, and this aggregate sum deposited is larger than that of any one of the ten years preceding. The amounts deposited averaged \$66.34 to each deposit made, an increase of \$1.92 over the average of last year. The total amount withdrawn from the banks during the year was \$79,334,807.88, or \$2,413,383.02 less than the sum withdrawn in the year preceding. The report relates to 187 savings banks and institutions for savings, with assets of \$503,973,934; 34 trust companies, with assets of \$134,294,237, and 2 trust companies and 4 savings banks in the hands of the court. The total amount of dividends declared was \$17,335,519, an increase of \$500,511 over last year.

Fisheries.—A report on the fisheries of Massachusetts recently issued by the Bureau of Labor Statistics furnishes further evidence of the decline of the industry. This is ascribed to the scarcity of the finer fishes, such as the mackerel, the halibut, and the bluefish, due, according to some observers, to their reckless and wasteful pursuit. The number engaged in the fisheries in 1895 was 11,093, compared with 11,743 in 1885. The working capital declined from \$7,652,089 in 1885 to \$4,488,564. The value of apparatus employed was \$725,152 in 1885 and \$599,267 in 1895. Measured by value, the total catch of 1895 was considerably less than in 1885, largely due to the exceptionally small haul of mackerel in 1895. Measured by quantity, the 1895 catch was the larger. The greatest falling off is in mackerel. From 1886 to 1894 the number of barrels of pickled mackerel inspected at Boston and Gloucester averaged fewer than 60,000 a year. For the twenty-five years previous to 1886 the number of barrels averaged about 200,000 a year. From 1820 to 1838 the number varied from 110,000 to 338,548. The catch of haddock in 1895 was more than double that of 1885, and the same is true of herring, while the cod catch rose from 77,729,196 pounds in 1885 to 81,092,958 in 1895. During the same period the oysters dredged fell from 86,964 to 71,222 bushels, and the lobsters caught from 3,370,724 to 2,119,587 pounds. A report from Gloucester says that during the year ending Dec. 6, 1898, 49,952,000 pounds of fresh fish were landed there, and 47,207,000 pounds were landed in Boston.

Labor Interests.—Reductions in wages in January caused strikes among mill operatives all through the State as well as throughout New England. The reductions amounted to about 10 per cent., and were estimated to affect 125,000 persons in about 150 mills. New Bedford, Fall River, and Taunton were specially affected by the strike. The strike council at New Bedford issued an appeal, March 17, in which was said: "Nearly nine weeks have gone by since the inauguration of the strike, funds have long since become exhausted, while contributions on behalf of the strikers have not averaged more than 25 cents per head per week. The suffering has become intense, while applications for relief to the Poor Department have increased sevenfold. A mutual levy of 25 cents per week upon every textile worker of New England, whose battle we have fought and are fighting, would place us beyond the reach of actual starvation. The strikers are just as firm, just as determined, and just as

resolute to-day as the day they quit work. There is no break, no dissension in their ranks, but it is mutually agreed by those in want and those yet beyond the reach of actual want that we must have far more substantial sympathy and support or we must acknowledge defeat." The city gave employment to many of the strikers and supplies to families in want.

There were strikes among brickmakers at East Brookfield, street-car employees at Haverhill, and lasters at Brockton, Rockland, Middleboro, Avon, East Weymouth, Stockton, and other towns in the southeastern part of the State, lasting about six weeks and ending without material benefit to the workmen, as it appears.

Centenary of the Statehouse.—The Legislature celebrated the hundredth anniversary of the day when the Commonwealth took formal possession of the Bulfinch Statehouse on Beacon Hill, Jan. 11. "It was at noon, exactly one hundred years ago, that Gov. Increase Sumner, Lieut.-Gov. Gill, President Samuel Phillips, of the Senate, and Speaker Edward H. Robbins, of the House, headed the procession which marched from the Old Statehouse on Washington Street, the colonial structure surmounted by the lion and the unicorn, and in solemn file and dignified tread wended their way to the new building crowning Beacon Hill. The exercises of occasion included a speech by Gov. Sumner, and those of the 12th included an address by Gov. Wolcott. The noteworthy dates in the history of our Statehouse are these: July 4, 1795, when the cornerstone was laid; Jan. 11, 1793, when the formal opening was had; 1853, when the Bryant addition was constructed; 1866, when the Washburn changes were made; 1896, when the late repairs were instituted; and to-day, when we celebrate the centennial."

Legislative Session.—The General Court convened Jan. 5, and was prorogued June 23, after the longest session since 1894. George F. Smith was President of the Senate and John L. Bates Speaker of the House. The Legislature enacted 580 bills and 119 resolves, and of these 580 acts and 111 resolves were signed by Gov. Wolcott and 2 measures were vetoed.

In order to secure more equitable assessments of personal property, the Tax Commissioner was authorized to appoint a deputy to inspect the work of local assessors, and require them to make such changes as will tend to produce uniformity in valuation and assessment in the State.

Provision was made for review of municipal expenditures; certain number of real-estate owners of any city, town, or county may by petition require a justice of the Superior Court to investigate alleged unlawful expenditure of public money.

The general act relating to negotiable instruments, which was recommended by the national conference of commissioners in 1896, was adopted as the law of Massachusetts.

The law relating to elections was revised and consolidated. Nomination of candidates is to be by majority instead of plurality vote. Those voting at a caucus of one party can not vote in a caucus of another within twelve months, instead of the same calendar year, as formerly. No warden, clerk, or inspector may be an employee of the State, county, or city, a member of a ward or town committee, or a candidate before the caucus. Ballots must be counted within 3 feet of the rail. Cities and towns may use voting machines approved by the State Treasurer, Auditor, and Secretary, and on petition of 50 voters of any party in a town or ward they must be used in caucuses. The law relating to a particular voting machine was repealed.

The settlement laws were so revised as to make

settlements wholly or partly acquired before 1860 of no effect; and settlement is lost by absence from the State for ten years in succession. Formerly a settlement acquired since 1794 remained good, and descended from father to son; so that one who had never lived in the State might claim a settlement if his ancestors had gained one. Residence of five years and payment of all taxes for three years are now required to obtain a settlement.

The Torrens system of land registration was adopted. The Governor and Council are to appoint a court of registration and a State recorder of registration. The court is to consist of two judges and have original jurisdiction over all applications for registrations of titles.

It was provided that when the machinery in a factory is stopped for any cause, and women and minors have been obliged to stay in the workrooms during the stoppage, they shall not lose pay for the time nor be required to make it up without extra compensation. The law relating to employment of minors was generally amended. The law providing for the weekly payment of wages was made to apply to all manufacturers, instead of only to those having as many as 25 employees. The Labor Bureau is to investigate Sunday labor in the State, and also the subjects of profit-sharing and industrial insurance.

A report was received from the committee appointed in 1897 to investigate the relations of street railways to cities and towns, and a law was passed embodying most of its recommendations. A special tax was imposed upon the profits of roads paying dividends of more than 8 per cent., and which have paid dividends since they began operations equivalent to 6 per cent., and also a tax on gross receipts from 1 to 3 per cent. Street railways are to come under the supervision of the State Railroad Commissioners.

Some additions were made to the militia laws: Volunteers are to give seven days of camp duty each year, temporary enlistments and provisional companies were provided for, and the commander-in-chief was permitted to form additional companies of naval militia, not exceeding four.

The game laws were so amended that wild deer may not be hunted before Nov. 1, 1903; and the open season for scoters is to begin May 20, instead of April 15.

A general law was passed for the incorporation and regulation of fraternal beneficiary insurance associations. Fire insurance companies are not to be liable for more than the value of property when burned; if the insurance is greater, the premiums on the difference are to be refunded with interest. Provision was made for insurance against loss by bombardment. The law limiting the amount a company may insure in a town or fire insurance district on property other than dwellings and farm buildings and contents was repealed.

Laws in regard to convicts authorize the General Superintendent of Prisons to establish a camp for 100 prisoners, who are to be employed in reclaiming the land and preparing material for roads; he is also to employ inmates of the reformatories and jails in the same way; and goods are to be made for use in State and county institutions by convicts under his direction. The laws in reference to releasing convicts on probation were amended. The Governor may grant a conditional pardon to a convict upon his petition, if he has served half his sentence and has kept all the rules of the institution.

It was enacted that the death penalty shall hereafter be inflicted by electricity, and \$7,500 was appropriated for a building for the purpose at the State Prison.

It was enacted that declarations of deceased persons are not to be excluded from evidence as hear-

say if they were made before the beginning of the suit, and upon personal knowledge of the declarant. A probate court may appoint a conservator of the property of any person unable by reason of advanced age to care for it, upon petition of such person or of one or more of his friends. A probate court may also authorize a special administrator to do such acts as the interests of the property or estate may require. A bill providing for a war loan of \$1,500,000 became a law. The bonds are to run thirty years, and to bear interest not to exceed 4 per cent., payable semiannually. The money was needed to pay bounties authorized for Massachusetts volunteers, and for other expenses on account of the war. Another act appropriated \$50,000 for a hospital ship.

An appropriation of \$25,000 was made for making Greylock mountain a State reservation.

A resolution granting woman suffrage was debated at some length, but when it came to a vote there were not enough of the friends of the measure to demand a rollecall. Twice the opportunity was given for those who wished a yea and nay vote to express themselves. It required 30 votes, and on each occasion only 29 rose.

Among other enactments were the following: Empowering cities and towns to construct bicycle paths and appropriate money for the purpose.

Establishing a State board of insanity of 5 members, to be appointed by the Governor and Council.

Making the officers of corporations jointly and severally liable for debts contracted before the original capital is fully paid in and the certificate of payment properly filed.

Allowing associations not for profit to change their purpose of incorporation.

Prohibiting the use of trading stamps.

Requiring records of religious societies to be deposited with the town or city clerk after meetings have been discontinued for two years.

For exterminating the brown-tail moth.

Declaring advertisements on fences, etc., without consent of the owner or tenant, public nuisances, which may be abated by any person.

Providing that no loans of less than \$200 at an interest greater than 12 per cent., secured by mortgage on personal property exempt from attachment or by assignment of wages, shall be made without a license; the license board is to fix rates and may revoke the license.

Amending the law regulating the sale of poisons, adding carbolic acid to the list, and prohibiting the sale of cocaine without a physician's prescription.

Providing that corporations having deposits to the credit of any pauper shall give information to the poor officers.

Prohibiting the employment of other than citizens of the State in the making and repairing of State roads.

Allowing cremation of the bodies of the dead.

Giving the right of way to fire engines and carts in cities and towns when going to fires, and providing fine and imprisonment for obstruction.

Making persons and corporations liable in damages for not less than \$500, or more than \$5,000, for negligence resulting in the death of a person not in their employ.

To provide an equitable process after the giving of a judgment based on necessities of life supplied to a debtor.

Prohibiting a married woman doing business on her own account from carrying on business in the name of her husband.

Amending the law relative to exemption of property of soldiers and their wives, and extending it to widows of soldiers. The exemption of any one family is not to exceed \$2,000, and the combined

property of a family claiming exemption not to be more than \$5,000.

Amending the law for preventing spread of contagious diseases among domestic animals; the work is to be hereafter performed, so far as possible, and the appropriations therefor expended, by the local inspectors acting under direction of the Board of Cattle Commissioners.

Political.—The annual report of the political proceedings of the State Advisory Board of the American Protective Association was published in February. Following are excerpts:

"The political interest and activity of our members have not diminished since our last report. Our large representation in the General Court has been maintained. All candidates seeking our support for office were informed that, while we antagonize no man on account of race, color, or religion, yet we do stand for separation of Church and state, no public funds for sectarian purposes, and restriction of immigration. Suitable candidates in sympathy with these principles received our hearty support.

"The political board of Boston was much stronger than in previous years. Every ward was represented in its composition, the attendance at its meetings beating former records. This board refused to indorse any candidate in the canvass for the nomination for Mayor, or to support either candidate as a body at the polls.

"Our representation in Congress has increased since our last report.

"We commend our membership for conducting their work quietly, without ostentation, and for not seeking notoriety in the public press. We have endeavored not to inject a turbulent spirit into any party or parties, but it is our purpose to stand steadfastly by the principles herein referred to."

State officers were chosen at the election, Nov. 8, as well as members of Congress and of the Legislature. There were five tickets in the field: Democratic, Republican, Socialist-Labor, Prohibition, and Socialist-Democratic.

The Democrats met in convention at Worcester, Oct. 4. The advocates of free coinage of silver were in control, and John W. Corcoran, a member of the National Democratic Committee, who is not in sympathy with his party in the State on that question, was removed. The platform, declaring for free silver, said: "The futile policy of the Republican administration in sending a commission to Europe to secure international bimetalism, and at the same time in thwarting and bringing to naught every effort of that commission, and in making its success impossible, has revealed the predetermined purpose of the Republican party to violate its pledges to the American people, and to prevent bimetalism in any form, not only in the United States, but throughout the world."

Opposition to imperialism was declared, and the conduct of the war was criticised as follows:

"The military administration during the recent war has been a stigma on the history of the republic and a disgrace to civilization. The army which sprang into existence has been made the prey of incompetents and favorites, who have fattened on the sorrows of American soldiers. The brave young men who fought our battles in the West Indies were left without adequate food, medicines, or surgical assistance; they were deprived of the abundant provisions which a generous and patriotic people had made for their support and encouragement. They were obliged to perform menial services under intolerable hardships. They were put under incompetent commanders, and were left to suffer and die with undressed wounds and burning fevers. And hundreds of their comrades who have

returned alive have come back emaciated and ghostly, to stagger through the streets as living witnesses against those who are responsible for their sufferings. We demand that a thorough investigation by Congress, not by an Administration committee organized to acquit, shall expose the guilty and drive them mercilessly from the office which they have disgraced."

Further, the resolutions denounced the Dingley tariff law and the new internal revenue tax law; favored public ownership of street railways, waterworks, plants for electric lighting, gas plants, plants for heat and the distribution of power, and for the service connected therewith.

On State issues they demanded State supervision of telephone companies; suggested that the nomination of candidates for Congress, members of the Governor's Council and the General Court be made by a direct vote in the caucuses; demanded reconstruction of State commissions and election of United States Senators by direct vote of the people and favored direct legislation.

The platform also favored the adoption of the initiative and referendum, eight hours as a legal day's work, technical and industrial schools, and a ship canal across Cape Cod.

The candidates were: For Governor, Alexander B. Bruce; Lieutenant Governor, Edward J. Slattery; Secretary of State, Henry Lloyd; State Treasurer, Pierre Bouvuloir; Auditor, Dr. Charles F. Parker; Attorney-General, Patrick H. Kilroy.

The Republican State Convention, at Boston, Oct. 6, asserted in its resolutions that the demand in the last national platform for a vigorous foreign policy had been fully discharged in the war just ended; renewed allegiance to the St. Louis platform; commended the Dingley tariff law; praised President McKinley in peace and war; eulogized the deeds of the army and navy; approved the President's action in demanding a thorough investigation of the War Department; asserted the necessity for a larger regular army, a reorganization of the National Guard, a larger navy, and better coast defenses.

The money plank was as follows:

"We affirm anew our support of sound money. True to the pledge of the St. Louis platform, the President and Congress, earnestly and in good faith, strove to secure an agreement of the great commercial nations for the coinage of silver and gold at an established ratio. The attempt has utterly failed. All our currency must rest upon the single gold standard. Every dollar must be kept equal in value to the dollar in gold. All Government indebtedness which, by the terms of the contract, is payable in coin must be paid in gold at the option of the creditor. We rejoice in the defeat of the Teller resolution in a Republican House of Representatives as the repulse of an attack upon the integrity of our monetary system and the fair fame of the republic.

"The time has come for the reform of our currency in the direction of the ready conversion of its different forms, each into the other, and the redemption of all in gold upon demand, with adequate provision for the extension of banking facilities to the agricultural and sparsely settled portions of the country, to the end that in those sections capital may be responsive to the demands of business, and lower rates of interest prevail."

On a foreign policy the platform said: "The war with Spain, undertaken by the United States from the highest motives, has been justified in the intelligence and compassion of mankind. Our brilliant victories have brought us solemn obligations and grave responsibilities, for we can not, in the interest of honor, humanity, or civilization, return to Spain

the peoples whom we have freed from her tyranny. While we would not interfere with the diplomatic negotiations now in progress, we desire that they be so conducted and terminated as to secure to the Philippine Islands and to Cuba in amplest measure the blessings of liberty and self-government.

"The building of the Nicaraguan Canal, controlled and operated by the United States, is now imperative. Our possessions in the Caribbean Sea, the annexation of Hawaii, our position in the Philippine Islands, and the notable voyage of the 'Oregon,' have made its necessity clear to all."

The platform favored restricted immigration to the extent of "requiring of the intended immigrant that he be able to read and write."

Any action that will imperil the North Atlantic fisheries was protested against.

The State administration was commended, and the State officers renominated, as follows: for Governor, Roger Wolcott; Lieutenant Governor, W. Murray Crane; Secretary of the Commonwealth, William M. Olin; Treasurer and Receiver General, Edward P. Shaw; Auditor of Accounts, John W. Kimball; Attorney-General, Hosea M. Knowlton.

The Republicans elected their State ticket, but with smaller pluralities than in 1897. The vote for Governor stood: Wolcott, Republican, 191,146; Bruce, Democrat, 107,960; Shapleigh, Prohibitionist, 4,734; Peare, Socialist-Labor, 10,063; Porter, Socialist-Democrat, 3,749.

The Executive Council consists of Nathaniel F. Ryder, William W. Davis, George N. Swallow, Horace H. Atherton, S. Herbert Howe, M. V. B. Jefferson, and Perley A. Russell, Republicans, and Charles I. Quirk, Democrat.

The Legislature stands: Republicans in Senate, 33; in House, 165. Democrats in Senate, 7; in House, 65. Independents in House, 10.

Of the Representatives elected to Congress, 10 are Republicans and 3 Democrats.

Municipal elections were held Dec. 6 in 16 of the cities of the State. Reports say: There were some surprising changes in the license vote in some of the cities, notably in Holyoke and Lowell. Last year Holyoke went "yes" by over 1,400 majority, but this year it declared for license by a bare 69. In Lowell the license majority last year was a little less than 200, but this year the city falls into the no-license column, and elects a Democratic mayor. Holyoke itself went over solidly into the Republican column, electing a Republican mayor, and Lynn's new mayor is a Republican. Salem and Everett voted no license. Haverhill has a Socialist-Democrat a mayor. Woburn elects an independent Republican over Republican and Democrat, and comes to the no-license line. Chelsea re-elects Mayor Littlefield, and sticks to no license. Cambridge votes for no license by an increased majority.

The only change in the license policy is in Lowell, where it is from "yes" to "no."

The Socialists showed their strength in Worcester, where they piled up a vote of over 900, and in Lynn they cast 300 votes even against Mayor Ramsdell, who has been considered as in sympathy with their views.

In Boston the license vote fell away remarkably. While the "No" kept steadily up to its figures of last year, the "Yes" fell off, and the majority of last year was cut down by a very material percentage.

METALLURGY. Iron and Steel.—Bog-iron ore is extensively worked in the province of Quebec, Canada, and arrangements are being made to extract manganese from the bog-ore deposits in New Brunswick. The ore is a soft wet stuff, containing 50 per cent. of water, and is covered by a thin coating of vegetable earth. It lies at a depth varying from

3 feet to 30 feet. When it is dried the residuum is a black powder too firm to be treated in the blast furnace and it has therefore to be made into briquettes, as is done with fine dust from blast furnaces and the finely divided iron produced from low-grade ores by the Edison electrical process. The cementing material used is kept secret.

Bessemer pig is not produced for the manufacture of steel exclusively, but is used in an increasing degree in the production of malleable castings. Manufacturers of car wheels are also said to be able to secure thoroughly satisfactory results from the use of it. Coke Bessemer is most sought for these purposes, but the charcoal metal also enjoys a share in the trade.

Mr. Alexander E. Outerbridge, Jr., believes that manganese is greatly maligned and misunderstood by foundrymen as a rule. It behaves very differently under different circumstances and with different kinds of iron. Experiments made fifteen years ago satisfied him that under suitable conditions the effect of manganese added in a ladle of molten metal was to cause a large proportion (nearly one half) of the carbon in pig iron, low in silicon, to revert to the graphite form. The strength of test bars of metal so treated was increased from 30 to 40 per cent., the depth of chill was decreased about 25 per cent., and the shrinkage was decreased nearly as much. The tests were made with car-wheel iron.

George R. Johnson describes experiments which seem to indicate that further use may be made of high manganese irons. The characteristics of manganese that make it suitable for mixture with iron are its high affinity for sulphur, rendering it a useful aid in eliminating that substance; the possession of the property in combination with iron of allowing the absorption of more carbon; and its tendency to increase carbon in the combined state. A number of English and Scotch brands of excellent quality are referred to as containing a high percentage of manganese. In Mr. Johnson's experiments of six specimens of iron, submitted to the test of scratching with a diamond, the manganese iron proved the hardest; and the results of tests in brake shoes showed that very great hardness, with good strength and toughness, might be obtained by using high manganese iron and chilling at a blue heat.

In a casting machine devised by Mr. R. W. Davis, of Warren, Ohio, for the production of sandless pig iron the molds—about 140 in number—are arranged around the circumference of a wheel about 50 feet in diameter. As the wheel is revolved, each mold comes successively under the ladle. After a cast has been made and the molds are filled, the wheel is revolved, and as each mold, which is hung on trunnions, reaches a given point each pig is tipped into a chute leading to a wagon.

It appears, from a discussion of the subject in the Pittsburg Foundrymen's Association, that the use of sandless pig iron in foundry practice has not proved as successful so far as in open-hearth practice, because of the oxidation of the overheated iron when it is not protected during the period of heating by the sand clinging to the pigs. It was suggested that the difficulty might be partly overcome by adding a small amount of slag. This, however, would protect the iron only after melting is completed, and not during the process.

Relative to the value of sandless pig iron as compared with ordinary pig, E. A. Welling says that the sandless iron has been demonstrated in the basic open-hearth furnaces at Homestead to be worth at least 50 cents a ton more than sand iron of the same composition. The enhanced value is due first to the fact that it melts more readily than iron with a crust of sand about it, and, being in a more advanced state of reduction when melted, is

more quickly converted. Then, while the sand damages the hearth and requires additional flux, the sandless pig is harmless, and the flux required is a minimum, thus saving material as well as wear and tear; consequently less fuel is required to convert the sandless pig into steel. This results in an increased output. The same holds true in remelting in the cupola for Bessemer steel. The sandless pig requires less flux and less fuel, melts more quickly, and results in appreciably less wear and tear in the cupola.

Experiments upon the loss by oxidation of cast iron when melted in a cupola were made by Thomas D. West in a "twin-shaft" cupola on sand and chill castings, and also on chill castings protected by various coatings or washes. It was found that the sand castings oxidized in melting to a greater extent than either the protected or unprotected chill or sandless castings. The average losses were: Sand iron, 5.8 per cent.; sandless iron, 3.4 per cent.; chilled iron, with lime wash, 3.8 per cent.; with graphite wash, 3.4 per cent.; with silicate of soda wash, 2.9 per cent.

Mr. David Baker, of Chicago, has devised an improved casting plant for blast furnaces in which the iron is run into ladle cars at the furnace, then hauled to the casting plant, where the metal is poured into moulds and delivered into cars by gravity, without any adhering sand and with a minimum loss in scrap. The iron goes into the cars cooled and ready for shipment.

A method for determining the hardness of cast iron described by Charles A. Bauer is based on the fact that, with a drill running at a uniform rate of speed and under a constant pressure, the number of revolutions required to drill a given depth would be directly proportionate to the hardness of the material subjected to the testing.

Hot metal direct from the blast furnace is used in the open-hearth furnace at the Homestead Iron Works, Pennsylvania. The operation of casting the metal at the Duquesne furnaces, transporting it in ladle cars by the Union Railroad 5 miles, mixing, reheating, recasting in ladles, and charging the open-hearth furnace, is performed in about one hour. Coke dust is used to retain the heat and cover the metal while in transit. Each ladle is fitted with an electric tipping apparatus which turns the ladle and discharges its contents into an immense cask-shaped mixer of 250 tons capacity. The metal is run from the blast furnace and into the mixer in forty minutes, and when ready for the open-hearth furnace the mixer is turned and runs the iron on the opposite side into 20-ton ladle cars, which are moved to the No. 2 open-hearth furnaces. The iron is then run through a spout into the furnace in ten minutes from the time it leaves the mixer.

From experiments on the effects of adding phosphorus to iron, especially in reference to the strength and fusibility of the metal, Thomas D. West learns that the strength of Bessemer iron is increased from 25 to 75 per cent., and that the fusibility of solid iron is greatly increased.

From experiments conducted during several years to determine the bursting stress of east-iron cylinders under water pressure, C. H. Benjamin has drawn the conclusions that east-iron cylinders of the form ordinarily used for engines, subjected to internal pressure, are as likely to fail by tearing on a circumference as by splitting; that by reason of local weakness and distortions the cylinder may fail when the stress, as calculated by the ordinary formula for thin shells, is only about one third of the strength shown by a test bar; that the principal cause of weakness is the sponginess of metal due to uneven cooling; and that to insure good

castings the flanges should not be materially thicker than the shell, the cylinder should be cast on end, and suitable "visers" should be provided for the escape of dirt and gas.

The results of tests of east-iron columns by Prof. W. H. Burr, of Columbia University, go to show very irregular variations, and the author concludes his report by saying that "they constitute a revelation of a not very assuring character in reference to east-iron columns now standing, and which may be loaded approximately up to specification amounts. They further show that, if east-iron columns are designed with anything like a reasonable and real margin of safety, the amount of metal required dissipates any supposed economy over columns of mild steel. As a matter of fact, these results conclusively confirm what civil engineers have long known, that the use of east-iron columns can not be justified on any reasonable ground whatever."

A series of fire tests of east-iron columns, made at Hamburg, was applied to columns 10½ inches in diameter, and of 1.13- or 0.5-inch metal. They were loaded centrally and eccentrically, and some were cased with a fire-proof covering. A hydraulic press was placed below the column with its cross-head above it, and a hinged oven, containing 12 large gas burners, was clamped about it. On an average, a load of 3.2 tons per square inch, with a heat of 1,400° F., produced deformation in thirty-five minutes in a centrally loaded column without casing. This showed itself by bulging all round in the middle of the heated part, especially where the metal was thinner; fracture occurred finally in the middle of the thickest part of the bulge. If the load was less, it occurred at a higher temperature. Jets of water had no effect until deformation heat was reached. The castings had the effect of increasing the time before deformation began from half an hour to four or five hours.

In the practice of the crucible process for the production of steel castings at the New Admiralty, St. Petersburg, ferro-silico-manganese is used, according to Mr. Sergius Kern, as the most powerful agent to add to ready-made steel for the production of sound castings, the most useful alloy containing, on the average, 10 per cent. of silicon and 15 per cent. of manganese. Metallic aluminum is of second importance, especially if good raw materials are used: an addition of ferro-aluminum (14 per cent. aluminum) with the silico-manganese is preferred. For steel castings, roundings coming from the punching of steel ship plates for rivet holes and soft-puddled iron are used. The plates contain, on the average, 0.4 per cent. of manganese. In the ordinary run the various castings for shipbuilding contain 0.40 per cent. of carbon, 0.42 per cent. of manganese, 0.35 per cent. of silicon, 0.02 per cent. of sulphur, and 0.04 per cent. of phosphorus. In case of castings intended to resist water or steam pressure, the use of steel stronger in carbon is preferred, and the metal has 0.6 per cent. of carbon. Such a metal is recommended for the different pieces of Belleville boilers, mostly hollow and of capricious forms.

The temperature of crucible steel prepared in naphtha-firing furnaces at St. Petersburg is given by Sergius Kern as, just before firing for steel castings, 2,200° C. The experiments, Mr. Kern adds, prove that naphtha-burning furnaces for melting steel are far more convenient in comparison with the coke furnaces, and nearly equal to the Siemens gas-crucible furnace; but are cheaper and handier than the latter when small quantities of steel are melted at a time.

From experiments made and observed by him, Sergius Kern has learned that ferro-sodium used as a reducing flux in crucible steel makes the slags

thinner; but aluminum has still to be employed; while in casting a steam cylinder jacket of about 4 tons' weight improvement was visible. The charge in the cupola contained 75 per cent. of machine scrap and 25 per cent. of pig iron. The ferrosodium was thrown into the ladle, and gave, when the cast iron was poured into it, dense fumes.

"Semi-steel" is the name given to a material formed by mixing steel scrap with pig metal to strengthen the resulting castings. It was first used in 1870 for car wheels, and subsequently for brake shoes. It has since been used in hammer dies, etc. It is claimed that greater strength and a closer grain are imparted when it is used in proper proportion with good charcoal irons.

The characteristic features of the Tropenas process for steel are defined as being: (1) Low pressure blast, always above the surface of the metal and through the lower or firing tuyères; (2) disposition of the tuyères in the horizontal plane, so that the jets of air, arriving above the bath, can not impart to the latter any gyratory motion; (3) great depth of the metallic bath, so as to avoid the churning and stirring of the latter during the operation; and (4) arrangements above the "firing tuyères," and independent of the latter, of a supplementary row of combustion tuyères, so as to burn the combustible gases escaping from the metallic bath and thus increase the final heat of the metal. Iron is produced by this process in so great purity and at such a high temperature that it is possible to make the most varied final additions with the view of producing different qualities of steel, from the softest to the hardest, and all the intermediate grades. This is done by modifying the final addition according to the product required.

In a newly described American process for tempering steel the article to be tempered is heated in a charcoal fire, and after being thoroughly rubbed with ordinary washing soap is heated to a cherry red. In this state it is quickly plunged into petroleum. It is said that the parts hardened by this method show no cracks, and do not warp; and that after hardening they remain nearly white, so that they can be finished without cleaning or grinding.

A direct process for tempering steel under pressure has been brought forward in Germany by Herr Haedicke. Of the two methods in which this may be performed one is by hardening the steel first by plunging it red hot into cold water and then drawing the temper, and the other is by plunging it into certain chemical baths. The process has been so far applied in the manufacture of saws and steel ribbons.

In experiments made at the Washington Navy Yard on the porosity of thin steel plates under heavy hydraulic pressure, pieces of sheet steel of $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, and $\frac{1}{32}$ inch in thickness were subjected to a water pressure of 6,000 pounds per square inch. Percolation was not found in any case. A $\frac{3}{8}$ -inch rivet joining two $\frac{1}{4}$ -inch plates also proved tight under the same pressure. A test made to determine the friction of water under high pressure, while inconclusive, gave no evidence that it was any greater than the friction of water not under pressure.

Experiments of MM. C. Chistoni and G. de Vecchi on the magnetic qualities of Valtrompia tungsten steel gave satisfactory results, even superior to those obtained by Barus and Stronhal. The demagnetizing influence of time is represented not to have been felt, except after magnetization in the strongest fields; and the experimenters assert that after exposure to a comparatively weak field the magnetization went on increasing independently for some time. After saturation the time required to reach a stationary condition differed in various specimens, being longer in thick rods than in thin ones.

Concerning the relative value of iron and steel plates and forgings for use in shipbuilding, M. M. W. Aisbett said at the meeting of the South Staffordshire Iron and Steel Institute that steel was preferred to iron in consequence of the reduced scantling that was allowed, and even where the scantling was the same, on account of its ductility and the consequent possibility of bending it cold to any desired shape. Iron, being of larger scantling and not so ductile, was more rigid and less liable to throw off scale. It also corroded at a slower ratio than steel. In the case of strandings and groundings the author had generally found that of two given vessels which struck rocks, one iron and one steel, the repair of the iron one would cost considerably less than that of the steel one. His own impression was that a combination of steel and iron would be most advantageous for shipbuilding purposes.

Iron and steel are found to be much more brittle at their critical temperature, or what is called the blue heat, from 460° to 600° F., than when cold or at redness. This heat however, does not seem to leave any bad effect, though, if the piece be worked in such a range of temperature, it will retain the brittleness after cooling, and show a great loss of ductility. The poorer the iron the more susceptible it is to the blue heat. The danger to steel at this fatal blue point is more pronounced than in iron; but it exists to a greater or less extent in all iron of whatever grade, and is more noticeable in a descending than an ascending heat.

The danger of using too hard steel rails is considered by C. P. Sandberg in the light of several years' experience as consulting engineer and rail inspector for railways in Sweden. A medium hardness has always been aimed at in that country, as well as a minimum of phosphorus for the cold climate. Lately the higher wheel loads and speed have made it desirable to use a harder quality of steel in order to avoid crushing of the rails. The hardness has been obtained by using more carbon, or from 0.35 to 0.45 per cent., and more manganese up to 1 per cent., with silicon up to 0.1 per cent., and the phosphorus not more than 0.075 per cent. Experiments made with a few casts of this excessive hardness of carbon, or 0.60 per cent. in 80-pound rails, resulted in their flying into many pieces with less than half the specified trip test for safety, while casts with 0.45 per cent. carbon stood one ton falling 20 feet. The author's conclusion is that in a severe climate, such as that of Sweden, constructors should not try to remedy the deficiency in weight of rails used at the original building of the railways by now resorting to a dangerous hardness of rail steel retaining the same section, but should rather adopt a heavier weight of rail of moderate hardness, and consider safety before all.

Many persons who use forgings of iron and steel, Mr. H. P. J. Porter observes, say that they prefer wrought iron to steel for the connecting rods and crank pins of their engines, because steel, having no fiber, is brittle and snaps suddenly; while wrought iron, being fibrous, does not; that while wrought iron and steel both crystallize from shock, iron, being tougher, will outlast steel in such service as is performed by pistons of steam hammers; and that low carbon steel is softer than high carbon steel, and is therefore less brittle and not so apt to break in the forged parts of their machines. These views are declared by Mr. Porter to be mistaken. Such defects as have been revealed in forged steel are not due to the nature of the material, but to faults in the working of it. Steel does not possess to the same degree as wrought iron the property of welding. Instead, therefore, of building up a forging of small pieces, it is necessary to work down the

finished piece from a block of steel of considerable size. When the large rolling mills of the country changed their product from iron to steel, they continued to use the small hammers with which their forges were equipped, which, by taking advantage of the property of welding possessed by wrought iron, were of sufficient capacity to build up such small forgings of that metal as were demanded, but were not powerful enough to reduce properly the large blocks of steel it was necessary to work upon; and there were other reasons, in view of the processes which are now considered necessary for turning out good work, why the proper equipment could not be supplied by the forges of the day. The author supports his position by citing a number of specimen defects met in practice in steel forgings which have caused their failure in the past and have prevented their coming into more general use—all due to faulty methods of manufacture.

In the light of seventeen years' observation in the use of the Post steel cross ties on the Liège and Lindbourg (Holland) state railway, Herr Renson, chief engineer, concludes that the life of a steel tie exceeds several times that of those of oak. Cracks and breaks in steel ties noted in the beginning were due to the fact that the holes for the fastenings were punched. When the holes were drilled the evil disappeared. A plate placed between rail and tie, and raised edges along the top of the tie, further increased the durability of the latter. With these ties there was also less fear of the rails spreading.

To protect marine boilers in the French marine, the boilers are filled with fresh water to which milk of lime or solution of soda is added, strong enough to neutralize any acidity of the water. It may be stronger in boilers with large tubes than in those with small, where the deposit from the solution may be liable to contract the effective area. Care must be taken to preserve the outside of the steel crown in these boilers which are not to be used for long periods. For this purpose they are painted with red lead or coal tar as far as it is possible to reach, while a protective coating is obtained for the inaccessible parts by burning coal tar under the tubes. The smoke forms a coating of soot which prevents the air from reaching the surface of the tubes. Quicklime is put inside of the boiler casing, and it is closed and made air-tight.

Magnets are used at the plate mill of the Illinois Steel Company to lift red-hot metal. They are capable of lifting each five tons of red-hot steel, and are also so adjusted as to pick up half a dozen steel plates and drop them one at a time.

Gold and Silver.—Dr. Thomas Ewan points out that an advance of importance in the metallurgy of gold is marked by the application of electrolysis in the precipitation from cyanide liquors. Gold is not precipitated in a reasonable time by zinc from solutions containing less than 0.1 or 0.2 per cent. of free potassium cyanide, whereas with the electrolytic process the concentration of the solution is a matter of indifference. It thus becomes possible, by the employment of very dilute cyanide solutions, to extract economically the small quantities of gold contained in slimes and tailings which would otherwise have been thrown away. A further advantage of the electrolytic precipitation is that the metal obtained contains about 89 per cent. of gold, instead of the 70 per cent. contained in the zinc bullion.

The Bromine Gold Extraction Company is represented to have succeeded in treating ore with a loss of only about half an ounce of bromine to the ton of ore treated. The ability to recover the bromine at a small loss and a small nominal cost overcomes the chief objection to its use. The bromine

is converted into a dry salt, and shipped in that form to any part of the world. The company has succeeded in treating ores containing both gold and copper with success, at a low cost and a saving of both metals.

In the Black permanganate gold recovery process, now coming into use in the mines of New Zealand, sulphuric acid, together with common salt in combination with permanganate of potash, take the place of the hydrochloric acid of the Etard solution, and the solution is said to accomplish the work of extraction equally well and more rapidly, while it is much cheaper. An extraction of 92 per cent. of the gold contents of the ore has been effected with the Black solution in fifteen hours by percolation and in five hours by agitation.

For the assay of silver by Gay-Lussac's humid process, as described by Mr. A. C. Outerbridge, the assayer prepares two solutions of common salt, one of which is known as the "normal solution" and the other as the "decimal solution." One begins and the other completes the assay. The sample is weighed out in quantity sufficient to contain not less than one gramme of pure silver, and is then placed in a glass bottle with a charge of nitric acid. The acid is caused to boil, and the silver alloy is completely dissolved in a short time. A charge of the normal salt solution is allowed to flow into the bottle from a glass pipette, which is made of such a capacity that it shall contain just enough salt water to precipitate one gramme of pure silver. The chlorine in the salt combining instantly with the silver, precipitates it in the form of a white cloud; the bottle is agitated rapidly for a few moments, when the precipitate settles to the bottom, leaving a clear solution above. The assayer next allows a charge of the "decimal solution," which is one tenth the strength of the normal solution, to flow into the bottle from a burette or glass tube with graduated divisions, each division making one hundredth the capacity of the large pipette. If any silver remains in the solution, a cloud will be observed on the surface. Now, as this decimal charge is one tenth the strength and one hundredth the volume of the large pipette, it will, of course, precipitate one thousandth as much silver, or one milligramme. The bottle is again agitated to settle the precipitate, and successive charges of the "decimal solution" are added until all the silver is precipitated, and then a simple rule-of-three calculation gives the exact proportion of pure silver contained in the original weight of the alloy.

The electrolytic process of Messrs. Pelatau and Clerici for extracting gold and silver from their ores and other compounds has been described as a single continuous process, because it has proved itself equal to effect in one operation all that can be expected of it. In it we have, Major-Gen. C. E. Webber believes, for the first time a process and apparatus which effectively combine in a way that can be constructed and worked by a workman of average intelligence, a vat made of material dielectric in its nature; an agitating apparatus of various specific forms, each form calculated to carry out one and the same process, having an agitator, part of which constitutes the anode in an electrolytic circuit, which is carried so that it can not make contact with the bottom or sides of the vat; the presence of a cathode, covering the whole of the bottom of the vat, made of a metal and adapted to carrying on it a layer of mercury; the use of a graduated current from an electrical generator, having large quantity and low potential; and the mixture or sludge under treatment composed of water in given proportions, ore finely pulverized, potassium cyanide or other solvent of gold and silver, and common salt, with the addition as required during

the process of alkalis or organic acids. A simple means given by Mr. Pelatau of testing quantitatively for gold and silver in the solutions with potassium cyanide as a solvent at each stage of treatment, consists of heating 500 cubic centimetres of solution nearly to boiling point, adding 2 grammes each of sulphate of copper and sodium sulphate and of hydrochloric acid, so as to have strong acidity; filtrating the black precipitate in which all the gold and silver are retained; and scarifying the precipitate with 50 grammes of litharge. The precious metals are recovered from the lead by cupellation.

To refine the precious metal at the United States mint from small percentages of base metals they may contain, the metal is melted with the addition, while it is fluid, of saltpeter as an oxidizing flux. The saltpeter decomposes and liberates oxygen gas; the oxygen seizes the base metals, forming oxides; these rise to the surface and are dissolved in the flux; the flux, when sufficiently thick, is skimmed off, and the purified metal, consisting only of gold and silver, is poured into cold water to form granulations. The silver is removed by boiling in nitric acid, when it dissolves, leaving the gold in a finely divided state.

Medals of silver with polished surface soon tarnish, and several processes have been applied for giving them a frosted texture. In England the flat surfaces are left smooth and mirrorlike, while the parts in relief are frosted. In France unpolished dies are used, and care is taken to impart a dead or frosted surface to the medals struck by rubbing them with fine pumice. More recently a sand-blast process has been employed at the French mint. Sometimes the surface is darkened by exposing it to a solution of chloride of platinum, after which rubbing with a brush and very fine pumice changes the color to a delicate gray, and, with skill, graduated shadows may be left wherever they are desired. A medal with a frosted platinized surface has, according to Prof. Roberts-Austin, a great advantage over one with a polished table, as the platinized one is merely dampened in tone by exposure to the atmosphere, and does not become disfigured by blotches of tarnish. The frosted platinized medal may be restored to almost its original freshness by careful rubbing with a soft leather, while the tarnish on a silver medal is often too deep to be rubbed off.

Aluminum.—In a review of the present state of the aluminum industry, published on the authority of Prof. Roberts-Austin, of the British mint, the current selling price of the metal is quoted as 33.2 cents per pound. The cost of production is estimated to be 27.2 cents per pound, of which only 2.2 cents is for electric energy consumed in the production of aluminum, while the cost of the raw material is placed at 12 cents. No further reduction need be expected in the cost for power, which appears to be extremely low, but there is a possibility of effecting a reduction in the price of the raw material, in which direction, as in that of new methods of manufacture, further improvement must be sought. It is proposed by M. Becker, formerly manager for the French Aluminum Company at St. Michel, to substitute calcined bauxite for the refined alumina formerly used in the manufacture, whereby the cost of aluminum might be reduced to nearly 10 cents a pound. The objections are offered to this substitution that aluminum thus made would contain silicon and iron as impurities, for the removal of which some cheap process of refining would have to be applied.

According to a paper read by Mr. E. Ristori at the summer meeting of the British Institute of Mechanical Engineers, great improvements have been made in the process of manufacture used by

the British Aluminum Company. The finished product is a very finely divided powder of alumina, and is packed for shipment in hermetically sealed drums. The oxide is reduced by the Herault process and the metal is run out of the electrolytic baths into ingot molds. In this form the aluminum is pure enough for certain purposes, and much of it is therefore sold without further treatment. For uses where a pure metal is required, the crude ingots are refined to a purity of 99.6 per cent. With certain limitations imposed by the chemical and physical properties of the material, aluminum can be worked much like the other industrial metals handled at the present day. It can be forged hot or cold; in comparison with other metals it ranks third in malleability and sixth in ductility. Sheets have been hammered as thin as one forty-thousandth of an inch. In turning, the edge of the tool soon becomes blunt, and the cutting speed should be high. In its purest form aluminum is very soft, and is not of great service in those arts in which much rigidity and strength are required. One casting alloy having a specific gravity of 2.9 is largely used, but its composition is still kept secret. It produces remarkably clean castings, which require very little machining to finish up, and takes a high polish. The two alloys particularly recommended as among the best yet made are ternary alloys, and containing tungsten as the leading ingredient after aluminum. One of them has besides a small proportion of copper, and the other nickel, and both display high qualities of strength and elongation. Aluminum bronzes have superior strength, and are especially suitable for marine engineering.

A method of blackening aluminum, represented to be satisfactory, consists of polishing the surface to be blackened with fine emery paper, spreading on it a thin film of olive oil, and heating slowly on a spirit flame, when the oil boils and takes a golden color. Then another coat of oil is laid on, and on heating strongly the golden color becomes brown, and soon darkens to an intense black.

In the Wegner process for plating aluminum goods, the article to be plated is first pickled in a bath composed of acetate of copper dissolved in vinegar, iron oxide, sulphur, and chloride of aluminum. After having been taken out of the bath, it is brushed with a soft wire brush. A metallic coat then develops on the surface of the aluminum, closing its pores and rendering it smooth. After rinsing it in clean water the article is put into the galvanic bath and operated on in the usual manner. The current is kept closed until on the aluminum or its alloys a metallic coat of gold, nickel, copper, or other metal of the desired thickness has been formed.

A successful method of plating aluminum with copper by a welding process is claimed to have been invented by Herr Wachnitz, a German engineer. It is said that the plated sheets can easily be soldered, grooved, tinned, and nicked, and that the plating may be of any thickness desired, there being no separation even with the thinnest sheets when rolled or drawn.

A remarkable property of aluminum is described by Hans Goldschmidt and Leon Frank, who find that if a mixture of metallic aluminum and the oxide of another metal be heated at one point to a high temperature the oxygen leaves the other metal and oxidizes the aluminum, generating an extremely high temperature, which continues the operation till the reaction is complete, and the oxide is reduced to a metal which is free from aluminum. Instead of oxides, sulphides may be used, but the heat developed is less than with oxides. The process may be used for generating heat for the production of metallic alloys for brazing, welding,

perforating iron plates, etc., and for the reduction of metals from their oxides. Among the metals that have been obtained in this manner are chromium, magnesium, iron, titanium, barium, wolfram, molybdenum, nickel, cobalt, and vanadium. Alloys of barium with lead and with iron, ferrotitanium, and other alloys have also been made.

Among the various practicable applications of this reducing action of aluminum, Mr. A. E. Hunt, of the Pittsburg Reduction Company, mentions its employment in the production of steel castings; from 2 to 5 ounces of aluminum per ton suffice to remove oxygen from the steel, and so to obviate to a great extent the formation of blow holes in the castings. A little aluminum added from time to time to the baths of molten zinc used in galvanizing removes the oxide and keeps the baths fluid. The addition of a little aluminum in making brass castings increases their soundness in a similar way. Aluminum is used instead of brass for a multitude of small and stamped objects that do not require to be soldered, while no trustworthy method of permanently soldering it seems to have been found yet. It may probably be used as a conductor of electricity, though at present the advantage in price lies with copper.

A hand car built by a St. Louis company as a specimen has the wheels, body, and walking beam made of an aluminum alloy of great strength and lightness, and the axles of steel tubing. By means of these and other improvements—such as gearing of the bicycle pattern admitting of adjustments for the speed desired, ball bearings, and hub brakes—it is believed that two men will be easily able to run the car for a limited time at a speed of from 20 to 35 miles an hour. The new car will weigh not more than 150 pounds, or about one third as much as the ordinary hand car, and one man will be able to lift it on or off the track.

An experiment in the use of aluminum for horse-shoes has been tried in the Finland Dragoons of the Russian army. One foot of the horse is shod with aluminum and the other three feet with ordinary shoes. The aluminum shoe has $2\frac{1}{2}$ ounces in weight to its credit, is not more costly, and wears longer than the ordinary shoe, while it is not so easily affected by mud and moisture.

In one of the electrical installations at Niagara Falls aluminum is used, in place of copper, for the conductors connecting the dynamos at the bottom of the shaft with the plant on top of the cliff. According to a description in the "Western Electrician," the bars used are 25 feet long and half an inch thick, four being used in parallel, bolted and riveted together every 25 feet. At the top they are connected with aluminum cables $1\frac{1}{4}$ inch in diameter, and covered with india-rubber insulation. The total weight of these aluminum conductors is about 22,000 pounds, while the same work would require 48,000 pounds of copper.

Copper and Nickel.—In the electrolytic process for purifying and refining copper, as described by Dr. Thomas Ewan, the copper containing from 0.3 to 2 per cent., or sometimes more, impurity is cast into plates, which are suspended, about 3 or 4 inches apart, in large lead-lined wooden boxes. Between each pair of plates a thin sheet of pure copper is suspended, and the solution, containing from 15 to 20 per cent. of crystallized copper sulphate and from 5 to 6 per cent. of sulphuric acid, is run in. The impure copper plates form the soluble anode, and the thin sheets receive the pure copper. The electrical energy needed to carry out the process is from 0.1 to 0.2 electrical horse power per hour per pound of copper deposited. Of the impurities in the anodes, gold, silver, and part of the arsenic and antimony remain undissolved, while iron, nickel, and the remainder

of the arsenic and antimony pass into the solution. The two latter metals are deposited along with the copper when they are allowed to accumulate too largely in the solution, especially if the amount of free acid is small. The solution must therefore be purified from time to time, and this forms the main difficulty of the process.

Nickel can be obtained pure by grinding up sulphide nickel ore and subjecting it to heat in an electric furnace. The sulphur is entirely eliminated, and the nickel is separated from the iron. Copper also has been separated from a matte of copper, nickel, and iron when smelted electrically. The furnace consists of cast-iron drums 10 feet in diameter and 2 feet long, mounted on a shaft and slowly rotated by a hand worm-gear; the electrodes are carbons 4 feet long and 4 inches square. The 2 electrodes of 4 pencils each are separated by a space of 8 inches, the axis being the axis of the furnaces. As the ore is reduced the resultant metal lowers the resistance of the furnace, and when the latter is slowly rotated the metal is drawn away from the electrodes, and fresh ore is brought between them to be acted upon. Notwithstanding the height of the temperature reached, it is under complete control.

Dr. Thomas Ewan says, in a paper on "The Industrial Applications of Electro-chemistry," that while it is perfectly easy to deposit a very thin film of nickel by electrolysis, the metal peels off if a thicker deposit is attempted. According to Foerster, however, tough, homogeneous plates of nickel of any thickness may be deposited from aqueous solutions of the sulphate or chloride if they are heated to from 50° to 90° C. The nickel, however, is not so pure as copper similarly obtained, cobalt and iron occurring in the refined metal in about the same quantities as in the unrefined. Electrotypic nickel is now a commercial article; part of it is obtained from alloys of copper and nickel containing a considerable amount of sulphur, which are used as anodes, the copper being first deposited, while the nickel goes into solution, from which it is subsequently deposited.

Tin and Zinc.—For the electrolytic removal of tin from tin plate, the tinned scrap is suspended in iron baskets which form the anode, and the tin is deposited in the spongy form on sheet-iron cathodes, the electrolyte being a solution containing from 10 to 15 per cent. of sodium chloride, to which a little caustic soda is added from time to time to prevent the precipitation of stannous oxide. The solution is warmed to 40° or 50° C., and since tin dissolves under these circumstances independently of the electric current, it is necessary occasionally to evaporate the solution and work up the residue for sodium stannate.

At the Crefeld silk factory, Rhenish Prussia, is a plant for recovering tin from tin-plate scrap. In order to make white and colored silk heavier and more agreeable to the touch, it is boiled in a solution of chloride of tin. The pure chloride, which, of course, is most suitable for the process, being too expensive, tin-plate scrap is used for the chemical manufacture of a chloride. The tin is recovered from the scrap electrolytically, and the impure tin thus obtained is worked up further to chloride of tin.

The history of the electro-metallurgy of zinc is pronounced by Dr. Thomas Ewan mainly a record of failures. When deposited from neutral or slightly acid solutions, zinc is very prone to separate in a spongy form, probably by the formation of traces of oxide. This may be remedied by the presence of reducing agents or by vigorous circulation of the solution, and is promoted by the presence of metals more electro-negative than zinc,

which deposit on it and produce oxidation, while it is difficult to insure the absence of such metals. In Dieffenbach's process, which is in successful operation at a German establishment, a solution of zinc chloride, obtained by leaching a zinciferous iron pyrites after submitting it to chlorinating roasting, is electrolyzed. The Ashcroft process obtains coherent zinc by employing a somewhat basic solution of zinc sulphate or chloride in the cathode compartments of the electric cells. The Siemens and Halske process employs a somewhat acid zinc-sulphate solution. An almost chemically pure zinc was obtained at Tarnowitz from an alloy of zinc and silver with a little lead and copper, procured by desilverizing lead with zinc containing about 0.5 per cent. aluminum, refined electrolytically.

In introducing his new apparatus for the electrolytic production of zinc, Dr. Carl Hoepfner, of Giessen, Germany, affirms that zinc has not hitherto been recovered electrolytically on a commercial scale from zinc-chloride solution, owing to the nature of the cathodes used. Such solutions, he says, can be economically electrolyzed only by the use of discoidal rotating cathodes when partly immersed in the electrolyte, and the zinc is obtained in a homogeneous pure solid condition. With such cathodes currents of high density can be used when it is desired to produce chlorine together with zinc.

Attempts to deal on a commercial scale with complex refractory ores, such as those existing at Broken Hill, which contain on an average about 25 per cent. of lead, 20 per cent. of zinc, and 20 ounces of silver per ton, have been abandoned on account of the great difficulties met in practice. It is claimed that the Cowper-Coles electrolytic process overcomes all these difficulties, and has other substantial advantages, as regards economical working and the purity of the products obtained. The ore, after being crushed dry and roasted, is screened, so as to remove the very fine dust or slimes, which are treated by a special process in separate vats, while the screened ores are placed in vats provided with false bottoms or filter beds. A weak solution of sulphuric acid, which may be made from the sulphur dioxide driven off from the ore during the process of roasting, is employed for leaching off the zinc. The leaching solution, after being drawn off from the operation tanks to remove any copper that may be present, is circulated through a series of electrolyzing cells, where the zinc is deposited in the form of metallic plates on an aluminum cathode, or in the form of zinc sponge. By using a suitable strength of solution only the zinc and copper are removed from the ore, while the other metals present are not dissolved. The residue, after the zinc has been leached out within a few per cent., is washed to remove the soluble zinc sulphate. The lead and silver remaining in the residue can be extracted by any of the well-known methods.

Alloys.—The mechanical defectiveness and consequent electrical instability of alloys used for electrical wires are discussed by Mr. Rollo Appleyard with regard to the constitution and metallurgy of the alloy, and the subsequent treatment and environment of the wire. Instances are given of the failure of German silver and platinoid wire that have occurred among several thousand resistance coils distributed over widely different latitudes. In periods of time, varying from six weeks to several years after manufacture, some of the bobbins became brittle and bulky, both on the outer layers and within the coils. The towns where the faults appeared are all within the tropics, and are included nearly within the isotherm of 25° C. Other coils of nominally the same material, manufacture,

and environment have retained their original good condition. It follows that metallurgical differences exist between different samples of the same nominal quality of alloy. Examples are given to prove that failure sometimes occurs with platinoid through which no electricity has passed. Provided that the wire is good, the effect of environment is almost insignificant—that is, the question is one of metallurgy rather than of instrument-making.

The experiments of Prof. Guillaume show that the higher alloys of nickel with steel up to 50 per cent. of nickel are subject to very slight expansion by heat, and are therefore suitable for the construction of standards of length. An alloy containing 36 per cent. of nickel showed an extremely small variation in length under wide changes of temperature. The hardness and strength of this alloy, and the fact that it readily receives a high polish and is little subject to rust, add to its suitability for the purposes indicated. The same property renders it eminently suited for the construction of pendulum rods for clocks, as the variation in length due to changes of atmospheric temperature would be almost inappreciable. It is possible that bars of this alloy may prove satisfactory for measuring rods for geodetic base measurements, thus dispensing with the use of the troublesome compensating compound bars, or with the device of employing a bar packed in ice.

The use of coins made of an alloy of copper and nickel in two of the French colonies has made necessary at the mint a rapid and exact method for the analysis of these coins. They are not of the same composition, one containing 25 and the other only 15 per cent. of nickel. They being binary, it is only necessary to determine one of the metals—the copper, for instance. But as the nickel is the more expensive, it is preferable to estimate it directly rather than to deduce its weight by difference. In the process a gramme of the alloy is attacked with the smallest quantity possible of nitric acid on a sand bath, after which the directions are: Add a little water containing five or six drops of sulphuric acid and evaporate to dryness. Take up with water still containing a little sulphuric acid, and again evaporate to dryness to make sure that all the nitric acid is driven off; redissolve in water with a little sulphuric acid, and pour into an electrolytic crucible, filling it about one third full. The copper alone is deposited. The remaining solution is saturated with ammonia and electrolyzed with three Daniell cells. This brings down the nickel, and the whole process gives very concordant results. The difference between the total weights found and 100 represents the impurities—consisting of sesquioxide of iron and oxides of manganese and aluminum—in the nickel.

In experimenting with Babbitt's antifriction metal, 82 Sn, 9 Sb, 9 Cu, Prof. H. Behrens and Mr. H. Bancke found that by slow cooling the alloy was split up into compounds of different fusibility. By pressure between the plates a metallic mother liquid was squeezed out. The remaining cakes of crystalline metal were treated with hydrochloric acid and washed with water. An alloy containing 90 Sn, 10 Sb, on being thus treated, yielded the same cubic crystals as Babbitt's metal, which were found to answer to the formula SbSn. With 42 Sb prismatic crystals of the compound SbSn were obtained. In Babbitt's metal the copper forms brittle needles of whitish bronze containing no antimony. Such bronzes show less stability than the compounds of tin and antimony. From an alloy of 90 Sn, 10 Cu, the compound CuSn was obtained. Repeated heating and cooling brought the copper percentage up from 35 to 58. Microscopical examination of bearings showed that cushions heated by

running were poor in cubic crystals of the compound SbSn . Babbit's metal is made amorphous by casting in cold molds. Axles running on such metal get tinued; this leads to sticking and heating; finally recrystallization sets in, and liquid tin is squeezed out, while a compact layer of crystals is formed on the axle. Microscopical examination of the metallic deposit from the lubricating oil led to the unexpected result that metal with crystals of moderate size will develop ball cushions. Tin is ground to a fine dust by the sharp fragments of the bronze needles, the hard cubes of SbSn are rounded, undermined, and finally worked up into something like metallic pebbles of microscopical size. Similar spheroids were obtained from bearings of magnesia metal and of aluminum brass, but not from ordinary brass nor from gray cast iron.

Medals of bronze, Prof. Roberts-Austin says, differ considerably from those of silver, in that their surfaces are far more liable to be affected by the slow operation of atmospheric influences and by the more rapid action of chemical agents. Ancient silver coins, for instance, which have been long buried in the earth, do not show anything like so wide a range of color in their patina or crust as is revealed on coins of brass, bronze, or copper which have been hidden in the same way. This is due to the fact that silver is much less affected than copper by the chemical action of the constituents of soils, or by atmospheric influences. The rust of a patina which is formed, a skin or pellicle of oxide, serves to protect the surface of the medal from further changes. In modern times most medals to which the name of bronze is given are really of copper, "bronzed" or colored artificially on the surface. The process consists in applying with a brush a composition of common crocus powder and jeweler's rust, and polishing when dry and cold. A composition of verdigris, 87 grains; sulphate of copper, 437 grains; niter, 87 grains; common salt, 68 grains; sulphur, 233 grains; and water, 1 gallon, has also been found to answer fairly well. A Japanese "verdigris" called "rokusho" may be made by slight variations in its composition to give copper a great variety of tints, ranging from golden yellow through deep brown to bright red. The quality of the copper also exerts a very great influence on the tint of the patina. In France medals of true bronze containing much zinc are struck, and although the color is heightened by superficial oxidation, produced by gentle heating, no true patination is effected.

A metallic preparation for plating iron and steel, patented by W. J. Wilder, consists of an alloy of zinc, tin, and aluminum, and is claimed by the inventor to possess superior qualities. It becomes alloyed to the base, and is so thoroughly attached that the sheets, for example, will stand working after the coating has been applied, will resist corrosion, and can be heated red hot without injury.

Processes.—In the Cowper-Coles electrolytic cyclic process for the treatment of refractory ores, a special feature of interest is the throwing down of the zinc from the sulphate solution upon aluminum plates, which can be either stationary or caused to revolve. The use of aluminum, through the formation of a loose film of oxide, greatly facilitates the stripping of the zinc from the cathodes. Zinc sponge deposited on the revolving disks is scraped off by means of adjustable wood scrapers, and allowed to gravitate into a receiving box, where it is drained. It is then dried, and forms a good substitute for what is commonly known as zinc dust, the grayish amorphous substance obtained as a sublimed product during the distillation of zinc from its ores. This zinc dust is largely used in the Cowper-Coles regenerative electro-zincing process.

The lead obtained by leaching out with a solution of caustic soda is also deposited on revolving disks, and the deposit is scraped off from time to time. Litharge is made from the sodium plumbate solution by evaporating it at a temperature not exceeding 80°C .

A recent process for metallizing wood consists in first immersing the wood for three or four days in a caustic alkaline lye, and passing it thence immediately into a bath of hydrosulphite of calcium, to which is added, after twenty-four or thirty-six hours, a concentrated solution of sulphur in caustic potash. The bath has a temperature of from 50° to 55° , and the wood is immersed in it for forty-eight hours. Finally the wood is immersed for thirty or forty hours in a hot solution of acetate of lead. It is represented that wood prepared in this manner, and after having undergone a proper drying at a moderate temperature, acquires under a burnisher of hard wood a polished surface and exhibits a very brilliant metallic luster. The luster is further increased if the surface of the wood is rubbed, in the first place, with a piece of lead, tin, or zinc, and afterward polished with a glass or porcelain burnisher.

A process for the electrolytic manufacture of white lead consists in the action of electrolytically generated nitric acid on lead. Of the four reactions in the process, the first consists in the electrolytic preparation of nitric acid and sodium hydroxide; the second in the formation of lead nitrate by the action of the nitric acid on the lead. Then lead hydroxide is formed by the reaction of lead nitrate and sodium hydroxide; and, finally, the combination of lead hydroxide and sodium bicarbonate forms a lead carbonate or white lead.

Utilization of the very high temperature ($3,000^{\circ}\text{C}$.) produced by the union of aluminum with oxygen for soldering purposes, or for the preparation of pure metals and alloys, is suggested by Mr. Goldschmidt in the "Zeitschrift für Elektrochemie." When a more moderate temperature is sufficient for the work to be done, the active mass may be diluted by the addition of some inert substance—a metallic oxide, iron ore, silica, etc. Solderings effected with heat from such a source are considered better than electric solderings because of the greater uniformity of the temperature. The author showed the German Electrochemical Society a large mass of chromium which had been prepared by treating a mass of oxide of chromium and powdered aluminum in a crucible which was provided with a covering of magnesia. The reaction was started by burning a little magnesia, after which the mixture was added till the crucible was full. After cooling the crucible was broken and the ingot of chromium was taken out. By making two holes in the crucible, one for the introduction of the mixture and the other for the outflow of the chromium, we can have a continuous process, as in the electric furnace. The temperature obtained is higher than in the ordinary electric furnace. The aluminum produced may be converted anew into aluminum which can be used again, or it may be employed for polishing, for which it has some advantages over emery. Most of the metals can be reduced from their oxides and various alloys can be prepared by this method. The furnace residue contains little rubies colored by chromium. To prepare the pure metals it is necessary to use pure aluminum; but when a high temperature only is wanted crude aluminum will do.

In experiments in the application of pressure to filings of iron, steel, copper, tin, etc., Profs. Adams and Nicholson, of McGill University, have found that by the use of a compressor capable of applying 78,000 pounds to the square inch, metallic filings or

shavings may be consolidated into a bar or cylinder, weighing nearly as much as a cast or rolled bar of the same metal. It has been found easy to solidify Pittsburg brass, which is reputed one of the most difficult metals to unite by mechanical pressure.

An electric welding machine, designed by W. Clark, is intended to be alike suitable for furnace, crucible, open-hearth work, welding, brazing, and hand soldering, etc. It is arranged so that the carbon holders are capable of movement in every direction, admitting of their being placed at any angle in any plane. In order to achieve this, the framework supporting them consists of a slotted arch of metal cast in two halves, which are mounted upon a fire-resisting and insulated base, and are efficiently insulated from each other at the top, where they are bolted together. The carbon holders have a swivel action, fitted with thumb-screws, so that they may be clamped in any position. The swivel action is attached to an insulated bolt, which passes through the slots in the framework, and allows of adjustment to any height. Each carbon holder having an action independent and insulated from the other and from the framework, it is readily seen that they are easily capable of any arrangement to suit requirements.

In a successful test of a new welding machine—the Debombourg—at Bueyrus, Ohio, the iron was heated for a butt weld of 3-inch round bars. When put into the machine the bars were immediately gripped and by the use of a side lever squeezed into each other. The operation took only three minutes. When put up to the breaking test the weld was found to be the strongest part of the bar. It also withstood a severe tensile strain. The machine is simple, weighs only 1,300 pounds, and is capable of handling bars from 1 inch to 6 inches in diameter. No hammering is required to complete the weld.

Miscellaneous.—In a lecture at the Royal Institution on "The Metals used by the Great Nations of Antiquity," Prof. J. H. Gladstone began by speaking of some small gold and copper objects that were found in the recently discovered tomb of Menes, the first of the Pharaohs of Egypt, whose date is estimated to have been about 4400 B. C. The use of copper for tools was illustrated from the recent discoveries of Prof. Petrie and others in explorations at Negada. Later methods of hardening this copper by hammering or by the admixture of arsenic or of tin in sufficient quantities to form bronze were elucidated by experiments and the results of analysis. Lead, silver, and antimony were introduced at dates which have not been fully determined; and the lecturer believed that iron was little used, if at all, in Egypt before 1200 B. C. In Assyria, the earliest specimens of metal had been found at Tello. They consisted of copper and silver, and were thought to date from about 2700 B. C. The accounts of the great quantities of gold and other metals stored up in treasure houses or paid in tribute in the time of the great Babylonian empire were illustrated from the drawings on the black obelisk of Salmanneser II, and the bronze gates of his palace. In Palestine the Hittites used gold and silver for commercial and ornamental purposes; and the various peoples found in that land by the Israelites on their return from Egypt also employed bronze and iron. Copper implements of war had been found at Tel-el-Hesi, the ancient Lachish, in the Amorite town, and in the Jewish town, with bronze vessels, occasionally silver and lead, gradually giving way to iron. The excavations by Dr. Schliemann and others at Tiryns, Mycenæ, the supposed Troy, and other places, proved the abundant use of gold and copper by the Archaic Greeks,

and the successive introduction of bronze and iron before the compilation of the "Iliad."

The American section of a proposed international association for testing materials has been organized at Philadelphia, with Prof. Mansfield Merrimann as chairman. Among the various problems to be submitted to it are: Ways and means for establishing international standard specifications for the inspection of all kinds of iron and steel on the basis of those already existing; determination of methods of tests of the homogeneity of iron and steel, looking to their eventual use in inspection; preparation of uniform methods of test of paints as protection against corrosion of railroad structures; unification of tests of terra-cotta pipes; investigation of behavior of iron under abnormally low temperatures; methods of testing welds and weldability; collection of all information for preparation of standards for piece tests, with special reference to axles, tires, ear springs, cast and wrought pipes, as well as of separate parts of structures; investigation of the most practicable methods of polishing and etching for micrographic study of wrought iron.

Concerning the "fatigue of metals," which is sometimes cited to account for failure of forgings of iron and steel, Mr. F. H. J. Porter says that while our knowledge on the subject is still limited, it is known that the metals being initially crystalline, do not become so from shock or any similar service when cold. "Fatigue" simply means that frequent repetitions of load in amount far below the ultimate strength of the material will eventually break down its resistance and cause failure. Beyond the bare statement of this fact, laws of a general character have been formulated, but the complex nature of the situation prohibits exactness. No two pieces of metal are alike in chemical composition; and, if they closely approach similarity in this respect, the difference in mechanical treatment in their manufacture causes them to possess widely different physical properties. Generally speaking, we know that for any given stress a certain number of repetitions produce failure; the greater the intensity of stress, the smaller the number of repetitions. We know also that the stress required to cause failure is less, and, roughly speaking, only half as great when the metal is strained alternately in opposite directions as when it is strained in one direction only. It is very striking how regularly progressive is the increase in the number of repetitions, as the range of stress decreases; and if we can make the range of stress small enough, a practically unlimited number of repetitions is required to cause failure. From certain tests that have been made it has been found that within a certain limit, which is approximately one half of the ultimate strength, the metal is elastic, and if strained beyond this point its working strength is exceeded, and it can no longer be depended upon to sustain even minor loads. Such tests give results, however, which are simply relative. Their actual significance is uncertain. The fact that a metal possesses a certain elastic limit, elongation, and contraction of area when ruptured by once loading, fails to convey an adequate idea of what the same metal will do under circumstances of repeated stresses or when these stresses are applied in alternate directions, as they are in practice.

The surfusion of metals and alloys is their maintenance in a fluid state at temperatures which are many degrees below their true freezing points. It has been shown by Ostwald that a very minute quantity of a solid will cause a mass of the same substance to pass from the surfsured to the solid state. The same author distinguishes between the *meta-stable*, or ordinary condition in which surfsion takes place, and the *labile* condition which

occurs at temperatures much below the freezing point. Prof. W. C. Roberts-Austen has detected pronounced cases of surfusion in gold, copper, bismuth, antimony, and tin, and has also observed it in alloys, of which the eutectic alloy in the bismuth-copper series is mentioned as presenting a marked case. In studying the phenomena the author has been able to trace the solubility curves of certain metals in each other, in the same way as was previously effected in the case of salts by H. le Chatelier and by Dahms. The first experimental evidence as to the identity of the behavior of saline solutions and metallic alloys as regards selective surfusion has thus been afforded. It is further shown by Prof. Roberts-Austen's experiments and those of others that alloys may be formed by the vaporization of certain metals in a vacuum at as low a temperature as 50° C. The results given in the author's paper reveal additional points of similarity between the behavior of alloys and that of ordinary saline solutions.

From studies of the mechanical working of metals, Mr. G. A. Faure finds that stretching gives rise to wavelike deformations on the surface. Under certain conditions, wavelike knots and swellings at regular intervals can be recognized, but they are usually rather vague; sometimes, however, they are more distinctly developed. These knots occur in wire, rods, or sheets, as soon as their length exceeds their smallest diameter fifty times. They are supposed to be caused by the action of the burden on the lower end of the sample interfering with the reaction at the upper end.

The British Government's Committee on Dangerous Trades has reported, in effect, that the dangers likely to arise during conversion by the Bessemer process are generally adequately met and counteracted. They, however, make some recommendations with a view to rendering the observance of proper precautions more general and complete. They describe the advantage they enjoyed of seeing some of the largest industrial undertakings in the world, "where vast capital, unequaled experience, and wonderful ingenuity have combined to produce in the manufacture and handling of masses of molten and red-hot metal an immunity from accident which is remarkable." It is observed that "mighty ingots of nearly white-hot steel and seething caldrons of molten metal can not be conveyed from the place of one process to another, to be beaten or rolled into rails or armor plates, or to be pounded into molds or ladles for further distribution, without incurring some amount of risk. As the slightest blunder or the most trivial oversight in the construction or handling of the machinery might cause a vessel containing molten steel to deal out death to every person engaged in the process, it is acknowledged to be most creditable to all concerned that there is such general immunity. The principal recommendation made is as to control gear for automatically locking the converter when by accident its regular or proper course of reversal or tilting is interfered with. One of the six recommendations in reference to the use of converters is that no one be allowed to remain in the pit while the converter is being lowered, or during the process of pouring.

A system of furnace grate for obtaining perfect combustion by distributing the air introduced across the grate has been devised by M. Poillon, who also claims to avoid injurious blowpipe flames. The air inlets at the upper level of the grate which receives the coal are, as small as is necessary completely to burn the whole of the fuel with a minimum of air, and at a slight pressure in order to avoid drawing the ashes into the flues. The air inlets are wider below than above for facilitating access of the air,

and also for forcing the flames to spread in the form of a fan, while the inlets of the first series of plates or bars nearest the fire door are inclined backward, so that the air issuing from them is deflected toward the bridge. Careful trials of this system, carried out at Louviers, France, are said to have resulted in a saving of 32 per cent.

The Jones mixer, the patent for which has been declared valid by the United States Circuit Court at Pittsburg, is a large covered vessel, lined with fire bricks, holding from 200 to 300 tons of molten iron. The metal is drawn from the blast furnaces into ladles, in which it is carried to the mixer and poured into it. The metal in the mixer is drawn off from time to time into other ladles, which carry it to the Bessemer converters. The mixer performs the double function of storage, enabling the converters to run regularly, while the rate of production of the furnace is irregular; and of mixing, by which variations in the quality of the iron received by the mixer from the furnaces are evened up, and the quality of the iron delivered to the converter is made practically uniform.

The sand blast is now used for cleaning metallic structures preparatory for painting. It has been so employed for removing the old paint and oil from the One Hundred and Fifty-fifth Street viaduct, New York, and it is similarly applied to locomotive tenders. The foreman painter at the repair shops of the Pittsburg, Cincinnati, Chicago and St. Louis Railway is quoted as believing that, considering the thoroughness of the cleaning and the durability of the work which follows, there is no other method so economical. At the Erie Railway shops crushed quartz sand or quartz and deposit sand, mixed half and half, are used, with an air pressure of between 100 pounds, and the boiler is cleaned in about ten hours.

A rust-proof paint invented by Dr. B. Kossmann, of Charlottenburg, is composed of the peroxides of the cerium group. They are incorporated with linseed oil and varnish, to which is added as a drier a portion of linseed oil boiled with a mixture of boric acid and the peroxides. The resulting paint can be colored with graphite, lampblack, heavy spar, etc., and is said to fulfill all the requirements exacted of such a composition, namely, a sufficient oxygen content to insure the resinification of the linseed varnish, and freedom from any metallic base capable of setting up an electric action with iron, and so causing the formation of rust.

METEOROLOGY. Temperature.—Among the general conclusions from his kite-flying experiments at Blue Hill, Mass., presented by A. Lawrence Rotch to the Royal Meteorological Society in October, 1898, he finds, that as a rule the wind steadily increases with elevation, confirming the measurements made upon clouds. The tendency of the kites as they rise is to come into a current from the west, and it is possible, with no great difference in height, to find currents almost diametrically opposed to each other. The decrease of temperature with increasing elevation varies under different conditions. On most days when there are no clouds the temperature falls at the diabatic rate for unsaturated air—or 1° F. for each 180 feet of ascent, to the height of a mile or more. On fair days with clouds the fall is at this rate to the base of the cloud; in the cloud the rate of fall is slow, and it is still slower above the cloud. The diurnal change in temperature in the free air nearly disappears at about 2,500 feet, much lower than has been hitherto supposed. During calm nights there is a marked inversion of temperature, so that the air near the ground is much colder than at the height of a few hundred feet; indeed, on some occasions the air may be colder at the ground than at the height of several thousand

feet. Daily kite flights confirm the theory that temperature changes in the upper air are cyclonic in character, and are due to the passage of warm and cold waves, which are more strongly felt in the upper air than near the ground. The changes with altitude which precede a warm wave are these: During the day a decrease of temperature at the adiabatic rates from the ground up to more than 1,000 feet, then a sudden rise of temperature, amounting to perhaps 15° , followed by a slow fall. Clouds form when the dew-point of the warm current, which overflows the cold current, is sufficiently high. Such conditions announce the arrival of a warm wave from eight to twenty-four hours in advance of its appearance at the earth's surface. The conditions that indicate the coming of a cold wave are a rapid fall of temperature, which exceeds the adiabatic rate up to about 1,000 feet, and above that is at the adiabatic rate to 3,000 feet higher. During the prevalence of the cold wave the temperature at the height of a mile, which is sometimes its upper limit, may be 25° or 30° lower than at the ground. After the cold wave has passed, and with the coming of a southeast storm, the temperature rises rapidly up to a height of 1,000 or 2,000 feet, and then slowly falls. Cloud usually occurs when the temperature begins to fall, and sometimes this cloud extends downward to the earth as a fog. The relative humidity generally increases to saturation in the clouds and above them rapidly decreases. In clear weather there may be change of relative humidity with altitude, as during the cold wave; or, with no change of temperature vertically, both the absolute and relative humidity may decrease rapidly with increase of altitude, as is the case in areas of high barometric pressure. At the height of half a mile the diurnal changes of relative humidity are the inverse of those at the ground. In brief, then, during fair weather in the upper air the days are relatively cold and damp, while the nights are warm and dry, as compared with surface conditions. Electricity is usually noticed on the kite wire whenever the altitude of the kite exceeds 1,700 feet. At higher altitudes, as well as during snowstorms and near thunderstorms, the potential increases, and is sufficient to cause strong sparking discharges. It therefore appears to be only necessary to tap the great atmospheric reservoir to obtain an inexhaustible supply of electricity, which, perhaps, may be applied to the service of man. Kites are frequently employed on Blue Hill to measure the heights of certain low and uniform clouds which could not be measured by either photographic or visual theodolites. From the traces of the barometer and hygrometer the thickness of clouds may be determined.

In addition to a formerly published investigation by Dr. O. Pettersson, based on observations made during about twenty years on the Norwegian coast, going to show that certain relations exist between the behavior of the Gulf Stream and the subsequent general character of the weather over Europe, confirmatory results, based on a longer series of observations, are published by Dr. W. Meinhardts, of Berlin, in the "*Meteorologische Zeitschrift*." His article, "On the Meteorological Relations between the North Atlantic Ocean and Europe during the Winter Half Year," shows that a good prediction of the temperature over a large area may be made with a considerable probability of success, and that, generally speaking, a high (or low) temperature of the Gulf Stream on the Norwegian coast in the first part of the winter (November to January) is usually followed by a high (or low) air temperature in central Europe in the latter part of the winter (February to March) and the early spring (March and April).

The subject of mild winters has been discussed by Dr. G. Hellmann, upon the basis of temperature observations in Berlin since the early part of the last century. The author considers the frequency and succession of mild winters; their general character; and the kind of summer weather that may be expected after a mild winter—defining as a mild winter, for the purpose of the investigation, one in which the mean temperature of December and January is above the average, and in which the sum of the deviations of both amounts to at least 2° C. A table giving the number of deviations from November to August shows that since 1720 there have been 48 mild winters in Berlin, and that they have never been isolated, but occur in groups of two or three years, and especially after a longer period of colder winters. The intervals between two groups of mild winters vary from nine to fourteen years. The table shows that these mild winters are usually of long duration, and that the chances are nineteen to twenty-one that after a mild winter February will also have a high mean temperature. The greatest deviations of temperature usually occur in January. Whether a mild winter will be damp or dry depends chiefly upon the distribution of atmospheric pressure. Taking July and August as representing the summer, the author has further found that the chances are 44 per cent. that a warm summer will follow a moderately mild winter, while after a very mild winter the chances of a warm summer amounts to 68 per cent. Cases of mild dry winters are rare; and if the deficient rainfall is not compensated for during springtime, the summer is likely to be wet and consequently cool.

A chart of yearly isotherms and isabnormals of the sea surface, prepared by Dr. Koppen, shows, in addition to the isotherms, those districts where a temperature anomaly of more than 2° C. exists. The areas where the water is too cold or is too hot, or which are thermically neutral, are distinguished by different shadings. It is seen on this map that between the equator and latitude 40° S. cold currents extend like long tongues from the west coasts of South Africa and South America toward the west, while north of the equator analogous currents are developed to a much less extent. On the coast of the Sahara the sea temperature is only slightly below the normal value of the latitude. On the western sides of the oceans, in similar latitudes, warm currents exist trending northward. In the South Atlantic the warm and cold currents are nearly equalized. In the South Pacific the cold current and in the South Indian Ocean the warm current predominates, as it does also in the northern hemisphere, and more particularly in the North Atlantic. It is also seen that an area of cold water occurs on the western edge of the warm currents, and between them and the continents, where the latter stretch northward as far as the zone of westerly winds, viz., on the east coasts of Asia and North and South America.

Among the noteworthy facts brought out in a paper by Dr. Alexander Buchan on the mean atmospheric pressure and temperature of the British Islands for forty years, 1856 to 1895, is the down-curling of the annual isobaric lines as they cross the Irish Sea and St. George's Channel. Another distinct feature of the isobars is the influence of the land in increasing the barometric pressures and the opposite influence of the sea in depressing the isobars. The author finds that where a winter climate is sought—as for invalids, offering in the highest degree the combined qualities of mildness and dryness, anywhere offered by the British Islands—such a climate is to be found on the shores of the Channel, from about Dover to Portland.

From his investigation of the "cold days" of

May, in which he examined the weather charts for the past twenty years, Dr. R. Henning, of Berlin, finds that these days are, with rare exceptions, a yearly recurring phenomenon, but do not affect the same parts of Europe; that the period of their occurrence varies considerably. It may embrace the whole month, but most frequently takes place during the second decade, and usually lasts for three or four days; that the phenomenon generally begins during stormy northwest winds, accompanied with frequent showers of rain, snow, or hail. Night frosts and hoarfrost sometimes occur during the early period of this unsettled weather, but generally take place after the passage of areas of low barometric pressure. During this cold period an extensive area of high pressure obtains over the ocean adjacent to the western or northwestern shores of Europe. The subject was investigated before by Dove, in 1856, and Von Bezold, in 1882.

From the examination of the weather charts issued from the Meteorological Office of Paris, particularly those from January to March, 1895, the Rev. M. Decheirans, of the St. Louis Observatory, Jersey, has found that the extremes of heat and cold, observed respectively in areas of low and high barometric pressures, do not occur at the centers of those systems, but in the neighborhood of the mean isobars; also that the descending current of air in an area of high pressure escapes along divergent lines, and that it is principally due to this divergence that the cold usual in anticyclones is observed. Similarly, the relatively high temperature in areas of low pressure is due to the convergence of ascending air currents.

The bulletin of the Society of Naturalists of Moscow contains an account of observations made by M. Walther, of Jena, in the transcaspiian country upon the temperature of the surface of the ground. The temperature of the air was registered on a day in September, 1897, every hour from five o'clock in the morning till ten o'clock in the evening, upon an isolated hill about 35 feet high; and the temperatures of the sand, the clayey soil, and an olive-brown dolomite were taken by means of a special thermometer. Independently of the angle of incidence of the rays of the sun, M. Walther took note of a considerable influence of the wind. The removal of the thermometer situated in the wind to a sheltered spot gave a rise of temperature of 6.5° C. for the sand, 4.5° C. for the clay, and 4.5° C. for the rock, the temperature of the air remaining the same. The temperature of the air reached its greatest height at two o'clock, when it was 33.5° C.; that of the clay soon rose to 46.5° C.; and even a little before two o'clock the temperature of the sand was 48.5° C. The rock did not reach its highest temperature till three o'clock. The setting of the sun had considerable effect; and shortly after it the temperature curve of the soil cut that of the air and continued to be several degrees below it. Rain had a still greater effect. Ahnger observed in the desert on the same day that the temperature fell after a heavy shower from 30° C. to 10° C. M. Walther relies on sudden changes like these to explain the disintegration of rocks and their breaking up by parallel fissures.

Precipitation.—In a bulletin of the Weather Bureau of the United States Department of Agriculture, on the rainfall of the United States, prepared by Mr. A. J. Henry, observations obtained from the largest and most trustworthy registers are compared, and annual, seasonal, and other charts are discussed. Special attention is given to the rainfall of the crop-growing season as being a matter of most vital interest. As regards the monthly distribution of rainfall by districts and types according to natural boundaries, the conditions favor-

able for rainfall are found to be nearness to the ocean, proximity to the track of storms, and the position of mountain ranges. The rainfall of the North Pacific coast is discussed as an example of the combined effect of all three of these conditions. There a wet season prevails from October to March, and the summer is nearly rainless, except in northern California and parts of Oregon and Washington. About half the yearly fall occurs between December and February. In a narrow belt on the northwest coast, extending from Cape Flattery to about the middle of the Oregon coast, and some distance inland, the annual amount of rain is more than 50 inches, and at some points is 100 inches. To the east and north of this, the annual rainfall diminishes, and is least on the lowlands and valleys between the Coast Range on the west and the Sierra Nevada and the Cascade Range on the east, where the amount is in some cases not more than 10 inches, though in years of plentiful rainfall it may rise to 20 inches in the best-watered parts. East of the Rocky mountains the annual rainfall ranges from 10 to 18 inches, and increases slowly to 60 inches on the Florida and Gulf coasts, and to from 40 to 50 inches in the Eastern States. It, however, gradually declines from the Atlantic coast westward and from the Gulf coast northward. The large majority of excessive rains are said to occur west of longitude 105° west, and principally in the summer months, in connection with afternoon thunderstorms. They occasionally take place on the track of the West India hurricanes, and are more abundant on the Gulf and South Atlantic coasts than at inland places. The greatest rates of rainfall per hour, estimated from periods of five minutes at the Weather Bureau stations that possess self-registering gauges, were 9 inches at Bismarek, N. Dak., 8.4 inches at St. Paul, Minn., and 8.2 inches at New Orleans.

A formation of small cumulus clouds over a fire has been observed by Mr. R. de C. Ward, at the Harvard College Observatory, Arequipa, Peru, and is described by him in the "United States Weather Review." Behind the western flank of Mount Charchani, and about 15 miles away, a column of smoke was rising from a considerable fire of brushwood, at a probable height of about 14,000 feet above sea level. While looking at the smoke, Mr. Ward noticed the formation of a small cumulus cloud directly over it, and between 4,000 and 5,000 feet above it, when the sky was almost clear and there was little wind. The cloud soon disappeared, and was succeeded by another, which again disappeared within five minutes. Eight distinct cloudlets were seen thus to form and disappear within half an hour, after which the smoke vanished. Two previous similar cases are referred to by Mr. Ward—one recorded by Prof. Espy, and the other described in "Science" of Jan. 8, 1897.

The report of the International Meteorological Committee on cloud observations records nearly 3,000 measurements of heights and velocities made at Upsala Observatory, Sweden, during the year beginning May, 1896, 1,635 of which were taken by photography. The discussion of the results shows that the annual deviation of the mean height of the clouds is very pronounced, with a maximum during June and July and a minimum during winter. During the summer season the mean height of the cirrus is 8,176 metres, and that of the cumulus 1,685 metres. The heights of the upper and middle level clouds are lower than at the Blue Hill Observatory in Massachusetts, while the lower forms are at nearly the same level; this is accounted for as probably a natural effect of the difference of position of the two stations. The velocity of the upper clouds is greater than that of the lower, and the

velocity of all clouds is greater in winter than in summer.

It has been found by C. T. R. Nilson that clouds may be produced by the action of ultraviolet light on moist air. When the light from an arc-lamp was brought to a focus by means of a quartz lens within a vessel containing moist, dust-free air, a bluish fog became visible in the course of a few minutes along the path of the light. The cloud particles remained in suspension for hours after the light was cut off. The phenomenon was shown even in unsaturated air, but the faint blue haze which then developed took much longer to form. When the radiation was not sufficiently intense to show these effects, a dense fog could still be obtained by bringing about slight supersaturation by expansion. The clouds, unlike those obtained by Tyndall and by Aitken by the action of light on various vapors, are due to the ultraviolet rays above; for if a thin sheet of glass or mica (substances which are opaque to those rays) be interposed, not a trace of fog or rain is formed, even when a high degree of supersaturation is brought about by expansion. It is possible that the small particles to which the blue of the sky is due are the result of this action of the ultraviolet rays, of which sunlight, when it first enters our atmosphere, doubtless contains a plentiful supply.

In connection with the attempts to establish a twenty-six day period for meteorological phenomena, Prof. Arthur Schuster is cited as being led to think, from a critical examination of the published investigations on the subject, that "although the magnetic phenomena and the occurrence of thunderstorms seem to be affected by a period of twenty-six days and of its first multiple, the subject requires a good deal of further study before we can be sure as to the exact nature of the period. Even though it may be considered as proved, it must not necessarily be assumed that it is due to solar action. If it is a question merely of magnetic disturbances, there does not seem to be any great improbability, however, that some periodicity may be connected with the sun's rotation about its axis, especially at times of great sun-spot activity."

Winds.—Addressing the Royal Meteorological Society upon the progressive movements of the cores of the permanent high-pressure areas which are found to be associated with different localities at different times of the year, Major H. E. Rawson referred to previous investigations by Abereromby, Scott, Loomis, H. C. Russell, and Buchan, and then proceeded to give the results of an examination which he had made of all the available synoptic weather charts for the eleven years 1881 to 1891. During this period there were 212 cases in which the center or core of an anticyclonic system was over the British Isles, and of these 130 were due to the Atlantic system, 41 to the Scandinavian, 17 to the Greenland system, 22 to the Atlantic and Scandinavian systems extending and merging together, and 2 to the same thing occurring in the case of the Atlantic and Greenland systems. It is thus evident that the greater number of the British cyclones are owing to the Atlantic system. They occur in all months, but more especially in January, June, and October, and are least frequent in April and November. When such cyclones move away from the British area the direction is very much influenced by the season of the year; by far the largest number drift off in some direction between northeast, through east to south, and take the more southerly course in December, January, and February. A few between April and July move west or southwest, and still fewer north or northwest.

The report of the Wind Force Committee of the Royal Meteorological Society giving the results of

experiments with anemometers attached to the rigging of ships at different heights, finds as general facts deducible from them, that the instruments must have a fairly clear exposure to be of much value, and that for a mile at least all around there should be no hills or anything higher than the position they occupy; that on a ship the results may be considered fairly accurately determined by having the instrument 50 feet above the hull, but that on land it will generally be necessary to carry the instruments somewhat higher, the height to be determined by the local conditions; that no other form of anemometer offers such advantages as the pressure tube, from the fact that it can be run up and secured easily at the desired height above a building, and that the pipes and stays can be slight so as to offer no resistance to the wind and cause no deflecting currents. The committee found that the ship itself modified the indications of the lower anemometers, while some low hills and trees a quarter of a mile away affected the wind velocity from the quarters in which they lay.

In the instrument of Prof. F. E. Nipher for measuring wind pressure, two equal thin metal disks, $2\frac{1}{2}$ inches in diameter, having beveled rims, are screwed together so as to leave a small space between, into which a connecting tube is passed through the center of one of the disks. The end of the tube is flush with the inner surface of the disk, and the interspace is filled up with a certain number of layers of wire screen which project at least half an inch beyond the edges of the metal disks. When this simple device is placed in a stream of air, it is found that the effects of refraction and compression, set up at different parts of the porous screen, neutralize each other, so that the pressure at the mouth of the tube is the same as the true intrinsic pressure of the external air. This property of the collector was severely tested by thrusting it out of a carriage window in a train which was traveling at the rate of sixty miles an hour. No effect on the gauge could be noticed, although the instrument was sufficiently tangent to the edge. The gauge employed was a water manometer consisting of a cylindrical vessel partly filled with water, with a straight glass tube leading out from the bottom and inclined at 5 in 100 to the horizontal. The open end of this tube was in communication with a collector of the form suggested by Abbe so as to secure a standard pressure of comparison.

From observations of dust particles in the atmosphere made at Mont Salève in Savoy, the oasis of Biskra, the village of Tortola and the forest of Loimola in Finland, the neighborhood of Cristianstund on the west coast of Norway, and the island of Grip, M. G. Melander finds that the number of particles generally increases with the dryness of the air. This fact seems adequate to account for the influence of the direction of the wind that has been observed at different stations. Aitken's theory that the number of dust particles diminishes as the wind increases in strength seems to be liable to modification in the light of these observations and may be regarded as subject to local conditions. M. Melander further finds that the vapors from a saline solution carry, even at the ordinary temperature, particles of salt in suspension or solution; the number of particles in this case increases in the vicinity of the liquid. He concludes that, at least in many cases, particles of salt suspended in the atmosphere are causes of fogs, clouds, and rain. This hypothesis is confirmed by the deposits left by the evaporation of raindrops on a plate of glass. There seems to be an infinite number of saline particles constantly in the atmosphere which when dry are almost without action, are light and constantly in-

visible, but when sufficient water is present, condense into fine drops and become a visible elond.

From a study of the records—1763 to 1897—R. C. Mossman finds that, in London, snow is of most frequent occurrence with north and east winds, and least common with southwest winds. Hails, however, occur most often with west, northwest, and north winds. Gales are most frequent with west and south winds. The greatest number of thunderstorms, both in summer and winter, occur with west winds, although the values in summer are also high with east, southeast, and south winds. The greatest number of fogs are recorded on calm days, and these are closely followed by days on which the wind blows from the west.

In observations on the transparency of haze during 1897, the Hon. F. A. Rollo Russell found that the greatest clearness occurred with winds from the westward, and the least clearness with winds from the eastward. The highest mean visibility was 24 miles with the west winds, and the lowest mean visibility was 10.6 miles with northeast winds.

Miscellaneous.—The average height of the meteorograph in Mr. A. Lawrence Rotch's kite-flying experiments at Blue Hill, Mass., during August, 1898, was 7,800 feet, and on August 26 the meteorograph was raised higher than ever before, its altitude, determined trigonometrically, being 11,444 feet above Blue Hill, or 12,074 feet above the adjacent sea. The meteorograph was suspended from the top kite, a Lamson aëro-curve with 71 square feet of lifting surface; and 4 kites of the modified Hargrave form, with a combined lifting surface of 149 square feet, aided to lift the wire, which was 5 miles long and weighed 75 pounds. The total weight of the kites, lines, and apparatus in the air was 112 pounds. The meteorograph left the ground at 10.40 A. M., attained its greatest height at 4.15 P. M., and reached the ground at 8.40 P. M. It passed through cumulus clouds about three quarters of a mile from the earth, and above them the air was found to be very dry. The maximum wind velocity, 40 miles an hour, was reached at the height of 11,000 feet, while 100 feet higher the wind blew at the rate of 32 miles an hour from the southwest. On the hill at this time the wind was west, and its velocity was 23 miles an hour. The temperature of the air there was 72° when it was 38° in the free air 11,444 feet above.

A phenomenon, called Barisal guns in India and *Mistpuffers* in Europe, sounds like distant reports of cannon or explosions, the causes of which are not known, has received much attention of late years. A book concerning them has been published by M. E. Van den Broek, in which hundreds of instances are cited and described by the author or quoted from authentic sources, in all of which an explanation is sought. The sounds appear to be heard most frequently near the sea, and in warm weather. Communications made by Samuel W. Kain and others to the "United States Monthly Weather Review," show that the sounds are very frequent on fine, calm summer days in the Bay of Fundy. Prof. Cleveland Abbe has pointed out that there is a resemblance between the sounds as they are described and sounds made by drumfish in aquaria; and that a large drumfish will give out a sound that may be heard a long distance away. Prof. Abbe suggests that the noises proceeding from the ocean may have different characters and origins. Some may be due to the drumfish; others to breakers dashing on rocky cliffs, whence heavy thuds spread for many miles through the air and many miles farther through the ocean; others to the cracking of rocks in ledges near the surface; and others, occasionally, to genuine earthquakes occurring at the bottom

of the neighboring ocean. The subject is one that affords great scope for study.

The second meeting of the International Aëronautical Congress, at Hamburg, March 31 to April 4, was largely occupied with the discussion of questions relating to the equipment of *ballons sondés*, or captive balloons, and manned balloons. The congress recommended, among other things, that the instrumental equipment of manned balloons should be uniform, so far as possible, and that for each *ballon sondé* an instrument should be provided to serve as a basis of comparison with perfected instruments whose construction may change from one ascent to another as improvements may be attempted in them. Mr. A. Lawrence Rotch, of Blue Hill Observatory, Mass., was present and made a report on the use of kites at his observatory. The chief of the United States Weather Bureau sent a letter explaining the proposed use of kites to obtain data for a daily synoptic weather chart over the United States at the height of a mile or more. Resolutions were passed favoring the use of kites at suitable stations. It was announced that M. Teisserende de Bort was equipping a kite station at Trappes, near Paris, after the model of Blue Hill, and Gen. Rykatcheff stated that an anemograph of his invention was being raised with Hargrave kites at St. Petersburg.

A work on the meteorology of the Southern Ocean, between the Cape of Good Hope and New Zealand, was mentioned in the English Meteorological Council for 1896 as having then been under preparation; and as no charts for that area had been previously published by the office, the work was expected to prove of much value. The results of the weather forecasts continued to show a considerable amount of success; for those published in the morning newspapers, a complete and partial success of 81 per cent. was claimed for the year in question, while for the special forecasts during the hay harvest, the figures showed that 88 per cent. were useful. A still greater success was claimed for the warnings of storms, of which 91.5 per cent. were justified. For the study of the climatology of the British Isles, the office continued to subsidize a small number of observatories of the highest class, and maintain an intimate relationship with them, and to supplement this information by observations from a large number of voluntary stations.

In an analysis of the duration of sunshine in North America, presented to the German Meteorological Society at its triennial meeting in April, Prof. Dr. Van Beber stated that the amount of sunshine increases rapidly toward the south as in Europe, and reaches a maximum in Arizona. As in Europe, the mountains receive the most morning sunshine, but, unlike Europe, the annual maximum in America occurs in July, and in the South in June. The speaker inferred that the characteristics of the Northern and Southern people are to be attributed to climatic conditions, and are especially affected by the deviation of sunshine.

In an address to the Royal Meteorological Society, Mr. A. W. Clayden spoke of the extreme value of photographic methods of recording the movements of instruments, and of the real importance of preserving photographic records of all sorts of unusual meteorological phenomena, and emphasized the necessity of companion photographs, showing the same scene under normal conditions. Having referred to some of the puzzles offered by lightning photographs, the lecturer said that he had repeatedly found that a single discharge lasted several seconds. He had several years before been led to the proof that the "black" flashes shown in photographs were merely a photographic phenomenon, but it is one that still remains unexplained.

The author's method of measuring cloud altitudes differs from other methods in that he uses the sun as a reference point.

In seeking an explanation of the *aurora borealis*, Gustav Wendt observes that oxygen is a paramagnetic element, and assumes polarity by the presence of the earth as a permanent magnet. Hence near the magnetic pole, the magnetic attraction occasions the descent of paramagnetic matter, especially of oxygen or condensed oxygen, and also of dust of all kinds, including occasionally dust of meteoric iron, etc. The northern lights may therefore be regarded as an electrical phenomenon arising when oxygen and other paramagnetic matter are continuously drawn down from the higher regions of the atmosphere with the effect of setting up electric currents. If, as a large series of accurate analyses indicates, the air of the mountains and moors of the Scottish highlands generally contains 21 per cent. of oxygen while in large towns, especially in fogs, the oxygen, content sinks to 20.8 per cent., and in deep mines to 20.2 per cent., the fact may be explained by the circumstance that, besides the general diffusion, the magnetic attraction is brought into play. Every large mountain must possess the mountain magnetism in a larger or smaller degree. The agreeable sensation felt in lofty yet protected regions is usually owing to the presence of condensed oxygen drawn downward in consequence of the "mountain magnetism."

A sandstorm from the Sahara, which occurred at the Canary Islands about the middle of February, appears to have been felt over a wide area. On Feb. 15, when, in latitude 22.5° north, longitude 17.25° west, the steamer "Roslyn Castle" passed through the storm, large quantities of fine sand fell upon the deck and adhered to the sails and rigging. The steamer entered the dust cloud between five and ten miles off Cape Blanco, and continued in it for nearly two days. It extended many miles out to sea, and was so dense that objects on deck could not be clearly distinguished, and officers and men suffered great discomfort in their eyes. The vessel was in considerable danger passing through the Canaries. On Feb. 15, at Funchal, the sun had the appearance of the moon, and what seemed a fog of unusual and unprecedented character hung over the island. The dust penetrated everywhere. Although a gale was blowing at Madeira, there was no wind when passing through the dust. A sample of the dust was analyzed by Dr. Leonard Dobson, who publishes the results of his examination in the "Chemical News" of March 18, 1898.

The directors of the high- and the low-level observatories at Ben Nevis, in announcing that they would have to be closed for want of funds, in October, 1898, declared that by the establishment of those observatories, and the unique observations made at them, a great experiment had been carried out with signal success, and that in a large sense the objects aimed at had been attained. A long series of hourly observations had been obtained by night and by day without a break over a period of fifteen years, including eye and other observations made outside in the severe climate of Ben Nevis. These formed a unique series of observations, nothing like them having been as yet made at any other high-level observatory in the world. Funds were fortunately supplied a few days after the announcement referred to was made, and the necessity of closing the observatories has been avoided.

METHODISTS. I. Methodist Episcopal Church.—The following is a summary of the statistics of this Church as given in the "Methodist Yearbook" for 1899. In a few of the conferences meeting near the end of 1898 the statistical reports had not been completed at the time the "Year-

book" went to press. For these the figures are taken from the reports for 1897. There will therefore be some slight differences between the totals in this table and those which will appear in the book of "Minutes of the Annual Conferences," which was to appear later and include all their later returns: Whole number of annual conferences, 147; which are classified as conferences, 124; mission conferences (including the newly organized Congo and South Japan mission conferences), 11, and missions, 12; number of ministers in full connection and on trial (including supernumeraries and superannuates), 17,500; of local preachers, 14,610; of lay members (full members and probationers), 2,886,189; of Sunday schools, 31,666, with 349,026 officers and teachers and 2,676,297 pupils; of churches, 26,657, valued at \$113,781,905; of parsonages, 10,604, having a probable value of \$17,832,092. The increase of members and probationers during the year is estimated at 33,000.

The receipts of the Board of Education for the year covered by its report for 1898 were \$93,308. The receipts from returned loans were \$15,261, a larger sum than in any previous year. The board had aided with its funds 1,825 students of 27 different nationalities. Of these, 1,129 were preparing for the ministry or for missionary work, and 279 of them were women. The whole number of students aided from the beginning of the board's work in 1873 to July, 1898, was 8,909. The Sunday-school Children's fund, instituted in 1866, has become a very important feature in the work of the Church. The collections for it, taken annually on the second Sunday in June, reached \$84,000 on the second year after its institution, and the amount has since been largely increased. The educational institutions of the Church include 26 theological institutions, 53 colleges and universities, 63 classical seminaries, 8 institutions exclusively for women, 99 foreign mission schools, and 4 missionary institutes and Bible training schools; making a total, after deducting 23 schools duplicated, of 230 schools, or 3 more than in 1897. These institutions have grounds and buildings valued at \$17,132,501, endowments aggregating \$12,299,601, of which \$10,149,375 are productive; are in debt \$1,924,815, and return 3,143 professors and 46,708 students.

The third International Convention of the Epworth League was held in Toronto, Ontario, July 15 to 18, and was attended by an estimated number of 20,000 persons, 15,000 of whom were registered. The discussions held during the four days were participated in by about 236 readers and speakers. Resolutions were adopted upholding temperance and Sabbath observance; declaring it a Christian duty to participate in all matters that concern the national, State, and municipal government; and expressing a desire for the establishment of arbitration in the settlement of international questions and perpetual peace between the United States and Great Britain.

The General Committee of Church Extension met in Boston, Mass., Nov. 3. The receipts of the year had been \$173,720 for the general fund and \$188,653 for the Loan fund. While the receipts to the general fund had decreased \$3,419, the joint accounts of both funds showed a net increase of \$14,011. The total sum of \$172,337 had been authorized to be given out, of which the board had paid \$80,656 and promised \$72,222, while the balance would be carried forward into the new year. The plan of procuring new churches by special gifts of \$250 had invited contributors to select this special work. During the year 18 churches had been added to the number previously reported as secured in this way, making in all 623, of an average cost, when dedicated, of more than \$2,000 each. Many of

these churches had given place, as population and the strength of the people had increased, to larger and more valuable buildings. By a system of special gifts of \$100 each, what are called "mountain churches" are procured, at a cost, on the average, of \$600 or \$700 each. While the principal field of this work is the mountain region of the central South, it has extended into other parts of the country. The churches are situated chiefly in small villages and rural districts, and are built with the co-operation of the resident people. Ten such churches had been added during the year, making the whole number 90. A much larger number of churches of this class had been aided out of the general treasury in the ordinary course of the work. The capital of the Loan fund stood at \$1,043,310, while churches borrowing had returned, in all, during the history of the society, \$1,169,711, showing an aggregate for use by loans to date of \$2,213,021. In this way 3,315 different churches had been aided, furnishing sittings for about 965,000 hearers, and worth in the aggregate, nearly \$12,000,000.

The seventeenth annual meeting of the Woman's Home Missionary Society was held at Minneapolis, Minn., Oct. 19. The total cash receipts for the year had been \$135,164, and the expenditures \$131,430. Bequests to the amount of \$36,000 had been made to the society during the year, of which \$13,000 had been paid in. Reports were made of work in the South, where the society had 15 homes, with religious, literary, and industrial schools; among the Indians of New Mexico and the frontier, with a school for Indian girls at Lyndon, Wash.; among the Spanish-Americans; in Alaska; in Utah, where 13 missionaries and deaconesses are laboring; among immigrants in New York, Boston, and Philadelphia; and among the Chinese in San Francisco. The society had 20 homes for deaconesses, besides several centers of work, with 165 deaconesses in the field, and a training school for missionaries and deaconesses in Washington, D. C., for which a new and larger building is needed and projected, and homes for orphan and destitute children at York, Neb., Tivoli, N. Y., and Urbana, Ill., with about 175 children under care and in training.

The General Committee of the Freedmen's Aid and Southern Education Society met in Boston, Mass., Nov. 7. The treasurer reported that the total receipts for the year had been \$122,209, of which \$80,932 were contributions from the conferences. The disbursements had been \$126,756. The apportionments for the ensuing year were made on the basis of \$248,950 as the total amount to be raised. The regret of the committee was expressed by resolution at the fact that the collections from the churches for the society had been decreasing. The society maintained 1 theological seminary, 12 collegiate and 10 academic institutions among the colored people, and 3 colleges and 20 academic schools among white people.

The General Missionary Committee met at Providence, R. I., Nov. 9 to 15. The treasurer reported that the receipts for the year ending Oct. 31 had been \$1,181,789, being \$49,848 more than those of the preceding year. The expenditures had been \$1,196,802, of which \$626,202 were charged to the account of foreign missions, and the rest to domestic. The total debt in the treasury was \$177,417, having been diminished \$98,731. The sum of \$60,838 had been received in the form of "special gifts."

Appropriations were made for the missionary work of the ensuing year as follows: For Germany, \$36,575; for Switzerland, \$7,390; for Norway, \$12,421; for Sweden, \$16,256; for Denmark, \$7,490; for Finland and St. Petersburg, \$5,124; for

Bulgaria, \$8,868; for Italy, \$40,511; for South America, \$75,620; for Mexico, \$79,275; for Africa, \$24,635; for China, \$118,254; for Japan, \$49,272; for Korea, \$16,752; for India, \$142,886; for Malaysia, \$9,855; total for foreign missions, \$621,184. For missions in the United States (classified as Welsh, Danish, Norwegian and Danish, German, French, Spanish, Chinese, Japanese, Bohemian and Hungarian, Italian, Portuguese, American Indian, and English-speaking), \$413,022. The miscellaneous appropriations, for salaries, incidental expenses, etc., amounted to \$110,000, making the total amount appropriated \$1,177,206. In addition to this appropriations were made contingently for the Congo Mission Conference, Alaska, Italian work in Louisiana, and the establishment of a mission in Puerto Rico, amounting in all to \$48,000.

The twenty-ninth annual meeting of the General Executive Committee of the Woman's Foreign Missionary Society was held at Indianapolis, Ind., in November. The receipts for the year had been \$328,488, \$14,550 more than those of the previous year, and the largest in the history of the society. Three missionaries had been sent to China during the year, 7 to India, 3 to Japan, 1 to Burmah, and 1 to Africa, while 9 had returned from the field for rest. Eight missionary candidates had been accepted. The Felts Missionary Institute, at Herkimer, N. Y., the gift of Mr. and Mrs. George P. Felts, was accepted as a school for the training of Christian workers.

The bishops of this Church, at their semiannual meeting in November, adopted an address to the members and friends of the Church inviting them to contribute for a twentieth century thank offering of \$20,000,000, "over and above all ordinary contributions for the maintenance and spread of the "kingdom of Christ, which certainly ought not to be diminished"—the subscription to be paid within three years from Jan. 1, 1899. Of this sum, it was proposed to give \$10,000,000 for the benefit of the universities, theological seminaries, colleges, and other schools; and \$10,000,000 for the hospitals, orphanages, homes for the aged, and other charitable institutions of the Church, and for payment of debts on the various Church properties. A General Executive Commission was nominated for the accomplishment of this scheme, the first meeting of which was appointed to be held in the city of New York, Jan. 5, 1899.

II. Methodist Episcopal Church, South.—The tables of religious statistics published in the "Independent," New York, Jan. 5, 1899, give this Church, for 1898, 5,901 ministers, 13,995 churches, and 1,458,345 communicants.

The thirteenth General Conference met in Baltimore, Md., May 5. The episcopal address showed that the number of itinerant preachers had increased since the last General Conference 502, and the membership of the Church 123,221. The whole number of itinerant preachers was 5,989; of local preachers, 5,685; and of members, 1,478,431. The aggregate value of the Church property of all kinds was estimated at a little more than \$35,000,000, showing an increase of about \$2,000,000 during the four years. The Sunday-school reports gave the number of such schools as 14,188, with 104,135 teachers and 851,488 pupils, or 825 schools, 8,459 teachers, and 86,202 pupils more than in 1894. The Church had under its control 76 educational institutions of all grades, with more than 1,000 teachers, 16,000 students, property valued at \$4,661,850, and endowments amounting to \$2,189,695. The accounts of the several boards and benevolent societies showed that the whole amount paid out by them during the quadrennium had been \$2,067,955. On an indebtedness of \$129,144 lying against the

Missionary Society in 1894, \$117,559 had been paid, while the remainder was provided for by subscriptions not yet matured. The publishing house had done a business within the quadrennium aggregating \$1,378,858, and afforded a dividend of \$60,000 for the superannuated preachers. Its plant was out of debt, and was valued at \$895,000. A commission was instituted to ascertain and report to the next session of the General Conference what is the constitution of the Church, and also, separately, such amendments as they may recommend to render it symmetrical in form and substance, in order that the next General Conference may, if it see fit, send the same around to the several annual Conferences for ratification and adoption. Rules were adopted requiring inquiry to be made into the character of candidates for Church membership before they are received; and that local ministers coming to the Church from other churches be subjected to examination, excepting traveling preachers from the British Wesleyan and Canadian conferences. The sense of the General Conference was expressed, by resolution, "that our Methodism has never recognized or encouraged any such spirit as candidacy for the various connectional or other offices of the Church; that we do hereby enter our serious protest against the publication of any article, either editorial or communication, in any of our Church organs or other Church periodicals, and against any other methods which tend to foster in any measure an unwarranted rivalry for official preferment." A rule was adopted "that any traveling or local preacher who shall hold public religious services within the bounds of any mission, circuit, or station, when requested by the preacher in charge not to hold such services, shall be deemed guilty of imprudent conduct, and shall be dealt with as the law provides in such cases." The Conference approved and adopted the acts passed by the Joint Commission on Federation of the Methodist Episcopal Church, South, and the Methodist Episcopal Church, and agreed to recognize them as in force when they shall have been adopted by the General Conference of the Methodist Episcopal Church. The committee on this subject was reappointed, with continued power. A committee was appointed to co-operate in preparing a complete doctrinal catechism for both churches, a work in which other Methodist churches were invited to join. Bishop O. P. Fitzgerald was requested to prepare an autobiographical volume concerning the times in which he had lived and the men of those times. Presiding elders were advised to see that missionary institutes be held once a year in their respective districts; that each one of them preach at least one sermon a year on missions in each of the charges of his district; and that at least one missionary meeting be held in each charge during the year. An attempt was decided upon to raise \$1,500,000 during the year 1900 for educational purposes; 76 per cent. of the money raised to be retained by the annual conferences, 18 per cent. to be applied to the theological department of Vanderbilt University, and 6 per cent. to be used as a general fund. Two new bishops were elected, viz., the Rev. Warren A. Chandler, D. D., and the Rev. Henry C. Morrison, D. D. The Conference indorsed the Woman's Christian Temperance Union in all its temperance work, and bid it godspeed in all its efforts to extirpate the liquor traffic. The Sabbath resolution reaffirmed the faith of the Conference in the Sabbath as divinely instituted, and declared the conviction "that it is unlawful for individuals, corporations, or governments to nullify it or set it aside for gain, convenience, or pleasure, and that we will resist every effort to wrest the day from its legitimate place in God's economy and discourage its

desecration by those who buy and sell, and do ordinary work therein, all of which we believe to be contrary to the spirit and letter of God's law; that we will remain faithful in the observance of the holy Sabbath, and both by word and example testify to its sanctity, and also to its utility as a day of recuperation of body, mind, and spiritual strength." A petition to the President of the United States was approved of, asking him to forbid the transmission of any mails on Sunday, and to order the closing of all post offices throughout the United States on that day; or, if not empowered so to do, to ask authority from Congress to order the same. The Book Committee were authorized to establish a publishing house in Shanghai, China.

The book agents reported to the Book Committee for the year ending March 31 that the total business of the publishing house in all departments amounted to \$336,804 and the total assets to \$898,858; while the liabilities were \$3,313, leaving the net capital \$895,545.

The Woman's Parsonage and Home Mission Society reported to the General Conference that since its foundation, ten years previously, 1,735 parsonages had been built in Southern Methodism, being two thirds of the number accumulated during a whole century prior to its organization. Of this number the society had aided 717. The whole number of parsonages in the Church was 3,765, and their total value was estimated to be \$4,193,782. The sending of supplies to the families of preachers inadequately supported had been systematically carried on. The total amount contributed during the quadrennium, in goods and cash, was estimated at \$15,948.

The Board of Missions met at Nashville, Tenn., and appropriated \$201,916 for the support of the missions during the year, of which \$30,400 were for the Brazil mission; \$27,279 for the China mission; \$5,497 for Korea; \$31,536 for Japan; \$46,927 for the mission conferences of Mexico and the Mexican border; \$12,948 for the Indian Mission Conference; and the remainder for missionary work in the United States.

In promoting the passage of a bill through Congress awarding the sum of \$288,000 to the Book Concern of this Church as compensation for the occupation of the premises of the publication house for military purposes during the civil war, the book agents employed a lobbyist, to whom a considerable proportion of the sum awarded was paid. This was done, as was afterward shown, without consultation with any other officers of the Church, and without the knowledge of the General Conference or of the Church at large; and the fact that any portion of the money was to be paid to a lobby agent was not communicated to the members of the Senate. The fact was learned, however, after the bill had been passed, and some of the Senators stated on the floor of the Senate that they had voted for the bill under a misapprehension, supposing that the Church was to receive the entire benefit of the award. The case was inquired into by a committee of the Senate, who reported July 8, relating the facts as they had found them, and declaring, in conclusion, that they deemed it proper to state "that no censure should rest upon the Methodist Episcopal Church, South, for the acts of its book agent. The Church has been injured by the misconduct of its agents, but for such misconduct it is held utterly blameless. The committee has not thought proper to suggest to the Senate any action concerning the matter, it appearing to the committee that the governing authorities of the Church must be allowed to take such measures as it may think proper after it has been fully acquainted

with the facts concerning the passage of the bill and the final disposition of the money appropriated under it." The bishops of the Church, July 4, adopted a resolution which was duly communicated to the president of the Senate, declaring that, "while reaffirming the justness of our claim, payment of which has been sought for twenty-five years, we insist that the Church can not afford to accept it as a gratuity, or on conditions that reflect upon its honor. Inasmuch, therefore, as some Senators have affirmed on the floor of the Senate that they were induced to support the claim by misleading statements on the part of representatives of the Church—statements, however, which did not affect the merits of our claim—we hereby give this assurance: That if the Senate, by affirmative action, declares that the passage of the bill was due to such misleading statements, we will take the proper steps to have the entire amount returned to the Government.—(Signed) Robert K. Hargrove, Secretary of the College of Bishops."

This letter was regarded as making it appropriate that there should be an expression of opinion on the part of the Senate in response to the conditional proposition to tender to the Government the money paid to the book agents under the terms of the act of March 31, 1898. The committee reported that no new facts had come to its knowledge since its report had been laid before the Senate, and submitted the following resolution, which was adopted: "That the report of the committee made July 8, 1898, be approved, and that no censure should rest upon the Methodist Episcopal Church, South, for the misstatements and concealments of the book agents in connection with the passage of the bill for the payment of the claim referred to in the letter of the bishops now under consideration; that the injury resulting therefrom affected only the beneficiaries of the fund and not the United States; and the Senate should take no further action in the matter."

Federation.—The Commissioners on Federation appointed by the General Conference of the Methodist Episcopal Church and the Methodist Episcopal Church, South, met in joint session in Washington, D. C., Jan. 7. A paper was presented as a basis of action by the commissioners of the Methodist Church, South, in which the report on federation adopted by the General Conference of that body in 1894 was referred to, and the declaration and basis of fraternity adopted by the "Cape May commission" in 1876 was cited: "Statutes of the Methodist Episcopal Church and the Methodist Episcopal Church, South, and their co-ordinate relations as legitimate branches of Episcopal Methodism. Each of said churches is a legitimate branch of Episcopal Methodism in the United States, having a common origin in the Methodist Episcopal Church organized in 1784; and since the organization of the Methodist Episcopal Church, South, was consummated in 1846, by the voluntary exercise of the right of the Southern annual conferences, ministers, and members to adhere to that communion, it has been an evangelical Church, reared upon scriptural foundations, and its ministers and members, with those of the Methodist Episcopal Church, have constituted one Methodist family, though in distinct ecclesiastical connections." The paper continued: "That commission decided questions concerning conflicting claims to Church property in so just and liberal a spirit as to settle local contentions and give general satisfaction. The questions which came before this commission relate not to Church property, but to such occupation of the same territory by the two great branches of Episcopal Methodism as tends to promote friction and waste and injury, rather than promote the common cause—namely, the spreading of scriptural

holiness through this and other lands." The commission then discussed, and adopted unanimously, to be presented to the General Conferences of the two bodies, recommendations for the preparation of a common catechism, hymn book, and order of public worship; for the recognition and regulation of the International Epworth League conventions; for the just administration of publishing interests in China and Japan; for the co-operative administration of foreign missions; providing that new work be not organized by either Church when the other is established and supplying the needs of the people, without the consent of the bishops having jurisdiction; and for co-operation in the work of higher education, especially during the years 1900 and 1901; and resolutions commending the American University at Washington for contributions.

III. African Methodist Episcopal Church.—The statistics of this Church for the year ending May 1, 1898, published by Bishop B. W. Arnett, Church historian, give the following totals: Number of annual conferences in the United States, 52, with 4 conferences in Africa, 3 in the West Indies, and 3 in British America, making in all 62; of bishops, 9; of general officers, 9; of ministers on the rolls of the annual conferences, 4,825; of presiding elders in America and foreign countries, 242; of local preachers, 8,709; of exhorters, 5,250; of members, 556,289; of probationers, 57,836; of churches, 5,172, valued at \$6,150,175; of parsonages, 1,750, valued at \$624,423; amount of indebtedness on Church property, \$752,964; number of schools, 41, with 160 teachers, 5,257 students, 660 graduates, property valued at \$756,475, and an aggregate annual income of \$115,560; of Sunday schools, 3,447, with 21,514 officers, 37,916 teachers and 362,421 pupils; amount of benevolent contributions—for missions, \$29,938; for publication, \$16,745; for Church extension, \$17,252; for education, \$115,560; for ministerial support, \$753,404; for presiding elders, \$141,876; in the Sunday-school department, \$20,740; whole amount of money raised in the Church, \$1,570,329; total amount of all property, \$8,104,886. The most noteworthy events of the year were the organization of two annual conferences in South Africa, with 10,800 members, and the formation of a Church in Santiago de Cuba.

At an educational convention of the three annual conferences of this Church in Arkansas, held at Pine Bluff, May 18, under the presidency of Bishop Derrick, questions were discussed relative to the necessity for a higher educational development among the ministers of the State; to what the laymen could do to assist in bringing it about; as to whether, as laymen, they should not be more interested in the general welfare of the Church; whether the spiritual and moral interest of the laity are as strictly watched over as they should be; and whether the laymen should not concentrate their energies and consecrate their lives to the development of the educational interests in the State. Resolutions were adopted expressing the sentiments that prompted these questions, and pledging more energy and greater liberality in the support of educational interests. An organization named the Annual Educational Convention of Laymen was instituted to meet annually, and to consist of delegates invited from each mission circuit and station. The convention advised, also, that a layman be elected from each presiding elder's district as a "district lecturer on education," and to look after educational interests.

A full official report published by Bishop Turner represents that a correspondence had been going on between the "African Methodist Episcopal Church" and the "Ethiopian" Church in South Africa, and

that a delegation had been appointed by that body to visit the General Conference of the African Methodist Episcopal Church in 1896, and request admission into the Church. The delegation had not been able to reach the United States before the General Conference adjourned; and in the emergency a special session of the Georgia Conference was held, into which the delegates were admitted as members. The Rev. James M. Dwane, chairman of the delegation, was commissioned to act as superintendent in South Africa, and carry on the organization of the Church till a bishop should arrive there. Bishop Turner sailed in February, 1898, and arrived at Cape Town in time to reach Pretoria for a called session of the Transvaal Annual Conference. Thence he went to Queenstown, where he attended the South Africa Annual Conference. He also visited Cape Town, Johannesburg, and Bloemfontein, and organized several churches. At the request of the two annual conferences, he appointed Mr. Dwane a vicar bishop, to perform the usual functions of a bishop during the long intervals that must elapse between visits of those officers from the United States. The Transvaal Conference returned, including three churches that were added at Johannesburg during the bishop's visit, 7,175 members and probationers. The South Africa Conference had 3,625 members and probationers. The conferences were independent in position, and did not ask for missionary aid; but they wanted help in building a college or seminary, and desired teachers sent out from America.

IV. Colored Methodist Episcopal Church in America.—The tables in the "Independent" give this Church, for 1898, 2,187 ministers, 1,300 churches, and 199,206 communicants.

The ninth General Conference met at Columbia, S. C., May 3. The bishops in their quadrennial address advised against the election of any more persons to their office, and the Conference, after some discussion and efforts to overrule their recommendation, sustained it. An epidemic of small-pox prevailing in the city, the Conference, after a session of six days, was compelled to adjourn for want of a quorum, without having completed any legislative acts. Subsequently a called meeting of the General Board was held at Nashville, Tenn., and took action on several matters of importance. In order to provide a nucleus for the immediate establishment of a Sunday-school department, an assessment of one dollar was laid upon each bishop, presiding elder, and pastor, and of one cent upon each child in Sunday school. The Rev. R. A. Carter was chosen secretary of the Sunday-school and Epworth League departments. Provision was made for the publication of a volume of minutes of the Conference, and of the minutes of all the General Conferences. Resolutions were passed complimentary to the older bishops, and an anniversary meeting was appointed to be held in their honor at the next meeting of the General Board, to be held in Jackson, Tenn., in May, 1899.

At the annual meeting of the Board of Education of the Methodist Episcopal Church, South, held in May, Bishop Halsey, of this Church, and others, represented their special works. More money had been raised for the current expenses of Paine and Lane Institutes in the past than in any other year except one. The Heywood Memorial Hall fund had realized a considerable amount in cash and subscriptions, and the hall was well under way. The board has money enough to maintain its operations till the fall remittances from the annual conferences shall begin to come in, with no outstanding obligations. An effort was resolved upon to raise \$40,000 for the theological department of Vanderbilt University.

V. Union American Methodist Episcopal Church.—The Union American Methodist Episcopal Church is a branch of an organization formed in 1813 by Peter Spencer as the African Union Methodist Episcopal Church. Subsequently the denomination was divided, one part retaining the old name and the other assuming the name given at the head of this article. The General Conference of this body met at Camden, N. J., Oct. 18. The General Conference was composed of 35 elders and 20 laymen. The law of its constitution was modified, so that in future an elder must travel ten years before he can be eligible as a clerical member in the General Conference, and to be qualified for the office of bishop he must have traveled ten years, and be not less than forty years old. Legislation was adopted concerning the trial of members, a four years' course of study for candidates for the ministry, the organization of a Sunday-school union, and fixing the salaries of the bishops at \$1,000 a year each. Besides the general, annual, and quarterly conferences already existing, the District Conference was established. This Church has about 3,500 members, and is divided into three episcopal districts, James W. Wilmore, James C. Cook, and Benjamin T. Raley being the bishops.

Other colored Methodist churches are the Union American Methodist Episcopal Church, with 63 ministers, 61 churches, and 2,675 members; the African Union Methodist Episcopal Church, with 80 ministers, 70 churches, and 7,000 members; and the Congregational Methodist Church (colored), with 5 ministers, 5 churches, and 319 members.

VI. Free Methodist Church.—The statistics published in the combined minutes of this Church for 1898 give the number of members in full connection as 24,875, and of probationers as 3,259, showing a gain of 363 full members and a loss of 364 probationers, as compared with the previous year. The report on Sunday schools shows an increase during the year of about 700 pupils, 267 officers and teachers, and of nearly \$1,000 raised for Sunday-school purposes. The total valuation of church and parsonage property is \$1,219,816. The comparative summary for the quadrennium closing with the meeting of the General Conference shows a gain during the four years of 2,763 in full members and a decrease of 771 in probationers, or a net gain of 1,992, or a little more than 74 per cent.

The tenth General Conference met in Chicago, Ill., Oct. 12. The pastoral address of the general superintendents was read at the opening of the sessions by Superintendent B. R. Jones, who represented that, during the quadrennium then just closed, there had been some increase in members, ministers, and houses of worship, and that 7 new conferences had been organized. The reports of foreign missions showed encouraging improvement at nearly every station. Property had been acquired or title secured in Africa and India; two new missionaries had been sent to India; mission stations had been established in Japan, and 2 societies organized with 35 full members and about twice as many probationers. The receipts for the past quadrennium, \$35,513, showed an increase of \$14,843 over those of the previous four years. The address spoke also of the orphanages and homes of the Church, the publication house, and the Sunday-school literature furnished by it. Several measures were enacted by the Conference concerning the qualifications of ministers, among which was one recognizing a general desire among the people for a high grade of scholarship among the preachers, in view of which provision was made for the institution of a series of written examinations for preachers in the

course of study to be conducted by the conferences on question papers prepared by a central board—to go into effect in the year 1900; a resolution disapproving the admission and advancement in certain instances of ministers and evangelists who had not passed the educational tests required by the Discipline, or were behind in some of their studies, and insisting on full compliance with the prescribed tests; and a resolution directing that no person shall be licensed as a local preacher who has not been previously licensed as an exhorter and recommended. The Conference refused to allow the name of a woman preacher to be placed upon the list of claimants upon the Superannuate fund; but in the case of another woman it refrained from disapproving the appearance of her name in the list of members of the Kansas Conference, on the ground that she had been received into the Conference prior to the action of 1890, which barred the admission of women. The sense of the Conference was expressed that it has been a violation of Discipline, since the action referred to, to receive a woman into an annual Conference on trial or in full connection. A proposition to substitute the title of "bishop" for the words "general superintendent" where they occur in the Discipline was rejected, and the title of the officer remains general superintendent. A recommendation to expunge the general rule relating to slavery was adopted, conditioned upon its receiving the assent of the requisite majority of the annual conferences. The Conference resolved to begin proceedings to close the business of the Methodist Association for the Perpetuation of Church Property, and appointed a committee to attend to the details of the transaction. A delegate, with a reserve delegate, was appointed to the Ecumenical Methodist Conference to be held in London in 1901, and also to a preliminary meeting in anticipation of the conference to be held in Plainfield, N. J. Two delegates were appointed to attend the Ecumenical Missionary Conference to be held in New York city in the spring of 1901. The action of a previous General Conference urging the people to vote "with the party committed fully to the overthrow of the saloon" was reaffirmed. Provision was advised for the publication of a list of the best books for Sunday-school libraries, and for having the books kept on sale at the publishing house. A number of measures were directed for the promotion of Sunday-school work, including annual Sunday-school conventions, monthly Sunday-school board meetings, the furnishing of lesson helps to the schools, and the institution of a Sunday-school secretary, who shall also be associated with the editorial departments of the Church and Sunday-school papers. E. P. Hart, George W. Coleman, Burton R. Jones (all re-elected), and Walter A. Sellen (elected for the first time) were chosen general superintendents. The salary of the general superintendent was fixed at \$800 a year, with \$200 for traveling expenses. Special collections were authorized to be taken at points where the superintendents are called to labor, the proceeds to be applied to their salaries; they to give receipts for the money if required to do so.

VII. Methodist Protestant Church.—"The Methodist Protestant," the official organ of this Church, publishes a comparative table of numbers and the net gain of members of this Church by periods of ten years from 1828 to 1896, which shows that in the former year it had 5,000 members; in 1838, 39,000 members, a gain of 680 per cent.; in 1848, 58,000 members (gain, 48.73 per cent.); in 1858, 75,000 members (gain, 29.31 per cent.); in 1868, 99,000 members (gain, 32 per cent.); in 1878, 116,000 members (gain, 17.17 per cent.); in 1888, 147,000 members (gain, 26.72 per cent.); and in

1896 (eight years), 181,000 members (gain, 23.12 per cent). To the present number of full members should be added nearly 3,000 ministers and preachers and perhaps 5,000 probationers. The 50 conferences return, for the beginning of 1898, 2,294 churches, 512 parsonages, 2,200 Sunday schools, with 19,363 officers and teachers and 130,562 pupils, and Church property valued at \$4,913,809; colleges at Westminster, Md., Adrian, Mich., Yaddin, N. C., La Harpe, Ill., Westminster, Texas, and a theological seminary at Westminster, Md.; 3 book concerns, at Baltimore, Md., Pittsburg, Pa., and Greensboro, N. C.; 8 church papers; a complete set of Sunday-school papers; and Boards of Home and Foreign Missions, Ministerial Education, Church Extension, Ministerial Relief (superannuate preachers), and local interests.

VIII. Methodist Church in Canada.—The General Conference statistician has published statistics of this Church for 1898, the summary of which gives for the western section, including the London, Toronto, Hamilton, Bay of Quinte, Montreal, Manitoba and Northwestern, British Columbia, and Japan conferences, and the China mission, 239,622 members, showing an increase of 2,638 during the year, and for the eastern section, including the Nova Scotia, New Brunswick and Prince Edward Island, and Newfoundland conferences, 40,915 members, a decrease of 226; total, 280,537 members, with a net increase of 2,412. A comparison with the tables of the 3 previous quadrennial terms shows that the Church has realized a net increase of 110,734 members during the past fifteen years. Of the members returned in 1898, 2,370 were connected with the Japan Conference and 31 with the China mission.

The tables prepared by the General Sunday-School and Epworth League Board represent 8,387 Sunday schools, with 270,239 pupils, showing an increase of 136 schools and 17,783 pupils in four years. The Home Department, consisting of persons who, without attending the Sunday schools regularly, study the lessons at home and make stated reports of their work, has been developed rapidly, the number of members having risen from 1,856 in 1895 to 7,151 in 1898. The board also reported that there were 658 Epworth Leagues and 869 Epworth Leagues of Christian Endeavor, besides a number of Young People's societies, making the whole number of such societies within the Church 1,947, with 81,935 members, showing an increase in four years of 915 societies and 34,760 members. The collections for the general fund amounted to \$1,374. The total collections of the Sunday-School Aid fund for the past four years had exceeded those of any previous quadrennium. The amount for the last year was \$2,665. A debt of \$2,600 existing four years ago had been extinguished. A joint commission of the Epworth League, Christian Endeavor Societies, Baptist Young People's Union, and other societies was arranging for the preparation of common topics to be used in the Young People's prayer meeting.

The capital stock of the Book Room amounted now to nearly \$400,000, having increased \$60,000 in four years. During this period \$34,000 had been paid to the Superannuation fund.

The total sum of \$23,435 had been raised during the quadrennium for the General Conference fund, \$8,020 below the estimate set by the last General Conference fund.

The capital of the Parsonage and Church Aid fund was returned at \$23,790, of which \$19,799 were invested. The receipts had been \$14,688, and the expenditures \$10,698.

The income of the Educational Society for four years had been \$86,002. Grants had been made to colleges amounting to \$44,279, and the fees paid to

student probationers amounted to between \$10,000 and \$11,000. The loans had amounted to about \$14,000, and \$8,753 had been repaid on loans. Seven hundred and fifty-three notes held by the treasurers aggregated \$38,007.

The General Board of Missions, at its annual meeting, Sept. 23, made appropriations of \$20,886 to missions in Japan, \$9,592 to those in China, \$6,725 to French evangelistic and educational work, and \$85,554 to domestic missions. The arrangements made for the Indian missions by the last annual conferences were continued.

The Missionary Society had in Japan 25 missionaries, 33 assistants, 15 teachers, and 2,370 members; in China, 10 missionaries, 2 assistants, and 4 teachers; in the 59 missions among the Indian tribes, 37 missionaries, 17 assistants, 32 teachers, 11 interpreters, and 5,407 members. The 408 domestic missions were supplied by 390 missionaries and 34 assistants, and returned 37,603 members. A mission to the Japanese in British Columbia reported 83 members. The aspect of the missionary work among the Canadian French was not encouraging. The sum of \$21,455 was spent upon the mission in Japan, besides \$990 on the Japanese work in British Columbia; \$12,193 upon the Chinese mission; \$85,946 upon the work among the Indians; and \$92,881 upon the domestic missions.

The Woman's Missionary Society had laborers at four stations in Japan—Tokio, Shizuoka, Kofu, and Kanagawa, and had recently entered also Nagano. About 30 pupils had been graduated from the 3 schools during the quadrennium; 29 pupils and more than 80 women had been baptized; and 30 children were cared for in the orphanages at Tokio and Kanagawa. The pupils at Tokio have for several years maintained a school for 50 poor children, and were contributing to the work in China. Four missionaries had been sent to China since the previous General Conference, one of whom had died. A rescue home for Chinese girls was maintained at Victoria, British Columbia. Among the Indians of the Northwest, the Crosby Girls' Home was maintained at Fort Simpson, and the Cogualactza Home at Chilliwack had become an Indian institute, where about 100 children were taught and trained. The French institute in Montreal was attended by 80 pupils.

The fifth General Conference met at Toronto, Sept. 1. The Rev. Dr. Carman, general superintendent, presided, and presented in his official address a review of the history of the Church during the past four years, and of its relations to the ecclesiastical, fraternal, and the moral movements of the day. On the presentation of the report of a committee on that subject, the Conference expressed approval of an Ecumenical Conference of Methodism which it is proposed to hold in London in 1901, and its readiness to co-operate in carrying the scheme out upon the basis proposed; appointed a delegate, with an alternate, to represent the Canadian Church; and arranged for the other delegates to be apportioned to the different annual conferences. In response to the address of a fraternal delegate of the Presbyterian Church, the Conference declared "that in such fraternal fellowship we find more than mere interdenominational courtesy. Our cordial esteem for the Presbyterian Church amounts to warm Christian love"; and that the approximation of the two leading churches of the Dominion was "an encouraging guarantee of the continuance of an active evangelical influence." The action of the General Conference of 1894 upon the subject of a federal court for Protestant churches was reaffirmed. A committee was appointed to consider any proposals from other denominations looking towards union. The committee on the "Twen-

tieth-Century Thanksgiving fund" of \$1,000,000, which it is proposed to raise, reported that several memorials and resolutions had been received from districts and annual conferences, all favorable to the scheme, and suggested the details of a plan for carrying it out. The plan as adopted by the Conference contemplated that contributors be allowed to designate the objects for which their subscriptions shall be used, and recommended as the interests from which this choice may be made: Educational institutions; missions, home or foreign; Superannuation and Supernumerary funds; and local church debts. Donors were permitted, if they prefer, to leave their contributions to be distributed among the institutions, funds, and objects mentioned as the committee to be appointed by the General Conference might deem advisable. It was insisted upon that the givings to the Twentieth-Century fund must not be allowed to interfere with customary givings to the various Connectional funds. A motion proposing to strike out a note in the Discipline specifying what amusements and worldly practices were regarded by the Church as inconsistent with Christian life, and also a motion to modify the rule by making it a mere general statement, were voted down by an overwhelming majority, and the rule was left to stand unchanged.

In the revision of the disciplinary provisions regarding the superannuation of ministers, stipulations are inserted for medical examination before superannuation; for the refunding of only one half of the money paid in by the minister to the Superannuation fund, instead of the whole amount, as formerly, in case he withdraws from the Church; and permitting the suspension or withdrawal of annuities in cases where the minister does not intend to return to active work. The rule limiting the number of years for which a minister may be returned to the same station was amended so as to provide that by the request of the Quarterly Board expressed by a three fourths vote taken according to specified forms, the Stationing Committee may continue the appointment for four or five years in succession. The Transfer Committee was constituted to consist of the general superintendent and the presidents of the annual conferences other than mission conferences, to meet annually. It was given authority to transfer a minister from one Conference to another, by a two thirds majority, without his consent. It was directed that four ministers shall be transferred during the quadrennium from Newfoundland into some of the other conferences, no Conference, however, to receive more than one such transferred minister. It was further provided that after a man had stayed ten years in Newfoundland he could be brought back into one of the western conferences if he desired it. In a resolution expressing regret at signs of the decline of class meetings, the Conference "strongly recommended that earnest efforts be put forth to make our class meetings more and more attractive and spiritually helpful, and that more importance should be attached to the holding of leaders' meetings, to the preparation and diffusion of useful literature on the subject, and to the holding of class-leaders' conventions or institutes in connection with our conferences and district meetings, and at educational centers." It was ordered that the allowance of home missionaries shall include all items of a minister's support, such as salary, board, fuel, and traveling expenses, but not house rent. The missionary work among the Indians was put under the immediate control of the mission board. Mission councils were constituted, to consist severally of the missionaries sent to any foreign field, when not less than five in number, to be subject to such regulations and rules within its authority as the mission board may from time

to time adopt, with power to elect annually a chairman, to meet once a year for consultation, to appoint an executive committee to consider matters that may arise during the intervals between council meetings; to designate the particular field of each missionary and appoint or reappoint him thereto; to consult on matters of common interest with native pastors appointed by the annual Conference for the purpose; to meet annually with the council of the Woman's Missionary Society; to regulate matters pertaining to the property of the society; to review the work of each year; to plan for evangelistic work; to adjust, in the absence of the superintendent, differences or conflicts of authority between a foreign missionary and a native pastor; and to receive quarterly reports from the foreign missionaries and send annual reports to the General Board. The powers and duties of the superintendent of the mission were also defined, and amendatory provisions were adopted concerning mission conferences. Where the number of missionaries in the field is less than five, their power is limited to the making of recommendations. The Conference ordered that lawyers appearing either as counsel or representatives of parties in interest shall not be admitted to Church courts. While expressing its thankful realization of the important work that women were doing in the Church, the Conference, finding that very few desired official positions, decided that no change be made in the present policy. The beginning of an aggressive evangelistic campaign throughout all the circuits and missions of the Church during the opening weeks of the year 1901 was advised, and the general superintendent was requested to associate with himself a representative from each Conference in the Connection for the preparation of a scheme for such a movement, to be submitted to the annual conferences in 1900. The Conference authorized a memorial to be addressed to the Secretary of State for the Colonies praying her Majesty's Government to abolish the present order of precedence for the clergy in state functions in Canada, and directed its special committee to proceed with all diligence to secure the co-operation of other churches in the proposed memorial, and of the press, "for the removal of a procedure which is offensive in its unjust discrimination, and is utterly opposed to the constitutional relations of Church and state in the Dominion."

The duty of the Church to consider social problems was recognized in the appointment of a committee on sociological subjects, to which memorials on prison reform, single tax, and other topics coming within the sphere of sociology were referred. The report of this committee admitted the influence of heredity and environment, affirmed the sovereign freedom of the individual, and urged co-operation in efforts of various kinds for the improvement of the condition of the people in different directions.

IX. Wesleyan Methodist Church.—The following is the summary of the statistics of this Church in the British and affiliated conferences as they are given in the volume of the annual minutes for 1898.

CONFERENCES, ETC.	Members.	On trial.	Ministers.
In Great Britain	442,248	32,006	2,135
In Irish Methodism	27,180	775	238
In foreign missions	44,640	11,167	392
French Conference	1,770	136	73
South African Conference	57,906	23,544	204
West Indian Conference	44,692	3,578	100
Totals	612,436	71,205	3,112

The returns do not include the number of ministers and members in the Australasian Wesleyan

Church and in the Methodist Church of Canada; these are given in the minutes of their respective conferences. The young persons, 76,484 in number, enrolled in junior society classes, are also not included in the English returns. During the year the German Methodists, numbering 2,414, were transferred to the Methodist Episcopal Church in Germany.

The annual meeting of the Wesleyan Missionary Society was held in London, in May. The total annual income, home and foreign, had been £132,227, and the expenditure £131,266. The extra income, including special plant account, donations to the Indian Famine fund, and special contributions for extension, had been £12,907; and, in addition, the Women's Auxiliary had expended £13,083. The ordinary income was £3,000 in advance of that of the previous year, which in turn had been nearly £2,000 more than that of the year preceding. The history of the year had been marked by a widespread desire for extension, which had led to the erection of a special fund, resulting in the sending out of additional missionaries to Hyderabad and Lucknow. The sum of £7,732 had been raised to relieve distress caused by the Indian famine. A church membership of 44,457 was returned in the missions under the direction of the society, with 11,893 on trial. Allowing for the disappearance from the returns of the German district, which had been transferred to the Methodist Episcopal Church in Germany, and now formed part of it, the figures showed an increase for the year of 2,298. In the missions under other conferences than the British, which were still assisted by the society in France, South Africa, and the West Indies, there were nearly 180,000 souls in the fellowship of the churches.

The Conference met at Hull, July 19. The Rev. Hugh Price Hughes was chosen president. A scheme was adopted for raising a "Wesleyan Methodist Twentieth-Century fund" of 1,000,000 guineas, under which each member of the Church is to aim at giving or collecting a guinea or more, and the first day of the twentieth century is to be observed as a day of prayer and thanksgiving. The roll of contributors, opened on Jan. 1, 1899, to be kept open for two years, is to be preserved among the historical documents of the Church. A committee was appointed to make provisions for carrying the scheme into effect. The president of the Conference was authorized, upon his own request, to spend two days in each of the principal towns throughout Great Britain for the purpose of promoting spiritual work among the Methodist churches by holding united gatherings of their people. A change in the order of sessions of the Conference was decided upon, whereby the representative session (of which the lay members are a part) will precede the pastoral session. A proposition to exclude persons directly interested in the sale of intoxicating liquors from all official positions in the Church was disposed of by the adoption of a resolution declaring "that, while not interfering with the constitutional method of appointing the officers of our Church, the Conference recommends our people to keep free from a traffic the results of which are injurious to the interests of religion, morality, and social life." The senior secretary of the Missionary Society announced that 12 or 14 new men were to be sent out to the foreign field. It was represented that the provision for the creation of a "Welsh Methodist Assembly of Wales" adopted by the previous Conference had been unanimously approved by both the Welsh synods. The chairman of this body is to be officially known as the President of the Assembly.

The house which was occupied by John Wesley, on City Road, London, was dedicated March 1 as a Methodist Connectional center, museum, and home

for Christian workers. The house had been continued as a ministerial residence since the death of Mr. Wesley, in 1791. It being no longer needed for this purpose, a scheme was proposed by the Rev. T. E. Westerdale, superintendent, for freeing the Wesley's chapel trust from debt, and providing for the permanent settlement and endowment of this house for the purpose mentioned. This having been accomplished, and an endowment fund of £5,000 secured, the ceremonies of opening the Wesley house were celebrated in connection with the anniversary of John Wesley's death. One of the purposes for which the house will be used will be as a Methodist historical museum, toward which a considerable collection of books, manuscripts, and articles associated with Wesley and with Methodist history has been gathered.

X. Primitive Methodist Church.—The statistical reports of this Church, presented to the Conference in June, give it 1,088 ministers; 16,617 local preachers, 10,418 class leaders, and 197,182 members, showing an increase during the year of 1,455; 4,308 Sunday schools, with 61,000 teachers and 465,089 pupils (49,785 were church members); and 4,628 chapels, valued at upward of £3,000,000, and capable of accommodating 595,038 hearers. Five hundred and sixty-six Christian Endeavor Societies returned 15,657 active members and 5,774 associate members. Increase was shown in every department of denominational activity.

The total receipts for missions had been £16,671, and the expenditures £14,252. The receipts for the African fund had been £6,811, and the expenditure £1,146. This fund was represented to be winning increasing support. In addition to the money which had passed through the hands of the treasurers, there had been raised and appropriated locally for home missions £15,691, and for African missions £2,485. The 41 home missions returned 10,819 hearers, 51 ministers, 5 lay missionaries, 6 Bible women, 377 local preachers, 118 Sunday schools, 1,126 teachers, 9,129 scholars, and 4,719 members. The mission in Africa comprised 8 principal stations, with 25 outstations, 8 European and 4 native missionaries, 4 trained native evangelists, 50 native local preachers, 8 native day schools, 40 native class leaders, and 1,286 members, showing a gain of 40 members during the year.

The Conference met at Leeds, June 8. The Rev. John Smith was chosen president. The report upon the attempt to raise a jubilee fund of £50,000, initiated seven years previously, represented that only £38,000 had so far been raised, while the enthusiasm had somewhat diminished under the pressure of local claims. The Conference decided to leave the fund open another year and reappointed its committee. The income of the Aged and Necessitous Local Preachers' fund had increased by £341, and was now £788. Sixty students were attending the Manchester College for the training of ministers. The Chapel Aid Association had a deposit account of £219,339, and a loan account of £206,652. It had during its operations helped trustees diminish their liabilities by £49,630. The Connectional Insurance Company had issued 7,769 policies, 5,038 of which were still current. It had a reserve of £26,384. The General Chapel fund had during the year co-operated with trustees in reducing their debt by £17,000. The Chapel Loan fund stood at £8,500, and had lent to trustees during the year £1,584. The sales of the Book Room had reached £34,566, the highest amount in its history. The Joint Committee on Union with the Bible Christians reported that in this Church 18 out of 24 districts were in favor of continuing the negotiations; only 2 districts had approved the change in the composition of the Conference from two laymen to

one minister to equal representation of ministers and laymen; while the Bible Christians objected to the large official element which it was proposed to incorporate in the united Conference. The Conference decided to continue the negotiations. The joint committee on concerted Methodist action had labored to promote that object and Methodist fellowship. It found that the freest scope for united action lay in social and philanthropic questions. A Methodist Yearbook was recommended, and the churches were urged to hold united services once a year. The consent of the Conference was given to the accomplishment of the scheme for Methodist union in Australia. A committee on the institution of a system of pensions was reappointed. A measure for the creation of a sustentation fund was passed, with a proviso that it should come up for revision within the next five years.

XI. Methodist New Connection.—The one hundred and second Conference met at Nottingham, June 13. The Rev. David Heath, of Sheffield, was chosen president. The Committee on the State of the Connection reported that there had been a net increase during the year of 886 members and 637 probationers. The Sunday schools included 10,979 teachers and 83,838 pupils in England and Ireland.

A system of visitation of grant-aided circuits and home-mission stations was instituted, under which a minister and a layman are to be appointed by the Conference on the recommendation of the Home Mission Committee, whose duty it shall be to visit the circuits or stations once or twice a year, inquire into their condition, and give advice. The opinion of the Conference was expressed (in a case involving the question) that there is nothing in the constitution of the Connection to prevent the appointment of a minister in a home-mission station for a sixth year. A uniform financial system for all Connectional funds was instituted, with provisions for common banking, or a kind of clearing-house exchanges between them.

XII. United Methodist Free Churches.—The statistical reports of this denomination, made to the Conference in July, give it 397 ministers, 3,409 local preachers, 82,307 members, with 9,116 on trial, and 25,051 teachers, with 201,467 pupils in Sunday schools. The total income from circuits for home and foreign missions was £9,840, exceeding the income of the previous year by nearly £2,000. The missionaries numbered 56; the native and local preachers, 563; church members, 11,152, with 2,785 on trial; chapels, 137; preaching rooms, 132; day and Sunday scholars, 9,983; teachers, 933.

The Conference met at Lincoln, July 19. The Rev. E. D. Cornish, of Manchester, was chosen president. The Chapel Relief fund returned an income of £1,382 and a balance in hand of £808; the Chapel Loan fund, a capital of £14,000, of which £11,300 was out on loan; the Connectional Fire Insurance Association, an income exceeding the losses by £368, and a capital of £2,063; the Superannuation and Benevolent fund, an income of £11,800, and a balance in hand of £2,300. The sales of the Book Room had reached £5,500, and the profits £351, while the borrowed capital had been reduced by £700.

XIII. Bible Christians.—The Bible Christian Conference met at Cardiff, July 26. The Rev. W. B. Lark, of Davenport, was chosen president. The report of the Joint Committee on Union with the Primitive Methodist Church, presenting the records of the meetings of the committee and the resolutions passed by the Primitive Methodist Conference in June, was adopted, and the negotiations were directed to be continued, with instructions to the committee to make any modification that may be found necessary in the constitution of district

meetings and committees. It was understood, however, by the Conference and the committee, that no concession should be made of the Bible-Christian principle of equal representation of ministers and laymen in Conference, the Primitive Methodists proposing as the basis of representation two laymen to one minister. A scheme was adopted for the raising of a "New-Century fund," the precise amount of which was not fixed, to be applied (1) to making provision for the aid of local preachers in sickness and old age; (2) to the increase of the Chapel fund; (3) to the augmentation of the Superannuated Ministers' fund; and (4) to provision for the more efficient training of candidates for the ministry. The total receipts of the Missionary Society were reputed to have been £7,594, and the expenditures £8,332, leaving a balance due the treasurer of £738. Special mention was made in the annual report of the society of the success of the Bush mission in South Australia. Favorable reports were made of the Christian Endeavor Societies, the fire assurance department, and of the examinations of probationers.

XIV. Wesleyan Reform Union.—This society had according to the statistics reported to the Conference in August, 195 chapels and preaching places, 16 ministers, 422 preachers, 7,178 members, and 171 Sunday schools, with 2,738 teachers and 20,799 pupils. The Conference met at Clayton West in August. Mr. W. Brooks, of Sheffield, was chosen president. The need was pointed out in the annual report of a whole-hearted service, in the face of the growing worship of physical amusement, the increasing evil of gambling, and the liquor traffic. The spread of sacerdotalism in the Anglican Church called for the united watchfulness of all the Protestant Free churches. A pastoral letter was directed to be sent to the churches urging them to increase their zeal and labors among the young people.

XV. Wesleyan Methodist Church in South Africa.—The statistics published in connection with the South African Conference give this Church 147 circuits, with 2,517 chapels and churches, 199 ordained ministers, 193 evangelists, 3,143 local preachers, 46,024 native and 5,882 English members, the whole number showing an increase of 4,034 during the year; 500 Sunday schools, with 2,438 teachers and 32,639 pupils; 500 day schools, with 794 teachers and 31,800 pupils; and 3,972 class leaders. The Conference, including churches in Cape Colony, Orange Free State, and Natal, met at Cape Town, with the Rev. James Thompson as president.

XVI. Australasian Wesleyan Methodist Church.—The following are the members attending worship in the several South Sea missions of the Australasian Wesleyan Missionary Society: Samoa, 6,192; Fiji, 96,421; New Guinea, 9,318; New Britain, 8,812; total, 120,743. These figures show an increase, in two years, of 183 churches, 5 native ministers, 741 members, and 2,451 adherents. The financial accounts, however, showed a deficiency of £1,197 upon the year's work, making a total indebtedness against the society of about £4,500.

The General Conference was held in Auckland, New Zealand, with the Rev. H. T. Burgess as president. Progress was reported in the movement for the union of all the Methodist bodies in the Australian colonies into a single church, which had reached different stages of advancement in the different colonies. The prospect of an ultimate successful issue was considered good. Action upon a number of propositions for constitutional changes offered to the Conference was deferred, in order that they might be presented, if the scheme for union should be consummated, to the General Conference

of the united church. In view of a contemplated extension of the foreign mission work to continental Asia and Japan, an additional organizing secretary was appointed. A friendly letter was ordered sent to the divided churches in Tonga, describing what was being done to secure union in the colonies, and expressing the hope that their difficulties might be healed. Resolutions were adopted emphasizing the importance of preserving the class meeting in its integrity; condemning the holding of lotteries and games of chance for the benefit of religious enterprises; and commending proportionate giving to the cause of God. The establishment of a central institution in connection with Queens College, Melbourne, for training candidates for the ministry, was decided upon.

MEXICO, a republic in North America, composed of 27 federated States and a federal district, each represented by two Senators in Congress. The House of Representatives has 227 members, elected for two years by universal manhood suffrage. The Presidential term is four years. Gen. Porfirio Diaz has been elected five times in all, and for four terms in succession, the last time on July 15, 1896. The Cabinet was composed in the beginning of 1898 as follows: Secretary of Foreign Affairs, I. Mariscal; Secretary of the Interior, Gen. M. Gonzalez Cosio; Minister of Justice and Public Instruction, J. Baranda; Minister of Fomento, M. Fernandez Leal; Minister of Finance and Commerce, J. Y. Limantour; Minister of Communications and Public Works, Gen. F. Z. Mena; Minister of War and Marine, Gen. F. B. Berriozabal; State Treasurer, F. Espinosa.

Area and Population.—The area of Mexico is 767,005 square miles, including 1,420 square miles of uninhabited islands. The population of the Atlantic States, area 124,692 square miles, was 1,585,031 at the census of Oct. 20, 1895; of the central States, area 316,125 square miles, 6,684,078; of the Pacific States, area 324,768 square miles, 4,309,752; total population, 12,578,861, giving a density of 16.4 per square mile. The City of Mexico had 344,377 inhabitants.

Finances.—The revised budget for the year ending June 30, 1899, makes the revenue of the Federal Government \$52,500,000, of which \$25,000,000 are derived from customs, \$20,900,000 from stamps, \$2,700,000 from direct taxes, \$2,300,000 from posts and telegraphs, \$200,000 from succession duties, and \$1,400,000 from various sources. The total expenditure was estimated at \$52,672,448, of which \$26,155,717 are for debt and financial administration, \$11,996,356 for war and marine, \$5,652,111 for communications and public works, \$3,685,516 for the interior department, \$2,345,311 for justice and education, \$540,648 for foreign affairs, \$449,451 for the Supreme Court, \$745,626 for the Department of Agriculture and Commerce, and \$82,469 for the executive. The budgets of all the States amounted in 1895 to \$18,000,000.

The Federal debt on Dec. 8, 1898, amounted to \$201,143,121, of which \$108,555,100 was a foreign gold debt paying 6 per cent. interest, all except \$13,500,000 of 5 per cent. Tehuantepec railroad bonds.

The Army and Navy.—The standing army in the beginning of 1898 consisted of 7,249 cavalry, including 118 gendarmes and 261 rural guards, 2,289 artillery and train, and 22,605 infantry; total, 32,143, including 2,068 officers. The war strength is given as 20,000 cavalry, 8,000 artillery, and 123,500 infantry. The infantry is armed with Mauser rifles, the cavalry with carbines of the same system, the artillery with 7.9 centimetre Bange field pieces and Gruson mountain guns. The naval force consists of 2 dispatch vessels, 2 gunboats, and a

training ship. Four more gunboats, an ironclad, a cruiser, and 5 first-class torpedo boats are being built in Europe. The *personnel* numbers about 90 officers and 500 men.

Commerce and Production.—The production of rice in 1895 was 12,326 tons; of corn, 25,339,417, and of wheat 3,536,327 tons; of sugar, 143,578; of paochoa, 69,083; and of molasses, 57,825 tons; of brandy, 3,213,885 heetolitres; of henequen, 42,378 tons; of cotton, 35,613 tons; of logwood, 77,839 tons; of cacao, 2,425, of coffee 19,060 tons; of tobacco, 56,632 tons; of rum, 483,352 heetolitres; of cocoanuts, 310,953. The cattle ranches are valued at \$500,000,000. The exports of gold ore in 1897 were valued at \$349,082; of gold bullion, \$5,858,366; of gold coin, \$93,632; of silver ore, \$10,680,732; of silver bullion, \$32,137,257; of Mexican dollars, \$14,578,958; of coffee, \$5,858,366; of henequen, \$7,431,852; of timber, \$3,518,970; of hides, \$2,903,229; of cattle, \$2,720,091; of textile, \$807,162; of zacaton root, \$1,187,700; of vanilla, \$997,153; of dyes, \$1,936,668. The total value of imports in 1897 was \$42,204,095, and of exports \$45,164,417 for merchandise and \$66,182,077 for precious metals, making a total of \$111,346,494. The distribution of the trade among the principal nations was as follows:

COUNTRIES.	Imports.	Exports.
United States.....	\$22,593,860	\$86,742,951
Great Britain.....	6,881,701	14,280,527
Germany.....	4,003,263	4,416,744
France.....	4,980,082	1,873,522
Spain.....	1,983,794	1,192,328
Other countries.....	1,752,395	2,840,422
Total.....	\$42,204,095	\$111,346,494

In 1898 the imports were valued at \$43,603,000, and exports at \$128,973,000. The export of precious metals was \$75,042,000; of henequen, \$11,589,000; of coffee, \$10,649,000; of live animals, \$4,867,000; of tobacco, \$4,490,000; of timber, \$3,597,000; of hides, \$3,590,000; of lead, \$2,910,000; of copper, \$2,278,000. Of the imports, \$21,491,000 came from the United States, \$8,106,000 from Great Britain, \$5,436,000 from France, \$4,782,000 from Germany, \$2,039,000 from Spain, \$590,000 from Belgium, and \$1,159,000 from other countries. Of the exports the United States took \$94,975,000, Great Britain \$14,776,000, Germany \$6,996,000, France \$5,320,000, Belgium \$1,556,000, Spain \$1,231,000, and other countries \$4,119,000.

Navigation.—The number of vessels entered at Mexican ports during 1898, including coasters, was 10,527, of 4,085,200 tons; cleared, 10,452, of 3,880,940 tons. Of those entered, 5,112, of 3,731,323 tons, and of those cleared, 4,953, of 3,535,898 tons, were steamers. The merchant marine numbered 17 steamers, of 4,081 tons net, and 51 sail ships of 9,317 tons.

Communications.—The length of railroads on Sept. 1, 1898, was 7,750 miles. The length of telegraph lines belonging to the Federal Government was 28,227 miles. Over these 1,865,303 messages were dispatched in 1897. The length of other lines was 13,924 miles. The postal traffic in 1898 was 86,750,000 letters and postal cards in the internal service, and 26,000,000 in the international service. The receipts were \$1,409,528; expenses, \$1,587,115.

Internal Affairs.—The Congress was opened on April 1 and reassembled on Sept. 17. The revenue for 1897-'98 was \$52,500,000, exceeding by more than \$2,000,000 the receipts for the previous year, notwithstanding a decrease in the yield of the import duties, due to the development of manufacturing industries. The greater activity of business enterprise made the stamp revenue much larger. When war broke out between the United States and

Spain, attempts were made by Spaniards to foment disturbances on the border in the hope of involving Mexico, but the Government re-enforced the troops on the frontier, broke up the band which the Spaniards had organized, and punished the instigators for their breach of the law.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; and 2,093,889 in 1890. By the State census of 1894 it was 2,241,641. Capital, Lansing.

Government.—The following were the State officers during the year: Governor, Hazen S. Pingree; Lieutenant Governor, Thomas B. Dunstan; Secretary of State, Washington Gardner; Treasurer, George A. Steel; Auditor, Roseoe D. Dix; Attorney-General, Fred. A. Maynard; Superintendent of Public Instruction, Jason E. Hammond; Land Commissioner, William A. French; Bank Commissioner, Josiah E. Just, who died Feb. 19, and was succeeded by George L. Maltz; Railroad Commissioner, Sybrant Wesselius; Insurance Commissioner, Milo D. Campbell; Labor Commissioner, Joseph L. Cox; Adjutant-General, E. M. Irish; Food Commissioner, E. O. Grosvenor; Oil Inspector, Thomas R. Smith; Chief Justice of the Supreme Court, Claudius B. Grant; Associate Justices, Robert M. Montgomery, Frank A. Hooker, Joseph B. Moore, and Charles D. Long; Clerk, Charles C. Hopkins. All are Republicans.

Finances.—The report of the State Treasurer for the fiscal year ending June 30, 1898, shows that the balance on hand July 1, 1897, was \$783,888.04; total receipts for the year, \$5,122,859.36; total in the treasury, \$5,906,747.40; disbursements, \$4,690,534.79; balance June 30, 1898, \$1,216,212.61.

The net receipts from taxes for the year were \$2,559,219.71. Other receipts were as follows: Interest on surplus revenue, \$21,657.90; unexpended appropriations and funds returned, \$2,990.81; fees for examination of banks, \$9,136.66. The receipts not classified above aggregate \$149,253.31. The total receipts for specific taxes were \$1,028,930.25, divided as follows: From river improvement companies, \$2,870.10; railroad companies, \$744,077.60; insurance companies, \$219,152.62; plank-road companies, \$591.98; express companies, \$2,608.53; telegraph and telephone companies, \$59,586.71; freight, sleeping, and palace-car companies, \$42.65. There were no receipts from mining companies during the year, although these companies owe the State \$29,545.54.

The outstanding bonds of the State now are: Interest bearing—War loan bonds of 1898, $3\frac{1}{2}$ per cent., \$208,700; war loan bonds of 1898, 3 per cent., \$191,300; total, \$400,000. Non-interest bearing—Past due part-paid \$5,000,000 loan bonds \$19,000, adjustable at \$578.57 per 1,000, \$10,992.83. Trust fund debt—Agricultural College fund, \$625,790.98; Normal School fund, \$66,125.12; Primary School fund, 7 per cent., \$3,861,018.52; Primary School fund, 5 per cent., \$833,612.96; University fund, \$532,556.81; balance trust funds, \$5,919,104.39.

The amount paid for the support of the insane was \$504,682.32. Of this, \$440,651.30 was for the permanent insane and \$34,547.72 for criminal insane.

During the year the State institutions received from the treasury \$2,106,232.02; from earnings, \$758,680.35; from loans, \$21,000; total, \$2,885,912.37. Their disbursements for current expenses were \$2,232,324.66; for building and special purposes, \$725,555.78; for payment of loans, \$21,600; total, \$2,979,480.44. This shows an excess of disbursements of \$96,568.07. The institution balances at the close of the year aggregated \$125,073.63.

The receipts from all sources by classes of institutions were as follows: Soldiers' Home, \$81,250.35; Home for Feeble-Minded, \$82,648.43; educational asylums, \$162,216.71; insane, \$800,890.40; educational, \$858,472.92; reformatory, \$451,146.35; miscellaneous, \$422,293.21; total, \$2,864,912.37. The insane asylums, of course, received considerable sums for the care of private patients.

The following shows the total disbursements by classes of institutions: Soldiers' Home, \$99,765.01; Home for Feeble-Minded, \$85,828.60; educational asylums, \$169,137.11; insane, \$882,928.81; educational, \$863,861.59; reformatory, \$446,833.64; miscellaneous, \$409,525.68; total, \$2,957,880.44.

Education.—The 7,917 schools of the State cost \$6,378,706.78 during the last fiscal year, and the wages of the 15,601 teachers reached the total of \$4,050,832.82. The number of pupils enrolled is reported at 491,812. The total Primary School fund on which the State paid 7 per cent. interest for the last fiscal year was \$3,817,170.75; the total fund on which 5 per cent. interest is paid was \$829,069.38; the total of both funds was \$4,646,240.13. The total income for the year for the use of the primary schools was \$1,017,871.98.

The University fund on which the State pays interest is \$529,621.59; total income for year, \$38,507.81. The amount of the Agricultural College fund on which the State pays interest is \$569,951.82; received from United States Government, \$22,000; total income, \$65,880.75.

The amount of the Normal School fund on which the State pays interest is \$65,945.12; total income, \$4,203.66. The amount paid male teachers was \$1,051,380.29; average monthly salary, \$45.65; paid female teachers, \$2,992,971.58; average monthly salary, \$34.95.

The bill for uniform text-books which was made a law by the Legislature in 1897, on condition of its acceptance by the districts, was rejected by 98 per cent. of them.

A class of 29 was graduated at the State Agricultural College in June. By Sept. 16 the students enrolled numbered 389. A new building for woman students is to be erected at a cost not exceeding \$75,000.

Charities and Corrections.—The report of the State board says that insanity has increased in an alarming ratio, but in the last decade the cost per patient per week has been reduced 28 cents per week, without impairing the efficiency of the asylums. There are 3,600 patients.

The report makes a strong plea for an indeterminate-sentence law. The parole law is satisfactory, but scores of convicts are turned loose each year before they are ready to take up the duties of civil life again. The law of 1885 was declared unconstitutional. The State House of Correction has ceased to be a reformatory, as at first intended, all classes of criminals being sentenced there now.

On June 30 last, the population of Jackson prison was 852. Of this number, 596 were employed at productive labor, while 256 prisoners were employed at non-productive labor or were idle or sick. Both the contract and State account systems of employing convicts are in force. The total receipts of the prison, including \$6,000 received from the State Treasurer, were \$118,019.54, and the total expenditures \$115,475.37. The individual convicts have a credit of cash on hand of \$13,555.39.

Marquette prison is reported with a population of 200. The remunerative industries are carried on under the contract system, 110 convicts being employed in the manufacture of cigars, for which the State receives 42 cents per day for each convict.

At the Detroit House of Correction there were 689 prisoners at the date of the inspection, of whom 74

were females. All industries here are carried on under what is known as the State-account system. The manufacture of brushes is now the principal industry, the chair industry having proved unremunerative. Last year the earnings of the institution exceeded the expenditures by \$17,277.67. The population of the State House of Correction and reformatory at Ionia, Oct. 1, was 460, of which number 327 were employed in industrial and remunerative labor, 106 on unproductive labor, and 27 were either idle or sick. Three systems of labor—contract, State-account, and piecework—are carried on. The only industry under the piece system is the caning of chair seats, and this is about to be discontinued. The receipts last year were \$73,042.25, and the disbursements \$112,082.98.

The total number of prosecutions brought in the State in the year was 19,495; convictions, 14,871.

Military.—The expenditures of the State in connection with the war were \$506,630.83. Michigan furnished 6,438 officers and men for the army, and 275 officers and men for the naval reserve. All but \$49,077 of the sum used was expended in the State.

The report of the State Grand Army of the Republic for 1897 shows that there are 379 posts in good standing in the department, with 15,726 members; 6 posts with a membership of 116 failed to report; 2,984 members are on the suspended list, being a reduction of over 700 from the previous year; 8 posts have been organized; 6 posts have been disbanded; 640 new members have been mustered; 711 members have been reinstated; 109 have been honorably discharged; 338 have died. The sum of \$30,442.63 has been paid into the various post funds; \$19,990.99 has been expended for relief and general expenses; \$11,823.96 is the cash balance.

Railroads.—From the Railroad Commissioner's report it is learned that there has been a net increase of 15 per cent. over the business of the year previous. The year has seen marked improvement in roadbeds, equipment, and accommodations for the public, the increased earnings having in most cases been devoted to the betterment of properties and facilities.

With the increase of wages a large number of men have found employment at better pay, and through freight rates have been reduced by competition.

The total mileage in the State is now 7,816.55 miles of main track and 2,198.40 miles of side-tracks and spurs, a total of 10,018.95 miles, an increase during the year of 200 miles.

There has been a decrease in the number of accidents, and the commissioner recommends that it be made a misdemeanor for persons to trespass on the tracks of companies, in order that accidents may be made less frequent.

The railroads carried 9,802,491 passengers within this State during the year, and of this number only 3 were killed and 6 injured, while 31 employees were killed and 259 injured. One hundred and six other persons, principally trespassers upon tracks and trains, were killed and 79 injured.

Taxes were computed last year under the Merriam law, which amends the general railroad law, and the computations showed a net increase of \$203,075.86 over the previous year, the total being \$943,013.36. In order to make this showing the department included in the assessment all earnings from switching charges, and rentals of tracks and terminals, this ruling increasing the State's revenue by \$14,327.53. It also ruled that the new law repealed the law of 1891 exempting railroads north of the 44th parallel from taxation, thus increasing the revenue by \$16,086.44. The assessment under the new law of all companies having special charters further increased the revenue by \$31,160.90. By ruling that

the Merriman law applied to depot companies a still further increase of \$12,175.90 was effected. Every one of these rulings was challenged by the railroad companies, and an appeal was taken to the Supreme Court, the department being sustained in every instance. The increased revenue due to increased rates of taxation fixed by the Merriman law was \$127,150.49.

Banks.—The growth of the business of State banks since the present banking law was enacted in 1889 has been phenomenal, deposits having increased \$57,764,665.61, and loans \$48,320,831.11. On Dec. 1, 1898, the date of the last call, the total loans were \$79,136,528.24; real estate, furniture, and fixtures, \$3,960,988.02; cash, \$22,924,209.47. Of the liabilities the aggregate capital stock paid in was \$12,008,600; surplus fund and undivided profits, \$4,892,580.92; deposits, \$89,948,790; notes and bills rediscounted, \$76,754.81. The total footings were \$106,021,735.73.

The increase in deposits during the year ending Dec. 1, 1898, was \$10,625,638.27, and the increase in loans during the same period was \$8,338,308.21. The deposits of the national banks of Michigan increased about \$4,000,000 during the same year.

During the year 11 new State banks were organized and 1 failed with liabilities of \$11,040.68. One went into voluntary liquidation and 4 decreased their capital an aggregate amount of \$67,000. The net increase of capital was \$143,500. Six private bankers failed with total liabilities of \$484,000. There are now 188 State banks and 3 trust companies.

Insurance.—For 1898 the report shows that the total of risks written by stock and mutual companies was \$238,772,319; premiums received, \$4,467,290; losses paid, \$2,457,742.

The business of the 4 Michigan companies show the following increases over 1897: Risks written, \$5,648,866; premiums received, \$14,624; losses paid, \$72,652.

The latest figures at hand for life and accident companies are those for 1897. The total figures showing the Michigan business of all classes of companies are as follows: Policies issued, \$27,850,705, an increase over 1896 of \$3,959,569; insurance in force Dec. 31, \$136,571,796, an increase of \$6,646,516; premiums received, \$4,572,519, an increase of \$220,540; losses incurred, \$1,903,218, an increase of \$320,031. During the year 35 companies were authorized to do business in the State.

The following shows the Michigan business of co-operative life and accident associations: Policies written, 28,335; amount, \$17,976,111; certificates in force at the close of the year, 36,719; amount, \$46,979,764.

The Michigan business of fraternal associations was as follows: Certificates written, 45,570; amount, \$44,865,225; certificates in force at the close of the year, 187,057; amount, \$224,065,830; losses paid, \$1,722,876; mortuary assessments, \$1,896,676.

Casualty, fidelity, and miscellaneous companies made the following showing: Accident insurance written, \$53,949,718; surety, fidelity, and employers' liability, \$18,748,165; plate glass, \$991,234; miscellaneous, \$611,600; total, \$79,800,717. These companies collected \$332,219, and incurred losses aggregating \$122,399.

Labor.—The reports of factory inspection in 1898 are summarized as follows: The whole number of factories inspected was 4,556, the number running at the time of inspection 4,201, 355 being idle. They aggregated 42,733½ hours' run per day, or an average of 10.2, and when running full time would have run 276,467½ hours per week. They ran 255,967½ at the time of inspection. The total months run in the past year was 45,887½, or an

average per factory of 10.7. There were 168,433 employees when running full capacity, and at the date of inspection 138,598. Of these, 118,863 were males, 19,735 females, and 2,634 under sixteen years of age. The total number on the last pay roll was 137,582, of whom 118,082 were males and 19,500 females. The daily wages averaged \$1.37. Two hundred and one accidents were reported, and changes were ordered in 1,224 factories. The proprietors of 2,643 of the factories reported an increase in business, 1,587 no increase, and 21 refused to answer. More capital had been invested, in 702 of the institutions to the amount of \$4,274,693. In 2,817 factories they report more employees to the number of 22,337.

A report on the mine workers of the upper peninsula covering 1897 shows that 33 mines were canvassed in the iron range—12 at Marquette and Menominee each, and 9 at Gogebic; 8,932 miners were employed, 3,273 under contract. The highest and lowest wages per day were \$5 and 45 cents, respectively, with an average of \$1.74. Board at these places averages \$16.05 per month; other expenses, \$1.10. All the mines were in good condition, 18 promising for future operation, 8 fair and 7 poor; 34 fatal and 12 not fatal accidents was the record for 1897, and the total output of ore was 5,829,505 tons.

The total amount earned by 833 railroad men was \$505,008.35 a year, and the total amount saved \$32,522.73.

A decision of the Supreme Court in November declared against boycotting as unlawful whenever it uses threats of injury to persons or property in any form.

Food Inspection.—The report of food inspection for the last six months of the year shows that 32 prosecutions for violation of the dairy and food laws were brought by the department during the last six months; 10 cases were brought to trial, the defendant being convicted in every case. The law of 1897 concerning oleomargarine was pronounced invalid by the Supreme Court because it passed the Senate without an enacting clause, although this defect was remedied before the bill went to the Governor for his signature.

Suit was brought against the Live-Stock Sanitary Commission to compel it to pay the market value of sound cattle for 28 Jerseys which it had slaughtered and which were found to be diseased. The Court upheld the commission, which had awarded \$1 a head.

State Lands.—At the beginning of the fiscal year ending June 30, 1898, the whole number of acres held by the State was \$720,375.84. The number of acres of part-paid land forfeited to the State during the year was 558.50; number of acres of swamp land forfeited, 691.67; number of acres of delinquent land decreed by the Auditor General under the tax homestead law of 1893, 56,426.80; number of acres of tax homestead land reverted to the State for non-compliance with the law, 3,957.29; number of acres patented to the State by the General Government, 127.16; total, 783,147.06.

The number of acres of land sold during the year was 22,271.21; number of acres of swamp land licensed, 3,634.71; number of acres entered as homestead land under delinquent tax land act of 1893, 61,107.03. This left a total of 695,034.11 acres held for sale and homestead entry at the close of the year.

Mortgages.—The mortgages on farms recorded in the State during the year ending April 30, 1898, numbered 23,730, while those on village realty were 17,622. The farm mortgages reached \$5,053,804, and the village and city property \$16,195,199. The rate of interest averaged 7 per cent. The mortgages

discharged numbered 36,914—22,491 on farm and 14,423 on village property, representing an aggregate of \$26,766,048, \$15,102,264 of which was on farms.

Products.—The gold output of the State in 1898 is given as \$65,000 in value, against \$62,700 in 1897. The output of coal in the State the past year was 331,476 short tons. The report of the Labor Commissioner says that, although not more than one third of the iron mines in the State were in operation during the past year, the output has been far greater than during any year in the history of Michigan. The report not only embodies the mineral statistics, but also includes a summary of the Michigan sandstone quarries' enterprise, which is in its infancy. Four companies quarry red sandstone at Portage Entry, Houghton County, of which but two were in operation in 1897, and there is one at Marquette which produces brown sandstone, which has been used considerably in the construction of fine buildings. A good stone of this sort has been found in Alger, Marquette, Baraga, Houghton, and Ontonagon counties.

The wheat crop of 1898 was the greatest in the history of the State. The number of acres of growing wheat in the State last spring was 1,730,224; the average yield per acre is 19.12 bushels, and the total yield in the State 33,083,261 bushels.

Court Decisions.—In an action brought to recover \$500 lost in a bet on an election, the Supreme Court decided that the case did not come under the statute providing that money or any article of value lost by playing or betting on cards, or by any other device in the nature of such playing and betting, might be recovered after having been delivered to the winner; that betting on the result of an election is not a device of that nature.

The Supreme Court decided in December that express companies must pay for the one-cent revenue stamps used on receipts, and not charge them to shippers.

An action was brought to restrain the State printers from publishing a compilation of the statutes ordered by the Legislature, on the ground that it infringed the copyright on a previous compilation, which it was claimed the later compiler had followed and used. The United States Supreme Court held that the instances cited to show plagiarism were not numerous enough and of such character as to justify interference by the Court.

Ex-Gov. Blair.—On Oct. 12 about 25,000 residents of the State outside the capital visited Lansing to witness the unveiling of a statue of Austin Blair, erected on the Statehouse grounds, to commemorate Michigan's war Governor. Many veterans of the civil war marched in the parade, an impressive feature of which was torn and blood-stained battle-flags, which were brought out of the Statehouse for the first time since they were deposited there. The statue was presented to the State by Gen. W. H. Withington, of Jackson, Gov. Blair's home. The Legislature of 1895 appropriated \$10,000 for the statue, and provided for a commission of three for carrying out the work.

Legislative Session.—The Governor called an extraordinary session of the Legislature, to begin March 22. The call cited the requirement of the Constitution that the Legislature shall provide a uniform rule of taxation, and that assessments shall be on property at its cash value, and said further:

"In violation of the spirit, if not the letter, of these provisions of this Constitution, laws have been passed from time to time by which railroad companies, express companies, telegraph and telephone companies now owning, according to their sworn returns, at least one third of the property of this State, are required to pay only about one twenty-sixth of the taxes levied for State, county, and mu-

nicipal purposes. Taxation has, in many parts of the State, become in the nature of confiscation, the amount levied being greater than the property taxed can be made to produce."

The Governor issued also a proclamation calling the attention of persons and corporations to the statutes prohibiting the offering and receiving of gifts to legislators, and warning those who had been violating them that the Governor would do his utmost to enforce them, adding:

"The acceptance of a pass upon railroads in this State is not only a crime against the statute, but against the school children of the State. Every pass given makes the earnings of the railroad so much less, and as at present we only collect as taxes a percentage on earnings which goes to the school fund, every man who accepts a pass robs that fund of the percentage to which it is entitled. What is said of passes is also true of reduced fares, under whatever pretense they may be offered. Even the clergyman who rides at a reduced rate is expected to make some return to the railroad company, and in riding at the reduced rate he deprives the school fund of the money to which it is entitled, and encourages the railroad companies to make false returns and cheat the State out of its proper dues for taxes."

Bills were introduced providing for increased taxation of corporations, but none were passed except an amendment to the law for licensing and taxing express companies incorporated in other States, raising the levy from 1 per cent. of their gross receipts in the State to 5 per cent. The constitutionality of this bill is questioned.

The validity of the law under which the State has conveyed lands taken for delinquent taxes was before the courts this year in several suits. The Legislature passed an act to "suspend the refunding by the Auditor General of moneys to purchasers of certain tax titles held invalid, and to prohibit proceedings for the recovery of the same."

In all eight bills and three concurrent resolutions were enacted into law. Those not already mentioned were:

Authorizing a war loan of \$500,000 and providing for the disbursement of the proceeds therefrom, and providing for a war loan sinking fund.

To promote the efficiency of the Michigan National Guard and naval militia.

Providing for submitting to the electors the question of a general revision of the Constitution of the State.

To protect members of the State militia and all citizens of the State of Michigan in the service of the United States and their property from execution, seizure, and levy, and to provide for the continuance of pending suits in law and chancery in the event of war.

For the protection of homesteaders.

Political.—Municipal elections were held April 4 in all cities of the State except Detroit and Port Huron. Republican mayors were elected in Flint, Coldwater, Cadillac, St. Louis, Bay City, Lapeer, Battle Creek, Adrian, St. Clair, Stanton, Ludington, Menominee, Greenville, Tawas City, Sault Ste. Marie, Hillsdale, Eaton Rapids, Gladwin, Holland, Midland, Traverse City, Big Rapids, Belding, Niles, Muskegon, and Alpena. Democratic, Fusion or Silver Party mayors were chosen in Sturgis, Ionia, Albion, Benton Harbor, Charlotte, Jackson, Kalamazoo, Ypsilanti, Owosso, Hudson, Marine City, Monroe, St. Ignace, St. Joseph, Marshall, Clare, Manistee, Mt. Pleasant, Dowagiac, Hastings, Grand Haven, Three Rivers, and Saginaw. Non-partisan tickets were successful in Cornnna, Escanaba, Marquette, Gladstone, and Iron Mountain. The Labor party elected a mayor in Ishpeming.

A conference of the People's party was held March 10, with a view to bringing the whole party to act together in the election this year, but the object was not attained, and the Middle-of-the-road division called a convention to be held at Grand Rapids June 21. At that time resolutions were adopted that denounced fusion, declared direct legislation and the money question to be the paramount issues, and demanded the repeal of the national banking law, establishment of postal banks, a graduated income tax, Government ownership of railroads, telegraph, etc., the purchase by the Government for actual settlers of all lands owned by corporations in excess of their needs, prohibition of alien ownership of land, taxation of all property at its true cash value, and the establishment of a forestry commission; denounced war bonds, asked for more greenbacks and free coinage, and declared that no officeholder should hereafter be a delegate.

The following nominations were made: For Governor, Sullivan Cook; Lieutenant Governor, Austin S. Randall; Secretary of State, Jonas M. Borough; State Treasurer, Robert Bienhuber; Auditor General, Archibald Malone; Attorney-General, S. G. Houghton; Land Commissioner, J. H. Baker; Superintendent of Public Instruction, Philander Brant; Member State Board of Education, M. O. Graves; candidates for the Board of Education were afterward Disen J. Parker and William Warner.

The ticket of the Socialist party was: For Governor, Mr. Hasseler; Lieutenant Governor, Joel Dugrey; Secretary of State, Peter Friesema; Treasurer, Henry Sievers; Auditor, Anthony Louwet; Land Commissioner, Gustav Zander; Attorney-General, W. W. Wittenberg; Superintendent of Public Instruction, Joseph Kopyskiewicz; Member of the Board of Education, Louis Erb.

The Democrats, Silver Republicans, and one wing of the Populists met at Grand Rapids June 22. The platforms were modified somewhat in the way of compromise. Following are the nominations, which were ratified in joint convention: For Governor, Justin R. Whiting, Democrat; Lieutenant Governor, Michael F. McDonald, Democrat; Secretary of State, L. E. Lockwood, Populist; Auditor General, John L. Frisbie, Silver Republican; State Treasurer, Dr. Edgar B. Smith, Democrat; Attorney-General, Royal A. Hawley, Silver Republican; Land Commissioner, Carlton Peck, Populist; Superintendent of Public Instruction, Mrs. Florence Renkes, Silver Republican; Member State Board of Education, George E. Willetts, Populist.

There was an effort to defeat the nomination of Mrs. Renkes on the ground that a woman is not eligible under the State Constitution, but an authority on constitutional law decided in her favor, and her nomination was made unanimous.

The Prohibitionists held a convention at Lansing Aug. 23. The platform declared that the only remedy for the liquor evil is a political party united on that issue, as all other parties are hopelessly divided on it. The party in power was arraigned as a license party. The resolutions therefore declared for the complete outlawry and suppression of the entire traffic in alcoholic liquors, and for very rigid regulations governing the manufacture and sale of alcohol for legitimate uses. They favored making a fair and thorough trial of "the initiative and referendum," and demanded the abolition of all distinction of sex in regard to suffrage. The nominations were: For Governor, Noah W. Cheever; Lieutenant Governor, N. Horton Clark; Secretary of State, John Sweet; State Treasurer, Robert King; Auditor General, Henry Andrus; Land Commissioner, John Van Zollenburg; Attorney-General, Myron H. Walker; Superintendent of Public In-

struction, David S. Warner; Members State Board of Education, Delevan B. Reed, William C. Clemo.

The Republican convention met in Detroit Sept. 21. The resolutions said, in part:

"We indorse the present national administration, and express confidence in the honesty, integrity, and patriotism of President McKinley.

"We indorse our honored Secretary of War, and commend his conscientious, patriotic, and unselfish devotion to the honor of the nation and the welfare of the army. We denounce the unjust attacks made on him, and offer him our undivided support and confidence.

"We reaffirm the principles of the St. Louis platform, and pledge them our support as a sure guarantee of national prosperity and honor."

The platform congratulates the country upon returning prosperity under Republican rule and the operation of the Dingley law; offers honor and devotion to the volunteers from Michigan in the war; congratulates the nation upon its land and sea victories, and leaves the future destiny of the peoples over which the nation has gained control through the war confidently to the hands of the properly delegated authority. The administration of Gov. Pingree is commended, especially his care and energy in equipping and caring for the interests of the troops and their families. The paragraph concerning State taxation is as follows: "We commend the present administration for its earnest efforts in favor of the equal and just taxation of the property of railroad, telegraph, telephone, and express companies. We favor the immediate repeal of the tax upon the gross earnings of railroad, telegraph, and express company property, this statute to be determined by a State board. The taxes collected therefrom should be paid into the primary school fund. We indorse the principles of the Atkinson bill, and pledge the support of the Republican party thereto. We favor also the readjustment of the assessment laws of this State, so that all taxable property shall be placed upon the assessment rolls at a just value, and be taxed equally with all other taxable property in the State."

The ticket follows: For Governor, Hazen S. Pingree; Lieutenant Governor, Orrin W. Robinson; Secretary of State, Justus S. Stearns; Auditor General, Roscoe D. Dix; Attorney-General, Horace M. Oren; State Treasurer, George A. Steel; State Land Commissioner, William A. French; Superintendent of Public Instruction, Jason E. Hammond; Regent of the University (short term), Eli R. Sutton; Regent of the University (long term), J. Byron Judkins; Member of State Board of Education (short term), E. F. Johnson; Member of State Board of Education (long term), F. A. Platt; Chairman State Central Committee, Gen. Arthur F. Marsh.

The total vote for Governor was 421,164, being 126,638 less than that of two years ago. Gov. Pingree polled 243,239 votes, against 304,431 in 1896. This year he polled 57.76 per cent. of the total vote cast for Governor, an increase of 2.19 per cent. over his proportion two years ago. The vote for Governor stood: Pingree, 243,239; Whiting, Democrat, 168,142; Cheever, Prohibitionist, 7,006; Cook, Populist, 1,656; Hasseler, Socialist-Labor, 1,101. All the Republican candidates for State offices were elected. The Legislature stands: Republicans in the Senate, 27; in the House, 93; Democrats in the Senate, 5; in the House, 7.

Michigan's Representatives in the Fifty-sixth Congress are all Republicans.

The proposition to revise the Constitution did not receive a majority of the highest number of votes cast at the election, and for this reason it is claimed that it did not carry, although it received a substantial majority of the votes cast on that subject.

MINNESOTA, a Western State, admitted to the Union July 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,301,826 in 1890. By the State census of 1895 it was 1,573,350. Capital, St. Paul.

Government.—The following were the State officers during the year: Governor, David M. Clough; Lieutenant Governor, John L. Gibbs; Secretary of State, Albert Berg; Treasurer, A. T. Koerner; Auditor, R. C. Dunn; Attorney-General, H. U. Childs; Adjutant General, H. Muehlberg; Superintendent of Education, W. W. Prendergast; Commissioner of Insurance, E. H. Dearth; Labor Commissioner, L. Y. Powers; Bank Examiner, M. D. Kenyon—all Republicans; Chief Justice of the Supreme Court, Charles M. Start, Republican; Associate Justices, William Mitchell, Daniel Buck, and Thomas Cauty, Democrats, and L. W. Collins, Republican; Clerk, Darius F. Reese.

Finances.—The total in the State treasury by the report to the Legislature of 1899 was \$872,574.69. The Auditor submitted his estimate of revenue receipts for the ensuing biennial period, based on a tax levy of 1½ mill. This rate, according to the estimate, will produce \$2,560,000 in the first year, and leave a surplus of \$279,000 over and above estimated disbursements; in the second year, \$2,655,000, with a surplus of \$110,000.

Gov. Lind recommended legislation for shifting more of the burden of taxation from the possessions of the poor to various forms of wealth that now escape. The law which now requires the payment of a minimum incorporation fee of \$50 to obtain a corporate charter, and, in addition, one tenth of 1 per cent. on the capitalization in excess of \$50,000, should, in his opinion, be extended so as to apply also to foreign corporations doing business in this State. The Governor also recommends the levying of an annual franchise tax upon corporations, foreign and domestic. He says: "The legislation now in force for taxing express, telegraph, telephone, and sleeping-car companies in this State is, in my judgment, radically defective, and should be revised. The rate imposed of 3 per cent. on gross earnings computed solely on local business—originating and ending within the State—is grossly inadequate. Situated as is our State on the highway of commerce between two oceans, with our large centers of population near the State lines, it is but a small proportion of our business that is strictly local—that is to say, business originating and ending within the boundaries of the State. To impose a percentage tax, or any tax levied directly on the gross earnings, State and interstate, of these monopolies, would be held a violation of the Federal Constitution. The tax, whether it be a 3-per-cent. or a greater rate, should be computed on a valuation of the corporation's property employed in its business in this State."

The average rate of gross-earnings tax collected in Iowa, Illinois, and Wisconsin is more than one third higher than the rate imposed in this State. In the opinion of the Governor, this is a state of affairs that neither the Legislature nor the executive can ignore; and he recommends a law by which railroad companies may have the choice between payment of a higher percentage on gross earnings and payment of a tax on their franchises and valuation.

Education.—Gov. Clough's message to the Legislature says: "In all departments the enrollment of students has increased faster than the population. The special schools for the blind, the deaf, and other defectives are each making improvements in methods of work, and in other ways are coming to deserve as well as to receive the commendation of

the philanthropic workers throughout the State and nation."

It is announced that a debt of \$36,000 on Hamline University has been paid this year by subscription, J. J. Hill leading with \$20,000.

Pillsbury Academy received \$250,000 from George A. Pillsbury.

In a suit for libel brought by the American Book Company against the publishers of a pamphlet by President Gates, of Iowa University, the decision given in March was in favor of the book company, with damages of \$7,500.

Seven years ago a system of free-school libraries was established in Minnesota, and now there are 2,800 of such libraries in the State, access to which is had by three fifths of the school children. The number of the libraries is rapidly increasing. The books are in charge of the teachers during the school terms, and are kept in the school buildings. During vacations they are in charge of the clerks of school districts, but the children have access to them. The State pays half the cost of buying new books for the school libraries up to \$40 on the first year that they are established, and thereafter up to \$20 a year.

Charities and Corrections.—The hospitals for the insane in the State contained, on July 31, 1898, a total of 3,265 patients, of whom 1,895 were men and 1,370 were women.

The number of convicts in the State Prison at Stillwater, according to the latest report at hand, was 469. The prison is now more than self-supporting, the net gain in earnings exceeding the expenditures.

The State Training School had an average number of about 367.

Railroads.—Minnesota, it is said, led the other States in railroad construction in 1898. The Railroad Commission has held hearings during the year in reference to freight rates on iron ore, but apparently the decision had not been reached at the close. Testimony was given, "on the part of iron-ore men and sales agents, to the effect that reductions in freights by the ore roads of Minnesota would have no effect in helping the independent mine owners, who are supposed to have brought the case, but would simply result in giving the Eastern furnace men their ore at a cost less by just the reduction in rates than it had been before."

Insurance.—The commissioner refused to re-issue licenses to several mutual hail insurance companies on the ground that the losses are not paid promptly, and in many instances not at all; that the members of the companies are assessed several times as much as they should be; and that the officers are drawing enormous salaries and commissions in comparison with the amount of business done; and he gave notice to the officials that no officer shall receive more than \$2,000 a year salary, nor may he accept commissions of any sort. As to the assessment of members for losses, he stipulates that no assessment shall be more than one half mill on a dollar above what is needed to pay losses. In one company it appears that two officers drew nearly \$18,000 a year, while only about \$41,000 in actual cash was paid for losses.

State Lands.—The Auditor reports that several hundred thousand acres of swamp lands in the northern part of the State, within the granted limits of certain land-grant railroads, have been certified to the roads as inuring under the grant. The Governor says this is clearly erroneous, as the swamp-land grant antedates the railroad grants.

Farm Lands.—The Commissioner of Labor shows from statistics regarding foreclosures of mortgages on farms that there are not so many foreclosures as there used to be, and that there are fewer where

farming is diversified than in a one-crop country. They are now almost unknown in the richer agricultural counties where market and dairy farming are carried on.

Products.—The estimated wheat crop this year was 80,000,000 bushels; the estimated acreage, 5,250,000. If this estimate of the crop is at all accurate, the year is immensely beyond other recent years in this respect.

There has been great growth in the dairy industry within a few years. The principal of the dairy school at the State University gives the following information concerning it:

"The cost of manufacture in this State has been reduced to a lower point than in any other State. D. B. White at the dairy convention held at Albert Lea in December, 1898, said: 'The cost to make a pound of butter in the best creameries in the county for 1894 was from 1.69 cent to 1.95 cent, and averaged 1.76 cent. The cost for the year 1895 ranged from 1.41 cent to 1.88 cent, and averaged 1.65 cent.' During the years 1896 and 1897 some of the financial statements of our best-managed creameries show that they have succeeded in reducing the average annual cost of manufacture to 1.28 cent a pound, and that, too, without reducing the wages of the employees. When we consider that the prevailing cost of manufacture in other States is about 3 cents a pound, we can readily see why the creamery business is giving such good satisfaction in this State. During 1896 it cost \$22.12 to feed a cow, and the average milk yield was 7,454 pounds per cow. This made the average butter yield per cow 349 pounds, and the cost per pound was 6.3 cents per pound. During 1897 the average cost of producing a pound of butter was 4.7 cents. Taking the average for the last two years, we have the several costs as follows: Cost of butter production, 5.5 cents; cost of manufacture, 2 cents; cost of transportation to seaboard, 1.25 cent; commission, 1 cent; total, 9.75 cents. Our butter during that period sold on an average for 18½ cents a pound. If we add to this the value of the skim milk, we have a net return for the feed consumed by the cow of nearly 200 per cent."

A conservative estimate makes the number of dairy cows in the State 830,000. Not only have the cows increased greatly in numbers, but the annual yield of milk per cow has also increased. There are therefore about 435,000 cows contributing milk to the 650 creameries, and they distribute to the patrons \$9,550,000 annually. But this has reference only to the amount of money received by the patrons, which is only about 84 per cent. of the actual receipts, the 15 per cent. making up the expense account and the reserve fund, which is used in paying for the plant and maintaining the equipment. This makes the actual income from the 650 creameries in round numbers \$11,300,000.

At the dedication of the Minnesota building at the exposition at Omaha—a building made entirely of pine logs from the forests north of St. Paul and Minneapolis—the Governor said: "Minnesota produces more iron ore than any foreign nation excepting one; and in 1900 it will lead every country in the world."

St. Paul.—It appears from comparison of the number of families who own their homes in 28 cities of more than 100,000 population that only 3 have a larger percentage than St. Paul, in which 40 per cent. are owners of their homes.

Duluth.—A fire in this city just above the ship canal on May 8 rendered 2,000 persons homeless.

Pennington.—This village was practically destroyed on May 18 by a tornado; 3 persons were known to have been killed and 50 injured.

The New Capitol.—The corner stone of the new Capitol was laid on Aug. 3. The following is

taken from the introductory address by Commissioner Graves:

"Only forty-nine years ago, in September of the year 1849, the first Territorial Legislature of Minnesota assembled in a log building at the corner of Bench and Minnesota Streets, in this city, immediately upon the bluff overlooking the Mississippi river, and after listening to an address by the Hon. Alexander Ramsey, first Governor, proceeded to make laws for Minnesota, then a Territory of less than 6,000 people. Gov. Ramsey is present to-day to assist his successor in the duties of this historic occasion—his successor who to-day is the executive of a great State of nearly 2,000,000 of people and over \$700,000,000 of accumulated wealth. From the humble log cabin of 1849 and the buildings rented for State purposes in succeeding years the State departments in 1853 moved to the first building built for a Capitol. But of that structure it is recorded that, until 1866, the legislative halls were lighted during night sessions with candles, that it was heated by wood-burning stoves, and that all the water used in it was brought there by carts. When fire destroyed it, in 1881, the present Capitol on Wabasha Street was built, and has been occupied by the State government to the present time."

The building will be a somewhat plain structure, surmounted by a dome, and will be about 200 × 400 feet in size.

Military.—The State sent 4 regiments to the Spanish war. The Thirteenth Minnesota led in the attack on Manila, Aug. 13, and 13 of the 36 wounded were Minnesota men. The expense incurred in organizing the 4 regiments was \$143,164.34. The expense of caring for the sick soldiers and sundry allied objects amounted to \$10,000.

There was an outbreak in October by the Pillager Indians, a tribe of the Chippewas. The occasion was the attempt to make arrests for violations of law. The following statement has been made in regard to their provocation:

"It appears that these Indians have been victims of injustice of long standing. Ten years ago they agreed to cede to the United States their surplus land, and it was provided by law that the value of the land should be determined within a 'reasonable time,' on the basis of the pine growing thereon. The 'Chippewa Commission' was created for this purpose, and the high-salaried commissioners have gone leisurely forward with the work for ten years, at a cost of hundreds of thousands of dollars to the Indians. All kinds of frauds have been perpetrated meanwhile, the timber has been grotesquely underestimated, and desirable lands sold for much less than their value, and unscrupulous lumber companies and individual lumbermen have cheated and robbed the Indians."

Gen. Bacon went to Walker with a small force to assist the United States marshal in making arrests among the Indians at Bear Island. A conference was held with the chiefs, who refused to give up the men wanted, and the troops proceeded to take them by force, and were trapped by an ambush. In the fight that followed on Leech Lake, Oct. 5, 6 soldiers were killed and 11 soldiers and 5 civilians were wounded. The number of Indians killed was supposed to be about 30. Re-enforcements were sent to Gen. Bacon, but there was no more fighting. All but 2 of the men for whom the warrants were issued had given themselves up or been taken by Oct. 17. Leech Lake, the scene of the trouble, is in Cass County, 100 miles west of Duluth.

Another grievance of the Indians which has been supposed to have been connected with the outbreak is in regard to the taking of dead-and-down timber on the reservation by half-breeds from other reservations which was allowed by Government officials.

In December the Federal Land Commission made public the report of two agents who had been investigating, denying that there was any basis for the charges concerning the logging operations.

Political.—State officers were elected in November. Tickets were put up by Republicans, Democrat-Populists, Prohibitionists, Populists, and the Socialist-Labor party.

The Democrats, Silver Republicans, and Populists held conventions at Minneapolis, June 15. "A committee of seven from each convention, to act in joint conference, was appointed without trouble by both the Democrats and Silver Republicans, but with the Populists the friction was so great that the entire day was consumed in discussion. Both the Democrats and the Silver Republicans indorsed the Chicago platform and the candidacy of William J. Bryan for the presidency. The Silver Republicans also indorsed the initiative and referendum. A joint conference committee held a lively session, and it was agreed to divide the offices to the three parties, allowing the conventions to make the nominations. John Linde, the Silver Republican, who had been candidate for Governor twice, was indorsed for that office. To the Populists were allowed the offices of Lieutenant Governor, Auditor, Attorney-General, and Clerk of the Supreme Court. To the Democrats were given the nominations of the Secretary of State, State Treasurer, and one of the judges of the Supreme Court. The joint conference committee recommended that Judges Buck and Canty, at present sitting, be named by the three parties."

John Lind was nominated by the three conventions for Governor; J. M. Bowler, nominated by the Populists and indorsed by the others, for Lieutenant Governor; J. J. Heinrich for Secretary of State; Alexander McKinnon for State Treasurer; Justices Mitchell, Canty, and Buck for the Supreme Court bench; for Auditor General, George M. Lamphere; Attorney-General, John F. Kelly; Clerk of Supreme Court, Z. H. Austin.

The platform of the Democratic convention charged that State land has been frittered away at ridiculous prices, and that taxes have been increased. It said, in part: "Our banking institutions, established to care for the deposits of the people, have not had their condition of solvency or insolvency examined by a competent bank examiner. The offices of the Clerk of the Supreme Court, oil inspection, and surveyor of logs have been allowed to demand and receive exorbitant fees, amounting to about \$50,000 annually. Our railroad and warehouse commission has failed to fully protect the people. Unjust discriminations and exorbitant charges in railway rates demand proper regulations by this commission."

The majority of the Populists having agreed upon the compromise plan of fusion with the other silver parties, the minority bolted and held a convention the next day, nominating the following: For Governor, L. C. Long; for Lieutenant Governor, Kittell Halverson; for Secretary of State, M. Wogenberg; for Auditor, Charles Hopkins; for Treasurer, P. H. Rahilly; for Attorney-General, John F. Kelly; for Clerk of the Supreme Court, A. L. Stromberg. The resolutions affirmed fusion to be wrong on principle. The convention declared in favor of Ignatius Donnelly for United States Senator.

The Republican State Convention met in St. Paul, June 30, and nominated the following: For United States Senator, Cushman K. Davis; Governor, William Henry Eustis; Lieutenant Governor, Lyndon A. Smith; Secretary of State, Albert Berg; State Auditor, Robert C. Dunn; State Treasurer, August T. Koerner; Attorney-General, Wallace B. Douglas; Clerk of Supreme Court, Darius F. Reese;

Justices of the Supreme Court, John A. Lovely, Calvin L. Brown, Charles L. Lewis. The platform commended the tariff legislation of 1897, approved the Administration in its treatment of our foreign relations and its management of the war with Spain, and favored immediate annexation of Hawaii; it said the Nicaragua Canal should be constructed and under control of the United States Government; declared for the gold standard; and praised Senators Nelson and Davis. It commended the State administration, and recommended legislation to secure good roads.

John Lind, candidate for Governor on the fusion ticket, was elected by a vote of 132,024, against 111,625 for Eustis, Republican, 5,008 for Higgins, Prohibitionist, 1,766 for Long, Populist, and 1,657 for Hammond, Socialist.

The Republican candidates for all the other State offices were elected.

All the seven members of Congress elected are Republicans. The Legislature stands: Republicans in the Senate, 44; in the House, 93. Democrats in the Senate, 18; in the House, 25. Independents, 1 in each house.

Four proposed amendments to the Constitution, which had passed the Legislature, were submitted to voters and were ratified. They were:

1. Permitting women to vote for members of library boards and to be eligible to become members of such boards, in addition to the right to vote upon school matters and to hold offices pertaining to schools, as provided by the original section of the Constitution.

2. Providing that constitutional amendments shall be voted upon at general elections, and requiring, to carry them, a majority of all votes cast at the election.

3. Revising the amendment of 1896 relating to city charters. The term of office of the local commission for drafting a charter is limited to six years instead of being unlimited, as before. The commission must submit proposed amendments to vote when petitioned by 5 per cent. of the legal voters. Cities are divided into four classes instead of three.

4. Providing for the establishment of a State highway commission, and of a fund to receive proceeds of internal improvement land fund and of State tax of not over $\frac{1}{10}$ of a mill.

Decisions.—An amendment to the general banking law relating to the minimum amount of capital, organization, rate of interest, liabilities, loans on shares, and available funds to be kept on hand was declared by the Supreme Court to be void because not passed by a two-third vote.

A law providing for a commuted system of taxation of mining property and products by payment of a fixed sum per ton for all ore mined was declared in conflict with the constitutional provision that all taxes shall be as nearly equal as possible.

MISSISSIPPI. A Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; and 1,289,600 in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, A. J. McLean; Lieutenant Governor, J. H. Jones; Secretary of State, J. L. Power; Treasurer, A. Q. May; Auditor, W. D. Holder; Superintendent of Education, A. A. Kinnannon; Attorney-General, W. N. Nash; Adjutant General, William Henry; Chief Justice of the Supreme Court, Thomas H. Woods; Associate Justices, S. H. Terral and Albert H. Whitfield; Clerk, Edward H. Brown—all Democrats.

Finances.—The receipts for the fiscal year from Oct. 1, 1896, to Sept. 30, 1897, were \$1,492,978.92; and there was \$18,006.68 balance in the treasury on Oct. 1, 1896, making a total of \$1,510,985.60; of said balance only \$506.68 was available, the remainder being a donation of the United States to the Agricultural and Mechanical Colleges. Disbursements amounted to \$1,457,134.54. The total amount of warrants issued by the Auditor was \$1,381,518.30. Receipts from State tax privileges amounted to \$352,112.56; from land purchases, \$18,470.60; from State tax of 1896, \$990,583.48. Among the disbursements were: Judiciary, \$86,565; executive, \$25,114; common school fund, \$673,442; pension fund, \$73,311; legislative fund, \$32,875; commission for assessing, \$50,394; Chickasaw school fund interest, \$52,391; University of Mississippi, \$37,643; Lunatic Asylum, \$83,576; Deaf and Dumb Institute, \$32,021; East Mississippi Insane Asylum, \$43,085; Agricultural and Mechanical College, \$39,085; Industrial Institute and College, \$23,410; Alcorn Agricultural and Mechanical College, \$18,960; Vicksburg City Hospital, \$12,309; State Board of Health, \$14,894; interest on 6-per-cent. bonds, \$29,976; canceled land patents, \$11,327; Agricultural and Mechanical College congressional fund, \$20,791; interest on 5-per-cent. bonds, \$19,325. The total State debt was \$2,703,550.94; total collections made by the State Revenue Agent, for the two fiscal years, \$57,856.27. During 1897, to meet the necessities of the treasury, the Governor borrowed from the First State Bank of Columbus \$25,000, at 5 per cent. per annum; from E. & S. Virden \$10,000, at 5½ per cent.; and from the Manhattan Savings Bank and Trust Company of Memphis \$50,000, at 5 per cent. [As only biennial reports are made, some of the figures in this paragraph are necessarily the same that were given in the "Annual Cyclopædia" for 1897.]

Banks.—The following is a recapitulation of all the State banks: Overdrafts secured, \$767,170.60; overdrafts unsecured, \$230,096; State bonds, \$127,035.87; stocks, \$325,118.21; loans and discounts, \$9,132,712.65; county bonds, \$90,733.20; levee bonds, \$101,799.50; city bonds, \$135,804.40; banking houses, \$230,250.61; other real estate, \$238,611.97; furniture and fixtures, \$89,396.48; expenses, \$127,137; taxes, \$73,132.76; sight exchange, \$2,040,185.82; cash on hand, \$1,276,053.41; resources and liabilities, \$14,988,238.48; capital paid in, \$3,700,594.64; surplus, \$432,128.09; undivided profits, \$631,652.95; deposits liable to check, \$8,643,050.11; time certificates deposit, \$626,565.37; bills payable, \$539,284.29; due other banks, \$248,722.41; rediscounts, \$152,819.76; cashiers' checks, dividends, etc. \$101,420.86.

Valuation.—The valuations according to the last assessment are: Realty, \$113,210,931; personality, \$44,994,791; polls, at \$2 each, \$264,847; railroads, telegraphs, express and sleeping cars, \$24,682,876; total valuation, \$182,888,598; tax, at 6½ mills, \$1,718,469.89.

Education.—The Superintendent of Education reported that "although the State has been afflicted with epidemics of smallpox and yellow fever, working incalculable injury to labor and capital, although in unprecedented drought has parched the eastern prairies and a devastating flood has swept over the valleys of the west, although the State's principal commodity has fallen to the cost of production, the school system of the State has steadily prospered. In many counties the enrollment of pupils has increased, the school term has been lengthened, better teachers have been employed, new schoolhouses have been built, and an educational sentiment has been aroused. Gradually the people are realizing that the public school is the hope of the State, and

that the school tax is immediately returned to them in the education of their children."

During the scholastic year of 1895-'96, 363,753 pupils were enrolled in the public schools, 165,878 being white and 197,875 colored; for the year 1896-'97, 367,579 were enrolled, 170,811 being white and 196,768 being colored. The report continues: "It is apparent that nearly 200,000 children in Mississippi of educable age do not attend the public schools. Assuming that 25 per cent. of this number attend the private schools of the State, a vast number will receive no instruction. Every person who thinks will ask why this large number of children are out of school. That they will some day prove a menace to the welfare of the State can not be doubted. Unquestionably the absence of these children from school is attributable to the indifference or ignorance of their parents. Too often children of tender years are required to begin the task of bread winning, and are kept out of school that their labor may complement that of the father, or possibly to relieve the father in great measure from labor." The superintendent asked the Legislature to authorize him to have "the newspaper adopted as a text in the public schools."

Schools for Indian children have been maintained in the counties of Leake, Neshoba, Kemper, Newton, and Greene. The supervisor of these schools says in his report: "The greatest obstacle in the way of the educational and religious progress of our Mississippi Choctaws is the Indian ball play as it has been conducted for the past fifteen years. To put it mildly, the ball play is the most demoralizing institution in Mississippi. It is, in a great measure, nowadays, manipulated or controlled by a white swashbuckler element; and gambling, whiskey drinking, fighting, and not infrequently bloodshed, have become the regular concomitants of the play. These facts are well known to every one living in the Indian counties, and the Indian church members who have a real desire for the improvement of their people are very anxious that the ball play should be abolished by law." It is given as an evidence of progress among the Indians that they are beginning to assume English surnames.

Penitentiary.—There were 911 convicts in the penitentiary in 1897. The financial condition of the penitentiary farms was given: Total receipts for 1896-'97, \$192,156.98; expenditures, \$141,920.76; cash on hand Jan. 1, 1897, \$50,236.22; total receipts, for 1897, \$120,436.44; expenditures, \$96,335.18; cash on hand Jan. 1, 1898, \$24,101.26; cash in Merchants' Bank, \$3,707.06. Cotton on hand, 3,477 bales; cotton seed, 1,720 tons; corn, 28,500 bushels; peas, 3,210 bushels. The report of the Board of Control says that "the system of contracting with landowners for planting operations on the share plan or any other basis is unsatisfactory. Issues constantly arise as to the method of cultivating the land and the mode of conducting the work between the State authorities and the landowner. It often happens that the latter fails to furnish the proper teams and sufficient food," and in some instances there has been friction between the State authorities and the landowners respecting the manner in which the convicts should be treated.

Insane Asylum.—In 1896 there were 751 patients, of whom 186 were white males, 209 white females, 174 colored males, and 182 colored females. Discharged recovered, 93—white males 30, white females 30, colored males 72, and colored females 16; discharged improved, 17. At the beginning of 1897 there were 782 patients—white males 195, white females 223, colored males 175, and colored females 189; admitted during the year, 273—white males 68, white females 76, colored males 72, and colored females 57; total present, 1,055—white males 263,

white females 299, colored males 247, and colored females 246; discharged recovered, 98—white males 23, white females 38, colored males 13, and colored females 24; discharged improved, 13—white males 3, white females 6, colored males 2, colored females 2; discharged unimproved, 11; died, 95—white males 29, white females 13, colored males 26, and colored females 27; remaining at the end of the year, 831—white males 191, white females 238, colored males 199, and colored females 193; daily average, 825. Total amount expended for the fiscal year 1896-'97, \$150,809.18; total amount appropriated for 1896-'97, \$190,000; unexpended balance, \$39,190.82.

Deaf and Dumb Institute.—The number of pupils enrolled in 1896-'97 was 114; average monthly attendance, 107. The superintendent reports that "while this statement of the attendance is very favorable when compared with the reports of former years, yet, when taken in connection with the uneducated deaf of the State, it reveals a lack of interest on the part of parents and guardians in the education of this class of children that is not only lamentable but is actually culpable."

Cotton.—The total crop of cotton in 1897-'98 was 1,524,771 bales. The total movement was 1,561,529 bales: By rail—to New England mills, 266,336 bales; to Mobile, 86,226; to Norfolk, 19,322; to Louisville, 11,452; to Savannah, 9,554; to interior Alabama points, 9,378; to Boston, 9,154; to interior Louisiana points, 7,982; to Brunswick, Ga., 7,975; to Pensacola, 5,465; to Virginia mills, 3,833; to North Carolina mills, 3,447; to Tennessee mills, 2,604; to Baltimore, 1,744; to Canada, 1,442; to Western mills, 1,368; to New York city, 1,152; to Philadelphia, 1,146; to Helena, Ark., 1,062; to Pacific ports, 1,020; to Ohio river points, 532; to Charleston, 405; to Newport News, 200; to Cincinnati, 96; to Augusta, Ga., 75; to North Atlantic ports, 50; to Chicago, 9; by rail and water to New Orleans, 812,364; by rail, river, and wagon to Memphis, 293,863; by rail and river to St. Louis, 2,273.

Race Trouble.—As the result of an attempt to arrest a negro near Harpersville, Scott County, in October, 1898, one white deputy was killed, three deputies were wounded, and fourteen negroes were killed. A news dispatch from the scene of the trouble gave the following account of the affair: "Last Friday a negro named Bill Burke had an altercation with his employer, Charles Freeman, a white man, in which the negro got the best of the difficulty. That night a crowd of white men went to Burke's house to arrest him, but he was not there. The white men decided to go back the next night, and the plan was not concealed from the blacks. Headed by Wallace Sibley, a white man deputized to arrest the man, the crowd went to Burke's house. When they arrived upon the scene and called for Burke they were greeted by a fusillade by negroes concealed in the bushes and in the house itself. Wallace Sibley fell dead at the first volley and three other white men were wounded. The whites returned the fire, but were unable to do any execution. During the night a large mob of whites went to Burke's house and got from his mother the names of all in the negro party which had ambushed the white men the night before. About forty negroes had gathered to prevent the arrest of Burke, and a list was made up at her dictation. All of them had fled before the crowd made their appearance the next morning. Then the search for each of the proscribed blacks began. Six of the negroes were found and killed by the crowd before the sheriff arrived. Gathering a posse, the sheriff started for the place, and when he arrived he was joined by crowds of citizens. The sheriff's pursuit resolved itself into a chase of the negroes implicated. At times several of them at-

tempted to make a stand together in the swamps against the whites, but they were forced to abandon their ground in every case."

Through the influence of the Governor and his attendants, quiet was eventually restored, and there was no further bloodshed.

Lynching.—On June 25, 1897, a negro man was savagely lynched in the village of Crystal Springs on a charge of murder. In April, 1898, the grand jurors of the Circuit Court for the Seventh Judicial District reported to Judge Robert Powell that with diligence, patience, and persistency they had spent more than a week "in the vain and futile attempt to identify and bring to the bar of justice the perpetrators of this most foul deed." Upon hearing the report of the grand jury, Judge Powell remarked: "The Court would be recreant to the duty that has devolved upon it, and to its own feelings, did the Court fail to say that it believes that this grand jury, at least, have done their whole duty conscientiously, faithfully, and fearlessly. It is passing strange to me, gentlemen, as you said in your report, that a cruel and diabolical murder could be committed right under the sound of the church bells, right in the sight of civilized people, in the broad-open daylight, in the crowded streets of a city, and men be summoned from the highest to the lowest stations in life, men from right along the highway where the procession passed, and yet not a single man can be found to identify a single individual who participated in that mob. Somebody, gentlemen, has committed cold-blooded, willful perjury beyond a controversy or a doubt. I am told that they had dust in their eyes. Somebody, gentlemen, had dust upon their consciences. And yet they say that the courts of the country are not doing their duty and criminals go unwhipped of justice, when the very men who should be law-abiding citizens, who stand well in the community, will come before the juries of the country and perjure themselves, and fail to tell the truth. Another thing, gentlemen, that passes my comprehension is that the highest peace officers in the country, who had sworn to protect their prisoners and to do their duty, could have a man taken away from them in the broad-open daylight, and yet not strike a blow for the law, and fail to recognize a single individual who had taken away their prisoner. That is the situation, gentlemen, in Copiah County. God help them!"

On Dec. 10, 1897, a negro named Charles Lewis, supposed to be the murderer of Mrs. Brown Smith and four of her children, in Lawrence County, was lynched. The following account of the affair was published: "The mob placed him alongside of several other negroes, and asked the little girl who was spared by the murderer to pick out the one who killed her mother. She at once pointed to Charlie Lewis. This strong evidence to the mob made it difficult for Sheriff Gassell, of Monticello, to induce the people to turn Lewis over to him for safekeeping. He assured them he would have the negro at Bankston Ferry yesterday morning at 10 o'clock for trial. As promised, he arrived there on time with Lewis, and another mob of 200 men, armed with shotguns and Winchesters, met him on the opposite bank of the river. Speeches were made by cool-headed men, among them being Hon. A. E. Weathersby, Senator from Lawrence County, and Rev. Drummonds, a Methodist preacher, who pleaded eloquently for the negro's life. Mr. Brown Smith, the man whose family was murdered, jumped upon the water-shelf of the little store gallery and pleaded with the crowd to be patient and not to rush hastily into a thing they might regret. He said that, while he did not doubt his child's word, yet she was so young that there was a possibility

she might have been mistaken. He said there was something in there (pointing to his left breast) which did not exactly satisfy him about the matter. After parleying, the mob, under the leadership of a few determined men, made a rush for the negro and succeeded in getting him from the deputies after a hard struggle. They then put a plow line around the negro's neck and ran up the hill with him. He was put on a big black horse and driven under a tree. After the halter was fastened to a limb the horse was driven from under him. His feet touched, but he was strangling, and Mr. Arrington, one of the lawyers, and another man cut him down. He could not speak. The crowd allowed him to be revived and then lunged him in earnest. Lewis denied his guilt to the last."

A few days after this occurrence another negro, supposed to have been an accomplice of Charles Lewis, was put to death at Bankston Ferry.

Levees.—At the November election an amendment to the Constitution was adopted, providing that the commissioners of the several levee districts shall have power to cede all their rights of way and levees, and the maintenance, management, and control of the levees to the Federal Government. This action was brought about by the high water of 1897, when nearly all the levees gave way and the greater part of the alluvial district was disastrously overflowed. In December the United States Senate Committee on Commerce agreed to the report of the sub-committee appointed under the resolution of March, 1897, to investigate and report upon the floods in Mississippi river and their causes and prevention. The committee reported that the greatest and most destructive floods have come from the Ohio; that no adequate relief can be secured by reservoirs; and presented a comprehensive historical sketch of the levees and jetties along the Mississippi. With reference to the levees they say the experience of 1897 indicates that a complete inclosure of all the river basins will require considerably higher levees, from 3 to 6 feet; that no substantial relief from floods can be obtained by means of outlets; that only through properly constructed levees can relief be secured. They furnished an estimate of the cost of completing the levee system, putting the sum at \$18,000,000 to \$20,000,000, and the necessary time at four to five years.

Decision.—A suit brought by Amos Woodruff *et al.* vs. the State, the Delta and Pine Land Company *et al.*, begun in 1888, for relief from collection of taxes amounting to about \$1,500,000, was decided during the year. It was sought to subject to such taxes the lands owned by the defendants and claimed by them under a liquidating levee-tax title. The case was decided by the Chancery Court in favor of the defendants on the ground that the bonds sued on were special gold contracts and were not authorized by the statute creating District No. 1 of the Levee Board. That decision was affirmed by the Supreme Court of the State, and was then taken by the complainants, on a writ of error, to the United States Supreme Court and was reversed. This court confined itself to the single question of the validity of the bonds, and held that the issuance of special gold bonds was not in excess of the authority of the Levee Board. The case was thereupon remanded to the State Supreme Court, to be heard upon other questions raised by the demurrer to the bill. The effect of the decision is to sustain the title to the lands and the claim of exemption of the lands from the taxes of the levee district.

New Legislation.—Among the bills passed by the General Assembly were the following:

To provide for pensioning Confederate soldiers and sailors.

To authorize the Board of Levee Commissioners to issue certificates of indebtedness for the purpose of raising funds for high-water emergencies.

To require parallel railroads and railroads terminating at the same point to connect their tracks by switches for the transfer of freight cars.

To abolish corporal punishment in the Insane Asylum.

Resolution memorializing the Congress of the United States to enact a law to prohibit dealing in futures or gambling in farm products.

MISSOURI, a Western State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; and 2,679,184 in 1890. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, Lon V. Stephens; Lieutenant Governor, August H. Bolte; Secretary of State, Alexander A. Lesueur; Treasurer, Frank L. Pitts; Auditor, James M. Seibert; Adjutant General, M. Fred. Bell; Attorney-General, E. C. Crow; Superintendent of Education, John R. Kirk; Railroad and Warehouse Commissioner, T. J. Hennessey; Secretary State Board of Agriculture, John R. Rippey; Commissioner of Insurance, Ed. T. Orear—all Democrats, except Kirk, Republican. Chief Justice of the Supreme Court, Shepard Barclay; Associate Justices, Thomas A. Sherwood, James B. Ganett, Gavon D. Burgess, George B. Macfarlane, Theodore Brace, Democrats, and Walter M. Robinson, Republican; Clerk, J. R. Green, Democrat.

Finances.—At the beginning of 1897 there was a cash balance in the treasury of \$577,463; the receipts for 1897-'98 amounted to \$8,300,406.96; disbursements for the same period, \$7,980,760.53. The assessment upon which taxes were collected in 1896, including real and personal, railroad, bridge, and telegraph property, was \$1,021,993.628; the assessed valuation for 1898 was \$1,050,950,801, an increase of \$28,957,173. Revenues were derived from a tax of 25 cents on the \$100 valuation, levied upon real and personal property of individuals and corporations, from license taxes, tax on premiums received from foreign insurance companies, on merchants and manufacturers, and express companies, interest on balances with State depositories, an incorporation tax, notarial fees, and from sundry minor sources. The net reduction in the State debt during 1897-'98 was \$1,334,000. The certificates of indebtedness issued in 1897 and 1898 were: 1 certificate to the State Board of Education, in trust for School fund, dated July 1, 1898, to run twenty years, bearing 5-per-cent. interest, \$18,000; 1 certificate to the same board, in trust for the Seminary fund, dated July 1, 1898, to run twenty years, at 5 per cent., \$6,000; total certificates issued in 1897-'98, \$24,000. At the close of 1898 the State debt consisted of 5 3/4-per-cent. option bonds, redeemable after July 1, 1892; of 700 3/4-per-cent. option bonds, redeemable at the same time; and of 2,937 3/4-per-cent. option bonds, redeemable after Jan. 1, 1893; total, \$3,642,000. Outstanding certificates were: 1 6-per-cent. School fund, \$2,909,000; 5 5-per-cent. School fund, \$249,000; 1 6-per-cent. Seminary fund, \$122,000; 19 5-per-cent. Seminary fund, \$1,113,839.42; total certificates, \$4,393,839.42; total of bonded debt and certificates at the close of 1898, \$8,035,839.42. The "certificates" of indebtedness are assets of the State, the principal not to be paid, and the interest accruing thereon can only be used in supporting public schools and the State university.

Banks.—There are 494 incorporated and 85 private banks in the State, which at the close of

business on July 14, 1898, reported as follows: Resources—Loans and discounts undoubtedly good on personal or collateral security, \$69,170,376.28; loans and discounts undoubtedly good on real estate security, \$6,991,521.34; overdrafts by solvent customers, \$771,803.34; United States bonds on hand, \$305,984.22; other bonds and stocks, \$5,896,487.87; real estate, banking house, \$2,249,049.38; real estate, other than banking house, \$1,159,213.07; furniture and fixtures, \$578,388.37; due from other banks, good on sight draft, \$17,872,944.21; checks and other cash items, \$1,816,523.04; national bank notes, legal tender United States notes, and gold and silver certificates, \$6,092,722.11; gold coin, \$3,201,406.73; silver coin, including pennies, \$669,420.51; all other resources, \$143,476.62; total, \$116,919,267.09. Liabilities—Capital stock paid in, \$20,408,270; surplus funds on hand, \$7,346,724.28; undivided profits, less current expenses and taxes paid, \$1,280,871.44; deposits subject to draft at sight by banks and bankers, \$6,108,200.11; deposits subject to draft at sight by individuals and others, \$62,725,948.38; deposits subject to draft at given dates, \$18,292,642.44; bills payable and bills rediscounted, \$642,096.57; dividends unpaid, \$54,323.69; other liabilities, \$60,190.18; total, \$116,919,267.09.

There are 226 building-and-loan associations in the State, 222 of which reported a total of liabilities and resources at \$18,255,186.22, making an aggregate with the banks of \$135,174,458.31.

Insurance.—The removal of the State insurance department from St. Louis to Jefferson City was effected in 1898. It is reported that the receipts of this department have increased largely over the receipts of former years, more insurance companies being now licensed than at any time in the history of the department. In the ten years from 1878 to 1887 the receipts of the department amounted to \$182,787.68, the disbursements in the same period being \$166,028.98, leaving a balance of \$16,758.98; in the ten years from 1888 to 1897 the total receipts amounted to \$272,455.58, and the disbursements to \$165,874.52, an excess of \$106,581.06. The receipts up to Dec. 12, 1898, were \$58,000, or \$22,180.85 in excess of expenditures of the department. The 2½-per-cent. tax levied on the gross premiums of all insurance companies of other States doing business in Missouri during 1897, and paid up in 1898, amounted to \$233,306.17, the total sum being \$13,933.96 in excess of such taxes in the previous year. All the business of the insolvent companies which had been in course of settlement for twenty-one years was closed up, and \$17,333.33 of assets of the insolvent corporations was paid into the treasury, increasing the school fund to that amount.

Penitentiary.—At the beginning of 1898 there were 2,327 convicts in the penitentiary. An average of 1,302 daily during 1897-'98 were employed by contractors, at the rate of 50 cents per day, making a daily income for the institution of \$681. The surplus of cash on hand was \$8,552.63. The sum of \$29,545 was expended for a new cell-building, \$26,159 for a new shop-building, and 1,000 for books for the library. In his review of the institution for 1897-'98, the Governor said: "Not only is the financial status of the institution an excellent one, but the splendid discipline of the men maintained is worthy of notice and commendation. The old idea which prevailed so many years among prison officials, that men incarcerated for crime could only be controlled by harsh and severe means, that criminals had to be controlled by brute force, and that there was nothing in the nature of a convict that could be touched or softened by kind words or gentle manner, has been abandoned. In our penitentiary to-day the higher instincts of man are appealed to."

Insane Asylums.—The State supports 3 insane asylums, the Fulton, the St. Joseph, and the Nevada. In 1897-'98 the 3 contained 1,528 patients.

Government Lands.—In 1898 there were 498,264 acres of United States Government land subject to entry in the State, this being the only State containing Government lands for cash entry. These lands can be purchased at \$1.25 an acre, excepting such as were embraced in homestead entries and reverted to the Government; such can only be secured by homestead entry. One person can acquire title to but 320 acres. Homestead entries can only be made for 160 acres, but purchase may be made of an additional 160 acres.

Products.—The Labor Commissioner reported the surplus products of the State, "after having fed, clothed, and sheltered her 3,000,000 of inhabitants," as follows, shipped during 1897: Live stock—Cattle, 1,015,331 head; hogs, 3,415,459 head; horses and mules, 106,265 head; sheep, 387,385 head; poultry, 51,804,524 pounds. Farm crops—Wheat, 5,269,734 bushels; corn, 4,789,984 bushels; oats, 658,991 bushels; rye, 160,862 bushels; hay, 2,919,435 bales; grass-seeds, 228,783 bushels; flax, 34,512,819 pounds; cotton, 24,010,000 pounds; cotton-seed products, 15,844,000 pounds; tobacco, 1,379,235 pounds; east-tor beans, 1,114,055 pounds; popcorn, 48,330 pounds. Fruits and vegetables—Apples, 2,029,339 bushels; peaches and plums, 139,237 baskets; strawberries, 394,823 crates; small fruits, 134,478 crates; fruits and vegetables, 6,828,903 pounds; dried fruit, 1,883,602 pounds; potatoes, 150,268 bushels; onions, 19,664 bushels; melons, 4,447,273; canned goods, 8,466,621 pounds. Mill products—Flour, 2,625,607 pounds; cornmeal, 7,606,311 pounds; mill-feed, 40,954,916 pounds. Minerals—Coal, 1,981,397 tons; pig-lead, 50,600 tons; lead and zinc ore, 235,333 tons; iron ore, 61,960 tons; pig-iron, 12,080 tons; chats, 83,200 tons; charcoal, 134 cars; nickel, 2,000 tons; granite, 1,944 cars; fire-clay, 3,018 cars; lime and cement, 722,707 barrels; plate glass, 223 cars; tiff, 2,400,000 pounds; tripoli, 4,170,606 pounds; barytes, 17,000,000 pounds. Timber—Lumber, 365,320,523 feet; logs, 14,742,000 feet; walnut logs, 3,168,000 feet; piling, 13,986,000 feet; cross-ties, 4,053,686; cordwood, 119,458 cords; cooperage, 4,410 cars. Miscellaneous—Molasses, 124,266 gallons; honey, 65,215 pounds; beeswax, 3,798 pounds; wine, 2,005,791 gallons; elder and vinegar, 568,382 gallons; wool, 2,478,025 pounds; eggs, 34,314,133 dozen; butter, 3,378,272 pounds; cheese, 463,203 pounds; fish, 850,397 pounds; game, 2,238,315 pounds; dressed meat, 1,351,436 pounds; tallow, 2,489,994 pounds; hides, 9,903,842 pounds; furs, 293,997 pounds; feathers, 487,300 pounds; nuts, 51,952 bushels; milk, 474,731 gallons.

Lynching.—An excursion boat from Quincy, Ill., and Hannibal, Mo., arrived at Clarksville in June, with about 300 negroes on board. "They got into a free-for-all fight," according to a newspaper report, "and City Marshal Meloan went on board to quell it. He put Curtis Young under arrest, when somebody in the crowd shot the marshal in the back, killing him. A posse of fifty citizens gathered and went on board the boat, and arrested Sam Young, Curtis Young, Bob Taylor, and Charles Taylor (all colored), and took them to jail. During the night Sam and Curtis Young were taken from the jail and hung."

In the same month Henry Williams (colored), charged with an assault on some white girls, was hanged at Wabash bridge, Macon Co. A dispatch from the scene thus described the affair: "Williams died protesting his innocence. Rev. J. A. Robbins, Sheriff Glenn, and Mr. McVieker made speeches, pleading with the world-be lynchers to let the law take its course. Robbins was hooted down, and

McVicker was knocked senseless. The sheriff and his deputies were overpowered and disarmed, and the jail was broken into. When the bridge was reached Williams was asked whether he would rather be hanged up and strangled slowly, or allowed sufficient drop to break his neck. He said he did not care. His nerve was phenomenal. The mob finished its work with dispatch and quietly dispersed."

In September Benjamin Jones (white), sixty-eight years of age, was taken from the Liberty County jail by about 75 men and hanged. He had confessed to an assault on a girl eleven years old.

Political.—At the November elections the State went Democratic by less than 25,000, there being a loss of 65 per cent. compared with 1896. The pluralities of the 12 Democratic Congressmen ranged from 2,000 to 3,500. In the retiring Legislature the Democrats and Populists had 52 on joint ballot; this election gave them 40, there being a Republican gain of 12 on joint ballot.

The State Democratic Convention, which met in Springfield on Aug. 11, nominated William C. Marshall for Judge of the Supreme Court for the long term, and Leroy B. Valliant for the short term; William T. Carrington for Superintendent of Public Schools, and William E. Scully for Railroad and Warehouse Commissioner. No other nominations were made, and the nominees were elected.

The platform of this convention approved that of Chicago in 1896, demanding free coinage of silver and gold at the ratio of 16 to 1, without waiting for the consent of any other nation, and confidence in William J. Bryan as the leading exponent of these principles was expressed. The Republican party was censured for nonenforcement of anti-trust laws. The issuance of interest-bearing bonds was condemned. The platform then continued:

"We assert that the declaration of war against Spain was justified by the causes which called it forth. We direct attention to the fact that the National Republican Administration, backed by the Republican majority in Congress, was opposed to war, and yielded only after delay to strong public sentiment aroused by the just and persistent demands of Democratic Senators and Representatives, foremost among them those from Missouri; and for their part in forcing the Republican President and Congress to defend the rights of our country, we extend them our hearty congratulation.

"We are opposed to waging a war for conquest, but as this war was forced upon us by the intolerant action of the Spanish Government and people, we declare it should be prosecuted until Spain is driven from the Western hemisphere.

"We favor carrying out in good faith the resolution of Congress under which we intervened in Cuba, and aiding the Cubans to establish and maintain an independent government of their own, if they desire this, and we will favor its peaceful annexation whenever it can be done with the consent of the people of the island.

"We are opposed to the acquisition of the Philippines or other territory in the Eastern hemisphere. We declare that as an important incident to war our Government should acquire all necessary harbor and coaling stations in the Philippines or elsewhere, and that the Treaty of Peace with Spain or any government established on the islands should guarantee to us commercial privileges equal to or superior to those enjoyed by any other nation.

"The Nicaraguan canal should be constructed and controlled by the United States."

The Populist State Convention, which met in St. Louis on July 7, split on the question of fusion, and two conventions were held, one by the "regulars" and one by the "middle-of-the-roadsers." The plat-

form of the regulars reaffirmed the principles adopted by the Omaha and St. Louis conventions, declaring that money for carrying on the war with Spain should be obtained by coinage of silver and the issue of legal-tender notes, and not by increase in taxes and enlargement of the public debt; that the present system of using bank credit as a circulating medium is extravagant and dangerous. The initiative and referendum were favored in the enactment of laws. The platform of the middle-of-the-roadsers was substantially the same.

The Republican State Convention met in St. Louis on Aug. 23. The platform congratulated the nation upon the unparalleled success of the administration of President McKinley; extended thanks to the army and navy for their achievements in the Spanish-American war; reaffirmed faith in the declaration of principles of the Republican party in 1896; favored an increase of the navy, an adequate system of harbor and sea-coast defenses, and the maintenance of a regular army sufficient to insure the safety of the nation at all times; favored the completion and control of the Nicaragua canal by the United States, and reasserted the Monroe doctrine in its full extent.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles. The population, according to the census of 1890, was 132,159. Capital, Helena.

Government.—The following were the State officers during the year: Governor, Robert B. Smith; Lieutenant Governor, A. E. Spriggs; Secretary of State, T. S. Hogan; Treasurer, T. E. Collins; Auditor, T. W. Poindexter, Jr.; Attorney-General, C. B. Nolan; Superintendent of Education, E. A. Carleton—all elected on a fusion ticket of Democrats and Populists; Adjutant General, James W. Drennen, succeeded by C. F. English; Commissioner of Agriculture, J. H. Calderhead; State Examiner, John G. Moroney; Land Agent, Henry Neill; Land Register, H. D. Moore; State Architect, C. S. Haire; Chief Justice of Supreme Court, W. Y. Pemberton, Fusion; Associate Justices, W. H. Hunt, Republican, and W. T. Pigott, Democrat; Clerk, Benjamin Webster, Republican.

Finances.—The following details regarding the State finances are from the Governor's message to the Legislature of 1899:

At the close of the fiscal year in 1896 there were outstanding warrants amounting to \$366,974.57, and deficiencies not represented by warrants amounting to \$51,237.15. To meet this indebtedness was the revenue for 1896, yet uncollected, amounting to \$286,902.76, and cash in the treasury on Dec. 1, 1896, amounting to \$21,239.38.

It thus became necessary for the present administration to pay off and discharge the large deficiency, \$51,237.15, in addition to running the expenses of the State for the next two years. During 1897 there was collected from all sources \$516,719.81, which, added to the cash on hand, Dec. 1, 1896, gave a total of \$537,959.19.

The warrants drawn during 1897 amount to \$525,520.07. During 1898 the warrants drawn aggregate \$474,658.40, and the total revenue for 1898 amounted to \$520,497; and during 1898 there has been paid out on warrants and interest \$520,494.76, leaving the cash balance on hand, Dec. 1, 1898, \$2.70; but there were warrants outstanding on Dec. 1, 1898, amounting to \$337,649.21. The total amount of deficiencies for the two years aggregates \$42,270.43.

By adding together the outstanding warrants on Dec. 1, 1896, and the deficiencies for that year, we have a total of indebtedness, \$418,011.82. Deducting from that the cash on hand in the treasury, \$21,239.38, left a net indebtedness of \$396,772.44, to be met by the uncollected taxes of 1898, and by

adding together the outstanding warrants on Dec. 1, 1898, and the total deficiencies, we have \$379,919.64; from which subtract the cash on hand, \$2.70, and we have the net indebtedness of the State, amounting to \$379,916.94, which is to be paid by the uncollected taxes of 1898.

Admitting that the taxes for 1898 would not exceed those of 1896, we have notwithstanding gained \$16,855.50 on the indebtedness of the State, besides maintaining several institutions during the past two years which were not in existence prior to 1897.

The inheritance tax yielded \$136.56 in 1897, and \$6,912.72 in 1898.

The tax on insurance companies and the licenses amounted to \$31,019.90 in 1897 and \$41,857.42 in 1898.

The total valuation of property in the State in 1898 was \$133,969,519, an increase of \$3,212,107 over that of the preceding year. The railroad valuation was \$13,793,581; personal property, \$51,627,517; real property, \$68,548,421. The figures for the whole State on some of the different classes of property taxed are as follow: Cattle (all classes), \$11,546,885; sheep, \$5,072,641; net proceeds of mines, \$8,531,251; goods, wares and merchandise, \$5,457,908; horses (all classes), \$3,177,274; mortgages, bonds, etc., \$2,712,722.

The interest paid by State and counties on floating debts is \$82,140.96; interest paid by counties, school districts, and cities on bonded debt, \$322,006.84; interest paid by cities on floating debt (estimated), \$42,000; total annual interest on public debt of State, \$446,149.80.

Education.—The school population is 49,478.

A special election held in Helena to ascertain the wishes of the voters upon the proposition of levying a special tax of 1½ mill for the purpose of maintaining the public schools the full school year resulted in the defeat of the proposition by 141 votes, out of a total of 1,396.

The receipts from sales of State lands were divided among the educational funds as follow: Permanent school fund, \$37,739.96; school income fund, \$52,585.22; permanent university fund, \$4,727.90; University Bond fund, \$8,804.55; State Capitol Building fund, \$3,088.72; School of Mines fund, \$2,147.48; Normal School fund, \$6,342.46; Agricultural College fund, \$3,044; Deaf and Dumb Asylum fund, \$2,403.90.

In accordance with an act of the last Legislature two buildings have been erected for the State University at Missoula, at a cost of \$80,000.

The buildings for the Normal School and the Agricultural College have been finished. The Normal School, which has been in operation about two years, has 80 pupils, and the Agricultural College about 200. The building for the School of Mines, at Butte, is ready for occupation, but funds have not been provided for starting and maintaining the school.

An investigation was held by the State Board of Education in July into charges against the State Superintendent, to the effect that he had hired a stenographer in his office at \$50 a month, and that he authorized her to collect \$125 a month from the State for her services, intending that she should retain \$50 thereof for herself and turn the balance over to him. Mr. Carleton admitted this, but alleged that he intended to use such monthly balance for furniture and expenses of his department of the State government. The board declared that the proceeding was illegal; on the question whether he intended to use the \$75 for himself or for the State, the vote was a tie.

Exercises were held at Anaconda, June 11, in connection with the formal presentation to the city of a library and building by Mrs. Phoebe Hearst.

The State law library, now at the courthouse of Lewis and Clarke County, comprises more than 12,000 books and pamphlets.

The Helena public library has, besides 500 periodicals and a large number of pamphlets, unbound, more than 21,300 bound volumes.

Charities and Corrections.—The Asylum for the Insane cost the State \$130,822.80 for the year ending Nov. 30, 1897, and \$117,656.15 the succeeding year. Of the patients received in 1898, 36 per cent. were discharged as cured, or 9.9 per cent. of the whole population of the asylum. The increase during the year was 45; the whole number, Nov. 30, was 457, of whom 99 were women. There were 28 deaths in the past year.

The blind, the deaf and dumb, and the feeble-minded are provided for in a single institution, for which a new building has been completed recently at Boulder.

The fifth annual report of the Orphans' Home shows that 145 have been admitted since the opening, of whom 35 were placed in homes, 34 were returned to relatives, 2 were discharged as able to support themselves, and 2 died. In the year 31 were admitted and 80 were present at its close. The summary of expenditures for the year shows that it cost \$16,129.75 to run the institution for the fiscal year, including \$3,135.47 spent on the school building. The total estimated value of the products of the farm during the year was \$1,503.

The Soldiers' Home, which has been opened within the biennial period just past, has about 50 inmates.

A new penitentiary building has been completed at Deer Lodge. The number of convicts is 369. The cost of their care during the year ending Nov. 30 was \$52,229.50.

The biennial report of the State Reform School, at Miles City, shows that the gross expenses for 1897 were \$20,118.79, and for 1898 \$19,541.27. The school has 73 inmates, 61 boys, and 12 girls. During 1897 19 boys and 5 girls were admitted, and in 1898 25 boys and 3 girls. During 1897 19 boys and 3 girls were discharged, and during the present year 12 boys and 4 girls were paroled. The aggregate cost of transporting prisoners from the different counties during the past two years has been \$13,992.10, and the number of prisoners taken to the Penitentiary was 264.

Military.—The quota of the State for the Spanish war was 524, but 1,366 men were furnished, a regiment of infantry and a squadron of cavalry. The infantry were sent to the Philippines, and had lost 7 men by the close of the year. The cavalry were not in service, but spent the summer at Chickamauga Park, and were mustered out in September. Their loss is given as 4 men. The militia of the State now consists of 1 battery. The number of men eligible for military service in the State is estimated at 27,494.

Banks.—The value of bank stocks, notes, and solvent credits in the State, as assessed for taxation in 1898, was \$3,035,016, and the cash assessment of the State was \$1,080,522.

The report of the 21 national banks in February showed that since the date of the last report, Dec. 15, total resources decreased from \$16,631,780 to \$14,818,911; loans and discounts decreased from \$7,737,549 to \$7,682,332; reserve decreased from \$4,896,030 to \$3,882,833, of which gold holdings increased from \$640,717 to \$738,932. The deposits decreased from \$11,119,459 to \$9,976,116, and the average reserve held decreased from 45.20 per cent. to 40.14 per cent.

Insurance.—The receipts for the insurance department were eight times the amount received in 1896, the last year under the old law. That year

the receipts amounted to but \$5,234.50, derived from the following sources: Agents' certificates, \$2,258; filing annual statements, \$2,525; licenses, \$450; other fees, 50 cents. In 1898 the companies paid \$41,857. The receipts were from the following sources: Licenses to collect premiums, \$30,573.72; fees for licenses of agents, \$6,810; paid for filing annual statements, \$2,370; new companies' charter fees, \$2,100. During the year the State Auditor issued 1,362 licenses to agents in Montana.

Railroads.—In the biennial period just passed the railroad assessment of the State was increased from \$10,438,231.08 to \$13,793,581.35. The roads have reduced their passenger rates to 4 cents a mile.

The Montana Central report shows that the road has a funded debt of \$9,300,000, and that its cost and equipment represents an outlay of \$14,310,950.53. Including all of the side tracks there are 308.26 miles in the system. The average fare per mile per passenger for the year was 4.274 cents, while the average amount received for hauling freight per ton per mile was 0.842 cents. The gross receipts from the passenger department were \$251,152.57. From the freight business the Montana Central realized \$1,810,224.53, and from the freight and express business \$36,753.83. The total gross earnings of the road were \$2,150,456.87, and the net earnings \$979,514.46. During the year the company expended \$176,620.61 in new equipment and \$312,487.91 in maintenance of right of way (repairs and improvements of roadbed). The total expenditures were \$2,172,787.91.

The Montana Union, with its 60 miles of track, carried 73,129 passengers, 262,209 tons of through freight, 30,813 tons of local freight, and 58,469 tons of ore, cattle, grain, etc. The expenses of the road were \$255,378.44, and the receipts from passengers, \$81,260.23; from freight, \$200,315.69; mail and express, \$8,351.92; from all other sources, \$112,494.29; total gross earnings, \$402,422.13; total net earnings, \$147,043.19.

In a suit brought by the Attorney-General to prevent the Butte, Anaconda and Pacific from leasing the Montana Railway, the Supreme Court decided that, while the State Constitution prohibits the consolidation of parallel lines, it does not forbid a lease of one to the other.

Mining.—From an article by Prof. F. D. Smith are taken the following details:

"Everything in the operation and development of the year 1898 in Montana points to a material increase in the production of at least three staple products of Montana mines—copper, gold, and silver. At the close of 1897 nearly all the mines in which silver is the major value were closed, and capital was seeking other lines of mining industry. No additional mines closed during the year, and some have again opened. Nearly all the silver produced was a by-product of either copper or lead, while much of the gold was likewise a by-product of the copper. Consequently activity in the copper mines means a large output of gold and silver. The copper industry of Montana centers in Butte and Anaconda, since the Butte mines produce the major part of the State's copper. A review of the year's work shows remarkable activity. With a total of 50,000 feet in shafts, it is plain that 8,500 feet for one year means much development. The Anaconda Company operates in all 11 mines, with 10 separate shafts and hoisting plants, employed 3,340 men about the mines, and sunk a total of 3,550 feet. All the ore was hauled by rail 27 miles to Anaconda, where it was smelted, the copper matte nearly all resmelted, and the copper thus produced electrolytically refined. A large number of claims and partially developed mines in the best copper district in Butte have been purchased, and smelters and re-

fining plants to cost over \$1,000,000 are in process of construction at Anaconda.

"The wonderful increase in coal mining has received but scant attention outside of the State, since even now not enough has been produced to satisfy the needs of the factories and houses and the smelters with coke. During 1897 there were mined 1,647,882 tons of coal, and during the fiscal year ended June 30, 1898, 69,500 tons of coke were manufactured. Even this was not enough for all uses, and large quantities from the Wyoming mines were imported."

The gold product of the State was given as \$5,209,000 in value.

The report of the State Mine Inspector says that 136 mines were inspected. There were 11,096 men employed, 48 fatal accidents, 29 non-fatal, while the percentage of accidents to the men employed was 0.69. There were fewer fatalities than for two previous years.

Live Stock.—The report of the Sheep Commission shows that on March 1, 1898, there were 3,146,868 sheep in the State. The report says: "The later and present market price of wool has been disappointing, though opening sales were at fair prices, showing an advance of $2\frac{1}{2}$ cents to 3 cents over the previous year. The mutton market has shown the most marked improvement and firmness. The Northern Pacific Railroad Company, holding an immense land grant within our borders, has recently adopted a policy of disposing of its lands at reasonable prices and on favorable terms, instead of holding them for a rise. Many of our sheepmen have taken advantage of this."

The State veterinarian, Dr. Knowles, killed during the year 187 glandered horses, quarantined 863 exposed to glanders, quarantined 84,719 sheep, and treated by vaccination against blackleg 22,418 head of cattle.

Decisions.—In December the Supreme Court decided in effect that a solvent and prosperous corporation can not transfer its property in the State to another corporation without the consent of every stockholder.

Another decision affirmed the doctrine that there is no appeal for the State from a judgment sustaining a demurrer.

Bounty Claims.—The records show that in 1897 bounty claims were filed for the killing of 22,082 coyotes and 6,112 gray wolves; and during the first eleven months of 1898 20,797 coyotes and 5,356 wolves were reported. The amount of the bounties for 1897 was \$84,582, and for the eleven months of 1898 it was \$78,459.

Labor.—From the Commissioner of Labor it is learned that there are 105 unions in the State with an estimated membership of 11,066. About 16,000 men are employed in the occupations represented by these unions, showing that about 68 per cent. of the number employed are members. The membership of 11,066 reported consists, all but 73, of men. The estimated number of unemployed among tradesmen is 2,997.

Public Lands.—From figures of the Commissioner of the General Land Office it appears that during the fiscal year ending June 30, 1898, Northern Pacific Railroad lands within Montana were certified or patented to the extent of 518,404.04. Vacant public lands within the limits of Montana are estimated at 16,932,837 acres surveyed, 54,674,779 acres unsurveyed. The area of public surveys in Montana accepted during the year was 486,653. The apportionment for public surveys for the fiscal year 1898 was \$42,000.

The State Land Register's office has done a large business during the biennial term just past; 971 leases and permits covering 402,952 acres, yielding

an annual rental of \$78,602.83, have been issued, as against 527 leases and permits covering 175,558 acres, yielding \$27,469 annual rental, this being the total number issued for the six preceding years. The cash receipts of the office for the past two years show an increase of about 300 per cent. over any like period in the history of this department. The receipts for 1898 were: Land sales, \$12,954.69; timber sales, \$15,123.96; leases and permits, \$66,947.85; trespass, prepaid and back rentals, interest on deferred payments, \$31,807.21; total, \$126,833.71. Up to Nov. 30 a total of 404,779.07 acres of school land had been leased, from which the rental was \$45,372.16. Of this amount of land under lease, 245,452 acres were leased in 1898 and 159,547 in the previous six years.

Arid Lands.—Under an act of the last Legislature a commission consisting of J. K. Toole, C. O. Reed, Donald Bradford, A. H. Mitchell, and T. C. Marshall was appointed to provide for the reclamation of arid lands. They have had surveys made for three canals in the eastern part of the State, which will render arable about 75,000 acres; and contracts were let for the construction of two of them. The refusal of the Northern Pacific company, which owns alternate sections of the land on a large tract near Billings which the commission wished to irrigate by a large canal, to assume any part of the expense has hampered the operations in that direction.

The Capitol.—The fifth Legislative Assembly passed an act repealing the one passed by the fourth Legislative Assembly for the construction of a State Capitol building to cost \$1,000,000 and provided for one at a cost not to exceed \$300,000, and for the taking up and payment of the outstanding obligations of the former commission, amounting to \$40,000. A new commission was appointed, consisting of Elizur Beach, D. E. Folsom, J. M. Fox, A. D. Peck, and the Governor. Bonds were issued to the amount of \$350,000; no purchaser was found in 1897, but in 1898 they were all taken at par by Thomas Cruse, of Montana. Plans were drawn and the building contract was let for \$289,821. It is expected that the Capitol will be completed by May, 1900.

Political.—The only State officers to be elected this year were a Chief Justice and an Associate Justice of the Supreme Court and a clerk of the same court. A member of Congress was also to be chosen.

The Democrats, Populists, and Silver Republicans met in separate conventions at Anaconda, Sept. 21. The Governor, who has been a Populist since 1894, and was a delegate to the convention of that party, went over to the Democratic convention, where he declared his intention to re-enter the Democratic party.

The Democrats nominated a straight party ticket as follows: For Member of Congress, A. J. Campbell; Chief Justice, W. Y. Pemberton; Associate Justice, W. T. Pigott; Clerk, Henry G. Rickerts.

The Populists and Silver Republicans united on the following ticket: For Member of Congress, Charles S. Hartman, Republican; Chief Justice, Theodore M. Brantley; Associate Justice, Henry C. Smith, Republican; Clerk, Oliver Holmes, Populist. H. C. Smith declined the nomination, and J. M. Clements was afterward made the candidate, while T. S. Hogan was finally the candidate for Member of Congress.

The Republican convention met at Helena, Sept. 24, and named the following candidates: For Member of Congress, Thomas C. Marshall; Chief Justice, Theodore M. Brantley; Associate Justice, George H. Grubb; Clerk, Benjamin Webster.

At the election, Nov. 8, the Democrats carried all

the State offices, except that of Chief Justice. Following is the official report:

For Member of Congress—A. J. Campbell, Democrat, 23,351; Thomas C. Marshall, Republican, 14,829; Thomas S. Hogan, Silver Republican and Populist, 11,607.

Chief Justice—Theodore M. Brantley, Republican, Silver Republican, and Populist, 24,476; W. Y. Pemberton, Democrat, 24,319.

Associate Justice—Pigott, Democrat, 24,305; Grubb, Republican, 15,763; J. M. Clements, Populist, 5,350.

Clerk of the Supreme Court—Henry G. Rickerts, Democrat, 23,363; Benjamin Webster, Republican, 15,274; Oliver Holmes, Populist, 8,697.

The Legislature will stand: Senate—5 Republicans, 18 Democrats, 1 Populist; House—13 Republicans, 57 Democrats.

Two proposed constitutional amendments were adopted. One related to the term of office of county commissioners, and the other to the Supreme Court, providing that in case any justice is disqualified for any cause his colleagues may call in a district judge to assist in a case before the court.

MORAVIANS. The following is a summary of the statistics of the Northern Province of the Moravian Church in the United States for Dec. 31, 1897: Number of communicants, 11,661; of non-communicants, 1,281; of children, 4,794; total membership, 22,345; of members of Sunday schools, 15,466. The Southern Province returns 2,892 communicants, 228 non-communicants, 1,489 children, making a total of 4,609 members, with 4,061 in Sunday schools; giving for the whole American Province 14,553 communicants, 1,509 non-communicants, 6,283 children, and a total of 22,345, with 15,400 in Sunday schools. The numbers show increase of 333 communicants, 109 non-communicants, 21 children, 463 in the total, and 178 in Sunday schools. The contributions of the Northern Province for Church enterprises and general Christian objects were: For retired ministers, \$1,360; for the Bohemian mission, \$1,174; for foreign missions, \$4,746; for the Alaska mission, \$2,353; for home missions, \$7,219; for the Theological Seminary, \$2,972; for other Moravian causes, \$1,322; for general Christian objects, \$2,228; making a total of \$23,374, and showing a decrease from the previous year of \$4,204. The whole amount of contributions for church support was \$106,515, or \$7,619 less than in 1896. In regard to the decrease in contributions, attention is called to the facts that special efforts had been made in the previous year in behalf of several objects, and especially toward the payment of the foreign-mission debt and a new enterprise in Alberta; and several thousand dollars had been raised for the erection of new buildings and the liquidation of debts on church property; so that benevolences were diverted rather than diminished.

The provincial synod of the Northern American Province met at Lititz, Pa., Sept. 7. Bishop J. M. Levering was chosen president. The report of the Provincial Elders' Conference showed that there were now 83 ministers in active service in the province, or 5 more than at the time the previous synod was convened. Of these 74 were pastors of congregations and 9 were filling other offices. Twenty-two brethren and sisters were engaged in mission service in the United States under the superintendence of the provincial board. The membership of the churches had increased to a gratifying extent during the intersynodal period, being 11,661 on Jan. 1, 1898, against 10,160 on Jan. 1, 1893; while the total number connected with the Church had risen from 15,915 in 1893 to 17,736 in 1898, the Sunday schools had increased from 69 to 82, and the

enrollment in them from 9,715 to 11,229. Growth was also recorded in young people's societies of various names and representing different phases of Christian activity. Total contributions were returned for the five years covering the intersynodal period of \$534,784 for church support, \$130,946 for church enterprises, and \$6,866 for general Christian objects. A new English and German catechism, a Scandinavian hymn book, and a German hymn book for Sunday schools had been prepared. An important improvement in the financial conditions of the province was mentioned. The Permanent Church Extension fund had increased from \$31,315 at the time of the last synod to \$41,694. The condition of the several churches receiving aid was described in the report, including the Alberta, Canada, mission, which was established in 1894 to meet the spiritual needs of a colony of immigrants from Volhynia, and a mission in the Cherokee nation, which was begun as a foreign mission in 1735. The Moravian College and Theological Seminary had an endowment fund of \$115,634, and returned an average annual income during the past five years of \$9,427. Reports were likewise made of the Bethlehem Female Seminary and of Nazareth Hall. More than \$11,000 had been contributed during the past five years by the churches represented in the synod in aid of the Bohemian-Moravian churches. The present meeting of the synod being preparatory to the meeting of the General Synod, to be held in Germany in 1899, resolutions were adopted for presentation to that body recommending that the Unity's Elders' Conference, the Unity department, and the Mission Department as at present constituted be abolished; that an executive board of the Unity be elected to hold office in the interval between the sittings of the General Synod and to be called the Unity's Elders' Conference; that this body consist of five members—one to be chosen from the German Province, one from the British province, one from the American Province, and two from the missionary provinces; this body to be intrusted with the foreign-mission work in general, the Bohemian mission, the Leper Hospital, the administration of the funds of the Unity, the representation of the Unity in all negotiations with foreign governments and in public and legal functions, the oversight of the Unity, the convening of the General Synod and the carrying out of its enactments, the appointment of bishops during the intersynodal period, and the duties of the highest board of appeal for all provinces. Besides other suggestions respecting more particular details of the organization, the paper invited the General Synod to consider whether its next succeeding meeting could not more advantageously be held in London or in Bethlehem, Pa. The Rev. C. L. Moench and the Rev. E. A. Oester were elected and consecrated bishops, making the present number five, two of whom are, however, aged. Defining its position on the subject of marriage and divorce as that recorded in the Gospels as having been declared by Christ, the synod enjoined ministers under its control against officiating at the remarriage of divorced persons, knowing them to be such, unless they are assured that such persons, as the innocent parties, have secured divorce on grounds corresponding with the declarations referred to; and a request was made to the General Synod to embody in its results the position of the Church on the subject. The clause in the synod's interpretation of the rule on baptism making the refusal of members to have their children baptized a virtual withdrawal from the Church" was stricken out. All the congregations throughout the province were advised to use unfermented wine at the celebration of the holy communion. In

view of the drift of population to the cities, the Board of Church Extension was advised to make populous centers prominent objects of its work. It was further advised to make efforts to increase the provincial Church Extension fund to \$50,000. The General Synod was petitioned to require the authorities of all educational institutions of the Unity to make an open acknowledgment of the fundamental doctrines of the Brethren's Church, as is already done in America. The delegates of the synod to the General Synod were instructed to recommend to that body certain measures concerning pensions to missionaries. A beginning of the collection of an Archive-Building fund having been made, the committee on the enterprise was continued, with directions to further the scheme.

The synod of the British Province adopted a proposition for the reorganization of the Unity which includes among its principal features the severance of the Mission Board from any and all organic connection with any provincial Elders' Conference, the abolition of the Unity's Elders' Conference as such, the abolition of the Department of the Unity, and the assignment of the convening of the General Synod to the Mission Board.

MOTOR CARRIAGES. Motor carriages are not a new creation. The first work of this kind of which we have any well-authenticated record was by a Frenchman, Cugnot, in 1770. He constructed an operative though crude steam carriage for heavy-draught service, and this identical machine is still preserved in the Conservatoire des Arts et Métiers, at Paris. These experiments, which were carried on under the auspices of the Government, do not appear to have been prosecuted with much energy, and a few years later the French Revolution effectually checked all progress in this new art. In England the subject was attacked with great ingenuity, skill, and energy, and for a long time the steam road carriage was regarded as offering a better solution of the question of rapid transit than the steam railway. An operative steam carriage was constructed in Halifax, England, by Robert Fourness in 1788, and Nathan Reed, of Massachusetts, constructed and operated a steam carriage in the same year. In 1803 Jean Riehard Trevithick built and ran a steam carriage upon the highway in and about London.

From 1820 to 1840 was a very busy period with motor-carriage inventors. The most successful of these were Walter Hancock and Goldsworth Gurney. Hancock constructed 10 steam carriages during this period. They were mostly of the double-body coach type, and were the most efficient and practical of self-propelled vehicles of his time. Several of these were run regularly from London over certain routes, and remained in service some time.

Gurney built a series of carriages propelled by steam, and operated them regularly, carrying passengers between Gloucester and Cheltenham for four months. In 1834 the Steam Carriage Company of Scotland was formed, and it operated a line of steam coaches for the conveyance of passengers between Glasgow and Paisley, which plied hourly for several months with regularity. The distance is 7 miles, and the trip was made in thirty-four minutes, a speed of 17 miles an hour being obtained in the open country.

About 1834 a very strong prejudice was aroused in England against this new form of road locomotion. This was largely instigated by the railroad companies, rapidly growing in power, who foresaw in the steam carriage serious competition, and it found a ready welcome with the ignorant rustic class, always opposed to new inventions, and with the general public, which had been recently alarmed

by several serious motor-carriage accidents. The result was the passage of a parliamentary act imposing such onerous conditions upon the operation of road carriages as practically to prohibit their utilization. This was a serious setback to motor-carriage progress in England, and it remained without repeal or modification until 1896.

Continuous experiments up to the present time have been conducted with steam as a motive power, and have resulted in the development of practical types of heavy steam vans, trucks, omnibuses, and vehicles for heavy work and low speed, and these have been commonly used in France, and to a limited extent in England, since 1850. Although the principle of the gas engine was understood as early as 1794, when a patent on this form of motor was granted to Robert Street in England, and from this time engaged the attention of such men as Wright, Barnett, and Lenoir, not until the subsequent improvements by Dr. Otto, of Germany, in 1867, did steam have any competition as a motive power; but the ability to construct a practical and reliable explosion engine, and the feasibility of substituting hydrocarbon oils for gas and carrying a very condensed fuel, such as naphtha, seemed at once to solve the question of an automatic vehicle motor.

Among the first to appreciate this fact, and to set about constructing a practical vehicle, was Gottlieb Daimler, of the Otto Gas-Engine Works, in Koln, Germany. Contemporaneous with Daimler, large numbers of experimenters appeared in France, England, and the United States, and at present (1899), while it can not be said that the gasoline carriage has reached the state of perfection necessary to warrant its general use, its future seems to promise a wide field.

The first public demonstration of what was being done was a contest of "automobile vehicles" held in Paris in the summer of 1894. This event marks an epoch in the history of trackless transportation. It was instituted by "Le Petit Journal" of Paris, and consisted of a trial of speed from Paris to Rouen and back. One hundred and two vehicles registered their intention to participate. Of these, 15 appeared at the start on the day of the race, 2 being steam vehicles and 13 propelled in various ways by the exploding of gasoline or naphtha. The winner was a vehicle propelled by a Daimler gasoline motor, which covered the 75 miles of the course in five hours and forty minutes.

In June, 1895, a race from Paris to Bordeaux and back was arranged. Twenty-eight vehicles appeared at the start. The contest was to be one of speed and endurance from Paris to Bordeaux and return, a distance of 705 miles. Twelve vehicles reached Bordeaux, and 9 made the complete trip. The time of the winner was forty-eight hours and forty-eight minutes, and again a vehicle propelled by a Daimler gasoline explosion motor finished ahead. Of the 9 vehicles completing the course but 1 was steam, and that was an excessively heavy and cumbersome affair. In these contests, vehicles propelled by electric storage batteries had appeared, but in every case had failed to make any important showing in a field which is now recognized not to have been theirs.

In November, 1895, in Chicago, the "Times-Herald" of that city inaugurated a contest for motorcycles, as they were termed. This was to consist of a trial of speed and practicability between Chicago and Milwaukee, 100 miles. On Nov. 2, the day set for the contest, but 2 vehicles were prepared to start, and it was postponed until Nov. 28. On this date 15 vehicles appeared. Of these, 7 were gasoline-propelled, 1 steam, and 7 electric. On the day of the start Chicago was covered with a deep fall of snow, and the route had been changed to Evanston

and return, 54 miles. At the final start only 6 vehicles were prepared to compete, 4 gasoline and 2 electric, and of these but 2 finished, both gasoline. The winner was an American motor vehicle, constructed by Charles Duryea, of Springfield, Mass. The other finisher was A. Mueller, in a German vehicle built by Benz, of Mannheim, Germany. Duryea's time for the 54 miles was ten hours and twenty-three minutes.

This contest, though of little intrinsic worth, was the beginning of the horseless-vehicle epoch in the United States, and was largely instrumental in attracting the attention of inventors and capitalists to this new art, which has since grown to enormous proportions, and is fairly started upon a career of economic usefulness. From this time, contests and races of all descriptions have followed one another with great frequency, the principal of which have been the "London Engineer" contest of 1896, to celebrate the modification of the odious English road laws, a race from Paris to Marseilles and return, a trial of heavy vehicles at Liverpool in the summer of 1898, and a contest of passenger-carrying cabs in Paris in 1898, upon the results of which was based the decision to transform the entire Paris cab service from horse-drawn vehicles to electric automobiles. London and New York have large and well-equipped electric-cab stations, and the utility of the electric carriage for this branch of service has passed all expectations and greatly stimulated the interest of producers of electricity.

General Construction.—The construction of motor vehicles has been very much aided and simplified by the results of the development of the bicycle with its improved tires, and especially is this the case with the lighter forms of road carriages, where it has been possible to combine speed, strength, and comfort through the use of ball bearings, bicycle construction, and pneumatic tires. Motor-carriage construction, of course, exhibits great differences of detail, besides variations necessary through the difference in the conditions of service imposed.

For vehicles of light construction, intended for high speeds, steel rims and tangential steel-wire spokes are employed in the better class, and the wheels are usually fitted with large pneumatic tires made with a very thick outer shell. For the heavier class of vehicles wooden wheels are found preferable, and for hard roads the solid-rubber tire is used by the majority of makers. Nearly all builders concur in the advisability of using ball bearings on the lighter vehicles. For the heavier variety, ball bearings, plain, and roller bearings are all used.

One feature employed by nearly all carriage builders is a balance or compensating gear. The driving gears then are not keyed to the same axle, but are connected through this compensating gear, whose construction is such as to admit of the wheels revolving at different rates of speed when turning corners, thereby avoiding the injurious slipping of the outer wheel which would result were the wheels rigidly connected. The same result is sometimes attained in electric carriages without mechanical means, but through the use of two independent driving motors, one attached to each wheel, electrically connected in such a way as to give the proper increment to the outer wheel in turning; or, again, through the use of a peculiarly constructed motor, the field of which, capable of rotation, is geared to one driving wheel through an internal gear, while the armature is geared through an external gear to the other driving wheel. This object is accomplished in a great variety of ways, but the purpose is exactly the same, in each case, as the device used on the tricycles of fifteen years ago.

Steering is sometimes done through the ordinary king-bolt method, but oftener, and with better results, by individually pivoting each front wheel at the end of the axle and causing them to turn through the proper angles by a system of links connected to the hand-steering lever. As can be readily seen, the latter leaves various opportunities for improving the faults of steering at high speeds which do not exist in the former.

Speed control is closely associated with the character of the motive power. In the case of the steam carriage, variations of speed are obtained by some form of link motion, exactly as is done with the ordinary locomotive. In the case of the gasoline engine, the speed can not be varied beyond certain comparatively narrow limits which have proved acceptable to the users, and it becomes necessary to use two or more separate trains of gears, and different speeds are obtained through the medium of a gear-shifting device which transmits the power of the engine through any of the gearing trains desired. The electric carriage lends itself most readily to the matter of speed control, and mere changes in the battery connections sufficient to alter the voltage applied at the motor is all that is needed to get speed gradations.

Brakes of all descriptions are employed upon motor carriages, and this is, as may be seen, a question of vital importance. Some form of band brake operated by a foot lever is the most usual and satisfactory, but tire brakes consisting of a broad shoe pressed against the periphery of the tire are in common use, especially on European carriages. The builders of electric vehicles often fit them with some form of electric brake, the usual principle of operation being the retardation or magnetic drag effected by running a motor as a dynamo through the momentum of the carriage. The employment of current generated in this way for recuperating the batteries is limited to hills of more than ordinary inclination, such as grades of 10 per cent. or more.

Speed.—The speed of an automobile can be made almost anything that the condition of the road and the intrepidity of the driver will permit. In France the maximum speed of automobiles is not limited by the character of the road surface, and for special purposes great speeds are obtained; but in current literature the speed of the French carriages has been greatly overstated, and this fact has even been carried into the reports of French societies interested in the art. Few French carriages have speeds exceeding 20 miles an hour, and in the autumn of 1898 the best obtainable evidence indicated that but 3 automobiles in France had a maximum speed on the level of more than 25 miles an hour. Of these 3 but 1 had a speed of more than 30 miles an hour, and this was one which was reported to have gone from Paris to Amsterdam at an average speed of 25 miles an hour, and was driven by Baron De Knyff, who with Charron and Bollée holds the front rank among the automobile drivers. Such speeds as these are out of the question over any but the very best roads. In cities this fact, combined with police regulations, places at 12 miles an hour the maximum speed to be provided by the builder.

Steam Carriages.—The application of steam to automobiles presents no novelty in principle, for exactly the same character of engine is required as on the ordinary locomotive, though of course lighter and less powerful. The real obstacle in the way of a successful steam vehicle lies in the care and attention necessary to bestow upon the boiler and its accessories. Simple as is the steam carriage in most particulars, its operation under the best conditions requires the full attention of a trained

mechanic. Up to the present steam transportation has been reasonably successful only where conditions of operation and current wages of operators have not prohibited the employment of two operators, or where the speed has been reduced to such an extremely low mark as to require the supervision of but one man. The most successful system of steam-carriage propulsion is probably that devised by M. Serpollet, a Frenchman. This has been applied with success to heavy omnibuses, vans, road-tractors, and tramways, but, by reason of the great weight of boiler required, is not applicable to the lighter class of road vehicles. His invention, in brief, consists of a peculiar form of boiler which he terms an instantaneous steam generator. It is a water-tube boiler, the tubes being made of steel pipes with very thick walls and flattened out so as to leave a small slit which is called the capillary space. These tubes are exposed to a very hot flame, and, containing as much highly heated metal as they do, are not cooled by the small amount of water passing through the interior slit, but instantly vaporize it, and the interior walls maintain their temperature by conduction of heat from the exterior. It is claimed that this boiler can be run for a long time without injury with no water whatever in the tubes, and in fact it is by regulating the amount of water fed to the boiler that Serpollet obtains his variations of speed. Since the boiler is without capacity—that is, all the steam generated immediately passes into the engine—the moment the water ceases flowing the engine stops. The greater number of steam carriages use some form of tubular boiler which is non-explosive, and apply the heat through a gasoline burner, this being the most convenient fuel obtainable. Among the steam vehicles in commercial use may be mentioned a line of goods vans, built by the Liquid Fuel Engineering Company of London, and operated between London and Birmingham.

Petroleum or Gasoline Carriages.—To this class belong all those vehicles employing engines or motors actuated by the explosion of hydrocarbon vapors. The Otto principle of explosion engine is used almost exclusively. It consists of a cylinder and piston, which act alternately as pump and motor—that is, there is one effective or working stroke only in two revolutions of the crank shaft. At the first forward stroke a mixture of air and gas is sucked in; on the return stroke this is compressed; on the second forward stroke this mixture is ignited by one of several ways, and an explosion results, driving the piston forward, and storing up the resulting surplus energy in a fly-wheel which is large enough to do the work required of the engine between the separate working strokes. On the second return stroke the exhaust or burnt gas is expelled. The application of explosive engines to carriages was never successful until the principle of the compressed charge was applied. Explosion engines used upon motor carriages almost universally employ the vapor of common gasoline to form the explosive mixture. This is obtainable anywhere, and is a cheap and condensed form of fuel. With few exceptions, the gasoline is vaporized and intimately mixed with air before entering the explosion chamber. The device for vaporizing the oil is known as the carburetor, and in its simplest form consists of a tank containing a certain amount of gasoline, through which air is drawn by the suction of the piston, becoming saturated in its passage with the vapor of the volatile oil. This vapor, however, must be mingled with a certain amount of air before a truly explosive mixture is reached, and this is accomplished through some form of regulating valve which permits the control of the richness of the

mixture. A form of aspirating carburetor, in which the gasoline is sucked up in a fine needle-like jet and sprayed in the midst of an inrushing current of air, is the one in most common use.

The extremely high temperature accompanying the explosions, and the frequency with which these take place—several hundred a minute—results in greatly overheating the cylinder walls, and necessitates the use of some cooling device, usually a water-jacket, and a small pump to maintain the circulation of the water around the cylinder and through a coil of pipe exposed to the air, where it dissipates the heat acquired from the cylinder.

The ignition of the explosive mixture may be effected by an electric spark or by the hot-tube method. In the spark method an induction coil is employed to force a spark at the proper instant between two conducting points or electrodes in the explosion chamber, surrounded by the mixture of gas and air. This of course necessitates carrying a source of electrical energy, which is usually in the form of two small cells of dry battery. In the hot-tube method of ignition the chamber is fitted with a small platinum tube projecting outward therefrom and kept at a high temperature by a gasoline burner placed beneath. The vapor filling the chamber and the interior of the tube comes in contact with its heated sides, which, however, are not at a temperature high enough to ignite it under the conditions of pressure obtaining. As the piston returns the gas is compressed, and at the point of greatest compression—that is, at the end of the stroke—the temperature of the tube is sufficient to explode the mixture. This apparently crude device has been used with great success on many carriages. The French racing carriages are almost all provided with hot tubes. As will be seen from a consideration of the events taking place in the cylinder of a gas engine, this motor can not be self-starting like a steam engine, but some artificial means of previously compressing the gas before an explosion can take place must be used. This is ordinarily effected by turning the engine over once or twice through the medium of a hand wheel.

The advantages of the gasoline engine consist in the cheap, compact, common, and well-known character of the fuel. At a price of 10 cents per gallon for gasoline, a well-built carriage with two passengers should be run at an expense of less than half a cent a mile.

Electricity as a Motive Power.—The electric carriage makes use of electricity stored in the form of chemical energy in accumulators or storage batteries. A storage battery consists of a positive plate containing lead peroxide and a negative plate of porous lead immersed in an electrolyte of dilute sulphuric acid. This combination forms a type of battery which can be discharged in the same way as the ordinary primary cell, and acts on exactly the same principle; and when discharged, either fully or partially, the battery can be connected to a source of electrical energy, and the chemical compounds upon the plates, resulting from the passage of the discharge current, transformed into their original constituency by forcing an electric current between the plates in a reverse direction. If this reverse current is continued sufficiently long, all the active material of the battery

becomes reconverted to its original chemical form, and the battery is said to be charged, for it is now again able to yield current to the extent of its full capacity, and this process of charge and discharge may be carried on indefinitely. It is evident that, although electricity is put into the cell and later withdrawn, it is really a storage of chemical energy which is effected, which on discharge is manifested as electricity.

Although the principle of the lead storage battery has been well known since 1860, it is only since 1890 that its increasing fields of usefulness and extended application to the industrial arts has demanded due attention to improvements and refinements in its manufacture. Still more recently the peculiar conditions of road-vehicle service have demanded a form of lead storage battery which should possess, among other essentials, lightness and durability; but already storage batteries are available which conform sufficiently to the requirements to make the electric vehicle both serviceable and commercially practical. The immense superiority of control and the simplicity of the motive power in electric vehicles, have, in fact, a strong tendency to extend this field beyond its most advantageous limits, and to produce a willingness to accept relatively low standards of performance in storage batteries.

The relatively poor character of American roads has greatly retarded, and, up to the present time, almost prevented, the introduction of types of automobiles whose principal recommendation lies in unlimited radius of action, and it is not surprising that the world must still look to France as a leader in the production, if not also in the degree of development, of gasoline vehicles, while in England possibly the extreme conservatism may account for the fact that such development as has been made in that country in the new art has been along the lines of the steam carriage.

The character of most city streets in the United States has permitted the development of a demand for the electric vehicle, and as a consequence we find the old house of the Pope Manufacturing Company pre-eminent in this particular field. A special form of motor on these vehicles reduces all noise to a minimum. The controller handle, placed conveniently at the left of the operator, gives three speeds through the medium of a very simple controller. The steering handle, placed at the right of the driver, and a foot lever operating a powerful and quick-acting band brake, complete the apparatus necessary for a thorough control of the carriage. For the average person, but a few hours' trial is necessary to give skill and familiarity in all phases of the operation. A mileage of 30 is the normal amount for these vehicles, although much more than this often has been obtained. For a two-passenger carriage, at the prices ordinarily prevailing in American cities, the cost per mile is one cent, or slightly more. This type of carriage is rapidly coming into vogue. The advantages of the electric carriage are cleanliness, flexibility, ease and completeness of control, simplicity, freedom from noise, odor, and vibration, and, compared with the horse, economy of operation within the limits of reasonable deterioration. Its disadvantages are the weight of the battery and its limited mileage.

N

NATIONAL ACADEMY OF SCIENCES. The officers of the Academy in 1898 were: President, Woleott Gibbs; Vice-President, Asaph Hall; Foreign Secretary, Alexander Agassiz; Home Secretary, Ira Remsen; Treasurer, Charles D. Walcott.

Two meetings were held in 1898. The first or stated meeting was held in Washington on April 19-21. On that occasion the following papers were read: "The Coral Reefs of Fiji," by Alexander Agassiz; "The Fiji Bololo," by Alexander Agassiz and W. McM. Woodworth; "The 'Aculephs of Fiji,'" by Alexander Agassiz and A. G. Mayer; "Ballistic Galvanometry with a Countertwisted Torsion System" and "A Curious Inversion in the Wave Mechanism of the Electro-magnetic Theory of Light," by Carl Barus; "The Variation in Virulence of the Colon Bacillus," by John S. Billings; "McCrary's Gymnophthalmata of Charleston Harbor," by William K. Brooks; "A Consideration of the Conditions governing Apparatus for Astronomical Photography," by Charles S. Hastings; "New Classification of Nautiloidea," by Alpheus Hyatt; "The Use of Graphic Methods in Questions of Disputed Authorship, with an Application to the Shakespeare-Bacon Controversy," by Thomas C. Mendenhall; "A New Spectroscope," by Albert A. Michelson; "On Double Halides containing Organic Bases," by Ira Remsen; "On the Hydrolysis of Acid Amides," by Ira Remsen and E. E. Reid; "The Question of the Existence of Active Oxygen," by Ira Remsen and W. A. Jones; "On the Product formed by the Action of Benzenesulphonchloride on Urea," by Ira Remsen and J. W. Lawson; and "A Method for Obtaining a Photographic Record of Absorption Spectra," by Arthur W. Wright.

The following papers were read by scientists not members of the Academy: "Theories of Latitude Variation," by H. Y. Benedict (presented by Asaph Hall); "Progress in the New Theory of the Moon's Motion," by E. W. Brown (introduced by Simon Newcomb); "On the Variation of Latitude and the Aberration Constant," by Charles L. Doolittle (introduced by Seth C. Chandler).

Also a biographical memoir on Edward Drinker Cope, by Theodore Gill, was read.

This year, for the first time, the Academy met in the library building. The only public business transacted by the Academy at this meeting, besides the reading of the papers mentioned previously, was the elections. The honor of associate membership, which is given only to foreigners, was conferred on the following: Prof. Henri Poincaré, whose name is known among mathematicians the world over; Prof. David Gill, the astronomer in charge of the observatory at Cape Town, Africa; Lord Rayleigh, the eminent English physicist; Lord Lister, the physiologist; Prof. Edward von Suess, the Vienna geologist; Prof. H. de Lacaze-Duthiers, the Parisian zoölogist; Prof. Edward Strasburger, the German botanist; Prof. Felix Klein, of the University of Göttingen, Germany, famous for his researches in mathematics; Prof. Henri Moissan, the French chemist whose studies in high temperatures have resulted in the artificial production of gems; and Prof. Karl von Zittel, of Munich, Germany, who has a high reputation as a palæontologist. The election of the foreign associates was followed by the election of a treasurer for the Academy, Dr. John S. Billings having resigned on account of his removal from Washington. Dr. Charles D. Walcott, Director of the United States Geological Survey,

was elected in his place for a term of six years. The following members of the council were re-elected: John S. Billings, Henry P. Bowditch, George H. Brush, Arnold Hague, Othniel C. Marsh, and Simon Newcomb. The officers of the Academy are members of the council *ex officio*.

The scientific session was held in New Haven, Conn., Nov. 15-16, when the following papers were read: "On Solid Solutions of Colloidal Glass," by Carl Barus; "Anatomy of Nautilus Pompilius," by William K. Brooks and L. E. Griffin; "The Influence of Alcohol and Alcoholic Fluids on Digestion," by Russell H. Chittenden; "Sodium Tungstate as a Retainer for Boric Acid," by Frank A. Gooch and Louis Cleveland Jones; "The Ammonium-Magnesium Phosphate of Analysis," by Frank A. Gooch and Martha Austin; "On a Series of Native Skulls from New Guinea," "On the Reputed Prefrontal Bones in Recent Mammals," "On the Brecciated Fossil Marble from Kishiu, Japan," and "On Some Rare Antiquities from Mexico," by Othniel C. Marsh; "Observations on the Zeeman Effect with the Echelon Spectroscope," by Albert A. Michelson; "Three Phases of Vertebrate Development" and "Notes on Mammalian Embryology," by Charles S. Minot; "Further Researches on the Two Isomeric Chlorides of Orthosulphobenzoic Acid: A Study in Tautomerism," by Ira Remsen; "Report upon Work in Spectrum Analysis carried on by help of the Bache Fund," by Henry A. Rowland; "On the Nature and Origin of the Marine Fauna of Bermuda" and "On the Ability possessed by Certain Animals to Recover after Complete Freezing," by Addison E. Verrill.

The following papers were read by scientists not members of the Academy: "On the Conditions Modifying the Excretion of Kynuremic Acid," by Lafayette B. Mendel (by invitation); "The Chemical Composition of Tourmaline," by Samuel L. Penfield (by invitation); and "Perturbations of Minerva, with a Preliminary Determination of its Orbit," by W. S. Eichelberger (presented by Simon Newcomb).

During the year the Academy has lost by death the following members: James Hall and William Augustus Rogers, sketches of whom will be found in *OBITUARIES, AMERICAN*, in this volume.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; and 1,058,910 in 1890. Capital, Lincoln.

Government.—The following were the State officers during the year: Governor, Silas A. Holcomb; Lieutenant Governor, James E. Harris; Secretary of State, W. F. Porter, Treasurer, J. B. Meserve; Auditor, J. F. Cornell; Attorney-General, C. J. Smyth; Superintendent of Education, W. R. Jackson; Land Commissioner, J. V. Wolfe; Adjutant General, P. H. Barry; Oil Inspector, J. H. Edmiston; Secretaries of the Board of Transportation, J. C. Dahlgren, G. L. Laws, and J. W. Edgerton, all of the silver parties; Chief Justice of the Supreme Court, T. O. C. Harrison, Republican; Associate Justices, T. L. Norval, Republican, and J. J. Sullivan, fusion; Clerk, D. A. Campbell, Republican.

Finances.—The balance in the general fund Dec. 1, 1896, was \$589,370.39. The receipts for the following two years were \$1,975,434.54, making a total of \$2,564,804.93. The disbursements were

\$2,564,753.26, leaving a balance Nov. 30, 1898, of \$51.67.

The sinking fund, balance and receipts, amounted to \$535,727.55; by payment of bonds and interest and transfer to another account, \$521,504.51 was disbursed.

The permanent school fund, balance and receipts, amounted to \$1,187,654.47; disbursements to \$949,189.44. The total of the balance and receipts of the temporary school fund was \$1,706,555.90, and of disbursements \$1,441,066.65.

WILLIAM A. POYNTER,
GOVERNOR OF NEBRASKA.

At the close of business Nov. 30, 1894, the State debt amounted to \$1,188,575.59. For the biennium ending Nov. 30, 1896, it was \$2,463,709.95. Nov. 30, 1898, the debts of the State amounted to \$1,724,951.36.

The delinquent State taxes have increased during the past two years from \$3,384,559.94 to \$3,483,073.73.

The assets of the State as given by the Auditor are: Cash in treasury, \$624,523.43; uncollected taxes, \$3,483,073.73; suspended account, \$665,240.74; permanent educational fund investments, \$3,580,930.21; total, \$8,352,867.11.

The assessed valuation of the State has been lowered since 1892 by more than \$27,000,000. It was \$167,810,764.79 in 1898. The general fund levy is limited to 5 mills.

Education.—The school population is 366,069. The amount of State money appropriated in December was \$300,816. The principal sources of the fund were: State tax, \$73,057.92; interest on State bonds, \$7,230.69; interest on county bonds, \$65,002.98; interest on school lands sold, \$100,233.65; interest on school lands leased, \$43,697.24.

A new building for the department of mechanic arts was dedicated at the State University, Oct. 28. More than 160 new students were entered during the opening days of the fall term.

The State Normal School had a larger enrollment at the beginning of the school year than it has ever had at the corresponding time in other years; 333 were registered in the normal department. A new dormitory was opened in September.

Charities and Corrections.—The Lincoln Hospital for the insane had 351 patients at the beginning of the biennial term; 447 were admitted during the two years and 468 discharged. Of the number discharged 164 were transferred to Hastings and to various counties. The proportion of recoveries recorded is 21 per cent. The annual patient population is 360. The appropriation for the term was \$119,990. The annual cost for a patient was \$170.68. The asylum at Hastings is used for the chronic insane, those at Lincoln and Norfolk for patients not deemed incurable.

The Soldiers' Home, at Grand Island, had a membership of 274, Nov. 30, of whom 47 were absent, 41 of those present were women, 40 died during the previous two years, and 65 were discharged. The last Legislature appropriated for this home \$76,470, of which \$61,043 had been expended.

The School for the Deaf and Dumb, at Omaha, had 214 pupils during the biennial term. The

number admitted was 47, and the number graduated was 10. The capacity of the institution is 140 pupils. The average cost *per capita* for two years was \$366.83. The aggregate salaries of teachers and employees was \$29,600. The number of deaf and dumb children of school age reported from 29 counties who have never attended school is 42. The biennial estimate submitted aggregates \$135,000, which is \$80,000 more than was appropriated two years ago.

The superintendent of the Kearney Industrial School for Boys thinks 85 per cent. of the boys paroled and discharged have become honorable citizens and useful members of society. Since 1881, when the school was completed, 1,202 boys have been received and 1,051 boys have been paroled or taken out by legal process. The institution for the two years ending March 30, 1897, had \$105,000 at its disposal. In 1897 the Legislature appropriated \$81,650.

There were 290 prisoners in the Penitentiary, Nov. 30. The cooperage contractor now employs 110 prisoners. The broom contractors employ 95 prisoners. A shoe shop employing 7 prisoners has been established by the State. Shoes are manufactured for the Penitentiary and other State institutions.

The last Legislature appropriated \$60,000 as a maintenance fund for the Penitentiary, of which \$40,549 remains unexpended, \$19,324 having been left from the previous term. The warden collected \$44,474 for convict labor, deposited it with the State Treasurer, and drew out \$44,240, leaving only \$234 in the labor fund. He commends the convict parole law, and recommends purchase of more farm land.

Military.—The strength of the National Guard in April was given as 2,500 men. It is proposed to reorganize the Guard, since the State at the close of the year had only the Weymore Battery in its service. The First and Second Regiments and a troop of cavalry were called for by the Government, and after they left the service of the State Honorable discharges were issued to officers and men, including those who failed to pass the physical examination required by the Government mustering officers. The Adjutant General proposes to have a guard of 2,000 in 3 regiments, and estimates that the State should appropriate \$82,000 for maintenance for two years, \$22,800 for rent of armories, and \$66,697 for clothing and equipments to take the place of those turned over to the Government for the war, the value of which will in time be returned to the State.

Banks.—The report made by the Comptroller of the Currency showing the condition of national banks in Nebraska at the close of business on July 14 in comparison with the statement made on May 5 showed an increase of over a million dollars in the totals. Loans and discounts aggregate \$12,459,768; lawful money reserve, \$1,202,245; deposits, \$13,683,307; and average reserve, 4.12 per cent.

The president and vice-president of the First National Bank of Neligh were arrested in December charged with violations of the Federal banking laws. The cashier, who was indicted with them, has disappeared. The bank failed in October.

The State was non-suited Dec. 24 in the case brought to recover \$201,000 from the Omaha National Bank and the Chemical National Bank of New York. The suit was to recover the money for embezzling for which ex-State Treasurer Bartley is serving time.

A final dividend was declared in June in favor of the creditors of the national bank of Beatrice, making in all 64.4 per cent., or \$123,856.

Loan Associations.—The number of these in 1897-'98 was 68: the membership, 11,821; and the assets, \$3,554,788—a decrease of \$217,045.

Railroads.—A case was brought before the courts to test the validity of the law passed by the Nebraska Legislature in 1893, prescribing maximum freight rates. The act applies specifically to freight whose transit begins and ends in the State, and there was no effort in its enactment to control interstate freight. It affected all the railroads in the State, and the railroad companies filed a bill in the Nebraska circuit courts, after the law was enacted, to secure an order restraining the State officials from putting the law into force. The law was attacked on the ground of its constitutionality. It was charged that inasmuch as the act applied only to State freights it was chargeable with a discrimination against them, and therefore antagonistic to the spirit of the fourteenth amendment to the Constitution. The companies contended that the maximum rate fixed was unreasonable and ruinous to the roads. It was also asserted that the act interfered with interstate commerce. The decision in the circuit court was delivered by Justice Brewer, of the Supreme Court, who held against the validity of the law. His opinion was based largely upon the charge of unreasonableness. He made a computation showing that the reduction amounted on an average to 29½ per cent., which he held was too great a change.

The opinion of the United States Supreme Court, handed down by Justice Harlan in March, upheld the decision of the circuit court. He added that if railroad business should so improve that the rates fixed by the act of 1893 would afford a reasonable compensation the State might then apply for a discharge of the injunction. The opinion declared that a corporation is a person within the meaning of that term as used in the fourteenth amendment.

In a decision rendered July 25 in the district court at Lincoln, the State Board of Transportation was deprived "of much of the power conferred upon it by the last Legislature. The Attorney-General and the members of the board, acting under the law giving them jurisdiction over telephone and express companies, proceeded to enforce reductions in rates, in violation of a restraining order. Judge Cornish purged them of contempt, but assessed costs against them, and issued strict orders to make no further efforts in this direction."

The assessed valuation of the roads for 1898 was \$26,108,936.80; the mileage, 5,542.47.

Insurance.—The report for 1897 shows that joint-stock fire insurance companies, not of the State, wrote \$87,915,160 in risks, received \$1,221,879 in premiums, paid losses \$395,999. State joint-stock companies wrote \$10,620,427 in risks, received \$158,865, and paid \$43,094. State mutual companies wrote \$2,554,763 in risks, received \$75,271, and paid \$3,051. City and village mutual companies paid losses \$7,555, and had in force \$3,374,931. Nebraska farmers' mutual companies wrote risks, \$16,244,088; paid \$58,051; and had in force \$48,282,413.

Life insurance companies had in force at the close of 1897 19,218 policies, amounting to \$37,642,379, paid losses \$387,857, and received \$1,149,079. Two companies reported industrial business, \$1,250,717 in force, and \$10,155 paid. Premium life associations of the State had paid \$6,614, and had in force \$1,312,500. Assessment life associations had paid \$158,789, and had in force \$20,433,157.

Industries and Products.—A comparative statement of the surplus products of the State for 1891 and 1897, made by the Deputy Labor Commissioner, S. J. Kent, shows that the product of corn increased from 24,295,500 bushels to 76,346,362; wheat, from 9,821,000 to 18,040,915; oats, from 11,928,000 to 14,494,697; rye, from 803,500 to 2,879,612; barley, from 438,000 to 499,067; the number of hogs from 1,431,540 to 1,953,752; of cattle, from

380,100 to 657,942; of sheep, from 195,680 to 1,007,980; of horses and mules, from 18,940 to 13,240.

At a meeting of the State Dairymen's Association in November the president said that Nebraska had made greater progress in dairying during the year than any other State. He favored the creation of the office of dairy commissioner, in order that laws protecting dairy interests may be enforced.

The business of the stock yards at West Lincoln shows a great advance in recent years. The increase in 1898 over 1897 is reported as 87 per cent. in sheep, 23 per cent. in hogs, 4 per cent. in cattle, and 172 per cent. in horses and mules. The actual number of animals handled was 6,145 horses and mules, 60,340 cattle, 74,411 hogs, and 202,897 sheep. The figures of the Lincoln Packing Company also show rapid development of business. In 1898 the company bought and converted into meat products 65,513 hogs, for which \$634,567.14 was paid, or an average of \$9.68½ per head.

The Trans-Mississippi Exposition.—This closed the last day of October, after having had a total attendance of 2,600,000. The stockholders receive dollar for dollar, and it is estimated that from \$75,000 to \$100,000 will remain in the hands of the treasurer after all liabilities are paid.

The total amount of stock subscriptions collected and paid into the treasury on Oct. 28 was \$291,909.04; the total donations collected on that date was \$163,070.20; the total earnings of the corporation to that date was \$1,306,384.94; making a grand total of cash receipts from all sources of \$1,761,364.18.

Court Decisions.—The law providing for the appointment of a fire and police commission for metropolitan cities was declared unconstitutional and void in January. The applicants for a writ of mandamus contended that the law passed by the Legislature delegating to the Governor authority to name officers for the city of Omaha was at variance with the Constitution of the State and was a usurpation of the principle of the right of self-government. In passing upon the case, Judge Scott sustained this position and went even further. He holds that if the Legislature could pass a law delegating to the governor the power to appoint members of the fire and police commission it could also delegate authority to the State executive to name the mayor and other municipal officers.

A dispatch from Lincoln, Dec. 8, says: "The decision of the district court at Omaha in declaring the bondsmen of ex-Treasurer Joseph S. Bartley not liable for his shortage was reversed in an opinion rendered this evening by the Supreme Court. The decision is important and unexpected. The amount directly involved is \$201,000, which sum Bartley took from a State depository bank, and for which he was convicted of embezzlement and sentenced to the Penitentiary. Indirectly to-night's decision affects Bartley's whole shortage of nearly \$700,000, which it now seems probable his bondsmen must pay."

The State Supreme Court declared in September that the Mayor of Omaha was ineligible, because, by a technical irregularity in his accounts as district-court clerk, he was a defaulter at the time of his election.

An act of 1869, turning forfeitures, fines, etc., into the school fund was declared partly void, on the ground that unclaimed costs and witness fees are not public money and it is unconstitutional to deprive those for whose benefit they are paid of the title to them.

The act of 1897 creating municipal courts in metropolitan cities was declared by the State Supreme Court to be in violation of that section of the Constitution which provides that laws re-

lating to courts shall be general and of uniform operation.

The Attorney-General held that a woman who was elected town treasurer could not hold the office because not a qualified elector.

Political.—State officers and legislators and members of Congress were chosen at the November election. Candidates were nominated by the Republican, Prohibitionist, and Socialist-Labor parties; the Democrats, Populists, and Silver Republicans united, and the Liberty party made nominations for some of the State offices.

The convention of Prohibitionists was held June 10, at Lincoln. The resolutions were brief, reaffirming the national platform of the party and favoring woman suffrage and economy in State administration. Following are the nominations: For Governor, R. V. Muir; Lieutenant Governor, Rev. N. S. Lowrie; Secretary of State, Charles R. Lawson; Auditor, C. C. Crowell; Treasurer, Hiram Burch; Attorney-General, A. G. Wolfenbarger; Commissioner of Public Lands and Buildings, B. Blair; Superintendent of Public Instruction, Mrs. S. C. O. Upton.

On Aug. 2 the Democrats, Populists, and Silver Republicans held conventions at Lincoln and agreed upon a ticket.

The Democratic platform first greeted the soldiers and promised support to the President. Pride was expressed in Bryan and allegiance to Jefferson and Jackson. Restoration of the monetary system in operation before 1873 was demanded. Gold contracts were denounced. Free silver at 16 to 1 and full legal tender of all money were indorsed. Banks of issue and interest-bearing bonds were denounced, the recent issue being declared unnecessary. The tariff and the Dingley bill were denounced. Income tax and liberal pensions were favored. Deeds of congressmen and Senators were approved. Increase of Supreme Court judges was demanded, as also railroad commissioners elected by the people, and redistricting of the State.

The Populist platform declared for free silver, Government ownership of railroads, telegraphs, etc., and other well-known principles of the party. It favored a new maximum-rate law "granting the people all possible relief within the limits" of the decision of the Federal Court. It denounced usurpation of Federal courts in the issuance of writs of injunction by which constitutional rights of freedom of assembly and speech are denied to citizens; declared money to pay expenses of the war could have been raised by judicious taxation instead of by issuing Government bonds; condemned Republicans for not taxing all monopolies to raise war revenue; demanded "more money and less misery for the people"; and favored a vigorous prosecution of the war with Spain. Also it favored better pay for private soldiers and repeal of a time-limit provision relating to applications for pensions, and said further:

"We demand the enactment of a law prohibiting the issuance of free railway passes, except to *bona fide* employees, to public officials and private citizens, or the acceptance of the same, and favor the furnishing by law of necessary traveling expenses to public officers when engaged in the transaction of public business.

"We demand a speedy determination of the litigation involving the validity of the stock-yards act, regulating charges for feed and yardage, to the end that it may be determined, if said act is ineffectual, what steps should be taken to reduce said yards to State ownership."

The nominations were: For Governor, William A. Poynter; Lieutenant Governor, E. A. Gilbert; Secretary of State, William F. Porter; Auditor of

Public Accounts, John F. Cornell; Treasurer, John B. Meserve; Superintendent of Public Instruction, William R. Jackson, Land Commissioner, Jacob V. Wolfe; Attorney-General, Constantine J. Smyth. All are Populists except E. A. Gilbert, Silver Republican, and C. J. Smyth, Democrat.

The convention of the Liberty party was held at Lincoln, Aug. 2. The platform called for direct legislation under the system of initiative and referendum; for the "imperative mandate" through which any official who proves incompetent or dishonest in the discharge of his official duties may be removed from office by a majority vote of his constituency; for the honest and effective enforcement of all laws so that the will of the people, as expressed in the statutes, shall not be nullified by indifference or opposition on the part of public servants; and for the honest and economical administration of the Government, to the end that the people be not burdened with unnecessary taxes.

The ticket follows: For Governor, R. A. Hawley; Lieutenant Governor, J. Phipps Roe; Secretary of State, J. M. Dilworth; Attorney-General, Frank G. Odell; Treasurer, A. Luth; Auditor, Theodore Johnson; Commissioner of Public Lands and Buildings, B. H. Kelley; Superintendent of Public Instruction, Mrs. E. E. Utter. The candidates for the offices of Governor and Lieutenant Governor did not run.

The Republicans met at Lincoln, Aug. 10, and adopted resolutions in line with the party principles, and on State issues said:

"We pledge, if restored to control of the State Government, an honest and economical administration of public affairs and the introduction of strict business methods into all State institutions.

"We pledge the abolition of all unnecessary or sinecure State offices.

"We pledge a comprehensive revision of the revenue laws of the State with a view to a more equitable distribution of the tax burdens.

"We pledge legislation for State control and regulation of public corporations in the interest of all the people.

"We pledge the necessary steps toward a revision of the State Constitution.

"We call attention to the sham reforms of the triple allied fusion parties who have secured victory at the polls under false pretenses and whose pledges are proved by experience to be unreliable and utterly worthless.

"We invite the co-operation and support of not only all who believe in Republican principles, but also of all who wish better government, to the end that Nebraska may be no longer discredited by being classed among the States in subjection to Populism."

The nominations were: For Governor, M. L. Hayward; Lieutenant Governor, George A. Murphy; Secretary of State, Ceuk Duras; Auditor of Public Accounts, T. L. Matthews; Treasurer, Peter Mortensen; Superintendent of Public Instruction, John F. Saylor; Attorney-General, N. D. Jackson; Land Commissioner, A. F. Williams.

The Socialist-Labor party nominated H. S. Aley for Governor.

The official returns showed the following vote on Governor: Poynter, fusion, 95,703; Hayward, Republican, 92,982; Muir, Prohibitionist, 1,724; Aley, Socialist-Labor, 248. The highest vote for any candidate of the Liberty party was given to Theodore Johnson, candidate for the office of Auditor—166.

Republicans were elected to Congress in two districts, fusion candidates in the other four.

The Legislature will stand: Republicans in the Senate, 18; in the House, 55; Democrats in the

Senate, 6; in the House, 10; Populists in the Senate, 9; in the House, 35—giving the Republicans a majority of 13 on joint ballot.

NETHERLANDS, a monarchy in western Europe. The legislative authority is vested in the States General, consisting of a First Chamber of 50 members, elected by the Provincial Councils for nine years, and a Second Chamber of 100 members, elected for four years by the direct votes of all Dutch burghers who pay 10 guilders of direct taxes above the limit of partial exemption or are occupants of separate dwellings. The reigning sovereign is Queen Willemina, born Aug. 31, 1880, daughter of Willem III and Princess Emma of Waldeck and Pyrmont, who after the King's death on Nov. 23, 1890, acted as Queen Regent until her daughter reached her majority on Aug. 31, 1898. The young Queen took the oath of office on Sept. 6.

The Council of Ministers constituted on July 26 1897, was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. W. H. de Beaufort; Minister of the Interior, Dr. H. Goeman Borgesius; Minister of Finance, Dr. N. G. Pierson; Minister of Justice, Dr. P. W. A. Cort van der Linden; Minister of the Colonies, J. T. Cremer; Minister of Marine, J. C. Jansen; Minister of War, K. Eland; Minister of Public Works and Commerce, C. Lely.

Area and Population.—The kingdom has an area of 12,648 square miles. The population was estimated on Dec. 31, 1897, at 5,004,204, comprising 2,477,118 males and 2,527,086 females. The number of marriages in 1897 was 36,796; of births, 168,816; of deaths, 91,230; excess of births, 77,586.

Finances.—The revenue in 1896 was 135,175,567 guilders from ordinary and 180,000 guilders from extraordinary sources; total, 135,355,567 guilders. The expenditures were 39,295,234 guilders for defense, 32,137,346 guilders for debt, 10,223,130 guilders for public works, and 51,829,158 guilders for general expenses; total, 133,448,868 guilders. The revised estimates for 1897 made the total revenue 133,924,965 guilders and the total expenditure 137,273,041 guilders. The budget estimate of revenue for 1898 was 134,432,350 guilders, of which 44,400,000 guilders came from excise, 20,385,000 guilders from indirect taxes, 12,309,000 guilders from the land tax, 8,976,000 guilders from the post office, 8,716,500 guilders from import duties, 8,700,000 guilders from personal tax, 7,000,000 guilders from the tax on capital, 4,620,000 guilders from the tax on incomes from trade and professions, 3,885,000 guilders from state railroads, 2,450,000 guilders from domains, 1,850,000 guilders from pilot dues, 1,403,000 guilders from the telegraphs, 659,000 guilders from the state lottery, 240,900 guilders from the tax on gold and silver, 130,000 guilders from shooting and fishing licenses, 5,980 guilders from mining dues, and 8,641,970 guilders from miscellaneous sources. The total expenditures for 1898 were estimated at 141,743,746 guilders, of which 32,491,093 guilders are for public debt, 24,055,195 guilders for public works, 23,452,348 guilders for finance, 22,333,006 guilders for the army, 15,533,996 guilders for the navy, 14,455,836 guilders for the interior, 5,643,437 guilders for justice, 1,388,716 guilders for the colonial office, 338,436 guilders for foreign affairs, 800,000 guilders for the civil list, 701,681 for the state bodies, and 50,000 guilders for contingent expenses.

The estimate of revenue for 1899 is 140,800,000 guilders, and of expenditure 152,600,000 guilders.

The national debt in 1897 amounted to 1,106,341,893 guilders, consisting of 626,008,900 guilders of 2½-per-cent. funded debt, the 3-per-cent. loan of 1895 for 462,819,300 guilders, 3,013,693 guilders of debts of expropriated railroads, and 15,000,000 guilders of uncovered paper money. The interest for

1897 was 29,935,246 guilders, and the sinking-fund charge 2,708,500 guilders.

The Army.—The army has been recruited to the extent of two thirds by the levy of militia, of which the annual contingent was about 10,400, but the only thoroughly trained and disciplined troops were those obtained by voluntary enlistment for six or eight years. The peace footing in 1897 was 1,882 officers and 26,972 men, with 5,755 horses. The army in India is an independent organization, recruited by enlistment in Europe and the colonies. Its strength in 1897 was 40,346, comprising 16,066 Europeans, 55 Africans, and 22,938 native East Indians. The plan of reforming the Dutch home army by introducing universal obligatory personal military service has been long under discussion and was one of the chief projects of the present administration. The law was passed by the Second Chamber on June 1, with 72 votes to 20, and on July 1 by the First Chamber with 32 votes to 13.

The Navy.—The naval force, including the fleet kept in the East Indies, consists of 6 armored ram turret and barbette vessels, ranging from 3,400 to 5,200 tons; 19 smaller rams, monitors, and armored gunboats; the protected cruisers "Holland," "Zeeland," and "Friesland," of 3,900 tons, which carry two 15-centimetre and six 12-centimetre guns and can steam 20 knots with engines of 9,250-horse power; 6 other first-class and 4 second-class cruisers; 50 small gunboats; and 28 first-class, 3 second-class, and 6 third-class torpedo boats. Six new coast defense vessels are being added.

Commerce and Production.—The imports of wheat in 1896 were 134,439,000, and exports 98,161,000 guilders in value; the imports of rye were 77,343,000, and exports 35,430,000 guilders; the imports of wheat and rye flour were 48,779,000, and exports 8,271,000 guilders; the imports of barley were 26,092,000, and exports 18,520,000 guilders; the imports of oats were 28,971,000, and exports 24,060,000 guilders; the imports of flax were 1,178,000, and exports 16,298,000 guilders. In a total import trade of 1,635,000,000 guilders the imports of cereals and flour represent 315,624,000 guilders, and in the total export trade, amounting to 1,340,000,000 guilders, they stand for 184,422,000 guilders; the imports of iron and steel in all forms were 150,816,000, and exports 99,044,000 guilders; imports of drugs 203,899,000, and exports 187,021,000 guilders; imports of copper 68,044,000, and exports 65,367,000 guilders; imports of sugar 29,118,000, and exports 52,435,000 guilders; imports of coffee 40,872,000, and exports 24,434,000 guilders; imports of rice 39,527,000, and exports 15,412,000 guilders; imports of timber 38,397,000, and exports 21,086,000 guilders; imports of oil seeds 39,565,000, and exports 18,557,000 guilders; imports of butter 1,572,000, and margarine 18,240,000, exports of butter 17,170,000, and margarine 38,224,000 guilders; imports of hides and skins 22,931,000, and exports 21,472,000 guilders; imports of saltpetre 16,336,000, and exports 22,238,000 guilders; imports of colors 11,729,000, and exports 9,852,000 guilders; imports of indigo 9,649,000, and exports 6,911,000 guilders; imports of mineral oil 10,840,000, and exports 80,000 guilders; imports of cheese 76,000, and exports 11,731,000 guilders; imports of vegetables 1,627,000, and exports 27,106,000 guilders; imports of paper 5,026,000, and exports 27,732,000 guilders; imports of fats and grease 16,336,000, and exports 6,186,000 guilders; imports of tobacco 9,374,000, and exports 4,511,000 guilders; imports of tin 18,569,000, and exports 17,017,000 guilders; imports of zinc 10,954,000, and exports 10,700,000 guilders; imports of gold and silver 6,353,000, and exports 779,000 guilders.

The total value of imports in 1897 was 1,706,100,-

000 guilders, including 26,100,000 guilders of precious metals. The merchandise imports were valued at 1,680,000 guilders, of which 528,100,000 guilders represent alimentary articles, 587,300,000 guilders raw materials, 279,300,000 guilders manufactured goods, 285,300,000 guilders miscellaneous merchandise. The total value of merchandise exports was 1,478,200,000 guilders, of which 515,900,000 guilders represent alimentary products, 536,900,000 guilders raw materials, 276,400,000 guilders manufactured articles, and 149,000,000 guilders miscellaneous articles. Including 900,000,000 guilders of precious metals, the total exports were 1,479,100,000 guilders. The trade was distributed between different countries as follows:

COUNTRIES.	Imports.	Exports.
Great Britain	269,900,000	321,900,000
Germany	277,000,000	767,500,000
Belgium	186,400,000	165,700,000
France	19,600,000	35,300,000
Sweden and Norway	26,700,000	9,000,000
Russia	248,700,000	6,900,000
Roumania	31,200,000	800,000
Turkey	9,800,000	4,900,000
Italy	4,600,000	7,100,000
Spain	31,600,000	2,400,000
Dutch East Indies	217,000,000	60,300,000
British East Indies	36,600,000	3,400,000
Africa	5,400,000	11,600,000
United States	234,100,000	44,900,000
Brazil	16,000,000
Peru and Bolivia	16,700,000
Other countries	73,700,000	37,400,000
Total	1,706,100,000	1,479,100,000

Navigation.—There were entered at Dutch ports in the course of 1897 of sailing vessels 1,259, measuring 1,013,187 cubic metres, of which 549, of 262,309 cubic metres, were Dutch, and cleared 1,350, of 1,027,182 cubic metres, of which 654, of 288,615 cubic metres, were Dutch; of 9,976 steamers, of 23,080,359 cubic metres, that were entered, 2,446, of 5,692,616 cubic metres, were Dutch, and of 9,748 cleared, of 22,700,072 metres, 2,452, of 5,683,043 cubic metres, were Dutch. Of the sailing vessels entered, 1,053, of 976,479 cubic metres, and of the steamers, 9,546, of 22,410,043 cubic metres, were with cargoes; of the sailing vessels cleared, 939, of 398,525 cubic metres, and of the steamers, 6,145, of 11,522,475 cubic metres, carried cargoes.

The merchant navy on Jan. 1, 1898, comprised 441 sailing vessels, of 269,400 cubic metres, and 171 steamers, of 568,511 cubic metres; total, 612 vessels, of 837,911 cubic metres.

Communications.—The railroads in operation on Jan. 1, 1898, had a total length of 1,681 miles. The length of the State telegraph lines was 3,595 miles, with 12,736 miles of wire. The number of dispatches was 4,714,485, of which 2,554,791 were internal, 2,117,351 international, and 42,343 official. The receipts were 3,526,197 francs; ordinary expenditure, 4,512,705 francs; extraordinary expenditure, 1,441,572 francs. The post office in 1897 conveyed 64,159,000 internal and 24,449,000 foreign letters, 38,064,000 internal and 7,251 foreign postal cards, 122,282,000 internal and 15,944,000 foreign newspapers, books, and circulars, and 3,515,000 internal money orders and letters, remitting 332,658,000 francs, and 567,000 foreign ones, remitting 109,754,000 francs.

The States General.—The legislative session was opened by the young Queen on Sept. 20. The Chambers considered several measures of social importance, providing for the improvement of the dwellings of the laboring classes, the prevention of excessive hours of labor for adults in factories and workshops, and the correction of the abuse of alcohol. Other bills dealt with the construction of secondary railroads, the abolition of tolls, the reor-

ganization of the finances and government of the Dutch East Indies, and a modification of the government system of Surinam and Curaçao. The revision of the tariff duties was already nearly completed.

The Institute of International Law.—The Association of International Jurists, which has been in existence since 1873, at its annual meeting held at the Hague in August, 1898, manifested disappointment on account of the Spanish-American war, which was a setback to the chief object of the Institute—the promotion of international arbitration. It found consolation, nevertheless, in the adhesion of both belligerents, although not parties to the declaration of Paris, to the principle that neutral goods under the enemy's flag and the enemy's goods under a neutral flag are exempt from seizure. A report on conflicts of law respecting the rules of private international law approved the principle that the ordinary law of a country and not its rule of international law shall govern, that, for instance, when English law holds that the law of domicile, and the French, Italian, Dutch, and Belgian law that the law of nationality applies, as in the succession to personal property, if an Englishman dies a resident of one of these countries his property must be administered according to the English law of succession, not according to the English law saying that the law of domicile, which is that of the foreign country, shall prevail. Another question considered was the legal position of ships in foreign ports. As regards war ships it was held that a crime committed on board, whatever the nationality of the victim, must be judged by the courts of the nation to which the ship belongs, but that crimes committed on shore by officers or men of the ship fall within the jurisdiction of the local authorities, and, if the perpetrators escape to their ship, they must be delivered up for trial.

Colonies.—The area and population of the Dutch East and West Indies are given in the following table:

COLONIES.	Square miles.	Population.
Java and Madura	50,554	25,697,701
Sumatra:		
West Coast	31,649	1,853,315
East Coast	35,312	335,432
Benkulen	9,399	158,767
Lampoung	11,284	137,501
Palembang	53,497	692,317
Atcheen	20,471	531,705
Riau-Linga Archipelago	16,301	107,861
Banca	4,446	93,600
Billiton	1,863	41,558
Borneo:		
West Coast	55,825	370,775
South and east districts	156,912	809,803
Celebes:		
Menado	49,390	1,448,732
Molucca Islands	22,080	549,138
Timor Archipelago	43,864	399,208
Ball and Lombok	17,698	119,239
New Guinea	4,065	1,044,757
Surinam	151,789	200,000
Curaçao	46,060	76,500
.....	403	48,774
Total	782,862	33,125,244

The East Indian possessions outside of the colony of Java and Madura are designated as outposts. A legal and social distinction is made in Java between Europeans and persons assimilated to them, who are governed according to Dutch laws, and natives and persons assimilated to them, who are governed according to native customs. There were 62,061 Europeans and persons assimilated to them in 1895 of whom 34,645 were males and 27,146 females. Out of a total of 32,330 Dutch males 24,953, and out of 26,898 Dutch females 23,402 were born in the East Indies. Among the Europeans and persons assimi-

lated to them the number of marriages in 1895 was 493; of births, 1,886; of deaths, 1,410. The native converts to Christianity on Jan. 1, 1895, numbered 18,331 in Java and Madura, and 284,294 in the outposts. In the public elementary schools for Europeans and persons assimilated to them there were 14,010, and in private schools 2,898 pupils in 1895; in the Government schools for natives there were 36,763, and in private and missionary schools 20,753 pupils.

The Governor-General of Dutch India, who is assisted by a Council of 5 members, is Jonkheer C. H. A. van der Wyck, appointed July 15, 1893. The budget for 1898 makes the total revenue 135,204,203 guilders, of which 21,659,863 guilders were from sales of Government coffee in the Netherlands and 8,257,600 guilders from sales in India, 122,760 guilders from sales of cinchona and 6,777,446 guilders from sales of tin in the Netherlands, 216,000 guilders from the profits of the Billiton Company, 885,000 guilders from railroads in the Netherlands and 10,150,000 guilders from railroads in Java, 8,678,000 guilders from sales of salt, 17,248,000 guilders from sales of opium, 15,507,500 guilders from import, export, and excise duties, 19,589,700 guilders from land revenues, 34,214,700 guilders from all other sources in India, and 897,634 guilders from various sources in the Netherlands; total receipts in the Netherlands 21,558,703, and in India 113,645,500 guilders. About a third of the expenditure is for the army and another third for the general expenses of the administration in India and in the Netherlands. The expenditure in India for 1898 was estimated at 117,590,449, and expenditure in the Netherlands at 28,559,715 guilders, making the total 146,150,164 guilders, which is 10,945,961 guilders more than the estimated receipts. The deficits have averaged about this sum for four or five years past. On June 16, 1898, the Dutch Chambers authorized an East Indian loan of 55,000,000 guilders. For 1899 the expenditure is estimated at 146,000,000 guilders, exceeding the estimate of receipts by 13,334,000 guilders.

The Government is the owner of the land in Java and Madura, except the private estates, situated mostly in the western part of the island. Under the culture system the natives were compelled to work for the Government on the coffee, sugar, tea, indigo, pepper, and tobacco plantations, but now forced labor is exacted only for the production of coffee. Private landowners, as well as the Government, have the right to the gratuitous services of all laborers living on their land for one day or more out of every seven. The greater part of this forced labor is commuted on the Government domains since 1882 by the payment of a poll tax of 1 guilder per annum. Under the agrarian law of 1870 a considerable extent of wild land is added every year to the cultivated area under seventy-five year leases. In 1895 there were 772,376 acres thus leased to European companies and individuals, 30,080 acres to Chinamen, and 3,305 acres to natives. No land has been sold outright since 1816. The private estates of Europeans cover 2,069,733 acres, while 639,999 acres belong to Chinamen and 34,856 to other Asiatics. There were 6,490,737 acres under free cultivation by natives in 1895. The principal cultures, besides rice and coffee, are corn, arachis, sugar, tobacco, indigo, and cotton. Sugar has not been cultivated by the Government since 1891, but is grown on lands leased from the natives or the Government. The yield in 1896 was 501,122 tons. The produce of coffee in 1895 was 114,223,277 pounds, of which 48,333,858 pounds were grown by the Government, 13,564,994 pounds by natives, 48,559,186 pounds on leased lands, and 3,765,239 pounds on private lands. The crop of 1896 was 42,094 tons, and

that of 1897 was estimated at 55,140 tons. The production of cinchona in 1895 was 317,387 kilos on Government lands, 60,020 kilos on private lands, and 3,573,260 kilos on leased lands. There are 74 tea plantations, producing 4,349,000 kilos in 1895. The yield of indigo was 621,666 kilos. Of tobacco, 18,075,917 kilos were raised in Sumatra and 9,807,178 kilos in Java. The output of tin from the Government mines of Banca and the private mines of Riau and Billiton was 16,600 tons in 1896.

Although the operations of 1897 against the Acheenese rebels of Sumatra were on the whole successful, the powerful chief Tokoe Oemar, who was the leader of the war party, could not be caught, and in the spring of 1898 he was still at the head of a large force of well-armed and finely-disciplined men whose efficiency as guerrillas had been brought up to the highest standard by long years of warfare. These men had established their quarters among a friendly population in the mountainous and thickly wooded country of Pedir, which lies northeast of Acheen. Although many people in the colony were opposed to sending an expedition into the dense bush of this wild and trackless country, far from its base of supplies, the energetic governor-general determined to fit one out on an extensive scale. It entered the Pedir valley at the end of May, and captured Garoet, from which Tokoe Oemar withdrew after some resistance, disappearing according to his wont. On June 30 the Acheenese suddenly attacked the civil post at Edi, but were repelled and pursued, losing 110 killed. In a later action the Dutch drove them from their position at Edi Goet, killing 80, and then marched upon Perlak and into the district of Glieng, whence also the insurgents retired after losing 33 in battle. In all these engagements few were killed, but many wounded, on the Dutch side.

Surinam, or Dutch Guiana, is administered by a governor, W. Tonckens in 1898, assisted by a Privy Council and by the Colonial States, consisting of 13 members, 9 of them elective. The revenue in 1897 was 2,245,498 guilders, of which 2,020,739 guilders were raised by import, export, and excise duties, and personal, house, estate, and indirect taxes. There is a militia of 27 officers and 358 men, a civic guard of 68 officers and 1,463 men, and a European garrison of 20 officers and 350 men. The produce of sugar in 1896 was 10,390,747 kilos; of cacao, 3,088,894 kilos; of coffee, 99,413 kilos; of rum, 880,369 litres; of molasses, 1,259,024 litres; of bananas, 559,492 bunches. The production of gold in 1896 was 846,366 grammes. The total product for the twenty years from the beginning of mining was valued at 19,495,771 guilders. The total value of imports in 1896 was 5,335,180 guilders; of exports, 4,391,728 guilders. There were entered during that year 202 vessels, of 93,636 tons, and cleared 198 vessels, of 90,880 tons.

NEVADA, a far Western State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since, admission, was 42,491 in 1870; 62,266 in 1880; and 45,761 in 1890. Capital, Carson City.

Government.—The following were the State officers during the year: Governor, Reinhold Sadler; Lieutenant Governor, C. H. E. Hardin; Secretary of State, Eugene Howell; Treasurer, W. J. Westerfield; Comptroller, C. A. La Grave; Superintendent of Public Instruction, H. C. Cutting; Attorney-General, James R. Judge, all of the Silver party; Adjutant General, C. H. Galusha, Republican, who died July 21; Charles H. Peters was acting as Adjutant General; Chief Justice of the Supreme Court, C. H. Belknap; Associate Justices, M. S. Bonfield, W. A. Massey; Clerk, Eugene Howell, all of the Silver party.

Finances.—The Treasurer's report, published in February, gives the following details: The cash on hand Jan. 1, 1897, was \$272,890.32, and the receipts during the year from all sources \$450,127.85, making the total \$723,017.67. These receipts include the cash received for sale of State school lands, for interest on deferred payments of State school lands, sale of State bonds, interest on bonds, receipts from penal and eleemosynary institutions, county payments to district judges' salaries, county settlements, and miscellaneous sources.

The disbursements for 1897 were \$465,635.25, which included salaries of State officers and employees, support of State Prison, Hospital for Mental Diseases, Orphans' Home, expenses of Legislature, indexing and printing Supreme Court reports, State Printing Office, support of public schools, buildings and other expenses at the State University, militia, etc.

The balance in the treasury Jan. 1, 1898, was \$257,382.42, of which \$133,780.02 was in the general fund and applicable to the payment of State expenses, \$22,634.94 in the State school fund, \$50,702.99 in the general school fund, and \$36,910.34 in the State and Territorial interests funds, both of which are applicable for school purposes.

The cost of the State government in 1898 was \$436,423.39.

The amount of taxable property in the State was \$19,996.99 more in 1898 than in 1897.

Education.—The school population in 1898 was 8,996. The largest number recorded in any year was 10,592, which was in 1880. The apportionment to the counties from the school fund in 1898 was \$119,539.45. The balance in the educational fund Dec. 31 was \$1,413,738.91. During the year \$203,339.93 was expended for education, of which \$162,321.65 was for salaries.

The number of students in the State University has risen from 75 in 1874-'75 to 366 in 1898, of whom 302 are residents of the State. The expenditures for salaries, administration, new buildings, and improvements during the past biennial term amounted to \$88,980.63. The endowment fund is \$128,600.

Penitentiary.—The number of convicts in the State Prison Jan. 1, 1897 was 70, and at the end of that year 75. At the end of 1898 there were but 60. They were maintained, at a cost of 44 cents a day *per capita*, salaries of employees not included. The total cost for the biennial term, including repairs to buildings was \$59,500. Of this sum \$9,006.65 was charged to the Government for United States prisoners. The State board granted 14 pardons and the President 1 during the term, and 2 convicts died.

Military.—There were 6 companies in the National Guard, and but 4 were called for to form an infantry battalion for service in the war. By July 4 men to the number of 337 had been enlisted, of whom a small number, it seems, were of those already enrolled in the State militia.

Railroads.—The annual report of the Nevada, California and Oregon Railway for the year ending June 30, 1898, shows an earning by the company of \$84,738.05. Operating expenses, \$65,069.83; net profit, \$19,668.22. This is the little road that runs north from Reno toward Alturas; ground has been broken for an extension.

The Oregon Short Line is to be extended from Milford, Utah, through southern Nevada.

Mining.—Preparations have been made for raising the water by pumping from the flooded levels of the Comstock mines to the height of the Sutro Tunnel, which has been put into condition to carry it off. With the resumption of deep mining, the draining of old workings and development of new,

it is expected that the Comstock mines will at least regain their old prosperity. The expense of pumping by modern methods is estimated to be not more than one twelfth of what it was costing when pumping was suspended. This saving, or a large portion of it, will be accomplished through operating pumping and hoist plants by electricity, the power for generating which will be supplied by Truckee river. The pumps are to lift 12,000 gallons of water a minute, or 17,000,000 gallons every twenty-four hours. The maximum quantity pumped when all the old Comstock pumps were in operation was only 5,000,000 gallons in twenty-four hours. A statement in regard to the products of famous mines says that the Comstock lode, though worked only about thirty years, has yielded \$500,000,000.

The gold product of the State in 1898 is given by the director of the mint as \$2,959,731.

The copper mines, 12 miles south of Golconda, Humboldt County, are being rapidly developed. The smelting and roller-crushing plant has a daily capacity of 300 tons. The lowest workings are on the 250-foot level. The railroad from the mine to the reduction plant will be completed by Dec. 1, when arrangements for more extensive operations will begin.

The town has now six hotels and several business houses, and many neat cottage residences. The hot springs at Golconda are becoming noted, and a hotel has been erected there.

Near Lovelock, in the same county, are large deposits of iron.

It is published that infusorial earth is found in large quantity 8 miles from Carlin. The borax production of Humboldt and Churchill Counties this season is expected to exceed that of any former year.

The niter deposits of the State, although so far as discovered showing only limited quantities, are receiving attention from prospectors, as that product in its refined state is quoted at 7½ cents a pound.

The amount of sulphur mined in 1898 is given as about 1,236 short tons.

The English company operating the Cornhill County nickel mines, 45 miles south of Lovelock, has recently perfected a process of producing nickel salts directly from the ore. The salts is used extensively in nickel plating, and the process perfected by the company enables the placing of the product on the market at a price that shuts out competition. There are large resources of nickel ore in the mine.

Mob Law.—The lynching that took place at Genoa in December, 1897 (see "Annual Cyclopaedia" for 1897, page 546), was made the subject of investigation in January. The reports show that the crime was accompanied with unusual cruelty and atrocity. Yet a petition upholding it and denouncing those who were trying to bring the lynchers to justice received many signatures, among which were the names of four of the grand jury. The justice therefore ordered a new jury to be drawn, and said they should not only endeavor to find out who the lynchers were, but also whether it was true that the sheriff made no attempt to protect his prisoner, and none to form a posse and arrest the murderers; and, further, whether the county commissioners did their duty in refusing to offer a reward for the apprehension of the lynchers. The foreman, in his report to the judge, Jan. 25, said: "We have thoroughly investigated the Uber lynching case. We have examined 70 witnesses, and discovered the names of those parties who did the lynching, and have uncovered sufficient evidence to insure a conviction in every case, but the jury refuses to find indictments, and I consider it useless any longer to trifle with them." He did not think it would be worth while to bring before them the cases of the sheriff and the commis-

sioners. Finally, Feb. 5, one indictment only was found, and that was against the sheriff. A local paper said: "In the meantime it is gratifying that the case when fully examined makes a much better showing for the people of Nevada than appears on the surface. An effort really in earnest on the part of the officers of the law was made to bring the lynchers to justice. The prosecuting attorney did his work with zeal, and seems to have submitted to the jury abundant evidence to prove the case of the State against the accused. A considerable number of the grand jury also were ready and willing to act. Justice failed simply because a number of thrifty citizens whose devotion to economy would have made them excellent supervisors were by a freak of fortune turned from that office and landed in the grand jury."

The Poll-Tax Law.—The Supreme Court declared, June 27, that the law making the right of suffrage dependent upon the payment of poll taxes for two years, which was passed in 1897, is void because the title of the bill is not descriptive of the matter.

Political.—State officers and Legislature and a member of Congress were chosen at the November election.

The Silver party held its convention at Reno, Sept. 8 and 9. A committee was appointed to confer with one from the Democratic convention, with a view to fusion; they offered the Democrats choice of nominees for the offices of Lieutenant Governor, Comptroller, Regent of the University for the short term, and Superintendent of Public Instruction. The offer was rejected, and there was no fusion.

The platform of the Silver party approved the platform of the National Silver party at St. Louis in 1896, and the financial plank of the National Democratic party at Chicago reaffirmed devotion to free and unlimited coinage of silver at the ratio of 16 to 1 by independent action of the United States; opposed the Republican policy of increasing the bonded debt, and the issuing of money by banking institutions; asserted faith in the loyalty, ability, and wise leadership of William J. Bryan, and predicted his nomination as standard bearer in 1900. It favored the holding of Cuba, Puerto Rico, and the Philippines until the American people have time to consider the best policy in regard to their final disposition, the construction of the Nicaragua Canal, and the foreclosure of the mortgage on the Central Pacific Railroad unless the principle and interest is paid within one year.

The re-election of Senator Stewart was advised, and Senator Jones and Congressman Newlands were commended.

The nominations were: For Governor, Reinhold Sadler; Lieutenant Governor, J. R. Judge; Secretary of State, Eugene Howell; Treasurer, D. M. Ryan; Comptroller, S. P. Davis; Superintendent of Public Instruction, H. C. Cutting; Attorney General, W. D. Jones; Superintendent of Printing, Andrew Maute; Justice of the Supreme Court, C. H. Belknap; Regent of the University (long term), W. E. F. Deal; Regent (short term), H. S. Starrett; Surveyor General, E. D. Kelly; Member of Congress, Francis G. Newlands.

The Democratic convention adopted a platform approving that of the national convention in 1896, commended Democratic members of Congress for their course in favoring the prosecution of the war, denounced the Dingley tariff bill as a measure passed exclusively for the benefit of monopolies and trusts, declared the Democratic to be the only silver party, favored the election of United States Senators by popular vote, demanded that the Government should keep possession of the Philippines, and advocated the policy of internal improvements

to develop resources of the State by impounding water for irrigation. Following is the ticket: For Governor, George Russell; Lieutenant Governor, C. W. Grimes; Justice of the Supreme Court, C. H. Belknap; Secretary of State, John Weber; Treasurer, W. G. Thompson; Comptroller, G. M. Humphreys; Surveyor General, T. K. Stewart; Superintendent of Instruction, E. E. Caine (afterward withdrew); State Printer, James Morris; Regent (long term), J. F. Triplett; Regent (short term), G. Haist.

In State convention at Reno, Sept. 9, the Populists nominated the following candidates: For Governor, J. B. McCullough; Lieutenant Governor, W. H. Coffee; Secretary of State, G. T. Leavitt; State Treasurer, John Rhodes; State Comptroller, Harry P. Beck; State Printer, Dr. H. H. Hogan; Surveyor General, A. C. Pratt; Board of Regents (long term), George Peckham; Member of Congress, Thomas Wren. No nominations were made for the offices of Justice of the Supreme Court, Superintendent of Instruction, Attorney-General, and Regent for the short term. Following is the financial plank in the platform:

"We reiterate with emphasis that the financial question is the paramount issue, and demand the free and unrestricted coinage of silver and gold at the American ratio of 16 to 1."

The Republicans met in convention at Reno, Sept. 15, and passed resolutions commending the national Administration and the conduct of the war: favoring the immediate construction of the Nicaragua Canal and the enlargement and strengthening of the navy and coast defenses and a standing army commensurate with the dignity of the nation: commending the annexation of the Hawaiian Islands, and declaring in favor of territorial expansion. They expressed faith in the Republican principles of bimetalism, protection, and reciprocity, and declared that, as the Republican party is pledged to bimetalism, the settlement of the financial question may safely be left to it.

The following nominations were made: For Governor, William McMillan; Lieutenant Governor, J. W. Ferguson; State Treasurer, F. J. Button; State Comptroller, George H. Turrittin; Attorney-General, M. A. Murphy; Surveyor General, Allen Bragg; State Superintendent of Schools, Orvis Ring; State Printer, Joseph Eckley; Regent (long term), R. K. Colcord; Regent (short term), W. O'Brien. No nominations were made for the offices of Member of Congress, Justice of the Supreme Court, and Secretary of State.

The official returns show the election of all the candidates of the Silver party except the nominee for Superintendent of Public Instruction, Orvis Ring, the Republican candidate defeating his opponent by 1,198. The vote for Governor stood: Sadler, Silver party, 3,570; McMillan, Republican, 3,548; Russell, Democrat, 2,060; McCullough, Populist, 833, giving a plurality of 22 to Sadler.

The Legislature, for which there are to be some contests, was reported as follows: Republicans in the Senate 4, in the House 10; Democrats, 1 in each house; Silver party, 9 in the Senate, 17 in the House; 1 Independent in the Senate and 3 in the House.

NEW BRUNSWICK, an eastern province of the Dominion of Canada; area, 28,100 square miles; population in 1891, 821,263. Capital, Fredericton.

Politics and Government.—After the death of the Hon. James Mitchell, Prime Minister of this province, late in 1897, a new ministry was formed by the Hon. Mr. Emmerson, as follows: Premier and Chief Commissioner of Public Works, H. R. Emmerson; Provincial Secretary, L. J. Tweedie; Surveyor General, A. T. Dunn; Attorney-General, A. S. White; Commissioner for Agriculture, C. H.

Labillois; Members of the Council, L. P. Farris and A. D. Richard.

The new Government, like the preceding Blair and Mitchell ministries, claimed to be a coalition of Liberals and Conservatives; but the former so predominated in its composition, and so controlled its policy, that a long-expected revolt among provincial Conservatives took place, partly as a consequence of gradually growing feeling, and partly through the intervention of the Hon. G. E. Foster, the local Conservative leader in federal politics. On July 27 Mr. Foster came to Moncton and addressed a large gathering, at which the following resolution was passed unanimously:

"That in the opinion of this convention it is desirable that at the approaching general local election for the province of New Brunswick we support candidates pledged to establish and maintain a provincial administration in sympathy with Conservative principles."

Messrs. Tweedie and Richard, however, still maintain their places as members of the Government. Meantime all kinds of preparations have been proceeded with for the elections of 1899. Mr. Emerson, on assuming office, was banqueted at St. John on Dec. 2, 1897, and strongly expressed his desire to keep federal issues out of provincial politics. This line of thought was continued in the speeches at a demonstration held at Gagetown on Sept. 13, 1898, in honor of the Hon. A. G. Blair, late Premier, now Dominion Minister of Railways. Practically it amounted to an appeal for Conservative support by Liberal leaders. The situation at the close of the year, therefore, is that of a strong Government being attacked all along the line by an active opposition, led by Dr. A. A. Stockton and supported by his Dominion leaders, as the Liberals are by theirs. The House of Assembly met on Feb. 10, 1898, and was opened by Lieut.-Gov. A. R. McClellan with a speech from the throne, in which he said:

"It is gratifying to know that never in the history of the province has its financial credit stood so high as at present. The general prosperity and contentment of our people here and throughout the Dominion, the many eminent blessings richly showered in the past upon the land in whose interests we are assembled, and the many encouraging grounds for trust in the future, are all sources of congratulation, and merit our devout thankfulness to the Sovereign Ruler of our destinies.

"The official visit of his Excellency the Governor General and the Countess of Aberdeen to sections of our province during the year elicited cordial greetings from our people, testifying to the high esteem in which their Excellencies are held, as well for the interest shown by them in the welfare and advancement of the people as for their exalted position.

"The many economic, social, and other advantages arising from well-directed additions by immigration to our productive agricultural population have led my Government to give attention to the subject, and your consideration will be invited to a plan whereby it is hoped that we may not only be enabled to infuse some new elements into our too sparse population, but also further to encourage our own sons to remain at home in pursuit of agriculture, thus occupying and settling valuable vacant lands of the province.

"Agriculture, as an essential basis of all arts, will, I feel confident, claim your first consideration. The stock importation made during the recess, in accordance with the recommendation of the Farmers' and Dairymen's Association, met with popular approval, as evidenced by the interest manifested in the sale and the satisfactory prices realized. The special efforts made under the direction

of the Department of Agriculture in the holding throughout the province of farmers' meetings to disseminate knowledge pertaining to agriculture have contributed largely, I believe, to advance and energize this great industry. Past efforts have resulted in a large increase in the dairy products of the country, and I am led to hope that like efforts will result in stimulating and encouraging the farmers of New Brunswick to produce their own wheat supply, as of other cereals, thereby saving to their pockets the large annual drain therefrom now necessary in furnishing bread for their own tables.

"My Government strongly entertain the opinion that butter of the best quality can be profitably manufactured within the province during the winter season, through the agency of dairies supplied by auxiliary skimming stations located at suitable points and, with the view of demonstrating the possibility of conducting this enterprise successfully, have established one such winter dairy at Sussex. As there can be no doubt that great benefits will accrue to the province should this experiment prove that the enterprise can be made generally successful, you will be glad to hear that the results thus far have been eminently satisfactory. In furtherance of the interests of dairying, the Government have established and are now conducting a dairy school at Sussex, where all interested can obtain, free of cost, instruction in the most approved methods for butter and cheese making.

"The active and continued interest of a large portion of the progressive business element of St. John in a provincial exhibition has been brought to the notice of my Government, and should the plans matured by the association in charge involve particular and substantial recognition of agricultural exhibits, without lessening the usual display of the products of other industrial arts, a bill authorizing financial assistance on the part of the province will be submitted for your approval.

"Public attention abroad has been more and more arrested by the advantages of New Brunswick as an inviting spot for sportsmen and tourists. With a view of increasing the travel in this direction, so productive of profit to our people, my Government have thought it advisable to encourage an exhibit at the Sportsmen's Exhibition, to be held in Boston in March next, representative of the chief characteristics of our province in this regard.

"The commercial character of our country, notwithstanding all past discouragements, has begun to display itself in the successful establishment of lines of steamers sailing regularly from the commercial metropolis of our province during the winter months, whereby we are placed in relation to commerce in a position of advantage.

"A claim of long standing against the Dominion Government on account of eastern extension has been pressed during the recess by a delegation of my Government, and I have reason to conclude that a reply will be promptly given in the early days of this session."

The Hon. J. P. Burehill acted as Speaker, and the address in reply to the speech was passed after considerable discussion.

The House adjourned on March 18, after the following, among many minor bills, had been given the royal assent by the Lieutenant Governor:

To amend chap. xlvii of the Consolidated Statutes. "Witnesses and Evidence."

To amend an act entitled "An Act to incorporate the Exhibition Association of the City and County of St. John."

To amend an act to incorporate the New Brunswick Masonic Hall Company.

In aid of the settlement of Crown lands in the province.

For the further encouragement of agriculture.

To grant aid toward holding a provincial exhibition.

To encourage visits of tourists and sportsmen to the province.

In further amendment of chap. lxxv of the Consolidated Statutes, of "Schools."

To incorporate the Provincial Coal Company.

To amend the game law.

To authorize the city of Fredericton to issue debentures for certain purposes.

To amend the law respecting the administration of trusts and the liability of trustees.

To consolidate and amend the public-health act and amendments thereof.

To incorporate the Primitive Baptist denomination of New Brunswick.

To amend the law relating to rates and taxes throughout the province.

Finances.—On Oct. 31, 1897, the debt of the province was \$3,053,957, chiefly in provincial debentures at 4 per cent. interest. About \$600,000, however, is at 6 per cent. The assets were Crown lands numbering 7,000,000 acres, and public buildings valued at \$400,000.

The revenue for the fiscal year 1897 was \$953,590, of which the main items were as follows: Dominion subsidies, \$483,550; territorial revenues, \$180,126; taxes on incorporated companies, \$22,747; liquor licenses, \$20,267; proceeds of sale of debentures, \$117,000.

The expenditures were chiefly as follows: Administration of justice, \$17,617.16; agriculture, \$19,386.84; contingencies, \$15,038.63; education, \$208,027; executive Government, \$31,278.03; interest (not chargeable to special funds), \$121,783.11; Legislature, \$20,953.20; Lunatic Asylum, \$41,863; public works, \$195,800; permanent bridges, \$100,000; redemption debentures, \$37,000.

Agriculture.—In this year a department of the Government devoted to agriculture was established. Pasture during the season was good; the production of oats was not sufficient for home consumption; the barley crop was small; buckwheat and peas, so far as grown, were clearly profitable; potatoes were a failure, and turnips were below the average; beets, mangles, and carrots were a valuable yield where grown. Fruit-growing showed a slow but steady growth. Cold-storage warehouses were established in the chief cities and towns of the province, and agricultural education was largely promoted. The dairy exhibit at the annual St. John Exhibition (Sept. 14, 1898) was most successful. There were 7 butter factories in working order in 1897, or 2 fewer than in the previous year. There were 49 cheese factories, producing \$99,655 worth of cheese. The total export of dairy produce was valued at \$37,839.

Education.—At the University of New Brunswick there were 68 students in attendance in December, 1897. The total number of schools at the close of 1897—grammar, superior, and common—was 1,737, and the provincial grant was \$161,445, of which \$155,078 went to the common schools. The following are the official statistics of the common or public schools for the year ending June 30, 1897: Schools, 1,737; pupils in attendance at schools, 61,908; new pupils in attendance this term at schools in operation both terms, 7,479; new pupils in attendance this term at schools not in operation the previous term, 2,089; total number of different pupils in attendance at schools within the year, 66,917.

Miscellaneous.—One of the most important public bodies in the province is the St. John Board of Trade. During the year it took an active part in public matters, and its report, published on Dec. 10,

1898, shows influence strongly exerted in behalf of St. John as a winter port for Dominion lines of steamers, for the proper stamping of weights and dates on parcels for export, for the encouragement of trade with the Bahamas, for an imperial subsidy to a dry dock in the port of St. John, for the local establishment of various industries, for the improvement of harbor facilities at Montreal, for further lighthouses and lifeboat stations, and for the protection of provincial interests at the Quebec International Conference. In November, 1898, a great storm occurred, which did much damage along the coasts. Late in September Sir John C. Allen, for many years Chief Justice of the province, died.

NEWFOUNDLAND, a North American British colony; area, 42,200 square miles; population, 210,000. Capital, St. John's.

Sir Herbert Murray's term of office as Governor expired last year. His successor is Lieut.-Col. Sir Henry E. McCallum, R. E., K. C. M. G.

Finances.—The funded debt of the colony is \$16,485,760, the greater part of which was incurred in railway construction and other public works. The imports for 1896-'97 were, in value, \$5,938,336; the exports, \$4,925,789. The revenue for 1896-'97 amounted to \$1,610,788. The public accounts for 1898 will not be published for some time. The total amount of the grant for education is \$154,438. The relief of the poor, including lunatics, paupers, and sick, cost in 1896-'97 \$178,441. The interest on the public debt, funded and floating, is \$606,017.

The New Railway.—The legislative session of 1898 will be memorable for the number and importance of the acts passed which will have far-reaching results on the fortunes of the colony. The most important of these acts is that which provides for the maintenance and operation of the Newfoundland railway. The transinsular portion of this line, completed from St. John's to Port-a-Basque (550 miles), was opened in July. The object of this railway is to open up the interior for settlement and industrial enterprises, and at the same time to provide a means of rapid communication between the island and the continent. It runs through the most fertile lands, and supplies facilities for working the mineral deposits and coal beds, and for turning the valuable forests to profitable account. Its completion marks an era in the history of the colony. Hitherto the people were mainly dependent on the fisheries; now farming, mining, lumbering, and pulp making will employ increasingly large numbers of the population. A swift steamer, the "Bruce," plies between Port-a-Basque and Sydney, Cape Breton, making the passage in six hours. Under favorable conditions it is possible to reach Montreal from St. John's in sixty-four hours and Boston in seventy-three hours. The railway is admirably built, and the cars are equal in equipment to those on the Canadian Pacific Railway. Last year showed a large increase in the number of tourists, travelers, and sportsmen visiting the island, while the freight and passenger traffic is developing at a satisfactory rate.

It must be remembered, however, that the greater portion of this railway runs through an almost uninhabited country, so that a long time may elapse before such a line will pay its working expenses. The annual loss of operating it will probably exceed \$200,000. The line was built by the Government and paid for by colonial bonds bearing interest at 3½ per cent.

Robert G. Reid, contractor, of Montreal, who had built the greater part of the railway, made an offer for its operation which proved to be so acceptable that the Legislature closed with it by an overwhelming majority, and their action was approved by the constituencies. In the act which authorized

the acceptance of the contract it was provided that the whole railway system of the colony should be leased to Mr. Reid for fifty years on condition that he should maintain and operate the lines and pay to the Government \$1,000,000 within a year. At the end of that period, the railways were to become his sole property. In payment for operating and maintaining the lines Mr. Reid agreed to accept 2,500 acres of land for each mile of railway operated. By the original contract he became entitled to 5,000 acres for each mile of railway, so that, in all he received 7,500 acres per mile. These lands were to be selected along the line in alternate blocks, the Government retaining the same quantity as that given to Mr. Reid, in equal blocks. Thus Mr. Reid became a landed proprietor to the extent of about 4,000,000 acres.

The advantages of such a contract to the colony are very great. It was at once relieved of an annual expenditure of \$250,000 for operating, and received in hand \$1,000,000, which, if placed at compound interest, would in fifty years become \$7,000,000. The total cost of the railway was about \$14,000,000. The lands given to Mr. Reid are in a wilderness, and are of no value to the colony. Mr. Reid can only render them valuable by settlement and by working the forests and mines, thus giving employment to large numbers and indirectly increasing the revenue and adding to the population. The railway never could become a source of revenue, its object being to open up the country. So popular was the contract that 28 members of the House of Assembly out of a total of 36 voted for it, and the Upper Chamber was unanimous in its favor.

Mr. Reid's contract with the Government is not confined to the operation of the railway. He agrees to take over and operate the Government telegraph system, the Government paying \$10,000 per annum till 1904, when the Anglo-American Telegraph's monopoly terminates. Then the contractor will operate the lines free of subsidy. By this arrangement the Government will save \$10,000 per annum for the next six years. Further, the contractor agrees to provide 8 steamers for an improved mail service, of which one will connect Port-au-Basque with Sydney; another will ply between St. John's and Labrador; and the remaining 6 will ply on the large bays, and will connect with the railway at various points. The steamer "Bruce" alone cost \$250,000, the cost of the other 7 will be more than \$750,000, while at the same time the mail subsidies will be reduced. The contract is for thirty years.

Another part of the contract is the purchase of the dry dock in St. John's, from the Government, for \$350,000, the contractor to operate it and keep it in repair. Here again the colony effects a great saving, as the dock showed an annual deficit of more than \$6,000; while at the same time Mr. Reid will provide a superior staff of workmen, so as to be able to effect permanent repairs on the largest ocean steamers.

Other sections of this gigantic contract provide for the construction of a branch railway and the working of certain coal areas; also for the construction of an electric railway through the city of St. John's.

Legislation.—The other acts of the session were mainly devoted to the improvement and enlargement of the civil service. A Department of Marine and Fisheries, a Department of Justice, one of Finance and Customs, one of Agriculture and Mines, and a Department of Public Works were all instituted by separate acts; and amendments were made in the acts relating to slander and perjury, to the education and elections acts, and to the constitution of the Supreme Court. Altogether, the session was most prolific, and effected great and im-

portant changes. A stringent law regulating the seal fishery was passed, which enacts that no steamer shall leave for the seal fishery till 8 o'clock of the 10th of March; that no seals shall be killed till the 12th of March, or after the 1st of May, under a penalty of \$4,000. No second trips are allowed, except in case of accident. No more than 3 men for every 7 tons gross register shall be allowed to any steamer. A bounty was allowed to sailing vessels engaged in the seal fishery.

Fisheries.—In 1898 the bank fishery employed 66 vessels having a tonnage of 3,684 tons; the average catch per schooner was 890 quintals; the number of men employed was 872; and the codfish caught, 58,762 quintals.

The seal fishery of 1898 was fairly successful. Nineteen steamers having a tonnage of 5,720 tons, and crews numbering 4,838 men, engaged in the fishery. The number of seals taken was 243,014; the average value per seal \$2.50.

The export of dried codfish (1897-'98) was 1,145,540 quintals—value, \$3,230,928. The export of herring (pickled and frozen) was 62,155 barrels—value, \$102,447. The export of lobsters (preserved) was 2,973,648 pounds—value, \$619,510. The value of common cod oil exported in 1897-'98 was \$185,704; of refined cod-liver oil, \$14,480. The value of seal oil exported was \$218,279; of sealskins, \$129,840. The total value of the fishery products was \$4,571,808. The value of pickled salmon exported was \$61,312.

Mining.—The year 1898 witnessed a wonderful development of mining, proving that the island is destined to become one of the great mining regions of the world. Iron ore has been discovered recently in immense masses and of the best quality. The iron mine at Belle Isle, Conception Bay, exported 100,000 tons in 1898. It has been purchased lately by a syndicate for \$1,000,000. A later and more important discovery has been made in the Bay-de-Verd district of a vein of iron ore 16 miles long, estimated by experts to contain 50,000,000 tons. The ore averages 65 per cent. of pure iron—equal to the Lake Superior iron ore. An English syndicate has leased the property and is now working it. At Ochre Pit Cove another iron mine has been discovered still more recently which is said to equal the former. Many other iron deposits are reported, all going to show that Newfoundland is likely to become a great iron-producing country.

Several new copper deposits have been reported lately. Owing to the increased demand for copper for electrical purposes, the price has advanced 30 to 40 per cent.

Coal mining at Grand Lake is making good progress under Mr. Reid's contract.

The value of copper exports in 1898 was \$401,332; of iron pyrites, \$78,620. Asbestos and mica are among the other minerals which are likely to prove valuable. The attention of English and American mining capitalists has been drawn lately to the mining capabilities of the island, and mining experts were sent from England to conduct prospecting operations.

Paper Pulp.—Another new industry has been introduced, and gives promise of rapid extension—namely, the manufacture of pulp for paper making. The materials for such an industry are inexhaustible, and the quality of the wood is reported to be of the best. One pulp factory has been in operation at Black River, Placentia Bay, for two years, with great success. Mr. Reid is about to build a pulp factory on a large scale at Grand Lake. The capital is to be \$2,000,000, and it will be in operation before the end of this year. He is also to work an iron-pyrites mine at Bay of Islands, the capital to be \$1,000,000. From iron pyrites is made sulphuric

acid, which is necessary in the pulp manufacture; so that at Grand Lake are coal, inexhaustible forests, and iron pyrites—a combination that rarely occurs in any single locality.

Whale Fishery.—The Cabot Steam Whale-Fishing Company began operations in July last with a single steamer called "The Cabot." The success of the little steamer was wonderful. She captured 91 whales, and her gross earnings were \$22,000. This was done in less than four months. She was built in Norway, and the captain and crew are Norwegians. The whales are taken by firing a bomb which, on striking the whale, explodes, killing it instantly, and at the same time develops a gas which prevents the animal from sinking. The whales are the sulphur-bottom, the finback, and humpback. They are in great numbers round the coast. The company intend building a second steamer this year, and will erect a second factory for the extraction of the oil at Hermitage Bay.

Events.—The year 1898 was eventful. In the general elections of November, 1897, Sir William Whiteway's party were defeated, and a new Government came into power, headed by Sir James Winter, the Hon. A. B. Morine being Minister of Finance. It proved to be a strong Government, and during its first session passed many useful measures, the most important being the Reid contract, already referred to. After the session Sir James Winter and the Hon. A. B. Morine went as deputies from the Government to the Colonial Office. One of their principal objects was to induce the Right Hon. Joseph Chamberlain, Colonial Minister, to grant a royal commission to investigate the working of the treaties on the French shore. In this they were successful, and Sir John Blamston and Sir James Erskine were appointed commissioners for this purpose. After spending two months in the colony, during which they visited the whole of the French shore and examined a large number of witnesses, they returned and made their report. That report has not yet been made public, but its character may be inferred from Mr. Chamberlain's speech at Manchester in November last, in which he emphatically charged the French with a system of constant aggressions in Newfoundland which, while highly injurious to the colony, did themselves no good, and which were unwarranted by the treaties. In subsequent speeches he was even more pointed, and said that "by means of alleged rights under antiquated treaties they have strangled our colony of Newfoundland, and have done so without a penny of advantage to themselves." He further said that "if they were desirous of amity with England, it will be an easy thing for them to abandon those antiquated rights for a satisfying compensation." The people—so long neglected and oppressed by these treaties, which were made for a state of matters that ceased to exist long ago—saw at once that they had found a champion in Mr. Chamberlain. The condition of affairs had at last become intolerable, and only one remedy was of any value—the total extinction of French treaty rights on the shores of the island. With St. Pierre and Miquelon and their bank fishery Newfoundlanders have no wish to interfere; but they must be cleared out of the island, and this can be done by an equitable purchase. The French themselves begin to see the necessity of relinquishing those rights in a peaceable manner. One of their admirals has publicly declared that the Newfoundland fisheries are of no value whatever to the navy of France. The settlement of the French shore question in some shape is now assured. Hitherto, by these old treaties, one half the island—and that by far the better half—was practically locked up.

The past year was marked by another important event: The international conference for the settlement of all outstanding matters in dispute between England and the United States has been sitting for several months, and will soon close its sessions. Canada and Newfoundland are represented on this conference, the latter by Sir James Winter, Premier. Newfoundland is mainly interested in the fisheries.

Naval Reserve.—One other mark of favor was conferred on Newfoundland in the past year. She is the first colony to which has been extended the provision for recruiting for the naval reserve. The people being seafaring largely, it is expected that a great number of good recruits for the navy reserve will be found in the island. The terms are liberal, and the service is popular in the colony. Recruits will be trained for one month each year, and afterward will serve six months on board a man-of-war.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,916 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; and 376,530 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, George A. Ramsdell; Secretary of State, Ezra S. Stearns; Treasurer, Solon A. Carter; Attorney-General, Edwin J. Eastman; Adjutant General, Augustus D. Ayling—all Republicans; Insurance Commissioner, John C. Linehan; Bank Commissioners, John Hatch, Alpheus W. Baker, and Thomas J. Walker, succeeded by George W. Cummings; Superintendent of Public Instruction, Fred Gowling, succeeded by Channing Folsom; Secretary of the Board of Agriculture, N. J. Bachelder; Labor Commissioner, Julian F. Trask; Public Printer, Arthur E. Clarke; Chief Justice of the Supreme Court, Alonzo P. Carpenter (died May 21, 1898), Lewis W. Clark, appointed May 31 (term expired by limitation—seventy years—Aug. 19), Isaac N. Blodgett, appointed Aug. 18; Associate Justices, William M. Chase, Robert M. Wallace, Frank N. Parsons, Robert G. Pike, Robert J. Peaslee, John E. Young; Law Reporter, Charles B. Hibbard.

Finances.—The cash in the treasury June 1, 1897, was \$241,296.27. The receipts during the year were \$1,325,687.68; total, \$1,566,983.95. The disbursements during the year amounted to \$1,152,468.09, and the cash on hand June 1, 1898, was \$414,515.86. The revenue was from the following sources: State tax, \$500,000; railroad tax, \$136,603.99; insurance tax, \$26,001.04; interest on deposits, \$2,977.09; license fees (peddlers), \$3,800; license fees (fertilizers), \$1,150; telegraph tax, \$3,330.84; telephone tax, \$3,503.04; charter fees, \$215; fees (insurance department), \$9,964.50; Lura S. Craig refunds part asylum charges, account Commissioner of Lunacy, \$10; Benjamin Thompson es-

FRANK W. ROLLINS,
GOVERNOR OF NEW HAMPSHIRE.

tate, income for the year ending Jan. 29, 1898, \$10,539.94; sales of public property (janitor), \$2; escheated estates, \$3,642.85; license fees (itinerant vendors), \$25; National Guard (fines), \$3; total revenue, \$701,768.29.

The ordinary expenses were \$247,051.97; extraordinary expenses, \$39,431.10; interest, \$115,175.38; total expenses, \$401,658.45; excess of revenue over expenses, \$300,109.84.

The State debt was reduced during the year by \$300,109.84, leaving the net indebtedness June 1, 1898, \$1,367,657.61.

The trust funds are now as follow: Fiske legacy, \$26,378.43; Kimball legacy, \$6,753.49; Teachers' Institute fund, \$57,949.21; Agricultural College fund, \$80,000; unclaimed savings-bank deposits, \$2,096.19; Benjamin Thompson trust fund, \$497,917.33; Benjamin Thompson State trust fund, \$28,748.40; total, \$699,843.05.

The total expenditures on account of the Soldiers' Home for the year ending May 31, 1898, were \$17,001.63; and there was received from the United States during the year for the home \$7,145.34.

The Treasurer says in his report: "The reduction of the net indebtedness of the State for the past two fiscal years has been phenomenal, aggregating \$460,083.76. The net reduction for the year 1897-'98 of \$300,109.84 has been exceeded in only one instance in twenty-five years, to wit, in 1873-'74, when, with a State tax of \$600,000, the net reduction of the debt was \$305,570.42. Since Jan. 1, 1892, the State has redeemed and canceled \$1,154,800 of the municipal war loan six-per-cent. bonds from the ordinary revenue without refunding a single dollar, thus reducing the annual interest account by the sum of \$69,288."

In April Gov. Ramsdell was authorized to expend a sum not to exceed \$25,000 in placing the National Guard of the State on a war footing. The \$20,000 usually spent for the annual encampment was this year used for equipping the troops.

Banks.—In the annual report of the Bank Commissioners the following list of the institutions which they supervise is given: "Seventy-eight savings banks; 13 State banks and trust companies, 10 of which have savings departments; 17 building and loan associations, organized under chap. clxvi of the Public Statutes. Of the 78 savings banks, 17 are in liquidation under the management of their own officers, and 8 are being wound up by assignees appointed by the court. Of the 14 trust companies, the Derryfield Savings Bank and Trust Company and the New Hampshire Trust Company of Manchester, and the Security Trust Company of Nashua are in the hands of assignees, and the Bank of New England, of Manchester, is in liquidation under the management of its directors. The 2 building and loan associations that were organized under special charters are in liquidation, the Granite State Provident Association by an assignee, and the Citizens' Building and Loan Association under a vote of its directors."

The liabilities of the savings banks and savings departments of the trust companies that were in active business in 1898 were: Amount due depositors, \$49,997,654.03; guarantee fund, \$2,974,502.48; interest, \$1,130,270.59; miscellaneous indebtedness, \$5,737.32—\$54,108,164.42; premium, \$2,622,947.74; total, \$56,731,112.16.

The report for the year ending June 30, 1898, shows an increase in bank deposits of nearly \$80,000 over those of 1897. Also in the last year the guaranty fund of the banks increased more than \$53,000, and the premium account, which is said to be a good index of prosperity, increased by \$634,000. The combined value of the cash and investments owned by the banks, compared with the amount

they owe to depositors, showed a surplus of \$6,733,458.13 on June 30, 1898.

Insurance.—The report of the Insurance Commissioner for the year ending Dec. 31, 1897, shows that four companies, two of other countries and two of other States, all conducted on the stock plan, were admitted during the year. A recapitulation of the business of New Hampshire companies gives these figures: Risks written, \$38,654,557.49; premiums received, \$496,812.14; losses incurred, \$211,303.31. Sixty foreign stock fire and marine insurance companies of other States and countries: Risks written, \$40,809,722.87; premiums received, \$32,586.84; losses incurred, \$293,885.39. Four foreign mutual fire insurance companies: Risks written, \$2,366,806; premiums received, \$32,586.84; losses incurred, \$5,801.06. Recapitulation of business of foreign and marine insurance companies: Risks written, \$43,176,528.87; premiums received, \$606,027.76; losses incurred, \$299,686.45. The percentage of losses to premiums in 1896 was 46.40; the percentage of losses to premiums in 1897 was 46.33.

The number of fires reported for the year was 403, which is 105 fewer than for the year preceding; total loss, \$675,107; insurance paid, \$389,931.

The transactions of 18 authorized fidelity and casualty companies were: Risks written, \$17,020,703.54; premiums received, \$84,834.55; losses paid, \$39,565.56. One additional life insurance company was admitted to do business in the State, and the returns of the 23 authorized companies for the year were: Premiums received, \$923,008.56; losses paid, \$352,469.89; policies issued (2,746), \$3,695,668.46; policies in force (17,529), \$28,855,141.77.

Eight assessment life associations had 3,175 policies in force amounting to \$5,231,498. Assessments, etc., were paid to the amount of \$104,731.36, while the losses on claims paid amounted to \$97,429.70. Nine assessment casualty companies had 3,764 risks in force, amounting to \$4,677,600. Their assessments paid were \$42,863.40, and their losses and claims paid \$16,433.46. Fraternal beneficiary associations to the number of 35 report 28,934 certificates in force. The amount received from assessments, etc., was \$286,937.13, and the 182 losses and claims paid amounted to \$232,993.54.

Railroads.—The report of the Railroad Commissioners contains the returns of the 24 steam-railroad and 7 street-railway corporations doing business in the State June 30, 1897, the findings, decisions, and orders in the 71 cases heard by the board during the year, with statements and comments based upon the annual inspection and the returns. The report says:

"The financial exhibits of the steam railroads of New Hampshire for the year ending June 30, 1897, were disappointing. Instead of showing, as it was hoped they would, a recovery from the business depression, their receipts disclosed a shrinkage from the comparatively small volume of traffic in 1896.

"Great damage was done upon the Boston and Maine lines in April and July, 1897, by freshets, which swept away nearly one third of the roadbed of the Pemigewasset branch, destroyed a stone culvert at Bath and another at Exeter, wrecking a freight train, and killing 3 trainmen at each place, and injured bridges, fences, and roadbeds at other points. The money loss to the corporation can not be much less than \$150,000. There was no addition to the line mileage of any road during the year.

"Steady progress has been made in the equipment of all the steam roads with train brakes and automatic couplers.

"An electric road was built from Springfield, V., to the station of the Boston and Maine in Charles-

town, a distance of 6 miles, and opened for business in the summer of 1897. Authority to construct the section in New Hampshire, $2\frac{1}{4}$ miles in length, was granted by the Supreme Court after the board had determined that the public good required it. Stock to the amount of \$12,000, which represents the cost in this State, has been authorized by the board. The road connects one of the most flourishing villages in Vermont, which has heretofore had no railroad accommodations, with the Boston and Maine, and has a large traffic, much of which is freight.

The Dover and Somersworth road, about 8 miles in length, which was sold by order of the court for \$105,000, passed into the possession of the purchasers, who were the bond owners, Feb. 1, 1897. It was a wreck when they received it, and the purchase price represented little more than the franchise. They have reorganized the corporation and with the approval of the board capitalized the investment in stock to the amount of \$100,000 and issued \$50,000 in bonds, the proceeds of which are being applied to the reconstruction of the road, in which they had expended \$40,719.78, June 30.

The Nashua road reconstructed 13,286 feet of its track.

The Manchester road was extended 16,750 feet during the year, and 7 cars were added to its equipment.

The 7 street railroads that were in operation on July 1 last have an aggregate length of about 60 miles, with about 8 miles of double track and sidings. They are capitalized at \$1,358,500, of which \$740,000 is stock and \$618,500 bonds, and having a floating indebtedness of \$91,719.23. They earned last year \$282,820.97, and expended for operation and fixed charges \$262,839.28. None of them charged anything for depreciation of track or equipments, and only one of them, the Manchester, paid a dividend. The net earnings were $1\frac{1}{2}$ per cent. of the stock and debts."

The volume of traffic, though slightly larger than in 1897, was below that of 1896, and the returns of the steam railroads throughout the State do not show a business recovery. The earnings in 1896 were \$34,108,364.43; in 1898 they were \$33,241,290.26, a loss of \$869,074.17.

The permanent improvements on the Concord and Montreal have been completed. A new passenger station and signal towers were built at Manchester.

Road Building.—The New Hampshire College of Agriculture and the Mechanic Arts has been making experiments in road building. For this purpose they chose a section of what they term "average country road" about a mile long. It was 66 feet wide and nearly straight as laid out; but masses of rock upon the sides in many places forced the travel out of the direct line, and in other places the same result was caused by ravines requiring heavy fills. The traveled way was built 22 feet wide in the middle of the laid-out 66 feet, and the sidewalk was rebuilt on the north side of the laid-out road. They reached the conclusion that there is need of a large amount of rock work upon the average country road; that the steam drill is absolutely essential for handling large rock masses, and is capable of doing exceedingly economical work that the ownership of the necessary plant, with boiler and forge omitted, is within the means of a large number of towns; that it may save the cost of the entire plant in the first season; that it is simple in construction, is made to stand banging, and less liable to get out of order than ordinary farm machines.

Education.—The State spent during the year \$5,939.25 for the Department of Public Instruction, this amount being for the salaries of superintendent and clerk, printing, and incidentals. The

Teachers' Institutes received \$2,233.41, and Dartmouth College \$5,000. The latter graduated 71 men from the academic department. We quote from Gov. Rollins's message to the Legislature of 1899:

"The master of the State grange, Mr. N. J. Bachelder, in his annual address, says: 'The concentration of wealth has drained many rural towns of their means of supporting schools, and it is manifestly the duty of the State to provide respectable means of education for the children of the State, irrespective of their location.' The movement which the grange advocates is being taken up in other States, and is a movement to increase the size of the unit for educational purposes. In New England our unit has always been the town. The proposition now is to make it the State, or at least the county. It is a broad question, and one meriting careful examination, and will probably meet with some antagonism from the wealthier communities; but the possession of wealth brings with it responsibilities which may not be avoided. I doubt if any State in the country is called upon for so little direct aid for education as New Hampshire. The appeal that comes to us from the rural sections of the State for greater consideration is one which will enlist your assistance if it can be given without injustice to other localities. The State has assisted Dartmouth College and the Agricultural College at Durham in a desultory way."

Law-and Order League.—The State Law-and-Order League held its annual meeting in Concord, June 20, 1898. The report of the Executive Committee was in part as follows: "At the time of holding the annual meeting of the league one year ago the Legislature was in session and our prohibitory laws threatened by the liquor interests of the State. Bills were introduced by the liquor interests to repeal the moiety clauses of the statutes, the nuisance act, and to repeal all the existing prohibitory laws and substitute a license law. Probably there was never a more determined effort on the part of the liquor fraternity to repeal the laws. All attempts to weaken the law were defeated by large majorities. The final vote to repeal the prohibitory law and enact a license law showed the largest majority in opposition to its repeal that has ever been known since the law was placed on the statute books.

"This, we think, has had a good effect, and has led many of our people to feel that the laws on this subject are likely to remain upon the statute books, as stable as the granite hills.

"A great gain has been made, especially in Cheshire County. There are less than half as many saloons in that county as there were one year ago.

"A great effort has been made to accomplish something in Hillsborough County. This is the one county of all the ten in the State where it is exceedingly difficult to obtain a grand jury composed of men who dare not violate their oath. It has therefore been found necessary to take some course whereby the use of the grand jury could be avoided. Some of the members of the league obtained petitions of more than 20 legal voters in the city of Manchester asking the court to enjoin the owners and proprietors of more than 40 liquor saloons in that city under the nuisance act."

The following is a list of the officers: President, Hon. David H. Goodell, Antrim; Vice-Presidents, Prof. E. W. Bingham, Derry; Col. Daniel Hall, Dover; Rev. Mr. Allis, North Conway; Rush Chellis Claremont; Hon. Alvin Burleigh, Plymouth; Rev. C. L. White, Nashua; Rev. J. P. Jordan, Laconia; Rev. Elihu Snow, Concord; Dr. A. W. Wark, Lancaster; Rev. E. J. Smith, Marlborough. Executive Committee, Rev. D. C. Babcock, Dover; D. C. Remich, Littleton; Rev. J. H. Robbins, Con-

cord; Rev. D. C. Knowles, Tilton; Rev. J. H. Bliss, Franklin; Rev. J. S. Harrington, Farmington; Hon. John B. Smith, Hillsborough; C. P. Willey, Portsmouth; Hon. Dexter Richards, Newport; I. J. Dunn, Keene; Hon. L. H. Pillsbury, Derry; George B. Cox, Esq., Laconia; Rev. J. R. Horne, Bartlett; Rev. Henry H. Manser, East Jaffrey.

Rev. Dr. D. C. Knowles, Rev. J. H. Nichols, and L. H. Pillsbury were appointed a committee of negotiation.

Forests.—Gov. Rollins says in his message: "I can not escape the conviction that the forests of New Hampshire are among the first and most important of our resources, and that we can not long postpone the necessity of taking action to secure their preservation from wanton destruction. Already they support directly an industry which produces \$10,000,000 annually, and indirectly they contribute largely to the public welfare in both a scenic and economic sense. They are capable also, I believe, of contributing increasingly to the income of the State treasury if a suitable means of State ownership and management could be devised. Pending that, however, I recommend that the work of education and investigation already begun by the Forestry Commission be continued, and that a reasonable appropriation be placed at the disposal of the board for making an accurate forest survey of the White Mountain region with a view to determining exactly what part the State should take in any effort to perpetuate the forest cover and to secure its rational and continued use. The most obvious means to arrest the devastation of the forest cover is to apply the police power of the State in such a manner as to prevent the removal of immature timber. To this end, therefore, I commend to your attention the reports of the Forestry Commission, which treat this subject in detail. I also invoke your individual interest in behalf of forest culture, to the end that all of our people may be led to see the importance of our natural resources of climate and scenery, which contribute so largely, both directly and indirectly, to the income of our citizens."

Industrial School.—The annual appropriation for the State Industrial School at Manchester is \$6,000, and in the last year a special appropriation of \$2,500 was added.

Political.—The Republican State Convention was held in Concord, Sept. 13. The significant portions of the platform adopted were the following:

"The Republicans of New Hampshire reaffirm the St. Louis platform, especially indorsing the gold standard, and congratulate the people upon the speedy fulfillment of its important pledges.

"We heartily commend the wise and patriotic administration of President McKinley. The patience, tact, and sagacity of the President have maintained the unity of his party while securing the approbation of the whole people, irrespective of political affiliations.

"We commend the successful conduct of the war with Spain, a war prompted by the noblest sentiments of humanity.

"We approve the increase of the navy, the upbuilding of our merchant marine, the enlargement of the regular army to meet the present requirements of the country, the construction of a canal connecting the Atlantic and Pacific oceans, the annexation of Hawaii and Puerto Rico, the provision for a free and stable government for Cuba and its ultimate annexation.

"While reaffirming the Monroe doctrine, we favor such disposition of the Philippines as will best promote the growing commercial and political interests of the United States, extinguish the sovereignty of

Spain, and make good our obligations to the peoples of those islands.

"We favor a conservative movement for the permanent improvement of the public roads of the State.

"The Republican party favors, as it did in the Legislatures of 1893 and 1895, submitting to the people the question of calling a constitutional convention, that they may act upon the question of abolishing free passes, and upon any changes of the organic law which experience has shown to be advisable to make. In the meantime we favor such legislation as may properly anticipate the adoption of a constitutional amendment prohibiting free passes."

Frank W. Rollins, of Concord, was nominated for Governor.

The Democratic Convention met in Concord and adopted a platform, of which the significant paragraphs were these:

"We, the Democrats of New Hampshire, reaffirm the principles of the Democratic party as enunciated in national conventions since the foundation of the party.

"We emphatically declare our admiration for, and confidence in, the wisdom and patriotism of our great national leader, William J. Bryan.

"We renew our adhesion to the Monroe doctrine, asserting that our national 'sphere of influence' comprehends and embraces the entire Western Hemisphere; and that, beyond securing requisite coaling and naval stations in other parts of the world, for the convenience and protection of our commerce, we should seek to acquire no territory.

"We oppose the maintenance of a large standing army in time of peace. We favor a navy equal to that of any other nation, and the construction and maintenance by the United States of an isthmian canal, free from the control of all private individuals, corporations, syndicates, or foreign governments as a preventive of war.

"Taxation is an incident, not an object of government. The great sums now required to defray necessary expenses should be levied through a system of imposts bearing as lightly as is consistent upon those articles in common use.

"We denounce the Republican party for the passage of the Dingley tariff bill, a measure calculated only to protect monopolies, insufficient to raise the necessary revenue to meet the ordinary expenditures of the Government, and based upon no principle of equity or justice.

"We condemn the action of the Secretary of the Treasury in the unnecessary issue of \$200,000,000 of long-term interest-bearing bonds.

"We favor the election of Secretary of State, Treasurer, Attorney-General, Superintendent of Public Instruction, Railroad, Bank, and Insurance Commissioners by the people at the polls.

"We favor the calling of a convention to amend the constitution by providing for the election of all judges, for stated terms, by the people; also abolishing the Executive Council, and establishing the office of Lieutenant Governor.

"We demand the repeal of all laws providing standing appropriations for any and all purposes.

"We condemn the action of the last Legislature in enacting a law legalizing free passes, and demand its repeal.

"The history of prohibitory legislation in this State is a disgrace to civilization. It has been conceived in hypocrisy, nurtured in greed and corruption, is openly disregarded, and enforced spasmodically by mercenary cranks. It enervates perjury and breeds contempt for the majesty of law. We demand its repeal and the enactment of such laws as will provide for the prohibition, regulation, or

license of the sale of liquors as the voters of the several towns and cities shall deem best within their respective limits."

Charles F. Stone, of Laconia, was nominated for Governor.

The Prohibition party nominated Augustus G. Stevens, of Manchester, for Governor.

At the election, in November, the Republican ticket received 44,730 votes; the Democratic, 35,653; the Prohibition, 1,333; the People's, 104; the Socialist Labor, 263; the Socialist Democrat, 350; and scattering, 42. The Legislature of 1899 will have 22 Republicans and 2 Democrats in the Senate, and 249 Republicans and 149 Democrats in the House.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; and 1,444,933 in 1890; by the State census of 1895, 1,672,942. Capital, Trenton.

Government.—The following were the State officers during the year: Governor, John W. Griggs until Jan. 31, followed by David O. Watkins, who acted until Foster M. Voorhees was elected; Secretary of State, George Wurtz; Treasurer, George B. Swain; Comptroller, William S. Hancock; Attorney-General, Samuel H. Grey; Adjutant General, William S. Stryker; Superintendent of Public Instruction, Charles J. Baxter; Commissioner of Banking and Insurance, William Bettel—all Republicans. Chief Justice of the Supreme Court, William J. Magie, Republican; Associate Justices, Gilbert Collins, Republican; David A. Depue, Republican; Jonathan Dixon, Republican; Bennet Van Syckel, Democrat; Charles G. Garrison, Democrat; Job H. Lippincott, Democrat; William S. Gummere, Republican; George C. Ludlow, Democrat; Clerk, William Riker, Republican. Court of Errors and Appeals: Judges, J. W. Bogart, G. Krueger, William L. Dayton, John S. Barkalow, Charles E. Hendrickson, and James H. Nixon. Chancellor, Alexander T. McGill.

Finances.—The income of the State fund for the year ending in 1896 was \$2,138,532.88; for the year ending in 1897 it was \$2,298,777.88; an increase of \$160,245. The disbursements for 1897 amounted to \$2,313,060.97; balance in bank to the credit of the State fund Nov. 1, \$945,345.89. Of the total disbursements out of the State fund the sum of \$310,948.57 was expended for the erection and improvement of public buildings and other purposes not connected with the ordinary administration of the State affairs; these disbursements, denominated extraordinary, were as follows: For completing Camden Armory, \$103,000; State Reformatory, \$80,000; improvement at State Hospital, Morris Plains, \$74,995.23; constitutional amendments, \$17,123.87; new building, Reform School for Boys, \$8,000; National Guard expenses at the inauguration of the President, \$7,376.51; equipment and furnishing Camden Armory, \$6,000; Chickamauga and Chattanooga Commission, \$5,000; new building at Deaf-Mute School, \$4,953.96; Trenton Battle monument, \$4,500. Ordinary disbursements amounted to \$2,002,112.40. The net increase in revenue was \$160,245—from official fees, \$53,299.55; from State tax on railroad corporations, \$35,776.77; from sinking fund, \$35,000; from collateral inheritance tax, \$31,584.96; from State Prison, \$11,551.77; from which amounts a decrease of \$6,968.05 in judicial fees, from miscellaneous corporations and from minor sources, was deducted. During the year the sum of \$189,400 of

the war bonds fell due and was paid out of the ordinary income; this, as against \$57,000 paid on the same account of 1896, was an increase of \$132,400 in the reduction of the bonded debt of the State. The sum of \$200,000 was appropriated by the Legislature for the payment of that amount of bonds falling due

Jan. 1, 1898, which sum was paid, leaving the total bonded debt \$194,000. Besides the war debt, there was owing \$48,000 to the Agricultural College, which made the entire debt of the State \$242,000. The only direct tax for State purposes levied was the school tax, amounting to \$2,124,795, which amount, together with the added income from the school fund, was distributed among the counties. The total receipts from the office of the Clerk in Chancery were \$44,097.90; expenses of running the office, \$29,031.03; net balance paid into the treasury, \$15,066.87.

Valuation.—The total assessment of real and personal property for 1897 was \$812,616,240, an increase of \$15,211,738 over 1896; of this sum, \$714,015,890 represented real estate and \$138,577,197 personal property; the assessment of real estate for 1897 was an increase of \$14,614,211 over that of 1896, and the assessment of personal property was an increase of \$177,508. The total amount of exempt property for 1897 was \$88,392,689.

The ratables for 1898 show an increase in the total valuations of \$31,756,106 over those of 1897, the aggregate valuations for 1898 being \$844,365,198. The largest increase in any one county was in Bergen, where the valuations rose from \$25,325,603 in 1897 to \$44,130,645 in 1898, because the State Board of Taxation called the local assessors to account for undervaluing all property in Bergen County. In all the counties excepting Burlington, Camden, Gloucester, Hunterdon, and Warren there was a notable increase; in the five counties named there was an aggregate decrease of \$998,857—a decrease attributed to depression in agriculture. The sum of \$844,365,198 was the net valuation of the combined real and personal property after deduction of \$35,707,935 of debts. The gross valuation of real estate was \$740,657,371, and of personal property \$139,415,762.

The aggregate assessed valuation of railroad and canal property was \$236,464,356; the tax for State uses was \$1,182,321, and for local use \$403,788.85, making the total tax \$1,586,110.14.

Banks.—There were in 1898 26 savings banks, 21 State banks, and 23 trust companies operating in the State, their aggregate resources being \$87,327,728, a net increase for the year of \$8,443,882. The total resources of the savings institutions exceeded \$50,000,000, the increase for the year being \$3,944,711, which was greater by \$1,563,874 than the increase for 1896; the amount deposited during the year, excluding interest credited, was \$2,002,800 in excess of the amount withdrawn, which was more than three times the excess for the preceding year; the net gain in the number of depositors or open accounts was 8,387; the average amount of each deposit or open account had increased \$7.02; the

FOSTER M. VOORHEES,
GOVERNOR OF NEW JERSEY.

amount due depositors showed an increase of \$3,347,747, which was 76 per cent. greater than the previous year's gain; loans and mortgages had increased \$1,652,790; the increase in bonds owned was \$1,828,029 at market values and \$1,500,678 at par values.

The resources of the State banks aggregated \$10,925,336.31. In his report the Commissioner of Banking and Insurance said: "The investigations instituted by this department have disclosed, in some instances, conditions that necessitated the taking of extreme measures, and involved large pecuniary sacrifices on the part of stockholders and others, in order to protect the credit and solvency of the institutions. The conditions referred to were brought about by excessive loans to favored individuals and corporations whose financial responsibility did not warrant such an extent of accommodations, and in whose undertakings directors or officers of the bank were to a greater or less extent personally interested.

The aggregate resources of the trust companies was \$26,259,730.27. The increase in deposits was nearly 21 per cent. as compared with the previous year; in total resources the increase was 17 per cent. A number of the trust companies pursued the policy of accumulating an ample surplus, to cover possible contingencies, before commencing the payment of dividends.

Building and Loan Associations.—The number of associations reported was 334, of which 309 were locals, 14 State, and 11 national. The locals reported a total of 603,296½ shares in force, of which total 201,670½ shares were borrowed on for loans by the membership. Nearly 90 per cent. of the pledged shares were for real-estate mortgage loans. The total number of new shares issued, 124,871, was a decrease of 7,062 from the number issued in 1896. Of the canceled shares there were withdrawn voluntarily 86,819½; lapsed or forfeited, 2,458; redeemed, retired, 892½; matured, 12,380½. Borrowers numbered 28,258, over one third of the shareholders borrowing. The net assets of the locals reached \$41,039,934, the aggregate valuation of the shareholdings. The State associations, working on the national plan, but only in the State, reported 187,146½ shares in force, and the nationals 66,393. Less than 19,000 of the national shares were held by New Jersey membership. The non-locals had together an aggregate of 44,515 pledged shares, or somewhat over 17 per cent. of outstanding shares; total number of shareholders, 29,520; borrowers, 2,584; net assets, \$3,487,401. The number of shares issued by the nonlocals during the year was 103,948½; canceled, 67,134. The total gross resources of the associations, local and non-local, amounted to \$47,413,645.48, of which \$44,526,336.21 were the net assets, which in the local associations practically meant the aggregate value of outstanding shares. The total invested on bond and mortgages on real estate was \$40,941,291.42. The real estate held was valued at \$1,715,788. Much of the real estate owned by the nonlocals was the result of purchase as an investment. The aggregate of the outstanding bills payable, money borrowed by the associations, was \$219,286.14 in the nationals and State and \$617,416.31 in the locals—a total of \$836,702.45, or nearly 1.8 per cent. of the liabilities. Of the total income, \$19,833,342.06, the largest sum was from installments of dues and interest, and from premiums, fines, and fees—\$11,391,644.83, or over 57 per cent. Under disbursements, \$18,403,553.28, the largest item was for loans to borrowers, \$8,990,595.69, or nearly 49 per cent. of the total; nearly 85 per cent. of this was placed on bond and mortgage. There were 108 local and 7 nonlocal associations which foreclosed

mortgages during the year; 193 local and 27 non-local mortgages, amounting to \$427,832.24 and \$68,286, respectively. The total losses resulting from foreclosures involved was \$8,511; from depreciation of property, \$14,448. Embezzlement in four local associations amounted to \$95,879.37, and in one State association to \$9,000, a total of \$104,879.37.

Insurance.—According to the report of the Commissioner of Banking and Insurance for 1897, there were 160 fire and marine companies doing business in the State; those transacting fire insurance only numbered 133, while 25 were engaged in both fire and marine insurance, and 2 did a marine business exclusively. The aggregate fire insurance business done during the year was summarized as follows: Risks written, \$538,170,522; premiums received in cash, \$4,481,039; contingent premiums received, \$538,510; losses paid, \$2,122,328.

The assets of the fixed-premium life companies amounted to \$1,337,400,727, an increase for the year of \$107,229,567; the aggregate of liabilities, exclusive of \$9,665,750 of capital stock, was \$1,151,992,006, of which \$1,113,896,684 was the calculated value of all outstanding policies or the reserve; the increase for the year in the liabilities except capital was \$96,530,249. The total income was \$301,807,677; premiums received aggregated \$240,546,657; receipts from interest and dividends, rents and miscellaneous profits, were \$61,261,020; total disbursements, \$212,147,742, of which \$137,828,447 was paid to policy holders for death claims and matured endowments, annuities, lapsed, surrendered, and purchased policies, and dividends.

The assets of the fidelity and casualty companies amounted to \$32,169,473; liabilities, excluding capital stock of \$11,080,860, aggregated \$13,570,821; total income, \$18,653,152, the income exceeding expenditures by \$1,927,350.

The fraternal beneficiary associations operating in the State numbered 53, representing a total membership of 1,122,956; during the year they received dues and assessments from members amounting to \$25,953,780, and paid claims aggregating \$23,425,520.

Education.—The number of persons between five and eighteen years of age reported for 1897 was 456,862; total enrollment in the public schools, 294,880; average daily attendance, 191,776; number of children the public schools will seat, 270,866; total valuation of school property, \$12,605,882; number of school buildings, 1,766; male teachers, 804; female teachers, 5,065; average salary paid per month to male teachers, \$31.39; average salary paid per month to female teachers, \$48.19; average cost per pupil, calculated on total school census, \$9.47; average cost, calculated on enrolled attendance, \$18.57; average cost, calculated on average attendance, \$21.66. Receipts: Appropriated from income of State school fund, \$200,000; State school tax, \$2,194,845; district and city tax, \$2,965,118.63; appropriated by counties for salaries and expenses of county superintendents, \$29,436.99; interest of surplus revenue, \$31,909.48; raised in districts for manual training, \$38,200; from sale of district bonds, \$373,666.52; raised in districts for school libraries, \$9,124.56; raised in counties for teachers' libraries, \$1,000. Among the disbursements were: For teachers' salaries, \$3,170,740.48; for building and repairing schoolhouses, \$963,794.72; for taking school census, \$20,307; for debt and interest, \$333,173.19; for manual training, \$54,275.91; for textbooks and apparatus, \$252,453.78; for expenses and repair of State Normal School, \$39,000. Number of schools that maintained school six months, but less than nine, 35; number that maintained school nine months or more, 342; average time the schools were kept open, nine months and three days.

The report of the State Librarian gives an account of the beneficent influence of the State library in connection with the schools. There are 48,986 volumes in the library; there was an average attendance of 43 pupils a day five days in the week for nine months, with the average use of 50 volumes daily, being a total for the year of 7,740 pupils, with the use of 9,000 volumes.

The State Prison.—The convict population of the State Prison at the close of 1897 was 1,131, greater by 108 than in the preceding year. The increase in number of prisoners was due to the fact that an arrangement was made about the beginning of the year to receive and maintain a limited number of United States prisoners sentenced by courts outside of the district of New Jersey, the United States agreeing to pay a fair *per diem* for their maintenance. Of this class, and of prisoners sentenced by United States courts sitting within the State, there were received during the year 126. The highest number of inmates at any one time during the year was 1,134, and the daily average was 1,075. The total expenditures for maintenance of the prisoners during the year was \$84,470.33. The average number of men employed during the year upon contract work was 425½; the computed value of the service of those engaged in ordinary labor was 45 cents per day, and of the skilled labor employed at mechanical work 75 cents per day. In addition to the outlay for maintenance there were the following expenses: For salaries of deputies and minor officers, \$84,404.73; for salaries of inspectors and executive officers, \$9,500; for furniture and general repairs, \$6,940.41; for furniture and appliances for new buildings, \$2,876.64; for payments to convicts upon their discharge, \$1,459.50; total, \$181,651.62. Receipts amounted to \$56,668.95; the expenditure over revenue was \$132,982.67. Net cost *per capita per annum*, \$123.71.

The Riparian Fund.—The receipts of the Riparian fund from all sources for 1897 aggregated \$108,687.03. Grants of riparian land in fee were made to the amount of \$21,718.35.

Factories and Wages.—Returns from 349 establishments reporting gave \$56,099,306 as the amount of capital invested in manufactures, \$33,080,224 as the cost of raw material, \$62,000,000 as the selling price of goods produced, and \$17,077,753 as the amount paid out in wages. The average number of employees in the 349 establishments was given as 42,644; the greatest number employed at one time was 45,728, and the least number 38,141, leaving 7,587 who were idle during some part of the year. Weekly salaries were reported as follows: Under \$5, 3,625 males, 5,296 females; \$5 or more, 1,433 males, 3,055 females; \$6 or more, 2,447 males, 2,496 females; \$7 or more, 3,153 males, 1,673 females; \$8 or more, 2,591 males, 1,155 females; \$9 or more, 3,936 males, 821 females; \$10 or more, 4,296 males, 798 females; \$12 or more, 4,096 males, 360 females; \$15 or more, 3,113 males, 123 females; \$20 or more, 1,451 males, 15 females.

The State Hospital.—The whole number of cases under care during 1897 was 1,238—643 men and 595 women. Of this number 167 (97 men and 70 women) were discharged; recovered, 71; improved, 21; unimproved or stationary, 5; escaped, 1; and 70 (37 men and 33 women) died. At the close of the year there remained under care 1,071 patients—546 men and 525 women.

Dependent Children.—The Legislature of 1896 constituted a commission called "The New Jersey Commission on Defective, Delinquent, and Dependent Children," and this body reported that there were 445 dependent children in the various almshouses of the State; the number of children cared for in the various homes and asylums was 3,005.

Disabled Soldiers.—There were 819 beneficiaries in the Soldiers' Home at Kearny in 1897. Of this number 195 were discharged, 31 were dropped from the rolls, and 41 died, leaving 552 at the close of the year. The board of managers acted upon 215 applications during the year, of which number 49 were declined. The average age of the inmates was sixty-four years.

Vital Statistics.—The number of deaths in the State in the year ending June 30, 1897, was 29,822. The estimated population of the State was 1,764,194, thus giving an annual death rate of 16.90 per 1,000, the lowest rate since 1889. The number of deaths from the 10 chief preventable diseases was 9,427, as follows: Consumption, 3,327; diarrhœal diseases of children, 3,450; diphtheria and croup, 1,382; typhoid fever, 478; whooping cough, 321; scarlet fever, 203; measles, 156; malarial fever, 132; erysipelas, 68; no deaths from smallpox. In allusion to deaths from consumption the secretary of the State Board of Health says in his report that the deaths by consumption this year were 121 fewer than during the previous year, and 255 fewer than the average for the ten years 1887-'96.

Decision.—An act was passed by the General Assembly in 1896 authorizing cities of the second class to issue bonds for high-school purposes to the amount of \$180,000. The measure was voted upon at the local spring election of 1896, and was adopted by a large majority. Pending negotiations for properties on which to build, the entire matter was removed to the Supreme Court on a writ of certiorari, and the law of 1896 was declared unconstitutional.

Political.—At the November election the State was carried by the Republicans, who elected Foster M. Voorhees Governor by a plurality of 11,632. The net Republican pluralities on the votes for Congressmen amounted to 10,429.

Legislation.—The following are among the acts passed by the late session of the General Assembly: Providing that taxes may be paid in cities in two installments instead of at one time.

Providing that no deduction shall be made from the assessed valuation of bank stock by reason of any indebtedness to any State or national bank.

Providing for the selection of a series of plans to be used in public schoolhouses throughout the State.

Requiring an official investigation before persons are committed to insane asylums.

Providing that a married man living in separation from his wife by written agreement may transfer property without her signature.

Giving surrogates and clerks of first class counties salaries in lieu of fees.

Appropriating \$2,000 and authorizing the Governor to appoint two persons to erect a monument at Andersonville, Ga., in honor of soldiers from New Jersey who perished there.

Enabling towns to issue bonds for \$50,000 for school buildings.

Making it a misdemeanor to furnish newspapers or other publications with any libelous statement untrue in fact.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fé.

Government.—The following were the Territorial officers: Governor, Miguel Antonio Otero; Secretary, George H. Wallace; Treasurer, Samuel Eldott; Auditor, M. Garcia; Adjutant General, H. B. Hersey, succeeded by William H. Whiteman in May; Solicitor-General, E. L. Bartlett; Superin-

tendent of Public Instruction, Manuel C. de Baca; Mine Inspector, J. W. Fleming; Chief Justice of the Supreme Court, William J. Mills; Associate Justices, Frank W. Parker, Jonathan W. Crumpacker, John R. McFie, and Charles Leland; Clerk, José D. Sena.

Finances.—The latest available report of the finances, a quarterly statement beginning March 7 and ending May 28, 1898, shows balances in the treasury, \$163,781.14; receipts during the quarter, \$38,418.41; total to be accounted for, \$197,199.55; payments during the quarter, \$76,281.22; balances May 28, \$120,918.33.

Valuation.—The property valuation subject to tax amounted to \$39,478,119.18, distributed among the counties as follows: Bernalillo, \$7,395,184; Chaves, \$1,475,829; Colfax, \$2,722,180; Dona Ana, \$2,446,692.85; Eddy, \$1,113,075; Grant, \$3,468,236.45; Guadalupe, \$420,558; Lincoln, \$1,413,832; Mora, \$968,135; Rio Arriba, \$800,222; San Juan,

advanced course. During the year 1897-'98 the enrollment reached 72. The scholastic year consists of forty weeks.

Coal.—The output of coal for the year 1897-'98 amounted to 858,583 tons, valued at \$1,408,680. Bernalillo County produced 372,611 tons; Colfax, 213,972; Santa Fé, 248,000; Rio Arriba, 22,500; Socorro, 1,500. Total number of men employed in coal mining, 1,888, an increase of 523 over the previous year.

Penitentiary.—The total number of convicts in confinement in 1897 was 305; in 1898, 215. The largest number of convicts during 1898 was 222, the smallest number 186, making a daily average of 207, as against 197 in 1897. Regarding religious instruction in the Penitentiary, the report says: "Divine services have been very much neglected, owing partly to the fact that the last Legislature refused to make a small appropriation for a chaplain, and partly to the employment of a large num-

NEW MEXICO'S TERRITORIAL CAPITOL.

\$729,310; San Miguel, \$4,209,564; Santa Fé, \$1,851,701; Sierra, \$1,055,072.30; Socorro, \$4,611,482; Taos, \$953,689; Union, \$1,174,850; Valencia, \$2,668,506.5

Education.—Seventy-nine per cent. of the inhabitants are able to read and write, leaving 21 per cent. of illiteracy. The district schools number 523; enrollment, 20,674; teachers, 546; average daily attendance of pupils, 16,845.

It is officially reported that the Indian industrial schools at Santa Fé and Albuquerque, supplemented by the governmental schools at the various pueblos, are doing good work for the education of Indian children. The report says: "Nearly every Indian child in New Mexico is provided with the means of education, and the schools are very largely attended. For many years it was difficult to obtain the consent of the parents for the education of their children at these public institutions, as they had much hesitancy in permitting their children to leave home and go under the control of the teachers. All this is now changed, and the parents are taking the greatest interest in the schools, in many instances showing intense anxiety to have their children educated. From present appearances, the majority of the Indian children of the Territory will be as well educated in a few years as the other youths."

The Normal School at Silver City has completed the fourth year of its existence. Students who desire to teach are offered both an elementary and an

ber of the convicts at the rebuilding of the Capitol every Saturday afternoon. These men return to the Penitentiary from their work too late to be bathed, shaved, and cleansed, and as this has to be done every Sunday morning divine service has to be omitted."

Insane Asylum.—There were 57 inmates of the asylum—33 males and 24 females—the majority of whom were reported to be incurable. The superintendent says: "Since the opening of this institution the number of chronic and incurable cases admitted has gradually but steadily increased, until the vacancies have been reduced to a very few, rendering it impossible, for lack of room, to admit many curable patients. This fact will account for the small number discharged as cured."

Railroads.—The Atchison, Topeka and Santa Fé Railroad traverses the Territory from north to south, with numerous branches running into the mountains. The Denver and Rio Grande road affords egress by way of Denver, and is claimed to be "the most magnificent scenic line ever built." The Pecos Valley and Northeastern road extends 89 miles from Pecos City, Texas, to the county seat of Eddy County, and 73 miles to Roswell, the county seat of Chaves County. A contemplated extension to Amarillo will be 208 miles, making the entire length of the line 372 miles. By the extension of this road the Territory will be able to ship stock and various products directly to larger mar-

kets, without having to drive across the country. The Union Pacific, Denver and Gulf road is built through the northeastern corner of the Territory for 80 miles. About 150 miles of the Southern Pacific road runs through the Territory. The Almagordo and Sacramento Mountain road has now completed its line to the Sacramento mountains. These mountains are noted for their excellent timber. The Santa Fé Pacific (formerly the Atlantic Pacific) takes in about 200 miles of the Territory, and the Silver City, Deming and Pacific road is completed.

Sheep.—In his report to the Secretary of the Interior for 1898, the Governor says of the sheep industry:

"New Mexico's natural adaptability to sheep raising and woolgrowing was recognized by the Spaniards when they settled in this section about three hundred years ago, and they introduced large numbers of Merino sheep, which soon became the principal support of the people, furnishing them with food and raiment. Since that time this industry has occupied a prominent position in the Territory, and it is to-day, as it has been for many years past, the most important and profitable in New Mexico. At this time there are owned within the borders of the Territory over 4,000,000 head of sheep, including the lambs grown this year, and with the exception of one State possessing many similar natural advantages, our Territory towers above all other States and Territories in the number of sheep owned. The original stock was of the Spanish Merino type of sheep, and from lack of fine-bred rams to keep up and improve the strain they gradually deteriorated in character, until they became a class unto themselves, displaying more of the characteristics of wild than of domestic animals. This trait developed in these sheep an ability to hunt for their food, and enabled them to subsist upon scanty herbage and to live without water for many days whenever conditions demanded or necessitated such modes of living. To-day, though improved by the best-blooded stock to be found, they still possess these desirable characteristics. The ewes make excellent mothers, caring for their lambs in a manner unequalled by any other breed of sheep, and fearlessly defending them against attack by carnivorous wild animals. Their fecundity is also remarkable, and there is always a high percentage of lambs born, running up, in some flocks, over 100 per cent. Possessing such qualities, the increase of the flocks is very rapid."

The cost of running the sheep for a year is stated to be about 30 cents a head, which covers the expense of herding, lambing, shearing, dipping, taxes, etc. The cost of shearing amounts to $2\frac{1}{4}$ to 4 cents a head, according to the class of sheep. The flocks are usually run in bands of 3,000 to 5,000. It is said that while a few years ago sheep could be bought for 75 cents per head, to-day ewes are selling freely at from \$3 to \$4 a head, yearlings (wethers) at \$2.50 to \$2.75, two years old and upward (wethers) at \$3 to \$3.25, and six months' lambs at from \$2 to \$2.25 a head. The clip of wool for 1898 amounted to about 15,000,000 pounds.

Irrigation.—Improved systems of irrigation are said to be developing rapidly. To quote again from the Governor's report: "There is in operation the Springer system of irrigation, with 50 miles of ditches and 5 reservoirs, covering 22,000 acres. The Vermejo system, which controls 57 miles of ditches and 10 reservoirs, supplies 30,000 acres. In the northwestern portion of the Territory there are 200 miles of ditches, watering 24,000 acres. There are several tracts of fertile soil accessible to streams, which will afford an ample supply, awaiting the attention of moneyed men. Also extensive ditch

systems are in operation in the Mimbres region of Grant County. The irrigation projects noted above are in the four corners of the Territory. In the meantime the great central portions are receiving attention, more than 50 companies having been organized for irrigation projects, and several having plants in operation, affording to the home seeker at the present time ample opportunity for settlement and reclamation. The valley of the Rio Grande presents the most extensive field for operations of this kind, as the present narrow strip of lands cultivated can be widened very materially by the proper disposition of the water which flows so abundantly from the north and is now allowed to be wasted. A very few years will find all the water now suffered uselessly to run away utilized to the highest degree, and enlarging the area of the agricultural and horticultural land to an extent almost fabulous. Meanwhile, individual enterprise is increasing the local supplies by the erection of multitudes of windmills, pumping from artesian wells in various parts of the Territory."

Decision.—Suit was brought in a lower court to eject certain defendants from the possession of certain mining property. The decision in the case by the Supreme Court of the Territory settles for the first time the question whether mineral land within the boundaries of a claimed Mexican or Spanish grant, such grant being at the time *sub judice* in the Court of Private-Land Claims of the United States, is open to exploration for mining purposes. The decision holds that, as the law now stands, there is no statutory reservation of any of the lands embraced within the boundaries of a claimed grant in New Mexico.

NEW YORK, a Middle State, one of the original 13, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344, and according to an estimate made in December, 1898, by the State Board of Health, the population was 7,000,000. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Frank S. Black, Republican; Lieutenant Governor, Timothy L. Woodruff; Secretary of State, John Palmer; Comptroller, James A. Roberts; Treasurer, Addison B. Colvin; Attorney-General, Theodore E. Hancock; State Engineer and Surveyor, Campbell W. Adams; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, Louis F. Payn; Superintendent of Banking Department, Frederiek D. Kilburn; Superintendent of State Prisons, Austin Lathrop, who was succeeded on April 17 by Cornelius C. Collins; Superintendent of Public Works, George W. Aldridge until Dec. 2, when he was suspended from office by the Governor; Commissioner of Labor Statistics, John T. McDonough; Railroad Commissioners, Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Alton B. Parker; Associate Judges, John C. Gray, Denis O'Brien, Edward T. Bartlett, Albert Haight, Celora E. Martin, and Irving G. Vann.

Finances.—The State Treasurer reported a balance of \$1,654,225 in the treasury on Dec. 31, 1898, compared with \$2,283,341 on Dec. 31, 1897. The receipts for the fiscal year, ended Sept. 30, were \$30,488,406, and for the preceding year \$32,678,112. The payments were \$33,757,981, as compared with \$30,364,254 for the preceding year. Among the receipts were: General tax, \$8,036,124; canal tax,

\$2,120,086; school tax, \$4,043,065; inheritance tax, \$1,997,210; excise tax, \$4,215,860; corporation organization tax, \$334,812; and annual tax on corporations, \$2,162,434. The expenditures during the fiscal year exceeded those of last year by \$3,393,727. The State tax rate is 2.08 mills, compared with 2.67 mills in 1897. This is the lowest rate adopted

Copyright, 1897, Rockwood, N. Y.

THEODORE ROOSEVELT,
GOVERNOR OF NEW YORK.

by the Legislature since 1856, except in 1891 and 1892, when the large amount refunded by the national Government to the State allowed an abnormally low rate. It is distributed as follows: For canals, 0.17; for schools, 0.84; for canal maintenance, 0.19; for canal special appropriations, 0.07; for State care of the insane, 0.81; total, 2.08. The general appropriations made by the Legislature, in-

cluding the appropriation bill carrying \$6,372,262.06, and the supply and supplemental supply bills appropriating \$1,850,000, amounted to \$10,112,605.86. To this are added appropriations made in 1897, but not included in the tax levy of that year, amounting to \$630,000, making \$10,742,605.86. The estimated revenues from the corporation tax, inheritance tax, liquor tax, and other sources, including a surplus of \$1,533,707.92, is \$10,749,457.92, leaving only \$6,852.06 to be raised by taxation for general purposes. The appropriations for canal bridges and repairs amount to \$224,126.14, and deducting a surplus of \$29,000 the amount to be raised for this purpose is \$195,126.14. The free-school tax amounts to \$4,112,200.

Valuation.—The State assessors during the year were Martin Heermance, Rollin L. Jenkins, and Edward C. Adams, each of whom received an annual salary of \$2,500. The report of the commission for 1897 shows that the total assessment of real and personal property was \$4,999,268,900, of which \$4,349,882,088 was real and \$649,386,812 personal. Comparing with 1896, this is an increase of \$308,055,502 in real and \$105,075,255 in personal property; a total of \$413,130,757. Of the total assessed value of real estate, \$1,787,066,091 is credited to New York, an increase of \$55,556,948; \$570,107,742 to Kings, an increase of \$14,796,745; \$106,139,634 to Queens, an increase of \$23,266,973; \$24,371,551 to Richmond, an increase of \$3,831,398; \$45,049,701 to Suffolk, an increase of \$26,070,655; and \$168,034,356 to Westchester County, an increase of realty assessment of \$73,640,727. Of the total assessed value of personal property, \$380,217,023 is in New York, an increase of \$5,241,261; in Kings, \$33,688,721, an increase of \$6,152,087; in Queens, \$4,336,643, an increase of \$1,864,193; in Richmond, \$1,628,709, an increase of \$1,513,484; in Suffolk, \$5,421,543, an increase of \$3,626,958; and in Westchester County \$24,037,229. The total increase in assessable values was \$413,130,707, as compared with \$138,272,791 for the year previous.

Legislative Session.—The regular session of the Legislature began on Jan. 5, 1898, and continued until March 31. As elected, the Senate consisted of 35 Republicans, 14 Democrats, and 1 Independent Republican, and the Assembly of 79 Republicans,

68 Democrats, 2 Independent Republicans, and 1 National Democrat. Timothy E. Ellsworth was continued as President *pro tem.* of the Senate, and James M. E. O'Grady was chosen Speaker of the Assembly. The Legislature passed 849 bills, of which 676 were approved by the Governor.

By far the most important bills were those authorizing the appointment of a commission to investigate the expenditure of \$9,000,000 on the canals and the consideration of other matters affecting the canals before the Legislature, and extending the time of the Canal Investigation Commission to July 1, 1898, to report to the Governor and allowing the Governor to extend it until Aug. 1, 1898.

Other measures enacted were:

Authorizing the Governor to appoint a commission of five to inquire into the expediency of revising the tax laws.

Providing that within thirty days after this act takes effect the Governor shall appoint a commission of five persons to examine into the commerce of New York, the cause of its decline and the means of its revival, together with a summary of conclusions to be drawn therefrom, and to suggest such legislation as they deem advisable relating thereto.

Amending the town and election law to permit biennial town elections in autumn, and providing that the Board of Supervisors of any county may, by resolution adopted at an annual meeting of such board, fix a time when the biennial town meetings in such county shall be held, and such time, when so fixed, shall not be changed for the period of four years.

Authorizing cities of the first and second class, in the discretion of those officers or bodies of such cities that have charge of the appropriation of the public funds, to purchase works of art, which must be the production of professional artists who are citizens of the United States.

Authorizing cities of the third class to expend \$200 annually for a Memorial-Day observance.

Legalizing assessments made on the estate of a decedent, instead of on his personal representatives.

Authorizing executors and trustees to acquire or exchange lands for certain purposes.

Providing that an adopted child to receive, free of taxation, a bequest of property from a foster parent, must have been adopted before its fifteenth year, and the relationship must have existed for at least ten years.

Providing that all investments of money by a trust company chartered by a special act prior to May 18, 1892, shall be at its sole risk, and that its capital stock and property shall be liable, with the exceptions provided in the general law governing trust-company investments.

Amending the banking law to permit savings banks to invest in the first-mortgage bonds of any railroad corporation of this State the principal part of whose railroad is located within this State.

Providing that insurance companies organized exclusively for the purpose of insuring cheese factories and creameries may extend their business to any number of counties, not exceeding one county for each \$100,000 of insurance in force.

Revising the military code.

Amending the public-health law, to provide that every practitioner of dentistry must display in a conspicuous place upon the house or in the office wherein he practices his full name. If there are more chairs than one in any office, or "dental parlor," the name of the practitioner using each chair must be displayed on or by said chair in plain sight of the patient.

Providing that any person who represents himself or herself to be a member of, or who claims to represent, a labor organization which does not exist

within the State at the time of such representation, or who has in his or her possession a credential, certificate, or letter of introduction bearing a fraudulent seal, or bearing the seal of a labor organization which has ceased to exist, and does not exist at the time of such representation, and attempts to gain admission, by the use of said credential, certificate, or letter of introduction, as a member of any convention, or meeting of representatives of labor organizations of the State, shall be guilty of a misdemeanor.

Providing that any firm, person, corporation, or association of persons, or any employee of such or any of such, who in the newspapers or other periodicals of this State, or in public advertisements, or in communications intended for a large number of persons, knowingly makes or disseminates any statements or assertions of facts with respect to his, its, or their business affairs concerning the quantity, the quality, the value, the price, the method of production or manufacture, or the fixing of the price of his, its, or their merchandise or professional work; or the manner or source of purchase of such merchandise; or the possession of awards, prizes, or distinctions; or the motive or purpose of a sale, intended to have the appearance of an advantageous offer, which is or are untrue or calculated to mislead, shall be guilty of a misdemeanor.

Providing that no printing or photo-engraving shall be done in any State Prison, Penitentiary, or reformatory for the State or any political division thereof, or for any public institution owned or managed and controlled by the State or any such political division, except such printing as may be required for or used in the penal and State charitable institutions, and the reports of the State Commission of Prisons and the Superintendent of Prisons, and all printing required in their offices.

Erecting the new County of Nassau out of the three eastern towns of Queens County not included in the borough of Queens.

Authorizing Cornell University to establish branch departments in any part of the State.

Authorizing the establishment of a college of forestry at Cornell University and appropriating \$10,000 therefor. The trustees of the university are authorized to purchase, with the consent of the State Forest Preserve Board, not more than 30,000 acres in the State park in the Adirondacks, for the purpose of establishing the proposed college.

Requiring school authorities to purchase a United States flag and display it on every school building, and directing the State Superintendent of Public Instruction to prepare a salute to the flag for the opening of each day.

Changing the corporate name of the Trustees of Scenic and Historic Places and Objects to the Society for the Preservation of Scenic and Historical Places and Objects, and changing the number of trustees.

Appropriating \$55,000 of money collected from racing associations for distribution among agricultural societies.

Providing that if it is not practicable to change a railroad crossing within a city from grade, or to close and discontinue the same, the opening of an additional crossing for the division of travel going from the grade crossing is permitted.

Authorizing the New York Central, Delaware and Hudson, West Shore, and Boston and Albany railroads to construct a union railway station in Albany, to cost more than \$1,000,000.

Compelling all bicycles and similar vehicles to have a lighted lamp in use in any public highway or street between the hours from sunset to sunrise, limiting the rate of speed to eight miles an hour, and forbidding riding upon sidewalks or footpaths.

Placing the limit on the size of bass at 10 inches instead of 8, and restricting the number that one or more persons may take in a day.

Prohibiting the killing of deer for three years in the counties of Ulster, Greene, Delaware, and Sullivan.

Shortening the season for the killing of quail fifteen days, and the possession after they are killed to thirty days.

Making it a misdemeanor to spray fruit trees, while in blossom, with any poisonous substance.

Providing that all carcasses of calves shall be tagged with the age of calf when killed, owner's name, etc.

Making it a misdemeanor to place the words "sterling silver" on an article containing less than 925 one thousandth parts of pure silver.

Amending the penal code in relation to the manufacture or sale of spurious silverware.

The following laws pertaining to New York city were signed by the Governor:

Making Charter Day, May 4, a legal holiday in the Greater New York.

Authorizing New York city to appropriate \$10,000 for the relief of indigent sailors and soldiers and the families of those deceased.

Authorizing the city of New York to devote public-school houses to recreation and other public uses.

Providing that 5 per cent. of the excise moneys collected in New York city shall be paid into the Teachers' Retirement fund, and that the same shall be apportioned by the Board of Education among the several boroughs of the city of New York, as now constituted, in proportion to the number of teachers employed and the amount of salaries paid to them.

Authorizing Bellevue Hospital Medical College to hold real and personal property to an amount not exceeding \$1,000,000, and providing that it may mortgage, sell, and convey its property.

Authorizing the Board of Estimate and Apportionment to include annually, upon the requisition of the Department of Parks, in addition to the sum now provided, for the American Museum of Natural History, a further sum not exceeding \$30,000.

Allowing the American Museum of Natural History to take and hold by gift, devise, bequest, or purchase any real or personal property.

Compelling street surface railroads in Manhattan operating cars by cable or electricity to assign 2 conductors to each car between 6 and 9 A. M. and 12 to 2 and 4 to 8 in the afternoon. Nine hours are specified as a day's work.

Prohibiting the use of nets in the territory recently embraced in the Greater New York along the Harlem river.

A resolution was passed by the Legislature censuring Senator Murphy for his vote in favor of the free-silver resolution introduced by Senator Teller in the United States Senate.

Gov. Black convened an extra session of the Legislature for July 11, at 8 o'clock in the evening, when a message from him was presented, as follows:

"Unusual events have made it necessary to convene the Legislature in extra session. There are three subjects which demand attention, and I recommend them for legislative action: First, an appropriation to meet the expense of providing New York's share of troops required in the war with Spain. Second, a plan to enable voters absent from their homes in the military service to vote at the coming elections. Third, a provision which will better protect citizens who would vote according to law, and more certainly prevent and punish those who would vote otherwise."

The sessions were continued until July 16, during

which time the Legislature passed the following bills:

Providing for the appointment by the Governor of a supervisor of elections for a district larger than the city of New York. This measure, known as the Metropolitan Election bill, had for its object the removal of the control of the election from the New York City Police Board, which had become a partisan body by the removal of the Republican members by Mayor Van Wyck. This bill was promptly signed, and the nomination of John McCullagh as State Superintendent of Elections, made by the Governor, was immediately confirmed.

Appropriating \$500,000 for expenses of the National Guard and the Naval Militia.

Providing for the balloting of soldiers serving with the United States army.

Providing for absolute bipartisan representation on boards of election inspectors.

Law.—The annual report of the Attorney-General showed that during 1897 but 9 actions were begun against corporations for the purpose of dissolving them. More than 500 opinions were written on various questions referred to the Attorney-General for determination. For violation of the agricultural law 683 actions or proceedings were begun, and application was made asking that 26 other actions be begun. The number of actions in which the Attorney-General appeared for the people were: Certiorari, 23; *quo warranto*, 2; mandamus, 6; injunction, 2; miscellaneous, 57; and the enforcement of bond, 6. Papers have also been received in proceedings of voluntary dissolution of corporations, 138; in proceedings for the sequestration of corporations' assets, 61; in partition suits, 6; and in foreclosure of mortgages, 27. During the year 234 claims against the State were filed with the State Court of Claims, while 403 claims, aggregating \$682,323, were considered by the court, the award therein amounting to \$181,141.

He called attention to the adverse decisions of the courts on the antitrust law. The decisions, he said, have made the law nugatory, instead of simplifying practice and enabling an examination to be made for the purpose of determining the existence of a trust. "Outside of the legal questions under review," he added, "it may be said that the statute contains defects which probably make the law of very little utility."

He treated at length the tax question. In relation to threatened prosecutions against local assessors for alleged failure to assess property, he says: "Threats of criminal prosecution against officials whose duties are *quasi* judicial will accomplish nothing except to make the amount of equality more glaring in the future. There can be no question that the tax laws of the State require careful revision. A commission composed of men who have had judicial experience and who are free from bias could undoubtedly make recommendations which will be at once both practical and beneficial."

Banks.—These are under the supervision of a State superintendent, who is appointed for three years, and receives a salary of \$5,000. The incumbent during the year was Frederick D. Kilburn, whose term of office expires on May 9, 1899. The resources of the savings banks of the State at the close of the year ending June 30 were \$889,000,000, an increase of \$20,000,000 during the six months previous. During the year the sum of \$285,227,049 passed over the tellers' desks of savings banks in Greater New York. Of this sum, \$146,611,878 was deposits, and \$138,615,171 was withdrawn. The banks of Manhattan received \$109,212,163 on deposit, and paid out \$103,182,421. There are 370 building and loan and co-operative savings and loan associations, of which 86 are in New York City.

Of these, 44 are national and 317 local associations. The local co-operative associations showed total assets of \$37,385,642, with receipts of \$19,034,384, and cash on hand \$1,656,856. The number of shares in force Dec. 31, 1897, was 732,870, of which 189,029 were issued during the year, 197,867 being withdrawn during the same period. During the year 292 mortgages were foreclosed, \$5,820,264 was loaned on mortgage and \$804,909 on other securities, \$7,739,464 paid on withdrawals, dues, and profits, \$767,669 on matured shares, and \$1,152,355 of borrowed money. The expenses were \$194,024, and other disbursements \$348,175. In the "nationals" the same items show: Total assets, \$24,199,077; receipts, \$14,964,504; cash on hand, \$677,987. Shares in force Dec. 31, 1897, were 882,793, of which 375,935 were issued during 1896, while 318,349 were withdrawn. During the year 431 mortgages were foreclosed, \$5,043,498 was loaned on mortgage, \$629,136 on other securities, \$3,853,221 paid on withdrawals, dues, and profits, \$135,056 on matured shares, and \$279,190 of borrowed money returned. The expenses were \$595,147, and "other disbursements" \$1,225,926.

Insurance.—The care of the insurance interests of the State is under the charge of a superintendent, who receives \$7,000 a year, and holds office for five years. The present incumbent is Louis F. Payn, who was appointed on Feb. 11, 1897. His report shows that the assets of life insurance companies on Dec. 31, 1897, were \$1,334,051,344.68, an increase of \$105,727,002.94. Of this amount New York State companies have \$801,879,708.36; companies of other States, \$532,171,636.32. The aggregate of premium notes and loans show a decrease of \$29,061,785.17 during 1897, while deferred and uncollected premiums have decreased \$142,866.83. The liabilities of the several companies, excepting \$9,740,500 of capital stock, are \$1,148,249,329.87. The increase was \$94,641,191.80. The liabilities of New York State companies as reported are \$687,020,233.06; companies of other States, \$461,229,096.81. The gross divisible surplus is: New York State companies, \$114,859,475.30; companies of other States, \$70,942,539.51; aggregate, \$185,802,014.81. The aggregate receipts of New York State companies were \$183,652,785.96, an increase over 1896 of \$13,620,599.65; other companies, \$117,615,393.22, making the gross receipts \$301,268,179.18, and the gross increase over the receipts of the preceding year \$21,895,072.39. The disbursements were \$205,866,393.05, an increase of \$6,693,094.23; \$92,688,305.50 was paid for claims, \$26,431,311.98 for lapsed and surrendered policies, \$18,425,197.25 in dividends to policy holders, \$739,553.80 in dividends to stockholders, \$31,252,634.25 for commissions, \$16,513,883.06 for salaries and medical examiners' fees and \$19,815,507.13 for miscellaneous purposes. This classification shows that \$137,544,814.73 was paid to policy holders, while the cost of management, including dividends to stockholders, was \$68,321,578.32.

Excise.—The collection of the excise dues is under the charge of a commissioner, who serves for five years and receives a salary of \$5,000. The incumbent during the year was Henry H. Lyman, whose term of office will expire April 1, 1901. His reports show that the total amount received for liquor-tax certificates, transfers, and fines during the fiscal year ending Oct. 1, 1898, was \$12,640,718.01; county treasurers' fees, \$60,277.31; net balance for fiscal year, \$12,580,440.70. Of this amount the State received \$4,216,278.24; towns and cities received \$8,364,162.46. The total number of liquor-tax certificates of all kinds issued were 31,499; number of certificates in force Oct. 1, 27,897; total number of certificates surrendered and canceled for

rebate, 4,026. The rebates paid were \$815,988.86, and expenses of the department \$264,317.94. In the boroughs of Manhattan and Bronx the report shows that the number of certificates in force on Oct. 1 was 7,556. Also that the total amount received from the issue of certificates, transfers, and fines was \$5,747,864.35; rebates paid, \$306,233.47; net revenues, \$5,441,630.88; city's two-thirds share of same, \$3,627,753.92; State's one-third share, \$1,813,876.96; on the basis of the equalization table of 1898, prepared by the State Board of Assessors, the city has benefited by a reduction in State taxes, due to the State excise revenue, \$1,830,545, making a total benefit to the city's revenue of \$5,458,298.92, showing a gain to the city from the State treasury over and above what it pays to the State amounting to \$16,668.04.

Education.—This department is under the supervision of a superintendent, whose term of office is three years, and who receives a salary of \$5,000. The incumbent during the year was Charles R. Skinner, whose term of office expired on April 6, when he was reappointed for a new term. His report shows that the total number of children of school age (five to eighteen) was 1,668,949, an increase of 17,091. Of this number 1,113,899 were in the cities, an increase of 47,829, and 555,050 in towns, a decrease of 30,738. The average daily attendance was 820,254, an increase of 48,200. The whole number of teachers employed was 34,385, an increase of 565 in one year and of 3,060 in twelve years. There was expended for teachers' salaries \$14,183,685, an increase of \$564,456. Of this expenditure the cities paid \$9,158,205, an increase of \$483,522, and the towns \$5,025,480, an increase of \$80,936. The average annual salary of teachers was \$495, an increase of \$8. The State paid in teachers' quotas to the 3,090 small districts, at \$100 each, \$309,000. Estimating an average attendance of five scholars in each district the State pays \$309,000 for the education of 15,450 pupils, or an average of \$20 a pupil. The total expenditure for public schools was \$26,689,856, an increase of \$3,516,026. The cities spent \$19,152,644, an increase of \$3,610,573. The towns spent \$7,537,212, a decrease of \$94,547. There was expended for schoolhouses, sites, furniture, and repairs \$8,415,573, an increase of \$2,588,237. The cities expended \$7,226,700, an increase of \$2,816,645; the towns expended \$1,188,872, an increase of \$228,407. The value of schoolhouses and sites was \$66,077,600, an increase in one year of \$5,744,474. In cities this value was \$49,784,983, a gain of \$5,883,909. In the towns the value was \$16,292,617, a decrease of \$139,435.

According to the Regents' report, the number of teaching institutions in the university has increased to 688. The universities, colleges, professional and technical schools remain the same in number, while the incorporated academies have fallen from 128 to 119. In these institutions there are faculties with a total of 3,775 men and 2,671 women, and the total number of students is 43,146 male and 38,325 female. The net property has increased to \$87,460,783, while the expenditures reached \$9,055,572.

Charities.—This interest is under the care of a board, whose annual report is prepared from the sworn statements filed by the treasurers or other responsible officers of the charitable institutions, societies, and associations subject to the board's supervision. The real and personal property of these institutions, societies, and associations is estimated to have a value of \$103,384,554.21, of which \$77,455,064.20 is real estate and \$25,929,490.01 personal property. The receipts of the institutions aggregate \$23,100,880.50, of which amount \$9,606,136.34 came from the State, counties, and cities, while

\$13,494,744.16 was received through the medium of personal benefactions. The total expenditures for the year amounted to \$21,448,362.03. The number of inmates in the institutions was, on Oct. 1, 1897, 74,664. The tables further show that the number of inmates, received and cared for during varying periods of time during the year aggregated 269,147. But these were not all that received charitable assistance, the tables also showing that in the dispensaries 1,523,699 persons were treated practically free of charge, the number of prescriptions dispensed being 2,257,075. Also general outdoor relief was given by superintendents and overseers of the poor, relief societies, missions, and other charities to 758,609 persons, making the number relieved by institutions (including hospitals and dispensaries), societies, associations, and public officials aggregate 2,551,455.

Canals.—The statement made toward the close of 1896 by State Engineer Adams, that the amount of \$9,000,000 appropriated for the improvement of the canals was insufficient, and that at least \$7,000,000 additional would be required, led to a general feeling that mismanagement had occurred in the office of the Superintendent of Public Works. Soon after the convening of the Legislature, Gov. Black, in a special message, transmitted the following communication:

"The appropriation of \$9,000,000 voted by the people at the election of 1895 for improving the canals is insufficient to complete the work. Another large sum will be required. The authority for the second appropriation should be no less than that by which the first was made."

The communication further suggested that a commission be appointed to examine the "work already done or contracted for, and estimates prepared for that which may be necessary to complete the undertaking." The Governor called attention to the fact that he could not appoint "a committee having the necessary powers unless authority is conferred on him by the Legislature." A bill authorizing such action was passed, and the following commission was appointed: George Clinton, chairman; Smith M. Weed, Darwin R. James, Frank Brainerd, A. Foster Higgins, Franklin Edson, and William McEchron. The commission was directed to examine and report on the work of enlarging and improving the Erie, Champlain, and Oswego canals. The commission began its work in the latter part of March, with E. P. North as consulting engineer and Lyman E. Cooley as advisory engineer. Nearly all the members visited Albany, Syracuse, Rochester, Buffalo, and intermediate points, and personally inspected portions of the canals, besides taking testimony. A voluminous report was submitted to the Governor on Aug. 1, in which the commission said that large sums had been expended in unnecessary advertising in the interior of the State; also that \$1,000,000 or more had been expended "unwisely" in various ways; and that certain accounts for payments to contractors for earth and rock filling had been manipulated. The evils of the existing dual system of keeping the accounts of the Public Works Department were pointed out. The commissioners examined 69 contracts for work, and the engineers carefully examined every foot of the new work. Several recommendations were given in the report, and the members voted as a unit on every point. They were unanimous in suggesting that political methods should be eliminated so far as possible from the management of the State canals, and they were also unanimous in recommending that sufficient additional appropriations be made to complete the work of putting the canals in the best possible condition. The report emphasized strongly the importance of the canals to the commercial in-

terests of the State. The report of the commission was transmitted by the Governor to the Attorney-General, with a request for its examination in order to determine "whether judicial proceedings should be instituted against any of the parties referred to in the testimony or report." At the request of the Attorney-General, Judge Edwin Countryman was named as special counsel to aid him in examining the documents submitted. Subsequently State Engineer Adams presented to Gov. Black a statement concerning those portions of the report that reflected on his office, in which he characterized the work of the commission as "cruelly unjust, unfair, and unwarranted under the circumstances." Superintendent of Public Works Aldridge commented on the report, saying that "the findings of the commission are not warranted by the testimony or the facts," and that "what were mere rumors and stories of mismanagement, and which were denied under oath, are reported as findings." Finally Judge Countryman, on Nov. 30, reported that the conclusions of the commission were warranted by the testimony, and that both State Engineer and Surveyor Adams and the Superintendent of Public Works either have committed or permitted acts which should be investigated by a grand jury. Mr. Aldridge at once asked that he "be relieved from the performance of the duties of my office until such time as my responsibility for alleged wrongdoing may be judicially determined." Accordingly, on Dec. 2 he was suspended from office by the Governor. The official date for closing the canals this year was Dec. 10, the first clearing having occurred on May 4.

Fisheries.—The commissioners in charge of this department are Barnet H. Davis, Edward Thompson, William R. Weed, H. S. Holden, and Charles S. Babcock. During the year 667,325 fingerlings and yearlings of brook, brown, rainbow, and lake trout were planted, in addition to the millions of fry. The planting of the output of the hatcheries during the year was: Brook trout, 3,879,402; brown trout, 991,801; rainbow trout, 144,800; lake trout, 2,813,983; landlocked salmon, 2,054; steel-head salmon, 14,503; Swiss lake trout, 4,200; shrimp, 20,000; whitefish, 21,660,000; smelt, 45,000,000; ciscoes, 14,500,000; frostfish, 10,600,000; tomcods, 44,675,000; shad, 10,118,000; wall-eyed pike, 49,405,000; muscalonge, 3,035,000; lobsters, 6,896,420; and black bass (Oswego), 39,000. There were successfully prosecuted 316 cases for violation of the fisheries, and game, forest law, resulting in a recovery by the people of \$10,728. Twenty-seven persons were convicted and sentenced to the Penitentiary or county jail, while many others were convicted and sentence suspended. There were 82 applications for oyster lots, covering 672 acres, all of which were executed and filed. Sixty-three leases of oyster lots were made, and 68 oyster lots of different sizes and shapes were located and surveyed, principally in Jamaica and Sheepshead bays.

Prisons.—These are under the care of a superintendent, who receives a salary of \$3,000. The incumbent at the beginning of the year was Austin Lathrop, who was succeeded, on April 17, by Cornelius V. Collins, who holds office for five years. The prison population on Oct. 1, 1897, was: State prisons (including female prison), 3,203; New York State Reformatory, 1,525; House of Refuge for Women, 408; penitentiaries, 3,768; jails, 4,366; total, 13,270. The total merchandise sales from the three State prisons for the first eleven months of 1897 were \$194,014.13, of which \$134,023.82 were made in August, September, October, and November. During the first eight months of the year, the period of greatest idleness, there was an increase of 7 cases of insanity in the State prisons, and of 4 cases in the penitentiaries; a total increase of 11

cases in a population of 6,971. These cases of insanity, it is claimed, were not due to idleness, because they occurred mostly among those who were employed, and were due to heredity, vice, and evil habits.

Insane.—The charge of the insane is in the care of a commission in lunacy, consisting of Peter M. Wise, Goodwin Brown, and Henry A. Reeves, who was succeeded by William L. Parkhurst. Their reports for the fiscal year ending Sept. 30 shows that there are nearly 21,000 insane in the New York State hospitals, all of whom, except those in private institutions, are now in well-organized and well-managed hospitals, with the advantages of curative treatment. While the hospitals have been greatly improved in every respect, the cost of administration has been largely reduced, the individual cost during the year being \$184.16—the lowest in the history of the State hospital system. Prior to 1893 the cost of caring for patients in the State hospitals averaged more than \$222 a year. The expenditures during the year were about \$600,000. In every department improvements have been made. A definite allowance has been made for the amusement and entertainment of patients, which very largely enter into their curative treatment. Dances and other forms of amusement are held each week in every hospital. These entertainments are greatly enjoyed by the patients, and are a positive economical advantage. The amount expended has been sufficient for the purpose—a little more than \$1 a year for each patient. The most gratifying feature is the rise of the recovery rate: In 1895-'96 it was 948, in 1896-'97 it was 951, while during the past year it gained nearly 10 per cent., reaching 1,018. New building is rapidly going on, and soon all of the insane on Hart's and Blackwell's islands will be removed to comfortable quarters and surroundings. Another large group of buildings is about to be erected at the Manhattan State Hospital Farm for the Insane, on Long Island.

Labor Statistics.—This department is under the charge of a commissioner, who receives a salary of \$3,000. The incumbent during the year was John T. McDonough. The investigations of the bureau for 1897 were devoted to three subjects: First, the economic condition of organized labor; second, the ownership and operation of electric and power, gas and water plants; third, the agricultural conditions in the State. The data for the economic condition of organized labor were obtained by means of quarterly reports from labor organizations as to membership, total time of employment, and earnings of members during the quarter, the unemployed, rates of wages, and hours of labor. On March 31 927 organizations reported a total membership of 142,670; on June 30 975 unions reported a membership of 151,206; and on Sept. 30, 1,009 organizations reported 167,454 members. As to idleness, the report shows that, on March 31, 43,631 members of unions were out of work; on June 30 the number was 27,378; and Sept. 30 23,230 were reported idle. The average number of days of work for each member during the first quarter was, for men, 58, for women, 63; during the second quarter it was 69 for men and on 57 for women; while for the third quarter it was 67 for men and 66 for women. The average earnings for each member of the unions were, in the first three months, \$155.06 for men and \$85.63 for women; during the second three months \$159.12 for men and \$81.39 for women; and for the three months closing with September \$174.40 for men and \$91.80 for women. As to the ownership and operation of electric and power, gas and water plants, replies to inquiries were received from 97 electrical com-

panies, 26 combined electric-light and gas, 2 combined electric-light and water, 61 gas, and 96 water companies; also from 4 electric-light, 5 combined electric-light and water, and 71 water-supply plants—owned by municipalities. The report shows that only the electric-light and power plants have appreciated in value, to the extent of 12 per cent., while all other plants have depreciated from 5 to 27 per cent. The highest average salaries paid are those of the gas plants, which average \$1,260.70 each. The highest wages paid are those by electric-light and power plants, averaging \$672.47 each. The lowest salaries average \$459.25 a year each for eight officers and employees in the employ of two combined electric-light and water plants, and the lowest wages earned are by the employees of public water plants, who receive an average of \$364.80 each a year. The cost of product and selling prices of electric light and power, gas, and water are variously reported. For the first-named the lowest cost reported is 2½ mills an ampère, and the maximum figure is 10½ mills an ampère. The minimum monthly charge for an arc lamp to customers supplied in cities on the contract system is \$6, while the rate for similar services is \$3 where the plant is owned by companies. The highest figure (\$10.41) is returned by a New York corporation. The monthly charge for incandescent light ranges from 40 cents to \$1.50. Schedule prices for municipal arc lights are from \$6 a month to 50 cents a night. The cost of producing gas ranges from 31½ cents to \$1.49 for 1,000 cubic feet, the average for 26 establishments being 52½ cents for 1,000 feet. The highest selling price of manufactured gas used for lighting is reported as \$2.50 cents for 1,000 feet. The cost of producing 1,000 gallons of water in reservoirs ranges from 2½ cents to 10 cents. With reference to agricultural conditions, the report points to the serious feature presented by the rapid and unprecedented depreciation in the market value of farms—represented by the owners themselves to range from 50 to 75 per cent. during the past six years. The State within the past ten years has expended \$3,309,503.07 to promote the interests of agriculture, and it is a disappointing fact that, as the expenditures for that object increased from year to year, the farming industry and the value of farms seemed to decline in a greater ratio.

National Guard.—With the beginning of the year came the resignation of Gen. Louis Fitzgerald, after forty years of service. On Feb. 9 Charles F. Roe was made major general of State National Guard and given command of the State troops.

The following order was issued by the Adjutant General: "The brigade organization known as the First Brigade is hereby discontinued, and the officers of the brigade staff are rendered supernumerary. The organization comprising at present the First Brigade, now discontinued, is hereby formed into two brigades, the First and Fifth. The new First Brigade will consist of Squadron A, First Battery, Ninth, Twelfth, and Twenty-second Regiments. The new Fifth Brigade will consist of the First Signal Corps, Second Battery, Seventh, Eighth, Sixty-ninth, and Seventy-first Regiments."

Pending the enactment of the revised military code the war with Spain occurred, and in consequence it was not until in December that the appointments of the following officers on Gen. Roe's staff were made, when Lieut.-Col. N. B. Thurston was appointed inspector of small-arms practice, with the rank of colonel; Lieut.-Col. Kirby was made his assistant, with the rank of lieutenant colonel; Inspector-Gen. Hoffman was appointed plain inspector with the rank of colonel; and William Carey Manger was made assistant inspector.

Gov. Black, on March 31, addressed the following message to the Legislature:

"Events are now transpiring of so grave and general import that the attention of every enlightened people is fixed upon our own. The crisis which our National Government now meets involves those deep considerations which affect the future of the race. To aid that Government by approval and support, to sustain its hand when raised for justice and fair play, is the duty of every State. No hour has ever been so full of peril that New York has faltered while it passed. Because of her past history and her present greatness, she should be the first to understand the meaning of "to-day." After long reflection, and with an earnest desire to do that which ought to be done, and to refrain from that which ought not to be done, I recommend that, before you adjourn, you take such action as your wisdom shall decide upon to provide against such urgent needs as the future may disclose."

Promptly on receipt of this message the following bill was passed by the Legislature and signed by the Governor:

"The sum of \$1,000,000, or so much thereof as may be necessary, is hereby appropriated for the purpose of defraying the expenses of the National Guard and Naval Militia of this State and volunteers furnished by the State, or either of them, when called into service for the public defense on the request or requisition of the President of the United States; but no part of the money hereby appropriated shall be expended unless the Governor shall certify that in his opinion there is a necessity for using the same or a portion thereof, and in such case the same shall be paid by the Treasurer on the audit and warrant of the Comptroller."

A call was issued to the Governors of the States for volunteers on April 23 by President McKinley, and the quota that came from New York was 20,022.

Railroads.—This department is cared for by three commissioners, each of whom serves for five years, and receives a salary of \$8,000. Those holding office during the year were Ashley W. Cole, George W. Dunn, and Frank M. Baker. The commission reports that the number of passengers carried by the steam surface railroads for the year ending June 30, 1898, was 149,253,259, a decrease of 21,021,144. The gross earnings of steam surface railroads were \$9,797,599.10 in excess of the gross earnings for the year previous. The operating expenses were \$7,409,313.43 in excess of those for the preceding year, making the net earnings from operation \$2,388,285.67 in excess of the net earnings from operation in 1897. Accidents on steam railroads involving loss of life or injury to persons aggregated 2,207, in which 700 persons were killed and 1,507 injured. The total number of passengers carried by the elevated roads in New York city was 227,776,552, a decrease of 1,019,129. The number carried by the elevated roads in Manhattan and Bronx was 183,360,846, an increase of 395,995. The number carried by the elevated roads in Brooklyn was 44,365,706, a decrease of 1,465,124. The street surface railroads of Manhattan and Bronx carried as passengers 456,963,753, including "transfers," an increase of 57,538,010. The number carried in Brooklyn, including some carried in Queens, was 217,410,612, including "transfers," an increase of 17,224,793.

Forest-Preserve Board.—In compliance with Gov. Black's recommendations, the Legislature appropriated \$1,000,000 for the preservation of the Adirondack Park. In his message attention was called to the fact that in the proposed park, which should belong exclusively to the State, the State owned but 661,000 acres out of a total area of 2,800,000 acres. He said that 1,250,000 acres were owned

by lumbermen, and were therefore subject to fire, axe, and devastation, all of which were progressing fast. The commission, consisting of Lieut.-Gov. Timothy L. Woodruff, State Engineer Campbell W. Adams, and State Forestry Commissioner Charles H. Babcock, in their first report, showed that the board purchased, within the confines of the Adirondack Park, 250,117 acres, making the State's total holdings 911,117 acres. The purchases were made at a cost of \$921,699, an average price of \$3.68 an acre. Very nearly all the land so purchased is virgin forest land, surrounding the lakes, the protection of which insures the water supply of the Hudson valley and the Erie Canal. Although the act under which the board was created expressly conferred the power to condemn lands and appropriate them without the consent of the owners, it has been unnecessary to resort to that remedy, except in two cases. More than \$2,000,000 worth of Adirondack lands are still in the market, which have been offered for sale or can be bought.

Historian.—The care of the historical records is under the charge of the State Historian. The incumbent during the year was Hugh Hastings, who in his report announced the publication of a volume of military papers of Daniel D. Tompkins, which gave much information concerning the part taken in the War of 1812 by New York. It also announced that the work of compiling the colonial muster rolls from 1664 down to the outbreak of the Revolutionary War has been concluded. But few rolls of troops between 1765 and 1775 were found, which is due to the fact that when Gov. Tryon retired to the British ship "Asia," in May, 1775, he took with him all the colonial records, and subsequently shipped many of them to London, including probably many of the colonial muster rolls. By dint of considerable correspondence, Mr. Hastings succeeded in obtaining the list of names of New York State men who participated in the first infantry fight of the civil war; the names of the 100 men of the Eighty-ninth New York who volunteered to cross the Rappahannock at the battle of Fredericksburg, Dec. 11, 1862, and drove out the Confederate sharpshooters who had prevented the construction of the pontoon bridges; a list of the members of Company D, One Hundred and Sixty-first Regiment, who were aboard the United States gunboat "Sachem" on the Sabine Pass expedition; and a list of the men of the One Hundred and Sixty-ninth New York, who specially distinguished themselves in the assault on Fort Fisher, Jan. 15, 1865. With a view for the better preservation of army records, the State Historian suggests the creation of a new officer for every regiment, who shall be known as the "regimental recorder."

State Capitol.—The Capitol was not finished at the end of the year. In July State Architect Perry, by reason of lack of funds, was compelled to dismiss his force of draughtsmen. Mr. Perry had charge of the erection and alteration of all the State institutions, and to carry on the work of his office an item for \$35,000 was inserted in the supply bill, which was cut down to \$20,000. The original sum was the minimum with which the work planned and ordered by the Legislature could be carried on. Some changes in connection with the artistic work of the grand stairway in the Capitol building were decided on during the year. One of the features of the stairway is the carving of heads in the caps of the columns, and it was determined to select four women as types representing women in four distinct spheres, and directions were given that their portraits should be carved in the stairway caps. The four women chosen were "Capt." Molly Pitcher, Harriet Beecher Stowe, Clara Barton, and Susan B. Anthony.

State Library.—This is under the care of the Regents of the University of the State of New York, and the librarian is Melvil Dewey. His report for 1898 shows 217,933 volumes in the State library, besides 43,525 volumes in the traveling libraries; a total of 261,458 volumes, exclusive of duplicates. Of the 9,999 volumes added to the State library proper, 4,117 were given, 2,812 were acquired by exchange and by binding serials and pamphlets, while only 3,070, or about one third of the accessions, were bought. Of the 21,366 new pamphlets, 20,706 were gifts, 609 exchanges, and 51 purchases.

Niagara Reservation.—The commissioners appointed to the charge of this reservation met on May 19, and organized by electing Andrew H. Green as their president. The work outlined by them included the building of a stone arch bridge between Goat and Sister islands, to replace the wooden and iron suspension bridge now connecting them. It was also proposed to undertake extensive plantations of trees and shrubs on the shores of the reservation, and particularly on Bath island, with a view to restoring the original woodland effect which is so peculiar to the region, and makes it specially attractive.

Omaha and Paris Expositions.—On Feb. 26 Gov. Black appointed as delegates to represent the State at the Trans-Mississippi and International Exposition, held in Omaha from June to November, 1898, the following: Chauncey M. Depew, John Jacob Astor, G. Creighton Webb, Henry B. Herbert, Abel E. Blackman, Charles N. Stow, Jacob Amos, and John C. Graves.

The following honorary commission to represent the State at the Paris Exposition in 1900 was appointed by Gov. Black on Dec. 24: First Judicial District, Emil Twyffort, New York; Second Judicial District, Ludwig Nisson, Brooklyn, Norton P. Otis, Yonkers; Third Judicial District, Urban Weldon, Cohoes; Fourth Judicial District, Clarkson C. Schuyler, Plattsburg, Mrs. Mary Harrison McKee, Saratoga; Fifth Judicial District, Henry A. Phillips, Lowville, Thomas R. Proctor, Utica; Sixth Judicial District, Mrs. Nanny W. Metcalf, Owego; Seventh Judicial District, Lamotte M. Blakely, Lyons; Eighth Judicial District, William L. Marcy, Buffalo, George E. Spring, Franklinville. The commission will serve without compensation. Its duties are to encourage and promote a complete exhibit of the artistic, commercial, industrial, agricultural, and other interests of the State at the Exposition; to provide for the comfort and convenience of the citizens of the State in attendance; and to make arrangements for the exhibits made by the citizens of the State. The commission met at Albany on Dec. 27, and organized by the election of a president and vice-president. It is authorized to appoint a secretary.

Political.—On Sept. 27 a Republican State Convention was held in Saratoga Springs. Benjamin B. Odell, Jr., chairman of the State Committee, called the convention to order, and named Congressman Sereno E. Payne as temporary chairman. For the permanent organization Horace White was made chairman. Concerning national issues the platform said:

"We congratulate the country upon the conclusion of the war with Spain. It was not undertaken for conquest, but for the sacred cause of humanity and for the just protection of American interests.

"We have abiding confidence that the President will conclude this peace upon terms that will satisfy the conscience, the judgment, and the high purpose of the American people. We have assumed the responsibilities of victory, and wherever

our flag has gone there the liberty, the humanity, and the civilization which that flag embodies and represents must remain and abide forever.

"In the interest of American labor and commerce, we believe that American products should be carried in American ships, and we favor the upbuilding of an American merchant marine."

On State issues it said:

"State taxation of the liquor traffic has steadily grown in popular favor. There has been collected under this law, during its brief period of existence, more than \$33,000,000, which has been applied to the reduction of State and local taxation, and has thus relieved the earnings and the savings of all the people of the State.

"New York is foremost of the States in the Union in caring for the interests of labor. Factory inspection has been extended. The prevailing rate of wages has been enforced upon all public works. Railroad corporations have been compelled to adopt a ten-hour law. The law securing the weekly payment of wages has been extended to include all joint-stock associations, and its violation has been made a crime. The right to use labor labels has been secured to labor organizations. Elaborate provisions have been enacted for the security of employees in factories and stores and for their better treatment. The mechanic's lien law has been amended so as to prefer all labor for daily and weekly wages before all other claimants, without reference to the time when such laborers file their notices of lien. Subletting of contracts has been absolutely forbidden without the written consent of the responsible awarders. Qualified engineers are now alone permitted to run stationary engines in New York city."

In making nominations for Governor, the names of Frank S. Black and Theodore Roosevelt were presented, and the ballot showed a preference for Roosevelt, who received 753 votes against 218 for Black. The remainder of the ticket named was: Lieutenant Governor, Timothy L. Woodruff; Comptroller, William J. Morgan; Secretary of State, John T. McDonough; State Treasurer, John B. Jaekel; State Engineer, Edward A. Bond; and Attorney-General, John C. Davies.

Subsequently a new State committee, consisting of one member from each of the 34 congressional districts, was formed, and Benjamin B. Odell, Jr., was chosen as its chairman.

The Democratic State Convention was held in Syracuse on Sept. 28-29. It was called to order by Elliot Danforth, chairman of the State Committee, who announced George M. Palmer as temporary chairman. The convention adjourned over night and a permanent organization was effected, with Frederick C. Schraube as chairman. A platform was adopted containing the following:

"We rejoice that the Democracy has been connected with every honorable and creditable step in the war, and with nothing that is dishonorable or discreditable. The scandalous abuse by the President of his power of appointment in scattering army commissions among inexperienced and incompetent civilians, as reward to personal favorites, and almost to the exclusion of experienced officers in the service, is largely accountable for the fearful sufferings and the appalling loss of life among the gallant soldiers, that have brought disgrace upon the Administration and a sense of shame to the nation.

"Reform in the canal management of the State is the supreme issue of the hour. No squandering of public moneys, no more millions to be stolen, wasted, or needlessly expended, as reported by a Republican investigating commission to have occurred with the \$9,000,000 canal improvement fund; all public contracts to be fairly and honestly awarded

to the lowest *bona-fide* bidder; no special privileges to pet surety companies favored by political influence.

"We demand the restoration of the National Guard to the high standard of efficiency which under Democratic Governors was long enjoyed; no more "Tillinghastism" incompetency or red tape in the Adjutant General's office; a capable Adjutant General and a reorganization of the National Guard are imperatively demanded.

"We demand just and equal taxation; no tax-dodging. We denounce all attempts to evade the burdens of taxation upon personal property by pretended changes of residence or otherwise under the Constitution and laws of our State."

As candidates for the governorship, the following names were presented: James K. McGuire, John B. Stanchfield, Robert C. Titus, and Augustus Van Wyck; and the result of the ballot was: Van Wyck, 351; Stanchfield, 41; Titus, 39; and McGuire, 19 votes. The remainder of the ticket was as follows: Lieutenant Governor, Elliot Danforth; Secretary of State, George W. Batten; Comptroller, Edward S. Atwater; Treasurer, Elliott P. Norris; Attorney-General, Thomas F. Conway; and State Engineer and Surveyor, Martin Schenck.

A new State committee, consisting of one member from each of the 50 senatorial districts, was formed, and Frank Campbell chosen as its chairman.

Owing to the failure of this convention to reaffirm the National platform adopted by the Democratic party in Chicago, in 1896, certain Silver Democrats met in New York city on Sept. 30, and under the chairmanship of Henry M. McDonald, President of the New York Bimetallic League, named the following ticket: Governor, Henry George; Lieutenant Governor, Elliot Danforth; Secretary of State, Gideon J. Tucker; Comptroller, John T. McDonough; Treasurer, H. C. Caton; Attorney-General, Ole F. Snyder; and State Engineer and Surveyor, James A. Lee. Subsequently Mr. George declined to serve, and Mr. McDonald was chosen to succeed him. There were also tickets in the field representing the Prohibition, Socialist-Labor, and Citizens' Union parties.

* The election, on Nov. 8, resulted in the success of the Republican ticket, with pluralities ranging from 17,786 for Governor to 8,664 for Treasurer. The average total number of votes cast was 1,359,190, and of these Mr. Roosevelt received 661,707. Much delay in canvassing the final results was due to the soldiers' and sailors' vote. The State Board met on Dec. 29, and declared the Republican candidates elected. According to this report, 4,503 ballots were cast by the military, the preponderance of which was in favor of Mr. Roosevelt.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, Robert A. Van Wyck (salary, \$15,000); President of the Council, Randolph Guggenheimer (salary, \$5,000); Borough Presidents, Manhattan, Augustus W. Peters (salary, \$5,000), who died on Dec. 29, but his place was not filled till after the new year; Brooklyn, Edward M. Grout (salary, \$5,000); Bronx, Louis F. Haffen (salary, \$5,000); Queens, Frederick Bowley (salary, \$3,000); and Richmond, George Cromwell (salary, \$3,000), all of whom are Tammany Democrats and took office on Jan. 1, 1898. Also there are the following county officers: County Clerk, William Sohmer (salary, \$15,000); Sheriff, Thomas J. Dunn (salary, \$12,000 and half the fees); and Register, Isaac Fromme (salary, \$12,000), all of whom are Tammany Democrats and took office on Jan. 1, 1898.

Finances.—The conditions of the debts of the city of New York including the boroughs of Manhattan, the Bronx, Brooklyn, Queens, and Richmond, Jan. 1, 1892, is shown in the accompanying table:

A. FUNDED DEBT OF THE CITY OF NEW YORK AS NOW CONSTITUTED, ISSUED SUBSEQUENT TO JAN. 1, 1898.

1. Payable from the sinking fund of the city of New York under the provisions of section 206 of chapter 378 of the Laws of 1897....	\$17,966,817 24	
2. Payable from the water sinking fund of the city of New York under provisions of section 10, Article VIII, of the Constitution of the State of New York, and under section 208 of chapter 378 of the Laws of 1897....	3,150,000 00	
3. Payable from taxation....	8,179,665 59	
4. Payable from assessments and the city treasury.....	868,424 08	
		\$30,164,906 91

B. FUNDED DEBT OF THE CITY OF NEW YORK AS CONSTITUTED PRIOR TO JAN. 1, 1898, ISSUED PRIOR TO THAT DATE.

Boroughs of Manhattan and the Bronx.

1. Payable from the sinking fund for the redemption of the city debt (first lien) under ordinances of the Common Council.....	\$1,865,900 00	
2. Payable from the sinking fund for the redemption of the city debt (second lien) under the provision of section 213 of chapter 378 of the Laws of 1897.....	9,700,000 00	
3. Payable from the sinking fund for the redemption of the city debt under the provisions of section 229 of chapter 378 of the Laws of 1897.....	112,130,894 70	
4. Payable from the sinking fund for the redemption of the city debt under the provisions of section 1 of chapter 79 of the Laws of 1889....	9,823,100 00	
5. Payable from the sinking fund for the redemption of the city debt No. 2 under the provisions of the constitutional amendment adopted Nov. 4, 1884, and of section 10, Article VIII, of the Constitution of the State of New York.....	41,977,000 00	
6. Payable from taxation....	35,819,402 87	
7. Payable from assessments and the city treasury.....	10,600,536 21	
		221,916,333 78*

C. FUNDED DEBT OF CORPORATIONS IN THE BOROUGH OF BROOKLYN, INCLUDING KINGS COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

City of Brooklyn, including Annexed Towns.

1. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 488 of the Laws of 1860 and amendments thereto.....	\$8,697,000 00	
2. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 572 of the Laws of 1880 and chapter 443 of the Laws of 1881.....	2,350,000 00	
3. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 648 of the Laws of 1895.....	7,065,567 41	
4. Payable from the water revenue under the provisions of chapter 366 of the Laws of 1859, and acts amendatory thereof and supplementary thereto....	16,800,749 76	
5. Payable from taxation....	24,861,543 73	
6. Payable from assessments	6,150,614 00	
<i>Kings County.</i>		
7. Payable from taxation....	14,575,392 83	
		80,500,867 73

D. FUNDED DEBT OF CORPORATIONS IN THE BOROUGH OF QUEENS ISSUED PRIOR TO JAN. 1, 1898.

1. Payable from the special sinking fund of Long Island City for the redemption of revenue bonds under the provisions of chapter 782 of the Laws of 1895.....	\$342,000 00	
2. Payable from sinking fund under the provisions of chapter 122 of the Laws of 1894.....	35,000 00	
3. Payable from water revenue.....	751 500 00	
4. Payable from taxation....	6,064,500 02	
5. Payable from assessments	357,221 20

E. FUNDED DEBT OF CORPORATIONS IN THE BOROUGH OF RICHMOND, INCLUDING RICHMOND COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

Payable from taxation.....	\$3,136,798 20	
		3,136,798 20
Total funded debt.....		\$343,269,127 84

II. TEMPORARY DEBT.

Issued in anticipation of taxes of 1898.....	\$7,600 00	
Total bonded debt.....		7,600 00
		\$343,276,727 84

SUMMARY.

Total gross funded debt.....		\$343,269,127 84
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 1.....	\$76,215,866 68	
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 2.....	15,869,678 81	
Less amount held by the commissioners of the sinking fund of the city of Brooklyn.....	6,970,746 38	
The bonds held by the special sinking fund of Long Island City for the redemption of revenue bonds have not yet been approved and are not included in the above statement.		99,056,291 87
Net funded debt.....		\$244,212,825 97
Revenue bonds.....		7,600 00
Net bonded debt.....		\$244,220,425 97

In the year bonds and corporate stock of the city were issued as follow: For public buildings, \$4,755,293.31; for public parks, \$2,355,050.38; for bridges, \$3,378,844.83; for repavement of roads and drives, \$1,072,740; for water supply, \$3,150; for docks, \$3,675,294.54; for condemnation of rear tenements, \$33,045.78; for street openings, \$2,696,548.50; for local improvements, \$868,424.08; special revenue bonds, \$8,179,665.59; a total of \$30,164,906.91. The tax rate for Manhattan and the Bronx was at the rate of \$2.01 for each \$100 of assessment. This was lower than that of 1897, which was \$2.10, and also lower than that of 1896, which was \$2.14.

Constitutional Limit of the City Debt.—The question of the limit of the city debt was agitated soon after Mayor Van Wyck took office, and the Comptroller was ordered to report on its condition. He presented, on April 22, an elaborate statement in which he showed that the assessed valuation of real estate in the former city of New York on Dec. 31, 1897, was \$1,787,186,791, and the net bonded debt, excluding revenue bonds of 1897 and deducting securities held by the sinking fund, was \$138,855,361.27, being \$39,863,317.83, less than 10 per cent of the assessed valuation. By the consolidation effected by the charter there was added to the city territory, of which the assessed valuation of real estate was \$675,948,896 and the net bonded in-

* Of this amount \$9,383,700 was originally issued as debt of the county of New York prior to the consolidation of the county and city of New York.

debtcdness was \$91,447,311.81, an excess of the 10 per cent. of \$23,852,422.21. The result of consolidation, therefore, was the creation of a city the net bonded indebtedness of which was \$16,010,895.62, less than 10 per cent. of the assessed valuation of its real estate. A summary of his figures shows:

ITEMS.	Former city.	New territory.
Net bonded debt.....	\$138,855,361 27	\$91,447,311 81
Contract liability.....	25,122,351 56	1,041,804 74
For lands acquired.....	37,765,813 06	182,339 72
For judgments.....	1,200,000 00	891,832 94
	\$202,943,525 89	\$93,563,289 21
Ten per cent. of assessed valuation of real estate.....	178,718,679 10	67,594,889 60
Excess over constitutional limit.....	\$24,224,846 79	\$25,968,399 61
Aggregate excess for new city on Jan. 1.....		50,193,246 40

Subsequently these figures were materially modified by opinions of the Corporation Counsel, which enabled him to exclude from statements of the city debt liabilities chargeable against the fund for street and park openings and certain contracts based on uncertain quantities of work to be performed, until, according to the Mayor's message presented at the beginning of the new year, "the excess of the city's indebtedness over its constitutional limit on Jan. 1, 1898, was found to be \$13,566,875.69."

Board of Estimate and Apportionments.—This body consists of the Mayor, the President and Secretary of the Department of Taxes and Assessments, the Comptroller, President of the Council, and the Corporation Counsel. The city tax budget for 1899 was passed by this body on Oct. 30, and was adopted by the Municipal Assembly on Nov. 15. It included the following items: The Mayoralty, \$63,755; Municipal Assembly and City Clerk, \$200,052; Department of Finance, \$779,391; interest on city debt, \$9,278,385; interest on bonds and stocks to be issued after Oct. 10, 1898, and in 1899, \$1,277,393; interest on revenue bonds of 1899, \$875,000; redemption of the city debt, \$9,412,950; installments payable in 1899, \$2,633,110; rents, \$291,761; borough officers, \$51,300; the Law Department, \$399,758; Board of Public Improvements, \$239,500; Department of Highways, \$2,520,099; Department of Sewers, \$787,479; Department of Bridges, \$406,522; Department of Public Buildings, Lighting and Supplies, \$3,617,804; Department of Water Supply, \$1,450,817; Department of Parks, \$1,729,235; Department of Public Charities, \$1,941,215; Department of Correction, \$704,065; Department of Health, \$1,110,538; Police Department, \$11,182,531; Bureau of Elections, \$615,065; total, Police Department, \$11,797,596; Department of Street Cleaning, \$4,575,800; Fire Department, \$4,443,664; Department of Buildings, \$523,265; Department of Taxes and Assessments, \$329,200; Board of Assessors, \$35,700; Department of Education, \$13,415,053; Coroner's Office, \$165,150; for library purposes, \$226,564; courts, \$967,500; charitable institutions, \$1,784,846; miscellaneous, \$4,990,513; grand total, city budget, \$83,710,793; New York County, \$6,961,101; Kings County, \$2,326,098; Queens County, \$403,806; Richmond County, \$118,283; total of counties, \$9,809,288; grand total, city and counties, \$93,520,082.

The total budgets for all boroughs of New York city for 1898 aggregated \$63,669,103.23. The budgets for 1899 therefore show an increase of \$29,850,978.80.

Taxes and Assessments.—These are under the charge of a board consisting of Thomas L. Feitner, President; Edward C. Sheehy, Arthur C. Salmon,

Thomas J. Patterson, and William Grell; office, 280 Broadway. They report the total valuations of real and personal property, as assessed for taxation in 1898, at \$2,365,490,372, against \$2,168,635,856 in 1897, showing an increase of \$196,854,516. The assessed valuation of real estate is \$1,856,467,923, against \$1,787,186,791 in 1897. The assessed valuation of personal property is \$509,022,449, against \$381,449,065, distributed as follow: Resident, \$325,892,478; non-resident, \$108,105,545; and shareholders of banks, \$75,024,426. The increase under the classifications of resident and non-resident is \$134,485,344. There is a decrease in the assessed valuation of the shareholders of banks of \$6,911,960, leaving the net increase \$127,573,384. Among the largest personal assessments were the following: William W. Astor, \$2,000,000; Russell Sage, \$500,000; Cornelius Vanderbilt, \$400,000; William K. Vanderbilt, \$400,000; Adrian Iselin, \$400,000; John Jacob Astor, \$250,000; Frederick W. Vanderbilt, \$200,000; George W. Vanderbilt, \$200,000; Andrew Carnegie, \$150,000; Robert Bonner, \$125,000; Caroline W. Astor, \$100,000; Morris K. Jesup, \$100,000; Joseph H. Choate, \$100,000; George Ehret, \$75,000; Jacob Ruppert, \$50,000; Theodore Roosevelt, \$50,000; and Henry Clews, \$50,000.

Surrogates' Court.—There are two surrogates in New York City, each of whom receives a salary of \$15,000, and serves for a term of fourteen years. The incumbents during the year were Frank T. Fitzgerald and John H. V. Arnold. There were 1,955 wills offered for probate in 1898, and of this number 1,726 were admitted to probate. Of the 123 wills contested, 104 have been decided. The surrogates heard 3,801 motions and held 336 hearings in will contests, rendering 2,953 decisions.

Public Improvement.—The Board of Public Improvements consists of the president of the board, the Commissioners of Water Supply, of Highways, of Street Cleaning, of Sewers, of Public Buildings, Lighting and Supplies, and of Bridges, each of whom is appointed for a term of six years. The president of the board receives a salary of \$8,000, and the other members \$7,500 each. According to a report presented toward the close of the year, there are in Manhattan nearly 400 miles of paved streets, and 136 miles of these are paved with asphalt, nearly all of which has been laid since 1889. The following shows to what extent the different kinds of paving material are in use: With specification granite, 156.04 miles; with square granite, 13.19; with specification trap, 42.66; with Belgian trap, 32.49; with sheet asphalt, 130.31; with block asphalt, 5.83; with wood, 0.08; and with macadam, 18.94; total, 399.54. The longest stretch of asphalt in Manhattan is on Eighth Avenue, and runs from Thirteenth to One Hundred and Fifty-fifth Street, more than 7 miles. In some places it is 48 feet wide, and in others 60 feet.

Shortly before the opening of the campaign certain documents prepared by the Commissioners of Accounts were presented to the Grand Jury by the District Attorney, in which it was charged that the Department of Public Works, by letting out contracts for the paving of the streets with asphalt, contrary to the requirements of the law, had caused large losses to the city. The charges were investigated and then dismissed by the Grand Jury, by a vote of 17 to 5. Much comment was elicited toward the end of the year by the fact that not a single new street improvement in the entire Borough of Bronx had been initiated during the year, although the cost of running the several departments, which were formerly embraced in one department, was much greater. The Commissioner of Street Improvements was paid a salary of \$5,000, and was an elective officer, responsible directly to the people.

The entire salary list of his office was about \$30,000, while the salary list now of the different departments amounts to more than \$75,000 a year, not to speak of the engineering and other forces which are distributed among the different departments and which were formerly under one head.

Parks.—This department is under the charge of three commissioners, one having jurisdiction in Manhattan and Richmond, one in Bronx, and one in Brooklyn and Queens, each of whom serves for six years and receives a salary of \$5,000. During 1898 the commissioners were: George C. Clausen, Manhattan and Richmond; George V. Brower, Brooklyn and Queens; and August Moebns, Bronx. The most important item of the year's work by this department was the opening of the Harlem Speedway on July 2. It is $2\frac{1}{2}$ miles long, extending from One Hundred and Fifty-fifth Street, whence there is a down grade to the Harlem river, to Dyckman Street. The width of the Speedway varies from 100 to 150 feet. The roadway is from 52 to 95 feet wide, and the sidewalks from 10 to 20 feet wide. The surface of the roadway is macadam from One Hundred and Fifty-fifth Street to the first subway, and is then sandy loam to Dyckman Street. The road passes under both High Bridge and Washington Bridge to a point opposite Washington Heights, where it swings with an easy curve to Dyckman Street. A short distance beyond the old Jumel mansion there is an underground passage by which pedestrians may pass from one side of the drive to the other, and there are similar underground passages north of High Bridge and Washington Bridge. The walks on either side of the road are of asphalt or gravel. Just north of High Bridge the westerly walk is 20 feet higher than the driveway, and an excellent view can be had from this point of the horses speeding below. The spaces between the road proper and the sidewalks are filled with grass plots, and on these it is proposed to plant shade trees. In the building of the Speedway many difficult problems of construction were met with. In 1895 the mud far below the water level shifted, rupturing the masonry and causing 500 feet of the cribwork to move out of position. Thousands of tons of rock also fell upon the driveway from the side hills. The work of the contractors embraced the excavation of 475,000 cubic yards of earth and rock. One million cubic yards of filling material were used, and 750,000 cubic yards of mud were dredged out for the wall and cribwork. The total cost of the driveway has been \$3,075,000.

A new recreation pier at the foot of East Twenty-fourth Street, and an old one at the foot of Third Street, were opened on May 28. Also a recreation pier at the foot of East One Hundred and Twelfth Street was completed.

Zoological Park.—The development of this park is under the care of the New York Zoological Society, of which Levi P. Morton is president. Early in the year, the necessary \$100,000 having been raised by the society, the \$125,000 given by the city contingent upon the securing of the first-named sum became available, and the erection of buildings and other accommodations for animals was begun on Aug. 15. At the annual meeting it was announced that there are now under construction 4 buildings, 12 large dens for carnivorous animals, and other installations. The winter house for birds was receiving its roof, the cost of which, when completed with cages, is to be \$16,000. The reptile house was the most expensive building under construction, and its cost, when completely equipped with cages, was to be about \$40,000. It is intended that all these features shall be in readiness by the end of May, 1899. The society has expended in buildings and other installations \$16,977, and in

temporary roads, drainage, grading, forestry work, engineering, and maintenance, \$2,754; total, \$19,731. The total cost of improvements under construction is estimated at \$82,494. The treasurer reported the receipts to be \$116,070 and the total expenditures \$27,937, with a balance of \$88,133.75 in the treasury. From new memberships the society received \$4,100; from 15 life members, \$3,000; from 9 founders, \$45,600; from associate founders, \$5,950; from patrons, \$12,800; and from others, \$5,600. The membership is now 636.

Department of Health.—The collection of vital statistics is under the care of a board consisting of the president of the Board of Health, the health officer of the port, and three commissioners, one of whom must have been for five years a practicing physician. The officials in 1898 were as follow: Nathan Straus, who resigned early in the year and was succeeded by Michael C. Murphy, president; Dr. William T. Jenkins, Dr. John B. Cosby, health officer, Dr. Alva H. Doty, and the president of the Board of Police, Bernard J. York. The secretary of the board is Emmons Clark, and the office is in the Criminal Court Building. The vital statistics were as follow: Deaths under one year, Manhattan and Bronx, 10,165; Brooklyn, 5,587; Queens, 708; Richmond, 297; total, 16,757. Deaths under five years, Manhattan and Bronx, 15,571; Brooklyn, 8,431; Queens, 896; Richmond, 427; total, 25,325. Total deaths, Manhattan and Bronx, 40,354; Brooklyn, 21,853; Queens, 2,561; Richmond, 1,302; total, 66,073. Total reported births, Manhattan and Bronx, 53,358; Brooklyn, 21,395; Queens, 2,923; Richmond, 1,356; total, 78,932. Total reported marriages, Manhattan and Bronx, 20,860; Brooklyn, 7,129; Queens, 636; Richmond, 342; total, 28,967. Total reported stillbirths, Manhattan and Bronx, 3,203; Brooklyn, 1,888; Queens, 200; Richmond, 85; total, 5,376. Death rate per 1,000 living, Manhattan and Bronx, 19.70; Brooklyn, 18.26; Queens, 20; Richmond, 20.05; average, 19.21.

The principal causes of death were the following: Phthisis, 7,619; pneumonia, 7,527; diarrhoeal diseases, 4,845; Bright's disease and nephritis, 4,688; diarrhoeal diseases under five years, 4,355; heart disease, 4,090; bronchitis, 1,910; diphtheria, 1,461; whooping cough, 715; scarlet fever, 702; typhoid fever, 671; measles, 648; influenza, 369; cerebro-spinal meningitis, 356; croup, 317; malarial fever, 251; smallpox, 1; yellow fever, 1. Among the deaths by violence were the following: Accident, 2,317; suicide, 694; sunstroke, 548; and homicide, 116.

The estimate of the population made by this department is as follows: Manhattan and Bronx, 2,048,830; Brooklyn, 1,197,100; Queens, 128,042; Richmond, 64,927; total, 3,438,899.

Police.—This department is managed by a board of four commissioners appointed by the Mayor for a term of six years, each member of which receives a salary of \$5,000. The board during the year consisted of Bernard J. York, president; John B. Sexton, Thomas L. Hamilton, removed on May 21, and succeeded by Jacob Hess, and William E. Philips, removed on May 21, and succeeded on June 30 by Henry E. Abell. The chief of police on Jan. 1 was John McCullagh, whose appointment as acting chief was made permanent on Jan. 7, and who was retired on May 21. William S. Devery, deputy chief, was made acting chief on May 21, and full chief on June 30. The Central Office is at 300 Mulberry Street. The force on Dec. 31 consisted of a chief, 5 deputy chiefs, 10 inspectors, 72 captains, 324 sergeants, 88 detective sergeants, 361 roundsmen, 6,398 patrolmen, 153 doormen, 21 surgeons, 38 matrons, a superintendent of telegraphs, an assistant superintendent of telegraphs, 15 telegraph operators, 7 linemen, a battery man, and a messen-

ger. The number of arrests made in Manhattan and Bronx during the year was 100,738. Of these, 19,545 were women and 81,193 men. The arrests included 12 for arson; attempted suicide, 251 men and 201 women; burglary, 793, including 5 women; disorderly conduct, 16,290 men and 8,806 women; intoxication, 14,174 men and 4,727 women; grand larceny, 1,726 men and 474 women; petty larceny, 3,382 men and 538 women; murder, 2 men; homicide, 198 men and 6 women; robbery, 270 men and 27 women; vagrancy, 5,019 men and 710 women; excise violation, 1,719 men and 42 women; violation of corporation ordinances, 11,333 men and women. The Detective Bureau made 2,585 arrests and recovered property valued at \$250,487.20. The bureau secured 438 convictions of criminals, whose sentences in prison aggregate seven hundred and eighty-four years. The police found 186 men and 25 women dead. Notice was received of 46 runaway boys and 12 runaway girls. The number of lost children received at headquarters was 2,222 boys and 1,137 girls. The number of foundlings picked up was 95 boys and 76 girls and 4 colored boy babies.

Education.—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor, and receive no salary. The president of the board is Charles B. Hubbell, who was re-elected temporarily on Feb. 1, and permanently on Feb. 21. The city superintendent is William H. Maxwell, and the headquarters are at 146 Grand Street. According to the annual school report for the year ending July 31, 1898, the number of children from five to eighteen years in the entire city was 702,162, giving Manhattan and Bronx 382,000; Brooklyn, 276,662; Queens, 30,000; and Richmond, 13,500. The enrollment of pupils between five and eighteen years of age in all the public schools in Manhattan and Bronx was 270,501; in Brooklyn, 163,636; in Queens, 24,049; and in Richmond, 10,145; a total of 468,329. The expenditures were: Manhattan and Bronx, all school purposes, \$5,926,544.03; average for each pupil, \$21.89; Brooklyn, \$3,694,615; average for each pupil, \$22.45; Queens, \$600,000; average for each pupil, \$24.10; Richmond, \$355,611.67; average for each pupil, \$34.49; total for the entire city, \$10,576,770.80; average, \$22.48. In Manhattan and Bronx the aggregate daily attendance of pupils was 36,233,327, and over eighteen years 15,350; in Brooklyn it was 23,019,422, and over eighteen 154,169; in Queens, it was 3,655,964, and over eighteen 5,700; in Richmond it was 1,352,400, and over eighteen 1,562. The licensed teachers employed were: Manhattan and Bronx, 467 male and 4,673 female; Brooklyn, 180 male and 3,309 female; Queens, 42 male and 563 female; Richmond, 33 male and 183 female; making totals of 722 male and 8,730 female teachers, and a grand total of 9,542 teachers. In Manhattan and Bronx there were 162 brick and 8 frame school buildings. Brooklyn had 106 brick and 23 frame schoolhouses. Queens had 26 brick, 2 stone, and 49 frame buildings. In Richmond there were 10 brick and 19 frame schoolhouses. In Manhattan and Bronx there were 3 high schools, with 66 instructors and 1,282 male and 1,309 female pupils enrolled. In Brooklyn there were 4 high schools, with 170 instructors and 2,455 male and 4,613 female pupils. Queens showed 6 high schools, with 24 instructors and 221 male and 276 female pupils. Richmond had 3 high schools, with 11 instructors and 74 male and 117 female pupils. Brooklyn and Queens alone were credited with teachers' training schools and classes. Brooklyn had 12, with 1 male and 295 female teachers, and Queens had 1, with 35 female teachers. Manhattan and Bronx had the largest number of kindergartens, 35, with 41 instructors

and 2,643 pupils, quite evenly divided as to sex. Brooklyn had 18, with 1,240 pupils; Queens had 6, with 453 pupils; and Richmond had 2, with 177 pupils. Manhattan and Bronx had 34 evening schools, with 601 teachers and 29,552 pupils; Brooklyn had 16, with 234 teachers and 9,689 pupils. The statistics of the department showed that the amount spent was \$16,028,801.54. For the salaries of regular day-school teachers \$6,959,400.45 was spent; for kindergarten teachers, \$27,145.80; and for night schools, \$211,835.64. The amount spent for libraries was \$48,146.51. The sum of \$647,979.18 was spent for free text-books for the poor, which is nearly double the total amount spent in the territory now included in the city in any preceding year. The sum of \$6,425,273.84 was spent for school sites and houses. The report says that 39 school buildings were in course of construction, to have a total seating capacity of 50,000. The city also owns 22 school sites on which buildings are to be erected, which will accommodate 39,000 pupils. Proceedings are under way for acquiring 46 additional lots for schools in Manhattan and Bronx, and the board has approved the purchase of 14 other lots.

The success which attended the vacation schools and playgrounds kept open in the city last summer after the regular school year had ended has resulted in the approval of the idea by the municipal authorities. For the coming year the Board of Estimate and Apportionment appropriated \$10,000 for the maintenance of the vacation schools and \$15,000 for the playgrounds.

Adult education is provided by courses of lectures to the people, which are given during the period from October to May, in the evenings, in school-houses and halls. Lectures are given in forty-five places; about two hundred lecturers are engaged, eighteen hundred lectures given, and the total attendance for the season about five hundred thousand. The amount appropriated for the year 1898 for the free lectures is \$60,200 for the Boroughs of Manhattan and the Bronx.

Rapid-Transit Railroad Commission.—This body consists of Alexander E. Orr, president; Woodbury Langdon, John Claflin, George L. Rives, John H. Starin, and Charles S. Smith, together with the Mayor and Comptroller, *ex officio*. The office is at 256 Broadway. On Jan. 12 the Metropolitan Street Railway addressed a communication to the commission, withdrawing from further consideration the construction of an underground road as projected by the commission and approved by the Supreme Court. Previously, however, the Manhattan Elevated Railway Company presented a system of extension of the elevated roads for the consideration of the commissioners, in which it was maintained that the company would solve the problem of rapid transit. The commissioners took expert opinion on the plan submitted, and then decided that the plan was advantageous only from the view point of the elevated company. The Manhattan Elevated Railway Company subsequently announced their intention to introduce electricity on their system, and that they would "proceed to effect a general installation with as little delay as possible." Meanwhile a petition was presented to the Supreme Court, asking for some modification of the decision relative to the bond to be required under section 34 of the rapid-transit act. In reply to this petition the Supreme Court, on March 18, declared a decision modifying its previous decision requiring a continuous bond of \$15,000,000 to be given by the contractors for a term of fifty years, by stipulating that \$14,000,000 of that bond be conditioned upon the construction and equipment of the underground railway, and that \$1,000,000 should be a continuous

security applicable to construction, equipment, rents, maintenance, and operation. On Jan. 26 a communication was sent to the Manhattan Elevated Railway Company asking that incorporation to present separate formal applications for such additional franchises and facilities as may be desired in behalf of the Manhattan Company and to state specifically the exact routes upon which it desired to erect extensions and the form of structure to be used upon each route; what additional tracks it desired to erect upon streets and public places already occupied by its railroad; within what time it would construct such additional structures as may be specified and authorized by the board, and such further facts as may be pertinent to such applications. A prompt reply was received and four contemplated routes were outlined, including a West Street line with connection from City Hall to the west side and extensions east and west to King's Bridge and Two Hundred and First Street. On April 11 the Rapid Transit Board served on the Manhattan Company 7 separate documents, tendering 7 separate franchises, and requested that within thirty days the company should accept or reject them. An answer was received on May 6, in which the franchises as proffered were rejected on the ground that the terms were too onerous to be considered. The proposed franchise to build a tunnel under Amsterdam Avenue the Manhattan Company would not accept. Also for four of the lines for which 5 per cent. was asked the Manhattan Elevated Railway Company offered half of 1 per cent. Further correspondence was held, but without result. On May 21 the commission addressed the Manhattan Elevated Railway Company a letter which contained the following statement: "Unless your company is willing to submit to our board a counter-proposition which shall be complete in all its details, and which shall thus show exactly what benefit the community may expect to receive from your action, it would appear to be futile to continue the negotiation."

East River Bridge.—The commission having in charge the building of a bridge across the East river from Delancey Street near Grand Street, Manhattan, to South Fifth Street, Brooklyn, was abruptly removed by Mayor Van Wyck on Jan. 19, and a new commission consisting of Lewis Nixon, Smith E. Lane, and James W. Boyle, Manhattan; Julian D. Fairchild, John W. Weber, and Thomas S. Moore, Brooklyn, was appointed. The old commissioners applied to the courts for relief, contending that they were illegally removed, but after one favorable decision in their behalf by a lower court the Court of Appeals rendered a decision in which it was held that Mayor Van Wyck is the successor of the former Mayor of Brooklyn, as well as of his predecessor in old New York, and that under the new charter he has the power to remove public officers at pleasure within six months after the beginning of his term of office. Up to Dec. 31, 1897, the commission had acquired title to property in the cities of New York and Brooklyn requisite for the foundations of the towers and anchorages of the bridge to the amount of \$368,956, original cost of the several pieces of property, and \$8,986, additional expenses.

During the year the work of completing the trolley-car service on the New York and Brooklyn Bridge was continued. On Feb. 16 the cars of five Brooklyn lines were running on the bridge. In March an agreement was made between the Long Island Railroad and the Brooklyn Elevated Railroad, by means of which the trains of the Long Island Railroad were enabled to cross the bridge. The connection between the tracks of the companies was made by means of inclined planes at Flatbush

Avenue and at Atlantic Avenue near Chestnut Street. This agreement became operative on June 18, when a train of cars left the Manhattan end of the bridge under electric-motor power, and proceeded to the Brooklyn side, where a regular engine was attached, and then to Manhattan Beach, which was reached in thirty-seven minutes.

Public Library.—A special act of the Legislature in 1897 authorized the city to construct a library at a cost of \$2,500,000, and a plan for the building was accepted by the library trustees, which plan was also approved by the Board of Park Commissioners (see "Annual Cyclopædia" for 1897). Early in the year an effort was made to secure from the Board of Estimate and Apportionment a bond issue for \$150,000 to remove the old reservoir and to prepare the site for building, but it received an abrupt check from the Mayor, who decided that no bond issues would be made, as the debt of the city had already exceeded its constitutional limit. The matter was again agitated in the autumn, but the issue of revenue bonds for the library was deemed not advisable for the reason that the city "is not in a financial condition to warrant any new bond issue until next year at the earliest."

Art Commission.—A Municipal Art Commission, consisting of Charles T. Barney, Henry E. Howland, Samuel P. Avery, John La Farge, Daniel C. French, and Charles E. McKim, was named by Mayor Van Wyck on Feb. 14. The Mayor, the President of the Metropolitan Museum of Art, the President of the New York Library (Astor, Lenox, and Tilden Foundations), and the President of the Brooklyn Institute of Arts and Sciences are *ex-officio* members of the commission. This commission has extensive powers. Without its approval no work of art can become the property of the city by gift or purchase, and none can be placed upon city property. The expression "work of art" is construed by the charter to include "oil paintings, mural decorations, stained glass, statues, bas-reliefs, or other sculptures, monuments, and arches." At the discretion of the Mayor or of the Municipal Assembly the commission may exercise like powers over designs for municipal buildings, bridges, gates, lamps, etc., to be erected on city property. The commission met on Feb. 28 and organized by the election of Mr. Barney as president, Mr. Marquand as vice-president, and Mr. Healy (President of the Brooklyn Institute) as secretary.

Monuments.—In comparison with previous years very few historical monuments were added to those already in existence. The Lorelei fountain, commemorating the genius of Heinrich Heine (see "Annual Cyclopædia" for 1896 and 1897), was located finally in Hoboken, N. J., permission having been granted by the Common Council of that city on March 31. The monument is to be in Hudson Park, the cost to be \$4,000, raised by subscription among the German-American residents of that city.

On Oct. 31 a beautiful memorial to Richard M. Hunt was presented to the city by the Hunt Memorial Committee (see article FINE ARTS).

The Municipal Art Commission met on Dec. 19 and selected Mount Tom, a little hill in Riverside Park, at the foot of Eighty-third Street, as a site for the Soldiers' and Sailors' Monument. The project for the monument has been open ever since the Legislature passed a bill authorizing the city to spend \$250,000 for its erection.

On Dec. 31 the Park Department received official notice that the Board of Estimate had granted President Clausen's request for \$3,500 to defray the expense of the erection of the Washington-Lafayette bronze. The statue was the gift of Charles Broadway Rouss. It was accepted by the Art Commission and the Park Board, and a site for it

was selected at One Hundred and Fourteenth Street and Morningside Avenue. The statue is of bronze, by Bartholdi, and is a duplicate of that erected in Paris. The figures are ten feet in height and represent Lafayette bringing Washington the news that France has sent help to the American patriots. The statue will rest on a granite base, the whole to be 35 feet in height. The statue was presented to the city through the Mayor on Feb. 18.

Charter Day.—A committee of citizens who had undertaken to arrange for the establishment of an annual "Charter Day" celebration, in commemoration of the consolidation of the territory comprising New York, met on Feb. 1. Various plans were discussed and the industrial and commercial organizations of the city were invited to join in the celebration. Subsequently a committee of 420 persons was appointed by Mayor Van Wyck, of which William De H. Washington was chosen president and J. G. Garnett secretary. An appropriation of \$50,000 from the city funds was promised and an elaborate programme was arranged. The Legislature passed a bill making May 4 a legal holiday; but as the time approached the impending war with Spain became obvious, and it was voted to defer celebration until after peace had been declared.

Later in the year the project of honoring the returning military, both of the army and navy, was taken up by this committee. Sept. 17 was chosen as the date and the consent of President McKinley for a parade of the military was obtained, the naval parade having taken place on Aug. 20. Finally it was proposed to review the soldiers in camp at Montauk Point as they returned to their homes through New York, when they were disbanded, but owing to their weak physical condition the celebration was abandoned.

Naval Parade.—On Aug. 16 the City Council and Board of Aldermen, taking into consideration that the Government of the United States had directed that the cruisers and battle ships of the fleet under Rear-Admiral Sampson, with their officers, sailors, and marines, should come to New York, adopted the following resolution:

"That his Honor the Mayor of the city of New York be, and he is hereby, requested to invite the people of the United States to visit this city on Saturday next to receive the victorious squadron of Admiral Sampson on its return from Cuban waters, and to give these returning heroes such a welcome as will in a measure express the immense gratitude that pervades the entire American people; and he is hereby requested to name a committee of 100 citizens to arrange for the reception of the home-coming fleet."

In accordance with the foregoing resolution the Mayor appointed a committee of 100 citizens, who met at City Hall on Aug. 18 and elected the Mayor as chairman, with former Gov. Roswell P. Flower, former Gov. Levi P. Morton, and Gen. Louis Fitzgerald as vice-chairmen, and Alfred M. Downes as secretary. A committee of arrangements and other sub-committees were promptly appointed, who immediately took up the various lines of work assigned to them.

It was not till 5.40 A. M. on the morning of Aug. 20 that the fleet coming from the south was sighted from the Highlands. The sun was hidden by a bank of heavy clouds, but as the light grew stronger the six war ships could be seen sharply outlined against the horizon, with great volumes of smoke behind them. The vessels were in single file, with Admiral Sampson's flagship, the "New York," in the lead. The "Brooklyn" held fourth place in the line. The "Iowa" was second, the "Indiana" third, the "Massachusetts" fifth, and the "Oregon" last. As the Narrows were reached, Fort Hamilton

and Fort Wadsworth fired salutes, which were answered by the fleet. As they approached Tompkinsville they were greeted again by the admiral's salute of 13 guns from the "Texas," which had been at the navy yard, and by the auxiliary cruiser "St. Paul." The fleet slowed down and the "New York" received on board Secretaries Gage, Alger, and Wilson, Attorney-General Griggs, and Postmaster-General Smith, of the President's Cabinet. Scarcely had the little tug pulled away when another approached with the family of Admiral Sampson. Brief greetings were exchanged, and then as the fleet passed up the bay with the flood tide the tug containing Mayor Van Wyck and the Citizens' Committee was reached, and they were soon on the "New York."

Meanwhile more than 200 vessels of all sorts had surrounded the fleet. At exactly 10.40 o'clock the saluting station at Castle William fired a national salute. The ships were close to the Battery, and Hudson river was full of all sorts of craft. Every one of these vessels, from an ocean-going steamship to an antiquated sidewheeler, had a whistle, and every whistle was used. Cheer upon cheer was rolling over the water, and this, added to the din of the saluting cannon and the cannon on yachts, made a combination of noise that was more suggestive of battle than of welcome. Every yacht strung its signal flags from taffrail to truck, and the steamboats and tugs flew all the colors that they had. The flags that attracted most attention were the battle flags that flew at the foremasts and the taffrails of some of the war ships. Slowly up the Hudson came the war ships past the commercial districts, and then the residential portion was reached. Still onward past the Riverside Park, its green black with more than 1,000,000 people, till the guns of ships and batteries fired a salute to the memory of Grant. Then returning down the Hudson to the bay over the same route, the fleet came to anchor off Tompkinsville.

Post Office.—The care of the mails is a Federal charge. The Postmaster is Cornelius Van Cott. The Post Office building is at the junction of Broadway and Park Row. Besides the general post office there are 29 branch offices, of which the one known as Branch S, at the corner of Broadway and Howard Streets, was opened on May 11. During the year there were handled in the mailing and distributing departments 619,941,178 pieces of mail matter, an increase of 40,139,273 over 1897. The total business of the money order department showed an increase of nearly 18 per cent. During the year 833,956 money orders, representing \$11,525,919.66, were sent to Europe, and 190,101 money orders, representing \$4,187,100.37, were received from foreign countries. The total receipts, exclusive of the money-order department, were \$8,560,206.86, an increase of \$406,179.66. The expenses of the office amounted to \$3,405,721.85, giving a net revenue of \$5,154,485.01. During the year more than 300,000,000 stamps, 75,000,000 postal cards, and 50,000,000 envelopes were sold. There were 1,302,000 registered letters and packages mailed, as compared with 1,262,348 in 1897.

Customhouse.—The collecting of the custom duties is under the direction of the national authorities. The Customhouse is in Wall Street, between William and Hanover Streets. The collector during the year was George R. Bidwell. The domestic exports from New York in 1898 aggregated in value \$460,007,000, against \$396,388,942 in 1897. The imports of merchandise were \$416,745,431 in value, as compared with \$466,527,631 for 1897. The duties collected on merchandise in 1898 (excluding miscellaneous receipts) aggregated \$122,103,530.46, against \$119,648,652.79 in 1897. The imports of gold and silver were \$109,-

136,367 in 1898 and \$28,079,302 in 1897. The figures for the "in-transit trade" were as follow: Merchandise, \$28,554,717 for 1898 and \$33,668,039 for 1897; gold and silver, \$2,476,491 in 1898 and \$4,734,340 in 1897; domestic exports of gold and silver, \$44,986,002 in 1898, compared with \$75,237,235 in 1897; foreign exports of gold and silver, \$13,253,617 in 1898 and \$2,293,874 in 1897; the foreign exports of merchandise aggregated in value \$8,650,719 in 1898, against \$8,362,182 in 1897.

Naturalization.—An abstract of the work done in 1897 by the Naturalization Bureau shows that the number of citizens naturalized was 1,602. There were 2,140 petitions for certificates of naturalization filed and 8,034 declarations of intentions to become citizens were made. Duplicates of lost naturalization papers were obtained by 1,548 persons. Germany heads the list with 467 naturalized citizens. Ireland follows with 447; Russia with 189; Austria, 162; England, 84; Italy, 54; Sweden and Norway, 47; Scotland, 32; Canada, 24; Switzerland, 22; Roumania, 20; France, 14; Denmark, 12; Spain, 10; Holland, 6; Turkey, 4, and Wales, Greece, Venezuela, Peru, Australia, Egypt, and Nicaragua, 1 each.

Real-Estate Transactions.—In 1898 there were filed for record 14,627 conveyances of realty, amounting to \$103,742,216, against 14,724 conveyances, amounting to \$109,989,154, in 1897; 16,915 mortgages, amounting to \$233,706,811, were filed, against 15,913 mortgages, amounting to \$210,806,651, for 1897. The total number of building plans filed was 3,313, calling for an expenditure of \$72,661,956, against 3,511 plans in 1897, with expenditure of \$82,401,440. The total amount of alterations was \$6,646,257 in 1898, and \$7,299,404 in 1897. The real-estate auction sales in 1898 amounted to \$28,236,362; in 1897, \$36,162,725.

Political.—The interest in the election in 1898 was mainly on the two nominees for Governor, and the vote for these candidates was as follows: Manhattan and Bronx, Roosevelt 112,084, Van Wyck 172,250; Brooklyn, Roosevelt 82,821, Van Wyck 101,263; Queens, Roosevelt 9,691, Van Wyck 13,002; Richmond, Roosevelt 4,577, Van Wyck 6,723; total, Roosevelt 209,173, Van Wyck 293,179. Plurality for Van Wyck, 84,006. The Democrats elected their candidates for State Senators in Districts 1 and 2, included within Richmond and Queens County. In Districts 3, 5, 6, 7, and 9, in Brooklyn, the Democratic candidates were elected, while in Districts 4 and 8 the Republicans were successful. The senatorial Districts 10 to 22 are included in Manhattan and Bronx, and in these the Democrats were successful in every district except in 15, 19, and 22, in which the Republican candidates were elected, so that out of the 22 Senators chosen from the city of New York 17 were Democrats and 5 were Republicans. The election of Assemblymen was similar. Out of 21 from Brooklyn, 15 were Democrats and 6 were Republicans, while out of the 35 Assemblymen chosen from New York County 27 were Democrats and 8 were Republicans. For the 16 members of Congress from the districts included within the limits of New York city all the successful candidates were Democrats. This shows a loss of 10 to the Republicans. The most conspicuous of the contests was that in the Fourteenth Congressional District, where Lemuel E. Quigg, a Republican who had served for three terms, was defeated by William A. Chanler, who received 31,399 votes, against 25,083 for Quigg. Two years ago Quigg's vote was 33,233.

Events.—On Jan. 15 the Old Guard moved from its quarters on the corner of Fourteenth Street and Fifth Avenue to Forty-ninth Street and Broadway. It was escorted to its new home by delegations from the Ninth, Fourteenth, and Forty-seventh Regi-

ments. On April 3 the first trolley car over the Second Avenue surface line was run. On Aug. 1 the Third Avenue iron bridge over the Harlem river was informally opened to the public. It cost more than \$3,000,000. On Aug. 15 through trains began running to Tremont, without change of cars, over the elevated railway from City Hall to One Hundred and Seventy-seventh Street.

NICARAGUA, a republic in Central America. The Congress is a single Chamber composed of 48 members, half of them elected by the popular vote and half by the Legislatures of the 12 provinces. The President, who is elected for four years by direct universal manhood suffrage, is Gen. José Santos Zelaya. The Cabinet at the beginning of 1898 was composed as follows: Secretary of the Interior, Police, Ecclesiastical Affairs, War, and Marine, Gen. Erazmo Calderon; Secretary of Public Instruction, Dr. M. C. Matus; Secretary of Finance and Commerce, E. Lopez; Secretary of Communications and Public Works, J. A. Roman.

Area and Population.—The republic has an area of 49,200, square miles, with 420,000 inhabitants, of whom about 1,200 are of pure European extraction, not including 371 foreign settlers, of whom 88 are Germans, 69 Italians, 60 Americans, and 52 British.

Finances.—The revenue is derived from the alcohol, tobacco, and gunpowder monopolies and from import and export duties. The Government in 1894 stopped paying interest on £285,000 borrowed in London at 6 per cent. in 1886 for the purpose of building railroads, and in 1895 made a settlement with the bondholders, agreeing to pay half the overdue coupons and for the future 4-per-cent. interest. The amount outstanding on July 1, 1897, was £294,335. The internal debt amounted to \$7,000,000 before a new loan of \$500,000 was issued in 1896. The standing army of 2,000 men is, besides the debt, the chief expense of the Government.

Commerce and Production.—The cultivation of coffee, sugar, and bananas is increasing. The exportation of rubber was interdicted from the beginning of 1898. The estimated value of all imports in 1896 was \$3,730,000, and of exports \$5,647,000. The trade with the principal countries was as follows:

COUNTRIES.	Imports.	Exports.
Germany.....	\$930,000	\$2,286,000
Great Britain.....	1,472,000	739,000
United States.....	676,000	1,009,000
France.....	478,000	387,000

For 1897 the exports were estimated at a total value of \$2,641,920, of which \$1,033,000 came from Great Britain, \$501,600 from the United States, \$474,820 from Germany, \$275,000 from France, and \$367,500 from other countries; the exports at \$3,057,665, of which \$1,400,750 went to Germany, \$750,250 to Great Britain, \$530,500 to the United States, \$100,000 to France, and \$276,165 to other countries. The export of coffee was valued at \$1,925,000; gold, \$550,000; gum, \$80,000; hides, \$68,100; timber, \$56,535; cattle, \$32,500.

Navigation.—There were entered during 1897 at the port of Corinto 211 vessels, of 188,182 tons, of which 129 were steamers, of 182,892 tons.

Communications.—The completed railroad mileage is 89, that of new railroads in prospect 520 miles. The telegraphs have a length of 1,246 miles.

Political Affairs.—A revolution was attempted in the early part of 1898, but was suppressed after the rebels had been driven from San Juan del Sur on Feb. 7 and from Rivas a day or two later. About the same time a British cruiser arrived at Corinto to enforce the payment of the indemnity due to British subjects for losses resulting from the Mos-

quito disturbances of 1894. It was agreed in the convention of Nov. 1, 1895, to refer the matter to a commission. Afterward a lump sum was agreed upon, and a part of the amount was paid, but, in spite of repeated urgent applications, the balance was withheld until forcible measures to collect it were threatened. The concession granted to the Maritime Canal Company for the construction of an interoceanic ship canal was declared to be forfeitable at the expiration of the time limit, Oct. 9, 1899, and President Zelaya declined to renew it, the company having ceased active operations. The original contract under the Cardenas-Menocal concession, signed in April, 1887, provided that the concession should not become operative until \$2,000,000 had been expended and that the canal should be completed in ten years. As the Maritime Canal Company claimed that this period only began after the \$2,000,000 had been expended, the Nicaraguan Government agreed that it should date from Oct. 9, 1889. President Zelaya entered into negotiations with another American syndicate, and Congress on Nov. 1, 1898, approved a provisional agreement made with Edward S. Cragin and Mr. Eyre, of Grace & Co., representing these New York and Chicago capitalists, looking to an arrangement between them and the Maritime Canal Company.

The United States Government appointed, under an act of Congress approved on June 4, 1897, a new commission to investigate the proper route and the feasibility and cost of construction of a Nicaragua canal. This commission, consisting of Rear-Admiral J. E. Walker, Col. Peter C. Hains, of the Corps of Engineers, and Lewis M. Haupt, civil engineer, employed 70 engineers and was engaged for ten months in examining the canal region from ocean to ocean. In the preliminary report, handed in on Dec. 26, 1898, the commissioners recommended the construction of a canal of greater dimensions than had previously been proposed, both in length of locks and in width, depth, and radius of curvature. The greater dimensions were rendered necessary by the demands of modern commerce, size and draught of modern ships, etc. Two routes were examined—the one chosen by Civil Engineer Menocal for the Maritime Canal Company, and a low level route, somewhat longer, laid down by Commander Lull. The Maritime route requires the construction of artificial basins to control the San Juan, involving an enormous amount of embankment, and in other places deep cuttings. Two of the commissioners estimated the cost by this route at \$124,000,000 and by the Lull route at \$123,000,000. Col. Hains believed that this estimate, considering the difficulties incident to work in tropical countries, was lower than it should be by about 20 per cent., while he concurred with the other members as to the feasibility of the canal. The commission preferred the Lull route, which avoids many great cuttings and a great deal of the embankment required for the creation of artificial basins. The canal, if built over this route, was pronounced more desirable because it is easier of construction and presents no problems not well within good engineering precedents, and will be safer and more reliable when completed.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Daniel L. Russell, Republican; Lieutenant Governor, C. A. Reynolds, Republican; Secretary of State, Cyrus Thompson,

Populist; Treasurer W. H. Worth, Populist; Auditor, H. W. Ayer, Populist; Attorney-General, Z. V. Walser, Republican; Adjutant General, A. D. Cowles, Republican; Superintendent of Instruction, C. H. Mebane, Populist; Commissioner of Agriculture, John R. Smith, Republican; Labor Commissioner, J. V. Hamrick, Populist; Railroad Commissioners, J. W. Wilson (discharged during the year by the Governor), L. C. Caldwell, J. H. Pearson, and D. H. Abbott; Chief Justice of the Supreme Court, William T. Faircloth, Republican; Associate Justices, R. M. Douglas, Republican; Walter Clark, Democrat; D. M. Furches, Republican; W. A. Montgomery, Democrat; Clerk, Thomas S. Kenan, Democrat.

Finances.—The receipts of the State Treasury for 1897 were \$1,308,691.81, against disbursements of \$1,294,725.24, receipts exceeding expenditures by the sum of \$13,966.57. The receipts in 1898 were \$1,337,552.40, against disbursements of \$1,254,592.09, receipts exceeding expenditures by \$82,960.31. Among the receipts for 1898 were: Atlantic and North Carolina Railroad dividends, \$12,666; license tax on banks, \$7,428; tax on stock in banks, \$10,587; express companies' 2-per-cent. tax, \$3,000; interest on bonds belonging to the State, \$8,175; insurance companies' license, \$27,642; insurance companies' 2-per-cent. tax, \$55,398; Agricultural and Mechanical College, colored, \$8,414; College of Agriculture and Mechanical Arts, \$15,585; experiment station, \$15,000; railroad dividends, \$195,013; Penitentiary earnings, \$94,942; railroad property tax, general, \$70,599; railroad property tax, pensions, \$10,861; taxes from the counties for general purposes, \$543,883; for interest on incomes, \$4,273; for interest on merchants, \$26,254; for interest on liquor, \$5,488; for pensions, property, \$73,345; for pensions, poll, \$21,965; tonnage tax on fertilizers, \$61,377. Among the items of expenditure were: The Agricultural Department, \$56,037; Bureau of Labor Statistics, \$3,500; convict accounts, \$4,543; Department of Public Instruction, \$3,000; Eastern Hospital, \$40,000; interest on 4-per-cent. State debt, \$136,275; interest on 6-per-cent. State debt, \$159,330; the judiciary, \$62,832; normal schools, \$16,000; Agricultural and Mechanical College, colored, \$18,414; College of Agricultural and Mechanical Arts, \$38,085; experiment station, \$15,000; Insane Asylum, \$55,450; Institution for the Deaf, Dumb, and Blind, \$97,500; Penitentiary earnings, \$91,047; School for the Deaf and Dumb, \$55,000; Oxford Orphan Asylum, white, \$10,000; Oxford Orphanage, colored, \$5,000; pensions to Confederate soldiers, \$100,840; public printing, \$8,810; Railroad Commission, \$14,506; Soldiers' Home, \$8,500; geological survey, \$11,833; State Guard, \$6,000; State Hospital, \$90,00; Normal and Industrial College, \$25,194; State University, \$25,000; supplemental appropriations for public schools, \$10,856.

The bonded indebtedness of the State amounted to \$6,360,770.

Banks.—There are 71 banks in the State—44 State, 21 private, and 6 savings. Following is an abstract of the condition of all at the close of business in 1898: Resources—Loans on real estate, \$1,092,542.65; all other loans and discounts, \$5,983,284.53; overdrafts, \$125,647.32; United States bonds on hand, par value, \$47,300; North Carolina State bonds, \$80,165.45; all other stocks, bonds, and mortgages, \$271,889.02; premium on bonds, \$2,345; due from banks, \$1,429,299.25; banking house, \$196,531.13; furniture and fixtures, \$70,564.60; all other real estate owned, \$140,813.22; cash items, \$171,561.21; gold coin, \$197,871; silver coin and all fractional currency, \$106,711.20; national bank notes and other United States notes,

\$420,449.67; other resources, \$189,925.05; total, \$10,526,900.30. Liabilities—Capital stock paid in, \$2,525,297.15; surplus fund, \$376,581.41; undivided profits, \$311,666.93; dividends unpaid, \$2,372.26; deposits subject to check, \$5,208,917.98; due to banks, \$186,882.69; notes and bills rediscounted, \$108,163.35; cashiers' checks outstanding, \$48,995.91; certified checks, \$9,309.33; bills payable, \$285,434.95; demand certificates of deposit, \$277,660.37; time certificates of deposit, \$529,597.26; other liabilities, \$656,020.71; total, \$10,526,900.30. The total resources and liabilities of the State banks were \$7,074,293.25; of the private banks, \$1,533,854.08; of the savings banks, \$1,918,752.97.

Valuations, etc.—The total valuation of all classes of property in the State was reported at \$265,867,197.99—valuation of land, \$110,063,057; of mineral, quarry, and timber interests, \$430,552; of town lots, \$44,786,560; of personal property, \$76,967,160. According to the report of the Railroad Commission, the total mileage of the State is 3,477.99 miles, and its total valuation \$32,099,931.90. The Atlantic Coast Line, 788.87 miles, is valued at \$9,779,875.80; the Southern Railway Company, 1,005.20 miles, at \$10,565,729.20; miscellaneous roads, 1,078.30 miles, at \$5,700,659.75. The total assessed valuation of the steamboat property is \$293,937; of the telegraph companies, \$803,510; the Pullman Car Company property, \$96,918.15; and of the property of the Mercantile Trust and Deposit Company, \$326,071.94; making the total assessed valuation of the railroad, steamboat, and telegraph property of the State \$33,619,868.19. The gross income of the Atlantic Coast Line was given as \$1,283,262.25; of the Southern Railway, \$1,724,489.08; of the Seaboard Air Line, \$757,483.40; of miscellaneous roads, \$505,609.36. The number of men engaged in railroading was 9,966. During the year 780 persons were injured on the railroads and 99 were killed. Of the killed only 2 were passengers.

The Railroad Commission points to the following items as results of its administration for 1898: Increased tax valuation of telegraph and telephone property, \$4,462,769.96; discontinuance of free passes and enforcement of the free-pass law; railroads required to refund overcharges within 30 days after notice; freight rates on fertilizers reduced 20 per cent., and on corn 10 per cent.; mileage books made good for members of the purchaser's family.

Education.—There were in the State 628,480 school children between the ages of six and twenty-one—415,262 whites. 213,218 colored; there were enrolled 399,375—261,223 whites, 138,152 colored; total average attendance, 213,240—144,357 whites, 68,894 colored; percentage of school population in average attendance, 34 $\frac{7}{10}$ whites, 32 $\frac{3}{10}$ colored; average length of school terms, 71 days for whites, 64 days for colored; average salary of teachers, white males \$24.66, white females \$22.93, colored males \$21.64, colored females \$19.85; value of school property, for whites \$683,363, for colored \$246,851, total \$930,214; number of schools taught, 5,083 white, 2,404 colored.

Crime.—The Attorney-General published a summary of the criminal statistics of the State for the ten years ending June 30, 1898, and in connection therewith a summary of the number of trials, etc., since 1890, showing that the increase of crime keeps pace with the increase of population. The ratio of whites to negroes is as 2 to 1. The report of the year ending June 30, 1898, is taken. This shows that there were 9,729 actions, of which 5,015 were against whites, 4,672 against negroes, and 42 against Indians; 9,011 against males, 718 against females. There were 6,238 convictions, 1,596 acquittals, and *nolle pros.* was entered in 1,794 cases. The percentage of crime by whites was not quite

52; that of the negroes was a trifle over 48. The cases tried for various crimes were as follows: Assault and battery, 660; abandonment, 55; abortion, 5; assault with deadly weapon, 1,032; affrays, 1,022; simple assault, 414; assault with intent to commit rape, 27; arson, 10; attempt to burn house, 1; bigamy, 19; burglary in the first degree, 19; burglary in the second degree, 21; carrying concealed weapon, 942; cruelty to animals, 55; forgery, 53; gambling, 399; housebreaking, 24; incest, 8; larceny, 1,497; libel, 7; manslaughter, 12; murder in the first degree, 15; murder in the second degree, 24; perjury, 57; rape, 23; riot, 3; robbery, 12; slander, 43; seduction, 35.

Lynching.—Emma Hartsell, daughter of Samuel Hartsell, living near Concord, was found dead in her father's house on the afternoon of May 29, she having been outraged. A newspaper dispatch gave this account of what occurred: "The young woman was of a respectable family, and the news of the affair spread rapidly. In a short time large bodies of both town and country people assembled, and in the course of an hour two negroes, Joe Kiser, aged twenty-five, and Tom Johnson, aged twenty, were arrested, and the sheriff managed to get them safely to jail. The prisoners were placed in the cage, the stronghold of the jail, and the sheriff and other officers stood guard at the foot of the stairs. They did all they could to prevent the jail being forced, but as they looked out upon the sea of determined, angry faces they realized that nothing but the blood of the guilty would satisfy them. It was twenty minutes to ten o'clock when the mob, unable any longer to restrain its fury, broke down the jail doors. The sheriff and deputies were overpowered and the crowd rushed up the stairs toward the cell of the doomed men. The lock was broken, the door opened, and the prisoner hauled forth. The crowd called to the sheriff to get a lamp, but only a lantern was to be had. By this uncertain, fitful light the mob carried its victims out, took them to the vicinity of the crime, and hanged them to a tree. The bodies were filled with bullets."

A negro was hanged in Macon County, Nov. 7, charged with attempting to assault two white women.

Industrial.—There were 207 tobacco factories in operation in the State in 1898, giving employment to 16,900 men, 9,700 women, and 5,200 children. The production of plug tobacco had increased 7,683,000 pounds over 1897, and 3,450,000 more cigars were made. The output of 323 lumber mills aggregated \$4,558,280 for the year. There were 37 furniture factories, 126 tanneries, and 96 flour mills in operation. There were but 33 cotton mills operating in the State in 1870, equipped with 618 looms and 39,897 spindles; ten years later the mills had increased to 49, the capacity of many old ones had been enlarged, and there was an increase of over 100 per cent. in the equipment, the looms numbering 1,790 and the spindles 92,385; five years later there was another increase of 100 per cent. in round numbers, the mills being 80, with 4,071 looms and 199,000 spindles; in January, 1898, there were 207 mills, with 25,000 looms and 1,045,385 spindles. Ten new spinning companies were organized during the year. 9 additional mills were in course of erection, and 10 hosiery and knitting mills were being built. The average day's work is eleven and three-quarter hours, and 293 was the average number of days on which mills were in operation.

Twenty gold mines were making deposits in the assay office at Charlotte, Mecklenburg County leading in the number of mines, with Union second, and Cabarrus third. There were 11 brownstone and 25 granite quarries at work, and 8 coal mines. Mica

mining showed an increase, there being 53 mines. The market price of corundum had risen from 4 to 20 cents a pound, and there were 23 corundum mines in operation. Three of the many talc mines produced 3,200,000 pounds.

New Railways.—Two new railroad companies, to operate within the State, were incorporated this year. The first, the Goldsboro, Snow Hill and Eastern Railroad Company, was capitalized at \$300,000, with the privilege of increasing the capitalization. One terminus of this road will be at Snow Hill, Greene County, and the other at Pantego, Beaufort County, the road to be about 60 miles long and to traverse parts of the counties of Greene, Pitt, and Beaufort. The second, the Raleigh and Cape Fear Railway Company, was capitalized at \$200,000, the road to extend from some point on the North Carolina Railroad between the town of Carey and the town of Garner, Wake County, to some point on that portion of the Cape Fear river which lies in the county of Harnett, 35 miles.

Confederate Pensioners.—The sum of \$120,000 was available for pensions, being \$18,000 more than for 1897. There was a large increase in pensioners, due to the number of applicants passed by county boards. There were 131 first-class pensioners, an increase of 8 over 1897; 272 second-class, an increase of 26; 393 third-class, an increase of 30; 1,963 fourth-class, an increase of 53; 2,681 widows, a decrease of 59. The net increase of pensioners over 1897 was 58.

Decisions.—In the case of Sophia A. Houston, of Chatham County *vs.* Frank W. Thornton and others, as directors of the People's National Bank of Fayetteville, which went into the hands of a receiver in January, 1891, the plaintiff alleged that by the false statements of the bank's condition, published by the defendants, she was induced to buy 11 shares of the capital stock of the bank, which stock became worthless through the gross negligence of the defendants. The case was tried before the Chatham Superior Court, which rendered judgment in favor of the plaintiff for the full amount she paid for the stock, and interest thereon. From this judgment the defendants appealed to the Supreme Court, which affirmed the judgment of the lower tribunal.

In the case of the State Treasurer *vs.* the Bank of New Hanover, the court held that the relations existing between the parent bank and its branch (at Wadesboro) were those of principal and agent; that all the assets of the agency belonged to the principal, and all the debts of the agency were debts of the principal.

In the case of Abram Carter *vs.* The Life Insurance Company of Virginia, the court held that where a life insurance company lends to a borrower a sum of money at the full legal rate of interest, payable monthly, its repayment being secured by a deed of trust, but also requires the borrower to take an endowment policy in said company on his life, the monthly premiums on which for life or a term of years are also secured by the deed of trust, the contract is usurious.

The court decided against the Southern Railway Company and the Raleigh and Augusta Air Line Company for issuing free passes. These two cases went up from Wake County Superior Court, which had imposed a fine of \$1,000 on each company. A special verdict was rendered in the lower court, the jury finding that while the law had been violated there had been no intent on the part of the officers of the railroad companies to violate the law. In closing its opinion the Supreme Court said: "In the face of the clearly expressed provisions of the law, and in the face of the repeated constructions of that part of the Federal statutes regulating interstate com-

merce, which is in precisely the same words in which our statute is framed upon the point now before us, the defendant took its chances. It has in doing so violated the criminal law of the State and must abide the consequences, as all others ought to do who break the laws. It must be presumed that common carriers know well what they are doing in this matter. They are not, and neither do they wish to be considered, charitable institutions; they are corporations formed for profit and gain; and whenever they grant a thing of value—free transportation to a passenger not embraced in the excepted classes specified in the act—they must be acting, as they think, on business principles, expecting a return upon their investments. If, in pursuing their business interests, they violate the law, they must abide the result." Associate Justice Douglas dissented from the opinion of the court.

Race Troubles and State Election.—In September, 1898, a staff correspondent of the Atlanta "Constitution" dispatched to that paper a letter from Raleigh, N. C., elaborating a charge which from time to time had been less definitely made by various journals of the State—namely, that it was the purpose of the negroes to colonize and control North Carolina: that it was the purpose of the blacks thus to solve the race problem, by the establishment of a commonwealth of their own. This correspondent wrote:

"It is no secret that colored leaders, ambitious for their race, have matured in their minds a plan by which they hope to obtain absolute control of the legislative, judicial, and executive machinery, and then to rapidly carry out a scheme of colonization by which this will become a thoroughly negro sovereign State, with that population in the majority and furnishing all officials in the public service, from United States Senators and Governors down through judges, legislators, and solicitors, to the last constable and janitor. If their plan succeeds, North Carolina is to be the refuge of their people in America. Their brethren from all the Southern States will be invited to come here, cast their lot among their fellows, and together to work out their destiny in whatsoever degree of prosperity and advancement they may be able to achieve for themselves."

The correspondent's letter was copied in all the newspapers of the State, its argument being approved or ridiculed according to the political views of the various editors, but by most of them it was published as a startling revelation of facts. Commenting upon it, one journal said:

"Almost immediately after the passage of the reconstruction acts, under which the Southern States were readmitted into the Union, and by which civil and political rights were conferred upon the negro, there was a great influx of negroes into Washington city, and the capital of the Union was fast becoming the negro's political heaven. Why? It was about this time that an act was passed by Congress which gave to the citizens of the District of Columbia the power to elect all the local officers of the city of Washington. The people there had local self-government, and the negro was as good as the white man. The city government soon became so corrupt and extravagant that Congress was forced to repeal the act giving the people the right of local self-government. What place is now to him what Washington once was? What one State in all this Union now holds out the inducement to enter her citizenship and seek her political honors? What State, and what State alone, is represented in the Congress of the United States by a negro? What State, and what State alone, has registration laws which make it easy for him to register, whether he is a legal voter or not? What State, and what

State alone, requires nothing of him to entitle him to vote except his bare oath that he is so entitled? The answer to these inquiries is North Carolina."

On Oct. 18 the Republican postmaster at Wilmington publicly addressed a letter to United States Senator Pritchard, in which he said:

"As a matter of fact, there are in this county 36 colored magistrates and a colored register of deeds and various other minor officials, besides some presidential appointees, and the property owners, taxpayers, and business men seriously object to this state of affairs, and there now exists here the most intense feeling against any sort of negro domination. There is a greater feeling of unrest and uncertainty about the maintenance of order than I have ever seen, and many, even the most conservative, feel that a race conflict is imminent, than which nothing could be more disastrous, not only to this city and county, but to our party in the State, and rather than have riot, arson, and bloodshed prevail here, I, Republican though I am, advise giving up the local offices in this county, as there are no national political principles involved in this conflict."

In the same month a storehouse in Ashpole, Robeson County, was robbed and burned. Certain negroes suspected of the crime determined to resist arrest, and were said to have threatened to burn the town and murder the citizens, arms and ammunition having been stored by them near by. It was reported that while white guards were standing around a fire one night they were fired upon by negroes in ambush, 3 white men being seriously wounded. The fire was returned by the whites, and the negroes fled. Bloodhounds were sent for by the whites, the negroes were hotly pursued, and 10 of them were captured and lodged in jail.

A special dispatch to the St. Louis "Globe-Democrat," from Wilmington, dated Oct. 23, contained the following:

"North Carolina is in the throes of the most desperate campaign since the reconstruction era after the civil war. The People's party came into existence in 1894, and though its strength in North Carolina was only 32,000, a fusion arrangement with the Republican party, composed of 120,000 negroes and 25,000 whites, led to the capture of the Legislature by the Fusionists, whereupon it was alleged that the negro had become a controlling element in politics. In 1896 the Fusionists again elected an overwhelming majority of the Legislature, elected a Republican Governor and Populist and Republican State officers. The negro, realizing his importance, demanded his share of the offices, and the result was that many of the eastern counties of the State, where they are largely in the majority, became 'negroized,' as the Democrats sneeringly call the elevation of the colored man to office. The situation may be judged when it is stated that the Wilmington 'Messenger,' the leading paper in the State, boldly declared a few days ago that the Democrats intended to overthrow the present political conditions—peaceably if possible, but by revolution if necessary. This is the feeling of Democratic leaders throughout the greater part of the State, and they have prepared to carry out their purpose. Rioting between the races in Wilmington has been narrowly averted several times. The negroes do not propose to be bulldozed, and the white Democrats are preparing to back their threats by force. Every house in the city is an arsenal. Winchester rifles and riot guns have been purchased in great quantity, and the white men have gone so far as to purchase a Colt rapid-fire machine gun. The negroes are behaving peaceably, but they are prepared."

About this time the "North Carolinian" called attention to the fact that in 5 counties of the State

there were 143 negro magistrates; that altogether in the State there were nearly 300 negro magistrates; and that, taking the State at large, nearly 1,000 negroes were holding office. On Oct. 26 Gov. Russell (Republican) issued the following proclamation:

"Whereas, The Constitution of the United States secures to every State in this Union a republican form of government, protection from invasion, and freedom from domestic violence; and

"Whereas, The Constitution of North Carolina guarantees to all the people of the State the inherent right to fully regulate their own internal government; to peacefully assemble for the purpose of consulting for their common good; to hold peaceable and quiet elections; and to discharge and exercise in an orderly and quiet way the manifold duties and privileges of good citizenship; and

"Whereas, The Constitution of this State, and the laws made in pursuance thereof, forbid that any citizen shall be deprived or restrained of his liberty but upon indictment for and conviction of crime; and

"Whereas, It is ordained in the same Constitution and laws of this State that the writs for the protection of the citizen, and the processes of the courts for the protection of society, shall never be suspended, neither by usurping executive nor by turbulent mobs using the weapons of intimidation and violence; and

"Whereas, It has been made known to me, by the public press, by numerous letters, by the oral statement of divers citizens of the State, and by formal written statements, that the political canvass now going forward has been made the occasion and pretext for bringing about conditions of lawlessness in certain counties in this State, such, for example, as Richmond and Robeson counties; and

"Whereas, It has been made known to me, in such a direct and reliable way that I can not doubt its truthfulness, that certain counties lying along the southern border of this State have been actually invaded by certain armed and lawless men from another State; that several political meetings in Richmond and Halifax counties have been broken up and dispersed by armed men, using threats, intimidation, and, in some cases, actual violence; that in other cases property has been actually destroyed and citizens fired on from ambush; that several citizens have been taken from their homes at night and whipped; that in several counties peaceful citizens have been intimidated and terrorized by threats of violence to their persons and their property, until they are afraid to register themselves, preparatory to exercising that highest duty of a freeman, the casting of one free vote at the ballot box for the men of their own choice in the coming election:

"Now, therefore, I, Daniel L. Russell, Governor of the State of North Carolina, in pursuance of the Constitution and laws of said State, and by virtue of authority vested in me by said Constitution and laws, do issue this, my proclamation, commanding all ill-disposed persons, whether of this or that political party, or of no political party, to immediately desist from all unlawful practices and all turbulent conduct, and to use all lawful efforts to preserve the peace, and to secure to all the people the quiet enjoyment of all their rights of free citizenship.

"And I do further command and enjoin it upon all good and law-abiding citizens not to allow themselves to become excited by any appeals that may be made to their passions and prejudices by the representatives of any political party whatsoever; but to keep cool heads, and use their good offices to preserve the public peace, and to protect every, the humblest citizen, in all his rights, political and personal.

"And I do further command and enjoin it upon all judges and other civil magistrates, and upon all solicitors, sheriffs, and other officers of the law, to use their best efforts under the Constitution and laws of the State to apprehend and bring to speedy trial all offenders against the persons and property and the political and civil rights of any and all persons in this State whomsoever.

"And I do further command and require that all persons who may have entered this State from other States, in pursuance of any unlawful purpose, instantly to disperse and leave this State, upon pain of being arrested and dealt with according to law."

A mass meeting, attended by more than 8,000 persons, was held in the public square in front of the Wayne County courthouse, at Goldsboro, on Oct. 28, when the following preamble and resolutions were adopted:

"We, a portion of the citizens of eastern North Carolina, in mass meeting assembled, being mindful of the obligations we are assuming, and being desirous of informing our fellow-citizens of the condition of affairs in our section of the State, do publish to the world the following plain statement of facts:

"1. The population of this section of our State is divided into two distinct races—the Anglo-Saxon and the African.

"2. That in some counties the whites exceed the blacks, and in others the blacks largely exceed the whites, but in all of them the negro is found in large numbers.

"3. It is not claimed, even by his white leaders, that the negro is capable of administering a government. On the contrary, the man who is the present Republican Governor of the State has declared, in the most emphatic language, that he is wholly unfitted for it.

"4. That in many of the counties, cities, and towns of eastern North Carolina the local governments have been turned over, wholly or in part, to the negroes. Among these we mention Bertie, Craven, Edgecombe, Halifax, New Hanover, Warren, Greenville, New Berne, and Wilmington. In these counties, cities, and towns negroes may be found holding the offices of register of deeds, deputy sheriffs, constables, justices of the peace, school committeemen, town commissioners, policemen, and the like. In several other counties many of these offices are filled by negroes, and that many of the post offices are filled by them.

"5. That counting the offices of register of deeds, deputy registers, deputy sheriffs, constables, justices of the peace, school committeemen, town commissioners, policemen, postmasters, collectors, storekeepers, gaugers, and the like, there are now in office in counties and towns of eastern North Carolina nearly 1,000 negroes, there being nearly 300 negro magistrates alone.

"6. That as a consequence of turning these local offices over to the negroes, bad government has followed, homes have been invaded, and the sanctity of woman endangered. Business has been paralyzed and property rendered less valuable. The majesty of the law has been disregarded and lawlessness encouraged. In many localities men no longer rely upon the officers of the law for protection, for they are known to be incompetent or corrupt. Conditions have become so intolerable in these communities that they can be no longer tolerated or endured.

"7. That this negro domination was made possible, and these deplorable conditions were brought about, through a division of the white men at the ballot box. Had the white men remained together, as they did for many years, these things could not have been.

"8. That knowing these evils came about through a division of the white men, the White Man's party has been zealously working for months to reunite the white men at the ballot box, where these wrongs can be righted and these evils remedied.

"In view of these things, it is resolved:

"1. That the Republican leaders have a second time clearly demonstrated their inability and their unfitness to govern North Carolina.

"2. That the time has come when those who have followed these leaders should no longer do so, and that all men who love their State and their homes should unite in one supreme effort to redeem the State, and to place honest, capable white men in office in State, county, city, and town.

"3. That our appeal has been, is now, and shall continue to be to the ballot box and to honest white men. We have contemplated no violence, but we are determined to use all proper means to free ourselves of this negro domination, which is paralyzing our business, and which hangs like a dark cloud over our homes.

"4. That we declare it is not our purpose to do the negro any harm. It is better for him, as well as for us, that the white man shall govern; that while we propose to protect and encourage him in all his rights and duties of citizenship, we affirm that North Carolina shall not be negroized. It is, of all the States of the Union, peculiarly the home of the Anglo-Saxon, and the Anglo-Saxon shall govern it.

"5. That we affirm that no such conditions exist in this State as to justify Senator Pritchard in calling upon the President to send troops to this State, or the Governor in issuing his brutal proclamation, and we hereby condemn in the most unmeasured terms the conduct of Senator Pritchard and Gov. Russell in attempting to make it appear to the outside world that the descendants of the men of Mecklenburg, Halifax, Albemarle, the Cape Fear, of Alamance, Guilford Courthouse, and King's Mountain need the military power of the Government, which they helped to create and organize, to compel them to observe the law. The white men of this State, above all others, are interested in maintaining law and order, and for them to be charged by Senator Pritchard and Gov. Russell with having a purpose to become insurrectionary citizens is a vile slander, and we denounce them. They have been leaders in establishing negro domination among us, and they are therefore responsible for the conditions now existing, and in appealing to the President to send troops into this State to aid them in maintaining negro domination they have shown they care less for the honor and reputation of their State than they do for their official positions.

"6. That it is in the power of the Legislature to restore to the white men of eastern North Carolina the management and control of their local affairs; that if the Democratic party shall be placed in control of the Legislature this will be done. If the Republican party is placed in control it will not be done. We therefore appeal to our white brethren in every section of the State to go to the ballot box on the day of election and vote for the Democratic candidates for the Legislature.

"7. That a learned and pure judiciary is necessary to the preservation of the rights of the weak as well as the strong. The Democratic candidates for this high position are men learned in the law, and of eminent fitness for this great office. We therefore appeal to all white men who desire learned and pure men to sit upon the bench to work and to vote for Democratic candidates."

The State election, held Nov. 8, resulted in a Democratic victory, that party's majority being more than 19,000. Seven Democratic Congressmen

were elected and 2 Republican. In the State Senate of 1897 the Democrats had 7 and the Fusionists 43; this election gave the Democrats 43 and the Fusionists 7, just reversing the figures. In 1897 there were 30 Democratic members of the House and 90 Fusionists; the numbers were changed to 94 Democrats and 26 Fusionists. On the day after the election, Nov. 9, a mass meeting, attended by about 1,000 persons, was held in Wilmington, which unanimously expressed itself as follows:

"Believing that the Constitution of the United States contemplated a government to be carried on by an enlightened people; believing that its framers did not anticipate the enfranchisement of an ignorant population of African origin, and believing that the men of the State of North Carolina who joined in forming the Union did not contemplate for their descendants a subjection to an inferior race;

"We, the undersigned, citizens of the city of Wilmington and county of New Hanover, do hereby declare that we will no longer be ruled, and will never again be ruled, by men of African origin. This condition we have in part endured because we felt that the consequences of the war of secession were such as to deprive us of the fair consideration of many of our countrymen.

"We believe that, after more than thirty years, this is no longer the case.

"The stand we now pledge ourselves to is forced upon us suddenly by a crisis, and our eyes are open to the fact that we must act now or leave our descendants to a fate too gloomy to be borne.

"While we recognize the authority of the United States, and will yield to it if exerted, we would not for a moment believe that it is the purpose of more than 60,000,000 of our own race to subject us permanently to a fate to which no Anglo-Saxon has ever been forced to submit.

"We, therefore, believing that we represent unequivocally the sentiment of the white people of this county and city, hereby for ourselves, and representing them, proclaim:

"1. That the time has passed for the intelligent citizens of this community, owning 95 per cent. of the property and paying taxes in like proportion, to be ruled by negroes.

"2. That we will not tolerate the action of unscrupulous white men in affiliating with the negroes so that by means of their votes they can dominate the intelligent and thrifty element in the community, thus causing business to stagnate and progress to be out of the question.

"3. That the negro has demonstrated, by antagonizing our interest in every way, and especially by his ballot, that he is incapable of realizing that his interests are and should be identical with those of the community.

"4. That the progressive element in any community is the white population, and that the giving of nearly all of the employment to negro laborers has been against the best interests of this county and city, and is a sufficient reason why the city of Wilmington, with its natural advantages, has not become a city of at least 50,000 inhabitants.

"5. That we propose in future to give to white men a large part of the employment heretofore given to negroes, because we realize that white families can not thrive here unless there are more opportunities for employment for the different members of said families.

"6. That the white men expect to live in this community peaceably, to have and provide absolute protection for their families, who shall be safe from insult from all persons whomsoever. We are prepared to treat the negroes with justice and consideration in all matters which do not involve sacrifices

of the interest of the intelligent and progressive portion of the community. But we are equally prepared now and immediately to enforce what we know to be our rights.

"7. That we have been, in our desire for harmony and peace, blinded both to our best interests and our rights. A climax was reached when the negro paper of this city published an article so vile and slanderous that it would in most communities have resulted in the lynching of the editor. We deprecate lynching, and yet there is no punishment provided by the laws adequate for this offense. We therefore owe it to the people of this community and of this city, as a protection against such license in future, that the paper known as the "Record" cease to be published, and that its editor be banished from this community.

"We demand that he leave this city within twenty-four hours after the issuance of this proclamation; second, that the printing press from which the "Record" has been issued be packed and shipped from the city without delay; that we be notified within twelve hours of the acceptance or rejection of this demand. If the demand is agreed to within twelve hours, we counsel forbearance on the part of all white men. If the demand is refused, or if no answer is given within the time mentioned, then the editor, Manly, will be expelled by force."

The offensive article alluded to in the seventh section of the foregoing proclamation, which appeared in the daily "Record" of Aug. 18, read as follows:

"We suggest that the whites guard their women more closely, as Mrs. Felton says, thus giving no opportunity for the human fiend, be he white or black. You leave your goods out of doors, and then complain because they are taken away. Poor white men are careless in the matter of protecting their women, especially on farms. They are careless of their conduct toward them, and our experience among poor white people in the country teaches us that the women of that race are not any more particular in the matter of clandestine meetings with colored men than are the white men with colored women. Meetings of this kind go on for some time, until the woman's infatuation or the man's boldness bring attention to them, and the man is lynched for rape. Every negro lynched is called a 'big, burly, black brute,' when, in fact, many of those who have thus been dealt with had white men for their fathers, and were not only not 'black' and 'burly,' but were sufficiently attractive for white girls of culture and refinement to fall in love with them, as is well known to all."

A committee of 25 citizens was appointed to execute the provisions of the foregoing resolutions. There was a conference between the committee and a number of influential negroes of the city, at which it was agreed that the negroes should report to the committee at 7 A. M. the next day as to whether or not Editor Manly would comply with the requirements of the resolutions. If he did not, the white men proposed to go in full force at 8 A. M., destroy the newspaper plant, and expel the editor. Their demand appearing not to be acceded to at 8.30 o'clock 600 armed citizens went to the offensive newspaper office and proceeded to destroy the material. While the destruction was in progress the building "took fire" and was burned to the ground. It developed later in the day that the negro committee had used their influence to have the press, etc., removed, although the editor had disappeared and they had no authority in the premises. A letter from them, instead of being delivered to the chairman of the committee of 25 in person, was put into the mail, and did not reach him until three hours after the expiration of the

time limit which had been fixed for the receipt of an answer. Incensed at the destruction of the newspaper office, a large number of negroes assembled, and a bloody clash between whites and blacks ensued. Twelve negroes were killed during the day, and three white men were wounded. In the afternoon the Republican mayor, the board of aldermen, and the chief of police resigned their offices, and they were superseded by white Democrats, ex-Congressman Alfred Moore Waddell, who led the assault on the newspaper office, being chosen mayor. The first act of the new city government was to swear in 250 special policemen, chosen from the body of white citizens. Troops were ordered out, and the city was placed under martial law.

On the evening of the 10th a crowd formed to take from the jail and lynch two negroes. Mayor Waddell prohibited the assembling of the crowd at the jail, himself heading a guard of men with Winchester to protect the prisoners. He subsequently issued a proclamation, saying:

"The undersigned, upon whom has been placed the great responsibility by the action of his fellow-citizens, takes this method of assuring the good people of this city that all the power with which he is invested will be exerted to preserve order and peace in this community, and that power is amply sufficient for the purpose. All well-disposed persons are earnestly requested to co-operate with the municipal authorities in every way possible to secure the permanent establishment of good government. The law will be rigidly enforced and impartially administered to white and black people alike."

The expulsion of objectionable characters from Wilmington was thus described by a correspondent of the Raleigh "Farmer and Mechanic," under date of Nov. 11:

"The good work began last night with G. Z. French, a white carpet-bagger. He was waited on at his room at the Orton House by a committee, escorted to the train by a squad of militia with fixed bayonets, and put on the train with the injunction to leave North Carolina and never return again upon peril of his life. It is believed he has gone to Washington. So intense was the bitter feeling against French that after he reached the station a rope was thrown over his head, and several strong men were in the act of swinging him to an overhanging beam, when influential citizens interfered and with difficulty prevented the lynching. French has been acting sheriff here for some time, Hewlett being only a figurehead. Early this morning the work of banishment was resumed, when a squad of soldiers, under command of Lieut.-Commander George L. Morton, escorted the negro leaders, Tom Miller, Pickens, Bell, Aaron Bryant, and Rev. I. J. Bell to the station, put them on board the north-bound train with instructions to leave North Carolina and never return. They had tickets to Richmond. These negroes were among those arrested and put in jail Thursday for firing on white men and for urging other negroes to deeds of violence. The next exit were Trial Justice R. H. Bunting, ex-Chief of Police John R. Melton, Charles McAlister, Isaac Loftin, colored, and ex-Policeman C. H. Gilbert. They, like French and the negro leaders, were drummed out of town under an escort of soldiers."

Democratic jubilees were held in Raleigh and other cities of the State to celebrate redemption from negro rule.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719. Capital, Bismarck.

Government.—The State officers during the year were as follow: Governor, F. B. Fancher; Lieut-

enant Governor, J. M. Devine; Secretary of State, Frederick Falley; Treasurer, D. W. Driscoll; Auditor, A. N. Carlblom; Attorney-General, John F. Cowan; Adjutant General, Elliott S. Miller; Superintendent of Public Instruction, John G. Halland; Commissioner of Insurance, G. W. Harrison; Commissioner of Agriculture, H. U. Thomas; Bank Examiner, H. A. Langlie; Railroad Commissioners, John Simons, Henry Erickson, Luke L. Walton; Justice of the Supreme Court, N. C. Young; Associate Justice, J. M. Bartholomew; Board of Dental Examiners, President, R. B. Foster; Land Commissioner, Hugh J. Watt—all Republicans.

Finances.—The Treasurer's report for the six months ending June 30 showed that the balance in all funds at the beginning of the year was \$370,209.60; total receipts from Dec. 31, 1897, to June 30, 1898, \$1,112,407.80; total disbursements, \$866,587.11; valuation of personal property, \$22,929,831; number of persons assessed, exclusive of firms, 36,910; valuation of real estate, \$65,458,290; number of acres taxed, 17,223,634; valuation of railroad property, \$12,869,350; total redemption of school district bonds held by permanent school fund, \$23,858.72; cash on hand June 30, \$245,820.69; amount of bonded indebtedness at close of fiscal year, \$199,492.54, or within \$507.46 of the debt limit provided for by the State Constitution. Refunding bonds to the amount of \$112,000, dated May 1, 1897, to run thirty years without option at 4 per cent. interest, were advertised and sold Feb. 24, 1897, to refund Capitol-building warrants to the amount of \$63,000, bearing 5 per cent. interest; Penitentiary bonds to the amount of \$29,000, bearing 4½ per cent.; and \$20,000 university bonds, bearing 4½ per cent. interest, the issue being sold at a premium of \$1,340.

Banks.—On May 5 there were 87 State banks, with total resources of \$5,700,198.37, of which \$512,688.45 was cash. Two applications for charters were waiting the action of the Secretary of State on Dec. 9, 1898. In the 25 national banks the total deposits from Dec. 9, 1897, to Feb. 15, 1898, was \$5,493,911; total loans and discounts, \$4,297,239; average reserve, 32.46 per cent.; holdings of gold coin, \$227,390, an increase of \$5,000 in three months. The First National Bank at Larimore closed its doors in January because of slow collections and being unable to meet the demands of withdrawal. Bonds to secure the deposits in the 5 banks that suspended in 1896 and 1897 were filed according to law, and were amply sufficient to cover any loss; amount on deposit at time of suspending, \$78,483.16; received in dividends, \$14,968.04; total balance due, \$63,515.12.

The increase of business during the last two fiscal years by the 7 building and loan and savings associations of the State was \$70,345.54; total increase of assets, \$45,758.51.

Railroads.—The number of miles of main line, Aug. 2, was 1,244,153; of branch line, 1,278,241; of side track, 295,706; total mileage, 2,866,987; valuation, \$12,869,350, against \$8,619,450 in 1897; aver-

FREDERICK B. FANCHER,
GOVERNOR OF NORTH DAKOTA.

age valuation per mile, \$5,000, against \$3,300 in 1897. The directors of the Great Northern Railroad voted an increase of 1 per cent. in the dividends of the road, thus making 7 per cent. per annum instead of 6 per cent. as in 1897. The increase of total income during the year was \$7,114,501, and in net earnings \$3,904,972. The total increase in earnings of the Northern Pacific for the year was \$4,667,531.

Insurance.—The report of 41 fire and fire and marine insurance companies doing business in the State gave the amount of risks written during the year as \$24,840,517.76; premiums received, \$491,330.98; losses incurred, \$466,649.60; losses paid, \$326,382.41; total admitted assets, \$174,988,607.74; total liabilities, not including capital, \$85,794,418.66; total income, \$92,606,923.50; total expenditures, \$79,800,520.82.

The 14 life insurance companies reported the number of policies issued during the year as 1,252; amount, \$2,129,502; total premiums received, \$338,422.59; losses incurred, \$65,187.35; total admitted assets, \$1,022,897,643.68; total liabilities, except capital, \$873,760,699.44; total dividends paid, \$420,750. The total amount written by the assessment life insurance companies for the year was \$924,030.50; total losses incurred, \$29,000; losses paid, \$22,200; total assets, \$8,992,750.87; total liabilities, \$2,738,142.09. The amount of risks written by the accident, fidelity, and other liability companies was \$3,407,947.48; total admitted assets, \$72,218,557.43; total receipts, \$14,433,845.42; total disbursements, \$13,308,122.38.

Education.—The total number of children in the State for whom appropriation of school tuition was made was 76,651; total number of school-houses, 2,304; number of teachers employed, 3,637; warrants issued for school purposes, \$1,385,934.17; total valuation of school property in the State, \$2,132,738.91. The permanent school fund of \$1,000,000 is invested in bonds and other securities, the interest of which is quarterly apportioned to the different school districts of the State. The Burleigh County Summer School, as provided by the Department of Public Instruction, began Aug. 8 and remained in session till Aug. 28, with great benefit to the teachers of the State.

The number of well-equipped boarding schools reported by the Commissioner of Indian Affairs was 147; of day schools, about the same; total number of pupils, 23,952; increase in average attendance of Government schools, 1,238; decrease in sectarian and public schools, 301; allowance *per capita* of contract schools, \$10.

State Institutions.—The biennial report of the trustees and officers of the Hospitals for the Insane detailed the unsatisfactory working of the law passed by the Legislature authorizing the issuing of \$40,000 in bonds to be guaranteed by the lands of the institution. The lands were sold at a good premium, but the sale was found to be unconstitutional. The board urged the Legislature to make provision for building funds, and recommended the erection of a cold-storage building to cost \$1,000, and also the purchase of the 25 acres of land which have been rented hitherto for raising vegetables. The amount appropriated for the period March 1, 1897, to June 30, 1898, was \$38,835.52; estimated appropriation for the next biennial term, \$112,500. The superintendent reported that the overcrowded condition of the institution was a great drawback to the welfare of the patients. The report showed the average population to be 336; the cost of keeping each patient per week, \$3.34; number of patients admitted in the last two years, 225; discharged, 140; died, 68; number admitted of foreign birth, 143; natives, 67; nativity unknown, 15.

The number of prisoners in the Penitentiary April 6, 1897, was 105; number on April 6, 1898, 138; on May 16, 143, or within 17 of the entire capacity of the cell house. The barn on the grounds was destroyed by fire Oct. 9, with a total loss on building and contents of \$3,000. The amount of insurance was \$2,000. A warden's residence has been built with the \$3,000 appropriated by the Legislature of 1897, and a part of the yard wall has been erected. The receipts for the biennial period were \$7,114.05, all of which have been expended. The average monthly number of officers and employees was 25; of prisoners, 119; number of prisoners received in 1897-'98, 152; actual citizen residents, 68; non-residents, 84; temperate, 39; intemperate, 113; use tobacco, 126; convict population, June 30, 139.

The eighth annual report of the Agricultural College gave the three principal subjects of research by the department of science as waters, soils, and fanners. The experiments with well waters revealed a large amount of solid matter, and in several instances kidney trouble of a serious nature was traced directly to the use of the water. The experiments with sugar beets, by 36 farmers who were chosen to make the tests, were unsuccessful because of the unfavorable season, and the experiments will be continued another year. The station has experimented with 105 varieties of wheat in the past five years. It has secured the best results from Experiment Station Fife, which for four years has yielded 22 bushels to the acre. Red Fife and 774 Glyndon have averaged nearly the same. The dairy department received 100,776 pounds of milk in the year; 60,557 pounds of cream, containing 14,877 pounds of butter fat, for which was received \$2,597.24.

By a large number of field and laboratory tests the chemist of the college has succeeded in finding a substance in formalin which will kill the smut spores without doing any injury to the germinating powers of the grain. The chemist declares that 1 pound of formalin to 50 pounds of water sprinkled thoroughly over the grain piled upon the floor of the barn in such a way that every grain is wet, will prevent the smut. When properly treated, oats take up about 2½ gallons of water per bushel and wheat about 1½ gallon.

The report of the university shows that \$127,120 will be needed for permanent improvements during the ensuing two years, and \$11,506.21 for deficiency on account of repairs and salaries. The industrial school at Ellendale has sold bonds to the extent of \$14,700, the proceeds to be used in erecting a building the foundation of which has been completed.

The School of Forestry has not yet begun active operations. The number of pupils enrolled in the School for the Deaf was 50, an increase of 3 over 1897 and of 16 over any other previous year.

Agriculture and Labor.—The result of investigation by the Department of Agriculture shows that the people of the State have paid off several million dollars of mortgaged debts during the year. On Jan. 14 an inquiry was sent to the register of deeds of each county, and the report from 10 counties gave the total amount of liquidation of chattel mortgages as \$1,042,347, a net gain over 1897 of \$292,244. The total expense to the office of Commissioner of Agriculture for publishing the annual proclamation of the free-storage and wool-market days was \$193.25, and thousands of dollars are saved to the wool growers by reason thereof. The number of sheep sheared in 1897 was 234,541; number of pounds of wool clipped, 1,382,230. There were 919,493 tons of prairie hay cut during the year. The 67 flouring mills of the State are furnished with the most approved machinery and ap-

pliances. To the circulars sent to 54 creameries and cheese factories only 23 responded, and of these 10 had suspended operations. Two licenses for the sale of oleomargarine were held within the State during the fiscal year. The number of tons of coal mined in the 43 mines operated was reported as 35,742; number of men employed, 151; wages paid, \$8,644. The total number of farms reported was 31,653; acres under cultivation, 5,587,849; total number of acres in crops, 5,337,173; total product of wheat, 35,758,346 bushels; of oats, 11,490,888 bushels; acres of oats sown, 638,929; total product of barley, 3,655,942 bushels; acres of barley sown, 231,896; total product of flax, 1,956,205 bushels; acres sown, 399,900; rye, 281,876 bushels; sown, 27,750 acres; corn, 479,804 bushels; acres planted, 57,829; potatoes, 1,711,820 bushels; acres planted, 22,395.

Live Stock.—The total number of horses of all ages was reported as 216,519, assessed value \$6,814,918; number of mules, 3,862, value \$143,904; cattle, 280,011, value \$3,547,743; sheep, 267,050, value \$396,767; swine, 78,010, value \$146,270; total valuation of all live stock, \$11,079,805.

Land Sales and Loans.—There are 2,580,480 acres of common-school lands in the State, not including the 500,000 acres granted by the United States for the benefit of public institutions. Of these school lands, 32,420 acres were sold, for which the first payment was \$463,480, and the second payment \$305,000; interest received on deferred payments, \$174,365; total revenue, \$942,845. About 20,000 acres a month have been taken up by settlers distributed over the whole district. On Dec. 31, 1897, there was in the permanent school fund, under a provision of the farm-loan law, the sum of \$250,000, about \$60,000 of which was deposited in suspended banks and unavailable for immediate use. Since the land law went into effect there have been applications for farm loans aggregating \$167,265; of this sum \$20,250 has been withdrawn or refused, and \$110,615 has been invested in farm loans during the year. The sales of land in January of the present year amounted to \$245,000, as against \$78,000 in January, 1897. In February there were sold \$175,000, against \$58,000 last year. Hay permits on the common-school lands were sold to the amount of \$4,560.50, and on institution lands to the amount of \$1,474.25.

Immigration.—The increase in the population of the State is steady and continual. Of the 33,000 skilled laborers that came to this country during the past year, 70 emigrated to this State; of the 16,243 farmers, this State had 360; of the 52,000 unskilled laborers of all nationalities, North Dakota had 262. The Great Northern Railroad brought 1,800 Dunkards to the settlements in the Turtle mountain country.

Veterinary.—The work of the veterinary department showed the use of mallein as a diagnostic agent in detecting glanders, the use of tuberculin for the diagnosis of tuberculosis, and the use of blackleg vaccine for the prevention of blackleg in cattle. The 3,000 doses of blackleg vaccine administered gave excellent results; not a single animal suffering from the disease and vaccinated was lost, though non-injected animals in the same herd died.

Rabies.—The first outbreak of hydrophobia in the State began Aug. 1, when a shepherd dog bit several cattle in the vicinity of Bartlett. On Aug. 20 several animals developed signs of rabies, and were destroyed. Two human beings were bitten by the dog, but took Pasteur treatment and suffered no discomfort.

Tornado.—On July 22 a tornado struck the town of Minot, demolished 17 buildings, and injured several people. The hail following destroyed about 25,000 acres of grain in the vicinity of Casselton.

Pier Moved.—The east pier of the Northern Pacific bridge at Bismarck was moved to new foundations, May 29. The solid mass of granite, weighing more than 9,000,000 pounds, quivered, trembled, slid forward a distance of 2 feet 9 inches in less than a minute, and rested safely on its new base. The work of preparation for its removal occupied eight months.

Fire.—On Aug. 8 a disastrous fire visited Bismarck and destroyed much property. The Northern Pacific granted a free rate for the transportation of building material, and the burned section was rapidly rebuilt.

Indians.—There are about 1,500 Indians on the Fort Totten reservation, 400 of whom hold land from the Government. The State's Constitution provides that Indians shall become residents when they have severed tribal relations, and have taken land in severalty from the Government. According to a decision of the Supreme Court, 300 of these Indians who hold Government land are citizens of Benson County and as such are entitled to vote and to be treated in every way as full residents of the county.

Yellowstone Park.—The number of tourists visiting the park from June 1 to Aug. 20 was 720. On Aug. 14 six of the transportation company's coaches and one United States wagon were held up by two well-armed, masked highwaymen, who obtained \$500 in plunder. The robbers were arrested Aug. 29. The estimated number of buffalo in the park was 24. The coyotes were numerous and killed 75 from a herd of 500 antelopes that ventured on the slopes of Mount Everts.

Wolf Tax.—The number of wolves killed, according to registered certificates, was 8,000; amount of bounty, \$24,000. The amount of wolf tax to be collected from the counties was \$9,000.

Military.—For the expenses in connection with the mobilization of State troops a statement has been prepared giving the amount of officers' pay as \$867; of rejected soldiers, \$675.95; band, mileage, and *per diem*, \$263.20; for equipment of men, \$2,096.86; for subsistence, \$3,296.52; total, \$10,021.18.

The organized strength of North Dakota, April 1, 1898, as given by the Adjutant General, was: Officers, 54; enlisted men, 498; number of men unorganized but available for military duty, 19,937. The entire National Guard volunteered their services at the call of the President, but only 8 of the infantry companies could be accepted. The troops ordered from Fort Yates belonged to an historic organization. The Second Regiment, dating its birth from the days of the Continental army, with Gen. Washington in command, has seen service in all the wars, and has had among its officers many generals.

Prohibitory Law.—One of the ways by which the prohibitory law has been evaded was by the shipment of packages of beer or liquor C. O. D. Many of these packages were shipped to fictitious addresses. One such package was not called for and finally was delivered to a man who paid the charge. When opened the package was found to contain alcohol. The case was taken up by the Prohibitionists, and the railroad agent was arrested for violating the law. The agent claimed ignorance of the contents of the package, but the judge charged the jury that "every person or corporation who assumes to act for another as its agent in the transmission of intoxicating liquors, and who receives the same by the method known as packages C. O. D., is bound to know, at his peril, the contents of such package." The jury found the agent guilty.

Decisions.—The Supreme Court, at its April session, decided that failure to file a chattel mortgage does not render it void as against the mort-

gagor. It also handed down the decision that costs can not be recovered in a disbarment case by either party in the absence of express legislative authority. At its May session the court advised district courts to look after divorce residences, and declared that the term residence must be construed to mean "domicile" in divorce cases, and held what the law specifies that applicants for divorce must be *bona fide* residents of the State by an actual three months' residence therein; and that when other occupation has never been given up, "the lack of *bona fide* residence is patent" and the court must throw out the case on statutory grounds.

In the case of the widow of an intoxicated man who died from exposure after having been put off the train, the court held that when the Northern Railroad accepted the intoxicated man as a passenger it was bound to exercise due care in looking out for his welfare, and that the widow is entitled to recover damages for his death, caused by cold and exposure from being put off the train and then ejected from the station by the station agent, thus being compelled to remain in the cold till he died.

In the Cavalier County case, where the Secretary of State refused to place the names of the Democratic nominees in the column with the fusion State ticket, the court decided that the Secretary must certify to the nominations as filed with him. It defined the duties as "ministerial, and not judicial." It further said: "The Secretary is a disinterested party. He has no duty to perform touching such nominations, except to certify them to the proper auditor. If improper nominations have been filed, any citizen interested may apply to a court of competent jurisdiction, where all the facts can be speedily and certainly investigated; and if nominations other than as prescribed by statute have been filed with the Secretary, that officer may be enjoined from certifying the same to the county auditors. But if no such restraining order be served, it is the duty of the Secretary to certify all nominations, proper certificates of which have been filed in his office."

The court decided that roundhouses and other railroad property on the right of way are included in the assessment of the State board, and can not be again assessed by county assessors.

The decision was handed down that county auditors may issue warrants for the current expenses of the county after the constitutional debt limit has been reached, in anticipation of the tax already levied, though not yet collected, and that such warrants do not augment the existing indebtedness within the meaning of the Constitution.

On June 8 a decision in the case involving North Dakota lands over which the railroad's right of way was protested declared that neither the city of Bismarck (as owner of the town site) nor the grantee could, under the facts shown, disturb the possession of the railroad company in its right of way extending 200 feet on each side of its road. The case involved about \$60,000, and has been in the courts for a number of years.

An important decision was filed in the Fargo Land Office, setting forth the status of a widow with minor children, and giving her the right to dispose of the homestead.

In the matter of the State against the North Dakota Railroad rate, the court decided that capital has a right to proper remuneration, and that the State failed to show that the railroad rates returned more than a proper income on the capital invested.

Political.—The Republican State Convention met at Fargo, July 20, and nominated a full State ticket. The most notable feature of the proceedings was the plank relating to higher taxation of railroad property, the resolution being as follows:

"We believe in just and equal taxation of all private and corporate interests, and pledge our State Board of Equalization to a higher assessment of railroads than has heretofore obtained in the State." In the matter of prohibition the convention pledged the people "that no backward step should be taken in the maintenance and enforcement of the prohibition law." The following nominations were made: For Governor, F. B. Fancher; Lieutenant Governor, J. M. Devine; Secretary of State, Frederick Falley; Auditor, A. N. Carlblom; Supreme Judge, N. C. Young; Treasurer, D. W. Driscoll; Superintendent of Public Instruction, J. G. Halland; Commissioner of Insurance, G. W. Harrison; Attorney-General, John F. Cowan; Railroad Commissioners, Luke L. Walton, John Simons, and Henry Erickson; Congressman, B. A. Spalding.

The Democratic and Populist State conventions met at Fargo, July 12. The Democrats approved the Chicago platform; and on the conduct of the war against Spain the convention declared: "We rejoice in the glorious achievement of our army and navy, whose magnificent victories, participated in by citizens of every State in the Union, have added imperishable luster to our arms, swept away the last vestige of sectionalism in our country, and revealed us to the world a united people." The platform charged the Republican party with neglect and betrayal of their official duties; demanded greater economy in State expenses; a more stringent system in investing and guarding the school funds; and that the valuation of railroad and other corporate property be raised to a just and reasonable basis, as compared with farm lands and other taxable property.

The Populists adopted a platform that was a combination of the platforms of St. Louis and Omaha. The joint conference committee reported in favor of calling the new party "Independent Democratic," which name the Democrats adopted after much opposition. The Populists debated many hours upon the adoption of the name, but accepted it finally.

The fusion committee of Democrats and Populists placed the following ticket in the field: For Governor, D. M. Holmes; Lieutenant Governor, W. A. Bentley; Secretary of State, Samuel Torgerson; Auditor, C. G. Bade; Treasurer, Thomas Bolton; Attorney-General, S. B. Bartlett; Superintendent of Public Instruction, C. C. Schmitt; Insurance Commissioner, W. M. Campbell; Commissioner of Agriculture, A. L. Whipple; Supreme Court Judge, C. J. Fisk; Railroad Commissioners, Robert Fleming, N. J. Bjornson, and H. L. Hevener.

The official returns were as follow: Governor, Fancher (Republican), 28,308; Holmes (Independent Democrat), 19,496. Judge, Young (Republican), 27,989; Fisk (Independent Democrat), 18,400. Lieutenant Governor, Devine (Republican), 28,703; Bentley (Independent Democrat), 17,282. Secretary of State, Falley (Republican), 28,143; Torgerson (Independent Democrat), 17,516. Auditor, Carlblom (Republican), 28,165; Bade (Independent Democrat), 17,480. Treasurer, Driscoll (Republican), 28,946; Bolton (Independent Democrat), 16,843. Attorney-General, Cowan (Republican), 28,768; Hildreth (Independent Democrat), 17,064. Superintendent of Public Instruction, Halland (Republican), 27,805; Shafer (Independent Democrat), 25,803. Commissioner of Agriculture, Thomas (Republican), 28,334; Whipple (Independent Democrat), 16,783. Commissioner of Insurance, Harrison (Republican), 27,764; Campbell (Independent Democrat), 17,311. Commissioners of Railroads (Republican), Walton, 27,249; Erickson, 27,567; Simons,

26,971; against (Independent Democrat) Bjornson, 16,731; Hevener, 17,027; Fleming, 17,061.

The Legislature stands as follows: Senate, 22 Republicans to 9 Democrats and Populists; Assembly, 55 Republicans to 16 Democrats and Populists.

NORTHWEST TERRITORIES OF CANADA.

These immense Territories passed in 1898 through the last stages of development into full self-government. From 1870 to 1875 they were governed as a part of Manitoba; from 1875 to 1880 by a lieutenant governor appointed by the Dominion Government and a council similarly appointed; from 1880 to 1888 by a council partly elected and partly nominated; from 1888 to 1897 by a lieutenant governor, executive council, and assembly, with all provincial rights except that of borrowing money. By an act coming into force on Oct. 1, 1897, full responsible government was finally granted. Mr. F. W. G. Haultain had acted as chief adviser, or Premier, to the Lieutenant Governor through the various stages between 1888 and 1897, and he naturally became Premier under the final changes in the latter year, with the following ministry: Messrs. J. H. Ross, H. Mitchell, C. A. Magrath, G. H. V. Bulyea. In addressing a public meeting at Moose Jaw, on Oct. 14, 1897, Mr. Haultain made the following historical reference to this development:

In asking the meeting to consider the history of the last six years, he asked them to consider that the members of the Assembly, of the executive committees of the Assembly—and that meant to a certain extent, at least so far as the business and condition of that fight were concerned, members of the present Government—were directly concerned with the struggle for the control of the affairs of the Territories by the people's representatives. Every year something had been done, some new power had been gained. Their jurisdiction had been extended, small increases of money had been secured until—taking the federal acts of 1891, 1894, 1895, 1896, and finally the crowning act of 1897—there was established a fully responsible form of government. Taking all those acts, there was a history of persistent effort finally rewarded, so that to-day they stood in the position not of a province with all its elaborate machinery, with all its terms of settlement with the Dominion of entrance into confederation, but in a position of having almost as large a measure of self-government and of autonomy as any of the provinces possessed. He thought that was a record of struggle and effort in the right direction which entitled them to a certain amount of credit and praise. There was one feature of this constitutional development he had been speaking about which was worthy consideration. That was, that it had been gradual; it had been progressive; it had been in keeping with the development of the Territories themselves. There had been no grasping after theoretical power, no simply claiming as rights things they did not want; there had been no saying, 'We want our jurisdiction extended in this direction and in that direction,' because some other places had it. It had been a steady, a distinct, a gradual, but certain development along the line of more definite control of their own affairs. There had been no radical change in any one year.

He protested against the introduction of federal politics into the new parliamentary system and elections which were to soon take place, and declared the Government's policy to be one of material development in the interest of the people and avoidance of all burning questions such as those involved in the racial, religious, and educational problems of the older provinces. Irrigation was to be encouraged, land taxation readjusted, agricultural societies promoted.

The last session of the old Assembly was opened on Aug. 16, 1898, by Lieut.-Gov. M. C. Cameron, with a speech, in which he said:

"I have to congratulate you upon the many evidences of prosperity which I have noted in such parts of the Territories as I have been able to visit recently, and also upon the marked advances to be seen in all communities since I first had the pleasure of visiting the West. From all parts of the country come uniform reports of substantial prosperity and splendid prospects for the farmer and the stock grower. These evidences of real prosperity, together with a largely increased immigration, point to the fact that the Territories have entered upon a period of unusually rapid growth and development.

"Since you last met the Parliament of Canada has cut off from the Territories the Yukon judicial district, for purposes of a separate administration. Before this was done my Government had taken steps to put into operation in that district such of the laws of the country as came directly within the scope of their responsibility. A member of the Executive Council, empowered with the necessary authority has spent several months in the Yukon district. One of the most important duties devolving upon my Government in connection with its administration of affairs in the Yukon district arose from the imperative and immediate necessity for regulating and restricting the importation and sale of intoxicating liquor. This work has been done with great care and consideration, and a statement of the action taken in this matter will shortly be laid before you.

"The revenue of the Territories has been increased beyond the estimate by a comparatively large sum, and you will be asked to appropriate several amounts required in the interests of the public service and the country.

"The commission appointed to consolidate the ordinances has intimated, through the chairman, a desire to have further legislation enacted in order to make its work as complete as possible, and in deference to that desire no action has been taken under the authority given at your last session to promulgate the consolidation of the ordinances. An opportunity will therefore be afforded you to include in the consolidation the whole of the work of this Assembly.

"The organization of the several departments of the public service authorized at your last session has engaged the attention of my Government during the recess. This work is now about completed in a satisfactory manner, notwithstanding a number of unforeseen hindrances. So far as is known, the whole of the Territories where the population warrants has been organized into statute labor districts during the year. Three hundred and forty-four new districts have been constituted, making the total number 401, with 4 districts in process of organization. Returns of the work done during the past season are now coming in, which show gratifying results. Before you close your labors a statement will be laid before you giving further details of the present position of statute labor districts.

"An important feature of the year's work has been the recording and reallocation of stock brands, which has been successfully carried on by the Department of Agriculture. I am pleased to announce to you that my Government has been able to make arrangements which, if ratified, will have the effect of enabling our stock raisers and agriculturists generally to take advantage of all that is being done in the eastern part of Canada to produce higher grades and better breeds of stock, and also to bring to their doors demonstrations of what is being discovered in advanced methods of culture in the growth

of cereals and other farm products suitable to the local conditions of each district.

"As a result of negotiations between my Government and the Minister of the Interior a bill was introduced and passed at the last session of the Federal Government, delegating the administration of the Northwest irrigation act to the Commissioner of Public Works. As a practical result of this legislation the procedure for obtaining and recording water rights under the provisions of the irrigation law has been largely simplified and rendered very much less expensive. As a further result of this legislation the procedure for the formation of irrigation districts under the local ordinance can be made comparatively simple and inexpensive, and a measure having that end in view will be submitted for your approval."

The time of the session was mainly taken up in discussion rather than in practical legislation. The address was unanimously agreed to on Aug. 22. It was decided that the consolidated ordinances were to be printed in English only. Much bitter feeling was expressed over the assumption of the Yukon district government by the Dominion authorities and its complete severance from the Territories. This was particularly observable in the debate over Mr. Bulley's mission to the Yukon and his dispute with Major Walsh over their respective jurisdiction in liquor-license matters. Mr. Haultain even threatened to have the Dominion commissioner impeached. On the other hand, it was pointed out with considerable truth by Ontario papers that the Northwest Territories had no actual jurisdiction, could establish no communication with the country, could do nothing to maintain authority in it, and certainly ought not to have intervened in settling an important question of public policy for a country that was about to have a government of its own. Proceedings of that sort do not rest upon any very excellent ethical basis, and it could scarcely be regarded as a very friendly act on the part of the Northwest Government toward the Federal Government to issue a large number of permits to sell liquor in a country where disorder and mayhap riot were liable to take place, for the suppression of which the Northwest Government could not be held responsible.

On Sept. 13, 1898, Mr. Haultain introduced his estimates for the year ending Aug. 31, showing a total revenue of \$542,772, of which \$372,510 had been already appropriated, with supplementary expenses which he placed at \$163,975. The appointment of a deputy commissioner of agriculture was also announced. A redistribution bill was passed, rearranging constituencies, and late in September the House was prorogued. On Oct. 13 Lieut.-Gov. A. E. Forget, who had succeeded Mr. Cameron upon the death of the latter a few weeks earlier, dissolved the Assembly, and Mr. Haultain appealed to the people. The result on Nov. 8 was an overpowering victory for the Government. Only 4 or 5 Opposition members were elected, and even the leader, Dr. Brett, was defeated.

Miscellaneous.—The following figures illustrate the subjects upon which money was expended by ordinance during the sixteen months ending Dec. 31, 1898: Civil government, \$6,325; legislation, elections, etc., \$46,150; public works, \$65,611; education, \$26,850; agriculture, \$9,485; hospitals, etc., \$3,200; Yukon \$6,000.

During the year wide prosperity prevailed throughout the Territories, and the crops were excellent, while cattle and other products of the ranches increased in numbers and value. Many immigrants from the border States settled in parts of the country, while a large contingent of Galicians was brought in by the Dominion Department of the In-

terior—about 765 heads of families. Irrigation was largely encouraged. At the date of the last annual report of the Interior Department there were about 157 ditches in operation in the Territories, supplying water sufficient to irrigate 65,000 acres. The number of constructed ditches increased during the past year to 174, having a carrying capacity sufficient to irrigate 76,000 acres. The experimental stage of irrigation in the Territories may now be said to be passed, as the irrigated areas are so widely settled throughout the arid portion of the country, and the returns from these areas have been uniformly satisfactory during the past three seasons.

NOVA SCOTIA, an eastern province of the Dominion of Canada; area, 20,907 square miles; population, 1891, 450,396. Capital, Halifax.

Government and Politics.—The ministry of the Hon. G. H. Murray maintained its position during the year without much difficulty, and politics were quiet. Sir Charles Tupper, leader of the Dominion Conservatives, paid a visit to the province in September, and addressed several meetings in Halifax, and his constituency of Cape Breton chiefly. He was warmly welcomed and banqueted, and made some powerful speeches. The first session of the ninth Legislature was opened by Lieut.-Gov. M. B. Daly, on Jan. 27, 1898, with a speech from the throne, in which he said:

"During the year the people in the eastern counties were honored by an official visit from his Excellency the Governor General and the Countess of Aberdeen, who in their former visits to Nova Scotia had not been able to see that section of the province. The warm interest manifested by their Excellencies in everything connected with the industrial and social life of the country through which they passed was highly appreciated by the people, who accorded them the loyal and cordial welcome which was due to their personal worth and their exalted position.

"It is gratifying to know that there was a general improvement in the condition of trade in the Dominion during the past year. This improvement was most marked in the central and western provinces; but the maritime provinces have felt the betterment to some extent. In most of the great branches of industry in which our people are engaged there has been a firm degree of activity, and the prospect for the new year is very encouraging.

"You will be pleased to learn that the mining enterprises which form so large a factor in the business of our province were very successfully prosecuted during the year. The output of coal was larger than in any previous year of our history, and the outlook for further development in this industry is most promising. Not less gratifying is the increase to be noted in gold mining. In other parts of the Dominion important discoveries have been made which have created world-wide interest, but in Nova Scotia gold mining is pursued as an old-established industry which has yielded rich returns to many who have prosecuted it under favorable conditions, and which now offers a legitimate field for the investment of capital when accompanied by skill and prudence.

The provincial exhibition held at Halifax in the autumn was remarkably successful, both as respects the character of the exhibits and the attendance of visitors. The land acquired and the buildings erected for the exhibition were well adapted for their purpose, and with the experience of last year to assist them the commissioners in charge will, it is confidently believed, be able to carry on their work in such a manner as to fully realize the expectations on which the exhibition legislation was passed.

"The importance of encouraging the pursuit of

agriculture can not be too frequently impressed on our people. I commend to the particular attention of our farmers the facilities which are being provided for the conveyance of food products in cold-storage steamers, which bring within their reach distant countries which afford profitable markets. There are classes of this trade for which our province is well adapted, and I trust that our intelligent and enterprising farmers will avail themselves of the opportunities that are opening to them. While the cold-storage arrangements are regarded as of chief importance in their relation to agriculture, it is hoped that they may be used with advantage in our fishing industry also.

"The Coast Railway Company, who have contracted to construct a railway from Yarmouth to Lockport, have prosecuted their work with vigor, and now have 31 miles of road, extending within a short distance of the Shelburne County line, in regular and successful operation. A contract has been entered into with the Midland Railway Company for the construction of a railway from Windsor to Truro.

"The subject of certain claims of the province upon the Federal Government has engaged the attention of my ministers during the recess, and steps have been taken to bring these claims before the Federal authorities. A delegation has visited Ottawa recently for that purpose.

"Nearly thirteen years have elapsed since the last revision of our provincial statutes. It seems to be generally believed that it is in the public interest that a new revision should take place, and you will be invited to consider a measure having that object in view.

"Among other measures to which your attention will be invited are a bill to effect a reduction of interest by the consolidation of the unfunded debt of the province, a bill to amend the law respecting grand juries, and a bill relating to the distribution of insolvent estates."

The House adjourned on March 11, after passing a number of bills, of which the chief dealt with assignments and preferences by insolvent persons; with the consolidation of county court acts; with a proposed provincial loan for the funding of \$729,000 of miscellaneous indebtedness; with regard to grand juries; with amendments to the fire insurance act; with legislation to assist creameries, and to amend the municipal assessment act; with regard to certain annuities and the rights of civil engineers; with respect to the public health; and with the incorporation of certain railway, coal, iron, and other companies.

The Lobster Fisheries.—This industry is one of the most important in the maritime provinces. The export of canned lobsters from Halifax—75 per cent. of the whole shipment from the province—has amounted to \$21,000,000 in value during the past twenty-three years. This is half the lobster pack of British America and the world, as no other country cans lobster for export. Since 1884 the price per case has steadily risen from \$6, and in 1898 it reached \$10. Hence the importance of the business and of the following table :

DESTINATION.	Cases.	Value.
Great Britain (1876).....	47,036	\$206,966
United States.....	1,807	10,826
Other countries.....	35	1,958
	48,878	\$309,750
Great Britain (1896).....	119,643	1,016,965
United States.....	13,536	115,046
Other countries.....	32,364	275,094
	165,539	\$1,407,105

In 1897 the lobster pack shipped from Halifax amounted to 1,500,000 cases, valued at \$1,350,000. But then came a partial cessation in the supply. The Dominion Government promptly appointed a Royal Commission of Inquiry, composed of Prof. É. E. Prince, M. H. Nickeison, W. Whitman, and H. C. V. Le Vatte. Statistics and other facts were obtained, complaints heard, regulations considered, seasons, fishing year, etc., studied, and recommendations made regarding increase of supply. The commission met at different places throughout the province in October, 1898, but the report has not yet been made public.

Education.—In 1897 progress was general. The number of sections without schools was reduced from 171 to 153, and the schools increased from 2,312 to 2,346. The number of pupils of all grades increased from 101,032 to 101,158. The average daily attendance increased at a more rapid rate, the 54,015 of the previous year having become 54,922, indicating an increased attendance every day of 907. The number of teachers increased from 2,312 to 2,346; but much more promising for the future of education, the Normal-School trained teachers increased at a higher rate, the 690 of last year having become 752. The following extract from the report of the chief superintendent (1897) illustrates the kind of progress made :

"The numbers of trained teachers employed in the schools of the province during each of the last five years are as follow: In 1893, 403; in 1894, 499; in 1895, 616; in 1896, 690; in 1897, 752. This shows that gently but surely we are making steps in the direction of all the leading educational countries of the world which have already made professional training of a very thorough character necessary for all teachers. Our method of options appears to be well enough adapted to our present stage of development. It gives a chance, yet without any restrictions, to the impecunious student to earn money for his advancement to some profession; but it is also giving a chance to the trained teacher to remain in the teaching profession. That this change is going on so gradually and smoothly is the highest praise for the method. This programme will have to run for many years at this rate, however, before we shall be in this respect in the position of the leading states of Europe and America to-day.

"Although from the increase in the number and rank of our teachers the fixed provincial grant of \$182,500 caused the allowance to each to fall \$1.18 on each \$60, it is gratifying to know that trustees on the average have so much appreciated the improved character of the teachers that not only was this deficit made good by the sections, but more than made good. Although teachers' salaries have been falling, as a rule, during the last five years in most of the provinces, under our present arrangements they have for the same period been steadily increasing. Notwithstanding the gradual lowering of the provincial grant to each, salaries during the past year actually increased, on the average. The increases were as follow: Class A—male teachers, \$46.94; female teachers, \$29.52. Class B—male teachers, \$7.85; female teachers, 84 cents. Class C—male teachers, \$9.07; female teachers, \$1.04. Class D—male teachers, \$2.26; female teachers, \$1.53. This increase was the spontaneous offering of the people in their desire to hold or obtain teachers with good records. Without increasing remuneration we can not expect the profession to improve much. Our future progress is conditioned by salary and the general cost of living, as well as by the adoption of improved accommodations, apparatus, and methods.

"That this continued improvement is not due

solely to the reduction in the number of licenses issued is suggested by the following figures showing the number of licenses granted each year since 1893: In 1893, 218; in 1894, 250; in 1895, 365; in 1896, 513; in 1897, 571. Four hundred more candidates than went up to the provincial high-school examination in 1896 presented themselves for examination in 1897. But as a small fee was required to be paid by those not taking the examination in regular order, the cost of the examination was less. The great rush of candidates to examination did not mean, it appears, a sudden advance in preparedness so much as it indicated oversanguine expectations. Out of 2,917 only 957 obtained the grades applied for, although 1,415 received certificates of some grade. It must be remembered that the standard after 1893 was being gradually raised until 1897, when the accommodation expedients authorized during the transition from the old to the new course could be completely dropped.

"Lastly, both the provincial Normal School and the provincial School of Agriculture affiliated to it, have continued to improve in the preparation of teachers suited to the needs of the province. They help to make clear that the form of education in the common schools best fitted to lay the foundation of a patriotic interest in the soil, industries, and life of the province is also the best for the foundation of the education of the future professional classes; and that the elementary stages of public-school work might therefore be safely directed without exception toward the stimulation of an industrial bias, instead of solely directing the pupils toward that academic instruction more particularly leading to the learned professions so called."

The following are the school statistics for the year 1897: School sections in the province, 1,896; sections without school, 153; schools in operation, 2,346; number of teachers, 2,485; teachers trained in Normal School, 752; pupils on the register in the last quarter of 1897, 100,356; high-school students, 4,807; property in sections, \$80,738,448. The expenditure in 1897 from provincial grants was \$242,811; from county funds, \$119,652; from section assessments, \$448,263.

Agriculture.—The number of agricultural societies in 1897 was 89, the members numbered 5,238, the total sum subscribed was \$5,998, and the Government grant was \$8,000. Efforts were made to improve the live stock, and much greater interest was shown in fruit culture. Efforts were made by the Department of Agriculture to promote the

breeding of hogs, and in this respect a satisfactory showing was given at the annual Halifax exhibition.

The creameries and cheese factories numbered 20, with 1,191 patrons and a production of 365,670 pounds of cheese and 192,887 pounds of butter. The total value was \$73,118.

Mining.—The receipts of the department during the year ending Sept. 30, 1897—mainly from the coal royalty—were \$270,387. The gold produced was 26,580 ounces, valued at \$505,020. This production is steady, the total value for thirty-five years having been \$12,434,474. The other items of mineral production were as follow:

PRODUCTS.	Year ending Sept. 30, 1896.	Year ending Sept. 30, 1897.
Iron ore (tons).....	56,334	44,146
Manganese ore (tons).....	129	100
Coal raised (tons).....	2,235,472	2,320,916
Coke made (tons).....	58,741	45,000
Gypsum (tons).....	130,489	125,000
Grindstones, etc.....	30,817	32,400
Limestone (tons).....	31,171	25,000

The sales of coal were \$641,308, and the export to the United States was 106,279 tons, against 174,919 tons in 1896.

Railways.—The report of the provincial Government Engineer, dated Jan. 20, 1898, says that "our operations during the year consisted chiefly of preliminary railway surveys, supervision of railway construction, and the erection of highway bridges, built under the authority of the bridge act of 1883 and its amendments. The year 1897 will be memorable for the opening for traffic of the first three sections of the Coast Railway, 31 miles, Yarmouth to East Pubnico. With the further stretch of 20 miles under construction, to Barrington, nearly one fourth of the whole length from Yarmouth to Halifax will be completed. Under the provisions of chapter liii, Revised Statutes, and in consideration of a subsidy to be paid in the manner provided, an agreement has been entered into between the Government of Nova Scotia and the Midland Railway Company, Limited, for a railway from a point on the Intercolonial Railway, or the Dominion Atlantic Railway, within the town of Windsor, in the county of Hants, to a point on the Intercolonial Railway within the town of Truro, in the county of Colchester."

The outlay on bridge repairs during 1896-'97 was \$12,986, making a total of \$145,976 in five years.

OBITUARIES, AMERICAN. Acton, Thomas Coxon, financier, born in New York city, Feb. 23, 1823; died in Saybrook, Conn., May 1, 1898. He acquired a limited education, and was admitted to the bar, but never practiced. In 1850 he was appointed assistant deputy county clerk, and after three years' service there he entered the office of the surrogate. Gov. Morgan, in 1860, appointed him a police commissioner of the old metropolitan district, an office he held under the old and new organizations for nine years, during seven of which he was president of the board. His most distinguished service was during the draft riots in 1863, when for a week, in consequence of the wounding of Superintendent Kennedy, he personally commanded the entire police force of the city. During this period he was also a member of the Board of Health and the Board of Excise, both of which he aided in organizing. The paid fire department, too,

was created largely through his efforts. From 1870 till 1883 he was superintendent of the United States Assay Office in New York city, and in the next four years he was assistant treasurer of the United States. In 1887 he organized and became president of the Bank of New Amsterdam, with which he was officially connected till 1896. Mr. Acton was an organizer of the Societies for the Prevention of Cruelty to Animals and to Children.

Allen, Joseph Henry, theologian, born in Northboro, Mass., Aug. 21, 1820; died in Cambridge, Mass., March 20, 1898. He was graduated at Harvard in 1840, and at its divinity school in 1843, and held pastorates in Roxbury and Northboro, Mass., Washington, D. C., Bangor, Me., Ann Arbor, Mich., San Diego, Cal., and Ithaca, N. Y., till 1878. For twelve years he was editor in chief of the "Christian Examiner." From 1878 till 1882 he was lecturer on ecclesiastical history at Harvard, and in

1887 he became editor of the "Unitarian Review." He received the degree of D. D. from Harvard in 1891. Dr. Allen was a prolific writer on religious and philosophical subjects, and published "Ten Discourses on Orthodoxy" (Boston, 1849); "Hebrew Men and Times" (1861); "Fragments of Christian History" (1880); "Christian History in its Three Great Periods" (3 vols., 1880-'82); "Our Liberal Movement in Theology" (1882; with "Sequel," 1897); "Positive Religion" (1892); "Unitarianism since the Reformation" (1894); and translations of Renan's "Anti-Christ," "People of Israel," and "Origins of Christianity."

Ammen, Daniel, naval officer, born in Brown County, Ohio, May 15, 1820; died in Washington, D. C., July 11, 1898. He was appointed a midshipman in the navy, July 7, 1836; was promoted passed midshipman, July 1, 1842; master, May 10, 1849; lieutenant, Nov. 4 following; commander, July 16, 1862; captain, July 25, 1866; commodore, April 1, 1872; and rear admiral, Dec. 11, 1877; and was retired June 4, 1878. He was on sea duty twenty-one years and two months, and on shore or other duty seventeen years and three months. He made his first cruise with the Wilkes exploring expedition in 1837-'38; was on duty in the West Indies and the Mediterranean and off the coast of Labrador till 1841, and passed the examination at the Naval School in 1842. From that time till the outbreak of the civil war he served in the coast survey, the scientific expedition to Paraguay, and the commission to select a naval station in the Bay of San Francisco, and also at the Naval Observatory. At the opening of the civil war he was executive officer on the "Roanoke," of the North Atlantic blockading squadron. He commanded the "Seneca," of the South Atlantic squadron, at the battle of Port Royal, Nov. 7, 1861, and on the following day raised the flag over Fort Beauregard and delivered the works to the army. In the attack on Port Royal Ferry, on Jan. 1 following, he commanded the forces entering by way of Whale Branch. Subsequently he was engaged in the operations against Fernandina through St. Andrew's Sound and in the St. John river. In 1863 he commanded the monitor "Patapsco" in the attacks on Fort McAllister, in March, and Fort Sumter, in April, and in 1864-'65 the steam sloop "Mohican" in the bombardment of Fort Fisher, in December, and in the naval support of the army in the assault there in the following month. After his retirement he served on the board for the location of the new Naval Observatory and as a representative of the United States at the Inter-oceanic Ship Canal Congress in Paris. Rear-Admiral Ammen invented the eask balsa, or lifeboat, now used on our war vessels, and the twin-screw steel-ram "Katahdin" of the navy. He published "The Atlantic Coast" ("The Navy in the Civil War Series," 1883); "Recollections of Grant" (1885); and "The Old Navy and the New."

Atwood, Melville, geologist, born in Prescott Hall, Worcestershire, England, July 31, 1812; died in Berkeley, Cal., April 25, 1898. In early life he engaged in gold and diamond mining in Brazil, and made a special study of microscopy, geology, and lithology. Through his studies he made, in 1843, a discovery that greatly increased the commercial value of zinc ore. In 1852 he came to the United States and invented the blanket system of amalgamation. The richness of the first Comstock lode was made known to the world by his assay of mineral specimens from that district.

Augur, Christopher Colon, military officer, born in New York, July 10, 1821; died in Washington, D. C., Jan. 16, 1898. He was graduated at the United States Military Academy, and commissioned a brevet

2d lieutenant in the 2d Infantry in 1843; was promoted 2d lieutenant in the 4th Infantry, Sept. 12, 1845; 1st lieutenant, Feb. 16, 1847; captain, Aug. 1, 1852; major in the 13th Infantry, May 14, 1861; lieutenant colonel of the 12th Infantry, July 1, 1863; colonel, March 15, 1866; and brigadier general, March 4, 1869; and was retired July 10, 1885. In the volunteer service he was commissioned a brigadier general, Nov. 12, 1861; promoted major general, Aug. 9, 1862; and mustered out Sept. 1, 1866. He was brevetted colonel in the regular army, Aug. 9, 1862, for services at Cedar Mountain, Va., and brigadier general and major general, both March 13, 1865, for services at Port Hudson, La., and in the field during the war. Gen. Augur was one of the few officers who received commissions during the war for specific distinguished services, having won the volunteer rank of major general by his conduct at the battle of Cedar Mountain. His earliest service was as aid to Gen. Hopping, and after that officer's death to Gen. Cushing, in the Mexican War. After that war he served on the northern frontier and on the Pacific coast, and distinguished himself in operations against hostile Indians in Oregon. When the civil war broke out he was commandant of cadets at the Military Academy, but was soon in the field with a volunteer commission. His greatest achievement was as commander of a division under Gen. Banks in the battle of Cedar Mountain, where he was severely wounded. Subsequently he served in the Louisiana campaign, and at the siege of Port Hudson he commanded the left wing of the army. In 1864-'65 he commanded the Department of Washington; in 1866-'69, that of the Platte; in 1869-'82, that of the South; and in 1882-'85, that of the Missouri.

Ayer, Josephine Mellin Southwick, philanthropist, born in Medway, Mass., Dec. 15, 1825; died in Paris, France, Jan. 3, 1898. She was of Quaker descent, and was the daughter of a prosperous manufacturer of Lowell, Mass. In 1859 she married Dr. John C. Ayer, a well-known chemist and manufacturer of patent medicines, at whose death she came into possession of great wealth. Since 1889 she had resided in Paris, France, where she entertained sumptuously, promoted music and the fine arts, and took special pleasure in aiding struggling American artists and singers. Her private and public charities at home and abroad were exceedingly liberal. The most cherished object of her benefactions was the Ayer Home for Young Women and Children, which she founded and maintained in Lowell. (See GIFTS AND BEQUESTS.)

Bagley, Worth, naval officer, born in Raleigh, N. C., April 6, 1874; killed at Cardenas, Cuba, May 11, 1898. His father was William H. Bagley, a major in the Confederate army, and for nearly twenty years clerk of the Supreme Court of North Carolina, and his mother the youngest daughter of the late Gov. Jonathan Worth. He was graduated at the United States Naval Academy in 1895, and after two years' service afloat on the "Montgomery," the "Texas," and the "Maine," was promoted to ensign July 1, 1897. After a short service on

the "Indiana," he became executive clerk to Capt. Charles D. Sigsbee of the "Maine," and in November was detailed to the new torpedo boat "Winslow" as inspector. The "Winslow" went into commission on Dec. 28 following, and Ensign Bagley became her executive officer on the strong solicitation of her commander, Lieut. J. B. Bernadon. In April,

1898, the "Winslow" was assigned to the fleet mobilized for operations in the waters of Cuba. On May 9 she precipitated the first naval engagement in the war with Spain during a reconnaissance in the harbor of Cardenas, when she drew the fire of three Spanish coast-guard vessels, but escaped without a scratch. The reconnaissance developed valuable information concerning the defenses of the harbor, where it was then expected United States troops would be first landed. On the morning of May 11 the "Winslow," "Hudson," and "Wilmington" were prepared to force an entrance into the harbor of Cardenas. The vessels started shortly after noon and were fired on by one of the Spanish gunboats. Immediately the action became general. Within a few minutes the "Winslow" was disabled, and her larger consorts had great difficulty in hauling her out of range of the Spanish guns. The "Wilmington" silenced the enemy's fire, and just as the action closed Ensign Bagley and four sailors were instantly killed by a shell. See "The First Fallen Hero" (Norfolk, Va., 1898).

Baker, Charles Richard, an Episcopal clergyman, born in Medford, Mass., April 15, 1842; died at Gratz, Austria, Aug. 8, 1898. He entered the priesthood in 1873, and was rector of the Church of the Messiah, Brooklyn, N. Y., from 1873 until his death. He was the author of "The Apostles' Creed tested by Experience" (New York, 1884) and "Prayers for the Christian Year."

Banigan, Joseph, manufacturer, born in County Monaghan, Ireland, June 7, 1839; died in Providence, R. I., July 28, 1898. He removed to Providence when eight years old, attended school for about a year, served an apprenticeship in the jewelry trade, and when twenty-one years old entered a manufactory of rubber goods. He remained in the last line of business throughout his life, becoming known as the "American Rubber King" and acquiring a fortune of many millions. Mr. Banigan was one of the largest contributors to the building fund of the new cathedral in Providence; established a Home for the Aged Poor in 1884 at a cost of \$50,000; and was the principal benefactor and the means of establishing St. Joseph's Hospital, St. Joseph's Orphan Asylum, Home for Working Girls, and St. Xavier's Convent, all Roman Catholic institutions, but open to Protestants on equal terms. For many years he deposited a handsome sum each month to the credit of his private secretary for distribution on non-sectarian lines. (See GIFTS AND BEQUESTS.)

Barry, William, comedian, born in Ireland about 1850; died in the borough of Brooklyn, N. Y., April 15, 1898. He accompanied his parents to New York in early childhood, and for several years followed the life of a newsboy. When the civil war broke out he ran away from home with a volunteer

regiment, but on reaching Baltimore he found that he could not be mustered into the service because of his youth. In seeking employment he met the manager of a vaudeville theater, who was so impressed by his fine voice and excellent dancing that he put him on the stage. Subsequently he acted with Col. Sinn's company for several years. In 1868 he played in Detroit; in 1869-'72 in Baltimore and Philadelphia; and in 1872-'78 made several tours with Tony Pastor's company. From the last year till his death he played principally in Brooklyn, intermitting with several tours. He was a popular favorite, and was highly successful as a comedian.

Bartlett, Samuel Colcord, clergyman and college president, born in Salisbury, N. H., Nov. 25, 1817; died in Hanover, N. H., Nov. 16, 1898. He was graduated at Dartmouth in 1836, and at Andover Theological Seminary in 1842. From 1843 to 1845 he was pastor of the Congregational church at Monson, Mass., and for the six years succeeding was Professor of Intellectual Philosophy at Western Reserve College, Hudson, Ohio. Thence he went to Manchester, N. H., where he remained four or five years as pastor of the Franklin Street Church, leaving there in March, 1857, to accept a call to the New England Church, in Chicago. In the autumn of the same year he became Professor of Biblical Literature in Chicago Theological Seminary, which chair he held for nineteen years, and resigned at length to accept the presidency of Dartmouth College in 1877. He resigned this latter office in 1893 and occupied the remainder of his life with literary work. He was a biblical scholar of eminence, and besides contributions to "The Forum," "Princeton Review," and "Bibliotheca Sacra," was the author of "Lectures on Modern Universalism" (Manchester, 1856); "Life and Death Eternal" (Boston, 1866); "From Egypt to Palestine" (New York, 1879); "Sources of History in the Pentateuch" (New York, 1883); and "The Veracity of the Hexateuch" (New York, 1897).

Bates, Erastus Newton, military officer, born in Plainfield, Mass., in 1828; died in Minneapolis, Minn., May 29, 1898. He removed to Ohio in his early youth, and settled in Minneapolis in 1855. In that city he erected one of the first sawmills and identified himself with every enterprise tending to benefit the young city. He was one of the framers of the State Constitution, and one of the first State Senators, and one of the founders of Plymouth Church. Shortly before the civil war he removed to Springfield, Ill., where he enlisted in the 80th Illinois Volunteers. He won promotion rapidly by meritorious conduct, and reached the rank of brigadier general. In one of the fiercest battles his entire command, excepting a large percentage killed, was captured and removed to Andersonville Prison. Later he was taken to Libby Prison, in Richmond, where he was one of the leading organizers of the prison societies. He assisted in planning the famous tunnel escape, but when the hour of flight arrived he was too ill to join his companions there. At the close of the war he was exchanged, and returned to Springfield. He served two terms as State Treasurer. His last years were spent in Minneapolis.

Bayard, Thomas Francis, statesman, born in Wilmington, Del., Oct. 29, 1828; died in Dedham, Mass., Sept. 28, 1898. He came of a family who traced their line back to the illustrious Chevalier Bayard. The widow of his direct ancestor, Balthazar Bayard, came to America in 1647, on the same ship with Peter Stuyvesant; and his great-grandfather, Gov. Bassett, his grandfather, James Asheton Bayard, his uncle, Richard H. Bayard, and his father, James A. Bayard, all represented

Delaware in the United States Senate. He was educated mainly at Dr. Hawk's school, Flushing, N. Y., and, after studying there two years, began a business training in New York city and Philadelphia. In 1848 he began to study law with his father in Wilmington. He was admitted to the bar in 1851, and immediately began practice. He was appointed United States district attorney for Delaware in 1853, but resigned the next year. In 1855 he went to Philadelphia, where he formed a legal partnership with William Shippen, which continued till the latter's death, two years later. He then returned to Wilmington. In January, 1864, the elder Bayard, after taking the oath of allegiance, resigned his seat in the Senate. His successor died March 29, 1867, and he was prevailed upon to serve out the unexpired term of two years. At the session of the Legislature which elected the father to the unexpired term the son was chosen as his successor. Mr. Bayard, the younger, was twice re-elected, serving continuously till March 4, 1885. He took his seat March 4,

1869, and almost immediately became the leader of the Democratic minority. He served on the Committees on Finance, Judiciary, Private Land Claims, Library, and Revision of Laws. He was a member of the Electoral Commission of 1876. In 1872 and 1876 he received some votes for the Democratic nomination for President, and in 1880 and 1884 was the most

formidable rival of the successful candidates. In October, 1881, he was elected president *pro tempore* of the Senate. His senatorial career ended in 1885, when he was appointed Secretary of State by President Cleveland. During his administration of this office he was called upon to deal with some difficult problems, including the Bering Sea controversy, the British and Russian treaties, and the Sackville-West trouble. In 1889 he returned to his legal practice in Wilmington, remaining in private life four years. On March 30, 1893, he was appointed ambassador to Great Britain. He addressed many audiences in Great Britain, and his open manner of expressing pro-English sentiments at the Boston, Lincolnshire, Grammar School, Aug. 2, 1895, and at a meeting of the Edinburgh Philosophical Society, Nov. 7 following, caused a vote of censure to be passed on him in the House of Representatives. His term of office expired March 4, 1897. He returned to the United States in May following, bringing with him the "log of the Mayflower," intrusted to him for presentation to the State of Massachusetts. He received the degree of LL. D. from Harvard in 1877, and from the University of Michigan in 1891; and both Oxford and Cambridge gave him the degree of D. C. L. in 1896.

Beidler, Jacob, merchant, born in Bedminster, Pa., Dec. 20, 1815; died in Chicago, Ill., March 15, 1898. He acquired a district-school education, learned the carpentry and cabinetmaking trades, and removed to Springfield, Ill., in 1842. After working at the bench and engaging in the grocery business for two years, he went to Chicago, where he followed his trade for three years and then established a lumber yard. In the parent business and the various branch interests he started or be-

came connected with he attained large financial success. His benefactions were large and frequent, but so quietly bestowed that none beyond his own family knew their extent. Among the most important of his public charities were the gift of one third of the cost of the West Side Young Men's Christian Association building, and large endowments to Lake Forest University, the Presbyterian Hospital, and other Presbyterian and local benevolent institutions.

Bell, Peter Hansbrough, jurist, born in Virginia about 1820; died in Littleton, N. C., March 11, 1898. In 1836 he went to Texas, arriving there just in time to join Sam Houston's army and fight against Santa Anna in the battle of San Jacinto as a volunteer private. Three years afterward he was appointed inspector general of Texas, and subsequently as captain of a company of rangers he distinguished himself by his reckless and successful fights with Indians. After the annexation of Texas to the United States he was appointed a colonel of volunteers. In 1848 he was elected Governor of the State, and he served till 1853. In this office he opposed the attempts of the Federal Government to curtail the territory claimed by Texas, even to the extent of threatening armed resistance, a course enthusiastically supported by his people. Trouble was averted by compromise in 1850. On the expiration of his term as Governor he was elected a Representative in Congress, serving from 1853 till 1857, and after this he further served his State as a judge of its Supreme Court. For many years he resided in North Carolina.

Bellamy, Edward, journalist, novelist, and social philosopher, born in Chicopee Falls, Mass., March 26, 1850; died there, May 22, 1898. He was the third son of the Rev. Rufus K. Bellamy and Maria K. Putnam. His ancestors, who originally came from England, had been New Englanders for two hundred years. One of these ancestors was the celebrated theologian, Joseph Bellamy. Edward Bellamy went to Union College, Schenectady, N. Y., and afterward spent a year or more in study in Germany. Returning to America, he read law and was admitted to the bar. His taste, however, was

for literature, and instead of undertaking legal practice he entered journalism. For two years he was associate editor of "The Union," of Springfield, Mass., where his writings were marked by fineness and virility. He then went to New York as an editorial writer on "The Evening Post." Here the purity, the incisiveness, and the concealed irony of his style indicated his literary degree.

After a year he returned to his home near Springfield, and with his brother, Charles J. Bellamy, established the Springfield "Daily News." But he soon retired wholly from journalism to devote himself to the writing of fiction. On May 30, 1881, he married Emma A. Sanderson, of Chicopee Falls. Two children were born of this marriage. Edward Bellamy's short stories soon began to appear in the more important periodicals. These tales showed impressive characteristics; with ingenuity of plot and dis-

tion of style was a certain psychologic quality akin to Hawthorne's, which attracted instant attention; and, though the stories often turned on some seemingly reasonable whimsicality, there was invariably a challenging boldness of idea. His first novel was "Six to One: A Nantucket Idyl" (1878). This was a lightsome summer story, faithful as to local color, and with a marked atmosphere. In 1880 came "Dr. Heidenhoff's Process," and in 1884 "Miss Ludington's Sister: A Romance of Immortality." Both of the last two named were adventurous in their psychological motive; both were avowedly materialistic in the methods applied to conscience in the one case, and to spiritism in the other; yet, by curious legerdemain, both suggested much that was apparently contradicted. Up to this time none of Mr. Bellamy's stories had attained wide popularity, but each had made a distinct impression. The author's high rank as a story writer was conceded by critics, and the eventual trend of his versatility was watched with interest. His short story "Pott's Painless Cure" gave promise of a humorist. Another short story, "An Echo from Antietam," evinced a power of sane melodrama and tender sympathy; while "Dr. Heidenhoff's Process" and "Miss Ludington's Sister," as well as several short stories of analogous interest, showed an artist brooding over the occult. The publication in 1888 of his next and greatest book, "Looking Backward, or 2000-1887," was a surprise to critics, as it revealed still another and a momentous bent of the author's mind. It was perhaps no less a surprise to himself, as it gave a permanent direction to his thoughts and purposes for the rest of his life. This book presented a forecast of a condition of governmental socialism in the year 2000, into which the world was supposed to have passed by economic evolution. It in no sense pretended to present a Utopian state of affairs possible in the present. It specifically described a condition into which the author believed that present economic forces are gradually carrying the world, and which consequently could not be made to exist to-day. The chief present force at work is the centralization of industrial and commercial energy, which, he believed, is destined eventually to lead to all production and distribution being performed by government through an industrial army of all the people of the nation. In that system each would be given his proper work; all work would be noble; there would be enough work for all; and because all worked all could have leisure and liberty. The author's story-telling art, while apparently subsidiary, gave buoyancy to the otherwise heavy problems of the book, and inspired such interest in the new ideas as caused half a million copies to be sold in three years. It was translated into French, German, Russian, Arabic, and other languages, and awakened as much attention in Europe as in America. The vogue of the book brought the tenets of state socialism to the comprehension of every one. The warmth of heart with which the author described the suffering under the present industrial system, and the glowing possibilities of equalized comfort under the future system, appealed to a wide sentiment. As once before, in the case of "Uncle Tom's Cabin," the mind of almost the entire public was interested by a novel which addressed itself to the conscience. But while interest in the book and in the questions it raised was universal, there were varying degrees of opinion. Many persons argued the impracticability and even the undesirability of the system described; others accepted the principle in its entirety; perhaps the great majority were quickened by the sincerity of its spirit and the attractiveness of its idea, but were unconvinced of the feasibility of its scheme. It is as yet too early

to estimate the effects of the book, since it is still extending its circle of readers and is in certain quarters an avowed political impulse. The astonishing career of the book made the author's personality a center of general and decided interest. In response to numerous requests from editors, Mr. Bellamy described how he came to write "Looking Backward," and its effect upon himself as its writing progressed. Though from his youth he had resented the inequality of rich and poor, when he began this book he had no further intention than to write a romance of the future in which, incidentally, human conditions should be greatly improved. But as he went on what at first had seemed incidental appeared to him to be of the foremost importance, and he determined to let the romance wait until he could work out a satisfactory solution of the social problem. Not until he was able, after many months of profound thought, to present to himself what he considered an unimpeachable economic and social scheme did he again take up the thread of the story. Then the story element took almost secondary place as the means of presenting to the world the scientific principles to which his investigations had converted him. Consequently, as he naively said, he was not surprised at the effectiveness of the book, because it had first wrought such an effect upon himself. In 1891 Mr. Bellamy became editor in Boston of "The New Nation," a weekly periodical which he established as the organ of the new nationalism. The brilliant editing of this paper did not insure its life, and after about a year he retired again to his home and resumed authorship. No other book, however, came from him until 1897, when he published "Equality." This was conceived as a sequel to "Looking Backward." In it the same characters of the twenty-first century appeared again, and he made it the means of developing in further detail the application of governmental socialism to the happiness and liberty of both men and women. In the previous book he had unfolded the more obvious advantages of a system of national production and distribution. In the latter book, after ten years of deeper study, he presented the principle of equality in economic life as the only basis for either liberty or brotherhood. More thoughtful than popular, this book was designed to establish fully before the thinking classes what he held to be the rational foundation of the principles of nationalism. Gradually failing health led him to seek the benefit of the Colorado climate in 1897, but with no lasting result. Edward Bellamy is best known as a social reformer. Modest to the point of shyness, and of extreme fineness of sensibility, he was neither in mind nor in temperament the active philanthropist. With him human sympathy led to a creative speculation which aimed at entire social reconstruction. Yet he was more than theorist, for he was urgent of practical methods for accelerating the economic evolution.

Bennett, Edmund Hatch, jurist, born in Manchester, Vt., April 6, 1824; died in Boston, Mass., Jan. 2, 1898. He was graduated at the University of Vermont in 1843, and in 1847 was admitted to the bar. He practiced his profession for many years in Taunton, Mass., being mayor of that city from 1865 to 1867 and judge of probate and insolvency of Bristol County from 1858 to 1883. From 1865 to 1871 he was a lecturer at the Harvard law school, and for the rest of his career was professor and dean of the law school of Boston University. He edited many important legal works, including 30 volumes of "English Law and Equity Reports," all the writings of Judge Story, "Cushing's Massachusetts Reports," Vols. IX, X, XI, and XII, "Massachusetts Digest," "Brigham on Infancy," "Blackwell on Tax Titles," two volumes of "Leading Criminal

Cases," eight volumes of "Greenleaf's Reports," "Goddard on Easements," "Benjamin on Sales," "Pomeroy's Constitutional Law," "Indermaur's Principles of Common Law," and five volumes of "Fire Insurance Cases." He contributed frequently to professional journals and was coeditor of the "American Law Register."

Bennett, Joseph M., philanthropist, born in Juliustown, N. J., Aug. 16, 1816; died in Philadelphia, Pa., Sept. 29, 1898. He went to Philadelphia when sixteen years of age, engaged in the clothing business, and was the originator of a unique building known as Tower Hall, where his poems, appended to clothing advertisements, were well known. He began his work of philanthropy in 1880, when he gave 40 acres in what is now Fairmount Park, valued at \$400,000, for the erection of a Methodist orphanage, afterward contributing largely to its support. He also founded the Hays Home, and gave valuable properties to the University of Pennsylvania, the Deaf and Dumb Institute, and the Methodist deaconesses. His property, which included the Chestnut Street Opera House, was said to be worth \$3,000,000, and it is estimated that his gifts to charity amounted to \$1,000,000. (See GIFTS AND BEQUESTS.)

Bennett, Sanford Fillmore, hymnologist, born in Eden, N. Y., in 1836; died in Richmond, Ill., June 12, 1898. In 1860 he went to Elkhorn, Wis., and became editor of the "Independent," subsequently resigning the place to enter the 40th Wisconsin Volunteers, with which he served till the close of the war. On his return he studied medicine and engaged in the drug business. In 1867 he became associated with J. P. Webster, the composer, in preparing a Sunday-school hymn book, "The Signet Ring," to which he contributed nearly 100 hymns. One of the first of these was "The Sweet Bye and Bye," which was inspired by a doleful chance remark of Mr. Webster's. Mr. Bennett wrote the words at once. Mr. Webster took a violin and soon produced the melody. Within two hours both men were singing the hymn that has become famous. Mr. Bennett composed numerous hymns and songs that were published in sheets.

Benteen, Frederick William, military officer, born in Petersburg, Va., Aug. 24, 1834; died in Atlanta, Ga., June 22, 1898. He was educated in his native State, and lived there till the beginning of the civil war, when, strongly opposed to secession, he went to Missouri and organized a company of Union volunteers. He was commissioned 1st lieutenant, 10th Missouri Cavalry, Sept. 1, 1861; was promoted captain, Oct. 1 following; major, Dec. 18, 1862; lieutenant colonel, Feb. 27, 1864; colonel 138th United States Colored Infantry, July 15, 1865; and was mustered out of the volunteer service Jan. 6, 1866. On July 28 following he was commissioned a captain in the famous 7th Cavalry; on Dec. 17, 1882, he was promoted major of the 9th Cavalry; and on July 7, 1888, he was retired. His most distinguished service was after the war, in campaigns against the Indians. He was brevetted major and lieutenant colonel, March 2, 1867, for gallantry in the battle of the Osage and in the charge on Columbus, Ga., respectively; colonel, Aug. 13, 1868, for the engagement with Indians on Saline river, Kan.; and brigadier general, Feb. 27, 1890, for the action against Indians on the Little Big Horn, Mont., known as the Custer massacre, in 1876, and for similar action at Cañon creek, Mont., in 1877.

Bogan, Frederick B., military officer, born in Boston, Mass., Feb. 10, 1851; died there, Aug. 9, 1898. He was educated in the public schools, entered the office of the city architect in 1878, was transferred to the Public Buildings Department in

1885, and at the declaration of war against Spain was superintendent of the department. His military career opened in 1866, when he enlisted as a private in the 5th Massachusetts Militia. In 1882 he was commissioned major of the 9th Infantry; in 1892 was appointed inspector general of the State militia; and in 1893 was elected colonel of the 9th Infantry. This regiment was one of the first to enter the United States volunteer army under the President's call after war with Spain was declared, and also one of the first detailed for the campaign in Cuba. Col. Bogan was prostrated by the hardships of the service before and after the surrender of Santiago, and was taken home for treatment, but died a few days after his arrival.

Booth, Henry, jurist, born in Roxbury, Conn., Aug. 19, 1818; died in Minden, Neb., April 29, 1898. He was graduated at Yale in 1840; spent a year in teaching in Wellsboro, Pa., was graduated at the Yale law school in 1844, and settled in Towanda, Pa., to practice. In 1856 he removed to Poughkeepsie, N. Y., and for two years had charge of the law department of the State and National Law School. Thence he was called to assist in organizing a law department in the University of Chicago, of which he had the principal charge till 1870, when he was elected one of the judges of the circuit court of Cook County. He served on the bench till 1879, and in the meantime continued to be connected with the law school as its dean. After his retirement he resided in Pasadena, Cal.

Bowker, Sarah Lamson, benefactor, died in Newton, Mass., July 27, 1898. She was the founder and for twenty-two years president of the Woman's Board of Missions, the first denominational organization specially formed for women's foreign missionary work. Two large buildings in foreign lands bear her name—Bowker Hall, in Bombay, India, the American Mission School, and Bowker Hall in Constantinople, one of the two large buildings of the American College for Girls, which has done much to educate and elevate women in Turkey. In 1890, through ill health and increasing infirmities, Mrs. Bowker was obliged to retire from the presidency of the mission board. Besides this work she was active during the civil war in various soldiers' relief organizations, was president of the Union Maternal Association, and was connected with societies for aiding women. She had passed the greater part of her life in Boston, where she and her husband, Albert Bowker, who survived her but a day, spent considerable money in charity. (See also GIFTS AND BEQUESTS.)

Boynton, Albert, journalist, born in Bangor, Me., March 31, 1837; died in Alma, Mich., Jan. 9, 1898. He took a partial course at Bowdoin College, leaving on account of failing health and going to Montreal, where he practiced law and entered journalism. In 1857 he removed to Detroit, Mich., engaged in practice, and served as city attorney and police judge. In 1872 he acquired an interest in the "Detroit Free Press," and from that time till his death was its principal editorial and political writer.

Braine, Daniel Lawrence, naval officer, born in New York city, May 18, 1829; d. in Brooklyn, N. Y., Jan. 30, 1898. He was appointed a midshipman in the navy, May 30, 1846; was promoted passed midshipman, June 8, 1852; master, Sept. 15, 1855; lieutenant, the day following; lieutenant commander, July 16, 1862; commander, July 25, 1866; captain, Dec. 11, 1874; commodore, March 2, 1885; and rear admiral, Sept. 4, 1887; and was retired May 18, 1891. He was on sea duty twenty-one years and one month, and on shore or other duty sixteen years and five months. His first service was on the sloop "Austin," of the Texas repub-

lie, after her delivery to the United States navy. He was then detailed to the steamer "General Taylor," engaged in carrying recruits from New Orleans to Pensacola, Fla. During the Mexican War he took part in the actions at Alvarado, Tobasco, Tuspan, Saguna, Tampico, and Vera Cruz, and subsequently saw service with the home, East Indian, and Mediterranean squadrons and in the coast survey. In April, 1861, he was placed in command of the steamer "Monticello," which was hastily fitted out to provision Fort Monroe, and after discharging this duty his vessel was assigned to the North Atlantic blockading squadron. With her he took part in the first naval engagement of the civil war—an action with a Confederate battery at Sewall's Point, Va., May 19. In October following he was present at the attack and capture of Forts Hatteras and Clarke, and engaged the Confederate gunboats at Kinniekerk Woods, above Cape Hatteras, sank two barges, dispersed two regiments, and rescued the 20th Indiana Regiment, which was surrounded by the enemy. In command of the "Pequot," he participated in the attacks on Forts Fisher and Anderson, and in three on Cape Fear river during the naval advance on Wilmington. He commanded the "Junia," of the "Polaris" search expedition, in 1873, and in the latter part of that year obtained the surrender by Spain of 102 survivors of the "Virginius" prisoners at Santiago de Cuba. In 1886-'88 he commanded the South Atlantic station, and in 1889-'90 the navy yard at Brooklyn.

Brice, Calvin Stewart, lawyer, born in Denmark, Ohio, Sept. 17, 1845; died in New York city, Dec. 15, 1898. He entered Miami University at the age of thirteen, and in April, 1861, enlisted in a university company which was stationed at Columbus, Ohio. In the autumn of the year he resumed study, and in April, 1862, again enlisted in a university company, which was merged in the 86th Ohio Infantry. He served in West Virginia during the summer campaign; then returned to the college and was graduated in June, 1863. After his graduation he taught school, served as auditor of Allen County, recruited a company and went to the war again as its captain in the 180th Ohio Volunteers, and served till the close of the war in Tennessee, Georgia, and the Carolinas. Mr. Brice took the law-school lectures of Michigan University in 1865, was admitted to the bar in 1866, and practiced law ten or twelve years at Lima, Ohio. He began his financial career in 1870, becoming a stockholder in the National Bank of Lima, and during the panic of 1873 his advice saved the bank from collapse. Shortly afterward he became interested in railroad affairs, and was identified with the East Tennessee, the Richmond Terminal system, the Duluth, South Shore and Atlantic, the Knoxville and Ohio, and several other railroads. At the time of his death he was interested in an enterprise known as the American China Development Company, its principal purpose being to build a railroad from Hankow to Canton, and thence to the seaboard near Hong-Kong. Mr. Brice was a Democrat in politics, and was an elector on the Tilden ticket in 1876 and on the Cleveland ticket in 1884. As chairman of the campaign committee he conducted the national campaign in 1888. He was elected United States Senator from Ohio in 1890, and served on the Appropriations, Pensions, Pacific Railroad, and Public Buildings and Grounds Committees.

Briggs, Frank A., governor, born in Hennepin County, Minn., Sept. 15, 1858; died in Bismarck, N. D., Aug. 9, 1898. He received a public-school education, learned the printer's trade, and became editor of the "Howard Lake Advocate." In 1881 he removed to North Dakota, and for a time was employed as a bookkeeper. Subsequently he

was postmaster at Mandan and for eight years treasurer of Morton County. In 1894 he was elected State Auditor of North Dakota, and in 1896 Governor.

Bristow, George F., music teacher, born in 1824, died in New York city, Dec. 13, 1898. He taught music in the public schools of New York city from 1850 till his death; was the author of several symphonies; and in 1854 composed the opera "Rip Van Winkle," which was produced in Niblo's Garden. He was a member of the Philharmonic Society, the Manuscript Club, and of other musical organizations.

Broadhead, James Overton, lawyer, born in Charlottesville, Va., May 29, 1819; died in St. Louis, Mo., Aug. 7, 1898. He was educated at a private classical school and at the University of Virginia; removed to St. Charles, Mo., in 1837; and, after studying law with Edward Bates, was admitted to the bar in 1842. In 1845 he was a member of the State Constitutional Convention, in 1847 was elected to the lower house of the Legislature, and in 1850-'54 was a member of the State Senate. He removed to St. Louis in 1859. At that time he was a Whig in politics. When the civil war broke out he was influential in the Union cause, and was a member of the committee formed in 1861 to perfect the military organization of St. Louis and Missouri. Subsequently he was appointed provost marshal general of the department that included Missouri, Arkansas, Kansas, and Indian Territory. After the war he joined the Democratic party, and in its national convention of 1876 he received many votes for the presidential nomination. He was elected to Congress in 1882, and was appointed United States minister to Switzerland in 1893. His public service also included a special mission to France in connection with the American claims for spoliation.

Bromley, Isaac Hill, journalist, born in Norwich, Conn., March 6, 1833; died there, Aug. 11, 1898. He took a partial course at Yale College, was admitted to the bar in 1854, and, after serving as clerk of each house of the State Legislature, established the "Norwich Morning Bulletin" in 1858. In 1862 he served as a captain in the 18th Connecticut Volunteers, and for two years afterward as a provost marshal. From 1868, when he gave up his connection with the "Bulletin," till 1872 he was editor and part proprietor of the "Hartford Evening Post." Leaving that newspaper because of political differences with his associates, he held a brief editorial place on the New York "Sun," and in 1873-'83 was a member of the regular editorial staff of the New York "Tribune." His editorial work was then interrupted for a year, during which he served as a Government director of the Union Pacific Railway. During the presidential campaign of 1884 he had editorial charge of the "Rochester Post-Express." After the election he was appointed assistant to President Charles F. Adams, of the Union Pacific Railway, with whom he remained till 1891, when he resumed his editorial connection with the "Tribune," and continued it till shortly before his death.

Brooks, Nathan Covington, educator, born in Cecil County, Md., Aug. 12, 1809; died in Philadelphia, Pa., Oct. 3, 1898. He was educated at West Nottingham Academy, received the degree of master of arts from St. John's College, Annapolis, and was successively principal of the Franklin Academy in Reistertown in 1831, principal of the Brookville Academy in 1834, and editor and publisher of the "American Museum," a monthly magazine which had a distinguished array of contributors. In 1839 he was elected principal of the Baltimore High School, and in 1848 he attempted to organize the

Baltimore Female College, which step marked him as one of the earliest advocates of higher female education. He projected and carried into execution a series of classical books on an improved system. He wrote and published "A Complete History of the Mexican War" (1845).

Brown, William M., artist, born in Troy, N. Y., in 1828; died in Brooklyn, N. Y., Sept. 6, 1898. He was famous as a landscape painter, and was one of the last of the Hudson river school of artists. At the time chromolithography was coming into notice he painted "A Basket of Peaches upset," which was purchased by an art dealer for \$2,000, and was made the subject of a chromo. "Raspberries and Strawberries," "Wild Strawberries," "Apples," and other subjects from his brush were made familiar by chromolithography.

Bruce, Blanche K., register of the United States Treasury, born a slave in Prince Edward County, Va., March 1, 1841; died in Washington, D. C., March 17, 1898. He was brought up as the companion of his master's son, and personally knew nothing of the hardships of slavery. Shortly before the civil war he removed to Mississippi with the family to which he belonged. His master died about the time the war broke out, the young master joined the Confederate army, and the slave made his way to Hannibal, Mo. There he organized the first school in the country exclusively for negroes, and taught till he had acquired a little money, when he entered Oberlin College. Lack of means prevented him from completing the course, and he supported himself as best he could till the war closed. He then went to Mississippi, where he became a planter and entered actively into the reconstruction movement. He was sergeant-at-arms of the first Mississippi Senate that sat after the war, and between 1871 and 1875 he held the offices of assessor, collector, sheriff, and superintendent of education for his county, and commissioner for the 2d Levee District of Mississippi. On Feb. 3, 1875, he was elected United States Senator as a Republican. When he appeared for formal induction into the office he held back till all the other Senators-elect had been presented by their escorts, and then walked alone toward the president's desk. Suddenly Roscoe Conkling passed from his seat to the aisle, offered his arm to the negro, and said: "Excuse me, Mr. Bruce, my name is Conkling. I had not until this moment noticed that you were unattended. Allow me the pleasure of presenting you." On the expiration of his term, in 1881, he was appointed register of the United States Treasury, and on Dec. 2, 1897, he was reappointed by President McKinley. After the death of Frederick Douglass he was considered the foremost man of his race in the country.

Brunot, Felix R., philanthropist, born in Newport, Ky., Feb. 7, 1820; died in Allegheny, Pa., May 9, 1898. He was graduated at Jefferson College, Cannonsburg, Pa., and became a civil engineer. In 1842 he engaged in milling at Camden and Rock Island, Ill., till 1847, when he became interested in the manufacture of steel at Pittsburg. At the beginning of the civil war he declined a commission in the army, and gave much of his time and money to relieving sick and wounded soldiers. After the battle of Shiloh he fitted out two vessels with medicines and supplies, and ran down to Pittsburg Landing, where he personally cared for the suffering, afterward taking the convalescents back to Pittsburg. In June, 1862, he took charge of twenty-five surgeons and medical cadets engaged by the Pittsburg Relief Commission, and went to Savage Station and Gaines's Mills. He remained in this vicinity after Gen. McClellan changed his base of operations, and although he pledged himself to care for the Union and Confederate wounded alike, he

was arrested and taken to Libby Prison. After the war he served for several years as president of the Board of Indian Commissioners, under appointment by President Grant. Nearly every Protestant and secular charitable institution in the city and neighborhood of Pittsburg received aid from him. (See GIFTS AND BEQUESTS.)

Buell, Don Carlos, soldier, born near Lowell, Ohio, March 23, 1818; died near Rockport, Ky., Nov. 19, 1898. He was graduated at the United States Military Academy in 1841, and assigned to the 3d Infantry. He became 1st lieutenant, June 18, 1846; was brevetted captain at Monterey, and major at Contreras and Churubusco, where he was severely wounded.

He was assistant in the adjutant general's office at Washington in 1848-49, and commanded in various departments of the army till 1861; was promoted lieutenant colonel on the staff May 11, 1861; appointed brigadier general, May 17, 1861.

In August he was given command of a division of the Army of the Potomac, and in November following, when the Army of the Cumberland was reorganized as that of the Ohio, he succeeded Gen. William T. Sherman in command. Early in 1862 Gen. Buell began a campaign in Kentucky and Tennessee; occupied Bowling Green, Feb. 14, 1862. Gallatin, Feb. 23, and Nashville, Feb. 25. He became a major general of volunteers, March 21, 1862, and saw hard service at Shiloh, where he arrived April 6, at the close of the first day's action. When Bragg organized his army for the invasion of Kentucky in the summer of 1862 Gen. Buell was sent to oppose him. Bragg's army advanced into Kentucky, captured several of Buell's posts, and compelled the abandonment of Lexington and Frankfort and the removal of the State archives to Louisville. The opposing army passed to the rear of Buell, forcing him to retreat rapidly to Louisville, which city he entered Sept. 24. Six days later orders came from Washington directing him to turn the command over to Gen. Thomas; later on the same day, however, he was restored to his command, and by Oct. 1 he had set out to pursue the enemy. He overtook Bragg at Perryville, and a battle was fought, Oct. 8, with heavy losses on both sides. Next morning Bragg withdrew slowly to Cumberland Gap, and, although Gen. Buell followed, he was blamed for not moving rapidly enough to bring the enemy to action again. He was ordered to transfer his command to Gen. Rosecrans, Oct. 24, and a military commission was appointed to investigate his operations, but their report never has been published. He was mustered out of the volunteer service May 23, 1864, and resigned his commission in the regular army June 1, 1864. He became president of the Green River (Ky.) Iron Works in 1865, and continued as such till 1870, when he engaged in coal mining on Green River. From 1885 till 1890 he served as pension agent at Louisville. In 1894 he engaged in the extraction of gold from the black sand along the seashore of Oregon and Washington.

Bullitt, Joshua Fry, jurist, born in Jefferson County, Ky., Feb. 22, 1822; died near Louisville, Ky.,

Feb. 16, 1898. He was educated at Center College and the University of Virginia; studied law in Louisville; and was admitted to the bar there in 1844. In 1851-'53 he was a member of the Legislature; in 1861 was elected to the bench of the Kentucky Court of Appeals; and in 1864-'65 was Chief Justice of that Court. On July 5, 1863, Judge Bullitt and several other citizens were arrested by the Federal authorities under the belief that they were conspiring to invite the Confederates into the State. In 1871 he was appointed one of the Commissioners to revise the "Code of Practice in Kentucky," and in 1876 one of the editors of the "Civil Code." In private practice he was considered one of the most profound lawyers in the State. One of his best-known cases was based on some mercantile contracts, which he settled after suit had been pending thirty-four years.

Burnham, Benjamin Franklin, lawyer, born in Groton, Vt., Nov. 30, 1830; died in Boston, Mass., May 21, 1898. He was graduated at Wesleyan University in 1852, and was admitted to the bar in Illinois in 1857. When the civil war broke out he was practicing law at Newbury, Vt., and enlisted in the 8th Vermont Volunteers. In 1864 he was detailed as assistant superintendent of education of freedmen in Louisiana, and in 1865 commanded a company of United States colored infantry at Palmetto Ranch. Subsequently he was detailed to the Freedmen's Bureau to establish schools among the negroes, and while engaged in this work at Monroe, La., he was wounded by a mob that opposed such schools. In 1867 he settled in Boston, where for five years he was an associate justice of the South Boston Court. Since 1879 he had applied himself wholly to the preparation of digests and legal works. In addition to his law writings, he was the author of the "Life of Lives," "Elsmere Elsewhere," several theological works, and treatises on chess.

Burroughs, William, actor, born in Akron, Ohio, 1840; died in New York city, Nov. 9, 1898. He was graduated at Columbia College, and studied law in the office of Judge Edmunds, New York city, but in 1864 joined the Winter Garden Theater stock company, of which his brother Claude was a member, and made his first appearance in a small part, Aug. 18. The next year he organized a traveling company, with his brother and himself as the leading members, and played very successfully. In 1869 William became a leading member of the California Theater stock company, San Francisco, and participated in the opening of that house on Jan. 19, 1869, under the management of John McCullough and Lawrence Barrett. In the autumn of 1870 he returned to New York, and became leading man at Niblo's Garden Theater. When Madame Helena Modjeska came to New York in 1877 to appear before a metropolitan audience, Mr. Burroughs was engaged as her principal support. He was the Armand Duval to her Camille on the occasion of her first performance, Dec. 7 of that year, at the Fifth Avenue Theater. From 1880 to 1884 he played with various companies, and he retired with a modest competency in the last-mentioned year. He was a graceful, dignified, and painstaking actor. At the time of his death (the result of accidental leakage from a broken gas tube) he was secretary of the Actors' Society of America.

Burt, Mary Towne, benefactor, born in Cincinnati, Ohio, March 28, 1842; died in New York city, April 29, 1898. She was educated at Brown's Institute, Auburn, N. Y.; married Edward Burt, of that city, in 1865; and was identified with temperance work nearly all her life. She was the first president of the Auburn branch of the Women's Christian Temperance Union, and since 1882 had been president of the New York State Society of the

Union. In 1875 she became the publisher, and subsequently the editor, of "Our Union," the organ of the society, and in 1878-'80 was the corresponding secretary of the National Union. For several years Mrs. Burt had had charge of the legislative interests of the union, and several laws for the protection of women and young girls resulted from her efforts.

Busteed, Richard L., lawyer, born in Cavan, Ireland, Feb. 16, 1812; died in New York city, Sept. 14, 1898. He was admitted to the bar in 1846; was appointed corporation counsel of New York city in 1856, and held this office for three years. He took an active part in the presidential campaign of 1860, and was a bitter opponent of Abraham Lincoln; but after the attack upon Fort Sumter he became a war Democrat. He was appointed brigadier general of volunteers, Aug. 17, 1862, and was stationed first in New York and then in Washington. In December, 1862, he assumed command of a brigade at Yorktown. He was appointed United States district judge of Alabama, Sept. 17, 1863, and was unanimously confirmed by the Senate on Jan. 20, 1864. In November, 1865, Judge Busteed had a controversy with the military authorities in Alabama that involved important questions relating to the suspension of the *habeas corpus* act. In 1874 he resigned his office and returned to New York city, where he resumed the practice of law.

Butterworth, Benjamin, lawyer, born in Warren County, Ohio, Oct. 22, 1839; died in Thomasville, Ga., Jan. 16, 1898. He was the son of a Virginian Quaker slaveholder, who had freed his slave and removed to Ohio, where he co-operated with Levi Coffin in promoting the escape to the North of fugitive slaves. Benjamin was educated at Ohio University, and was admitted to the bar in Cincinnati in 1861. Soon afterward he enlisted in an Ohio regiment, and during the war was promoted to the rank of major. In 1870 he was appointed United States district attorney for Cincinnati; in 1873 was elected to the State Senate; and in 1878 and 1880 was chosen to Congress as a Republican. While in Congress he drafted the compulsory retirement act for the army. He was appointed a commissioner to examine a part of the Northern Pacific Railroad in 1883, and was retained by the Government to prosecute the South Carolina election cases. Toward the close of that year he was appointed commissioner of patents, resigning in 1884 on being again elected to Congress, to which he was also returned in 1886 and 1888. From its inception to its close he was connected with the World's Columbian Exposition in an executive capacity. On retiring from Congress he practiced in Washington, chiefly in patent law, till April, 1897, when he was again appointed commissioner of patents.

Callis, John B., soldier, born in Fayetteville, N. C., Jan. 3, 1828; died in Lancaster, Wis., Sept. 23, 1898. He went to Wisconsin in 1840. At the outbreak of the civil war he became captain in the 7th Wisconsin Volunteers; was promoted lieutenant colonel in 1862; wounded at Gettysburg, July 1, 1863; and mustered out of the service Dec. 29. He entered the regular army as captain in the 45th Infantry; was brevetted brigadier general, March 7, 1864, and, later, major and lieutenant colonel. He served as superintendent in the War Department till December, 1865, when he was sent to Huntsville, Ala., as assistant commissioner of the Freedmen's Bureau. He resigned this commission, Feb. 4, 1868. He was elected to Congress from the 5th Alabama District in 1868, and he introduced the original resolution on which was afterward based the Ku-Klux-Klan bill.

Campbell, Alexander, legislator, born in Concord, Pa., Oct. 4, 1814; died in La Salle, Ill., Aug.

9, 1898. He received a common-school education; became a clerk in an iron manufacturing establishment at an early age; was promoted to the superintendency, and continued in the business of managing iron works in Pennsylvania, Kentucky, and Missouri till 1850. He then removed to La Salle, where he was elected mayor in 1852 and 1853; member of the legislature in 1858 and 1859, and delegate to the State Constitutional Convention in 1862. In 1875 he was elected to Congress as an Independent, serving one term. He was widely known as the "father of the Greenbackers."

Campbell, Hugh J., jurist, born in Pennsylvania in 1831; died in Yankton, S. D., April 19, 1898. He removed to Muscatine, Iowa, in early life, and was studying law there when the civil war broke out. Under a commission from Gov. Kirkwood he raised the first regiment of Iowa volunteers, and at the close of the war had reached the rank of brigadier general. He then finished his law studies, was admitted to the bar, and removed to Louisiana to practice. While there he was appointed a United States court judge, and after the presidential election of 1876 presided over the contest of the rival presidential electors, his decision giving the electoral vote of the State to the Republican candidate. In 1877 he removed to Dakota Territory, and for some time held the office of United States district attorney. He was a leader in the movement for dividing and admitting the Territory as two States; was a delegate to the various conventions; and was known throughout South Dakota as the "father of Statehood."

Capron, Allyn, soldier, born in Tampa, Fla., Aug. 27, 1846; died near Fort Myer, Va., Sept. 18, 1898. He was a son of Capt. Erastus A. Capron, who was killed at Churubusco in the Mexican War. He was graduated at the United States Military Academy and commissioned a 2d lieutenant in the 1st Artillery, June 17, 1867; promoted 1st lieutenant, Aug. 19, 1873; and captain, Dec. 4, 1888. He devoted himself particularly to artillery tactics and became an honor graduate of the Artillery School in 1873. In the Spanish-American War his battery accompanied Gen. Shafter's corps to Cuba, and took part in the battle of Santiago. He led the advance of Gen. Lawton's command, July 1, 1898, and fired the first shot of the fight. A shot from his battery tore away the Spanish flag on the fort at El Caney, and his effective fire aided in driving the Spaniards to the inner line of Santiago's defenses. He contracted typhoid fever as a result of the Cuban campaign, and died three weeks after his return home. His son, ALLEN KISSAM CAPRON, was born in Brooklyn, N. Y., June 24, 1871; died at La Guasimas, Cuba, June 24, 1898. He was educated at the Brooklyn High School; enlisted in the army at Fort Myer, Oct. 20, 1890; was commissioned 2d lieutenant in the 5th Infantry, October, 1893; and transferred to the 7th Cavalry, December, 1894. He enlisted in the 1st United States Volunteer Cavalry, popularly known as the "Rough Riders," at Fort Sill, Indian Territory; was made a captain; and was killed in the battle of La Guasimas.

Carpenter, Alonzo P., jurist, born in Waterford, Vt., Jan. 28, 1829; died in Concord, N. H., May 21, 1898. He was graduated at Williams College in 1849, and became principal of the high school in Bath, N. H. He studied law, was admitted to the bar in 1853, and practiced in Bath till 1863, when he was appointed county solicitor. This office he held for ten years, and then resumed private practice. In 1881 he was appointed an associate justice of the Supreme Court of New Hampshire, and on the death of Chief-Justice Charles Doe, in 1896, he was commissioned his successor on

the unanimous recommendation of his associates and the bar of the State. He would have retired by reason of age limitation in 1899.

Carpenter, Cyrus C., surveyor, born in Susquehanna County, Pa., in 1829; died in Fort Dodge, Iowa, May 29, 1898. When ten years old he was left an orphan without a dollar for his care. He picked up a limited education in a district school, and apprenticed himself to a tailor. Subsequently he attained considerable success as a fuller. In 1854 he removed to Iowa, engaged in surveying Government lands, and taught the first school in Fort Dodge. Then he became a land agent, and in 1858 was elected to the Legislature. He served in the army through the civil war, was commissary of subsistence on Gen. Dodge's staff for two years and on Gen. Logan's for one year, and was mustered out with the rank of lieutenant colonel. In 1866 and in 1868 he was elected register of the State Land Office, and in 1872-'76 he was Governor of the State. He was admired by both political parties for his inflexible integrity.

Cartland, Joseph, educator, born in Lee, N. H., in 1810; died in Newburyport, Mass., June 1, 1898. He was of old Quaker stock, and was among the original advocates of the abolition of slavery in the United States. He adopted the profession of teaching, was for many years superintendent of Haverford Friends' College, Pennsylvania, and after his marriage to Gertrude Whittier, a cousin of the poet, he and his wife were joint principals of the Friends' School at Providence, R. I. Much of the last part of Whittier's life was passed with the Cartlands, and they cared for him in his last illness.

Case, Rufus King, military officer, born in Hunterdon County, N. J., Dec. 12, 1840; died in Plainfield, N. J., June 18, 1898. When the civil war broke out he enlisted in the 6th New Jersey Volunteers, and was detailed to the quartermaster's department. He was mustered out in September, 1864, and two months afterward was commissioned captain and assistant quartermaster of volunteers by President Lincoln, and became assistant chief quartermaster of the Army of the Potomac, with which he served to the close of the war. In 1866 he was brevetted major for faithful and efficient services, and lieutenant colonel, to date from March 13, 1865, "for gallant, faithful, and meritorious services during the war." Shortly after the war he entered the quartermaster's department of the regular army, and served as chief clerk of the New York depot till his death. From the destruction of the "Maine" he had worked days, nights, Sundays, and holidays, his duties steadily increasing as the war with Spain advanced, and this strain caused his death.

Cattell, William Cassidy, educator, born in Salem, N. J., Aug. 30, 1827; died in Philadelphia, Pa., Feb. 11, 1898. He was graduated at Princeton College in 1848, and at Princeton Theological Seminary in 1852; took a post-graduate course at the seminary in Oriental languages, history, and bibliography; and was assistant principal of Edgehill Seminary in 1853-'55. From 1855 till 1860 he occupied the chair of Latin and Greek in Lafayette College, Easton, Pa., and then for three years was pastor of the Pine Street Presbyterian Church in Harrisburg. In 1863 he was called to the presidency of Lafayette College, and in the ensuing twenty years more than \$1,000,000 was contributed to the institution through his efforts, and the grounds, buildings, and equipment were largely increased. The General Assembly of the Presbyterian Church in the United States sent him as a commissioner to the Presbyterian Church in Scotland in 1869, and to the Reformed Church in Bohemia in 1881. He resigned the presidency of Lafayette in 1883, and had after-

ward resided in Philadelphia, where till his death he was corresponding secretary of the Presbyterian Board of Ministerial Relief. Dr. Cattell received the degree of D. D. from Hanover and Princeton Colleges, and LL. D. from Wooster.

Chalmers, James Ronald, lawyer, born in Halifax County, Va., Jan. 11, 1831; died in Memphis, Tenn., April 9, 1898. He was a son of Joseph W. Chalmers, a former United States Senator from Mississippi; removed to that State in 1839; and was graduated at South Carolina College in 1851. He was admitted to the bar in 1853; was elected district attorney of the 7th Judicial District of Mississippi in 1858; was chairman of the Committee on Military Affairs in the Secession Convention of his State in 1861; and entered the Confederate army as a captain on the outbreak of the civil war. In April, 1861, he was elected colonel of the 9th Mississippi Regiment; in February, 1862, was promoted brigadier general; in the following year was transferred to the cavalry service; and in May, 1865, while commanding the 1st Division of Forrest's Cavalry Corps, surrendered. Gen. Chalmers was charged with being responsible for the massacre of 300 Union soldiers, white and black, at Fort Pillow, and the event was the subject of a congressional investigation. In 1876-'77 he was a State Senator. He was elected to Congress as a Democrat from the 2d Mississippi District in 1876 and 1878. In 1880 he received the certificate of reelection, but was unseated after a contest by John R. Lynch, and in 1882, when an independent candidate, he was deprived of his certificate, and, contesting the election, was declared entitled to the seat in Congress in June, 1884.

Chase, Alden Fitzroy, educator, born in Woodstock, Me., Oct. 16, 1842; died at Kent's Hill, Me., Oct. 22, 1898. He was graduated at Middletown (Conn.) University in 1869 with highest honors, and taught in Wilbraham, Mass., from 1869 to 1871. From 1871 to 1883 he occupied the chair of Mathematics and English Literature in the Maine Wesleyan Seminary and Female College, at Kent's Hill. From 1883 to 1884 he was principal of the High School at Milbury, Mass. In 1884 he was elected to the presidency of the East Maine Conference Seminary, at Bucksport, which office he resigned in 1896 to accept the presidency of the seminary and college at Kent's Hill, where he died. He was a member of the Maine Conference, and preached occasionally, but his time and energies were devoted mainly to the duties of his professorship. As a boy Dr. Chase was considered a prodigy in mathematics, and his profound scholarship and genial bearing made him a leader among the educators of Maine.

Cisneros, Francisco Javier, patriot, born in Santiago de Cuba in 1836; died in New York city, July 7, 1898. He was graduated at the School of Engineering in Havana and at Rensselaer Polytechnic School, Troy, N. Y., and was immediately engaged by a English syndicate to superintend the building of railroads in Cuba. From early youth he had been opposed to Spanish rule in Cuba, and when the revolution of 1868 broke out he came to the United States, and for six years organized every filibustering expedition that sailed for Cuba. While directing one of them he was captured by a United States vessel and held as a prisoner for some time in Charleston. In 1874, having impoverished himself in efforts to free his native island, he went to the United States of Colombia and engaged in engineering work, in which he acquired a second large fortune. He returned to New York less than a month before his death, on what was believed to be a secret mission to the Government. Throughout the revolution preceding the war between the

United States and Spain he gave large sums of money to promote the cause of the Cubans in their struggle for independence.

Cochran, John, lawyer, born in Palatine, Montgomery County, N. Y., Aug. 27, 1813; died in New York city, Feb. 7, 1898. His grandfather, for whom he was named, was a surgeon in the French and Indian and the Revolutionary Wars. John was graduated at Hamilton College, Clinton, N. Y., in 1831, and was admitted to the bar in Oswego, N. Y., in 1834. He practiced in Oswego till 1845, and then removed to New York, where he speedily attracted attention by his abilities as a lawyer and an orator. In 1853-'57 he was surveyor of the port of New York, and in 1857-'61 he represented the 6th New York District in Congress. On June 11, 1861, he was appointed colonel of the 1st United States Chasseurs, which he commanded in the Peninsula campaign. In the autumn following he made a memorable speech in favor of arming the slaves against their masters. On July 17, 1862, he was commissioned a brigadier general of volunteers, and given a brigade in Gen. Couch's division of the Army of the Potomac. He resigned his commission because of failing health, Feb. 27, 1863. In the following year the National Convention of Independent Republicans nominated him for Vice-President of the United States on the ticket headed by Gen. John C. Fremont, but he declined because he favored the reelection of President Lincoln. During 1863-'65 he was Attorney-General of the State of New York, elected as a war Democrat. He was a delegate to the National Liberal Republican Convention in 1872, and was chiefly instrumental in securing the nomination of Horace Greeley for President. The same year he was president of the Common Council of New York city, and acting mayor during the temporary retirement of Mayor Hall. In 1883 he was again elected to the council as a Republican, but afterward he returned to the Democratic party. His last public office was that of police justice, which he held for a short time in 1889.

Collier, James Walter, actor, born in New York city, 1834; died there, May 13, 1898. He made his first appearance on the stage in "La Tour de Nesle," at Newark, N. J., and in 1859 appeared as Rolando in "The Honeymoon," in support of Charlotte Cushman at Niblo's Garden. He immediately became very popular in New York city as a graceful and handsome leading juvenile man. He married Mary Mitchell, sister of Maggie Mitchell, and after five years at Niblo's Garden he became leading man with that actress and played with her many years. About 1876 Mr. Collier became associated with Sheridan Shook and A. M. Palmer, and managed the "road" tours of all the Union Square Theater successes. Out of these ventures he made a great deal of money, which was lost in an effort to manage the Union Square Theater. His last appearance on the stage was at a benefit given him at the New York Academy of Music, June 24, 1885.

Colton, Gardner Quincy, scientist, born in Georgia, Vt., Feb. 7, 1814; died in Rotterdam, Holland, Aug. 11, 1898. He received a common-school education; was apprenticed to the chair-making trade, and followed it in St. Albans till 1835; and then spent seven years in New York, working at his trade and writing for the press. In 1842 he began studying medicine with Willard Parker, M. D., and at the College of Physicians and Surgeons, and two years later he undertook a series of popular lectures on philosophical and chemical topics, with exhibitions of the marvels of electricity and the novel effects of nitrous oxide, or, as it became more generally known, "laughing gas." On Dec. 10, 1844, while he was delivering a lecture in Hartford, Conn., and illustrating some of the amusing effects pro-

duced by inhaling the gas, one of his subjects, who had bruised himself while under the influence of the gas, declared after the effects had passed off, that he had felt no pain whatever while under its influence. The late Dr. Horace Wells, a dentist, who was present, was greatly interested in the circumstance, and suggested the possibility of extracting teeth without pain by the use of the gas. The next day Dr. Wells inhaled the gas and had a tooth drawn by Dr. Riggs, a fellow-dentist, without any pain. This is said to have been the birth of the practical knowledge of anæsthetics. Dr. Wells induced Dr. Colton to teach him the method of making and administering the gas, and began using it in his own practice. At this point a controversy arose which excited much bitterness for many years. Dr. Colton claimed that Dr. Wells had tried without success to induce several dentists in Boston to try the gas; that one of them, Dr. William T. G. Morton, conceived the idea from Dr. Wells's experiment of using sulphuric ether as an anæsthetic and tried it with success; and that Dr. Charles T. Jackson, a physician with whom Drs. Wells and Morton had studied, claimed the discovery of anæsthesia on the ground that he had suggested Dr. Morton's experiments. In Dr. Colton's judgment, Dr. Wells was the accidental discoverer. In 1847 Dr. Colton devised and had made from his plans the first electrical locomotive on record, a toy construction operated by an ordinary cell battery, and exhibited by him in his lectures, but not deemed of sufficient importance to be patented. Since 1863 he had been interested in large dental establishments in New York and elsewhere.

Concilio, Jannarius de, clergyman, born in Naples, Italy, Jan. 7, 1835; died in Jersey City, N. J., March 23, 1898. He was educated at the college Brignoli Sali, Rome, and ordained a priest in Geneva in 1860. He came to the United States the same year, and was assistant in the Church of Our Lady of Grace, in Hoboken, N. J., from April till September. He was appointed Professor of Theology in Seton Hall College, but resigned the chair because of failing health. He was assistant rector of St. Mary's Church, Jersey City, from 1861 till 1867. When the parish of St. Michael's was established, in 1867, he was appointed its curate, and he was in charge of it till his death. The title of Monignor was conferred upon him by the Pope in 1886. He contributed frequently to Catholic periodicals, and published "Catholicity and Pantheism" (1874); "The Knowledge of Mary" (1878); "Intellectual Philosophy" (1878); and "Harmony between Science and Revelation" (1890).

Conger, Omar Dwight, lawyer, born in Coopers-town, N. Y., in 1818; died in Ocean City, Md., July 11, 1898. When six years old he removed with his father to Huron County, Ohio. He was graduated at Western Reserve College in 1842; was appointed to the United States Geological Survey, and spent two years in surveying work in the Lake Superior iron and copper region; and began practicing law in Port Huron, Mich., in 1848. In 1850 he was elected judge of the St. Clair County court for a term of five years, and on its expiration was three times elected to the State Senate, serving till 1861, and acting as president *pro tem.* during the last term. He was a delegate to the National Republican Convention and a presidential elector in 1864, a member of the State Constitutional Convention in 1866, a representative in Congress in 1869-'81, and a United States Senator in 1881-'87. After retiring from the Senate he practiced law in Washington.

Conover, George S., historian, born in Brooklyn, N. Y., Nov. 7, 1824; died in Geneva, N. Y., July 5, 1898. During his early manhood he was engaged in mercantile business in New York. He removed

to Varick, Seneca County, N. Y., in 1850, and since 1870 had lived in Geneva. Soon after settling in Seneca County he began studying the early history of the region, and from this he became widely known as an authority on the Indian occupation and pioneer settlement of western New York. In 1877 he began a history of the Indian village of Kanadesaga, which occupied the site of the present city of Geneva. This work rapidly broadened till it reached four large volumes and became really a history of western New York. This history was never published, but Mr. Conover made four copies of it, which were presented to the State Library and the Buffalo, Rochester, and Waterloo Historical Societies. In 1855, under the authority of a legislative act, he began compiling the journals of the officers of Gen. Sullivan's army that invaded western New York in 1779 to chastise the Indians. This work was published in 1887. Mr. Conover also wrote many pamphlets, those on Red Jacket and Sayengueraghta, or "Old Smoke, the King of the Senecas," being particularly valuable. About ten years ago he was adopted into the Seneca tribe on their reservation at Brantford, Canada, and received the name of Hy-we-Saus, meaning "The Investigator."

Conrad, Frederick William, author and journalist, born in Pine Grove, Pa., Jan. 3, 1816; died in Philadelphia, April 10, 1898. He received his preparatory training in Mount Airy College, Germantown, Pa., 1828-'31, his theological training in the seminary at Gettysburg, 1837-'39, was licensed as a minister in the Lutheran Church in 1839, and became pastor of St. Peter's Church, Pinegrove, and of several other congregations in the vicinity. Subsequently he was pastor at Waynesboro and vicinity, 1841-'44; Hagerstown, Md., 1844-'50; Professor of Modern Languages in Wittenberg College, Springfield, Ohio, and of Homiletics and Church History in the same institution; pastor of the College Church and associate editor of the "Evangelical Lutheran," 1850-'55; pastor of the First Lutheran Church at Dayton, Ohio, 1855-'62; Trinity Church, Lancaster, Pa., 1862-'64; and at Chambersburg, Pa., 1864-'66. During his pastorate at Lancaster, in 1862, he became joint owner and editor of the "Lutheran Observer," and on the removal of the publication office to Philadelphia, he resigned his pastorate, removed to that city in 1866, and became the editor in chief, which place he held until his death. He received the degree of D. D. from Wittenberg College, and that of LL. D. from Roanoke College, Virginia. Dr. Conrad participated in all the general movements of the Church in this country in connection with the General Synod. He was a gifted speaker and a ready writer. As editor of the most extensively circulated periodical of the General Synod, he helped to shape its policy for many years. He was a frequent contributor to the "Lutheran Quarterly," as well as to other periodicals. He published numerous pamphlets and several books, among the most important of which are "Baptism," "The Call to the Ministry," "Worship and its Forms," and "Luther's Small Catechism Explained and Amplified" (Philadelphia, 1886), of which more than 30,000 copies have been sold.

Cooke, Martin Warren, lawyer, born in Whitehall, N. Y., March 2, 1840; died in Rochester, N. Y., Feb. 25, 1898. He was graduated at the University of Rochester in 1860; was admitted to the bar there in 1863; and was actively engaged in his profession till within a few weeks of his death. For many years he was a Supreme Court examiner of applicants for admission to the bar, and he was several times chairman of the board. He was a member of the executive committee of the New York State Bar Association from its organization, was its

treasurer several years, and was twice elected president of the association. In 1889 he was defeated as the Republican candidate for State Comptroller, though he ran far ahead of his ticket, and in 1897 he was chosen by the Supreme Court and county judges the first jury commissioner of Monroe County under a new law. Mr. Cooke had given much time to literary and scientific work; was a member of the American Association for the Advancement of Science, and of several clubs; and had published "The Human Mystery in Hamlet." He was strongly attached to the University of Rochester, and had long served it as trustee and attorney.

Cooley, Thomas McIntyre, jurist, born near Attica, N. Y., Jan. 6, 1824; died in Ann Arbor, Mich., Sept. 12, 1898. He removed to Michigan in 1843, and after his admission to the bar in 1846 practiced for a time in Tecumseh, and settling later in Adrian in the same State edited the "Watch Tower." In 1857 he was appointed by the Michigan Legislature to compile and publish the laws of the State, and in the following year became reporter of the Supreme Court decisions. In 1859 he was made a professor of law in the University of Michigan, and he was for many years dean of the faculty prior to 1885. In 1864 he was elected a justice of the Supreme Court of Michigan, and he was re-elected in 1869 for eight years, having served as Chief Justice in 1868 and 1869. He retired from the bench in 1885, and for the next three years was Professor of American History in the University of Michigan and also lecturer on constitutional law. Under President Cleveland he held for four years the office of Interstate Commerce Commissioner. Owing to failing health he retired from active life in 1891. He contributed frequently to periodicals, but will be best remembered by his chief work, "The Constitutional Limitations which rest upon the Legislative Power of the States of the American Union" (Boston, 1868), a standard authority. His other works, original and compiled, include "Report of Cases in the Supreme Court of Michigan, 1858-'64" (Detroit, 1859-'64); "Digest of Michigan Reports" (Detroit, 1866); "A Treatise on the Law of Taxation" (Chicago, 1876); "Treatise upon Wrongs and their Remedies, Vol. I, Principles of the Law of Torts" (Chicago, 1878); "The General Principles of Constitutional Law in the United States" (Boston, 1880); "Michigan: A History of Government" (Boston, 1885); "The Acquisition of Indiana" (Indianapolis, 1887).

Cooney, Myron A., journalist, born in Dublin, Ireland, in 1841; died in Albany, N. Y., June 21, 1898. He received a collegiate education in his native city, and, removing to the United States in 1860, became a clerk on a Mississippi steamboat. At the beginning of the civil war he entered the service of the New York "Herald" as a war correspondent, and at its close he was appointed musical and dramatic editor of the paper. He remained in New York till 1885, when he went to Albany, where he assumed the editorship of the "Argus," with which he remained till 1891. During the succeeding years of his life he was a legislative correspondent for several newspapers and financial clerk in the Department of Public Instruction. A large part of Mr. Cooney's education was musical, and he wrote a great number of carols, waltzes, English librettos to popular operas, and songs, composing both the words and the music. His "Nantilus Waltz" was made a great success by Theodore Thomas, and his musical Roman drama entitled "Cecilla," which was written for the Convent of the Sacred Heart of Sharon, was produced on a grand scale by the Lazarist Fathers of Baltimore in 1874.

Cooper, Margaret Sunderland, philanthropist, born in Quincy, Mass.; died in Hyde Park, Mass., Aug. 6, 1898. She was a daughter of Le Roy Sunderland, a well-known Methodist preacher and author. From early womanhood she had been actively engaged in humanitarian work. She was a vice-president of the Massachusetts Society for the Prevention of Cruelty to Animals, a director of the American Humane Association, and a director of the New England Anti-Vivisection Society. So great was her interest in dumb animals that at one time she obtained an appointment under which she superintended the transportation of cattle. Her literary work was principally in behalf of dumb animals, and the strongest of it was in opposition to the practice of vivisection. For long-continued, efficient, and courageous service she was awarded the gold medal of the American Humane Association in 1883.

Cothren, William, lawyer, born in Farmington, Me., Nov. 28, 1819; died in Woodbury, Conn., March 12, 1898. He was graduated at Bowdoin College in 1843; removed to Woodbury and was admitted to the bar in 1845. In 1856 he was admitted to practice in the United States circuit court, and in 1865 in the United States Supreme Court. Mr. Cothren was best known as an authority on Connecticut genealogy, and was the author of a "History of Ancient Woodbury" and other works.

Couldock, Charles Walter, actor, born in Long Acre, London, England, April 26, 1815; died in New York city, Nov. 27, 1898. He made his first appearance on the stage at Sadler's Wells Theater, London, as Othello, under the name of Mr. Fortescue in 1837. At the age of nine years he had begun to learn the trade of carpenter with his stepfather, and at thirteen had taken employment in a silk warehouse, where he worked nine years as an errand boy and clerk. His adoption of the stage was the result of an enthusiastic admiration of the acting of William C. Macready, of whose characteristic methods Couldock always remained somewhat of an exponent. After his *début* at Sadler's Wells he took a country engagement at Farnham, Surrey, but after six months of ill-paid work there he joined Jackman's traveling company, the first of that kind in vogue, and shared its fortunes for two years. Affection for a young lady whom he met during this term led him to relinquish the drama and return to mercantile life. He was employed in a wholesale dry-goods house in London for two years, during which he ineffectually tried to induce the young lady to marry him. At the same time he became a prominent member of an amateur dramatic company called "The Shakspearean," of which Dion Boucicault, then known as Lec Moreton, and other distinguished people were members. In the performances of this society, given at the St. James's Theater, Drury Lane, and the Italian Opera House, Couldock played such parts as Iago, Petruchio, Hotspur, and Antonio. His resumption of the actor's calling took place with the stock company at Gravesend in the autumn of 1841. At the close of a season at Gravesend he joined the stock company of the Bristol and Bath Circuit in support of John Vandenhoff. In Bristol he married Louisa Smith, with whom he lived happily until her death in 1877. Following his Bristol engagement he was for a time with the company playing at Southampton, from which he went to become a leading man and public favorite in Edinburgh. On Dec. 26, 1846, he began a prosperous engagement with the stock company playing in Liverpool and Birmingham with a performance of Sir Giles Overreach in the last-named city. Here Mr. Couldock was the principal support of all the prominent actors of his day.

and here he met Charlotte Cushman, who offered him the place of leading man with her on her return to the United States. He had also an offer to play with Macready in London in the production of a new piece named "Philip van Artevelde," but upon Charles Kean's advice that the venture was likely to fail he accepted Miss Cushman's proposal. Mr. Couldock's first appearance in the United States was at the Broadway Theater, Oct. 8, 1849, in the part of the Stranger to Miss Cushman's Mrs. Haller. During the Broadway engagement he played Macbeth, St. Pierre in "The Wife of Mantua," Master Walter in "The Hunchback," Othello, Wolsey, Duke Aranza in "The Honeymoon," Benedick in "Much Ado about Nothing," and King Lear. He was most cordially received by the Americans, not only in New York, but in all the principal cities of the country, and in the autumn of 1850, when Miss Cushman returned to Europe, he remained in the United States and accepted an engagement at the Walnut Street Theater, Philadelphia, as leading man. He held this place for four years. During the second year of his work in this theater Madame Celeste came there as a star, and among other plays produced one which had been sold by Dion Boucicault to Benjamin Webster in London in 1845 but never played. This was called "The Willow Copse," and was in effect an adaptation of a well-known French play called "La Closerie des Genets." At the opening performance at the Walnut Street Theater, May 24, 1852, so masterly was Couldock's rendition of the character of Luke Fielding that after the performance Madame Celeste gave him the play, saying as she did so: "Mr. Couldock, this is not my play; it is yours. Accept it." At the close of his stock season he played Luke Fielding to delighted audiences for three weeks at the Chatham Street Theater, New York, and subsequently starred in the same part in Philadelphia. When his engagement at the Walnut Street Theater ended in 1854 he became a popular "star," varying his presentation of "The Willow Copse," which was generally demanded everywhere, with performances of Hamlet, Othello, Richelieu, and Richard III. Hard times fell upon the drama in 1857, and Mr. Couldock accepted a stock engagement at Laura Keane's Theater, New York city. His first appearance there was in the part of Luke Fielding, Aug. 25, 1858, with Miss Keane as Rose Fielding, Joseph Jefferson as Augustus, and E. A. Sothorn as Sir Richard Vaughan. He soon afterward, September 1858, played Louis XI for the first time in the United States at the same theater, and on Oct. 18 of the same year appeared as Abel Murcot in the first performance of "Our American Cousin." The season of 1859-'60 he spent in New Orleans in a company managed by John E. Owens. From 1861 to 1878 he played many starring engagements, and in the latter year was a member of a stock company at the Fifth Avenue Theater, New York city, supporting Madame Modjeska on her first appearance in New York. He also made in the same year a strong impression in the part of Risler Ainé in an adaptation of Alphonse Daudet's "Froment Jeune et Risler Ainé," afterward played at the Madison Square Theater under the name of "Partners." In September, 1879, Mr. Couldock was engaged by Steele Mackaye for the opening of the Madison Square Theater, New York city. Mr. Mackaye had adapted from an older drama a play which he called "An Iron Will," in which the principal character was fashioned upon the lines of Luke Fielding. This play was produced at Providence, R. I., Oct. 27, 1879, Mr. Couldock playing the leading character, and on the completion of the Madison Square Theater was introduced to New York audiences on that stage, Feb. 4, 1880, as

"Hazel Kirke," with Mr. Couldock as Dunstan Kirke. The play ran until May 31, 1881, and was then performed for several years consecutively throughout the United States and Canada. It is said that Mr. Couldock played Dunstan Kirke more than 1,500 times. In April, 1886, Edwin Booth and Signor Salvini appeared at the Academy of Music, New York, in "Othello." Mr. Couldock was a member of the company supporting them and played Brabantio, but his increasing age and the fact that he had been so long confined to one part caused him to give up activity in his calling. On May 11, 1888, Edwin Booth and Joseph Jefferson gave Mr. Couldock a testimonial benefit in honor of the closing of his fiftieth year on the stage. The performance, which took place at the Star Theater, New York, in the afternoon, was attended by an enormous audience and produced more than \$5,000 for the beneficiary. It consisted of the third act of "Hamlet," Edwin Booth as Hamlet, Charles Barron as the Ghost John Malone as King Claudius, and Mrs. Augusta Foster as Queen Gertrude; the screen scene from "The School for Scandal," Fanny Davenport as Lady Teazle, John Gilbert as Sir Peter Teazle, Robert Mantell as Charles Surface, and John H. Barnes as Joseph Surface; recitation of Trowbridge's "Vagabonds," C. W. Couldock; the fourth act (quarrel scene) of "Julius Cæsar," Cassius, Lawrence Barrett; Brutus, John Malone; the third act of "The Rivals"—Bob Acres, Joseph Jefferson; Sir Lucius O'Trigger, James O'Neill; Captain Absolute, Kyrle Bellew; Mrs. Malaprop, Mrs. John Drew; Lydia Languish, Miss Annie Robe. When "Alabama" was produced at the Madison Square Theater, New York, in 1894, Mr. Couldock was again before the public in a congenial character, that of Colonel Preston. On May 7, 1895, another testimonial benefit of \$6,000 was given to him at the Broadway Theater, New York. On that occasion "The Rivals" was played, with Joseph Jefferson as Bob Acres, William H. Crane as Sir Anthony Absolute, Henry Miller as Captain Absolute, N. C. Goodwin as Sir Lucius O'Trigger, Thomas W. Keene as Falkland, De Wolfe Hopper as David, Mrs. John Drew as Mrs. Malaprop, Miss Viola Allen as Lydia, and Miss Nellie McHenry as Lucy. Mr. Couldock's last appearance on the stage was made at the Star Theater, New York, in the character of Dunstan Kirke on Sept. 10, 1898. His method was marked with great power of pathos and feeling. In his youth and middle age intensity and fire in the rendition of heroic and tragic rôles were quite as remarkable as the strong emotional qualities, but these qualities were necessarily mellowed and softened in the later years of his career by the fact of his great age.

Cox, James Farley, military officer, born in Locust Valley, Long Island, N. Y., Feb. 1, 1830; died in New Brighton, Staten Island, N. Y., June 24, 1898. He took a partial collegiate course, and, after a brief service in a dry-goods house in New York city, entered the office of the Mercantile Marine Insurance Company, and made a special study of the adjustment of averages. In this line he soon became so expert that when twenty-five years old he was chosen vice-president of the Great Western Marine Insurance Company. Subsequently he originated and carried to success the system of individual underwriting in this country, and with the late Douglass Robinson, then his partner, created the United States Lloyds. He was one of the organizers of the 22d Regiment, N. G. S. N. Y., and served in it in every rank from private to colonel. In 1862 he served in the National army in Baltimore and at Harper's Ferry, and in 1863 took part in the memorable march to Harrisburg and Carlisle, following Gen. Fitzhugh Lee's retreating army, and returned

to New York in time to aid in defending it during the draft riots.

Cragin, Aaron H., lawyer, born in Weston, Vt., Feb. 3, 1821; died in Washington, D. C., May 10, 1898. He was admitted to the bar in Albany, N. Y., in 1847, and settled in Lebanon, N. H., the same year. In 1852 he was elected to the Legislature, where he served four continuous terms; in 1854 and 1856 he was elected to Congress on the American ticket; in 1859 was again elected to the Legislature; and in 1860 was a delegate to the National Republican Convention in Chicago. He was elected United States Senator, and took his seat in 1865, and was re-elected in 1870 for the term expiring March 3, 1877. During his last term he was chairman of the Committee on Naval Affairs and a member of the Committees on Territories and Railroads.

Cramer, Michael John, clergyman, born in Schaffhausen, Switzerland, Feb. 6, 1835; died in Carlisle, Pa., Jan. 23, 1898. He came to the United States with his father in 1845, learned the printer's trade in Cincinnati, and was graduated at the Ohio Wesleyan University in 1860. After a service of four years in the Methodist ministry in Cincinnati and Nashville he was appointed a chaplain in the regular army, where he remained till 1867, when President Johnson made him United States consul at Leipsic. During his residence there he attended lectures on theology and philosophy at the Universities of Leipsic and Berlin, and preached every Sunday at an American chapel service, which he organized in Leipsic. In 1870 he was appointed by President Grant, whose sister he had married, United States minister to Denmark; and in 1881 President Garfield transferred him to Switzerland. He returned to the United States in the summer of 1885, having been elected Professor of Systematic Theology in Boston University. After a year there he resigned, removed to East Orange, N. J., and occupied the chair of Church History at Drew Theological Seminary for a year. In the autumn of 1897 he was elected Professor of Philosophy at Dickinson College, Carlisle, Pa., where he served until his death. He received the degree of D. D. from Syracuse University, and that of LL. D. from Ohio Wesleyan University. Dr. Cramer spoke five modern languages, and was an excellent Latin, Greek, and Hebrew scholar, and published a large number of essays of an exegetical and biblico-critical character. During his residence abroad he collected a working theological library of 5,000 volumes, many of them rare, which he announced he should bequeath to Ohio Wesleyan University.

Cruger, Stephen van Rensselaer, soldier, born in New York city, May 9, 1844; died in Bayville, N. Y., June 23, 1898. His great grandfather, John Cruger, was the first mayor of New York. His grandfather on his mother's side was Stephen van Rensselaer, of Albany. He was studying in Europe when the civil war began. He came home, and received a commission as 1st lieutenant in the 150th New York Regiment. He participated in the battle of Gettysburg in 1863, and for gallantry was promoted adjutant in August. His regiment joined Sherman's army, being assigned to the 20th Army Corps; and with it he took part in the Atlanta campaign. He was twice wounded at the battle of Resaca. It was feared that he would never be fit for service again, and an honorable discharge was sent him, but in the course of three or four months he applied for restoration to his command, and, being recommissioned, joined his regiment in September, 1864, and took part in the "march to the sea." In the battle of Averysboro his horse was shot under him. Previous to the surrender of Johnston Adjutant Cruger was promoted to the rank of captain, and was appointed chief of ordnance of the 1st Division,

20th Corps, commanded by Gen. A. S. Williams, in which post he served till mustered out in June, 1865. He was brevetted major and lieutenant colonel "for gallant and meritorious conduct during the campaign through Georgia and the Carolinas." In 1870 he was commissioned major of the 12th Regiment, N. G. S. N. Y.; promoted lieutenant colonel in 1875; and colonel in 1877, remaining in command of the regiment till 1883. In 1867 he entered the real-estate business, and some of the largest landed interests in New York city and its neighborhood were under his management. He was comptroller of Trinity Church corporation, and for a time senior warden of the church. In politics Mr. Cruger was a Republican, but he frequently opposed the leaders of his party, although he was a member of the Republican County Committee for years. In 1888 he was the candidate for Lieutenant Governor, but was defeated. He was a Park Commissioner under Mayor Strong, and for a time president of the Park Board. He was connected as director and trustee with many large corporations, and was trustee of the New York Public Library. He married Julie Grinnell, daughter of Thomas W. Storrow, of Boston, an author who writes under the pen name of Julien Gordon.

Crummell, Alexander, clergyman, born in New York city in 1819; died in Point Pleasant, N. J., Sept. 9, 1898. His father was a native of Africa, and young Crummell, after enjoying such meager educational facilities as were given to members of his race, in 1835 entered a school at Canaan, N. H., but the prejudice against the higher education of the negroes was so intense that he was not permitted to remain. Afterward he entered the Oneida Institute, remained there three years, and in 1839 applied for admission to the General Theological Seminary. His application caused bitter opposition and was refused. In 1848 he went to England and was graduated at Cambridge in 1853. Owing to his delicate health he then entered the missionary service and was located in Liberia twenty years, during which time he acted as principal of the Alexandria High School and president of the Liberia College. He went to Washington, D. C., in 1873 and founded St. Luke's Church, of which he was rector till 1895. In 1897 he organized in New York city the American Negro Academy. He published "The English Language in Liberia" (1861); "The Future of Africa" (1862); "The Negro Race not under a Curse" (1863); "The Greatness of Christ, and Other Sermons" (1882); and "Africa and America" (1891).

Currier, Moody, lawyer, born in Boscawen, N. H., April 22, 1806; died in Manchester, N. H., Sept. 23, 1898. He was graduated at Dartmouth College in 1834; became a teacher and editor; studied law and was admitted to the bar at Manchester in 1841. Though successful as a lawyer he gave up its practice to become cashier of the Amoskeag Bank in 1848, and in 1864 was elected president of the Amoskeag National Bank. Early in life he entered the Democratic party; was State Senator in 1843-'44; became an ardent Republican in 1854; and in 1860-'61 performed valuable service toward raising and equipping troops for the civil war. He was a presidential elector in 1876. He was unsuccessful as a candidate for Governor in 1882, but was elected to that office in 1884 by a three-fourths vote. Mr. Currier was a liberal friend of public libraries and churches, presenting more than 700 volumes to the library of Manchester and making gifts of money to colleges and academies. He acquired an intimate knowledge of the modern languages of Europe, and published for private circulation a volume containing translations from French, German, Italian, and Spanish. (See GIFTS AND BEQUESTS.)

Dahlgren, Madeleine Vinton, author, born in Gallipolis, Ohio, about 1835; died in Washington, D. C., May 28, 1898. She was a daughter of Samuel F. Vinton, a former member of Congress from Ohio. She first married, early in life, Daniel C. Goddard, of Zanesville, and, on being left a widow, married Rear-Admiral John A. Dahlgren in 1865. From her youth she was identified with the life of the national capital. Possessing large wealth, she maintained residences in Washington and South Mountain, Md. During the winter season she entertained with great liberality, and at South Mountain she was known as "Lady Bountiful." In 1859 she began publishing sketches and poems under the pen name of Corinne, and later she wrote under that of Cornelia. She was strongly opposed to the woman-suffrage movement, and for two years published a weekly paper against it, besides drawing up a petition to Congress, to which she obtained many signatures, asking that the elective franchise should not be extended to women. Mrs. Dahlgren was a founder and vice-president of the Literary Society of Washington, which met at her house for several years, and a former president of the Ladies' Catholic Missionary Society of Washington. She had a large estate at South Mountain which she maintained in mediæval style. She erected two churches, established schools and a library, gave a number of the brightest boys a complete college education, and personally taught music and the languages to classes of girls. Her publications include "Idealities" (Philadelphia, 1859); "Thoughts on Female Suffrage" (Washington, 1871); "South Sea Sketches" (Boston, 1881); "Etiquette of Social Life in Washington" (Philadelphia, 1881); "South Mountain Magic" (1882); "A Washington Winter" and "Memoirs of John A. Dahlgren" (1882); "The Lost Name" and "Lights and Shadows of a Life" (Boston, 1886); and translations from the French—Montalembert's "Pius IX" and De Chambrun's "Executive Power," the last with preface by James A. Garfield (Lancaster, 1874), and from the Spanish—Donoso Cortes's "Catholicism, Liberalism, and Socialism." For her various services to the Roman Catholic Church she several times received the thanks of Popes Pius IX and Leo XIII.

Dana, James Jensen, soldier, born in Waltham, Mass., April 9, 1821; died in Keene, N. H., Sept. 15, 1898. He was graduated at the United States Military Academy, June 18, 1855, and entered the army as 2d lieutenant in the 4th Artillery, was promoted 1st lieutenant, Jan. 10, 1857; captain in the quartermaster's department, Aug. 3, 1861; major, Jan. 18, 1867; lieutenant colonel in the department of the quartermaster general, Feb. 13, 1882; and was retired April 9, 1885. In the volunteer service he was commissioned a lieutenant colonel in the quartermaster's department, Jan. 1, 1863; promoted colonel, Aug. 2, 1864; and brevetted brigadier general, March 13, 1865. After the civil war he served in New Mexico, Arizona, and Nebraska till his retirement.

Davenport, Fanny Lily Gipsy, actress, born in London, England, April 10, 1850; died in Duxbury, Mass., Sept. 26, 1898. She was the eldest child of Edward L. Davenport and Fanny Vining Davenport, well-known players. She made her first appearance on the stage as a child, Feb. 23, 1857, at the Chambers Street Theater, New York city (formerly Burton's), which was then under her father's management. She was named in the bill of the night as Miss Fanny, and sang a verse from "The Star-Spangled Banner." While E. L. Davenport was the manager of the Howard Athenæum, Boston, she again played a child's part, in John Brougham's burlesque of "Metamora," Aug. 12, 1857. Her first speaking part was King Charles I in the comedy

"Faint Heart ne'er Won Fair Lady," at Niblo's Garden, New York city, Feb. 14, 1862. She was then engaged for the stock company of Macauley's Theater, Louisville, Ky., where she made her first appearance in a leading part as Arline in "The Black Crook." While in this theater she first played Nancy Sikes in the dramatization of "Oliver Twist," and gave evidence of the tragic power for which she subsequently became famous. Leaving Louisville, she went to Mrs. John Drew's Arch Street Theater, Philadelphia, where she occupied the position of soubrette. While playing with Mrs. Drew she attracted the attention of Augustin Daly, who engaged her for his theater, the Fifth Avenue, in New York city. She made an immediate success as Lady Gay Spanker in "London Assurance." Her father was the Sir Harcourt Courtley. She was the principal attraction at the Fifth Avenue Theater from 1869 to 1873, and played a long line of exacting parts. She then became a "star," and for several years traveled throughout the United States with great success, playing Shakespearian heroines principally. In 1882 she went to London and began an engagement at Toole's Theater in an English version of "Diane de Lys." While abroad she made the acquaintance of Victorien Sardou, and obtained from him the American rights for his play of "Fedora," which was then being played by Sarah Bernhardt in Paris. She produced "Fedora" for the first time in the United States at the Fourteenth Street Theater, New York city, Oct. 1, 1883, and this occasion was the beginning of a series of triumphs for her in the works of the French dramatist. She produced in succession and with great financial and artistic results "La Tosca," "Cleopatra," and "Gismonda." She married, July 30, 1879, at her mother's home in Canton, Pa., Edwin F. Price, an actor. On June 8, 1888, she was divorced from Mr. Price, and on May 19, 1889, she married Willet Melbourne MacDowell, also an actor, who was playing in her supporting company as her leading man. She continued the arduous work of her profession, traveling everywhere in the United States and Canada up to the moment of the illness that caused her death. In October, 1897, she produced in Boston an elaborate and expensive rendering of "The Soldier of France," an English adaptation of "Jeanne d'Arc." The venture was a failure and occasioned Miss Davenport much regret and anxiety. She finally succumbed to a perilous impairment of the action of the heart, and was obliged suddenly to close her dramatic season at Chicago, March 25, 1898, her last appearance on the stage having been the night before at the Grand Opera House in that city.

Davis, Margaret Ellen O'Brien, author, born in Montgomery, Ala., Nov. 19, 1870; died in Birmingham, Ala., April 1, 1898. She was the daughter of Frank P. O'Brien, journalist and artist, and was educated in Loretto Convent, Marion County, Ky. After being graduated she returned home and began writing poems, short stories, and book reviews for the "Daily Herald." Her work attracted favorable attention, particularly through the South, and led to a contributing connection with several periodicals. The publication of "Judith, the Daughter of Judas" (Philadelphia, 1889), a novel, proved a success. During the time her father controlled the "Age-Herald," of Birmingham, she aided him

in the business and editorial management, became chief editorial writer, and for some time, during his absence, was in full charge of the paper. In 1895 she was one of the founders of the "Free Lance," a literary and society weekly, official organ of the Woman's Federation of Literary Clubs of Alabama, and was its editor in chief till her marriage, in 1897, to John D. S. Davis, M. D. Her "Judith" was followed by "The Squire," and at the time of her death she had completed her third large work, "Told by a Woman." Mrs. Davis was also a founder of the Woman's Press Club of Alabama.

Davis, Varina Anne Jefferson, author, born in Richmond, Va., June 27, 1864; died at Narragansett Pier, R. I., Sept. 18, 1898. She was the second daughter of Jefferson Davis, and her childhood was mainly spent abroad. She had devoted herself to literature for several years, her latest work, "A Romance of Summer Seas," appearing but a short time before her death. Her other works are: "An Irish Knight of the Nineteenth Century"; a "Sketch of the Life of Robert Emmet" (New York, 1888); "The Veiled Doctor," a novel (1895); and "Foreign Education for American Girls."

Davis, William G. Mackey, lawyer, born in Portsmouth, Va., in 1813; died in Alexandria, Va., March 11, 1898. In early life he removed to Florida, where he was admitted to the bar and became active in politics. He was a member of the Secession Convention and worked and voted against the ordinance of withdrawal, but after the ordinance was adopted he raised a troop of cavalry, was attached to the army under Gen. E. Kirby Smith, and was promoted to brigadier general. After the war he settled in Washington, D. C., and resumed the practice of law. He was one of the counsel of the Federal Government in the great cotton case, involving several millions of dollars, brought by a British firm.

Delacy, William, soldier, born in England, Sept. 29, 1828; died in South Orange, N. J., Dec. 12, 1898. He came to New York in 1848. At the outbreak of the civil war he was commissioned a lieutenant in the 37th New York Infantry; he served two years with that regiment, and was mustered out with the rank of major. In 1863 he was commissioned colonel of the 164th New York Infantry. He was wounded at the battles of Williamsburg and Spottsylvania, and was brevetted brigadier general, March 13, 1865. After the war he went to Brooklyn, where he served for eight years as a member of the Board of Assessors. He was for a short time chief clerk in the naval station at Key West.

Demarest, David D., clergyman, born in Oradell, Bergen County, N. J., July 30, 1819; died in New Brunswick, N. J., June 21, 1898. He was graduated at Rutgers College in 1837, and at the New Brunswick Theological Seminary in 1840; entered the ministry of the Reformed Dutch Church, and held pastorates at Catskill, Flatbush, New Brunswick, and Hudson, N. Y., till 1865, when he became Professor of Pastoral Theology and Sacred Rhetoric in the New Brunswick Seminary. The connection was maintained till his death. He was a vice-president of the Huguenot Society of America, trustee of Rutgers College from 1858, secretary of the seminary faculty thirty-one years, stated clerk of the General Synod in 1862-'69, and an active member of the New Jersey Historical Society. He received the degree of D. D. from Princeton in 1857, and that of LL. D. from Rutgers in 1892. Dr. Demarest was author of the article on the "Reformed Protestant Dutch Church" in the "American Cyclopædia"; and of "History and Characteristics of the Reformed Protestant Dutch Church" (New York, 1856; 4th ed., 1889); "Practical Catechetics" (1882); "The Huguenots on the Hackensack" (1886); and many addresses and contributions to periodicals.

Demorest, Ellen Louise, benefactor, born in Saratoga, N. Y., in 1824; died in New York city, Aug. 10, 1898. She was the widow of William Jennings Demorest (see obituary in the "Annual Cyclopædia" for 1895), and her life work was closely identified with that of her husband. About fifteen years ago she retired from active connection with her husband's publications, to which she had been a regular contributor for many years, and afterward gave much of her time to charity and temperance work. She was president of the Woman's Christian Temperance Union of New York.

De Vivo, Diego, *impresario*, born in Sarno, Italy, in 1822; died in New York city, Aug. 11, 1898. He studied alternately for the priesthood and the profession of architecture, but, becoming dissatisfied with his prospects, he ran away and enlisted in the army. After aiding in the suppression of several revolutions, he retired from the army and was engaged in business till 1854, when his republican proclivities led to his arrest and deportation. He settled in New York, intending to support himself by teaching Italian, but becoming acquainted with Signors Brignoli and Albites, then singing in opera, he was induced by them to undertake the career of an operatic manager. His first engagement was with Mine. Gazzaniga, the wife of Signor Albites, a famous prima donna, in 1860. Many of the operatic stars of the twenty-five years that followed were under his management. He was the first American manager of Parepa Rosa; brought Salvini to the United States; managed for Wachtel, Ristori, Carlotta Patti, Aimée, Ilma dei Murska, Emma Abbott, and Castelnary, who died last year while on the stage singing; and he had charge of the principal English, Italian, and German opera companies in the United States during 1868-'83. He published his reminiscences in the New York "Sun."

Dodson, Caroline M., physician, born in Keosauqua, Iowa, Dec. 17, 1845; died in Philadelphia, Pa., Jan. 9, 1898. She was graduated at the Woman's Medical College of Pennsylvania in 1874, and was active in the practice of her profession till her death. In 1891 she was president of the Woman's National Health Association. She was a frequent speaker on educational matters and on woman's rights; the first president of the County Woman's Christian Temperance Union; organizer and president of the Northwest Philadelphia Woman's Christian Temperance Union; a former secretary of the White Ribbon Army; and one of the most active members of the Woman Suffrage Association.

Donaldson, Thomas Corwin, collector, born in Columbus, Ohio, Dec. 27, 1843; died in Philadelphia, Pa., Nov. 18, 1890. He was educated in the public schools of Columbus. At the outbreak of the civil war he enlisted in the 19th Ohio Infantry, and was honorably discharged in June, 1862, in consequence of a wound. In 1863 he went to Philadelphia, and in September, 1864, under the name of Lingard, enlisted in the 199th Pennsylvania Infantry, with which he served till the end of the war. For a time he was employed in the office of the Secretary of State of Ohio, and he subsequently practiced law. In 1869 he was appointed Register of Public Lands for Idaho. He held that post several years, and also served as clerk of the Supreme Court of the Territory. In 1875 he lived for a time in San Francisco, engaged in making a collection of American minerals for the Smithsonian Institution's exhibit at the Centennial. Later in the year he removed to Philadelphia as Centennial Commissioner, and made his permanent residence there. He served on many mint assay commissions, was offered the governorship of Idaho in 1890, and was a member of the Republican Na-

tional Committee in 1884. He was famous as a collector of antiquities, and his collections of works of art, books, relics, historical documents, etc., was not excelled by any private collection in the United States. He wrote and compiled for the Government a mammoth volume, "Public Domain," which is the standard reference history of the national public lands, and he also wrote "The George Catlin Indian Gallery in the United States National Museum" (1888) and "Walt Whitman, the Man" (1896).

Donnohue, Dillard C., lawyer, born in Montgomery County, Ky., Nov. 20, 1814; died in Greencastle, Ind., April 2, 1898. He removed to Indiana in early life, settled in Greencastle, was a member of the State Legislature from 1848 till 1852, and as a delegate to the National Republican Convention of 1860 had much to do with shaping the action of the Indiana delegation in favor of the nomination of Abraham Lincoln. Although beyond the average age, he served as a soldier during part of the civil war. In 1863 he was appointed by President Lincoln a special commissioner to the republic of Hayti for the purpose of inquiring into the practicability of colonizing all the slaves of the Southern States there after their freedom had been secured. This was a project highly favored at the time by both President Lincoln and Secretary Seward, but Mr. Donnohue was obliged to make an adverse report. For details of this mission the reader is referred to Nicolay and Hay's "History of the Administration of Abraham Lincoln." Mr. Donnohue was a law partner of John P. Usher and an early and active abolitionist.

Dorsey, Henry C. L., prisoner's friend, born in Kentucky, in 1823; died in Pawtucket, R. I., June 8, 1898. In early life he was once unjustly arrested and had much difficulty in procuring bail. This experience caused him to make a vow that he would aid any man in a similar situation, and till within a few years he was widely known as the man who would furnish bail for any one who could convince him that he was innocent of the crime charged, whether he knew the person or not. About twenty-five years ago he offered to give to several States a fund of \$1,500 with which to provide an annual turkey dinner for convicts. Connecticut was the only State that accepted his offer, and the Dorsey Thanksgiving dinner has been a feature of its prison ever since. It is believed that he was formerly a man of large means, for he spent freely and gave away considerable sums for many years. He died poor, and penologists say that his peculiar benefactions wrought more harm than good.

Dos Passos, Benjamin Franklin, lawyer, born in Philadelphia, March 28, 1856; died in New York city, June 17, 1898. He was admitted to the bar of New York in 1879, and in 1883 he formed a partnership with his brother, John R. Dos Passos. In 1888 he was appointed an assistant to the district attorney of New York County. While in that office he had charge of many important criminal cases, in the prosecution of which he showed marked ability. At the close of his term of office he resumed the partnership with his brother. He was appointed special counsel for the State of New York in important litigations arising under the tax laws, notably the one against the estate of Jay Gould. He published "The Law of Collateral and Direct Inheritance, Legacy and Succession Taxes" (1890).

Downs, Morse S., musician, born in Haverhill, Mass., in 1830; died in Brooklyn, N. Y., June 12, 1898. He developed a strong taste for music at an early age, and when nine years old was able to play the organ in a church, though he was so short that he had to stand before the instrument. Severe application to the study of music greatly injured his

health before he was twenty years old, and he spent some time in California. On his return he took a course in vocal instruction in Boston, and in 1860 became the tenor in the quartet of the Old South Church. His health again failing, he removed to Memphis, Tenn., where he was appointed director of the Mozart Conservatory, and later gave the first musical festival ever held in the South, aided by Theodore Thomas and his orchestra. Nilsson, Materna, Scaria, and Winterman. About this time also he published songs and other musical works. During the past fifteen years he was prevented by illness from following a professional career.

Dreher, Virginia, actress, born Louisville, Ky., in 1858; died in Phoenix, Ariz., Nov. 11, 1898. She was the daughter of a family named Murphy, and married when quite young a music professor of Louisville named Dreher. On the death of her husband she sought a means of supporting herself and two children by going upon the stage. She studied under John Norton, an actor and manager of St. Louis, and made her *début* as Julia, in "The Hunchback," at the Grand Opera House in that city in 1888. Her success was such that she was immediately engaged by Augustin Daly for his theater in New York. She made her first appearance in New York in 1883 in "7-20-8." She became immediately a favorite with the public, and remained a member of Daly's Theatre until 1889, when she married George Frederick Postlethwaite, a wealthy English gentleman, and retired from the stage.

Duncan, Charles C., seaman, born in Bath, Me., in 1821; died in Northfield, Mass., March 25, 1898. He adopted a seafaring career in early life, and when twenty years old was given command of a ship. Subsequently he was engaged in business in New York city. In 1867 he embarked on a cruise to the Mediterranean, the idea of which he had conceived, commanding the steamer "Quaker City," which furnished the subject of Mark Twain's "Innocents Abroad," Mr. Clemens being a member of the excursion party. On returning from the voyage Capt. Duncan became actively identified with the American Seamen's Friend Society, and labored with much zeal to promote the shipping act that Congress passed in 1872. For many years he was a conspicuous church worker in Brooklyn, N. Y., being at times a deacon of Plymouth Church and superintendent of its Sunday school and superintendent of the Sunday school of the Rev. Dr. George F. Pentecost's church. After the passage of the shipping act he was appointed shipping commissioner of the port of New York, and he held the office till 1885, when he removed with his family to Northfield. In 1894 he was licensed to preach by the conference of Franklin County, Mass.

Duncan, Samuel White, clergyman and educator, born in Haverhill, Mass., Dec. 19, 1838; died in Boston, Oct. 30, 1898. He was graduated at Brown University in 1860. He raised a company in Haverhill for the 50th Massachusetts Volunteers in 1862, and served as its captain through a part of the civil war. He was graduated at the Theological Seminary in Rochester, N. Y., in 1866, and then held pastorates of Baptist churches, successively, in Cleveland, Cincinnati, and Rochester. In 1885 he was offered the presidency of Vassar College, but declined it. He became in 1892, and continued to his death, foreign secretary of the American Baptist Missionary Union. He was a trustee of Rochester University, Denison University, and Rochester Theological Seminary, and a fellow of Brown University. In 1878 the degree of D. D. was conferred upon him by the University of Chicago.

Durgin, Dorothy, Shaker, born in Sanbornton, N. H., Nov. 23, 1825; died in Canterbury, N. H.,

Aug. 25, 1898. She was left motherless at the age of seven years, and was placed in the keeping of a Shaker family at Canterbury, and remained a member of the household for sixty-five years. She was eldest, or first sister in authority, for forty-six years. She was an able writer, contributed many articles to Shaker and other magazines, and had visited every community of her sect in the United States, except one in Ohio.

Durrie, John, artist, born in Hartford, Conn., March 21, 1818; died in East Orange, N. J., Aug. 1, 1898. He studied painting with Nathaniel Jocelyn, of New Haven, where he resided nearly all his life. His specialty was portraiture and fruit pieces. Many of his small canvases, fruit and fish, are owned in Boston. A younger brother, George H. Durrie, who died many years ago in New Haven, was a painter of landscapes and snow scenes.

Duryea, Joseph Tuthill, clergyman, born in Jamaica, Long Island, N. Y., Dec. 9, 1832; died in Brooklyn, N. Y., May 17, 1898. He was of Huguenot and Dutch stock; was graduated at Princeton in 1856, and at its theological seminary in 1859; and was first called to the Second Presbyterian Church in Troy, N. Y., immediately after leaving the seminary. In 1862 he went to the Collegiate Reformed Dutch Church in New York city, and in 1867 to the newly established Classon Avenue Presbyterian Church in Brooklyn. He held the last pastorate for twelve years, and in that time his congregation erected a handsome new church edifice, and established a mission school on Atlantic Avenue which became the Duryea Presbyterian Church. From Brooklyn he went to the Central Congregational Church in Boston, where he remained ten years, and during the whole of this pastorate he also taught the senior class in philosophy in Wellesley College. In 1888 he accepted a call to the First Congregational Church in Omaha, Neb., where he became one of the foremost in missionary, charitable, and educational work. He had charge of the general work of relief in that city during the distressing winter of 1893. In 1895 he resigned, and accepted the pastorate of the First Reformed Church in Brooklyn, with which he remained until his death.

Eaton, William Wallace, statesman, born in Tolland, Conn., Oct. 11, 1816; died in Hartford, Conn., Sept. 19, 1898. He was educated in the public schools of Tolland. From 1837 to 1841 he was in business in Columbia, S. C. Returning to Tolland, he studied law and was admitted to the bar. He was elected to the State House of Representatives in 1847-'48, and to the State Senate in 1850. He then removed to Hartford, where he lived till his death. He was clerk of the Superior and Supreme Court, and city judge and recorder of Hartford. For several terms, between 1853 and 1875, he represented Hartford in the Legislature, and he was Speaker of the House in 1854 and 1873. He was known as a "Peace Democrat" during the civil war, and he advised resistance if the troops from Massachusetts attempted to pass through his State. He served one term, 1875 to 1881, in the Senate of the United States, and previous to that a few weeks as the successor of Senator Buckingham, who died while in office. For a part of his term he was chairman of the Committee on Foreign Relations. He framed a bill for the appointment of a tariff commission. The bill failed, but a similar measure was adopted by the next Congress. He opposed the appointment of the Electoral Commission to settle the controversy over the presidency in 1876-'77. In 1883-'85 he represented the 1st District of Connecticut in the United States House of Representatives, and while holding this office he maintained the right of the House, independently

of the Senate, to determine all questions relating to any presidential election.

Eddy, Wilson, inventor, born in Chelsea, Vt., Feb. 24, 1813; died in Springfield, Mass., Sept. 2, 1898. At the age of nineteen he went to Lowell with the Locks and Canal Company, and in 1840 began to work for Major Whistler as a mechanic on the Boston and Albany Railroad. When Mr. Eddy began working on locomotives there were fewer than a dozen in the United States, and when his manager made a failure of several locomotives which had been built to overcome the steep grades between Springfield and Albany Mr. Eddy's opportunity came. He was promoted from foreman to master mechanic in 1850, and then began building his own locomotives. He went to Russia in 1856, but as the capitalists' plans failed he returned to New England. He retired from active work in 1880. Mr. Eddy never cared to secure patents on his many inventions, and took out only one, on a car brake. He kept pace with the development of locomotives, so that the last one of the 135 which he built was as complete and able to meet the demands of the period as the first. He served both as an alderman and councilman in Springfield, and in 1882 represented his district in the Legislature.

Eliot, Samuel, historian, born in Boston, Mass., Dec. 22, 1821; died in Beverly, Mass., Sept. 14, 1898. He was graduated at Harvard in 1839 and was long prominent in educational work. From 1856 to 1864 he was Professor of History and Political Science in Trinity College, Hartford, and he was president of that institution in 1860-'64; from 1872 to 1876 he was head master of the Girls' High School, Boston, Superintendent of the Boston Public Schools, 1878-'80, and after that date he served on the school committee. He was an accomplished historical scholar. His principal work, "The History of Liberty" (Boston, 1853), was a revision of two earlier works—"Passages from the History of Liberty" (Boston, 1847) and "The Liberty of Rome" (Boston, 1849). In its new form it was divided into two parts, the first entitled "The Ancient Romans," the second called "The Early Christians." His other writings include "The Life and Times of Savonarola" and "Manual of United States History, 1492-1850" (Boston, 1856).

Elmer, Horace, naval officer, born in Bridgeton, N. J., in 1847; died in Brooklyn, N. Y., April 27, 1898. He was appointed an acting midshipman in the United States navy, Sept. 27, 1861; and was promoted midshipman, July 16, 1862; ensign, Nov. 1, 1866; master, Dec. 1, 1866; lieutenant, March 12, 1868; lieutenant commander, April 27, 1869; and commander, March 2, 1885. He was on sea duty thirteen years and eleven months, and on shore or other duty eighteen years and one month, at various times he served on the "Hartford," flagship of the East India squadron; the ironclad "Terror," on the North Atlantic station; the "Colorado" during the excitement over the "Virginius" capture in 1873; the "Kearsarge"; and the practice ship "Jamestown." On Oct. 26, 1896, he was appointed commandant of the naval station at New London, Conn., and during the winter of 1897-'98 he was on duty at Cramp's shipyard in Philadelphia, superintending the construction of vessels for the navy. In March, 1898, when war with Spain seemed inevitable, he was detailed to take charge of the organization of a special naval force for patrol duty along the coasts. This force was afterward known as the "mosquito fleet." It was the intention of the Navy Department to give him command of the fleet when organized, but he died from overwork before his task was completed.

Elmore, Alfred Frank, vocalist, born in Canterbury, England, May 23, 1839; died in New York

city, June 14, 1898. He was educated in London under Randegger and Balfe, and began his professional career when about twenty-one years old. He achieved a wide reputation as a baritone concert singer; was a member of the choir of the Temple Church in London; and was the first vocalist to take the baritone part in Sir Arthur Sullivan's oratorio "The Prodigal Son," at the Crystal Palace, London. In company with Mmc. Patey, Mme. Edith Wynne, and the baritones Santley and Maas, he made several singing tours of Great Britain. In 1884 he came to the United States. For a year he was Professor of Singing in the University of South Carolina. Afterward he was choirmaster of the Protestant Episcopal Church of the Ascension in Baltimore, and Professor in the New York Conservatory of Music. For some time he had charge of the musical work of the New York City Missionary Society. His widow was Maria Strindberg, a popular Swedish pianist.

Emerson, George H., clergyman, born in Roxbury Highlands, Mass., in 1823; died in Salem, Mass., March 24, 1898. He received a common-school education, and, after spending some time in a store, was taken under the tutelage of the late Rev. Abel C. Thomas, of Lowell, who prepared him for the ministry. For several years preceptor and student traveled together through Kentucky and Ohio, organizing religious societies and building churches. In 1856 Mr. Emerson returned to the East and organized the First Universalist Society in Somerville, Mass. Afterward he held pastorates in Needham and in Huntington, Long Island, N. Y. While stationed in Huntington he was called to the editor's chair of the "Embassador," a religious periodical subsequently known as the "Christian Leader," with which he had a continuous service of more than thirty-five years. He was the oldest editor of a religious periodical in Boston. He was a frequent contributor to magazines, and had published several books, including "Probation," "The Life of Barnum," and "The Life of Dr. Miner."

Emerson, Jesse Milton, author, born in Methuen, Mass., in 1818; died in Plainfield, N. J., Dec. 20, 1898. Early in life he was in business in New Orleans, but he afterward removed to New York city, where he resided until 1894. He conducted a publishing business, and was the author of these works: "New York to the Orient," "Stimulants," and "European Glimpses and Glances."

English, Mrs. Jane (Western), actress, born in Philadelphia, Pa., in 1825; died there, Oct. 24, 1898. She was known in her early career as Mrs. Jane Western, having married a comedian who was commonly known as "the Great Western." Lucille and Helen Western, the well-known actresses, were the children of this marriage. Mrs. Western made her first appearance on the stage at the Adelphi Theater, Boston, in 1846. She became a member of the stock company of the National Theater in Boston, and was very popular in soubrette rôles. On the death of her first husband, in 1858, she married William English, a manager. She occupied places in different stock companies in New York, Philadelphia, and Baltimore, and was very highly esteemed as a vivacious and attractive comedienne. In 1880 she retired from the stage and entered the Edwin Forrest Home, Philadelphia.

Eno, Amos Richards, capitalist, born in Simsbury, Conn., Nov. 1, 1810; died in New York city, Feb. 21, 1898. He received a common-school education in his native town, and was sent to Hartford to learn the dry-goods business. While there he had for fellow-clerks the late Gov. Edwin D. Morgan, of New York, and Junius S. Morgan, the banker of New York and London. He established himself in the wholesale dry-goods business in New

York city in 1833, and continued active in it till 1857, when he turned his attention wholly to real-estate operations. Three years before making this change he bought the land at Fifth Avenue and Twenty-third Street, on which Franconi's Hippodrome had stood, and began building the Fifth Avenue Hotel. At that time this site was so far uptown that the venture was derisively spoken of as "Eno's Folly," and it was with difficulty that Mr. Eno secured a manager for the hotel in the person of the late Paran Stevens, then a successful hotel manager in Boston. The new hotel was opened in 1859. Mr. Eno retained the ownership of this property till his death. He was remarkably successful in all his real-estate operations, was conceded to be one of the first experts in New York realty valuations, and was a man of the strictest integrity. He was one of the founders and principal stockholders of the Second National Bank, of which one of his sons was made president in 1881. In 1884 financial circles in New York were startled by the announcement that the bank had been ruined by the private speculations of its president. Mr. Eno declared at once that the bank would not be allowed to fail, and that every obligation would be paid in full. It was reported at the time that the saving of the bank cost him between \$3,000,000 and \$4,000,000. (See GIFTS AND BEQUESTS.)

Evans, Joseph, painter, born in New York city, Oct. 29, 1857; died there, April 23, 1898. He received his art education in the schools of the National Academy of Design and the Art Students' League in New York and at the École des Beaux Arts in Paris, and while in Paris worked in the studio of Gérôme. On his return to New York he applied himself to landscape work and was a frequent exhibitor, especially at the annual exhibitions of the Society of American Artists. He was for three years president of the Art Students' League, and for the same time secretary of the Society of American artists. He was deeply interested in public education, and had served one term and part of another as a school inspector.

Fairbank, Calvin, clergyman, born in Pike, N. Y., Nov. 3, 1816; died in Angelica, N. Y., Oct. 12, 1898. When twelve years old he attended a Methodist quarterly meeting and listened to a recital of the hardships of an escaped slave and his family. This made such a deep impression on the boy that it shaped the whole course of his life. His work of rescuing slaves began in 1837, while he was rafting lumber down the Ohio river; and within two years thereafter he had freed 23 slaves. His method was to ferry them across the river on rafts or logs, or in rowboats, and deliver them to trusted friends in Ohio or Indiana. According to his own statement he freed 47 slaves by his personal exertions, and he was instrumental in freeing many more. He entered the seminary at Lima, N. Y., in 1839, and soon afterward became a student at Oberlin College, from which institution he was graduated in 1844. During his college days he made the acquaintance of Gerrit Smith, Joshua R. Giddings, Theodore Parker, and other leaders of the abolitionists; adopted their ideas as to the unconstitutionality of slavery, and worked harmoniously with them in many ways. While a

student at Oberlin he taught school in Lexington, Ky., where he became the fast friend and defender from physical injury of Cassius M. Clay, who was publishing "The True American," the only anti-slavery paper in the South. He also continued his work of freeing slaves. The most remarkable incident of this work occurred in 1843. Mr. Fairbank had discovered in the jail at Lexington a slave girl almost purely white who was soon to be sold at auction. Proceeding to Cincinnati, he enlisted the sympathy of Salmon P. Chase, Nicholas Longworth, and others, so that he returned to Lexington with \$2,275 in his pocket and authority to draw upon the donors for \$25,000 more. The bidding was spirited, Fairbank's only opponent being a Frenchman from New Orleans. At last the girl went to Fairbank for \$1,485, and he took her to Cincinnati, where she was freed and educated. In 1844, in company with Miss D. A. Webster, he effected the escape of Lewis Hayden and family. For this offense Miss Webster was sentenced to two years in the prison at Frankfort, Ky., and Fairbank to fifteen years. During his imprisonment pending the trial he made a vain attempt to escape from the jail. In 1849 he was pardoned by Gov. Crittenden. His efforts were at once directed against the passage of the fugitive slave law; and, failing in that, against its execution. In 1852 he was once more sentenced to a fifteen-year imprisonment at Frankfort, where, according to his story, he received more than 35,000 lashes on his bared body, his weight being reduced from 180 pounds to 118. This treatment caused him to have the appearance of an old man at the age of forty. Having been ordained to the ministry in 1850, he officiated at times in the chapel of the prison, where he did not hesitate to set forth his own views on the absorbing question of the day. For a part of the year 1862 the Confederate army had possession of Frankfort, and several attempts were made by the soldiers upon the life of Mr. Fairbank. In 1864, during the temporary absence of Gov. Bramlette, he was released from prison by the acting Governor, Richard T. Jacobs. His total period of confinement exceeded seventeen years. On June 9, 1864, he married, in Oxford, Ohio, Miss Mandana Tileston, of Williamsburgh, Mass., to whom he had been engaged since 1851. He removed to New York city in 1864, where he was for more than ten years in the employ of religious and missionary societies, his special work being in connection with the freedmen. After this work he removed to Angelica, N. Y., where the remainder of his life was spent. In 1893 he published a book entitled "How the Way was Prepared," giving a detailed account of his eventful life.

Fassett, Cornelia Adèle (Strogo), painter, born in Owasco, N. Y., Nov. 9, 1831; died in Washington, D. C., Jan. 4, 1898. She studied painting in water color in New York city and in oil in Paris and Rome; and on her return to the United States in 1855 opened a studio for portrait painting in Chicago. In 1873 she was elected a member of the Chicago Academy of Design, and in 1875 became a resident of Washington, D. C. Her most notable painting is "The Electoral Commission in Open Session," which was executed in 1877-'80 and contains about 200 portraits. It was bought by the National Government and now hangs in the Capitol. Mrs. Fassett had also painted portraits of many notable persons, including Vice-President Wilson, Chief-Justice Waite, President Garfield, Associate Justices Miller and Field, Gen. John A. Logan, and Miss Clara Barton.

Fay, Theodore Sedgwick, author and diplomat, born in New York city, Feb. 10, 1807; died in Berlin, Germany, Nov. 17, 1898. He belonged to that generation of literary New Yorkers which in-

cluded Halleck, Willis, Morris, and Bryant, and in early life was editor of the New York "Mirror." He was secretary of the American legation at Berlin in 1837-'53, and minister resident to Switzerland in 1853-'61. Since 1861 he had lived in retirement at Berlin. His novels enjoyed a considerable measure of public favor at the time of their appearance, but with the exception of "Norman Leslie" are unknown even by name at the end of the century. His earliest work was entitled "Dreams and Reveries of a Quiet Man" (1832); and this was followed by "Norman Leslie" (1835); "Sydney Clifton" (1839); "The Countess Ida" (1840); "Hoboken: A Romance of New York" (1843); "Robert Rueful" (1844); "Ulric; or, The Voices" (1851); "Views of Christianity" (1856); "History of Switzerland" (1860); "Great Outlines of Geography" (1867); "The Three Germanys: Glimpses into their History" (1889).

Febiger, John Carson, naval officer, born in Pittsburg, Pa., Feb. 14, 1821; died in London-derry, Md., Oct. 9, 1898. He was appointed a midshipman in the navy, Sept. 4, 1838; promoted passed midshipman, May 20, 1844; master, July 13, 1852; lieutenant, April 30, 1853; commander, July 16, 1862; captain, May 6, 1868; commodore, Aug. 9, 1874; and rear admiral, Feb. 4, 1882; and was retired, July 1, 1882. He was on the "Germantown," of the East India squadron, in 1858-'60, on the sloop "Savannah" in 1861, and when commissioned commander was assigned to the steamer "Kanawha," of the Western Gulf blockading squadron. After commanding various vessels in that and the Mississippi squadron, he commanded the "Mattabeset," of the North Atlantic squadron in 1864, and in that steamer took part, May 5, 1864, in the engagement between the little fleet of wooden vessels under Capt. Melancthon Smith and the Confederate ram "Albatross," in Albemarle Sound, North Carolina. In this fight the ram was defeated and her tender was captured; and Febiger was commended for his gallantry and skill. He commanded the "Ashuelot," of the Asiatic squadron, in 1866-'68; was inspector of naval reserve lands in 1869-'72; a member of the board of examiners in 1874-'76; and commandant of the Washington Navy Yard in 1876-'80.

Fisher, Clara (Mrs. Clara Fisher Maeder), actress, born in London, England, July 14, 1811; died in Metuchen, N. J., Nov. 12, 1898. She made her first appearance on the stage at the Theater Royal, Drury Lane, London, England, Dec. 10, 1817, as Lord Flimnap in an adaptation called "Gulliver in Lilliput," which was specially provided for her by her father, George Frederick Fisher, who was connected with the theater as a scenic artist. The astonishing *aplomb* and accuracy of the child in the performance of the rather indifferent part with which she was intrusted took the city by storm. The novelty of seeing a mere child upon the stage, imitating with perfect confidence the manners of her elders, drew to Drury Lane not only the idlers of the clubs and coffee houses, but the gay ones of the court, and Clara Fisher was applauded and petted by George IV and his friends. She was even patronized by Beau Brummell. Her father wrote for her a burlesque on the last act of "Richard III," which upon its presentation with Clara Fisher as the Crookback made an immediate success and enjoyed a run of seventeen nights, a wonderful thing in those days for Drury Lane. She was then engaged by the managers of Covent Garden Theater. Not only were her houses crowded with the wit and fashion of the town, but her childish methods were adopted into the speech of polite society, and the "Fisher lisp" was the best vogue among the young exquisites of both sexes. She made tours of the United Kingdom, always under the direction of her

father and mother, playing with other parts Norval and Sir Peter Teazle for five years with great financial success. In 1822 she returned to Drury Lane in the part of Little Pickle in "The Spoiled Child," and remained at that theater as a regular member of the company for three years. In 1827 she came to the United States, landing Sept. 1 of that year at the Battery, New York, from a sailing vessel, when that locality was the fashionable quarter of the city. A house in the Bowery near Grand Street had been taken for her, and there she lived with her father and mother while she played her first engagement in New York at the Old Park Theater, which stood on the ground now occupied by the "Daily News" office, opposite the Post Office. Her first appearance was made Sept. 11, 1827, as Albina Mandeville in the comedy of "The Will." Her success here was a repetition of the astonishing *furore* which had attended her London appearances. Though she was now sixteen years of age, she was small and appeared younger, and was therefore still considered an infant prodigy. From New York she journeyed to Philadelphia, Boston, and the cities of the South and West. In addition to the characters already mentioned she played Clari in "The Maid of Milan," Maria in "The Actress of all Works," Gertrude in "The Loan of a Lover," Cherubino in "The Marriage of Figaro," Priscilla Tomboy in "The Rump," Letitia Hardy in "The Belle's Stratagem," the Four Mowbrays in "Old and Young," and Juliana in "The Honeymoon." In Baltimore in 1828 President Adams attended her performances and at a Twelfth Night where she was present in one of the first houses of the city she was chosen as the Queen of the Revels and had Louis Napoleon, afterward the Emperor Napoleon III, for her partner. By this time she had begun to be an earnest and studious woman, and when in 1834 she married James Gaspard Maeder, a well-known and favorite musician, she was determined, although in the possession of an independent fortune, to devote herself to the best work of the drama. She was successively attached to most of the best companies of the United States. Charlotte Cushman, Forrest, the elder Wallack, the elder Booth, Edmond Connor, Hamblin, Charles Kean, and James H. Hackett are a few of the names of those whom she ably supported in the principal female rôles of their repertoires. One of her interesting recollections of youth in America is the fact of her having played with Thomas Apthorpe Cooper and George Frederick Cooke. She played Susanna in "The Marriage," with Charlotte Cushman as the Countess; Violante to the Don Felix of the elder Wallack, in "The Wonder"; Phoebe to Master Burke's Paul Pry; Mrs. Page and Mrs. Ford (at different times) to Hackett's Falstaff, as well as Ophelia to his Hamlet. On the stage of the Old Park Theater she was the original of more than half a hundred characters new to the American stage, among which were Clara Douglas in "Money," Caroline in "The Four Sisters," Duchess de Torrenneva in "Faint Heart ne'er Won Fair Lady," Madame Germaine in "Home, Sweet Home," Victoria in "The Invincibles," Rosetta in "The Alpine Maid," and Nell Gwynne in the drama of that name. She was also intrusted with the interpretation of the parts originally presented by Madame Vestris in London. Mrs. Maeder and her husband purchased and occupied a handsome home in Albany, N. Y., where they lived for many years while she was filling engagements throughout the country, and where they were surrounded by a large family of children. Financial reverses, from the failure of a New York bank, in which most of her money was invested, embittered Clara Fisher's later life with the cares of poverty. Yet such was the gentleness of her

nature that she never lost the peculiar charm of sunny good nature and the sparkling vivacity which constituted the magnetic power of her work on the stage. Mrs. Maeder continued to act and was employed in many different companies until 1889, when she definitely retired after seventy-two years of active work, during which she had been a leading figure of the English drama in two continents. She made her last public appearance on the stage at Baltimore, Md., in the character of Mrs. Jeremiah Joblots in "The Lottery of Love," under the management of Augustin Daly, of whose company she had been for three years a member. The Dunlap Society of New York in 1897 published Mrs. Maeder's autobiography.

Flad, Henry, civil engineer, born near Heidelberg, Germany, in 1824; died in Pittsburg, Pa., June 20, 1898. He entered the service of the German Government when twenty-two years old, and was detailed to duty in connection with the work of improving the Rhine. Three years later he joined the revolutionists with the rank of captain of engineers, and constructed defensive works. On the suppression of the uprising he fled to the United States with a sentence to death against him, and on landing in New York supported himself for a year as draughtsman in an architect's office. In 1850 he was appointed assistant engineer of the New York and Lake Erie Railroad; in the following year made the survey between Buffalo and Niagara Falls; and in 1852 became resident engineer of the Ohio and Mississippi Railroad, with 35 miles of road to construct and supervise. He settled in St. Louis in 1861; enlisted as a private in the 3d Missouri Reserves; was promoted to captain of engineers when Gen. Frémont took command; and was detailed to special duty at Cape Girardeau. Subsequently Gen. Halleck transferred him to "Bissell's Engineer Regiment of the West," with which he served through the war and became its colonel. After the fall of Atlanta, Col. Flad resigned from the army, returned to St. Louis, and was employed as chief assistant to J. B. Woodward, who planned the waterworks. In 1867 he was appointed a water commissioner of St. Louis, and while holding this office was also chief assistant of James B. Eads in the construction of the great St. Louis bridge. He was president of the St. Louis Board of Public Improvements for nine years, and at the time of his death was a member of the Mississippi River Commission.

Flagg, William Joseph, vitiiculturist, born in New Haven, Conn., April 15, 1818; died in New York city, April 15, 1898. He was a son of Henry Collins Flagg, well known in his day throughout the South, and was educated and admitted to the bar in his native city. In the midst of a successful practice he removed to Cincinnati, Ohio, and married a daughter of Nicholas Longworth, and identified himself with the culture of the grape. He made a careful study of the conditions of the industry in the United States, and then spent some time in France, acquainting himself with systems there, and especially investigating the ravages of phylloxera. On his return he published a book on his observations, which became an authority. Mr. Flagg acquired large tracts of vine land along the Ohio river, and valuable real-estate properties in New York city and elsewhere. During the latter part of his life he resided in New York city and engaged in literary work. He was an accomplished scholar, an authority on financial questions, and a writer of fiction and on scientific subjects. On the day of his death the first edition of a work on the religions of all countries, on which he had been engaged for fifteen years, was published in New York under the title of "Youga."

Fowler, Mary Odenheimer, painter, born in Philadelphia, Pa., about 1845; died in Nutley, N. J., July 3, 1898. She was a daughter of the late Bishop William Henry Odenheimer, of the Protestant Episcopal diocese of New Jersey, and received her art education in the Philadelphia Art School and in Paris under Carolus Duran. She made a specialty of portrait and figure work, was a strong colorist, and executed a number of ideal paintings of high merit, including "Guinevere," "Vivien," "Elaine," and "Enid." The first of these was exhibited at the Centennial Exposition in 1876, and was the first painting sold, bringing \$1,000. At the World's Columbian Exposition she exhibited a study entitled "Marie," and received a diploma for her decorative studies. Many of her ideal heads were reproduced in engravings, etchings, photographs, and lithographs. Mrs. Fowler contributed to the exhibitions of the National Academy of Design, the Water-Color Society, and the Society of American Artists. She was an accomplished linguist, a contributor to art periodicals, and a writer of short stories. She was the wife of Frank Fowler, the portrait painter.

Franklin, Benjamin J., lawyer, born in Mason County, Ky.; died in Phoenix, Arizona, May 20, 1898. He was educated at Bethany College, West Virginia; studied law, and was admitted to the bar in Kansas in 1857; removed to Kansas City, Mo., in 1860; and served in the Confederate army through the civil war. In 1871 he was elected commonwealth attorney for the 24th Judicial Circuit of Missouri, and in 1874 was chosen Representative in Congress from the 8th Missouri District as a Democrat. During President Cleveland's first term Mr. Franklin was United States consul at Hankow, China. On his return he settled in Arizona, and in March, 1896, was appointed Governor of the Territory. After serving the unexpired term, he resumed the practice of law in Phoenix.

Fraser, John Arthur, painter, born in London, England, in 1839; died in New York city, Jan. 1, 1898. He was carefully educated for an art career, studying in the Marlboro House School of Design, in the famous Lee Life School, and with F. W. Topham, the distinguished water colorist. Soon after reaching his majority he went to Toronto, Canada, to take possession of an inheritance, and there he lived several years. In 1878 he was one of a small group of painters selected by royal command to found the Royal Canadian Academy of Fine Arts. He also became a founder of the Ontario Society of Artists. During a part of his residence in Toronto he was director of the Government Art Schools in that city. He was employed for many years by the Canadian Pacific Railway Company to paint the scenery of the Northwest. On removing from Toronto he first went to Boston, and a few years afterward returned to London, whence the climate caused him to remove to New York city. Here he became an active member of the American Water-Color Society, the Salmagundi, and other art societies. His painting "The Heart of Scotland" was given the post of honor in the Paris Salon of 1890, and he was awarded a gold medal for his contribution of seven canvases to the World's Columbian Exposition in 1893. Besides "The Heart of Scotland," his best-known paintings are "Inghan More House" and "The Hamlet of the Muskrat." He was a brother of W. Lewis Fraser, art manager of "The Century Magazine."

Frederic, Harold, novelist and journalist, born near Utica, N. Y., Aug. 19, 1856; died in Henley, Oxfordshire, England, Oct. 19, 1898. Owing to the death of his father he was early thrown upon his own resources, and after spending a year in a confectioner's establishment and several years as a

retoucher of negatives for photographers he became a proof reader in a newspaper office in Utica, at the age of twenty. In 1880 he was an editor of the Utica "Observer," and two years afterward was editor of the Albany "Evening Journal," which became Democratic under his management. In 1884 he was engaged by the New York "Times" to act as the London correspondent of that journal and for the remainder of his life he resided in London. He was an ardent literary worker, and was popular in his profession. His first novel, "Seth's Brother's Wife," appeared in 1887, and, like the greater number of his fictions, was a story of life in central New York. In the opinion of most critics his strongest work is "The Damnation of Theron Ware," which attracted much attention at the time of its appearance in 1896. His other stories include "The Lawton Girl" (1890); "In the Valley" (1890); "The Return of the O'Mahoney" (1892); "The Copperhead" (1893); "Marsena, and Other Stories of the War Time" (1894); "March Hares" (1896); "Gloria Mundi" (1898); "The Deserter, and Other Stories" (1898); "The Market Place" (1899). Other works by him are "The Young Emperor: William II of Germany" (1891); "The New Exodus: A Study of Israel in Russia" (1892).

French, Samuel, publisher, born in Gardiner, Me., in 1818; died in London, England, April 10, 1898. He removed to New York city in 1835 and established his business of publishing plays, which he brought out in small paper-covered volumes that were sold at low prices. His business met with quick success, and gave him such an extended reputation that he soon added to it an American agency for foreign playwrights. Most of the European plays which previous to the last fifteen years made notable successes were brought here by Mr. French, including "A Celebrated Case," and the three plays written by Sardou for Mr. French—"Feodora," "Theodora," and "Odette." He was interested in many theatrical enterprises in the United States, and at one time was manager for John McCullough. After 1872 he resided in London, where he had acquired the dramatic publishing business of Thomas H. Lacy.

Frink, Henry Allyn, educator, born in Amherst, Mass., May 23, 1844; died there March 25, 1898. He was graduated at Hamilton College in 1870, and, after teaching two years in the Brooklyn Polytechnic Institute, was called to the chair of English Literature and Oratory in Hamilton College. This chair he retained till 1885, when he became Professor of Logic, Rhetoric, and Public Speaking in Amherst College, where he remained until his death. In 1877 he was licensed to preach by the Presbytery of Utica, N. Y., and after this as long as he remained at Hamilton he supplied pulpits in the cities and large towns of central New York and elsewhere. In 1876 and 1877 representatives of Hamilton College who had been instructed by him won the intercollegiate honors in oratory in the contests at the Academy of Music, New York. Prof. Frink made extended tours of Europe in 1885, 1890, and 1895. He adapted Austin Phelps's "English Style in Public Discourse" for a text-book for schools and colleges under the title "Rhetoric: Its Theory and Practice," with an original second part on "Practical Exercises in the Fundamental Qualities of English Style" (New York, 1895). His "New Century Speaker" was published a month after his death, and he left other works unfinished.

Gage, Matilda Joslyn, reformer, born in Cicero, N. Y., March 24, 1826; died in Chicago, Ill., March 18, 1898. She was a daughter of Dr. H. Joslyn, an abolitionist, from whom she inherited an interest in reformatory problems. She received a liberal education, married Henry H. Gage, of Cicero, in 1845,

and began writing and speaking on reform measures in 1852. Her earliest concern was for the abolition of slavery; but she soon became acquainted with Elizabeth Cady Stanton, and through her influence began lecturing in advocacy of woman suffrage. In 1872 she was elected president of the National Woman Suffrage Association and of the New York State Woman's Suffrage Society, and in 1878 she organized the Woman's National Liberal League, of which she was president till her death. She edited the "National Citizen," of Syracuse, N. Y., from 1878 till 1881, and was author of "Woman as an Inventor" (New York, 1870); "The History of Woman Suffrage," with Susan B. Anthony and Elizabeth Cady Stanton (3 vols., 1881-'86); and "Woman, Church, and State" (1896). While on her sick bed she prepared a speech that was read at the annual convention of the National Woman Suffrage Association in Washington, D. C.

Garcia, Calixto, insurgent, born in Holguin, Cuba, Oct. 14, 1836; died in Washington, D. C., Dec. 11, 1898. He studied law, and began practice, but later he cast his lot with the struggling patriots in Cuba, and in 1868, with Carlos Manuel Cespedes and Marmol, he planned the revolution that became known as the "Ten Years' War." On Oct. 10, 1868, Garcia and Marmol took up arms at the head of 150 men; for a time they had great success, town after town falling before them. They captured Santa Rita, Baire, and Jiguani; for courage and ability at the latter place Garcia was appointed a brigadier general under Gomez. The Provisional Government later removed Gomez, and Garcia was made commander in chief of the forces of Cuba. He attacked Jiguani, which had been retaken by the Spanish, captured it, and then took Holguin. He was also victorious at Baquano, Cupeijal, Zarsal, and Santa Maria. Sept. 3, 1873, a decided reverse came. With 20 men at San Antonio del Bahar he was attacked by 500 Spaniards. When called on to surrender he decided to die by his own hand, and, placing his pistol in his mouth, fired upward. The bullet came out at his forehead, and he carried the scar the rest of his life. He was taken to Manzanillo, recovered, and was deported to Spain. After the peace of Zanjon, in 1878, he was freed by Premier Canovas at the request of Gen. Campos. He returned to Cuba and, not considering the Zanjon peace honorable or binding, took part in the "little war," in which he fought side by side with Maceo. He was compelled to surrender at Bayamo, and was sent to Madrid, where he lived seventeen years under police surveillance. In September, 1895, he crossed the frontier into France, came to New York, and arranged a filibustering expedition on the "Hawkins," Jan. 26, 1896, which was unsuccessful. Then he fitted out the "Bernuda," but was arrested by the United States Government. He forfeited his bail, and, the "Bernuda" having sailed March 15, he met her off Cape Henlopen, and landed in Cuba with 62 Cubans, 6 field guns, and a quantity of dynamite. On Oct. 27, he captured Guimaro; Jan. 13, 1897, he won a brilliant victory at Gabuquito; and Sept. 5, 1897, he captured Victoria de las Yunas. The loss of this place led to the recall of Gen. Weyler. Garcia held the interior of Santiago de Cuba province till the beginning of the Spanish-American War, when he offered to co-operate with the forces of the United States. Incensed because Gen. Shafter would not turn over to him the command of Santiago after its capture, he withdrew from the Cuban army July 17, 1898, but returned Sept. 23. In November he was sent to the United States at the head of the commission to present the views of the Cuban leaders to President McKinley, but he died before accomplishing his purpose. High official

and military honors were paid to his remains in Washington.

Gibbs, John Blair, physician, born in Richmond, Va., about 1858; killed at Guantanamo, Cuba, June 12, 1898. He was a son of the late Major Alfred Gibbs, of the 7th United States Cavalry, and was graduated at Rutgers College in 1878, at the University of Pennsylvania in 1881, and at the New York College of Physicians and Surgeons in 1882. After spending nearly two years at Bellevue Hospital, New York city, he took a course of post-graduate study in London and Vienna. On his return he established himself in practice in New York, becoming an instructor in the Post-Graduate Hospital and a member of the staff of Roosevelt and Lebanon Hospitals. When news of the great American naval victory at Manila reached New York, Dr. Gibbs determined to give up his lucrative practice and enter the navy for the war. He was commissioned an assistant surgeon and assigned to the monitor "Miantonomoh," but was soon transferred to the converted cruiser "Panther," which landed 600 marines from the American blockading squadron at Guantanamo. The second night after the landing the Spaniards made a midnight attack on the small American camp, and before they were dispersed Dr. Gibbs, a sergeant, and two privates were killed. Dr. Gibbs was the first physician accepted as a surgeon under the President's first call for volunteers, and the first American officer killed on Cuban soil.

Gilbert, Jasper Willett, jurist, born in Rome, N. Y., Jan. 15, 1812; died in Brooklyn, N. Y., Feb. 10, 1898. He received a public-school education, was admitted to the bar in 1835, settled in Rochester, N. Y., to practice, and in 1839 he became city attorney. From 1840 till 1845 he was district attorney of Monroe County. In 1847 he established an office in New York city and a residence in Brooklyn. He was elected judge of the Supreme Court of New York for the 2d Judicial District, on a unanimous nomination by both political parties, in 1865, and by re-elections held the office till he reached the age for retirement—Jan. 1, 1883. The most conspicuous case before him while on the bench was that of 17 aldermen of Brooklyn, who violated an injunction order issued by him. He adjudged them all guilty of contempt of court and sent them to jail. For ten years after his retirement from the bench he was engaged in private practice. Judge Gilbert was a State Charities Commissioner, an original member of the Standing Committee of the Protestant Episcopal Diocese of Long Island, and vice-chancellor of the Cathedral at Garden City.

Giles, William T., journalist, born in New Lisbon, Ohio, in 1824; died in Chicago, Ill., Feb. 3, 1898. He was apprenticed to the printer's trade in the office of the "Ohio Patriot," of New Lisbon, and after his promotion to the case entered the office of the "Crawford County Democrat," at Bucyrus. Here, the owner of the paper, becoming unable to pay his wages, suggested that he take the material of the office to Upper Sandusky, and there establish a Democratic paper. He reluctantly undertook the task, and was editor, compositor, and pressman all in one. He made a success of the paper and became influential in local and county politics. In 1849 he sold the paper and joined a party bound overland for the California gold mines. After spending a year and a half in mining and trading, he went to Marysville, and established the "California Express." A year later he founded the "Mountain Echo," at Downieville, Cal., and in 1853 returned to Ohio and established the "Wyandotte County Democrat." In 1856 he purchased the "Bulletin," of Freeport, Ill., which he conducted

several years. His restless disposition sent him gold hunting again in 1864, and he spent two years in Montana. Afterward he established "The Bugle," and a German paper at Council Bluffs, Iowa; the "Dakota Herald," at Yankton; the "Lee County Democrat," at Dixon, Ill.; the "Illinois Monitor," at Freeport; "The Democrat," at Freeport; and lastly, the "Daily Gazette," at Monroe, Wis. He retained active connection with his last paper till about a year before his death. Mr. Giles established more newspapers than any other man in the country.

Goodell, Abner Cheney, inventor, born in North Orange, Mass., Feb. 9, 1805, died in Salem, Mass., March 27, 1898. He perfected the first printing press that printed on both sides of a sheet in one operation. His inventions in this line became the foundation of the present Hoe press. He also invented the cracker machine now in use, and perfected the preparation of copper and steel plates for use by engravers. In 1825 he went to Boston, and afterward carried on the steel-plate business in Ipswich for three years, worked in Byfield on the first locomotive for the Boston and Lowell Railroad, and in Salem on the first electric motor ever built, which was run between Washington and Baltimore. About 1840 he engaged in making keys by wholesale, having invented machinery which would produce ten times the former output. In succeeding years he made many inventions in machinery.

Gray, Mercy Maria, benefactor, born in Mansfield, Mass., Dec. 26, 1818; died in Oakland, Cal., May 20, 1898. Early in life she married J. A. Fay, an inventor of note, and about 1878 married the late Rev. Edgar H. Gray, of Washington, D. C. From her first husband she received a large fortune, out of which she did much while in Washington to promote the welfare of newsboys and fallen women. Two years after her second marriage she went to San Francisco, Cal., with her husband, who had received a call to the First Baptist Church of that city, and in 1888 to Oakland, where he was pastor of the First Baptist Church till his death, in 1894. Mrs. Gray gave to charity more than \$1,000,000. Among her most noteworthy gifts were \$30,000 each to the Pacific Baptist Theological Seminary, in Oakland, the Baptist Home Mission Society, and the American Baptist Publication Society, about \$100,000 to foreign missions, and \$25,000 to California College, Oakland.

Green, Manley C., jurist, born in Sardinia, N. Y., Oct. 5, 1843; died in Buffalo, Oct. 10, 1898. He was educated at Williams College. After studying law he opened an office, later formed a partnership with Goodwin Brown, and in 1886 with William L. Marey. He was defeated for the Republican nomination for district attorney; elected justice of the Supreme Court in 1891; and in 1894, when the Appellate Division was organized under the new State Constitution, he was assigned to it, and he held the seat till his death.

Gregory, John Milton, clergyman and educator, born in Sand Lake, N. Y., July 16, 1822; died in Washington, D. C., Oct. 20, 1898. He was graduated at Union College in 1846, after which he studied law, but finally was ordained as a clergyman in the Baptist Church. After a short pastorate in the State of New York he began his life work as a teacher in Akron, Ohio, in 1852. Soon afterward he became the head of a classical school in Detroit, Mich., and from 1858 till 1863 he was Superintendent of Public Instruction of the State of Michigan. He was a particular friend of William H. Seward, and as such supported Seward's candidacy for the Republican nomination for President in 1860. In 1854 he established the "Michigan Journal of Education," of which he was sole editor for several years.

In 1863-'67 he was president of Kalamazoo College, and he then became president of the newly organized Industrial University in Champaign, Ill. He was a commissioner from the United States to the Vienna Exposition in 1873, a member of the Board of Judges in the educational department of the Centennial Exhibition at Philadelphia in 1876, and a commissioner from Illinois to the Paris Exposition in 1878. He resigned the presidency of the university in 1890. From 1892 till 1895 he was a member of the Civil-Service Commission of the United States, residing in Washington, D. C., thereafter. In 1886 Dr. Gregory made an extensive trip abroad in search of material for a work on sociology, which was never finished. He published many addresses on educational subjects, together with the following books: "Compend of the School Laws of Michigan"; "Handbook of History" (1866); "Map of Time" (1866); "A New Political Economy" (1882); "Seven Laws of Teaching" (1883); and "Political Economy" (1887). He also lectured on historical, political, and economic subjects. He was for some years president of the Civic Federation.

Gridley, Charles Vernon, naval officer, born in Logansport, Ind., in 1845; died in Kobe, Japan, June 4, 1898. He was appointed an acting midshipman in the United States navy from Michigan in 1860; was promoted midshipman, July 16, 1862; acting ensign, Oct. 1, 1863; master, May 10, 1866; lieutenant, Feb. 21, 1867; lieutenant commander, March 12, 1868; commander, March 10, 1882; and captain, March 14, 1897; and at the time of his death was commander of the cruiser "Olympia," the flagship of Rear-Admiral Dewey's famous squadron in Manila Bay. Capt. Gridley had already distinguished himself as an executive officer, when, in March, 1897, he was ordered to duty with the Asiatic squadron. On arriving at Hong-Kong, China, he was assigned to the "Olympia." On Sunday, May 1, the American fleet of 7 fighting vessels attacked and destroyed the entire Spanish fleet of 13 vessels, in the Bay of Manila. Just before this extraordinary naval battle opened Capt. Gridley took his station in the conning tower of the "Olympia," with Commodore Dewey on the bridge. As the flagship led the fleet into the bay, and when the cruiser drew near to the Spanish vessels, Commodore Dewey gave the order: "You may fire when you are ready, Gridley." Almost instantly the battle opened. Capt. Gridley handled his ship superbly throughout the action and fired the broadside that destroyed the Spanish flagship. At the time of the battle he was very ill, but he insisted on actively commanding his ship. Soon afterward his malady became aggravated and he was "invalided" to his home, and died soon after leaving his ship.

Gross, William Hickley, clergyman, born in Baltimore, Md., June 12, 1837; died there, Nov. 14, 1898. In 1857 he entered the novitiate of the Redemptorists at Annapolis; made his profession of religion in this order April 4, 1858; and was ordained March 21, 1863. He devoted the first year of his work as a priest to ministrations among the sick and wounded soldiers. After the war he was assigned to missionary duty in various places, but was attached to St. Alphonsus's Church till 1871, when he was appointed Superior of the Order of Redemptorists in Boston. He remained there two years, and April 27, 1873, was consecrated Bishop of Savannah. There several churches, hospitals, and orphanages were erected through his energy, and he did much for the education of the freedmen. In 1884 he became Archbishop of Oregon.

Hall, Abraham Oakey, lawyer, born in Albany, N. Y., July 26, 1826; died in New York city, Oct. 7, 1898. He was graduated at New York University in 1844, and his uncle, Samuel W. Oakey, of

New Orleans, offered to pay his expenses as a student of law, whereupon he entered the Harvard Law School. After one term he returned to New York, where he was in a lawyer's office for a brief time. He then went to New Orleans, took up in turn almost every branch of law, and mastered each. While studying he was obliged to earn money to support himself, and reported for several papers. He remained in New Orleans two years, returned to New York, and was admitted to the bar there in 1848, becoming a member of the firm of Brown, Hall & Vanderpool. In 1850 Mr. Hall was appointed assistant district attorney; in 1854 was elected district attorney, and was re-elected twice to the office, declining a fourth term to resume law practice. He again returned to the district attorney's office in 1861, remaining seven years as its chief. While there he argued before the Supreme Court and Court of Appeals more than 200 cases. In 1868 he was nominated by Tammany for the office of Mayor, and was elected. During his term the great Tweed ring frauds were disclosed. The most careful investigation in court and out of it, as to Mr. Hall's criminal relation to the acts committed by the "ring" exonerated him from any such participation. He held the office two terms, and the Tammany overthrow in 1872 ended his political career. On Dec. 18, 1875, he ventured on a short dramatic career, playing Wilnot Keviton in an original piece, "Crucible," at the Park Theater. For a time he returned to his old profession of journalism; was city editor of the "World"; went to London as a newspaper correspondent; from 1883 till 1888 represented the "Herald" there; and again in 1890 went there as correspondent for the "Journal." In 1889 he brought a suit against Prof. James Bryce, author of "The American Commonwealth," claiming damages to the amount of £20,000 for libel in the chapter on the Tammany scandals. The offending chapter was omitted in succeeding editions, but the suit dragged on and was finally dismissed with costs in 1897. In 1891 he returned to New York and re-engaged in his law practice, which he continued till his death. Mr. Hall's political vagaries won for him much criticism; he was first of all a Whig; then a Republican, supported the Know-nothings, and finally became a Democrat. In matters of religion, too, he was of unsettled belief: reared a Presbyterian, he turned in manhood to the faith of Swedenborg, and then, with his wife, became a convert to Roman Catholicism. He published a pamphlet on Horace Greeley and a volume of "Ballads," under the signature of "Hans Yorke" (1880).

Hall, Ephraim B., jurist, born in Martinsburg, Va. (now W. Va.), about 1823; died in Santa Barbara, Cal., Jan. 20, 1898. He was admitted to the bar in 1851. In 1861, as a member of the Richmond Convention, he voted against the ordinance of secession, and later, as a member of the Wheeling Convention, he earnestly advocated the reorganization of the Virginia State Government on the basis of loyalty to the Union. For these acts he was pronounced guilty of treason to his State, and a price was set on his head by the Confederate authorities. Judge Hall was a member of the convention that framed the first Constitution of West Virginia, and one of a committee of five appointed under it to procure the admission of the new State into the Union. He was Attorney-General of West Virginia four years, resigning to accept appointment to the bench of the circuit court. In 1870 he was chosen one of three commissioners to settle the debt question between Virginia and West Virginia, and afterward he held a judgeship till 1872, when he resigned and removed to Santa Barbara, where he engaged in private practice.

Hall, James, geologist, born in Hingham, Mass., Sept. 12, 1811; died in Echo Hill, near Bethlehem, N. H., Aug. 7, 1898. He was the son of James Hall and Susanna Dourdain, natives of Lancashire, England. His early education was received in the public schools of Hingham, and in 1831 he entered the Rensselaer School in Troy (now the Rensselaer Polytechnic Institute), where he came under the influence of Amos Eaton, then in charge of the scientific studies. He was graduated in 1832, but remained at the Institute as Assistant Professor of Chemistry and Natural Science, which chair he then held until 1854, when he was made Professor of Geology, which appointment he retained until 1876, when he was made emeritus professor. The geological survey of New York was organized in 1836, and the State divided into four districts. Prof. Hall was made an assistant geologist and assigned to the second district, under Ebenezer Emmons. A year later he became State Geologist and took charge of the fourth district. He began his explorations in the western part of the State, and from 1838 till 1841 prepared the second to the fifth annual reports on the work. In 1843 he published his final report of the survey of the fourth geological district as "Geology of New York, Part IV" (Albany, 1843), in which, according to T. Sterry Hunt, "he described in a very complete and exhaustive manner the order and succession of the strata, their mineralogical and lithological characters, and the organic remains which they contain." He retained the title of State Geologist, and in 1843 assumed charge of the palaeontological work of the State survey. His results are contained in 13 volumes of the "Natural History of New York," bearing the subtitle "Palaeontology" (Vols. I to VIII, Albany, 1847-'94). This is considered "the most comprehensive work of the kind which any State or country in the world possesses." The first appropriation (\$15,000) that was made for this work was with the understanding that it should be completed for that sum, but again and again, as the work progressed, Prof. Hall appealed for additional funds for its completion, until in 1894 it was estimated that the entire work had cost the State more than \$1,000,000. The comprehensive studies by Prof. Hall on the palaeontology of New York naturally demanded researches beyond the limits of the State, and these he extended westward to the Rocky Mountains, and it is generally admitted that his investigations have served as the basis of all our knowledge of the geology of the Mississippi basin. In 1855 he was offered the charge of the palaeontology of the Geological Survey of Canada, with the promise of succeeding Sir William E. Logan as director on the retirement of the latter; but as he was about to accept promises of more liberal appropriations from the Legislature and the influence of many American scientists, including Louis Agassiz and James D. Dana, he declined the offer—a decision which, as the promises never were realized, he came to regard as "the great mistake of his life." Subsequently he prepared a monograph on the "Graptolites of the Quebec Group" (Montreal, 1865), which he contributed to the publications of the Canadian survey, and it was accepted as "the most complete work on that class of fossils." In addition to his State appointment in New York he held the office of State Geologist in Iowa in 1855,

and in Wisconsin in 1857. For the former he prepared the geological and palaeontological portions of the two volumes of the "Geological Survey of Iowa" (Albany, 1858-'59), and he wrote the chapters on physical geography, geology, and palaeontology for the "Report on the Geological Survey of the State of Wisconsin" (Madison, 1862). The examination and description of specimens collected for the Government were frequently assigned to him, and he wrote the palaeontological portions of "Frémont's Exploring Expedition; Appendix A" (Washington, 1845); "Expedition to the Great Salt Lake" (Philadelphia, 1852); "United States and Mexican Boundary Survey" (Washington, 1857); and "United States Geological Exploration of the Fortieth Parallel" (Vol. IV, 1877). In 1866, on the reorganization of the New York State Museum, he was appointed its director, which office, in addition to that of State Geologist, he held until 1893, after which he retained only that of State Geologist, which he continued to fill until his death. In connection with the State Museum he made annual reports (Albany, 1866-'92), which were published by the State and contained valuable papers by him on geology and palaeontology. As State Geologist he published 15 reports (Albany, 1884-'95), of which the last 2 are quarto. Prof. Hall devoted much time to crystalline stratified rocks, and he was the first to point out the persistence and significance of mineralogical character as a guide to classification. Concerning this, McGee has said: "It is not too much to say that the method was established by the New York survey, and that it finds its best illustration in the classic fourth district; here it was that American stratigraphic geology was founded." He also laid the foundation for a rational theory of mountains, which is discussed in the third volume of the "Palaeontology of New York," and is accepted as "one of the most important contributions ever made to the doctrine of isostasy. The sixtieth anniversary of the beginning of his service to science as State Geologist of New York was celebrated by a special session of Section E (geology and geography) at the Buffalo meeting of the American Association for the Advancement of Science, at which addresses descriptive and appreciative of his work were made by W. J. McGee, John M. Clarke, Benjamin K. Emerson, Joseph LeConte, George M. Dawson, T. Guilford Smith, and John J. Stevenson. On this occasion he was called the "Founder of American Stratigraphy." He received the degree of A. M. from Union College in 1842, and that of LL. D. from Hamilton in 1863, from McGill in 1884, and from Harvard in 1886. Prof. Hall received the quinquennial Walker grand prize of \$1,000 awarded in 1884 by the Boston Society of Natural History, and in 1889 he was the recipient of the Hayden medal given by the Philadelphia Academy of Natural Sciences. In 1840 he was one of the founders of the American Association of Geologists and Naturalists, and after its development into the American Association for the Advancement of Science was elected president in 1856, delivering his retiring address on "Contributions to the Geological History of the American Continent" at the Montreal meeting in 1857. At the time of his death he was one of the very few surviving original members of the association by which in 1890 he was made one of its six honorary fellows. He was one of the original members of the National Academy of Sciences, named by act of Congress in 1863. He was one of the founders and president of the International Congress of Geologists held in Philadelphia in 1876; one of its vice-presidents at the sessions held in Paris in 1878, in Bologna in 1881, in Berlin in 1885, and president at the session held in Washington in 1891, and in St. Petersburg

in 1897. He was elected one of the 50 foreign members of the Geological Society of London in 1848, and in 1858 was awarded its Wollaston medal. In 1884 he was elected correspondent of the Academy of Sciences in Paris and was a member of many other scientific societies at home and abroad. Besides his larger works, most of which have been mentioned, he was the author of more than 300 separate papers, of which a list from 1836 to 1882 is given in the "Thirty-sixth Annual Report of the New York Museum of Natural History" (Albany, 1884). Says a recent writer: "He is known wherever the language of science is spoken; he is honored in his State, revered in his friendly circle, and esteemed in far countries; he is the founder of stratigraphic geology and applied palaeontology in America."

Hall, John, clergyman, born in County Armagh, Ireland, July 31, 1829; died at Bangor, County Down, Ireland, Sept. 17, 1898. He entered Belfast College at the age of thirteen, and in 1852 became pastor of a Presbyterian church in Armagh, and in 1858 of St. Mary's Abbey, in Dublin. In 1867 he was sent by the Irish Presbyterian Church as a delegate to the Presbyterian churches of the United States, and soon after his return to Ireland he received a call to the pastorate of the Fifth Avenue Presbyterian Church, of New York city. On his acceptance he was installed pastor of this church in November, 1867, and he held this office at the time of his death. He was one of the most prominent clergymen in his denomination, and was widely known as a religious writer. For several years he contributed a weekly column to the "New York Ledger," and his explanations of the International Sunday-school lessons were long a feature of the "Sunday-School World." His published books include "All the Way Across"; "The Chief End of Man"; "Familiar Talks to Boys"; "How to study International Sabbath-School Lessons"; "Minor Characters of the Bible"; "The Only Rule of Faith"; "Sabbath-School Theology"; "The Sower and the Seed"; "Family Prayers for Four Weeks" (edited, 1868); "Care Cast upon the Lord" (1869); "Papers for Home Reading" (1871); "Questions of the Day" (1873); "Preaching: Manner and Matter" (1874); "Thoughts for the Old Year and the New" (1874); "God's Word through Preaching" (1875); "Memorials of Wesleyan Ministers from 1777 to 1840" (1876); "You and your Children" (1877); "Foundation Stones for Young Builders" (1881); "A Christian Home and how to Maintain it" (1884); "Family Prayers for Working People" (edited, 1885). With T. J. Cuyler and H. W. Beecher he published "Successful Preaching" (1881); and with G. H. Stuart, "The American Evangelists" (1875).

Halsey, Harlan Page, author, better known as "Old Sleuth," born in New York city in 1837; died there, Dec. 16, 1898. When a boy he was employed on "Frank Leslie's Magazine." His first book, a novel of 300 pages, published at his own expense, was written when he was sixteen years old. The book that gained him the title of "Old Sleuth" was founded on the celebrated kidnapping case of Charlie Ross (see "Annual Cyclopædia" for 1897, page 617). His books numbered 135, the last one being "Only a Photograph." He was a remarkably rapid writer, and his stories were popular with the uneducated classes. He was a member of the Board of Education in New York city from 1885 to 1895, in which time he was particularly interested in night schools and drawing classes.

Hamilton, John B., surgeon, born in Jersey County, Ill., in 1847; died in Elgin, Ill., Dec. 24, 1898. He was graduated at Rush Medical College, Chicago, in 1869. He was appointed assistant surgeon in the United States army in 1874, but resigned

in 1876 to enter the Marine-Hospital service. In 1879 he became supervising surgeon general of that service. During his administration he fought, with success, two epidemics of yellow fever; brought about the first visual examinations of fresh-water pilots, and the first physical examinations of seamen preliminary to shipment, and drafted the national quarantine acts. In 1891 he resigned his office, because it was not equalized with the offices of the surgeons general of the army and navy. He, however, remained in the ranks till 1896, when he resigned from the service altogether. He was Professor of Surgery in two colleges of Chicago, and possessed the largest surgical library in the West. He was editor of "The Journal of the American Medical Association."

Hamilton, John M., military officer, born in Canada, June 1, 1839; killed near Santiago, Cuba, July 1, 1898. In early life he went to live with relatives in Geneva, N. Y. He enlisted in the 33d New York Infantry, May 1, 1861; was appointed a 2d lieutenant in the 9th United States Colored Infantry, Dec. 24, 1863; was promoted 1st lieutenant, May 15, 1865; and leaving the volunteer service was appointed a captain in the 39th United States Infantry, June 6, 1867. He was transferred to the 5th United States Cavalry, Dec. 30, 1870; promoted major 1st Cavalry, April 2, 1887, and lieutenant colonel 9th Cavalry, Dec. 8, 1896; and from the last date till his death commanded the regiment, owing to the continued illness of Col. Perry. In 1865 he was brevetted captain in the volunteer army for meritorious services during the civil war, and in 1890 major in the regular army for gallant services in action against Tonto Apache Indians in Arizona, Jan. 16, 1873. He commanded his regiment in Cuba, and was killed at its head while leading the charge against the fortified blockhouse on San Juan Hill, near Santiago.

Handy, Moses Purnell, journalist, born in Warsaw, Mo., April 14, 1847; died in Augusta, Ga., Jan. 3, 1898. He was educated at the Virginia Collegiate Institute in Portsmouth; served for some time in the Confederate army on the staff of Gen. Stevens, chief of engineers of Gen. Lee's army; and after the war entered journalism in Richmond, first on the "Christian Observer," and later on the "Dispatch." He was the only newspaper correspondent that witnessed the surrender of the captured filibuster steamer "Virginius" to the United States authorities by the Spanish Government in 1873, and his report led to his receiving a call to join the staff of the "New York Tribune." In 1875 he returned to Richmond as editor-in-chief of the "Enquirer." A year later he was appointed commissioner from Virginia to the Centennial Exposition in Philadelphia, and soon after reaching that city he became an assistant editor of the "Times," for which he reported the events in Louisiana growing out of the presidential electoral dispute. In 1880 he was appointed managing editor of the Philadelphia Press; in 1884 established the "Daily News" in that city; and in 1892 became chief of the Bureau of Promotion and Publicity of the World's Columbian Exposition. Soon after the close of the exposition he assumed charge of the editorial page of the "Chicago Times-Herald," and in July, 1897, resident McKinley appointed him special commissioner of the United States to arrange for the reception and display of American exhibits at the Paris Exposition of 1900. This task he had but recently completed at the time of his death.

Handy, Truman Parmelee, capitalist, born in Paris, N. Y., Jan. 17, 1807; died in Cleveland, Ohio, March 25, 1898. At the age of eighteen he removed to Geneva, N. Y.; and thence, in 1830, to Buffalo, where he assisted in organizing the Bank of Buffalo.

In 1832 he removed to Cleveland and became cashier of the reorganized Commercial Bank of Lake Erie, the charter of which had been purchased by the historian George Bancroft. The bank was so prosperous that the Legislature refused to renew its charter in 1842. In 1843 he organized the private banking house of T. P. Handy & Co. When the State Bank of Ohio was established, in 1845, he organized the Commercial Branch Bank and he was either its cashier or president for the twenty years of its existence. The financial panic of 1857 was caused, in northern Ohio, by the failure of the Ohio Life and Trust Company, and this left the Merchants' Branch of the Ohio State Bank in bad financial condition. Mr. Handy accepted the presidency in 1862, and within three years he had the institution on a solid basis. He was also president of its successor, the Mercantile National Bank, for many years. He was among the most efficient workers for the completion of the Cleveland, Columbus and Cincinnati Railroad, and was its treasurer and chief financial officer till 1860. He was largely interested in iron mining and in various forms of iron manufacture. He was a trustee of Western Reserve College and of Lane Theological Seminary; and, for ten years in its early days, he was a member of the Board of Education in Cleveland, and he did much toward shaping the school system of that city.

Harden, William Dearing, lawyer, born in Athens, Ga., Jan. 15, 1837; died in Savannah, Ga., Jan. 11, 1898. He was graduated at Princeton in 1856; studied law, and was admitted to the bar in Savannah. At the outbreak of the civil war he entered the Confederate army and rose to the rank of chief of ordnance in an army corps. After the war he resumed law practice in Savannah, and for fourteen years was judge of the city court. Subsequently he became counsel for several railroad corporations in Georgia and New York. He was vice-president of the Georgia Historical Society. He wrote much on historical subjects, and published a treatise on dogmatic religion.

Harris, Robert S., clergyman, born in Philadelphia, Pa., in 1816; died in Camden, N. J., March 22, 1898. He began preaching under the authority of the Methodist Episcopal Conference of New Jersey in 1846, and from that time till his retirement from active work, in 1893, he held pastorates in nearly every county in the State. He was known as the founder of Children's Day, which is annually observed in the Methodist Church on the second Sunday in June. His purpose was originally to have a day designated for special services and contributions in behalf of the educational part of the church work, in which the children should have a conspicuous part. The General Conference adopted his idea in 1872, and Children's Day soon became an impressive summer festival, enlivened with floral decorations and services especially adapted to children. Thousands of Methodist Sunday-school children have been educated with the funds collected on these days. Money is loaned to deserving pupils on their personal notes, and when they enter the ministry of the Church the notes are destroyed.

Haskell, Joseph T., soldier, born in Cincinnati, Ohio, Nov. 19, 1838; died in Columbus, Ohio, Sept. 16, 1898. He entered the volunteer army in the civil war; was appointed a captain and commissary of subsistence Feb. 19, 1863; and was brevetted major, March 13, 1866; lieutenant colonel, April 2, 1866; and colonel, Nov. 26, 1866. At the close of the civil war he entered the regular army as captain of the 23d Infantry, July 28, 1866; and was promoted major of the 24th Infantry, June 28, 1892; lieutenant colonel of the 17th Infantry, Aug. 27, 1896; and brigadier general, Sept. 7, 1898. He was in command of the San Juan Islands from

January, 1869, till January, 1872, when they were the subject of contention between the United States and Great Britain; in 1888 he was made a member of the Tactics Board, assisting in the compilation of the military tactics which are now used by the army. From 1891 till 1898 he was a member and president of the Board of Examiners of officers for promotion, and from July, 1893, was instructor in the Infantry and Cavalry School at Fort Leavenworth, Kan. In the Santiago campaign in Cuba he led his regiment through the succession of barbed-wire fences which surrounded the blockhouses at El Caney till he was wounded. First a bullet struck his right foot, soon afterward he was shot in the left shoulder, and in another instant he received a bullet in the knee. Of the five soldiers who volunteered to bring him off the field three were shot. He survived his wounds, was taken to Siboney, and then to Fort Monroe, where he recovered rapidly, and as soon as he was able returned to Columbus, where he received his commission as brigadier general for gallantry on the field. Nine days later he rode at the head of his regiment on its return to Columbus, and in the afternoon of the same day he died of apoplexy.

Haxtun, Milton, naval officer, born in New York city, Oct. 5, 1825; died in Brooklyn, N. Y., May 26, 1898. He was appointed a midshipman in the United States navy, Oct. 19, 1841; was promoted passed midshipman, Aug. 10, 1847; master, Sept. 14, 1855; lieutenant, the day following; lieutenant commander, July 16, 1862; commander, Jan. 12, 1867; and captain, Feb. 2, 1876; and was retired Feb. 7, 1883. He was on sea service twenty-one years and eight months, and on shore or other duty thirteen years and eight months. After a service with the Brazilian squadron he was transferred to the fleet operating against Mexico, and after the war was on mail steamship duty two years. In 1852-'54 he was attached to the "Plymouth," of the East Indian squadron, in which he took part in the capture and destruction of the Chinese forts near Canton; and in 1860-'61, with the "Mystic," he aided in suppressing the slave trade on the coast of Africa. During the civil war he was present at the capture of Fort Macon, and was principally engaged in blockading duty. When the United States declared war against Spain he offered his services to the President, though on the retired list, and after hostilities began he was recalled to service, but was too feeble to be informed of the order.

Hays, John Betts, soldier and journalist, born in Meadville, Pa., March 12, 1839; died there, July 18, 1898. He was graduated at Allegheny College in 1858 and admitted to the bar in 1861. In the latter year he entered the United States army as a 2d lieutenant; served in the Peninsula, Maryland, and Fredericksburg campaigns, and was promoted to 1st lieutenant in 1862. He was transferred in 1863 to the Army of the Cumberland, and was then made commissary of the 1st division, Reserve Army Corps. He also served as mustering and disbursing officer on the staffs of Gens. Baird, Steedman, and Thomas. He took part in the campaigns of Chickamauga and Chattanooga, was specially mentioned for bravery by Gen. Rosecrans, and was promoted to major. He was for four years assessor of Internal Revenue for the 20th District of Pennsylvania. He entered upon active newspaper work in Meadville in 1869. From 1874 till 1886 he held a place in the customhouse in New York city. After 1886 and almost to the day of his death he was connected with the editorial staff of the "New York Tribune," his special work being the political events that took place in and about the City Hall. He was an authority on news from that quarter, and he had an extensive acquaintance among politicians of all parties.

Hazard, Rowland, manufacturer, born in Rhode Island in 1829; died in Watkins, N. Y., Aug. 16, 1898. He was the owner of a large woolen mill in Peacedale, R. I., and president of several large industrial companies. He introduced the manufacture of soda ash in this country and was instrumental in organizing the Spray Process Company, of Syracuse, N. Y. Mr. Hazard was a trustee of Brown University from 1875 till 1889, and a fellow from 1889 till his death. (See GIFTS AND BEQUESTS.)

Hendren, John Newton, jurist, born in Augusta County, Va., in 1823; died near Staunton, Va., March 5, 1898. He was graduated at the University of Virginia, and after being admitted to the bar, served several years as commissioner in chancery and as commonwealth attorney. On the organization of the Confederate States Government he was summoned to Richmond to take the office of Treasurer of the Confederacy. He held this post through the war, and on the evacuation of Richmond he accompanied Mr. Davis in his flight, taking a large amount of Government gold with him. When Mr. Davis realized that the capture of himself and his suite by the National authorities was certain, he directed Mr. Hendren to distribute the money in his possession among the Confederate soldiers, to prevent it falling into the hands of his pursuers. After the war Judge Hendren resumed practice in Staunton, was again appointed commissioner in chancery, and from 1870 till 1880 was the first judge of Augusta County.

Henley, Edward John, actor, born in Gloucestershire, England, Aug. 17, 1861; died in Lake Placid, N. Y., Oct. 16, 1898. He made his first appearance on the stage at Middleborough, Yorkshire, England, in 1879, as a member of a pantomime company. His first London engagement was in the following year, when he played a part at the Gaiety Theater in a burlesque of "Carmen." He was then engaged by John Hare for the St. James Theater. Dissatisfied with London, he came to the United States and made his first New York appearance in a burlesque of "The Corsican Brothers," produced at the Park Theater, corner of Broadway and Thirty-fifth Street. He went thence to Wal-lack's Theater as a member of the stock company. Mr. Henley returned to England in 1884 and produced a play written by his brother, William Ernest Henley, and Robert Louis Stevenson, called "Deacon Brodie," playing the title rôle. He subsequently brought the play to the United States and produced it through the West for a part of one season. He then became leading man with Mme. Modjeska, and on the conclusion of that engagement remained in New York with the intention of playing only in that city. He participated in many new plays as a leading man, among which were "Money Mad," "The Ugly Duckling," "The Junior Partner," "Gloriana," "The Price of Silence," and "Puddin-head Wilson." He played Iachimo in the production of "Cymbeline" by Margaret Mather at Wal-lack's Theater in the autumn of 1897, but his eyes failed during the run of the play, and he was compelled to retire permanently from the stage.

Herrmann, Charles Wilhelm August, mineralogist, born in Silesia, Germany, July 3, 1801; died in New York city, June 20, 1898. He was born on the estates of Baron Richthofen, of which his father was supervisor, and from an early age was deeply interested in the study of mineralogy and conchology. After taking the full course at the University of Breslau, he was appointed Professor of Mineralogy there. He resigned the chair after several years' service, spent some time in advanced study in Mecklenburg, and established himself in Breslau as a collector of minerals and shells for

educational institutions, museums, etc. In 1853 he removed to New York city, where he carried on the mineralogical part of his early business till his death. He brought with him his collection of minerals, which is believed to have been the first imported into the United States. In 1857, at the Crystal Palace Exhibition, he received the competitive medal for the best display of mineral specimens and cabinets of minerals for schools. Prof. Herrmann was also an accomplished linguist.

Herter, Robert Johnson, painter, born in Stuttgart, Germany, in 1874; died in Nesles-la-Vallée, France, April 20, 1898. He was educated in his native city; came to New York in 1888, and, joining the Art Students' League, studied a year with Kenyon Cox; and continued his art studies in Stuttgart with Robert Haug, head of the Royal Academy there. In 1892 he again came to New York, where he established a studio, and produced promising *genre* canvases. Subsequently he opened a studio in Paris. Two days before his death his parents, in New York, received a letter from him saying that his latest painting, a scene in the American civil war, had just been accepted for exhibition in the Paris Salon. He was an enthusiastic worker, and had given evidence of high artistic merit.

Hieronimo, Mother. See O'BRIEN, VERONICA.

Hoagland, Cornelius Nevius, physician, born in Neshanic, Somerset Co., N. J., Nov. 23, 1828; died in Brooklyn, N. Y., April 24, 1898. He removed with the family to Piqua, Ohio, in 1834; was graduated at the medical department of Western Reserve University in 1852; served four years as auditor of Miami County; and was surgeon of the 71st Ohio Infantry from 1861 till 1866. He took part in important engagements, and was wounded in the battle of Nashville. After the war he engaged in business pursuits, removed to Brooklyn in 1868, and retired from active business in 1876. In 1888 he founded the Hoagland Laboratory with a gift of \$150,000. Shortly before his death he gave the laboratory \$24,000; the Brooklyn Eye and Ear Hospital, \$14,000; and the Brooklyn Free Kindergarten Society, \$20,000. One of the 16 kindergartens established by the society was named for him and wholly maintained by him.

Holt, Homer A., jurist, born in Parkersburg, Va. (now W. Va.), April 27, 1831; died in Lewisburg, W. Va., Jan. 7, 1898. He was the son of a pioneer Methodist missionary in the central part of what is now West Virginia, and was educated at Rector College, Pruntytown, and at the University of Virginia, leaving the latter in 1851. He taught in Weston while studying law, was admitted to the bar in 1853, and settled in Braxton Courthouse to practice. In 1854-'56 he was deputy surveyor for Braxton and Nicholas Counties. He was arrested as a Confederate sympathizer early in 1862 and sent to Camp Chase, Ohio; was ordered to be taken to Vicksburg for exchange in 1863; and was afterward held prisoner at Camp Douglas, Chicago, and City Point, Va. After being exchanged at the latter point he joined the Confederate army at Salem, Va., and served to the close of the war. He was on the Judiciary and Land Titles Committees of the State Constitutional Convention in 1872, and the same year was elected judge of the 8th Judicial Circuit of West Virginia for a term of eight years. In 1880 he was elected judge of the newly created 10th Circuit; in 1890 was appointed a justice of the Supreme Court of the State to fill a vacancy; and in 1892 was elected to the same post to fill out the unexpired term that ended Jan. 1, 1897.

Hotto, Henry, comedian, born in New York city, in 1833; died there, Dec. 4, 1898. He was employed as a boy by Goodyear Brothers, and was after-

ward apprenticed to a wood engraver; but he had a stubborn liking for the theater, and became a player in the celebrated company of juvenile actors known as "The Marsh Troupe." After traveling over the country with this organization for a short time, during which he became noted for his performances of old men in the Shakespearean and other standard plays, he returned to New York, and for a time filled subordinate places in different theaters. In 1852-'53 he was engaged for the Albany Theater stock company to play old men. He was associated in this company with the late James Lewis, and they became known as "the two young old men." After two seasons in Albany, Mr. Hotto was engaged for the Pittsburg Theater to play comedy and old men. He remained several years in Pittsburg and was very popular as an actor of amusing and eccentric characters. He attracted the attention of Laura Keane, and was engaged by her as the comedian of her theater in Washington. At the expiration of a season he was engaged by John T. Ford, who maintained stock companies in both Washington and Baltimore, to fill the leading comedy rôles in his Baltimore company. For four years Mr. Hotto popularly sustained this appointment, playing frequently in Washington, where he was as great a favorite as in Baltimore. From Baltimore he moved to the New Bowery Theater, New York, and became a favorite of the metropolis during the years of the civil war. In 1865 he became the comedian of the first stock company organized in New Orleans after the war. When the era of traveling combinations began, Mr. Hotto remained content with a subordinate place in support of more ambitious comedians, and for many years was associated with Frank Chaufran, Maggie Mitchell, and Minnie Palmer, as a comedian of the first rank. From 1882 to 1891 he played the parts created by James Lewis in the successive tours of the country made by the plays from Augustin Daly's theater. Four years ago, while playing in Boston, he was seriously injured by persons who attempted to rob him. His retirement from acting, and ultimately his death, were caused by this injury. He had amassed and inherited considerable property in New York city, and was little known to the stage during the last six years of his life.

Howard, Blanche Willis (Tenffel), author, born in Bangor, Me., July 21, 1847; died in Munich, Germany, Oct. 7, 1898. Her first book, "One Summer" (Boston, 1875), was a breezy story full of humor and made an immediate success. Very soon after its publication she removed to Stuttgart, Germany, where for several years she edited a magazine printed in English. About 1890 she married Prof. Von Tenffel. Her books include "One Year Abroad" (1877); "Aunt Serena" (1880); "Guenn, a Wave on the Breton Coast" (1882); "Aulnay Tower" (1886); "The Open Door"; "Seven on the Highway"; "No Heroes"; and, with William Sharp, "A Fellowe and his Wife."

Howlett, Thomas Rosling, clergyman, born in Cambridgeshire, England, March 19, 1827; died in Philadelphia, Pa., Feb. 22, 1898. He came to the United States in early youth, and was graduated at Madison University in 1856, and at its seminary in 1858. During his active career he held Baptist pastorates in New Brunswick, N. J., Albany, N. Y., Trenton, N. J., Washington, D. C., Hudson, N. Y., and Plainfield, N. J. Besides many articles in secular and religious periodicals, he was author of "Anglo-Israel and the Jewish Problem, with Supplement," a work that attracted much attention and criticism; "The Bible a Sealed Book; Why?" "Songs of Israel"; and "Baptistal Souvenir."

Hoyt, Charles S., physician and philanthropist, born in Ridgefield, Conn., June 8, 1822; died in

Canandaigua, N. Y., Dec. 13, 1898. He removed with his parents to western New York in 1834, and was graduated at Geneva Medical College in 1847. In 1862 he was appointed assistant surgeon of the 126th New York Regiment, and in 1864 he was promoted to surgeon of the 39th Regiment. While on duty with the 126th Regiment he was taken prisoner at Harper's Ferry, but he was soon exchanged. He was with the 39th Regiment from Gettysburg to Appomattox, and was mustered out of the service at the close of the war. In 1852, and again in 1867, he represented Yates County in the Assembly of New York. During the latter year, as Chairman of the Committee on State Charitable Institutions, he succeeded in having passed a law establishing a State Board of Charities, of which in 1868 he was made secretary, an office that he occupied till, in 1894, he became Superintendent of State and Alien Poor. His most important work while secretary was the execution of the State pauper act of 1873, and the alien poor act of 1880. Owing to his efforts in enforcing the latter act more than 3,500 infirm alien paupers were returned to their native countries between 1880 and 1898, and the whole number of removals to other countries and to other States of the Union under both acts was 27,752 between 1873 and 1898. He gave his personal attention to nearly all such removals, and thus saved the State of New York an expenditure estimated at \$42,628,000. The State Board of Charities in its annual report for 1896 commended his work in the highest terms and declared that no criticism or complaint of his conduct had ever been made. He was an active agent in the opening of the Craig Colony for Epileptics in 1894. He prepared many papers on immigration. In 1874 he was an organizer of the National Conference of Charities and Correction, and he was elected president of it in 1888.

Hunt, Albert Sanford, clergyman, born in Amenia, N. Y., July 3, 1827; died in Brooklyn, N. Y., Sept. 11, 1898. He studied at Amenia Seminary and was graduated at Wesleyan University in 1851, where he served as tutor and Adjunct Professor of Moral Science till 1855. In 1859 he joined the New York East Conference, his first pastorate being the old Nathan Bangs's (now New York Avenue) Church, Brooklyn. He was successively pastor of the South Fifth Street, First Place, Washington Street, Hanson Place, and Pacific Street Churches. In 1872, 1874, and 1884 he was elected to the General Conference of the Methodist Episcopal Church; in 1874 was chairman of the fraternal delegation to the General Conference of the Methodist Episcopal Church, South, at Louisville, Ky., and in 1886 went to England as delegate to the British Wesleyan Conference. In 1878 he was elected corresponding secretary of the American Bible Society, and he held this office till his death. In his official capacity he presented the Bible cause in every State and Territory in the United States. (See GIFTS AND BEQUESTS.)

Hurt, Ashley D., educator, born in Petersburg, Va., in 1834; died in New Orleans, La., March 10, 1898. He was graduated at the University of Virginia and the University of Göttingen, Germany; was for some time principal of the high school at Louisville, Ky., the Florida Agricultural College, at Lake City, and Tulane High School, at New Orleans, and since 1894 had been Professor of Greek in Tulane University. Prof. Hurt held high rank as a Greek scholar.

Jackson, Henry Rootes, military officer, born in Athens, Ga., June 24, 1820; died in Savannah, Ga., May 23, 1898. He was a son of Prof. Henry Jackson, of the University of Georgia; was graduated at Yale College in 1839, was admitted to the bar in 1840, and settled in Savannah. In 1843 he

was appointed United States district attorney for Georgia. He served in the Mexican War as colonel of the 1st Georgia Volunteers, and after its close was for a year editor and part owner of "The Georgian," of Savannah. The Legislature in 1849 elected him judge of the Superior Court for the Eastern Circuit for the term of four years, and in May, 1853, he was appointed United States *charge d'affaires* at the court of Austria. In 1854 the grade of the mission was raised, and he served as minister resident till his resignation, in July, 1858. Soon after his return he was commissioned by the Federal Government to assist the United States district attorney of Georgia in prosecuting notorious slave-trading cases, in which he encountered the opposition of a large popular sentiment. On the secession of his State he was appointed major general in command of the State militia, and in August, 1861, he entered the Confederate army as brigadier general. He was taken prisoner at the battle of Nashville, in December, 1864, and was held till the close of the war. He then resumed law practice in Savannah. From 1875 till 1888 he was a trustee of the Peabody Education fund, and from 1872 till his death was president of the Georgia Historical Society. In March, 1885, he was appointed United States minister to Mexico, but he resigned within a few months, owing to a difference of opinion with the Government relative to the course to be pursued on the seizure of the American vessel "Rebecca" by Mexicans. Gen. Jackson was author of "Tallulah, and Other Poems" (Savannah, 1850), and of several separate poems which have had a large circulation in the South. His most popular poem was "The Old Red Hills of Georgia," which he wrote while serving in the Mexican War.

Jewett, Hugh Judge, railroad president, born in Deer Creek, Harford County, Md., July 1, 1817; died in Augusta, Ga., March 6, 1898. He was educated at Hiram College, Ohio; admitted to the bar at Elkton, Md., in 1838; and engaged in practice at St. Clairsville, Ohio, till 1848. In the last year he removed to Zanesville, and became president of a branch of the State Bank of Ohio. Soon afterward through the influence of his elder brother Thomas, he was elected president of the Central Ohio Railroad Company. Within a short time he became one of the best-known lawyers in Ohio in matters relating to commercial, banking, and railroad affairs. In 1852 he was a Democratic presidential elector, in 1853 was elected to the State Senate, and in 1854 was appointed United States attorney for the Southern District of Ohio. He was credited with the organization of the Pittsburg, Cincinnati and St. Louis Railroad; was one of the organizers of the Pennsylvania Railroad; and undertook the construction of the Kansas Pacific and other Western railroads. In 1871 he was appointed general counsel of the Pennsylvania Railroad, and in 1872 was elected to Congress. In June, 1874, Peter H. Watson, who had been president of the Erie Railway Company for two years, resigned the office. The English holders of the Erie bonds invited Thomas A. Scott, then first vice-president of the Pennsylvania Railroad Company, to accept the office, and he had prepared to do so when the death of President Frank Thompson advanced him to the head of that company. This event complicated the memorable struggle for control of the Erie. The English bondholders appealed to Col. Scott to suggest a suitable man for their president, and he recommended Mr. Jewett. A contract was made with the latter, under which he resigned his seat in Congress and assumed the presidency for a term of ten years at a salary of \$40,000 per annum and on the immediate payment of \$150,000 in a lump sum, or \$15,000 for each year of the contract. This was

said to be the largest salary ever paid to a railroad president anywhere. Mr. Jewett assumed the management of the affairs of the company in July, 1874. About a year afterward the company was obliged to apply for a receiver and President Jewett was appointed to that office. He succeeded in extricating the corporation from its financial embarrassments; became president of its reorganized board of directors, and in 1884 retired from business life to his home in Zanesville.

Johnson, Rachel, actress, born in Louisville, Ky., July 4, 1845; died in New York city, Oct. 10, 1898. At an early age she made her first appearance on the stage as Parthenia in "Ingomar," at the Howard Athenæum, Boston, while that theater was under the management of Edward L. Davenport. Soon afterward she married Bernard Macauley, an actor and manager of the Louisville Theater. She remained in her native city for many years, occupying the place of leading woman in her husband's theater and aiding him in the management of that house as well as Wood's Theater, Cincinnati, of which he was also manager. From time to time she also played starring engagements in the Southern States, and she became very popular. After her marriage she was professionally known as Rachel Johnson for some years, but finally she assumed her married name on the bills and was generally referred to as Mrs. Barney Macauley. Her last appearance was at Palmer's Theater, New York city, in the title rôle of "Clarisse," her adaptation of Dumas's play "Franeillon," May 16, 1890.

Johnston, Richard Malcolm, author, born in Powelton, Hancock County, Ga., March 8, 1822; died in Baltimore, Md., Sept. 23, 1898. He was graduated at Mercer University, Ga., in 1841, and after teaching for a year was admitted to the bar. From 1857 to 1861 he was Professor of Literature in the University of Georgia, and during the civil war he was an officer in the Confederate service. Since 1867 he had lived in Baltimore, engaged in literary work. As a humorist his merits are considerable, and as a careful, faithful delineator of certain phases of Southern life he takes honorable rank. His novels and short stories are mainly concerned with the life of middle Georgia. His various published books include "Georgia Sketches" (Augusta, 1864); "Dukesborough Tales" (Baltimore, 1871); "Historical Sketch of English Literature," with W. H. Browne (Philadelphia, 1872); "Life of Alexander H. Stephens," with W. H. Browne (1876); "Old Mark Langston" (New York, 1884); "Two Gray Tourists" (1885); "Mr. Absalom Billingslea and Other Georgia Folk" (1888); "Ogeechee Cross Firings" (New York, 1889); "Widow Guthrie" (1890); "The Primes and their Neighbors" (1891); "The Chronicles of Mr. Bill Williams"; "Studies: Literary and Social" (Indianapolis, 1891-'92); "Mr. Billy Downs and his Likes" (New York, 1892); "Mr. Fortner's Marital Chains" (1892); "Little Ike Templin" (Boston, 1894); "Old Times in Middle Georgia" (New York, 1897); "Pearse Amerson's Will" (Chicago, 1898).

Josephine, Mother, benefactor, born in Ireland, about 1827; died in Leavenworth, Kan., Feb. 7, 1898. She was in her twentieth year when pestilence and famine in her native land reached their height. She applied herself fearlessly to the work of relief, and when the worst had passed became a Sister of Charity. Coming to the United States, she first settled in Cincinnati. In 1854 she joined Mother Xavier in Nashville, and in 1858 went to Leavenworth, where Bishop Miege placed Sister Josephine in charge of the novices. When St. John's hospital was completed she was appointed to take charge of its management. From superior of the hospital she became procuratrix of the whole com-

munity, assistant mother of the sisters, and mother superior, being elected to the last office three times in succession. She was widely known in the West because of her success in establishing academies, hospitals, and asylums. The last completed work in her long life of benevolence is the orphan asylum at Helena, Mont., which cost more than \$50,000. Under her immediate charge at Leavenworth were more than 300 sisters, who looked after orphan children in asylums, nursed 10,000 patients annually in 10 hospitals, and taught in 15 schools.

Joy, John D. W., merchant, born in Boston, Mass., in 1828; died there, Oct. 4, 1898. He was educated in the common schools, entered business life, and was variously employed till he became a partner in the house of Mason, Lawrence & Co. Later he was a member of the firm of Frothingham & Co., and on the death of Mr. Frothingham he established, about 1870, the firm of Joy, Langdon & Co., dry-goods merchants. He was an active worker in the Universalist Church; was president of the Massachusetts Universalist Convention for thirty-five years, and treasurer of the Universalist publishing house thirty years. He was also president of the Board of Trustees of Tuft's College, with which he had been identified from its inception, and to which he had given \$20,000 for the library.

Kahnweiler, David, inventor, born in Roekenhauser, Bavaria, in 1826; died in New York city, Nov. 5, 1898. He emigrated to the United States in 1847; made a fortune in dry goods in Wilmington, N. C., which he lost during the civil war, and came to New York city, where he invented a machine for milling, which brought him a second fortune. He experimented with the floating properties of ground cork, and finally invented the cork-jacket life preserver. Mr. Kahnweiler also constructed a metallic life raft and patented a cash-carrying system.

Kavanagh, John, painter, born in Prescott, Canada, in 1858; died in Cleveland, Ohio, Feb. 8, 1898. He accompanied his parents to Cleveland in early childhood and received his first ideas of art in the studio of a photographer. For three years he spent the autumn and winter months in study at Cooper Institute, New York city, then for nearly three years he was in Munich, for one year at home, and for three years in Paris. In 1889, after visiting the picturesque regions and art centers of England and Scotland, he opened a studio in Cleveland. While in Munich he received honorable mention and a gold medal for his paintings, and in Paris his canvases were accepted for three consecutive exhibitions at the Salon, and at one exhibition he had the rare honor of having three paintings hung, for which he received a gold medal. His last notable exhibition was at the World's Columbian Exposition in Chicago in 1893.

Keely, John Ernest Worrell, impostor, born in Philadelphia, Pa., Sept. 3, 1837; died there, Nov. 18, 1898. His education was meager, and at an early age he was apprenticed to a carpenter, and he worked at his trade till 1872. During this time he became interested in music, and the tuning-fork, so he said, gave him his first hint of a new motive power that he claimed to have discovered. He spent years experimenting with the effect of sound vibrations on metals, and finally he made a machine that appeared to develop an enormous power. It did not need steam, compressed air, or electricity, but started at the sound of a violin bow. He displayed this machine, which became known as "the Keely Motor," before capitalists and scientists in 1874; and a stock company was formed and thousands of dollars were advanced to enable him to perfect his discovery and apply the principle. Between 1874 and 1891 Mr. Keely expended large sums in exper-

imenting, without any practical results. He constructed and discarded 129 different models. In the first of these he employed water as a generator, but later the experiments were made with what he called a "liberator," a machine equipped with a large number of tuning-forks, which, he claimed, disintegrated the air and released a powerful etheric force. In 1881 a wealthy Philadelphia woman built him a new laboratory and provided a weekly salary for him to continue his experiments. He gave exhibitions at various times before scientists and the stockholders of the Keely Motor Company, but at no time did he disclose the means by which he produced many remarkable effects. In 1888 he was for a time confined in jail for contempt of court in refusing to tell his secret, but till his death it was known only to himself. Then it was discovered that his machines were propelled by a compressed-air motor in the cellar, and that his whole scheme was a fraud. See "Annual Cyclopædia" for 1887, page 407, for a detailed description of his machines and his theories.

Keene, Thomas Wallace, actor, born on Staten Island, N. Y., Oct. 26, 1840; died in New York city, May 30, 1898. His real name was Eagleson, and he was a member of an old Staten Island family settled about Castleton Corners, where Mr. Keene made his home. At a very early age he attached himself to the Old Bowery Theater, New York, as a supernumerary. His first regular engagement was in the company of James H. Hackett, from which, after five weeks' service, he entered the stock company then maintained at Newark, N. J. The next season he was at John Brougham's Lyceum, New York city, and he then went to the stock company of the National Theater, in Cincinnati. In 1870 he began a four years' engagement at Wood's Museum, New York city (the same theater on Broadway that is now called Daly's). At this theater he was chiefly engaged in burlesque and melodramatic parts. During an interval between engagements at Wood's, Keene went to England and produced there the play of "Across the Continent." He reappeared at Wood's as Joe Morgan in "Ten Nights in a Bar-room," Jan. 18, 1871. In 1875 he was engaged as leading man of the California Theater, San Francisco, then under the management of John McCullough, who, having resolved to star, selected Mr. Keene to take his place at the head of the stock company. He became a favorite with the very critical audiences of this theater from his first appearance before them. When Edwin Booth visited California in 1876, after an absence of twenty years, he played a brilliant engagement of eight weeks at the California Theater, during which he was supported by Mr. McCullough and Mr. Keene in the principal subordinate rôles. In the alternation of the parts of Mark Antony and Cassius in "Julius Cæsar" Mr. Keene fairly shared the enthusiastic plaudits of the public with his illustrious comrade, and this artistic triumph brought him before the American public as a star. He was engaged in 1879 by Eugene Tompkins, manager of the Boston Theater, for the part of Couplan in "Drink," an adaptation of Zola's "L'Assomoir," and it is said that his representation of the reckless inebriate was vivid and startling. In 1881 he made an engagement with W. R. Hayden for the performance of Shakespearean characters under the business direction of Mr. Hayden for several years. The devices of pictorial advertising liberally resorted to attracted much attention to this venture, and, coupled with the actor's ability, quickly established it as a financial success. Mr. Keene was particularly fortunate in such parts as Richard III, Cassius, Iago, Othello, Louis XI, and Richelieu, and for seventeen years he was generally regarded as one of the best American

actors. In private life he was a genial and affectionate friend, a sympathetic comrade, and a gentle and devoted husband and father. He suffered a stroke of partial paralysis in 1885, which obliged him to retire from the stage for two years; and though he eventually resumed his work, and often played with his old fire and enthusiasm, he never fully recovered his natural buoyancy. His death resulted from the failure of an overworked constitution to resist the shock of an operation for appendicitis. His last appearance was in the character of Richelieu at Hamilton, Ontario, May 23, 1898.

Kirkland, William A., naval officer, born in North Carolina, July 3, 1836; died in Mare Island Navy Yard, Cal., Aug. 12, 1898. He was appointed a midshipman in the United States navy July 2, 1850; was promoted passed midshipman, June 20, 1856; master, Jan. 22, 1858; lieutenant, March 18 following; lieutenant commander, July, 1862; commander, March 2, 1869; captain, April 1, 1880; commodore, June 27, 1893; and rear admiral, March 1, 1895; and was retired July 3, 1898. His early service was in connection with the Pacific and Brazilian squadrons, and in the first years of the civil war he was on duty at the China station and with the East India squadron. In 1864-'65 he commanded the ironclad "Winnebago," of the Western Gulf blockading squadron, and served under Rear-Admiral Thatcher in the combined movements of the military and naval forces against the defenses of Mobile, which resulted in the capture of that place and the surrender of the Confederate fleet. From 1866 till 1882 he commanded several vessels in the South Atlantic squadron, and from 1883 till 1886 was attached to the navy yards at Norfolk and Brooklyn. He was supervisor of the harbor of New York in 1889-'91; then became commandant of the League Island Navy Yard, at Philadelphia; and, after his promotion to rear admiral, commanded the European squadron till October, 1895, when he was detached and ordered home. His sudden recall created a sensation in naval circles. In the preceding January, after M. Félix Faure had been elected President of the republic of France, Admiral Kirkland sent him a letter of congratulation, and this act brought upon him a reprimand by the Secretary of the Navy, who held that the position of Admiral Kirkland precluded him from making any comment on French politics. The admiral resented the reprimand, claiming that his letter was a friendly, personal communication to a gentleman he had long known intimately. He appealed to President Cleveland from the act of Secretary Herbert, but the latter was sustained, and the admiral was recalled. On June 1, 1896, he was appointed commandant of the Mare Island Navy Yard, and after his formal retirement he was asked to retain the command till the close of the war with Spain.

Knapp, Arthur Mason, librarian, born in St. Johnsbury, Vt., Aug. 3, 1839; died in Boston, Mass., Dec. 28, 1898. He was graduated at Harvard in 1863, and after teaching several years in Phillips Andover Academy, in the Boston Latin School, and in the Brookline High School, he entered the service of the Boston Public Library in 1875, and filled the place of custodian of Bates Hall from 1878 until his death. In this capacity the extent and depth of his special knowledge in genealogy and local history, as well as his thorough acquaintance with Elizabethan literature, made him of the greatest service to hosts of readers and students, and the personal interest that he manifested in the hundreds of inquiries which came to him daily was felt as a most helpful stimulus to study and research.

Köhler, John, clergyman, was born in Juniata County, Pa., May 27, 1820; died in New Holland, Pa., April 11, 1898. He was graduated at Pennsylv-

vania College, Gettysburg, in 1842, studied theology there, and was ordained in 1844. He was pastor at Williamsport, Pa., 1845-'49; New Holland, 1850-'64; Trappe, 1864-'73; Stroudsburg, 1873-'82; principal of the academic department of Muhlenberg College, Allentown, 1882-'84; pastor at Mechanicsburg, 1884-'85, and at Leacock, 1885-'93. He was for many years a director of the Theological Seminary at Philadelphia, and a trustee of Muhlenberg College, Allentown. He held many offices in the ministerium of Pennsylvania, and was a regular contributor to the periodicals of the Church. His most important articles, especially those on the subject of the episcopacy in the Lutheran Church, were also published in pamphlet form.

Kramer, John Wesley, an Episcopal clergyman, born in Baltimore, Md., Jan. 5, 1832; died, Dec. 22, 1898. He was graduated at the Baltimore Medical College in 1850, subsequently became a Methodist clergyman, and was chaplain of the 1st Maryland Regiment during the civil war. He entered the Episcopal ministry in 1865, and for the last ten years of his life was rector of the Church of the Holy Spirit, Bath Beach, Brooklyn, N. Y. He was for several years general secretary of the Church Congress, was actively interested in social reforms, and was a coworker with Henry George in several directions. He published "Mindful of Him," "Manual for visiting the Poor," "Commentary on the Church Catechism," "The Right Road," and "Comfortable Thoughts."

Labaree, Elizabeth, missionary, died in New York city, April 15, 1898. In 1860 she went with her husband, Rev. Benjamin Labaree, as a missionary of the Presbyterian Church to Persia, and she remained there till her health failed in 1892. She was stationed at Oroomia, and worked among the Nestorians of western Persia and eastern Turkey. When Sheikh Obdullah, a Kurdish chief, besieged Oroomia, fifteen years ago, Mrs. Labaree, with other missionaries, saved the city from destruction. They had been kind to Obdullah, and easily prevailed upon him to postpone his attack till after the place had been put in condition to resist. She spent some time in Constantinople assisting her husband in translating the Bible into Syriac.

Labberton, Robert Van Hinderloopen, author and lecturer, born in Marseilles, France, April 6, 1813; died in New York city, Oct. 12, 1898. He was the son of Derrick Labborton, an educator, of Holland. In 1833 the late Commodore Conner, of the United States navy, having made the acquaintance of the Labborton family at their home in Gonda, Holland, induced Robert to come with him to Philadelphia and assume the tutorship of his children. Labborton had just been graduated at the University of Groningen, and was devotedly attached to classical and historical studies. He followed for many years in Philadelphia the occupation of tutor, and prepared many youth for college. With several of his charges he traveled extensively in Europe and Asia Minor. During the time of his private teaching he began giving occasional lectures on historical and literary subjects before scholastic and social assemblies in cities of the Eastern and Middle States. He continued his work until he had well passed his sixtieth year. About 1850 he was tendered the position of Professor of Greek in the University of Pennsylvania. He finally accepted this chair, and in great part gave up his private work, devoting himself for more than twenty years to the welfare of the university. While fulfilling the duties of his place he projected and published, in part, a work intended to be a universal history, graphically illustrated with colored charts showing the extent of each epoch of human empire upon the face of the globe. This system, perfected and en-

larged at a later date, is known as "Labborton's Historical Atlas," and is a standard work of reference. While at the University of Pennsylvania Prof. Labborton was employed by the Federal Government on a confidential mission to Russia in connection with the effort to insure the neutrality of European powers in the civil war. After the war he was offered the office of United States consul general in Japan, but declined it in favor of a professorship in Columbia University. His publications included "Outlines of History" (Philadelphia, 1870); "Historical Atlas" (New York, 1884); and "New Historical Atlas and General History" (London, 1887).

Lathrop, George Parsons, author; born near Honolulu, Hawaii, Aug. 25, 1851; died in New York city, April 19, 1898. He was the youngest son of Dr. George A. Lathrop, United States consul at Honolulu, distinguished for courage in the care of the natives during a severe epidemic of smallpox, and he was great-grandson of Major-Gen. S. Holden Lathrop, of Revolutionary fame, who succeeded Gen. Putnam in command. His father's mother was a descendant of Gen. Parsons of the Revolution. On his mother's side he was descended from an old Massachusetts family. He was educated in private schools in New York and in Dresden, Germany. At the age of twenty he began to support himself by writing, to which he applied himself with the energy and thoroughness of genius, without intermission, till the end of his life. His literary activity was ever ready to exert itself for the good of others and the highest objects of effort; his novels were begun with noble motives and finished without a flaw in tone or diction. His poetry is remarkable for liberty in form, with great sensibility for poetic richness of perception and beauty. His critical articles, on both art and literature, were always regarded as authoritative and eagerly sought for; his editorial work in the journalistic field was of the strongest quality, showing keen business acumen and a gift for clear argument that in his youth had led to his being placed in the law office of William M. Evarts. His life and work are characterized by a mingling of fervid gentleness, childlike reticence, and fearless expression of the truth in any question requiring championship. He published "A Study of Hawthorne"; "Afterglow"; "In the Distance"; "Rose and Roof-tree Poems"; "An Echo of Passion"; "Newport"; "Somebody Else"; "Spanish Vistas"; "Would You Kill Him?"; "Dreams and Days: Poems"; "Gold of Pleasure"; "Behind Time," for children; the "Libretto of the Scarlet Letter," a poem; "Columbus, the Christ Bearer, speaks," a poem written for the Columbian Celebration in New York; "A Story of Courage," the annals of the Visitation Order in America; "A Masque of Poets," an anonymous volume of poetry, edited by him, from the pens of well-known authors of the day; and "Gettysburg," a poem written at the request of the Grand Army of the Republic, to be read at the celebration of the battle of Gettysburg. He edited the standard edition of Nathaniel Hawthorne's works, with full introductory notes and a biographical sketch. He lectured upon literature in various parts of the country with eminent success, his charm of refined earnestness, and the intonations of a bell-like sweetness of voice, gaining the enthusiastic attention of his audiences. He was at different times assistant editor of the "Atlantic Monthly," under William D. Howells, editor in chief of the "Boston Courier," and editor of the "Providence Visitor." He was one of the chief workers in the establishment of the Catholic Summer School of Plattsburg, holding places among the trustees, etc.; a mover in the establishment of international copyright, and one of the first support-

ers of the Paulist inauguration of the Apostolate of the Press. His intellect was unceasingly active, even under the heavy pressure of failing health, to which he was often subject, and his conscientious enthusiasm for any undertaking adopted by him for the public good prevented a moment's real rest or the enjoyment of that outdoor life which was his greatest delight. He was a member of the Papyrus Club, in Boston; of the Authors and the Players' Clubs, New York; of the Society of Connecticut Sons of the American Revolution; of the St. John's Literary Society, of New London; and one of the first honorary members of the John Boyle O'Reilly Reading Circle, of Boston. The doctor's degree was conferred upon him by St. John's College, Fordham, N. Y. He died after a brief illness, in the height of his literary power, having but a short time before written superlatively fine prose and poetry. He married the second daughter of Nathaniel Hawthorne, whose wife, meeting him not long before her death, was especially fond of him, and several times uttered his name with great affection in her last hours. He had one child, Francis Hawthorne Lathrop, whom he lost, and to whom he wrote one of his most spiritual and beautiful poems. There was the quality in him of a star shining steadily among dark, moving clouds.

Lee, James Fenner, lawyer, born in Providence, R. I.; died in Baltimore, Md., Jan. 31, 1898. He was educated in Switzerland and graduated at the College of Louis le Grande, Paris. He studied law at Harvard and was admitted to the Baltimore bar. He represented his county as State Senator in 1876 and 1878, in 1885 was appointed *chargé d'affaires* to Austria; and at the close of the Cleveland administration became chief clerk in the State Department. He was commissioned *chargé d'affaires* at Rio when the republic of Brazil was organized. In collaboration with J. I. Cohen he compiled the third volume of a digest of the decisions of the Court of Appeals of Maryland.

Leighton, Scott, painter, born in Auburn, Me.; died in Waverly, Mass., Jan. 17, 1898. He received a public-school education, spent most of his time in drawing pictures of animals, and when only fourteen years old became a dealer in horses. He followed this business three years, and then removed to Portland, determined to make his living by painting portraits of horses and pet animals. Discouraged by the small pecuniary results, he engaged in the fancy-furniture trade in Providence for a while, then became a traveling artist, and ultimately settled in Boston, where he took a course of instruction in drawing and painting and afterward resided. He was a member of the Boston Art Club, the Paint and Clay Club, and other art and social organizations, and was frequently referred to as the Landseer of the United States. Among his best-known productions, many of which have been reproduced in photograph and engraving, are "Here they Come," considered by many his masterpiece; "In the Stable"; "On the Road"; "Three Veterans"; "Smuggler"; "The Pet"; "Waiting"; "Dogs"; and "The Farnaught Stallions."

Lincoln, Frederick W., politician, born in Boston, Mass., in 1817; died there, Sept. 13, 1898. He served in the Legislature of Massachusetts several terms, and was a member of the constitutional convention in 1852. He was engaged in banking and was a trustee of the Institute of Technology. He was Mayor of Boston for three terms, 1858-'60; and again for four terms, 1863-'66. During one of his later terms he prevented a draft riot by the prompt use of the military.

Lintner, Joseph Albert, entomologist, born in Schoharie, N. Y., Feb. 8, 1822; died in Rome, Italy, May 5, 1898. He was engaged in business in New

York city from 1837 till 1848, and in Schoharie from 1848 till 1860; and was then interested in the manufacture of woolen goods in Utica, N. Y., till 1867. From early youth he had been fascinated with the study and collection of insects, and during the greater part of his business life he applied all his leisure to that science. In 1867 he was appointed zoölogical assistant in the New York State Museum of Natural History in Albany, and he held the office for twelve years, when he was called to the presidency of the Department of Natural Science in Albany Institute. In 1880 he was appointed State Entomologist, and in 1881 he was reappointed under an act of the Legislature establishing the office permanently. He was placed on the scientific staff of the State Museum in 1883 and received the honorary degree of Ph. D. from the regents of the University of the State of New York in 1884. Prof. Lintner was president for two years of the Entomological Club of the American Association for the Advancement of Science. A few weeks before his death he received a six months' leave of absence to enable him to make a long-anticipated visit to the Old World. His publications on economic entomology were voluminous and were extensively copied in both American and European scientific journals. They included "Report on the Injurious and Other Insects of the State of New York" (2 vols., 1883-'85) and "Report of the State Entomologist" (1883 *et seq.*). To Prof. Lintner is credited the discovery of the clover midges and the clover beetle, two insects that have wrought great damage in the agricultural regions of the State.

Love, William De Loss, clergyman, born in Barre, N. Y., Sept. 29, 1819; died in St. Paul, Minn., Sept. 6, 1898. He was graduated at Hamilton College in 1843; studied theology at Andover Seminary one year and at Yale two years; and April 5, 1848, was ordained pastor of Howe Street Church, New Haven. In 1852 he was called to the Eastern Congregational Church, New York city; in 1853 was installed pastor of the Second Congregational Church, Berlin, Conn., and four years later was called to the Grand Avenue Church, Milwaukee, Wis. After spending thirteen years there he held the pastorate of the First Congregational Church, East Saginaw, Mich., for five years. The First Congregational Church at South Hadley, Mass., where his service lasted eleven years, was his last charge. He was one of the early abolitionists; served on the United States Christian Commission; and was the author of many articles on the slavery question. He published "The Child's Book of Slavery" and "The History of Wisconsin in the War of the Rebellion" (1867).

Lowe, William Warren, military officer, born in Indiana, Oct. 12, 1831; died in Omaha, Neb., May 18, 1898. He was graduated at the United States Military Academy, and appointed a brevet 2d lieutenant in the 2d Dragoons, in 1853; was promoted 2d lieutenant in the 1st Dragoons, Oct. 22, 1854; transferred to the 2d Cavalry, March 3, 1855; promoted 1st lieutenant, Dec. 1, 1856; captain, May 9, 1861; and major, July 31, 1866; and resigned, June 22, 1869. In the volunteer service he was brevetted major and lieutenant colonel, Oct. 9 and Dec. 15, 1863, respectively, and colonel and brigadier general, March 13, 1865. His early military life was spent in scouting and frontier duty. In the civil war he served through the Manassas campaign; organized and became colonel of the 5th Iowa Cavalry; took part in the Tennessee campaign and the capture of Fort Donelson; commanded at times a brigade and a division in cavalry operations in Tennessee, Alabama, and Georgia; and twice was in command of the 3d Division of cavalry. During the last half of 1864 he was on duty at Nashville, re-mounting cav-

alry, and then till his resignation was chief mustering and disbursing officer for Kansas, Nebraska, Dakota, and Colorado. On leaving the army he settled in Omaha, and till his death was engaged in smelting and refining ores, mining, and railroad construction.

Ludlow, Benjamin C., military officer, born in Ludlow Station, Ohio, in 1831; died in Los Angeles, Cal., Jan. 10, 1898. He was graduated at the medical department of the University of Pennsylvania in 1854, and practiced till the beginning of the civil war. In 1861 he raised a company of cavalry, and tendered its services to Gen. Scott, who declined it on the ground that no cavalry would be required in the war, and that the four regular regiments would be sufficient for any emergency. Soon afterward Ludlow went to St. Louis, and was appointed a captain in Frémont's Hussars. In this command he distinguished himself in important and dangerous duty. Subsequently he was ordered East, where he served on the staff of Gen. Hooker in the battle of Chancellorsville, and as inspector of artillery on that of Gen. Meade, taking part in the battles of Gettysburg, Mine Run, and Rappahannock. He was promoted major in 1862, and lieutenant colonel in 1863; in February, 1864, was appointed chief of cavalry under Gen. Butler; and later was placed in charge of the construction of the Dutch Gap Canal. In October, 1864, he was brevetted brigadier general for services at Dutch Gap and Spring Hill, and was detailed to command the defenses of James and York rivers. He resigned his commission in 1865.

MacArthur, Charles L., journalist, born in Fremont, N. H., Jan. 7, 1824; died in Troy, N. Y., Oct. 12, 1898. Early in life he learned the trade of a printer in Watertown, N. Y., and he was graduated at the Black River Institute of that place. About 1840 he established the "Carthaginian," in Carthage, N. Y. In 1843 he was sent with an expedition to the head waters of the Platte, to make a treaty with the Sioux Indians. Later in the same year he established the Milwaukee "Sentinel," the first daily paper in Wisconsin. In 1846 he became city editor of the New York "Sun." In 1847 he purchased the Troy "Budget." It was a Democratic organ, representing the Free-Soil wing of the party. When Lewis Cass was nominated for the presidency by the Democratic National Convention in 1848 the "Budget" was delayed in going to press till the news had been received, and when the news came Mr. MacArthur told the foreman to insert the name of John A. Dix for President. This action was the beginning of a widespread bolt from Cass. In 1859 he retired from the "Budget" to establish the "Arena," which he sold two years later in order to serve with the 2d Regiment of New York volunteers in the civil war. In 1864 he founded the "Sunday News," the first Sunday newspaper in the State outside of New York city. In the meantime the "Budget" had died as the result of its opposition to the war. He revived that paper in 1867, and published it till the day of his death. In 1882 he absorbed the Troy "Telegram" into the "Budget." He was a member of the State Senate in 1882-'83.

McCormick, Thomas Francis, jurist, born in Elizabeth, N. J., July 31, 1844; died there, Sept. 13, 1898. He was graduated in 1864 at St. John's College, Fordham, and later at Seton Hall College. In 1871 he was admitted to the bar; in 1878 was appointed law judge in the Union County courts, and in such capacity he served four successive terms of five years each.

McGovern, Thomas, clergyman, born in Swanliber, Cavan County, Ireland, in 1832; died in Harrisburg, Pa., July 25, 1898. He was brought to the United States in infancy by his parents; was graduated at Mount St. Mary's College, Emmitsburg,

Md., in 1859; completed his theological course at the seminary of St. Charles Borromeo, Overbrook; and was ordained to the priesthood of the Roman Catholic Church, Dec. 12, 1861. For more than twenty years he was rector of St. Joseph's Church, Danville, Pa. On Jan. 15, 1888, he was chosen bishop of Harrisburg, and he retained the office till his death. He was noted for his zealous labors, scholarly habits, and literary accomplishments.

McKean, Thomas, benefactor, born in Philadelphia, Pa., Nov. 28, 1842; died there, March 16, 1898. He was a son of Henry Pratt McKean and a great-grandson of Thomas McKean, one of the signers of the Declaration of Independence. He was graduated at the University of Pennsylvania in 1862, entered at once on a business career, and became an officer in numerous railroad and financial corporations. He had a fortune of several million dollars, was exceedingly liberal to educational and benevolent institutions, and was ever ready to promote worthy enterprises. His gifts to the University of Pennsylvania aggregated about \$300,000, the last of them being \$100,000, given in November, 1897, to aid in the erection of the new law school building.

McLane, Robert Milligan, diplomatist, born in Wilmington, Del., June 23, 1815; died in Paris, France, April 16, 1898. He was a son of Louis McLane, United States Senator and minister to England. Robert was educated at St. Mary's College, Baltimore, the College Bourbon, Paris, and the United States Military Academy, where he was graduated and assigned to the 1st Artillery in 1837. He served under Gen. Jesup in the Everglades of Florida in 1837-'38, under Gen. Scott in the Cherokee country of Georgia in 1838, and under Gen. Taylor in Florida; was engaged in the military survey of the Great Lakes, under a transfer to the corps of topographical engineers, in 1839-'40; and was sent to Europe to study the dike and drainage systems of Italy and Holland in 1841. Two years later he returned, resigned his commission in the army, and, having been admitted to the bar before going to Europe, began practicing law in Maryland. He was a conspicuous speaker in the presidential campaign of 1844, and was elected to Congress as a Democrat in 1844, 1846, and 1848, having been in the meantime an earnest supporter of President Polk's Mexican War policy. After the expiration of his third term in Congress he spent a year in practice in California. In 1852 he was one of the presidential electors of Maryland, and in the following year he was appointed by President Pierce United States commissioner to China with plenipotentiary functions, and at the same time was accredited to Japan, Siam, Korea, and Cochin-China. He reached Hong-Kong in the spring of 1854, had a strong naval force subject to his authority, and, accomplishing the object of his mission, was recalled at his own request, and arrived home early in 1856. Soon afterward he was a delegate to the National Democratic Convention that nominated James Buchanan. In 1859 he was appointed United States minister to Mexico, and while there he negotiated a treaty for the protection of American citizens. He resigned the mission directly after the secession of the cotton States and became a member of the legislative committee to confer with President Lincoln on some State grievances against

the Federal authorities. During the civil war he was counsel for the Western Pacific Railroad Company, and spent much time in New York, San Francisco, and Paris. In 1876 he was a delegate to the National Democratic Convention that nominated Samuel J. Tilden, and also a State Senator; in 1878 and 1880 he was again elected to Congress; in 1883 was elected Governor of Maryland; and in 1885-'89 was United States minister to France.

McReynolds, Andrew Thomas, soldier, born in Dungannon, Ireland, Dec. 25, 1806; died in Muskegon, Mich., Nov. 25, 1898. He came to the United States in 1830; lived for a time in Pittsburg, and, in 1833, removed to Detroit. In 1834 he served as major on the staff of Gen. Williams in the Toledo war, and was one of the organizers of the Brady Guards of Detroit. In 1838 he was elected alderman of Detroit; in 1839 was a delegate to the Whig National Convention at Harrisburg; and in 1840 was a representative in the Michigan Legislature. In the same year he was chosen the first captain of the Montgomery Guards, and he was also colonel of the 1st Michigan Militia from 1840 till 1851. From 1842 till 1845 he was Indian agent for Michigan, and in 1846-'47 was State Senator from Detroit. He was commissioned a captain in the 1st United States Dragoons in March, 1847, and served in the Mexican War under Gen. Scott. He was first president of the Detroit Board of Education in 1852; prosecuting attorney of Wayne County in 1853-'55; and candidate for circuit judge in 1857. He organized the first regiment of cavalry in the civil war (the Lincoln Cavalry), and was commissioned its colonel June 14, 1861. Subsequently he was in command of a brigade for two years, and of a division six months, and was honorably discharged Aug. 22, 1864. He removed to Grand Rapids in 1866, served as United States district attorney for western Michigan from 1866 till 1868, and was prosecuting attorney of Muskegon County from 1874 till 1876. Gen. McReynolds was for years president of the Michigan Mexican Veteran Association, and at one time was department commander, Department of Michigan, G. A. R.

Mallon, Isabel Allerdice (known as Bab and Ruth Ashmore), author, born in Baltimore, Md., July 13, 1857; died in New York city, Dec. 27, 1898. She was a member of the Sloan family of Harford County, Md., and at the age of sixteen married William T. Mallon, of Baltimore. With her husband she spent some years abroad, and at his death, obliged to support herself, she became a newspaper correspondent. In 1888 she began writing the "Bab" letters, which were widely copied and later were syndicated to various papers. She continued writing them till a few weeks before her final illness. Under the name of Ruth Ashmore she wrote a series of letters, entitled "Side Talks with Girls," for the "Ladies' Home Journal." A collection of these letters was published in book form in 1895. Just before her last illness she finished another book, "The Business Girl in Every Phase of Life" (1898).

Marcou, Jules, geologist, born in Salins, Jura, France, April 20, 1824; died in Cambridge, Mass., April 17, 1898. He was educated at the College of Besançon and that of St. Louis in Paris, and acquired a fondness for natural science while traveling in Switzerland for his health. Here he became acquainted with Jules Thurmann, whom later he assisted in the geological survey of the Jura mountains, and while engaged in this work he met the late Louis Agassiz. In 1846 he was appointed assistant in the mineralogical department of the Sorbonne, and also made a classification of fossils, and in 1847 was made traveling geologist for the Jardin des Plantes in Paris. Under the last commission

he first came to the United States, and accompanied Prof. Agassiz on his trip to the Lake Superior region in 1848. After six months of exploration he went to Cambridge, Mass., where he classified and sent to Paris a valuable collection of minerals. The year 1849 he spent in studying the geology of New Jersey, Pennsylvania, and Virginia, the Mammoth Cave, and the provinces of Canada. He returned to Europe in 1850, but was soon again settled in Cambridge. Entering the service of the United States in 1853, he was the first geologist that crossed the country, and made a section map of the thirty-fifth parallel from the Mississippi river to the Pacific Ocean. Impaired health led him to revisit Europe, and during 1855-'59 he was Professor of Geology in the Zurich Polytechnic School. In 1861 he returned to Cambridge, where he was associated with Prof. Agassiz in founding the Museum of Comparative Zoölogy, in which he took charge of the division of palæontology for three years. From 1864 till 1875, when he re-entered the service of the Government, he applied himself closely to scientific research. He remained in the Government service till within a few years of his death. Besides many scientific memoirs and papers on the Taconic system of New York, he published "Recherches géologiques sur la Jura Salinoise" (Paris, 1848); "Geological Map of the United States and British Provinces of North America" (2 vols., Boston, 1853); "Geology of North America" (Zurich, 1858); "Geological Map of the World" (Winterthur, 1861; 2d ed., Zurich, 1875); "Origin of the Name America" (Boston, 1875; Paris, 1887); "First Discoveries of California, and the Origin of its Name" (Washington, 1878); and "A Catalogue of Geological Maps of America" (Washington, 1884).

Marsland, Edward, engineer, born in New Castle, Westchester County, N. Y., Oct. 5, 1829; died in Sing Sing, N. Y., June 25, 1898. He entered the Allaire Iron Works, in New York city, as an apprentice in 1847, and four years afterward engaged with the Collins line of steamships, rising to the rank of first assistant engineer in a service of six and a half years. Early in 1858 he was selected as second engineer to go out on the Russian steam corvette "Japanese," which had been built by William H. Webb in New York. On arriving with the vessel at Nikolafsk, on the Amoor river, he was asked to enter the service of the Russian Government, and was commissioned chief engineer of the "Japanese." Subsequently he was placed in charge of some complicated machinery at Nikolafsk, and was promoted to the rank of fleet engineer of the Russian squadron in Chinese waters. In August, 1860, he resigned his Russian commission and was given hearty testimonials of his professional skill and personal character. On returning to New York he was appointed chief engineer of the Pacific Mail Steamship Company. In August, 1861, he offered his services to the United States Government, and was appointed first assistant engineer in the navy. He was assigned to the "Unadilla," the first gunboat placed in commission for the war. Impaired health caused his retirement from the navy after a service of three years, and he resumed connection with the Pacific Mail Steamship Company. Later he took the Italian frigate "Redon Luigi de Poetogallo" to Italy and the ironclad ram "Dunderberg," which the United States had sold to France, to Cherbourg. He then entered the United States Engineer Corps, prepared the plans and specifications of the dredge boat "General McAllister," superintended her construction in New York, and took her to New Orleans, where he spent two years in Mississippi jetty work. He resigned from the Engineer Corps to become superintending engineer of the Roach shipyard at Chester, Pa., where he

remained three years. After this service he was employed professionally in New York city.

Mason, Edwin C., military officer, born in Ohio, May 31, 1831; died in St. Paul, Minn., April 20, 1898. He was appointed a captain in the 17th United States Infantry from civil life, May 14, 1861; was transferred to the 35th Infantry, Sept. 21, 1866; and to the 20th Infantry, Oct. 14, 1869; was promoted major, 21st Infantry, Sept. 5, 1871; lieutenant colonel, 4th Infantry, May 19, 1881; and colonel, 3d Infantry, April 24, 1888; and was retired May 31, 1895. In the volunteer service he was appointed a captain in the 2d Ohio Infantry, April 29, 1861, and was commissioned colonel of the 7th Maine Infantry, Aug. 22, 1861, and of the 176th Ohio Infantry, Sept. 23, 1864. He was brevetted major, Dec. 13, 1862, for gallantry at Fredericksburg; lieutenant colonel, May 6, 1864, for the battle of the Wilderness; colonel, May 10 following, for Spottsylvania; brigadier general of volunteers, June 3, 1865, for faithful services during the war; and brigadier general United States army, Feb. 27, 1890, for services in action against the Indians in the lava beds, Cal., April 17, 1873, and at Clearwater, Idaho, July 11, 12, 1877.

Masset, Stephen, author and actor, born in London, England, in 1820; died in New York city, Aug. 22, 1898. He came to America in 1837 on a sailing vessel, and made his *début* as an actor in Buffalo, N. Y. In 1841 he was engaged for singing parts in the drama by the manager of the Charleston, S. C., Theater, where he quickly won popularity both as an actor and as a good ballad singer. His singing of "The Light of Other Days" and "Oh, would I were a Boy again" were especially admired. After one season in Charleston, where he had played under the name of Stephens, he was engaged for Mitchell's Olympic Theater, and made his first appearance, under the name of Mr. Raymond, as the count in the opera of "Amalie," Oct. 2, 1842. In the summer of 1843 he made a voyage to the Mediterranean, returning to Boston in 1844. The discovery of gold in California attracted him to that country, and in June, 1849, he arrived in San Francisco. Here he inaugurated his career as an entertainer by giving a concert in a schoolhouse, June 22, 1849, the first public entertainment ever given in the city. He had for sometime been engaged in writing humorous sketches for the press under the name of Jeems Pipes. He continued this work on the Pacific coast, and, having acquired some lots among the sand hills on the outskirts of the town, he built himself a shanty and gave his estate the name of Pipesville. He remained for several years on the Pacific coast, and made a small fortune by his amusing musical and humorous concerts. From California he made a tour of the world, going to Australia, India, and the Cape of Good Hope. He was well received in England, and made a great many friends in London. His wit and vivacious conversation made him a desirable acquisition to the best circles of literary and artistic life. He returned to the United States in the early '70's, and thenceforward made his home in New York, where he lived quietly in retirement. Even to his last days he continued his favorite work of song composition. He published his autobiography under the title "Drifting About" (New York, 1863).

Mather, Margaret, actress, born near Toronto, Canada, Oct. 21, 1859; died in Charlestown, W. Va., April 7, 1898. She was the daughter of a Scotch ship carpenter named John Finlayson, and took the name of her mother's family for professional use. Her childhood was passed in great poverty in Detroit, Mich., where her father and mother kept a sailor's boarding house, and where even as a

child she contributed to the meager income of the family by selling newspapers in the street. When twelve years old she attended a public school in New York city for a few months from the house of an elder sister. In 1877 she began to study for the stage, and filled an engagement with a traveling company under the name of Miss Bloomer. In 1878 she was engaged in the company supporting George Edgar, and made her first appearance therewith as Cordelia in "King Lear," in Providence, R. I., under the name of Margaret Mather. In June, 1881, she made the acquaintance of J. M. Hfill, an enterprising manager, who, after witnessing her work, engaged her on a six-year contract, one of the conditions of which was that she was to retire from the stage and devote herself to study for a year at her manager's direction and expense. She spent that year in reading and preparation at the house of John Habberton, the author, near New York. On Aug. 28, 1882, Miss Mather made her *début* as a star under Mr. Hill's management as Juliet at McVicker's Theater, Chicago. Her success was rather the result of general curiosity than the effect of personal talents; it was some time before the crudeness of her methods became toned to smoothness of expression. After two seasons of touring, during which Miss Mather added Pauline in "The Lady of Lyons," Leah in "Leah the Forsaken," Juliana in "The Honeymoon," and Rosalind in "As You Like It," to her *repertoire*, Mr. Hill leased the Union Square Theater in New York city for the season of 1885-'86, and opened it on Oct. 13, 1885, with a sumptuous revival of "Romeo and Juliet," with Miss Mather as Juliet. The play was kept on the stage there seventeen weeks, at a loss of \$22,532.95 (according to Mr. Hill's subsequent testimony in court); but the investment was good, as the country for several seasons paid liberally to see what had infatuated New York—according to the advertisements. In January, 1886, Miss Mather played Leah at the Union Square, closing her engagement at that house in February with Juliana in "The Honeymoon." She then began a very profitable succession of engagements "on the road." On Feb. 15, 1887, in Buffalo, N. Y., she married Emil Haberkorn, a musician, leader of the orchestra at the Union Square Theater, in New York. She then continued her tours, sometimes under her husband's management, and again under that of others. On Jan. 1, 1889, she made her first appearance as Peg Woffington at Niblo's Garden, New York. The Columbus Theater, One Hundred and Twenty-fifth Street, New York, was opened by her Oct. 11, 1890, with a performance of "Romeo and Juliet." On Nov. 24, 1890, she first played Imogen in "Cymbeline" at the same house. An adaptation of Jules Barbier's "Jeanne d'Arc," which Bernhard was then playing in Paris, was produced by her at the Fifth Avenue Theater, Dec. 8, 1890. Her performance of the heroic Joan did not satisfy the metropolitan taste, but she kept the play in her "road *repertoire*." She married, on July 26, 1892, Gustave Pabst, son of a wealthy Milwaukee brewer, and on Dec. 10 of the same year retired from the stage to reside with her husband and his family in Milwaukee. She was divorced from Mr. Pabst in October, 1896, and in January, 1897, returned to the stage as Imogen in a fine production of "Cymbeline" at Wallack's Theater, New York. While playing that part, on the stage of the theater, she was stricken with her fatal illness.
